KANSAS-NEBRASKA BILL, a bill passed by Congress in 1854; the last of three compromises between the aggressive slavery expansionists of the South and their anti-slavery opponents in the North. It is famous because, by its repeal of the first, the Missouri Compromise (q.v.), it precipitated the organization and rapid growth of the Republican Party and especially incited the radical abolition sentiment of the North to aggressive action, thus causing or hastening the secession of the Southern States and the resulting Civil War. Its passage was mainly due to the leadership of Stephen A. Douglas (q.v.), of Illinois. The second compromise occurred when New Mexico and Utah came to be organized as territories in 1850. The compromise consisted of the provision, which was also one of the two principal features of the Kansas-Nebraska

Bill, that when these Territories came to be admitted as States they should come in with or without slavery as their constitutions, which would be framed by the people, might prescribe. The strengthening of the Fugitive Slave Law was the other feature of this compromise. This settlement of 1850 was the first step toward the final compromise, the Kansas-Nebraska Bill.

As early as 1844 Stephen A. Douglas introduced in the House of Representatives a bill "to establish the territory of Nebraska," and Douglas afterward asserted that he took this method of serving notice on the Secretary of War to discontinue using that Territory as the dumping-ground for Indians. In 1848 Douglas, now chairman of the Committee on Territories in the Senate, introduced in that body a bill for the same purpose. In December 1851 Willard P. Hall of Missouri gave notice in the House of a bill for the organization of Nebraska; but none of these bills got beyond the committee stage. On 2 Feb. 1853 William A. Richardson of Illinois, the leading lieutenant of Douglas in the House, introduced still another bill "to organize the Territory of Nebraska." This bill, which, like all of its predecessors in question, made no reference to slavery, passed the House, 10 Feb. 1853; but in spite of the strenuous endeavors of Douglas in its behalf, it failed of consideration in the Senate. The long debate over this bill in the House disclosed clearly that the primary object of members from the Northwest, who were its champions, was to protect and encourage travel over the great upper line to the Pacific Coast and make way for the ultimate construction of the already much talked of Pacific Railroad; while members from the South, and especially from the Southwest, were bent on keeping this northern region open for the colonization of their undesirable Indian tribes, with the purpose of securing travel and the railroad to the Pacific Coast through their own country.

Early in the session of the next Congress—14 Dec. 1853—Senator Dodge of Iowa, a coadjutor of Douglas in this enterprise, introduced "a bill to organize the Territory of Nebraska." This bill also originally contained no reference to slavery; but by amendment it became the famous Kansas-Nebraska Bill, which finally became a law 30 May 1854. On 4 Jan. 1854 the Senate Committee on Territories, through Douglas, reported a substitute for the Dodge bill which contained the compromise provision of the Utah and New Mexico acts; namely, that "the Territory of Nebraska, or any portion of the same, when admitted as a State or States, shall be received into the Union with or without slavery, as their constitutions may prescribe at the time of their admission." In his famous report, accompanying this bill, Douglas points out that "eminent statesmen hold that Congress is invested with no rightful authority to legislate upon the subject of slavery in the Territories, and that therefore the 8th section of the Missouri Compromise is null and void; while the prevailing sentiment in large sections of the Union sustains the doctrine that the Constitution of the United States secures to every citizen the inalienable right to move into any of the Territories with his property of whatever kind or

description, and to hold and enjoy the same under the sanction of law." The report pointed out also that under this section it was a disputed point whether slavery was prohibited in the new country by valid enactment, and advised against the undertaking by Congress to decide these disputed questions. The bill was further amended so as to provide that all questions pertaining to slavery in the Territories and the new States to be formed therefrom be left to the decision of the people residing therein; that cases involving title to slaves be left to the courts; and that the provision of the Constitution in respect to fugitive slaves should be carried out in the Territories the same as in the States. On 16 January Senator Dixon of Kentucky offered an amendment, which was accepted by Douglas, expressly repealing the slavery restriction clause of the Missouri Compromise; and the bill passed with these amendments.

The repeal of the Missouri Compromise restriction was hotly denounced by the anti-slavery element and was seized with alacrity and used with great effect as a political weapon by anti-slavery agitators and politicians; and Douglas was also savagely denounced for selfish subserviency to the South for the sake of winning the Presidency. But Douglas and his friends ably and plausibly defended the repeal of the Missouri restriction on the ground that it was consistent with and the natural sequence of the popular sovereignty compromise of 1850, that there was danger that it would be held unconstitutional by the courts; that there was ground for fear that Dixon's amendment, as he proposed it, would legislate slavery into the Territories, and that on the whole Douglas, as leader of the dominant party, and having regard to the preservation of the Union as well as to the vexatious slavery question, made the safest and best terms practicable in securing the right of the people to decide the question of slavery for themselves. In the course of the debate on the bill Douglas, as well as Thomas H. Benton, who was opposed to the repeal of the Missouri restriction, insisted that, left to the people, slavery could never be successfully introduced into Kansas or Nebraska.

Impartial consideration of all the facts bearing upon this phase of the question leaves no ground for the charge preferred by leading historians and others that the proposed Nebraska Territory was at last divided into Kansas and Nebraska at the instance of Southern members, to gain opportunity to make Kansas a slave State. The "provisional" delegate in Congress at that time from Nebraska well known by contemporary citizens of the Territory as a reliable man, in his published account of his part in the transaction asserts that, before he went to Washington to attend the session of December 1853, it was agreed among the enterprising citizens of western Iowa—there were then no citizens of Nebraska—who were pushing the project for Territorial organization, that division was desirable so that one of the Territories might be directly opposite their State, and that he urged this change upon Douglas, who assented to it. In the debate on this feature of the bill Senator Dodge of anti-slavery Iowa and Representative Henn of the Iowa district bordering on Nebraska urged it

division for the frankly expressed reasons that it would be to their advantage to have the capital of an important commonwealth opposite them and would aid in securing the route of the Pacific Railroad through their part of the country; while the representatives of slave-holding Missouri were indifferent to the question of division. Douglas himself specified the wish of the Iowa members as the basis of his reason for the division of the territory. It is significant, moreover, that Douglas had always stood for a northern territory, as shown by his original bills of 1844 and 1848. It is a very significant fact that the northern boundary of the territory in each of these bills was the 43d parallel, which is identical with the northern boundary of the present state; and that the southern boundary described in the bill of 1848 was also identical with the same boundary of the state, while the southern boundary described in the bill of 1844 was only two degrees farther south. These and other incidents of a like kind show a remarkable prescience and a persistent consistency in interpreting the wishes and interests of those most directly interested in the territory opposite the State of Iowa and on the line of the great natural highway connecting Chicago, the commercial mart of the Northwest, and the home of Douglas, with the Pacific Coast. Representative Henn in resenting "the unjust charge made on this floor by several that it (the proposed division) was the scheme of Southern men whereby one of the States to be formed out of these Territories was to be a slave State," put the case concisely: "The bill is of more practical importance to the State of Iowa and the people I represent than to any other State or constituency in the Union."

The Kansas-Nebraska Bill was also distinguished by more completely safeguarding the rights of Indian occupants than any previous territorial organic acts had done; and likewise being the first territorial bill of that class which provided for the choice of the members both houses of the legislature by popular election, and to drop the provision requiring the submission of all acts of the legislative assembly to Congress for approval. The territory organized by this bill comprised all of the unorganized part of the Louisiana Purchase north of the 37th parallel, which comprised all of the rebase north of that line except the states of Iowa and Missouri, and that part of the Territory of Minnesota between the Mississippi River on the east and the Missouri and White Earth rivers on the south and west.

ALBERT WATKINS,
Editor "History of Nebraska."

KANSAS RIVER, river (also called the Kaw), Kansas, formed by the junction of the Republican and Smoky Hill rivers at Junction City, Kearney County, in the eastern part of the state. The direction of its course is generally easterly. It flows for 169 miles through a rich agricultural section, passing Topeka, and empties into the Missouri River at Kansas City. Its largest tributary is the Big Blue River which joins it from the north near Manhattan, Kansas.

KANSAS STATE COLLEGE OF AGRICULTURE AND APPLIED SCIENCE, Manhattan, Kansas, a coeducational institution established in 1863 under terms of the Morrill (Land-Grant) Act. Its 160-acre campus has 39

major buildings, nearly all of native limestone. Resident instruction is divided among schools of agriculture, arts and sciences, engineering, home economics, and veterinary medicine, and there is a graduate school. The college has always emphasized professional education in the applied sciences, such as agriculture, engineering, industrial chemistry, and industrial physics; and has offered instruction in home economics since 1873, longer than any other college in the United States. It has one of the very few fully accredited veterinary medicine schools in the country, and the only four-year milling industry curriculum in the world. As a major research agency, the college is a participating institution of the Argonne National Laboratory and maintains agricultural and engineering experiment stations, with branch agricultural stations at Colby, Hays, Garden City, Tribune and Mound Valley. Agricultural extension work is conducted in cooperation with the federal Agricultural Extension Service throughout the state. Normal enrollment after World War II was about 7,000.

KANSAS WESLEYAN UNIVERSITY, Salina, Kansas, a coeducational institution founded in 1886 under the auspices of the Methodist Episcopal Church. It is governed by a board of trustees responsible to the Central Kansas Conference of the Methodist Church. The campus of approximately 30 acres has seven main buildings and a number of auxiliary units, an athletic field and stadium. There is a college of liberal arts, and its departments of music, business administration, and education provide special training for students in these areas. Normal enrollment is about 550.

KANSK, kánsk, city of Asiatic Soviet Russia, in southern Krasnoyarsk Territory. It is on the Trans-Siberian Railroad, 151 miles east of Krasnoyarsk, and on the Kan River, an unnavigable affluent of the Yenisei. Situated in the Kansk lignite basin and in a rich farming district chiefly devoted to wheat growing and dairying, its industries include sawmills, food processing, and light manufactures. During World War II the first large cotton mill of eastern Siberia was constructed here. Founded in 1628 by the voivode of Krasnoyarsk, it remained a village until the advent of the railroad stimulated its growth, much accelerated in the 1940's. Pop. (1951 est.) over 25,000.

KANSU, kán'sōō', Chinese, gán'sōō', province, China. It is generally long and narrow in shape, running northwest and southeast, bordered by Ningsia on the north, Sinkiang on the west, Tsinghai (Chinghai) and Szechwan on the south, and Shensi on the east. The terrain is generally mountainous, having the northern ranges of the Nan Shan (up to 20,000 feet) in the northwest, and the Min Shan (up to 17,000 feet), an extension of the Kunlun Mountains, in the southeast. The northwestern plains tend to be arid, while those in the southeast, watered by the Hwang Ho (Yellow River) and its tributary, the Wei, are more fertile. Minerals include petroleum, coal, iron, gold, and mercury. The chief crops are rice and other grains, beans, rapeseed, and kaoliang (sorghum). Opium was formerly grown extensively. The population is about one third Moslem. Large sections of the western extension of the Great Wall lie in this province. The Silk

Road, a famous caravan route of earlier times, runs through Kansu which is now an important link between China and the USSR. The capital is Lanchow (Kaolan). Area 151,160 square miles; pop. (1947 official est.) 6,897,781.

KANT, kánt, Immanuel, German philosopher: b. Königsberg, East Prussia, April 22, 1724; d. there, Feb. 12, 1804. Kant's father, Johann Georg Kant, was a poor but respected saddler. The home atmosphere of strict pietistic Protestantism made a lasting impression upon Kant and is reflected in the rigorism of his moral doctrine. The young Kant attended the Collegium Fridericianum, where he received a thorough training in Latin; but Kant always remembered with horror the "fanatical discipline" characteristic of this school. When, later, in his lectures on pedagogy, Kant emphasized that one ought to educate children in freedom so that they can be of a "happy heart," he was reacting to the quite different experience of his own childhood.

At the age of 16 Kant entered the University of Königsberg, where he studied philosophy, mathematics, and physics, and attended lectures in theology. When, five years later, his father died, Kant found himself in financial difficulties which delayed until 1749 the publication of his first scientific work, *Thoughts Concerning a True*

Estimation of the Vital Forces, and made it necessary for him to serve nine years (until 1755) as private tutor with various families in the vicinity of Königsberg. However, during this period Kant not only acquired the social graces which later distinguished him, but also accumulated an astounding knowledge in many fields, and his thoughts matured. He published a few brief papers and then, in 1755, anonymously, his famous *General History of Nature and Theory of the Heavens*. In the same year Kant received his doctor's degree and became a lecturer at the University of Königsberg. He taught logic, metaphysics, moral philosophy, natural theology, and anthropology, as well as mathematics, physics, and physical geography. In 1770, upon submitting his inaugural dissertation, *On the Form and Principles of the Sensible and Intelligible World*, he was appointed professor of logic and metaphysics at Königsberg. Before he retired, in 1796, Kant had been dean of the faculties six times and rector of the university twice.

After a long pause in publication, Kant com-

pleted in quick succession the great works which have become classics in philosophy: *Critique of Pure Reason* (1781); *Prolegomena to Any Future Metaphysic* (1783); *Metaphysical Foundations of Natural Science* (1785); *Critique of Practical Reason* (1788); *Critique of Judgment* (1790); *Religion Within the Limits of Pure Reason* (1793); *Metaphysics of Morals* (1797). Only once was this productivity interrupted, when Johann Christian von Wöllner, minister to Frederick William II of Prussia, ordered the seventy-year-old philosopher to refrain from writing about or lecturing on religion. Kant wrote a reply justifying his position but obeyed the order.

Kant was neither asocial nor detached from the events of the day. The pedantic orderliness of his daily life was the result of a rigid self-discipline to preserve his strength and not to overtax his frail health. Kant's "critical philosophy" was the result of a long development during which he came successively under the influence of Gottfried Wilhelm von Leibniz, Christian von Wolff, Sir Isaac Newton, John Locke, David Hume, Jean Jacques Rousseau, and, once more, Leibniz and Hume. The dividing mark between Kant's pre-critical and critical philosophy is the year 1769. In the early 1760's, Kant still accepted the dogmatic rationalism of philosophical tradition, the culmination of which he saw in Newtonian mechanics and in the metaphysics of Leibniz and Wolff. The chief works of Kant's pre-critical period are: *General History of Nature and Theory of the Heavens* (1755), and *Dreams of a Spirit-Seer, Explained through the Dreams of Metaphysics* (1766). The former bears the subtitle, *Concerning the Structure and the Mechanical Origin of the Whole Universe, According to Newtonian Principles*. Using our solar system as an example, Kant tries to show how, under the influence of attraction and repulsion and in conformity with Newtonian principles, the whole universe can be developed out of an initially given cosmic dust (Kant's "nebular hypothesis" of the origin of the solar system). Philosophically significant here is Kant's strict adherence to the principle of mechanical causation, and the absence of metaphysical speculation. Kant is convinced, however, that the manifest purposiveness of all vital processes remains inexplicable in terms of causality alone.

At this time Kant's thinking was still dominated by the rationalism of Leibniz and Wolff according to which conceptual analysis by itself yields true knowledge of the very nature of things. However, under the influence of Locke and Hume, Kant came to understand that logical operations, although sufficient for the organization of knowledge, contribute nothing to the content of knowledge, which is derived from experience alone. Following Hume, he distinguished now between logical ground (*ratio*) and real ground (*causa*); but whereas Hume repudiated the principle of causality as a deception of our imagination, Kant retained it as a constitutive principle of nature. The result of these new insights led Kant to that attack upon traditional metaphysics which is the philosophical core of the *Dreams of a Spirit-Seer*. Reacting to the metaphysical speculations of Emanuel Swedenborg, Kant shows how easy it is through a clever use of mere conceptual possibilities, to create the impression of knowledge of a supersensible world. Since metaphysics cannot penetrate to the ultimately real, Kant now argues, its only legitimate task is the comprehension of

the nature and limitations of human cognition. The aim of "critical philosophy" thus appears for the first time.

The year 1769 brought Kant "a great new insight" into the crucial distinction between the world of sense and the world of the understanding, and hence into a corresponding distinction in the structure of knowledge. This "new insight" was induced by Kant's realization of the full significance of the problem involved in the applicability of mathematics to the physical world. More specifically, how can the independence and apodictic validity of mathematical proof be reconciled with the applicability of mathematics to the world of things? Kant's solution of this problem, as presented in the dissertation of 1770, is that space and time are neither mere concepts of relation (as Leibniz held) nor metaphysical entities (as Newton maintained), but "forms of our sensibility under which alone sense impressions can be experienced by us." Following Leibniz, Kant now distinguishes between a world of appearance (which corresponds to our senses) and the world of true being (which corresponds to our understanding and reason); and, again following Leibniz, he accepts the rationalistic-dogmatic thesis that, whereas "sense impressions reveal the things as they appear to us, the concepts of the understanding reveal them as they are."

However, a renewed study of Hume now led Kant to the final repudiation of speculative metaphysics and to the development of his own "critical philosophy." Kant never doubted the validity of the basic principles of mathematics and physics; it was realized that Hume's position, consistently allowed through, must lead to skepticism not only with respect to metaphysics, but with respect to the natural sciences as well. He was therefore forced to re-examine the position he himself had taken in 1770. His problem was to reconcile that which is irrefutable in Hume's skepticism with the postulate of a necessarily and universally valid cognition in the exact and natural sciences. Conceived in its broadest sense, this problem became, for Kant, the problem of the possibility of an objectively valid cognition as such. The key to Kant's "critical" solution of this problem lies in his method of analysis, which is neither psychogenetic nor merely logical. It is a method which makes cognition itself the subject matter of inquiry, aiming at the disclosure of the very conditions which make valid cognition possible. Kant called it the transcendental method. He was convinced that certain judgments, which he called "synthetic *a priori*," are the indispensable presuppositions of all sciences. These judgments are "synthetic" in so far as they contribute to the content of knowledge (as do empirical judgments); and they are "*a priori*" because they are "necessarily and universally valid" (as are analytic judgments). Kant's specific problem is, therefore, How are synthetic *a priori* judgments possible? His solution is that sense impressions and our understanding are independent but supplementary sources of knowledge, that true knowledge is found only where both contribute to it, and that whatever our senses and our understanding contribute to knowledge is preconditioned by the "forms of our sensibility" (space and time), and by the "categories of our understanding" (quantity, quality, relation, modality, and their sub-forms). Synthetic *a priori* judgments are rooted in those forms and categories and are therefore valid for every object which appears under the

forms of our sensibility or is thought of in terms of the categories of our understanding. (For details see entry under CRITIQUE OF PURE REASON.)

Kant believed that the *Critique of Pure Reason* demolished all speculative metaphysics and natural theology but provided a dependable foundation for science. His conclusion was that cognition is restricted to the realm of phenomena, that we can know nothing which cannot be given through our senses, but that within these limitations we may have valid empirical knowledge (derived from observation and culminating in the special laws of nature), and a cognition *a priori* of the universal conditions which make nature itself and a science of nature possible. The empirical knowledge of special laws is the proper province of the scientist; the cognition *a priori* is that of the philosopher of nature. Kant dealt with this in his *Metaphysical Foundations of Natural Science*. His first step beyond the conclusions of the *Critique of Pure Reason* was the introduction of the empirical concept "matter" by applying the category "substance" to the appearances of the "outer sense" (space). Initially, matter was for Kant a movable substance in space. However, this concept gradually gave way in Kant's thinking to that of "force," for matter does not simply occupy space, but occupies it under the dynamic aspects of attraction and repulsion. Repudiating the atomism of his time, Kant thus accepted a theory of the dynamic continuity of forces. But it follows from the principle of causality that every change of a material body in space must have a cause external to itself. The transition from rest into motion and from motion into rest must therefore have an external cause, and this fact logically implies the law of inertia. Furthermore, it follows from the category "interaction" and the law of inertia that, in the transmission of motion, action and counteraction must always be equal. Kant thus shows that the whole of Newtonian mechanics can be deduced *a priori* from the fundamental conditions of empirical cognition as such.

Although the universal principles of nature, being the indispensable conditions of the possibility of cognition, must hold for the realm of living beings no less than for the rest of the universe, they are not in themselves sufficient to explain the phenomena of life. A "mechanics of a blade of grass" is impossible. Here the concept of teleology must supplement the categories of the understanding. For Kant, however, teleology is merely an auxiliary principle which is applied whenever the causal relation as such is not clear unless the idea of the effect is regarded as determining the cause, i.e., when what is can be understood only in terms of what is to be. The idea of teleology is useful when we deal with processes in the living organism, or with nature as a whole. In Part II of the *Critique of Judgment* Kant developed these ideas at length. With respect to the living organism Kant's point is that the organism as a whole is determined by the structure and function of its parts while at the same time the structure and function of the parts is determined by the organism as a whole. This interaction of parts and whole constitutes an insurmountable obstacle for any interpretation of nature, such as the mechanistic, which is restricted to a one-dimensional causal sequence. "Life" is thus a boundary concept which delimits the sufficiency of a mechanistic view of the world. Still, Kant hoped that a principle of "genetic development" (evolution) might enable us to understand the development of

species from some original form of life. With respect to nature as a whole, Kant saw the need for a teleological approach in the interdependence of the specific laws of nature which, taken together, constitute an all-inclusive system. This "system of nature" cannot be known *a priori*, nor is it empirically demonstrable, for nothing can be demonstrated empirically about nature as a whole. But to think of nature and the world order as if they were the achievement of an infinitely intelligent being, i.e., to think of them in terms of an ultimate purpose, might greatly aid our understanding of them. In Kant's opinion, however, the only purpose which, being ultimate, can also be an end for everything else must be a being capable of positing for itself unconditionally some goals of action. Only a human being, as moral person, fulfills this requirement. To make possible the existence of moral beings living under moral laws may thus be regarded as the highest purpose of nature.

At this point the crucial question of critical philosophy arises in a new form: Are there laws which determine man's volition in an *a priori* manner, and wherein is grounded their claim to universal validity? Kant holds that the existence of such laws is disclosed in the value judgments pertaining to the conditions of human volition. He finds, however, that two kinds of such judgments are possible, namely, judgments of usefulness (which are conditional and therefore not universally valid), and moral judgments which at least claim universal and unconditional validity. This claim to unconditional validity is justifiable only in terms of some universal norm which is valid for all rational beings, and such a norm, according to Kant, is the moral law. Upon the all-encompassing background of universal natural laws there arises thus a narrower realm of moral laws. Now a law of nature states what, under specified conditions, *must* occur and what therefore actually occurs. The moral law, on the other hand, demands what *ought* to occur irrespective of whether or not it actually does occur. The question concerning the existence and validity of *a priori* laws in the sphere of morality thus leads at once to the question of the nature of moral laws and the possibility of reconciling them with the laws of nature; and this question in turn leads to the problem of free will—the basic problem of critical ethics. Kant holds that the moral value of an act stems exclusively from the inner attitude of the person, that is, it stems from the "maxim" which determines the action. However, if the maxim is merely subjective, then it cannot be a moral law. This means that a maxim takes on the character of a law only when all elements which may vary from person to person and from situation to situation, and which are only empirically determinable, are eliminated from consideration. Even an attempt to derive the moral law from a universal self-love must fail because self-love leads at best to hypothetical imperatives of the form: if you desire such and such a goal, then you must do so and so. Such imperatives are at best counsels of prudence; they are not moral laws. But if all "material determinations" of the will are unsuitable as foundation for the moral law, then the criterion of such a law can lie only in its form. As Kant put it: "Act only on that maxim through which you can at the same time will that it should become a universal law." A law, however, which we can wish to be valid universally has the character of a law of

nature. Hence Kant's second formulation: "Act as if the maxim of your action were to become through your will a universal law of nature." It follows that, for Kant, the moral worth of a person is determined, not by what that person does, but by the spirit in which he does it. "It is impossible to conceive anything in the world, or even out of it, which can be taken as good without limitation, save only a good will." Empiricistic and rationalistic interpretations of morality are wide of the mark because they place the good not in the will but in something external to it. The moral law demands, however, that the will be its own autonomous lawgiver. The moral law is in that case but an expression of the autonomous will itself. Because man is capable of giving laws to himself he ceases to be a thing and becomes a person, and as person and autonomous lawgiver he possesses human dignity and an infinite worth. To be sure, the individual may be sinful, but the idea of humanity within him is sacred. Therefore, "So act as to use humanity, both in your own person and in the person of every other, always at the same time as an end, never simply as a means."

If human beings were purely rational beings, their awareness of the moral *ought* would at once imply the fulfillment of the *ought*. But human beings, being what they are, are willing to do what they recognize as good only when doing it promises them pleasure or advantages. This tendency is the "radical evil" in man. Against such actions "from inclination" Kant emphasizes the significance of duty. Whereas inclination is rooted in self-love, duty arises from a respect for the law. Only that act is morally praiseworthy which is done out of respect for the law, or for the sake of duty itself. Kant did not mean, however, that an act is moral only when it is done without inclination or even against inclination. What he meant is rather that the moral law demands complete purity of motive, and that such purity is encountered only where the conception of duty alone determines our actions. The moral law does not demand the eradication of sensuous inclinations and desires; but it does demand categorically that their exclusive determination of the will be broken. When the relative rank of reason and sensuousness, demanded by the moral law, has become habitual, we have risen from slavery (to our appetites and passions) to that inner freedom which it is our duty to achieve through inner self-discipline. Only to the degree to which we realize this freedom have we become persons. However, the possibility of this freedom cannot be explained in terms of the nature of man as an empirical being. For in the realm of nature causal necessity prevails. But Kant points out that the moral law does not say what takes place always and everywhere. The basic difficulty lies in the fact that the moral law demands that the will be capable of spontaneously originating an action which, as an actual event in space and time, is part of the causally determined world of phenomena. Kant's solution lies in the thesis that we are "citizens of two worlds." As citizens of the phenomenal world we are subject to causal determination, but as citizens of an intelligible world we are autonomous law-givers in a universal "kingdom of ends."

Kant's *Critique of Practical Reason* has thus prepared the ground for the more concrete considerations of the *Metaphysics of Morals*. Here Kant distinguishes between juridical and moral

lities. The former involve merely the conformance of our actions with laws; the latter pertain to moral attitudes or virtues. Again Kant attempts a reconciliation of empiricism and rationalism. Empiricism sees our duties toward humanity in whatever will contribute to the happiness of man; rationalism sees them in achieving perfection. But our own happiness cannot be our duty because, by natural inclination, we already strive to achieve it. The perfection of other persons cannot be our duty because perfection cannot be imposed from without; everyone must attain it for himself. Kant's synthesis is that we ought to strive to achieve our own perfection, and that we ought to contribute to the happiness of others. But since the natural freedom of man consists in his ability to act in accordance with his own decisions, there is danger that the various spheres of freedom of different persons will interfere with one another. Reason demands therefore that, in order to assure the freedom of others, each individual impose certain restrictions upon his own freedom. The result will be a system of laws which defines the conditions under which, in conformity with a universal principle, the wills of all are brought into harmony. People living under such a system of laws constitute a state. Kant's argument is here reminiscent of Thomas Hobbes'; but his orientation and motivation are radically different. The sole purpose of the state and of the creation of states is the preservation of law and justice. No considerations of "welfare" can be substituted for this. But the attributes of a citizen are freedom (or the absence of all compulsion save that necessary for the enforcement of law), equality before the law, and civic independence. Although Kant was in sympathy with the Constitution of the United States, he was convinced that no ideally perfect constitution can ever be devised and that it is therefore the duty of a citizen to obey the laws under which he lives. In history, however, Kant saw the slow progress of mankind from an original state of nature to a state in which reason guides the moral self-determination of man. This progress cannot be proved, for too many facts seem to contradict it; but Kant accepts the belief in progress as a demand which, when acted upon, will lead to its realization. Humanity is thus an ideal to be achieved.

The relation between nations is to be governed by law. Wars are to be conducted in such a way that it is always possible to establish a peace which will not lead to new wars. But since recurring wars are devastating, means ought to be sought to avoid them. Kant believed that "perpetual peace" can be achieved through a League of Nations which unites the nations of the world under law in the same way in which a state unites its citizens. The only stumbling block to the full realization of this goal Kant saw in "the false pride of national sovereignty," which can be overcome only by education in world citizenship. Moreover, only through education can one become a human being in the full sense. The process of this education involves (1) that the natural "wildness" of the child be restrained through discipline, (2) that the child's mind be cultivated through instruction and training, (3) that the child be prepared for communal living, and (4) that his moral development be assured through the proper conditioning of his will. The goal of all education is the enlightened moral person. But "the heaven of childhood" is not to be clouded.

In the field of aesthetics, which deals with the beautiful and the sublime, judgments of taste also claim universal validity. Kant shows in Part I of the *Critique of Judgment* that the ground of these judgments, being our experience of pleasures and displeasures, is subjective. The judgments, nevertheless, claim objective validity. Kant takes this to mean that they constitute a "command" to agree with them; that they presuppose an aesthetic sense shared by all which makes communication in aesthetic matters possible and thus raises aesthetic experience beyond the sphere of the merely private and subjective. But the objects themselves are not beautiful or sublime; we ascribe these qualities to them because of the effects which they have upon us. The effects depend, however, on certain qualities of the objects. In the case of the beautiful, these qualities call forth the harmonious interplay of our imagination and understanding. In the case of the sublime, they lead to a pleasing resolution of an opposition of our sensibility and reason. In a manner of speaking we may say that the objects in question are "adjusted to" our faculties of aesthetic experience. They are in this sense "purposiveness without (external) purpose," and this purposiveness without utilitarian purpose which induces aesthetic enjoyment is the proper object of aesthetic evaluation. The emotional and the rational aspects of the aesthetic experience have thus both been incorporated into Kant's theory. Ultimately, however, the sensuous-intuitive object of aesthetic experience becomes for Kant a symbol of the morally good, a sensuous representation of a moral ideal.

When the moral laws are conceived as if they were imposed by a divine Creator, then a turn into the religious has been taken. Religion is thus for Kant but the "apprehension of all duties as divine commands." The facts of moral consciousness constitute the only admissible foundation for religion. The moral law is not compelling because it is God-given, but because it is compelling it can be interpreted as if it were of divine origin. There are, however, also other considerations which lead to religion. Thus, the categorical imperative remains incomprehensible in a completely determined nature; religious faith may here achieve a reconciliation. Also, the moral law demands unconditionally the fulfillment of duty, but the nature of a sensuous being (like man) demands happiness. Justice demands that the two be ultimately reconcilable, the harmony of virtue and happiness being the highest good. The ideal of the highest good thus presupposes a moral world order which, in turn, presupposes a rational will as Creator. The existence of God is therefore, for Kant, a "postulate of practical reason." As such it remains a matter of faith, not of proof. The pragmatic test of this faith is its effectiveness in the moral attitudes of men. The various positive religions are historico-traditional adumbrations of this basic "religion of reason," and are significant only to the extent to which they embody the moral law and have moral consequences in the actions of men. Christ is thus the ideal of perfect humanity, and faith in Christ is faith in the power of this ideal. Everything else in Christian theology is unimportant or is but a means by which a priestly class, which presumably is in the privileged possession of the means of dispensing grace, attempts to control the faithful. The achievement of a pure religion of reason is the task of the future. It presupposes the shedding of the traditional dogmatism of all

positive religions. This goal Kant envisioned in *Religion Within the Limits of Pure Reason*.

The reaction to Kant's philosophy was immediate and strong. The disciples of Christian von Wolff, in particular, were quick to respond. Johann August Eberhard founded two periodicals, the *Philosophisches Archiv* and the *Philosophisches Magazin*, devoted to the refutation of Kant. At Marburg, Johann Bering was forbidden to lecture on the new philosophy. Empiricists, such as Adam Weishaupt, Christoph Meiners, Friedrich Selle, and Dietrich Tiedemann, attacked Kant's "rationalism." Moses Mendelssohn attempted to salvage the traditional proofs for the existence of God. Christoph Friedrich Nicolai wrote pamphlets against Kant. In the field of religion a strong reaction to Kant's "intellectualism" developed. It was spearheaded by Johann Schultz and Johann Georg Hamann at Königsberg, and vigorously supported by Johann Gottfried von Herder and Friedrich Heinrich Jacobi. Perhaps the most formidable early opponent of Kant's philosophy was Gottlob Ernst Schulze at Göttingen, who had a profound influence upon Arthur Schopenhauer.

The younger philosophers, however, turned more and more to Kant as their intellectual leader. At Halle they published the *Annalen der Philosophie und des Philosophischen Geistes*, which was devoted to a defense of the Kantian system. At Jena, Christian Friedrich Schmid published his *Wörterbuch zum leichteren Gebrauche der Kantischen Schriften* (1788); and here also the *Neues philosophisches Magazin zur Erläuterung des Kantischen Systems* lived up to its name. Jena soon became the center of Kantian idealism and of its development into Absolute idealism. Here Karl Leonhard Reinhold, in his *Briefe über die Kantische Philosophie* (1786-1787), gave direction to that development; but here also Johann Christoph Friedrich von Schiller, Johann Gottlieb Fichte, Jakob Friedrich Fries, Friedrich Wilhelm Joseph von Schelling, and Georg Wilhelm Friedrich Hegel made their important contributions.

Southern California.

KANTARAWADI or **KANTARAWADDY**, kân'tu-râ-wâ-dē, one of the former three independent Karenni States of Upper Burma (the other two being Bawlake and Kyebogyi) having an area of 3,161 square miles. Its capital was Loikaw. The countryside is mostly hilly

jungle in which teak is cut. There is some rice growing. Becoming a constituent part of the Union of Burma in 1947, with its sister states it formed a part of the Karenni State, more recently renamed Kahyah States. The population of Kantarawadi in the 1941 census was 30,677.

KANTEMIR. See CANTEMIR.

KANTOR, kân'tēr, MacKinlay, American author: b. Webster City, Iowa, Feb. 4, 1904. He began as a journalist with the *Webster City Daily News* (1921-1924), later living in Chicago and elsewhere. In 1934 he published *Long Remember*, a novel of the Gettysburg campaign, his first success, which was followed by *The Voice of Bugle Ann* (1935), probably the most widely read of his works. After 1934 he also wrote scripts for motion pictures, and was the author of the original story for the film *The Best Years of Our Lives*. His other books include *Diversey* (1928); *El Goes South* (1930); *The Jaybird* (1932); *Arouse and Beware* (1936); *The Romance of Rosy Ridge* (1937); *The Noise of Their Wings* (1938); *Valedictory* (1939); *Cuba Libre* (1940); *Happy Land* (1943); *Midnight Lace* (1948); *The Good Family* (1949); *Signal Thirty-two* (1950); *Don't Touch Me* (1951); *Warwhoop* (1952); *The Daughter of Bugle Ann* (1953); and *Andersonville* (1955). He was a war correspondent in Korea in 1950, and from 1951 to 1953 served as technical consultant with the United States Air Force.

KANTOROWICZ, kân-tō-rō'vich, Hermann, German jurist and scholar: b. Posen (Poznan), Nov. 18, 1877; d. Cambridge, England, Feb. 12, 1940. He was educated at the universities of Berlin, Geneva, Heidelberg and Munich. From 1908 to 1913 he taught at the University of Freiburg, later serving with the German Army during World War I. From 1923 to 1929 he was an expert on the Reichstag committee to investigate the origin of the war, and was widely known for his assertion that the belief of the imperial government that the empire was being "encircled" by Great Britain was a basic cause of World War I. From 1929 until Hitler came to power he was a professor at the University of Kiel, being dismissed in 1933. Thereafter he lectured in New York at the New School for Social Research and at City College, and in England at Oxford and Cambridge. His works include *Der Kampf um die Rechtswissenschaft* (1906) and *Dictatorships* (1935).

KANUKU MOUNTAINS, kúnōō'kōō, in southern British Guiana. A spur of the Guiana Highlands, they extend about 80 miles eastward from the Rio Branco (Brazil) border just north of Lat. 3° N. The mountains are situated in a sandstone plateau district of about 2,500-foot elevation traversed by the Rupununi River, a major tributary of the Essequibo. A rich savanna area, it is well suited to cattle raising and one of the few parts of the country's interior not covered by a tropical rain forest of one kind or another. There are said to be uranium ore deposits in these mountains.

KANURIS, kâ-nōō'rîz, certain Negroes of the Sudan and especially of Bornu, Kanem, and Chad parts of the country. They number about 3,500,000, most of whom are said to have an admixture of Hamite blood. Their features

are broad, flat and decidedly Negroid. They belong to the Mohammedan faith.

KAOLIN, kă'ô-lin, or **KAOLINE**, certain white-burning clays of a residual nature formed by the wearing away of granite, pegmatite, schist, limestone or feldspathic quartzite. It is a soft clay of low plasticity and very refractory when burned. There is a large production of kaolin in Europe, where it is mined principally in England, France and Germany, one of the richest mining districts being in Cornwall, England. Consult Ries, H. and Bayley, W. S., *High-Grade Clays of the Eastern United States* (Washington 1922).

KAPITAL, DAS, the largest and most comprehensive work written by Karl Marx, the ideological founder of Communism. The first volume of *Das Kapital* discusses goods and money, and was first published in 1867. The second and third volumes, devoted to circulation of capital and the process of capitalist production, first appeared in print in 1884 and 1890, after Marx's death. The three volumes constitute a profound and well-documented humanitarian criticism of the faults of the profit system, as it existed in British economy of the mid-19th century during the early throes of the Industrial Revolution. Marx's main thesis was that the modern capitalist form of society tends to make the rich richer and the poor poorer. He did not foresee that in the subsequent 20th century, both the governments and organized labor of well-developed capitalist countries, as well as businessmen themselves, have eliminated many of the faults of which he complained.

Despite being somewhat out-of-date, *Das Kapital* has had, and continues to have, more influence in world economic thought than possibly any other economic book. Even though disagreeing with its conclusions, capitalist economists consider it one of the best economic studies of all time. Most of the strong socialist parties of the present day would take their views of society from *Das Kapital*.

However, there is a sharp difference of opinion between modern socialists and Communists in interpreting Marx. Moderate socialists, such as the British Labour Party, accept the ideas set forth by *Das Kapital*, but reject certain other writings by Marx, such as the *Communist Manifesto*, which give a program of action to overthrow capitalism by force. In contrast, the Communists consider both *Das Kapital* and the *Communist Manifesto* as part of an organic whole, the former expounding the theory, and the latter the method to put theory into action.

Das Kapital, though primarily an attack on the English economy of Marx's day, also contains Marx's complete philosophy of history, and from that viewpoint is often studied by historians of philosophy with little interest in economics. Political scientists also read *Das Kapital* extensively. The present government of Soviet Russia uses the book almost as a bible.

KAPOK, kă'pök, a kind of silk cotton. See SILK-COTTON TREE. -

KAPP, kâp, Friedrich, German biographer and historian: b. in Hamm, Westphalia, April 13, 1824; d. Berlin, Oct. 27, 1884. He left Germany at the outbreak of the Revolution of 1848,

and settling in New York in 1850 took active part in American politics. In 1860 he was a presidential elector and in 1867 commissioner of immigration. Returning to Germany in 1870, he entered the Reichstag in 1872. His works, which mainly refer to the United States, include *American Soldier Traffic by German Princes* (1864); *German Emigration to America* (1868); *History of the German Migration into America* (1867); *Frederick the Great and the United States* (1871); *Aus und Über Amerika* (2 vols., 1876).

KAPP, Wolfgang, German politician, son of Friedrich Kapp: b. in New York, July 24, 1868; d. Berlin, June 12, 1922. He was a founder of the Fatherland Party and, in 1918, a member of the Reichstag. Heading a revolt (the "Kapp putsch"), he supplanted the republican government in Berlin, March 13, 1920, but when foiled by a general strike of labor he fled to the country, March 17. He was arrested on return from exile in Sweden, April 1922, and died in prison awaiting trial for treason.

KAPPEL, kâp'êl, town in Zürich Canton, Switzerland; noted as the scene of the death of the Protestant reformer Zwingli in 1531. The place contains a monument to his memory. Pop. about 700.

KAPTCHAK. See KIPTCHAK.

KAPURTHALA, kâ-poor'tâ-lâ, India, one of the union of Sikh states, inaugurated July 15, 1948. It lies within the Punjab province of India, the capital being about 60 miles southeast of Lahore. The area is 645 square miles, and the population numbers 378,380 (1941). Cereal crops, cotton, sugar, and tobacco are exported. The maharaja is the vice president of the Sikh states for life.

KARA-KALPAK, kâ-râ-kâl-pâk', **AUTONOMOUS SOVIET SOCIALIST REPUBLIC**, or **KARAKALPAKIA**, an administrative subdivision of the Uzbek SSR, Soviet Central Asia, west and south of the Sea of Aral. The name means "Black Bonnet," referring to the shaggy sheepskin caps of the inhabitants. The area is 79,631 square miles; the population comprises Kara-Kalpaks, Uzbeks and Kazaks. The capital, Nukus, is situated on one of the numerous irrigation canals; other towns are Turtkul, Chimbai and Takhta Kupyr. Stock raising is the main industry. Fleece of Karakalpakia's astrakhan sheep is highly valued in world markets. Cotton and alfalfa growing are of increasing importance. Russia occupied the region in 1867. After the Bolshevik Revolution the Karakalpak ASSR was incorporated with Uzbekistan. Pop. (1941 est.) 436, 995.

KARA KUM, kâ-râ' kôom' (Russ., black sands), a desert of Soviet Central Asia. It lies mostly within the Turkmen SSR, and on the northwest extends into the Kazak SSR.

KARA SEA, an arm of the Arctic Ocean indenting the north coast of Siberia, between Nova Zembla and Yamal Peninsula; it is about 300 miles long and 170 miles wide.

KARACHAI, kâ'râ-chî', formerly an autonomous region in the Ordzhonikidze Territory of

the Soviet Union, at the headwaters of the Kuban in the Caucasus Mountains. It was dissolved for treasonable activities in World War II. Its area was 3,821 square miles, and the estimated population (1941) was 157,541.

KARACHI, ká-rá'chí, capital and chief seaport of Pakistan, in Sind Province (in the Federal Capital Area administratively excluded from Sind), on the Arabian Sea between the Baluchistan border and the delta of the Indus River, which here forms a backwater behind Manora Point. The city has water and rail connections with Hyderabad and the valley of the Indus, and also has excellent air communications with other cities of Pakistan, India, and Europe. The main industries are cementmaking and fishing; chief exports are wheat and raw cotton. Karachi was made the capital of Pakistan in 1947 because of its defensible location and also because its well developed communications network facilitated development of close economic and cultural relations with Moslem nations of southwest Asia. Pop. (1951) 1,005,000.

KARADZIC, ká-rá'jê't-y', or **KARAJICH**, **Vuk Stefanović (Stefanovich)**, Serbian scholar: b. Tršić, Serbia, Oct. 26/Nov. 7, 1787; d. Vienna, Austria, Jan. 26, 1864. He modernized the old Slavic alphabet and thus reformed the literary language of Serbia. He published a Serbian-German-Latin lexicon (1818), a collection of Serbian folk tales (1821) and folk songs (1823), a translation of the New Testament into Serbian (1847), and other important works.

KARAGANDA, ká-rá-gán-dá', city, Soviet Union, in Kazakh Soviet Socialist Republic, capital of Karaganda Oblast, and the center of the Karaganda coal basin, is 120 miles southeast of Akmolinsk, on the railroad linking Petropavlovsk with Balkhash. Sawmilling, and the manufacture of mining equipment, bricks, and cement are the chief industries. Pop. (1947 est.) 220,000.

KARAGEORGE, kár-á-jôrj'; or **KARADJORDJE**, ká-rá-dyôr'dyê; (also **CZERNY DJORDJE**, chër'ní dyôr'dyê; or Serbian, **CRNI DJORDJE**, tsûr'nê), all meaning Black George; (original name **GEORGE PETROVIĆ**, pè'trô-vêt-y'), Serbian leader against the Turks and founder of Karageorgevich dynasty: b. Viševac, Serbia, 1752/1762; assassinated at Smederevo, July 13, 1817. He served in the Austrian Army (1788-1791), became leader of the Serbian rebellion against Turkish rule (1804) and was elected hereditary military leader in 1808, but was defeated in 1813 and fled to Hungary. Returning to Serbia in 1817, he was slain in his sleep by members of a rival political faction.

KARAGEORGEVICH, kár-á-jôrj'jê-vich; Serbian, **KARADJORDJEVIC**, ká-rá-dyôr'dyê-vêt-y', the Serbian dynasty founded by Karageorge in 1808. Its rulers were Prince Alexander (r. 1842-1858); King Peter I (r. 1903-1921); Alexander (regent 1914-1921; king of Yugoslavia 1921-1934); Peter II (r. 1934-1941).

KARAISKAKES or **KARAISKAKIS**, ká-rá-ê-ská'kyês, **Georgios**, Greek leader in war for independence from Turkey: b. Agrapha, Greece, 1782; d. Athens, May 4, 1827. He joined Ali Pasha, of Janina, in his warfare against the

Turks, but eventually transferred allegiance. In turn, he deserted the Turks, when the Greeks revolted against them in 1821, and became one of his country's principal leaders in the struggle that followed. Karaïskakes participated in the victorious defense of Missolonghi during 1822-1823, and was one of the unsuccessful defenders of the town in 1825-1826. He was killed during the Turkish attack on the Acropolis.

KARAITE or **QARAITE**, ká-rá-it (From Ar. *qur'an*, to read), the name of a religious doctrine which, like Christianity, originated in a Middle Eastern Jewish environment and later spread among other peoples. It was formulated at Baghdad in the 8th century by the Hebrew, Anan ben David, in collaboration with the Moslem, Aba (Abu) Hanifa (q.v.), the theologian and reformer whose sect, most esteemed of the four major schools of orthodox Islam, has many adherents in modern Turkey. Down to modern times religious Jews have repudiated Karaism much as they repudiated early Christianity.

Karaism first gained wide attention in 767 when the exilarch (official leader of the Jewish community in Babylonia) summoned Anan ben David, a defeated candidate for the exilarchy, before the Baghdad tribunal demanding his execution on the ground that the new doctrine he professed was a Jewish sect. Conviction on such a charge always involved the death penalty, for Almanzur (q.v.), Abasside caliph of Baghdad, tolerated in his realm only fundamental orthodox religions and executed sectarians. The case was tried before Arab judges presided over by Almanzur. The plaintiff's demand was unanimously rejected, and the erudite caliph, becoming interested in Anan's religious ideas, bestowed on him and his followers his personal and official protection. Later the Orthodox Christian Church followed the Islamic example in protecting the Karaites. Significantly, Anan and his most notable followers wrote their works in Arabic.

Karaite doctrine acknowledges one source of the Law: the Old Testament of the Bible in the version adopted by the Christian church. It rejects the Talmud and rabbinical interpretations. Anan's legacy to his adherents was the precept: "Search thoroughly the Scriptures and do not rely upon my opinions." Thus he enhanced the influence of the Bible among them and helped to develop their powers of criticism. Like Jesus Christ, he taught that the Bible should be interpreted through its moral, rational and symbolic meanings, and not with the strict literalness prescribed by the Jews. Karaite prayers are composed on the basis of Biblical texts.

Karaism recognizes Jesus and Mohammed as great prophets. Its dogmas and principles have been borrowed both from Christianity and Mohammedanism. For example, the commandment, "Thou shalt love thy neighbor as thyself," was taken from the Christians; belief in transmigration of the soul (metempsychosis) was borrowed from the pre-Islamic Arabs; while from Islam itself was borrowed the determination of feast days by direct observation of the moon, the status of women and marriage, and numerous rites and customs such as the obligation to remove the shoes on entering a *kenassa* (church), embellishment of *kenassas* with carpets, and the fountains adjoining them for ablutions.

King Charles XI of Sweden (1655-1697) became interested in the tenets of Karaism. On

several occasions he sent theologians to Lithuania, where dwelt a small colony of the sect, to study their creed. Finally he invited two learned Karaites, fluent speakers of Latin, to visit him in Sweden. His son, Charles XII (1682-1718), also corresponded with the Karaites, seeking further information on their beliefs.

The Karaite ecclesiastical organization is independent and its spiritual sovereignty is recognized by laws of the various countries inhabited by Karaites. The head of the church, called the grand khan and elected for life, is likewise the political representative of his people. At present (1949) the grand khan is S. M. Schapschal (elected 1914), professor of Turkish language and history at the University of Wilno, Lithuania. Before the Bolshevik revolution he occupied the same chair in the Imperial University of Petrograd.

Priests of the Karaite Church are trained in the Karaite Ecclesiastical Seminary of Alexander at Eupatoria in the Crimea.

The Russian Karaites comprise an autochthonous population, all of Crimean descent. Their creed was brought to the Crimea in the 9th century by a disciple of Anan, I. Sangari whose tomb was found in an ancient Crimean Karaite cemetery. At that time the Crimea's southern coasts comprised a Germanic state, established in the 3d century by the Goths and called Gothia; it was chiefly the inhabitants of the fortress town of Kirkor (Qyrq-ier) in this region who adopted the Karaite confession. These converts were primarily of Turkish stock and had lived in the peninsula from time immemorial. Thousands of caverns, excavated in the rocks on which the Kirkor fortress (now a ruin east of the city of Bakhchisarai) was built, afford one of the most remarkable archaeological curiosities in the Crimea.

The Karaite language is an ancient Turkish dialect of the northwest. The dress, customs, manners, and legends of this people are similar to those of other Turkish peoples. Having translated the Bible and their prayers into their native tongue, they sealed the original versions as holy relics in the walls of kenassas. Thus, in the 19th century the oldest existing manuscript version of the Bible (916 A.D.) was discovered in the ruins of a kenassa, and deposited in the Imperial Library of St. Petersburg under the title *Codex Babylonicus Petropolitanus*.

Although the number of Karaites in the Crimea has always been small compared with the total population, which sometimes numbered a million inhabitants, they long played a preponderating role by reason of their honesty, hospitality, and exemplary behavior. When the Tatars became masters of the country in the 13th century, they confided to the Karaites important administrative posts, including responsibility for coining money and collecting taxes. In his campaign on the lower Dnepr in 1396 Witowt (Vytautas), grand duke of Lithuania, disastrously defeated the Tatars and their ally, the Karaite khan of Kirkor. Duke Witowt's Crimean captives included 500 Karaite and 10,000 Tatar families whom he brought back with him to Lithuania. Later, he was so well satisfied with his new subjects that he constituted his personal guard of Karaite soldiers. Down to present times descendants of these captured Karaites and Tatars have lived in mutual amity near the city of Troki, Lithuania, where they comprise a farming com-

munity. Of these, the Karaites number about 600 persons. They preserve not only their ethnic physical characteristics but the ancestral religion and language.

In the 17th century a Karaite, Eliasch Karaimovich, was elected hetman (leader) of the kossacks of Zaporozhe on the Dnepr, an honor rarely accorded a foreigner.

In 1783 the Crimea was annexed to the Russian Empire, and since invasions of the peninsula were thereafter no longer to be feared the Karaites abandoned the fortress of Kirkor and settled in the modern cities of the region. The Russians granted them full civic rights and even some privileges. Many became officers of the Russian Army. Karaites were elected mayors of nearly all the Crimean cities and, after the establishment in Russia of parliamentary government (1905), a Karaite, agricultural engineer S. S. Krymm, was regularly re-elected deputy for the Crimea.

Horticulture and agriculture are the chief occupations of the Karaites. Some are well educated and have contributed much to the development of farming in their districts.

The Karaites have never constituted a large group, for since the 10th century they have admitted no new members and even descendants of mixed marriages have been excluded. According to the last census, made in 1910, they numbered about 13,000, almost all living in Russia. Since the Bolshevik Revolution (1917) their numbers in the USSR have dwindled. Those remaining there have been dispersed throughout different Soviet Republics. Some hundreds emigrated to western Europe and the United States.

PASTAC.

KARAJICH, Vuk Stefanovich. See KARADZIC, VUK STAFANOVIC.

KARAKORUM, kă'ră-kô'rûm, or **KARAKORAM**, a range of mountains in the northwest Himalaya (q.v.) mountains.

KARAKORUM (Mongol, *kara*, black, *ku-ren*, camp), the name of two ancient cities in northern Mongolia. The older city, also called Holin, was about 210 miles southwest of Urga near the Orkhon River, and was founded in the 8th century as capital of the Uighur kingdom. The later Karakorum, 15 miles to the southeast, was capital of the Mongol Empire from 1234 to 1409. Marco Polo visited it in 1275. At one time it was connected by canals with the Jir-manta River.

KARAKUL, kăr'ă-kûl, or **KARAKULE**, a breed of broadtail sheep native to the province of Bukhara, USSR, and suited to semiarid regions. The body is narrow and the brown fur of the mature animal is coarse and wiry. Newborn lambs have tightly curled glossy black coats;

their pelts are called variously karakul, broad-tail, astrakhan, and Persian lamb. Karakul sheep were first imported into the United States in 1908.

KARAMZIN, kŭ-rŭm-zyĕn', **Nikolai Mikhailovich**, Russian writer: b. Mikhailovka, Orenburg (now Chkalov Oblast), Russia, Dec. 1, 1766; d. at Taurida Palace, St. Petersburg (now Leningrad), May 22, 1826. He was much influenced by English writers and by the teachings of Jean Jacques Rousseau, and his writings broke new ground for Russian literature. He founded the *Moscow Journal* (1790) in which appeared his *Letters of a Russian Traveler* (1790-1801) and his novels *Poor Liza* (1792) and *Natalia, the Boyar's Daughter* (1792). He also founded *The European Messenger* (1802). His most famous work was *History of the Russian State*, to 1613 (1819-1826).

KARAULI, kâ-rou'li, city, Republic of India, in Rajasthan State (1949), 80 miles southeast of Jaipur, in a farming area raising millet, gram, wheat, and cotton. It was the capital of the former princely state of Karauli. Pop. (1941) 19,177.

KAREL, kâr'ĕl, **Rudolf**, Czech composer: b. Pilsen (Plzen), Bohemia, Czechoslovakia, Nov. 9, 1880; d. Teresin, March 3, 1945. His works show skillful use of variation and a tendency to polyphony. Among them are the opera *Ilse's Heart* (1909); *Symphony in D Minor* (1911); and the symphonic poems *Ideals* (1909; 1929) and *Demon* (1911).

KARELO-FINNISH SOVIET SOCIALIST REPUBLIC, kâ-rĕ'lô-fin'ish (KARELIA), a constituent republic of the Soviet Union, bounded north, east, and south by Russian Soviet Federated Socialist Republic, west by Finland. It has an area of 68,900 square miles and is wooded and hilly, with numerous lakes, the largest being Top, Seg, Vyg, and Onega. The chief industries are lumbering and paper and pulp milling; building stone (especially granite and marble) is quarried; mica and iron are mined. The railroad from Leningrad to Murmansk crosses the republic, and a canal links Belomorsk on Onega Bay of the White Sea with Povenets on Lake Onega. Agriculture consists mainly of dairy farming and the raising of fodder crops. Petrozavodsk (pop. 80,000) is the capital. The Karelians are a Finnish people. Pop. (1947) 600,000.

KARIKAL, kâ-rî-kâl', a French enclave within Madras State, Republic of India, on the Coromandel Coast, Bay of Bengal, is an agricultural area of 52 square miles raising rice, millet, sugarcane, tobacco, and coconuts. The capital is Karikal (pop. 1952 est. 24,700), officially a free city since 1947. Acquired by the French in 1739, occupied by the English in 1803-1814, the settlement was returned to French authority in 1817. Pop. (1946) 70,541.

KARLFELDT, kârl'fĕlt, **Erik Axel**, Swedish poet: b. Folkärna, Dalarna (Dalecarlia), Sweden, July 20, 1864; d. Stockholm, April 8, 1931. A graduate of the University of Uppsala, he was a member of the Swedish Academy (1904) and its secretary from 1912. The Nobel Prize

for literature was awarded him posthumously in 1931. His poetry includes *Vildmarks-och kärleksvisor* (*Ballads of the Woodlands and of Love*, 1895); *Fridolins visor* (*Fridolin's Ballads*, 1898); *Fridolins lustgård och dalmålningar på rim* (*Fridolin's Pleasure Garden and Dalecarlian Frescoes in Rhyme*, 1901); *Flora och Pomona* (1906); *Flora och Bellona* (1918); *Hörsthorn* (*Autumn Cornucopia*, 1927).

KARLI, kâr'li (also KARLA; KARLE), village, Republic of India, in Poona District, central Bombay, is famous for its 1st century carved rock cave temples. Pop. (1941) 634.

KARLOVAC, kâr'lô-vâts (Ger. KARLSTADT, kârl'shtât), city, Yugoslavia, capital of Karlovac Oblast, in the Pokupje region of northern Croatia, 30 miles southwest of Zagreb. It has foundries, lumber mills, machine shops, and manufactures of textiles, chemicals, and leather goods. Pop. (1948 est.) 23,885.

KARLOVCI SREMSKI, kâr'lôv-tsĭ srĕm'skĭ (Ger. KARLOWITZ, kâr'lô-vĭts), village, Yugoslavia, in Vojvodina, northern Serbia, is 6 miles southeast of Novi Sad, on the Danube River, in a vineyard and wine-making region. Here in 1699 a famous treaty of peace was signed between Austria, Turkey, Venice, and Poland. (See PEACE TREATIES—*Carlowitz*.) Pop. (1948) 5,670.

KARLOVY VARY. See CARLSBAD.

KARLSBAD. See CARLSBAD.

KARLSKRONA, kârls-krôō'nâ (CARLSKRONA), city, Sweden, capital of Blekinge County, 100 miles northeast of Malmö, on the Baltic Sea. It is a naval and air base, founded 1680. The chief industries are shipbuilding, granite quarrying, brewing, sawmilling, metalworking, and the manufacture of clothing and naval supplies. Pop. (1950) 30,997.

KARLSRUHE, kârlz'rôō-ĕ, or **CARLSRUHE**, city, German Federal Republic (West Germany), former capital of Baden and since 1945 administrative center of North Baden, is 32 miles south of Mannheim and 4 miles east of the Rhine River, with which it is connected by canal. It has an airport, railroad repair shops, and factories making gas and electric stoves, tools, machinery, and soap. Other industries are food processing, brewing, paper milling, printing, and pottery making. Pop. (1950) 198,014.

KARLSTAD, kârl'stât, or **CARLSTAD**, city, Sweden, capital of Värmland County, on Tingvalla Island and the north shore of Lake Vänern, has shipyards, lumber, pulp, and textile mills, and manufactures of chemicals, clothing, matches, leather goods, and fishing gear. The treaty ending the union of Sweden and Norway was signed here in 1905. Pop. (1950) 35,651.

KARLSTADT. See KARLOVAC.

KARLUK, kâr-lûk', village, Alaska. See KODIAK.

KARMA, kâr'mâ, a Sanskrit word meaning action or work. In Buddhism, Hinduism, and Vedanta (qq.v.) it has the meaning of causality

in the sense of every deed causing a sequence of good or evil in individual experience.

KARMAN, kār'mān, Theodore von, Hungarian-American aeronautical engineer: b. Budapest, Hungary, May 11, 1881. He was educated at the Royal Technical University, Budapest, and at the University of Göttingen. In 1930 he became director of the Guggenheim Aeronautics Laboratory at California Institute of Technology, and in 1945 director of the Scientific Advisory Board of the United States Army Air Force. He developed lighter and stronger aircraft fuselages, and did important research in supersonic aerodynamics and guided missiles. Von Kármán became a United States citizen in 1936.

KARMATHIANS, kār-mā'thī-ānz, a former Islamic sect founded by Hamdan Karmath in Iraq about 877, based on the teachings of the Ismailite Shi'ites and opposed to the orthodox Moslems and the caliphs of Bagdad. They had disappeared by the middle of the 11th century.

KARNAK, kār'nāk, village, Egypt, in Qena Province, on the east bank of the Nile River, one mile northeast of Luxor. It contains the ancient temple of Amen, famous for its hall of columns. Pop. (1947) 10,865. See THEBES.

KAROK, kār'rök (Indian KARUK, meaning "upstream"), the tribal name of the Quoratean family of American Indians formerly living on the Klamath River in northwestern California.

KAROLYI, kār'rō-lyi, COUNTS, a family of Hungarian nobility prominent in the history of Austria-Hungary. SÁNDOR (1668-1743), grandson of BARON MIHÁLY KAROLYI, was the first count (1712). COUNT MIHÁLY KAROLYI (b. Budapest, March 4, 1875) was president of the Hungarian Republic from January to March 1919, when he relinquished the office and went into exile. (See HUNGARY—History.) He returned to Hungary in 1946, and in 1947 was minister to France. He retired in 1949.

KARPATOS, kār'pā-thōs (ancient CARPATHUS or CARPATHOS; Ital. SCARPANTO, skār'pān-tō), island, Greece, in the Dodecanese group, 30 miles southwest of Rhodes, in the Aegean Sea. It is 30 miles long, from 2 to 6 miles wide, and is mountainous. Farming and fishing are the chief occupations. Pop. (1951) 7,396.

KARPELES, kār'pā-lēs, Gustav, Jewish literary historian: b. Eiwano-wits, Moravia (then part of Austria), Nov. 11, 1898; d. Bad Nauheim, Germany, July 21, 1909. He is best known for his *History of Jewish Literature* (1886), and his critical writings on Heinrich Heine.

KARPINSKI, kār-pēn'y'-skē, Franciszek, Polish poet: b. Holoskow, Galicia, Poland, Oct. 4, 1741; d. near Grodno, Sept. 16, 1825. He was noted for his idyllic and religious poetry.

KARR, kār, Jean Baptiste Alphonse, French writer: b. Paris, France, Nov. 24, 1808; d. Saint-Raphaël, Var Department, Sept. 29, 1890. He became editor of *Figaro* in 1839 and in the same year began publishing his satirical monthly pamphlets *Les Guêpes* (*The Wasps*). He also founded *Le Journal* (1848), but his po-

litical views offended Louis Napoleon and about 1855 he retired to the vicinity of Nice and devoted himself to gardening. His first and most celebrated novel was *Sous les tilleuls* (1832); other works included *Clotilde* (1839); *Geneviève* (1846); *la Famille Alain* (1848); *Lettres écrites de mon jardin* (1853); *Histoire d'un pion* (1854); *Au bord de la mer* (1860); *le Credo du jardinier* (1875).

KARRER, kār'ēr, Paul, Swiss chemist: b. Moscow, Russia, April 2, 1889, of Swiss parents. In 1892 his family returned to Switzerland, where he was educated at the University of Zurich. In 1919 he became professor and director of the university's Chemical Institute. Noted for his pioneer research on the carotenoids and flavins, and vitamins A and B₂, in 1937 he shared the Nobel Prize in chemistry with Walter N. Haworth of Great Britain.

KARROO, kā-rōō', a name adopted from a Hottentot word meaning dry or waterless, and designating a series of plateaus in the Union of South Africa. The three largest karroos are the North or Upper Karroo or High Veldt in Orange Free State; the Great or Central Karroo (2,000 to 3,000 feet elevation), and Little or Southern Karroo (1,000-2,000 feet), both in Cape of Good Hope Province and having a combined area of more than 100,000 square miles. They are mostly semi-arid grazing land supporting large herds of sheep and goats, but are fertile where irrigation is possible. Extensive areas known as karroo beds contain South African diamonds, fossils, and volcanic remains.

KARS, kars (ancient CHORSA), town, Turkey, capital of Kars Province, is located on the Kars River, 110 miles northeast of Erzurum, at an altitude of 5,750 feet. The province (7,107 square miles in area) is heavily forested and has natural resources of arsenic, some gold, and lignite; but agriculture and stock raising are the chief occupations. Town and province, once part of Armenia, were captured by Turks, Mongols, and Russians in turn, finally becoming part of Turkey by treaty in 1921. Pop. (1950) province, 409,138; town, 20,524.

KARSHI, kār'shī (Bek-Bum, 1925-1937), city, Soviet Union, capital of Kashka-Darya Oblast, in Uzbek Soviet Socialist Republic, on the Kashka-Darya River, 250 miles southwest of Tashkent. Industries are distilling, food processing, metalworking, and wool washing. Pop. (1932 est.) 20,400.

KARST, kārst (Ital. CARSO; Serbo-Croatian KRAS), a limestone plateau in the Dinaric Alps, northwestern Yugoslavia, characterized by caves and pits often of great extent, drained by underground streams. Karst topography designates similar regions in which the surface is marked by sink holes while drainage is chiefly underground through caves, the porous nature of the limestone allowing water to seep through and form underground streams.

KARTIKEYA, kār-tī-kā'yā, or SKANDA, the Hindu god of war to whom is attributed a miraculous birth without human medium or agency. According to the Sanskrit legends, the seed of the god Siva passed through fire

into the sacred waters of the Ganges. Six nymphs bathing in the water conceived and bore a son each. By some supernatural agency these children were united into one who retained six faces. This six-faced hero child became the leader of the embattled heavenly hosts; yet notwithstanding his warlike prowess and his military renown, he rides upon a peacock. A legend, evidently of more recent origin, credits him with being the son of Siva, the destroyer, and his wife, Parvati, the mountain-born.

KARUN, *kā-rōōn'*, the only navigable river of Iran, and important as a route to the interior. About 117 miles from the mouth navigation is impeded by the rapids of Ahwaz. Formerly the Karun flowed direct to the sea, but now it traverses an artificial channel leading it into the Shatt-al-Arab, which it joins at Khorramshahr. From the rapids a highway extends to the petroleum fields of the Anglo-Iranian Oil Company.

KARYOKINESIS, *kār-ī-ō-kī-nē'sis*, the process of development of the ovum under the influence of fertilization. See CELL; EMBRYOLOGY.

KASAI, *kā'sī*, a tributary of the Congo, which it enters from the south a short distance above Stanley Pool. It is navigable for hundreds of its total length of some 1,200 miles.

KASBEK. See KAZBEK.

KASHAN, *kā-shān'*, Iran, a city 150 miles south of Teheran, on the ancient caravan route between Kerman and Qum. Among its industries are the manufacture of woolen and silk goods, brass and other artisan work, jewelry, copper vessels and household articles. It is surrounded on three sides by picturesque mountains and is situated at an elevation of 3,190 feet. The district is noted for the quality of its figs and melons. Minerals mined in the vicinity include coal and cobalt. Pop. of Kashan and district (1940) 44,994.

KASHGAR. See SHUFU.

KASHMIR, or **JAMMU AND KASHMIR**, an Indian state north of the Punjab, bounded on the west by Afghanistan, on the north by the Sinkiang Province of China, and on the east by Tibet. Including feudatory territories, the area is 84,471 square miles, and the population (1941) 4,021,616. The upper Indus, with the Gilgit tributary, forms a valley stretching from the southeast to the northeast of the state. Northeast of this valley, and parallel to it, lie the Karakorum Mountains, whence flow the Shyok and the Hunza rivers. The Himalayas lie along the southeast of the state, and southwest of these mountains are the valleys of the Jhelum and Chenab. The Jhelum Valley is the famous "Vale of Kashmir," 80 miles long by 20 miles wide, overlooked by many peaks exceeding 28,000 feet in altitude. Srinagar (pop. 207,787), the capital of the state, lies along both banks of the Jhelum River. The Indus area of Kashmir is populated mainly by nomad shepherds, their trade centers being Ladakh, Baltistan, Gilgit, and Hunza. While the mineral resources of the state have not been fully surveyed, coal, limestone, gypsum, and iron have been found. The principal indus-

try of the people is agriculture; rice, buckwheat, millet, and barley are cultivated. Besides silk weaving, the fleece of the goat is spun for making the shawls for which Kashmir is famous. Carpets of high quality are also manufactured, and wood carving and silverwork are important industries. Prior to the partition of India, large quantities of Kashmir timber were floated down the rivers to supply ties for the Indian railways.

The withdrawal of British authority from India on Aug. 15, 1947 created a tense situation in Kashmir, where a Hindu dynasty ruled a predominantly Moslem population. Both "successor" governments—India and Pakistan—sought the "accession" of Kashmir. Into this already unstable situation came the aftermath of the widespread communal rioting in the Punjab all along Kashmir's southern boundary. Incidents of violence multiplied. Unable to cope with an incursion of Moslem tribesmen from the neighboring North-West Frontier Province in Pakistan, the maharaja of Kashmir "acceded" to India in late October 1947. The government of India thenceforth regarded the whole of Kashmir as legally within the Indian Union. Indian airborne troops turned back the tribesmen from the Vale of Kashmir. In the next few months, India brought much of central and northeastern Kashmir under the control of a government which acted in the name of the maharaja, but was really controlled by Sheikh Mahomed Abdullah who had led the struggle against the autocratic rule of the maharaja before and during World War II. Meanwhile an *Azad* (free) Kashmir government, supported by Pakistan and led by a lawyer from Poonch, Sardar Ibrahim, was asserting its authority in the western and northwestern portions of the state, which were not under Indian military control. This dispute was referred by India to the United Nations on Jan. 1, 1948. A "cease fire" agreement went into force on Jan. 1, 1949 but despite the effort of a United Nations commission, India and Pakistan could not immediately agree on a plan for a plebiscite whereby the wishes of the people concerning Kashmir's status might be ascertained.

KASHMIRI, *kāsh-mē'rē*, an Indo-European language, a dialect of the Indo-Aryan group of the Indo-Iranian subfamily. It is an ancient Sanskrit tongue of Kashmir (q.v.) which has, in the course of centuries, received the addition of many foreign words, principally from Persian and Arabic. Kashmiri is rich in folk tales and mythological lore, most of which have never been collected owing to the fact that the people were, for long, cut off from the art of writing. Most of the literature of the language, which is chiefly modern and of limited extent, is the work of foreigners, among the most prominent of whom are the foreign missionaries; the latter also translated parts of the Bible, hymns and other devotional literature into Kashmiri, through the aid of the Persian alphabet.

KASIMOV, *kā-sé'mōf*, Russia, a city of the Ryazan Region of the RSFSR, 250 miles east of Moscow, on the Oka River. The center of a flax-growing district, it contains spinning and weaving mills, and rope works. In the 15th century it was the chief residence of Kasim Khan, the Tatar leader, who is supposed to have built one of the picturesque mosques of the city. Pop. 12,979.

KASKASKIA, an American Indian tribe of the Algonquian family, formerly occupying a part of southern Illinois. In 1832, the survivors of the race, with the Peorias, removed to Kansas, and affiliated with the Weas and Pianishaws. The four tribes removed to Indian Territory in 1867, and in 1903 scarcely 100 members of the four tribes remained. See **INDIANS**, **AMERICAN**.

KASKASKIA, kās-kās'kī-ā, Ill., a township in Randolph County, on both sides of the Kaskaskia or Okaw River, at its junction with the Mississippi opposite Saint Genevieve, Mo.. A part of it now obliterated was the oldest town in the West, the first permanent white settlement in the Mississippi Valley. Jacques Marquette (q.v.), in 1675, had established a mission among the Kaskaskia Indians near the present Utica, Ill., on the Illinois River; the Jesuits, Marest and Saint Cosme, guided by Tonty (q.v.), removed the mission in 1700 to the Mississippi bottoms three miles from the river, near the Kaskaskia. It thrived greatly, and was not only a large Indian market, but sent produce and furs to New Orleans. Fort Chartres was built there in 1720; eminent French officers and adventurers came thither—as Pierre F. de R. Vaudreuil (q.v.)—and with its gay French life it was named "the Paris of the West." A noted Jesuit college and convent were maintained there. It formed one of the chain of posts by which France was to hem in English colonization; but in 1763 it fell into the hands of the English, who made it their capital in that region. On July 4, 1778 George Rogers Clark (q.v.), with a company of 200 Virginia militia, captured it for the United States by a night attack; this enabled us to claim and retain possession of the Northwest Territory by the peace of 1783, and changed the destiny of this whole region. It remained a leading western town and was the capital of Illinois as a territory (1809) and a state (1818); but on removal of the seat of government to Vandalia in 1819, began to decline. The river steadily encroached on the meadow; and in 1892 united its course with the Okaw, converting a large part of the old site, with most of the ancient buildings, into an island, which in 1899 crumbled into the river after several great floods. North of the junction still remains about a third of the town site, with the foundations of a church and of the capitol building. In 1891 the Illinois legislature appropriated \$50,000 to remove the old cemetery to a point on the bluffs, and a large monument was erected there.

KASKASKIA RIVER, rises in Champaign County, Ill., and flows southwest through Moultrie, Shelby, Clinton, Fayette and Saint Clair counties, finally joining the Mississippi in Randolph County. It formerly entered at Chester, but in 1891 the great river cut away the neck of land at Kaskaskia and joined it there. It is nearly 300 miles long, and navigable to Vandalia, 150 miles. It flows through a fertile rolling country which is part of the Illinois coal field.

KASSA, ká'sā, Magyar name for Kosice (q.v.).

KASSAI. See **KASAI**.

KASSALA, kā-sā'lā, Anglo-Egyptian Sudan, a town 250 miles east of Khartoum, near the frontier of Eritrea. It lies within a fertile re-

gion where cotton is grown on a considerable scale. Established as a military post by the Egyptians in 1840, it was lost by them in the Mahdi's uprising of 1885; recovered by the Italians in 1894, it was restored to Egyptian sovereignty three years later. Pop. 31,210.

KASSEL, or **CASSEL**, Germany, a city of Prussia, capital of Hessen-Nassau, on the Fulda River, 35 miles southwest of Göttingen, and 91 miles north-northeast of Frankfurt. It contains the former electoral palace, an indifferent structure; a handsome museum; the Bellevue palace, which contains a picture gallery; and the noteworthy Church of Saint Martin, having a nave of the 14th and a choir of the 15th century. Industries of Kassel include the manufacture of scientific instruments, metal goods, railroad cars and locomotives, gloves, and pianos. Founded in the time of the Romans, in 913, then known as Chassala, it was the capital of Conrad I. From 1806 to 1813 it was the capital of Westphalia; and after its occupation by Prussian troops in 1866 it became part of Prussia and capital of Hessen-Nassau. Pop. (1939) 217,085.

KASSIMOV. See **KASIMOV**.

KASSITES, an ancient dynastic family of Babylonia who ruled it from about 1761 to 1185 B.C. They were probably the same people as the Cossaeans. The first king of the Kassites was Gandash (1761-45 B.C.), and the list of his successors, with the dates of their kingships, has been ascertained with fair accuracy. In all there were 36 kings, who ruled over Babylon almost 577 years. The records so far recovered and deciphered show, in a fragmentary manner, yet in a most interesting way, many of the activities of this ancient line of Babylonian kings, who played the several parts in many of the historic events of their day which are known to us through the records of other countries. In the 8th century B.C. we find one of their sovereigns making an offensive and defensive treaty with Assyria. According to an account preserved, the daughter of the Assyrian king, Asuruballit I, became the wife of the Kassite ruler Burnaburiash (1381-56), who was on friendly relations with Amenhotep IV (1375-50) of Egypt and with other foreign potentates; with one, at least, of the latter he formed a treaty of friendship. Others of Kassite sovereigns are shown as carrying on wars against neighboring sovereigns; punishing traitors; placing their sons on foreign thrones; and marrying their daughters to friendly potentates, thus strengthening their foreign relations.

KASSON, John Adam, American lawyer and diplomat: b. Charlotte, Vt., Jan. 11, 1822; d. Washington, D.C., May 18, 1910. He was graduated from the University of Vermont in 1842, studied law, was admitted to the bar, and in 1857 moved to Iowa and continued his law practice. He became active in the Republican Party, was a delegate to the national convention in 1860 and chairman of the state committee in the campaign; was assistant postmaster general in 1861-62; and commissioner to the International Postal Congress at Paris in 1863. He was elected to Congress in 1863 and served until 1867; in the next year was elected to the Iowa state legislature, and from 1873 to

1877 was again a member of Congress. From 1877 to 1881 he served as United States minister to Austria-Hungary, and in 1884, after another three years in Congress, he was appointed minister to Germany. During 1885 he represented his country at the Berlin Conference on international interests in the Congo basin of Africa, and he returned to Berlin in 1889 as special envoy of the United States at the conference to settle the status of Samoa. In 1898 he was a member of the Joint High Commission which settled differences between the United States and Canada. His works included *A History of the Formation of the United States Constitution* (1889) and *Information Respecting Reciprocity and the Existing Treaties* (1901).

KASTAMONU, kās-tā-mō-nōō', or **KASTAMUNI**, -mōō-nē, town, Turkey, capital of the province of the same name, near the Gök River, 110 miles north-northeast of Ankara. The town is noted for its manufacture of copper utensils, and also produces textiles, arsenic, hemp, and mohair. Grain, rice, hemp, and apples are cultivated in the province, which is also densely forested and has deposits of coal, lignite, mercury, copper, chromium, and arsenic. Pop. (1950) province, 411,576; town, 13,688.

KASTEL-POMO, one of the three divisions of the Kato (q.v.) Indians.

KASTELORRIZON, kās-tā-lō'rē-zōn (also KASTELLORIZO or CASTELLORIZO; Ital. CASTELROSSO; ancient MEGISTE), island, Mediterranean Sea, the easternmost of the Dodecanese group, located two miles off the southwest coast of Turkey in Asia. It covers an area of four square miles. Occupied by the French during World War I, it subsequently belonged to Italy and, after World War II, passed to Greece. Its chief products are sponges, olive oil, and wine. Pop. (1947) 663.

KASTNER, kēs't'nēr, **Abraham Gotthelf**, German mathematician and poet: b. Leipzig, Germany, Sept. 27, 1719; d. Göttingen, June 20, 1800. Appointed professor of mathematics at the University of Göttingen in 1756, Kastner exerted a powerful influence there in delivering the mathematical and natural sciences from the bondage of antiquated textbooks. His most important mathematical writings were *Anfangsgründe der Arithmetik* . . . , 4 vols. in 10 (1790-1801) and *Geschichte der Mathematik*, 4 vols. (1796-1800).

Kästner took part in the formation of the celebrated union of Göttingen poets. He also assisted Heinrich Christian Boie (1744-1806) in introducing a younger generation of German poets through the latter's publication, *Musenalmannach*, which first appeared in 1770. His own epigrammatic verse was published in *Vermischte Schriften*, 2 vols. (1755), *Sinngedichte* (1781), and elsewhere.

KASTNER, kēs't'nēr, **Erich**, German poet and novelist: b. Dresden, Germany, Feb. 23, 1899. Kästner is best known for his novel *Emil und die Detektive* (1929), translated into English in 1930, and many times dramatized and filmed. His other works which reveal varying degrees of humor, satire, and idealism, include the verses *Herz auf Taille* (1928); *Lärm im Spiegel* (1929); *Lyrische Hausapotheke* (1936); *Bei der Durchsicht meiner Bücher* (1947); and the novels *Fabian*; die

Geschichte eines Moralisten (1931); *Das Fliegende Klassenzimmer* (1933); *Drei Männer im Schnee* (1934); and *Die Verschwundene Miniatur* (1936).

KASTNER, käst'nēr, **Johann Georg**, Alsatian composer and music theorist: b. Strasbourg, France, March 9, 1810; d. Paris, Dec. 19, 1867. Kastner was educated at the Strasbourg Lutheran Seminary, but in 1832, after two years' experience as a bandmaster, he gave up theology for music. Between 1832 and 1835 he composed four operas. In the latter year he went to Paris, where he completed his musical training under Henri-Montan Berton and Anton Reicha, and where he lived for the rest of his life. His *Traité général d'instrumentation* (1837) was used by the Conservatoire until superseded by the treatise of Hector Berlioz on that subject. In Paris, he introduced international band competitions, the first being held at the Paris Exposition in 1867. Besides operas, symphonies, overtures, marches, and miscellaneous pieces, his works include numerous theoretical treatises, periodical articles, collections of music with explanatory essays, and an unfinished *Encyclopédie de la Musique*.

His son, **GEORG FRIEDRICH EUGEN KASTNER** (1852-1882) was a physicist; he invented the pyrophone (q.v.) about 1875, and wrote on the theory of vibration and oscillation.

KASTORIA, kās-tō-rē'a (ancient CELETRUM), commune, Greece, capital of the Macedonian department of the same name, 19 miles south-southwest of Philorina (Florina). It is situated on the western shore of Lake Kastoria, which covers an area of 20 square miles. Pop. (1951) 9,468.

KASTRON, kās'trōn, or **KASTRO** (formerly LEMNOS; in ancient times, MYRINA), seaport, Greece, on the west coast of Lemnos Island in the Aegean Sea. It has an excellent harbor and is the center of trade for the entire island, of which it is the capital. Pop. (1951) 3,493.

KASTRON, or **KASTRO**, the former name of the chief towns on two islands in the Aegean Sea: Chios on the island of Chios and Mytilene on the island of Lesbos. The former, whose population in 1951 was 24,361, trades in wine, leather, and fruit; the latter, whose 1951 population was 25,518, trades in olive oil, citrus fruits, grain, hides, and sponges, and is the seat of a Greek metropolitan.

KATABOLISM. See ANATOMY, COMPARATIVE; METABOLISM.

KATAHDIN, kà-tā'd'n, mountain, Maine situated in Piscataquis County in the central part of the state. The region is difficult of access: the Penobscot River is the only thoroughfare and its course is interrupted by frequent shoals and falls. The mountain, which is the highest in the state, has an altitude of 5,268 feet. Entirely of granite, it has acres of surface exposed in naked floors. Its sides are marked by bare spots caused by sliding rock. On its summit are only lichens and a few dwarfish plants; halfway down, the birch and other forest trees are stunted. Over the granite rocks, even to the summit, are found boulders of trap and other rocks not belonging to the mountain, and among them

pieces of sandstone containing fossil shells. The view of the country from the summit embraces scattered mountains rising in conical granite peaks, among which are interspersed hundreds of lakes, many of them large, and innumerable streams. In 1931 Katahdin and surrounding area became a state park.

KATAKIUCHI, kă'tă-kē-oo'chē (Japanese, "killing one's enemy"), a very old vendetta popular in Japan. Custom prescribed the slaying, without process of law, of any one who had murdered one's lord, father, or very near relative. The law came to frown on this practice but custom proved itself more powerful than the might of the properly constituted authorities. To such an extent did this popular method of righting personal injuries prevail that one who failed to perform his part in the scheme of vengeance became thereby ostracized from the society of his class. The law prescribed capital punishment for any one taking vengeance in his own hands in the exercise of katakiuchi; and through the continual pressure of the authorities, exercised over a considerable space of time, this old custom has been completely abolished from the country.

KATAMORPHISM. See METAMORPH-

KATANGA, kă-tāng'gá, Belgian Congo, a highland district of Elisabethville Province, in the southeastern part of the country, bordering on Northern Rhodesia. It is drained by the Lualaba and other tributaries of the Congo. The district is rich in copper, radium, and other mineral deposits.

KATE, kă'tē, Jan Jacob Lodewijk Ten, Dutch clergyman and poet: b. The Hague, 1819; d. 1889. He studied theology at Utrecht and entered the Reformed Church ministry, and was actively engaged in ministerial duties until his death. Among his charges was a church in Amsterdam, to which he went in 1860. He devoted his spare time to literature, and has left many original poems, principally of a religious turn, which are still popular in the Netherlands and Flanders. Ten Kate had the gift of satirical poetry, which he displayed in his writings in the *Braga*, which he and Prius published and wrote during 1842-1843. He was an extensive translator from Hebrew, Luther, Chassigno, Schiller, Goethe, Tegner, Andersen, Hugo, Tasso, Dante, Oehlenschläger, Byron, and Milton. In turn, many of his own most popular poems have been translated into French, German, and other foreign languages. Among his best known works are *De Schepping* (1866); *De Planeten* (1869); *De Jaargetijden* (1871); *Palmbleden en dichtbloemen* (1884). Several editions of his works have appeared, the best and most complete being that published in Leiden in 12 volumes (1890-1891).

KATER, Henry, English physicist: b. Bristol, April 16, 1777; d. London, April 26, 1835. He entered the British Army in 1794 as an ensign, and from 1799 until 1814 he served in India, rendering important services in the great trigonometrical survey. Retiring on half pay in 1814, he devoted himself henceforth to scientific research. The Russian government employed

him to construct standards for the weights and measures used in Russia. He invented a pendulum (subsequently named for him) for determining the length of the seconds pendulum, employing a principle developed by Christian Huygens (q.v.) in which the centers of oscillation and suspension were interchanged. Among other researches, he investigated the diminution of terrestrial gravity from the pole to the equator; and he made a great contribution to practical astronomy by inventing the floating collimator.

KATHIAWAR, kă-tē-ā-wār', India, a peninsula on the west coast, bounded on the northwest by the Gulf of Cutch and on the southeast by the Gulf of Cambay. The area is 23,432 square miles, and the population numbers some 3,000,000 persons. Bhavanagar, on the Gulf of Cambay, is the principal seaport, and other towns include Jamnagar, Rajkot, Porbandar, Mangrol, and Junagadh. Diu, an island at the extreme south of the peninsula, is a Portuguese possession. The principal economic crop of Kathiawar is cotton, which is cultivated on a large scale.

KATHLEEN MAVOURNEEN, kăth'lēn mā-vōor'nēn, a famous Irish song, written by Mrs. Louisa (Macartney) Crawford (1790-1858). The words have sometimes been ascribed to Mrs. Julia Crawford or to Mrs. Anne B. Crawford. The music for the song was composed by an Englishman, Frederick Nicholls Crouch (q.v.), who first sang it at a concert in Plymouth, England, about 1832. He received five guineas for the song; in 1866 the plates were sold at auction for £532. Crouch also composed the music for *Kathleen Avourneen*, the words of which were written about 1844 by Desmond Ryan.

KATIPO, kă'tē-pō, a word of Maori origin commonly applied in New Zealand to most poisonous spiders of the genus *Latrodectus* (q.v.). The spiders, which are black and have a red abdominal band, are also found in Australia and the islands of the East Indies.

KATIPUNAN, kă-tē-pōō'nān, a word of Tagalog origin (meaning association) given to a secret society organized in the Philippine Islands late in the 19th century with the object of overthrowing the Spanish administration and the expulsion of all foreigners from the archipelago. The organization of the society was purely military, a chief or colonel being assigned to each 100 members. Each member signed an oath written in his own blood, swearing under most revolting penalties to serve and obey the leaders of the society. After the Spaniards discovered a conspiracy in 1895-1896, some 300 of the Katipuneros were arrested. Thereafter the society was openly opposed to the Spanish officials, and when Emilio Aguinaldo (q.v.) took command of the Filipinos in rebellion against Spain he placed all males under the direction of the Katipunan. The society took a prominent part in the insurrection against the United States in 1899-1901, but subsequently passed out of existence.

KATKOV, kūt-kōf', Mikhail Nikiforovich: Russian journalist: b. Moscow, 1818;

d. 1887. Educated at Moscow, Königsberg and Berlin, he became a teacher of philosophy in Moscow in 1845, and in 1851 he was appointed editor of the *Moscow Intelligencer*. He had already become much more conservative than in his youth when he sympathized with liberalism and revolutionary doctrines. He attacked the Nihilists bitterly through his paper, accusing them of being the fountainhead of all the political troubles that had flooded over Russia. Gradually he became one of the strongest supporters of absolutism while, at the same time he criticized the government for failing to use the iron hand in putting down insurrection and uprooting treason. He became the personal adviser of Alexander III, and was accused of simply echoing the sentiments of his sovereign. But this criticism was unjust for Katkov does not seem to have always sided with the emperor. The proof of this is that his name became known internationally and his reputation and influence were worldwide.

KATMAI, kät'mī, Alaska, a volcano of the Alaskan peninsula, situated long. 155° 30' W., lat. 58° N. on Shelikof Strait almost opposite Karluk, on Kodiak Island. Its altitude is 7,500 feet, and until its outbreak June 6, 1912, it was supposed to be extinct. The main crater is one of the greatest in the world, being three miles across, with the rim some 3,700 feet above the floor of the crater. Part of the crater wall is composed of igneous rock of brilliant color. When the top of the volcano was blown off in 1912, Kodiak Island, across Shelikof Strait, and distant 100 miles, was covered with a foot of volcanic ash, while in Alaska, most of which was showered, darkness lasted for 60 hours. Under the auspices of the National Geographic Society, Robert Fiske Griggs headed an expedition to Katmai in 1916. Where the former Katmai pass had been, he discovered what was named "The Valley of Ten Thousand Smokes," a region where gases and steam issued from innumerable vents in the earth. In 1918, on the authority of President Wilson, the volcano and The Valley of Ten Thousand Smokes was set aside as a national monument; with changes made in 1931, the area was 2,697,590 acres (4,215 square miles). Consult Griggs, Robert F., *Scientific Results of the Katmai Expeditions* (1920) and *The Valley of Ten Thousand Smokes* (1927); Hubbard, Bernard F., *Mush, You Malemutes!* (1932).

KATMANDU, kät-män-dōō, India, capital of the state of Nepal, at the confluence of the Baghmati and Bishanmati rivers, and 75 miles north of the frontier of British India. A feature of the city is the large number of temples. Katmandu contains the residences of the sovereign and the British minister. Pop. 119,686.

KATO, kă-tō, Takaakira, Viscount, Japanese statesman: b. Nagoya, Jan. 3, 1859; d. Tokio, Jan. 28, 1926. He was educated at the University of Tokyo, and in 1888, after commercial experience, he became secretary to the minister of foreign affairs. From 1891 until 1894 he was director of the taxation bureau of the finance department, and for the next five years he was minister to Great Britain. During 1900-01, and again in 1906, he was minister of foreign affairs, resigning his second term of office when the cabinet approved the policy of nationalizing

the railroads, a measure to which he was strongly opposed. In 1908 he returned to Britain as ambassador, the status to which the diplomatic post had now been raised, and continued in that capacity until 1913. During January-February 1913 he was again foreign minister. Opposed to many features of modernization of the country in 1913 he reorganized the Doshikai (late known as the Kenseikai, or Constitutionalist Party). In 1914-15 he was once more foreign minister, and in 1916 he was created viscount. He was called upon in 1924 to form a coalition cabinet; the following year he reorganized his cabinet, constituting it exclusively of members of the Kenseikai Party, and he continued as prime minister until his death.

KATO, Tomosaburo, Japanese naval officer: b. Hiroshima, 1859; d. Aug. 24, 1923. Entering the naval service he became professor at the Japanese Naval Academy with the rank of captain in 1899, and three years later he was appointed chief staff officer of the stationary squadron. The Russo-Japanese War found him chief of staff of the squadron of Hikonoyama Kamimura (q.v.); a position in which he showed marked administrative ability, and which secured him the appointment of bureau head when the war had ended. At the age of 49 he was vice admiral and a year later commander of the Kuré admiralty. In 1914 he was in command of the Japanese fleet which fought the Germans at Tsingtao and forced them to surrender the city after a four months' struggle. As minister of the navy after the First World War, he planned a considerable increase in naval strength, though at the Washington Naval Conference in 1921-22, at which he headed the Japanese delegation, he agreed not to outbuild the fleets of the United States and Great Britain. During 1922-23 he served as prime minister.

KATO, a Kuneste tribe of American Indians, belonging to the great Athapaskan family, which, at one time, lived in Cahto and Long valleys, in Mendocino County, Calif. According to Powers, the Kato consisted of the Kai-Pomo, Kastel-Pomo and the Kato-Pomo. They resemble the Pomo in culture but belong linguistically to the Athapascans, and are closely related to the Wailaki.

KATOWICE, kă-tō-vě'tsě, or **KATTO-WITZ**, Poland, a city on the Rawa River, five miles southeast of Beuthen. It lies within a large area of the Silesian coal fields; and has important manufactures of metal goods, creosote, paving blocks, furniture, and household fittings. Katowice passed from German to Polish sovereignty in 1921. During the Second World War it was temporarily reoccupied by the Germans. Pop. (1939 est.) 134,900.

KATRINE, kät'rīn, Loch, Scotland, a lake in Perthshire. Sir Walter Scott (q.v.) has sung its beauties in the *Lady of the Lake* and others of his works, and William Wordsworth (q.v.), too, has presented its attractions. The grandeur of the Trossachs, Ben A'an and Ben Venue are vividly presented in the opening canto of the *Lady of the Lake* and in following cantos. Loch Katrine is a comparatively small lake, being only about nine miles long and less than a mile wide on an average, though it stretches out to greater width in places. It drains into Loch Achray.

In the lake is the famous Ellen's Island, home of the exiles, in the *Lady of the Lake* whom James of Scotland visited in the guise of a lost hunter, without revealing his real name and rank. The celebrated mountains surrounding the lake are comparatively low when considered from their actual elevation above the level of the sea, Ben Venue, the highest, being only 2,393 feet. But as they rise from a low level they present jointly and severally a majestic appearance. Owing to its great natural beauty and its many romantic, traditional, historical and literary interests, Loch Katrine and the surrounding region are annually visited by many tourists and students. Modern steamers now take care of this tourist trade on the lake. In 1885 the waters of Loch Katrine were raised five feet by artificial means and its capacity is a great natural reservoir increased in order to make it furnish a greater supply of potable water to the city of Glasgow which, as far back as 1859, had made use of the lake for this purpose. This greatly reduced the dimensions of Ellen's Isle and covered up the "Silver Strand," made famous in the *Lady of the Lake*. The water from Loch Katrine is carried over a distance of 25 miles in reaching Glasgow. The lake lies at an altitude of 365 feet above sea-level; but as its maximum depth is 500 feet, a part of it is 135 feet below sea-level. Consult Scott's *Lady of the Lake* and *Rob Roy* for descriptions of Loch Katrine and surrounding country.

KATSENA, kât'sě-nă, the former capital of the Hausa territories, situated in the north of Kano, British Nigeria, Africa. It has been under British rule since 1903. It was at one time the most important city of the very extensive district in which it is situated; but tribal wars, which began over 100 years ago, largely repopulated it and left the greater part of it in ruins. Its present population is about 10,000 which is about one-tenth of that which it possessed at the height of its prosperity.

KATSU AWA, kätz' äh'wä, Japanese statesman: b. 1823; d. 1900. A disciple of Yokoi Shōmei and ardent adherent of the Oyomēi philosophy, which taught that all knowledge was useless unless expressed in action, and which fought ever for constructive change, as against the hardened conservatism that becomes dry rot, Katsu went to Nagasaki. From the Dutch officers sent out by the king of Holland in the early 50's, he, with others, who later became famous, learned about steam machinery and built the first Japanese warship on a foreign model. In 1859 Katsu navigated this, the first man-going Japanese steamship, the *Kanda Maru*, across the Pacific in 37 days. When in 1854 Tsushima was seized and occupied by the Russians, Katsu called in the aid of the British and had them expelled. In 1868, during the civil war in Japan, by reasoning with his former fellow-student, General Saigō of the imperial forces, he saved Yedo from attack and war torch. He laid the foundation of Japan's modern navy with purchased Dutch and American warships. He was several times member of the Cabinet. He brought American teachers Shidzuoka and sent his son to study at New Brunswick, N.J., and in the United States Naval Academy at Annapolis, and other young men to America, and assisted in the formation

of the first Commercial College in Tokio. Posthumous honors were awarded and his family ennobled. Consult Griffis, *The Rutgers Graduates in Japan* (1916), and Clark, *Katsu Awa: The Bismarck of Japan* (1904).

KATSUO, kât'soo-ō', the general name in Japan for tunnies, which are extensively fished and dried. In this latter shape they form a very important part of Japanese commerce amounting annually to over 5,000,000 catties (a catty is 1½ pounds).

KATSURA, kâts-wě'ä, Taro, PRINCE, Japanese soldier and statesman: b. Choshu, 1847; d. 1913. He received a military training in Prussia, entered the Japanese army in 1867, fought in the war of the Mikado's restoration, was vice-minister of the army in 1886-91, and in the Chino-Japanese War (1894-95) commanded the 3d division, with which March 4, 1895 he captured New-chwang. For his services he was made viscount. In 1896 he was governor-general of Formosa, in 1898-1900 Minister of War, from 1901-06 was Prime Minister. In the latter year the general dissatisfaction over the Peace of Portsmouth forced his resignation. In 1908-11 he was again Prime Minister and Minister of Finance, and for the third time from December 1912 to February 1913. His services in forming the alliance with England brought him the title of count, and in 1905 he became marquis. He was made prince in 1911 after the annexation of Chosen. In 1912 he founded the political party called Rikkendoshikai.

KATTE, kät, Edwin Britton, American electrical engineer, son of Walter Katte (q.v.): b. Saint Louis, Mo., 1871. Graduated from Cornell University he took up electrical engineering and became assistant engineer to the Park Avenue Improvement Commission, New York (1897-98). He then joined the engineering department of the New York Central and Hudson River Railway where he finally became chief engineer of the electrical traction systems in 1906. He died July 19, 1928.

KATTE, kät'tě, Hans Hermann von, an historically notable friend of Frederick the Great: b. 1704; d. 1730. He was very much attached to the young crown prince who had incurred the ill will of his father. Frederick ordered Katte to sever all relations with the crown prince; but he disobeyed this command, and plotted to liberate the heir to the throne. This attempt was discovered and Katte was condemned to death and executed for his part in it.

KATTE, Walter, American civil engineer: b. London, England, Nov. 14, 1830; d. March 5, 1917. Coming to the United States in 1850 he was resident engineer of the Pennsylvania State canals 1857-58, and subsequently held various engineering posts of responsibility. In 1861-62 he served the Federal government as military railway engineer. From 1865 to 1875 he was in the employ of the Keystone Bridge Company of Pittsburgh, superintending at this time the building of the steel arch bridge at Saint Louis. He was chief engineer of the New York Elevated Railroad 1877-80, and from 1880 to 1899, when he retired, held similar posts on other important railroads, including the New York Central.

KATTEGAT, kăt'ê-găt, a wide arm of the North Sea, with which it is connected by the Skagerrak on the north. It is 150 miles in length, and 88 miles broad at its widest point; the area is 9,840 square miles. It lies between the east coast of Jutland (Denmark) and the west coast of Sweden; and it connects with the Baltic Sea by the passages known as Little Belt, Store Belt, and Oresund. The Kattegat, which is shallow near its shores, with shoals and sandbanks, is difficult of navigation.

KATTIMUNDOO, or **CATTIMUNDOO**, a semielastic semiresinous substance obtained from the gum of the *Euphorbia trigonia*, a plant which grows extensively in India. The name itself is a native Indian term. As the elastic resinous gum becomes older it becomes harder and more brittle and loses practically all of its elasticity.

KATTOWITZ. See **KATOWICE**.

KATUN, kà-toon, a cycle of years employed by the Mayas in computing time. The exact length of a katun has not been exactly and definitely settled. Some authorities claim that it consisted of 20 years while others assert that it covered, like the ancient Mexican calendar, 52 years. On the other hand, the word *kate*, among the Mosquito Indians of Central America, signifies the 28 days of the lunar month. Others of the Central American tribes follow the Mexican system of 18 months of 20 days and a cycle of 52 years. Most authorities, however, claim that the katun contained only 20 years. Pio Pérez, a noted Mexican scholar and the discoverer of an important manuscript detailing the ancient chronology of Yucatan, was of the opinion that the katun consisted of 24 years.

KATYAYANA, kăt-yä'yä-nä, the name of several noted Hindu personages, among them some of the chief disciples of Buddha. One person of this name was a critic of great celebrity in India, chiefly on account of his criticisms of the work of Panini (q.v.), the famous native grammarian and writer. The name Kätâyâna is signed to various important works on the White Yajur-Veda. The grammarian of this name lived probably about the 3d century of the present era; and so important was his work that he is still regarded as one of the chief authorities of the Hindu language of the Vedics and of the tongue of the Deccan.

KATYDIDS, large neuropterous insects of the grasshopper family *Locustidae*, remarkable for their loud and shrill call. The katydids belong to several allied genera which have the head obtuse in front, the wings and wing covers large and leaf-like, and the color bright green. Highly developed stridulating organs are found in the males in the form of transparent drum-like structures at the base of the wing covers, by the friction of which, one against the other, as the wings are raised and lowered, the well-known call is produced. This is heard only at night (though some species have quite different day calls as well) and is so loud and shrill as to be distinctly audible at a distance of a quarter of a mile. The call of the males is answered by chirps from the females. The characteristic eggs are gummed to twigs in two contiguous over-lapping rows. Katydids are peculiarly American. The common species is

Cystophyllus concavus, known by its very broad coarse-veined wing covers and long ovipositor. In *Phylloptera oblongifolia* the wing covers are narrower and the veins finer. Other related genera are *Phaneroptera* and *Microcentrum*.

Their chirping note, supposed to resemble the words "Katy did," inspired the well known lines *To an Insect* by Oliver Wendell Holmes (q.v.):

I love to hear thine earnest voice,
Wherever thou art hid,
Thou testy little dogmatist,
Thou pretty Katydid.

KATZBACH (käs'täh) **RIVER**, a small stream in Silesia, Prussia, falling into the Oder at Parchwitz. On its bank, Aug. 26, 1813, a battle was fought between the French and the Prussians in which the latter under Gebhard L. von Blücher (q.v.) won a signal victory. The French lost 12,000, and 18,000 were taken prisoners.

KAUAI, kou-ä'ê, fourth largest of the Hawaiian Islands, the most northern of the group, in lat. 22° N. and long. 159° 30' W.; area, 547 square miles. It is of volcanic origin, its highest elevation, Mount Waialeale, reaching 5,080 feet; but although mountainous in character, the island has a soil of great fertility, a considerable portion of which, mainly in the northern part, is under cultivation. Sugar is the chief product, and tropical fruits are also largely grown. There is great extent of forest land, and the island is well supplied with streams, the largest of which is Hanalei. Lihue is the county seat. The principal harbors are Hanalei, Koloa, Nawiliwili and Waimea; the last, which was the old capital, was the first place in the Hawaiian Islands to be visited by Capt. James Cook (q.v.). Pop. (1940) 33,479; Niihau Island, (1940) 72. See HAWAIIAN ISLANDS.

KAUFFMAN, kouf'män, **Calvin Henry**, American botanist and mycologist: b. Lebanon, Pa., March 10, 1869; d. Ann Arbor, Mich., June 14, 1931. He graduated at Harvard in 1896, and for four years taught in secondary schools, after which he resumed his studies, first at the University of Wisconsin and then at Cornell University. In 1906 he secured his Ph.D. at the University of Michigan, where, two years earlier, he had become an instructor in botany. He was made assistant professor of botany in 1908, and associate professor in 1920, and from 1923 until his death he was full professor and director of the university herbarium. During the First World War he was on leave of absence to serve in the horticultural division of the U.S. Department of Agriculture. His research work on mushrooms, continued through many years, was of particular value. He published numerous articles in botanical journals, and in 1918 published the two-volume *Agaricaceae of Michigan*.

KAUFFMANN, kouf'män, **Marie Angélique Catherine**, commonly known as **ANGELICA KAUFFMANN**, Swiss painter: b. Coire, Switzerland, Oct. 20, 1741; d. Rome, Nov. 5, 1807. She was the pupil of her father, John Joseph Kauffmann, a painter of little note. Her first work of importance was a portrait of the Duke of Modena and his duchess. She then collaborated with her father in the decoration of the parish church and castle of Schwarzenburg, his birthplace, painting many portraits in the meantime. Going to Florence, she was

hindered in her artistic career by her passionate devotion to music and singing, but in 1763 finally abandoned all other pursuits for that of painting. She fell under the influence of Winckelmann at Rome, and produced the 'Mother of the Gracchi.' She also did some work in co-operation with the Venetian landscape painter Zucchi, whom she subsequently married. It was at this point in her life that she developed the particular sentimental style of her paintings as seen in 'Anna and Abra'; and 'Samma at the Grave of Bennoni,' which created a furore. In London (1765) she became a favorite with court and aristocracy, and acquired great wealth and honor; she was made member of the Royal Academy and was thought to have inspired Sir Joshua Reynolds with tender feelings. She was, however, unfortunate in marrying a Swede who called himself Count Horn, from whom she was later divorced. She eventually married Zucchi and settled in Rome (1781), where her house became a rendezvous for scholars and artists, the most famous of whom was Goethe, who has left us a remarkable characterization of her art. While her tenderness borders on mawkishness and her designs are monotonous, her imaginative figures have an elevated charm which as not without its influence in circles where George Morland was typical of English art. Her personality cast a reflection which enhanced the impression which her pictures made on her contemporaries, and the 'Miss Angel'.

Mrs Thackeray Ritchie exhibits with tact and fidelity this interpretation of her somewhat remarkable career. Other works by her are 'Psyche Drying Cupid's Tears'; 'Death of Leonardo da Vinci' (1781); 'Servius Tullius as a Child' (1784); 'Abelard and Héloïse'; 'Hermitage, St. Petersburg'; 'The Vestal Virgin' (Dresden Gallery); 'Christ and the Woman of Samaria'; 'Virtue, Prudence andolly' (Philadelphia, Pa.). There are over 200 of her original drawings in the British Museum. The best of her portraits are those of Mengs and Lady Hamilton in Kensington Museum, and of herself in the Berlin Museum, the National Gallery, London, and the Munich and Uffizi galleries. Consult De Rossi, 'Vita di Angelica Kauffmann' (Florence 1810); Bohme, 'Kunst und Künstler' (Leipzig 1817); Engels, 'Angelika Kauffmann' (Bielefeld 1892); Gerard, 'Angelica Kauffmann' (London 1893); Schram, 'Die Malerin Angelika Kauffmann' (Brünn 1890), and 'Angelica Kauffmann,' in *Illustrierte Zeitung* (Leipzig, June 1903).

KAUFFMAN, Reginald Wright, American author: b. Columbia, Pa., 1877. Educated at Harvard University, he joined the *Philadelphia Press*, and finally became associate editor of the *Saturday Evening Post* (1904-07). He held the same position on the *Delineator*, was dramatic critic on the *North American* (Philadelphia) and managing editor of *Hampton's Magazine* (1909). He was United States representative to the first International Congress for Woman's Suffrage held in London in 1912, and member of the Criminal Law Amendment Commission of Great Britain (1912-13). He was in Europe, especially in Belgium, during the first year of the European War, and was active in war work to 1919. Contributor of poems, essays and stories to newspapers,

journals and magazines, he has also written numerous photoplays and compiled and edited the books of 'Love,' 'Gratitude,' 'Friendship' and 'Good Cheer.' Among his original works are 'Jarvis of Harvard' (1901); 'The Things that are Caesar's' (1902); 'The Chasm' (1903); 'Miss Frances Baird, Detective' (1906); the dramatization of the latter (with the help of Channing Pollock, 1907); 'What is Socialism' (1910); 'The House of Bondage' (1910); 'The Girl that Goes Wrong' (1911); 'The Way of Peace' (1911); 'The Sentence of Silence' (1912); 'The Latter-Day Saints' (with Ruth Kauffman, 1913); 'The Spider's Web' (1913); 'Little Old Belgium' (1914); 'The Silver Spoon' (1915); 'The Mark of the Beast' (1916); 'The Ancient Quest' (poems, 1917); 'Money to Burn' (1924); 'Spanish Dollars' (1925); 'Seventy-six' (1926); 'A Man of Little Faith' (1926); 'Overland Trail' (1927); 'Pirate Jean' (1929).

KAUFMAN, David S., American politician: b. Cumberland County, Pa., 1813; d. Washington, D. C., 13 Jan. 1851. A graduate of Princeton University, he removed to Natchez, Miss., where he studied law. In 1837 he settled in Nacogdoches, Tex., and the next year was elected to the Texas Congress. He was twice re-elected and twice chosen speaker of the House. In 1843 he entered the Texan Senate, taking an active part in favor of annexation, and being elected one of the first members of the House of Representatives from Texas (1846-51).

KAUFMANN, Alexander, German poet: b. Bonn, 1817; d. 1893. After studying law in Bonn and Berlin he turned to literature, and some time later became archivist to the Prince of Löwenstein (Wertheim) which allowed him time and opportunity to follow his investigations into historical subjects and more especially the history and customs of the Middle Ages. Notwithstanding his love of history he was a poet of some power, freshness and originality. It is probable that his poetic bent was encouraged by his marriage to Mathilde Binder ("Amara George"), the Nuremberg poet, who worked continuously with him. His published works include 'Cäsarius von Heisterbach' (1852); 'Gedichte' (1852); 'Mainsagen' (1853); 'Unter den Reben' (1872); 'Mythotherapie' (with his wife, 1858).

KAUFMANN, Carl Maria, German archaeologist: b. Frankfort-on-the-Main, Germany, 2 March 1872. He was educated at Berlin and the University of Fribourg, Switzerland, and subsequently studied archaeology at Rome. In 1899 he was ordained to the Catholic priesthood. From 1905 to 1908 as member of the Frankfort Expedition he was engaged in archaeological explorations in the Libyan Desert. He discovered, in company with Ewald Falls, the old Christian city of Menas, a celebrated place of pilgrimage in early Christian days. He is the author of 'Die Jenseitshoffnungen der Griechen und Römer nach den Sepulkralinschriften' (1897); 'Die Legende der Aberkiosstele im Lichte urchristlicher Eschatologie' (1897); 'Der Letzte Flavier' (a novel, 1897); 'Das Dokument der Lady' (a novel, 1899, 1909); 'Die sepulkralen Jenseitsdenkmäler der Antike und des Urchristentums' (1900); 'Die Wunder der Kirche der Kata-

komben und Martyrer (a novel, 1900); *Sant Elia, Erinnerungen an eine archaeologische Streife in Etrurien* (1901); *Das Kaisergrab in den Vatikanischen Grotten* (1901); *Die Grotten des Vatikan* (1902); *Ein altchristliches Pompeji in der Libyschen Wüste* (1902); *Handbuch der christlichen Archaeologie* (1905); *Die Ausgrabung der Minasheiligtümer in der Marcotiswüste*, 3 vols. (1906–1908); *Manuale di archeologia cristiana* (1908); *La découverte des sanctuaires de Ménas dans le désert de Maréotis* (1908); *Der Menastempel und die Heiligtümer von Karim Abu Mina in der ägyptischen Mariüt-wüste* (1909); *Zur Ikonographie der Menasampullen* (1910); *Die Menasstadt und das Nationalheiligtum der altchristlichen Aegypter* (vol. 1, 1910), and contributions to periodicals. His fiction appears under the *nom-de-plume* of Marchese di San Callisto.

KAUFMANN, kauf'mün, Konstantin Petrovich, Russian general: b. near Ivangorod (now Deblin), Poland, May 3, 1818; d. Tashkend, USSR, May 16, 1882. Serving as engineer and soldier he became eventually attached to the War Department, where he was largely instrumental in the reorganization of the Russian army. His talent for organization won him the appointment of commander of the military division of Vilna and governor general of northwestern Russia (1865), and of Turkestan (1867). The latter division, which had just been organized, permitted him again to show his talent for organization which enabled him to very much extend Russian influence throughout central Asia. He defeated Bokhara, conquered Samarkand, overcame the Khan of Kiva and generally extended Russian power.

KAUFMANN, Nicolaus, German mathematician and engineer: b. Cismar, Holstein, about 1620; d. 1687. Educated at the universities of Copenhagen and Rostock, where he paid special attention to mathematics and astronomy, he became an engineer, and, having acquired some local reputation, he went to London in 1660 where he became very much interested in the formation of the Royal Society of which he was a charter member and with which he remained closely connected all his life. Later on he went to France where he seems to have won a reputation as a skillful architect and engineer. He contributed by his writings to much of the scientific literature of his day and many of his papers appeared in the transactions of the Royal Society.

Among his most notable works are *Cosmographia* (1651); *Astronomia Sphaerica* (1651); *Rationes Mathematicae Subductae* (1653); *Logarithmotechnia* (1668–1674); *Institutionum Astronomicarum, Libri Duo* (published first in 1876). Nicolaus Kaufmann generally went under the name of Nicolaus Mercator, or at any rate his writings, for the most part, were signed with this signature.

KAUKAUNA, kô-kô'nâ, city, Wisconsin, in Outagamie County, altitude 709 feet, served by two divisions of the Chicago and Northwestern Railway. It is located 20 miles southwest of the city of Green Bay and 9 miles northwest of Appleton, with which it is connected by bus. It has been important as one of six advantageous sites on the Fox River, linking the Mississippi

with the Great Lakes. Originating as a trading post, the place was first settled in 1793 by Dominick Ducharme, and a legend says that he purchased the site from Indians for two barrels of rum. In 1818, Augustin Grignon got control of the trading business, and the Grignon family managed the fur trade and built the first gristmill and sawmill. The Grignon house, still standing was built in 1838 with lumber shipped from Buffalo. A dam in the river supplies the city's municipally owned, electrical power plant.

Kaukauna is a marketing center for an area devoted to agriculture and dairy products. The chief industrial wealth is derived from railroad shops, bag and paper works, fiber mills, brick and tile works, foundry and machine shops, and sulphite mills.

The city is governed by a mayor and council. It was chartered as a city on April 5, 1885. Pop. (1940) 7,382; (1950) 8,337.

KAULBACH, koul'bäk, Friedrich, German portrait painter: b. Arolsen, Waldeck, July 8, 1822; d. Hannover, Sept. 5, 1903. He was one of the members of the famous Kaulbach family and a nephew of Wilhelm von Kaulbach (q.v.), under whom he studied. He had much of the talent of his uncle and might have made a noted success at the painting of large canvases containing groups and many figures, but his success as a portrait painter made him such a favorite that most of his time was taken up with this especially remunerative work which led to his appointment as court painter and professor in the Hannover Polytechnic Institute. He painted most of the celebrities of his day, and among the best of his portraits are those of the Empress Elizabeth of Austria and Elizabeth Ney, the sculptor. Among his large historical paintings the most meritorious is the *Coronation of Charlemagne* (Munich).

KAULBACH, Friedrich August, German portrait and genre painter: b. Munich, June 2, 1850; d. Jan. 26, 1920. Son of Friedrich Kaulbach (q.v.) and grandson of Wilhelm von Kaulbach, he received his first instruction in art from his father and later continued his studies with Raupp and Kreling at Nuremberg, and later on with Diez in Munich. Under his father's teaching he early displayed a facility of coloring which he steadily improved under his subsequent teachers. His work shows much more boldness than that of his father and a sympathy with the German renaissance which the older Kaulbach did not possess. His facility in portrait painting and the reputation in art of the Kaulbach family together with his own evident talent and modernity early won for him wide local popularity which he gradually extended to include all of Germany. If not a really great artist, he has proved a versatile one. He has painted miniatures perhaps better than anyone else of his day in Germany and he has won for himself the reputation of being a good caricaturist. An excellent teacher of painting and drawing, he became director of the Munich Academy in 1886, a position he held until 1891. His appointment to this office was probably due to his success in winning the Berlin gold medal for painting in 1886.

Among his best-known paintings are *Cavalier and Lady's Maid* (1873); *A Day in May* (1879); *Schützenlied* (1881); *Lute-player* (1882); portraits of Frida Scotta, Princess Gisela, Prince

regent of Bavaria, Emperor William II, Empress Auguste Victoria and Daughter, Ruth St. Denis and *Entombment*, and numerous pictures of his wife, his family and his friends.

KAULBACH, Hermann, German genre painter: b. Munich, July 26, 1846; d. there, Dec. 1, 1909. He was a son of Wilhelm von Kaulbach (q.v.), who gave him early instruction in painting. Later he studied under Piloty, who seems to have influenced him more than his father had. He has considerable talent, but he stands apart from the sketchy style of his age in his love for minuteness of detail. He tends largely toward historical subjects which he handles in a manner that is always interesting and generally notable for the excellent handling of coloring. Among his best paintings are *Hänsel and Gretel and the Witch* (1872, Riga Municipal Gallery); *Last Days of Mozart* (1873, Vienna Municipal Gallery); *Sebastian Bach Playing the Organ in the Presence of Frederick the Great* (1875, Berlin Gallery); *Coronation of Saint Elizabeth* (1886, Wiesbaden Gallery); *At the Grave of a Friend* (1888, Munich).

KAULBACH, Wilhelm von, German painter: b. Arolsen, Oct. 15, 1805; d. Munich, April 7, 1874. He learned the rudiments of his art from his father who was a goldsmith and engraver on copper. He was a good draftsman when he went to Düsseldorf in 1821 and entered the Art Academy where his chief teacher was Cornelius, already acknowledged as the head of the Düsseldorf school of historic painting. When Cornelius in 1825 removed to Munich, at the invitation of King Ludwig of Bavaria, he followed him and soon became his disciple in the art of ceiling decoration, examples of which are *Pollo and the Muses* in the great hall of the Leon, and the allegorical figures of the *Four Great Rivers of Bavaria* and of *Bavaria* in the oratorio of the royal palace. His pure and classic power of design is well exhibited in the 16 wall paintings, illustrating the story of *Cupid and Psyche*, in the palace of Duke Maximilian at Munich. He was at this time attracted to the study of Hogarth's works, the fruit of which appeared in his illustration of books, including works of Shakespeare, Goethe and Schiller, and the *Reineke Fuchs*. He painted many great incidents in the history of Germany, including scenes from Klopstock's *Hermann's Battle*, and the *Death of Hermann*, wall paintings in the queen's palace at Kingsbau. But his most ambitious and comprehensive works are those in which he endeavored to represent the progress of the human race by a series of typical historic tableaux. These comprise the *Tower of Babel*; *Age of Homer*; *Destruction of Jerusalem*; *Battle of the Huns and Romans*; *The Crusaders*; *The Reformation* (1847-1863). The range of his intellectual ideas, his wonderful power of generalization, his mastery of every style of painting, his caricature to the sublimity of the Italian quattrocentists, as represented by Michelangelo, have no parallel among modern painters. His coloring may be a little cold, sometimes a little rude, but his sense of form, his loftiness of conception and his genius for harmonious composition have won for him the first place among German artists of the transition period between the idealism of Cornelius and the realism of the modern historic school.

KAULBARS, koul'bürs, **BARON Aleksandr Vasilievich**, Russian soldier and explorer: b. St. Petersburg, 1844; d. 1929. Educated for military life in his native town, from 1869 to 1873 he carried on explorations in central and east Asia, particularly in the Issyk Kol and Aral-Amu Darya regions; and served in the Russo-Turkish War (1878), as Bulgarian minister of war (1882-1883), and in a series of military posts culminating in command of the 3rd Manchurian army, and later also of the 2nd army, suffering defeat by the Japanese in the Battle of Mukden (1905). Governor general of the district of Odessa from 1904, he was removed from this post in 1913 on grounds of military incompetence and anti-Semitism.

KAULBARS, BARON Nikolai Vasilievich, Russian soldier: b. St. Petersburg (Leningrad), June 3, 1842; d. there, Dec. 3, 1905. He was an elder brother of Baron Aleksandr Kaulbars (q.v.). Educated for the army in his native city and in Berlin, he was appointed member of the Russian general staff (1868). Like his brother he took part in the Russo-Turkish War (1877-1878) and afterward he held several important government posts and finally became chief of staff of the 6th Army Corps at Warsaw (1889) which he left 10 years later to join the general staff at St. Petersburg (now Leningrad). He wrote on military subjects and did some important work as a cartographer.

KAUN, kown, **Hugo**, German musical composer: b. Berlin, March 21, 1863; d. there, April 2 1932. After a good education in Germany along musical lines, he came to the United States and settled in Milwaukee in 1887, where he took an important part in the musical life of the city for the next four years, organizing choral and other musical societies. He returned to Berlin in 1900. He has written much chamber music and numerous choral pieces, songs, prologues, piano music of various kinds and two one-act operas, *Der Pietist* and *Oliver Brown*; a symphonic poem, *Falstaff*, and a symphonic prologue, *Maria Magdalena*.

KAUNAS (Russ. KOVNO; Pol. KOWNO; Ger. KAUNEN), city, Lithuania, at the confluence of the Viliya and Neman rivers, on the Vilnius-Kaliningrad (Königsberg) Railway, 55 miles west-northwest of Vilna. Its industries include meat packing, dairying, food canning, and the manufacture of agricultural implements, heating equipment, tin-metal goods, prefabricated houses, chemicals, plastics, and textiles. It has a state university, an academy of agriculture, and a music conservatory. During World War II, the station, the municipal electric plant, and some of the university buildings were destroyed by the Germans in their retreat, but much of the town was saved. In 1950 Kaunas became capital of the newly-created Kaunas Oblast. Pop. (1939) 154,109.

KAUNITZ, kou'nits, **COUNT Wenzel Anton von** (PRINCE VON KAUNITZ-RIETBERG), Austrian statesman: b. Vienna, Feb. 2, 1711; d. there, June 27, 1794. After traveling in England, France and Italy he was appointed an imperial councillor in 1735 and was later sent on diplomatic business to Italy (1741-1742); and filled other important diplomatic posts, being imperial ambassador (1748) at Aix-la-Chapelle in the negotiations which

KAYES, kâz, town, French West Africa, on the Senegal River in French Sudan. The river is navigable from the sea to this point, above which are "narrows" and falls. A railroad links Dakar with Kayes, and continues as far as Koulikoro, on the Niger River just northeast of Bamako. Pop. (1949) 24,750.

KAYSERI, kî-sê-rê', or **KAISARIA**, kî-sâ-rê-yâ', city, Turkey, capital of the Kayseri Vilayet (area, 5,840 square miles; pop. 1945, 370,089), at the northern foot of Erciyas Dagi (Argaeus), the highest mountain in Asia Minor. It has been an important trade center for many centuries, among local commodities being hides, carpets, cloth, fruits, and raisins. Known to the ancients as *Caesarea Mazaca* (or *Mazaca*), it was the chief city of Cappadocia. Pop. (1945) 57,864.

KAZAKH, kâ-zâk', **SOVIET SOCIALIST REPUBLIC**, or **KAZAKHSTAN**, a union republic of the USSR, situated in Asia southwest of the RSFSR. It extends from the Caspian Sea and the lower Volga on the west to the Chinese province of Sinkiang on the east; on the southwest it is bounded by Soviet Central Asia. The area is 1,072,797 square miles (one third the size of the continental United States), and the population, much augmented by refugees from European Russia during World War II, was 6,600,000 in 1950. It is a dry-steppe region with many salt lakes, the largest being the Sea of Aral and Lake Balkhash. The mountain ranges of Tien Shan and Altai fringe the country on the east and southeast. Kazakhstan's principal rivers are the Emba, Irtysh, Ishim, and Ural. Next to the RSFSR, it is the main livestock region of the Soviet Union. The chief grain crops are wheat, barley, and oats; and cotton, sugar beet, and rice do well. Indigenous dandelions are a valuable source of rubber. The mines of Kazakhstan are of great importance. Coal deposits, the third richest in the USSR, are located at Karaganda, Chimkent, and Akmolinsk, and copper is produced at Kounradski on Lake Balkhash, at Dzhezkazgan, in western Kazakhstan, and at Boshchekul', where also are extensive lead and zinc deposits. The country leads all republics of the Soviet Union as a producer of copper, zinc, lead, and tungsten, and it ranks second in its yield of gold, molybdenum, and fluor spar. Borax is obtained at Lake Inder and phosphorites at Dzhambul, in the Kara-Tau Mountains, and there are valuable deposits of potash salts and natural chrome-nickel ores, the latter at Aktyubinsk. Among other metals found are cadmium, gallium, and silver. Large petroleum deposits at Emba, at the northern tip of the Caspian Sea, were developed rapidly during World War II, a pipeline 434 miles in length carrying the crude oil to refineries at Orsk, a railroad town in the Urals. Numerous textile and flour mills, meat-packing plants, and canneries have been built at Alma Ata (pop. 400,000 in 1944), formerly Vernyi, the capital, Semipalatinsk, Karaganda, Petropavlovsk, Chimkent, Dzhambul (formerly Aulie Ata), and other cities. The Orenburg-Tashkent Railroad, which enters the republic near Aktyubinsk, in the north, runs southward past the Sea of Aral to Chimkent, and thence continues to Tashkent, in Uzbekistan. A second line, the Turkestan-Siberia ("Turksib") Railroad, proceeds eastward from Chimkent to Alma Ata, northeastward to Semipalatinsk, and thence to Novosibirsk. The Trans-

Siberian Railroad traverses the northern part of the country for a short distance, and from Petropavlovsk, a Kazakh city on that line, a railroad runs southward to Bertys Bay, on Lake Balkhash. Kazakhstan has numerous elementary, technical and high schools, and a university at Alma Ata, established 1928. After the German invasion of western Russia in 1941 the universities of Kiev and Kharkov were temporarily transferred to that city. Kazakhstan was part of the Russian imperial governor-generalship of Turkestan which, in 1920, became an autonomous soviet socialist republic within the RSFSR, and when a redistribution took place in 1925 the country was made part of the Kirghiz SSR. On Dec. 5, 1936 it was detached and created a state member of the Soviet Union.

KAZAN, kâ-zân', river in central Canada. It rises in the southeast of the Mackenzie District, Northwest Territories, and flows in a northeasterly direction through several lakes in the Keewatin District to enter the southern end of Baker Lake. The length is about 450 miles.

KAZAN, city, Soviet Russia, capital of the Tatar Autonomous SSR, on the Kazanka 3 miles above its junction with the Volga, and 200 miles east of Gorki. There is a university, founded in 1803, and the ancient kremlin, cathedral, monasteries, and mosques still stand. The city is an important industrial center, manufactures including textiles, leather goods, soap, metal products, and synthetic rubber. The inhabitants of the original Kazan, 30 miles northeast of the present city, accepted the Islamic faith in the 10th century. The Tatars founded the new city in 1437 as the capital of the kingdom of the khan of the Golden Horde. In 1552 it was captured by Ivan IV Vasilievich (Ivan the Terrible), czar of Russia. Pop. (1939) 401,665.

KAZANLIK, kâ-zân-lîk', town, Bulgaria, in the Stara Zagora Department, in a valley on the southern slope of the Balkan Mountains. There are large rose gardens in the vicinity, and the chief industry is the manufacture of attar of roses. Pop. (1926) 11,598.

KAZBEK or **KASBEK**, kûz-byêk', a peak in the central part of the Caucasus Mountains, on the border between the South Ossetian Autonomous Region (Georgian SSR) and the North Ossetian ASSR. It is an extinct volcano 11,000 feet in height. The Terek is one of the principal rivers rising below the mountain's eight glaciers. The summit was first climbed, in 1868, by Douglas William Freshfield and three companions.

KAZINCZY, kô'zîn-tsi, **Ferenc**, Hungarian writer and linguistic reformer: b. Erhemlyen Oct. 27, 1759; d. Szeplalom, Nov. 22, 1837. Revolutionary tendencies led him into trouble in his younger and more ardent days. He was arrested in 1794 for participation in the political conspiracy of Abbot Martinovics and condemned to death, but the sentence was commuted to 10 years' imprisonment. Following his release, in 1801 he assumed leadership of the Hungarian literary movement, striving to foster

growth of a truly national literature written in Magyar tongue. Among his original works: *Magyar Museum* (1788-1792); *Orpheus* (1790); *Lanassa, a Tragedy* (1791); *Magyar gisegek* (*Hungarian Antiquities*, 1808); *Poetai rke* (1813); *Reise* (1813; new ed. 1831). Numerous editions of his works have been published before and since his death. Of these the most extensive are that which appeared at Pest in nine volumes, under his own supervision and consisting largely of translations (1814-1816) and a collection of his original poems and other writings published at the same city (1843-1844). Many partial editions have also appeared; one consisting of his plays, another (in popular form) of his poems, others of his translations and still others of his essays, sketches and travels. Even his voluminous correspondence has been published by the Hungarian Academy as important documentary material for the literary and political history of the first quarter of the 19th century. Though not really a great or original thinker, Kazinczy was really one of the greatest of benefactors of Magyar literature at a time when it was beginning seriously to assert itself. Through his translations of the more striking works of great German writers, such as Lessing, Wieland, Goethe and Klopstock and other notable literary masterpieces from Molière, a Rochefoucauld, Jean François Marmontel, Voltaire, Shakespeare, Metastasio and the classical writers, he furnished the Magyar people with a literature already made and done over into their own tongue in a most pleasing manner and in a new literary form. The rising school of young literary men fed upon it, imitated it, as Kazinczy himself had done, and finally created a national literature. His numerous followers exaggerated his work and placed a higher literary value upon it than posterity has sustained. What he accomplished was in reality the rehabilitation of the Hungarian tongue which had lagged woefully behind in the literary march of Europe. At the beginning of the 19th century the Hungarian language had come face to face with the fact that it had neither the wealth of vocabulary nor the perfected literary form fitted to express the new ideas and the rising culture of the nation, most of which were being rapidly introduced from abroad or developed at home. At this moment, Kazinczy, liberated from his years of prison life, appeared upon the scene, his reform proclivities still strongly alive. He introduced new words wherever and whenever he had need of them to express his own thoughts in his original composition or in those of the galaxy of foreign authors whom he introduced to the Hungarian reading public. Everywhere he met with opposition. Kazinczy's works were more than once burned by the public hangman. But the reform eventually triumphed, though with many modifications of its exaggerated claims following the death of Kazinczy of Asiatic cholera. Kazinczy had two aims in view, to embellish the Hungarian language and to improve its facilities of expression, while at the same time improving its literary form and manner of thought. To this end he wrote critical essays on the works of Hungarian authors. This gave him the reputation of being the greatest living native literary critic and this, in turn, led to a very extensive literary correspondence.

Consult Reich, E., *Hungarian Literature* (London 1900); Riedl, F., *Hungarian Literature* (London 1906).

KAZVIN or **QAZVIN**, *káz-vên'*, city, First Province, Iran, located at the southern foot of the Elburz Mountains, 90 miles west-southwest of Teheran. It was the capital of the former Kazvin Province, whose area of 9,826 square miles was absorbed in 1938 into Iran's First Province. The city trades in silk and agricultural products and engages in such industries as carpet weaving, oil-seed and flour milling, distilling, and soap manufacturing. Highways, a railroad, and an airfield make it a communications center. It is said to have been founded in the 4th century by Shapur II. Mongols invaded it in the 13th century. During part of the 16th century it served as the Persian capital. Landmarks include an 8th-century mosque built by Harun al-Rashid and a 16th-century mosque built originally by Tahmasp I. Pop. (1949) 80,000.

KEA, *kā'ā*, or **KEOS**, *kē'ōs* (Lat. *Ceos*), island, Greece, in the Aegean Sea. The northwesternmost of the Cyclades group, located 13 miles from the mainland, Kéa is 13 miles long, 7 miles wide, and 60 square miles in area. Products include citrus fruits, wine, olive oil, barley, silk, and cotton. During the Middle Ages and later the island, also known as Zea, was a pirate refuge. The town of Kéa is situated on the northern slope of Mount St. Elias (1,838 feet), on the site of ancient Iulis, birthplace of the physician Eristratus and the poets Bacchylides and Simonides of Ceos. Pop. of town (1940) 2,869. Pop. of island (1940) 3,749.

KEA, *kā'ā*, a large parrot (*Nestor notabilis*) of South Island, New Zealand, with a very strong bill that crosses at the tip. On the body, its plumage is olive-green barred with black, and, on the rump and the undersides of the wing, bright red. During the summer the kea lives in the mountains; during the winter, in the lowlands, where it feeds chiefly on insects. The story that it attacks living sheep in order to eat the kidney fat appears to have been much exaggerated, but the story led, for a time, at least, to the bird's wholesale slaughter.

KEAN, *kēn*, **Charles John**, English actor and theatrical manager: b. Waterford, Ireland, Jan. 18, 1811; d. London, Jan. 22, 1868. He was the second son of the actor Edmund Kean (q.v.), and studied at Eton. He turned to acting against his father's wishes, and made his first stage appearance on Oct. 1, 1827, as Young Norval in John Home's *Douglas*. Later, he acted with his father on several occasions. He was manager of the Princess Theatre, London, 1850-1859, and staged there a series of revivals, most notably of Shakespearean plays. By employing imaginative settings and painstakingly attending to historical accuracy he greatly influenced the future of the art of production. As an actor he was best in melodrama. He visited the United States in 1830, 1839, and 1845-1847, and toured in Australia, Panama, and Jamaica in 1863-1866.

His wife, **ELLEN TREE KEAN** (1805-1880), was an English actress whom he married in 1842. She made her stage debut at the close of the 1822-1823 season, acted at the Drury Lane Theatre during 1826-1828, and during 1829-1836 made a name as a comedienne at the Covent Garden Theatre. During 1836-1839 she appeared in the United States. After her marriage to Kean she played opposite him until his death.

KEAN, Edmund, English tragedian: b. London, Nov. 4, 1787; d. Richmond, Surrey, May 15, 1833. His supposed parents were connected in a low capacity with the theatrical profession, and early abandoned him to his fate. He appeared as Cupid at the age of four in a ballet of Jean G. Noverre's, and, attaining adolescence, for several years wandered about the provinces. He appeared as a reciter and singer, again as a tumbler in a circus during which capacity he once broke both his legs in an over-zealous fall, and later as a member of itinerant companies. He married a well-known actress of her day, Mary Chambers, in 1808, and in January 1814 finally appeared at the Drury Lane Theatre as Shylock. His success from this moment was decided and he at once commanded large salaries. William Hazlitt and Charles Lamb eulogized him. Samuel T. Coleridge said "To see Kean act is like reading Shakespeare by flashes of lightning."

At John P. Kemble's retirement in 1817 Kean took the foremost place on the English stage. He appeared in several other tragic roles, among them Richard III, Hamlet, Lear, Othello, and Iago, and was immensely successful as Sir Giles Overreach in Philip Massinger's *A New Way to Pay Old Debts*. In these characters he has perhaps never been equaled.

He first came to the United States in 1820, when he was seen with enthusiasm in New York, Boston, and Philadelphia. His hold on the public remained uninterrupted until 1825, when he appeared in the character of correspondent in a divorce case. During his second tour of the United States the following year he was attacked on stage and off for his part in the divorce, several of his performances ending up in riots. He never regained public favor to the extent he previously had it, and he made his last appearance in *Othello*, in company with his son Charles, in March 1833, but broke down during the performance. His death took place some three months later.

Although small of stature, Kean offset this drawback by remarkable facial control, being able at times to put unheard of power into insipid lines merely by contortions of his face. He was the greatest proponent of passion in his time, and as he acted, so he lived—passionately. His eccentricities could well be compared with those of another, more contemporary tragedian, John Barrymore.

KEANE, James John, American Roman Catholic archbishop: b. Joliet, Ill., Aug. 26, 1857; d. Dubuque, Iowa, Aug. 2, 1929. Educated in his native town, St. John's Seminary, Collegeville, Minnesota, and the Grand Seminary, Montreal, Canada, he was ordained a priest in 1882. Serving in various ministerial and pedagogical capacities, among them that of president of St. Thomas Seminary, St. Paul, and that of pastor of the church of the Immaculate Conception in the same city (1892-1902), he became bishop of Cheyenne diocese, Wyoming, in the latter year, and nine years later he was raised to the archbishopric of Dubuque, Iowa.

KEANE, John Joseph, American Roman Catholic prelate: b. Ballyshannon, Ireland, Sept. 12, 1839; d. Dubuque, Iowa, June 22, 1918. When seven years old he came to America with his parents, who settled in Baltimore, Md., pur-

sued his classical studies at St. Charles College, Baltimore, and later took a complete philosophical and theological course at St. Mary's Seminary, where, in 1866, he was ordained priest. He was then appointed assistant pastor at St. Patrick's Church, Washington, D.C., and 12 years afterward was consecrated bishop of Richmond, Virginia. In this new field he labored indefatigably, much of his attention being bestowed upon the Negroes, and when, in 1884, the American hierarchy decreed the foundation of the Catholic University, Bishop Keane was selected to devise plans for its organization. In 1889 the university was formally opened, he being chosen its first rector, and under his efficient administration it attained most gratifying success. Its generous endowments and splendid equipment were the result of his tireless efforts, and when, in January 1897, his rectorship ceased, he left the institution established upon a solid basis. The next two years he spent in Rome, and in 1899 returned to America at the earnest solicitation of the board of trustees of the university, and for two years labored to augment its endowments. On July 24, 1900, he was appointed to the archiepiscopal see of Dubuque. He resigned in 1911 and James John Keane (q.v.) succeeded him.

KEARNEY, kâr'nî, Denis, American labor agitator: b. Oakmont, County Cork, Ireland, Feb. 1, 1847; d. Alameda, Calif., April 24, 1907. He went to sea from 1858 to about 1868, when he settled in San Francisco, becoming foreman of stevedores and later going into the draying business. In 1877 he began an agitation among the workingmen, his attacks being directed mostly against the rights of capital and the importation of Chinese labor. Large mass meetings were held on a sand lot by the new city hall, and the movement, called the Workingmen's Party, grew rapidly in power and importance, being dominated entirely by Kearney. Finally he was able to pack a convention which adopted a new state constitution in 1879 in the interests of his movement, and very detrimental to capital and property interests. In 1878 he visited the Eastern states, speaking in the large cities, but failed to gain an important following; on his return to California he gradually lost his influence and his party sank into obscurity.

KEARNEY, city, Nebraska, and Buffalo County seat, altitude 2,146 feet, served by the Union Pacific and the Chicago, Burlington and Quincy railroads and state and federal highways 45 miles west-southwest of Grand Island. Located in the fertile plains bordering the Platte River on the northern side, Kearney is the trading center of a wide area given up to diversified farming, with alfalfa, corn and wheat, sugar beets, and potatoes as leading crops. Ditch irrigation is extensively practiced in Buffalo County, the field system being fed from wells by pumping. The wells tap an underground stream that follows the course of the Platte for hundreds of miles and extends several miles on either side of the river. In this region the first successful demonstration was made of growing crops of alfalfa without irrigation; that is, by the dry-farming method. Manufactures of the city are widely diversified and include concrete blocks, air conditioners, trailers, harness and saddles, and dairy products. Besides the public and parochial schools,

Kearney has the State Industrial School for Boys and the Kearney State Teachers College. In connection with its public school system, the city maintains a vocational agricultural department, with a full-time director conducting classes in the Manual Arts Building. There are in the city three general hospitals and a state hospital for tubercular patients. The city has an armory, used as an auditorium, for conventions and other community activities. Harmon Field (16 acres) has a swimming pool, large rock garden, lighted baseball and softball diamond, all types of playground equipment, in fact everything to provide wholesome recreation for young and old. Seven miles out of town is Fort Kearney State Park, on the site of old Fort Kearney, established in 1848 for protection of settlers traversing the region in wagon trains, and abandoned in 1871, when the development of railroad traffic removed the need for such military protection. The city was named for the fort, and the fort for Gen. Stephen Watts Kearny (q.v.), who spelled his name without an "e" in the second syllable; but the extra letter found its way into the town incorporation papers, and so became official. Originally called Kearney Junction, it was founded in 1871, and incorporated in 1873. Government is by city manager. Pop. (1950) 12,115.

KEARNS, Thomas, American politician: b. near Woodstock, Ontario, April 11, 1862; d. Oct. 18, 1918. He attended the public schools and his father's removal to Holt County, Neb., 1872, then worked on the home farm until he was 14. After several years spent as a freighter Nebraska he removed to Utah in 1883, where worked at first as a miner, becoming subsequently one of the owners of the Mayflower and Silver King mines. He was a member of the common council of Park City, Utah, in 1895, and was a delegate to the National Republican convention the same year. He was also a delegate to the Philadelphia convention in 1900, and is a member of the United States Senate in 1905. He was largely identified with the mining interests of Utah and was also known as railroad promoter.

KEARNY, kār'nī, Lawrence, American naval officer: b. Perth Amboy, N. J., Nov. 30, 1799, d. there, Nov. 29, 1868. Having entered a navy in 1807, he was active in the defense of the coast of South Carolina and states adjacent during the War of 1812, and in 1826 in command of the *Warren* effectually put an end to the predations of the Greek pirates in the Levant. Promoted captain (1832), he was assigned in 1840 to the command of the East India squadron, and began the negotiations for a commercial treaty between China and the United States, later concluded by the special envoy, Caleb Cushing. On his return voyage to the United States, Kearny stopped at the Hawaiian Islands to protest against the contemplated transfer of the islands to Great Britain. He retired in 1861 and in 1867 he was made commodore on the retired list.

KEARNY, Philip, American soldier: b. New York, June 1, 1814; d. near Chantilly, Va., Sept. 1, 1862. He was graduated from Columbia in 1833, studied law, but in 1837 entered the United States Army as lieutenant of the 1st Dragoons, and in 1830-1840 was in Europe for the study of

the cavalry service of the French Army, with which he fought in the Algerine War. In 1841 he was on the staff of Gen. Winfield Scott, in 1846 resigned from the army, but soon afterward enlisted for the Mexican War, fought at Contreras and Churubusco, and at the close of the latter engagement charged and pursued into Mexico City the retreating enemy. He again resigned from the army in 1851, in 1859 entered the French service, and participated in the war in Italy, where he fought at Solferino. On May 17, 1861, he was appointed brigadier general in the Union service, and given command of the 1st New Jersey brigade in the Army of the Potomac. Later he was assigned to the command of the cavalry of that army, and served conspicuously in the Peninsular campaign. He was commissioned major general of volunteers July 7, 1862, took part in the second Bull Run, and subsequently at Chantilly was shot while reconnoitering. Kearny was a brilliant cavalry leader, termed by Scott "the most perfect soldier" he ever knew.

KEARNY, Stephen Watts, American general: b. Newark, N. J., Aug. 30, 1794; d. St. Louis, Mo., Oct. 31, 1848. He entered the United States Army in 1812 as lieutenant, and distinguished himself in the action at Queenston Heights in the same year. He served throughout the war, and, after extensive service on the Western frontier, became in June 1846 a brigadier general. At the commencement of the Mexican War he commanded the Army of the West, which marched from Fort Leavenworth, Kansas, westward and conquered New Mexico. Having established a provisional civil government in Santa Fe, he proceeded to California, and participated with his command in the Battle of San Pascual, in December 1846, where he was defeated by the Mexicans. For his services in this campaign he was appointed brevet major general, his commission being dated from the Battle of San Pascual. He was governor of California from March to June 1847 after he had occupied Los Angeles but subsequently joined the army in Mexico, where he continued until the close of the war. He wrote *Manual for the Exercise and Maneuvering of United States Dragoons* (1837); *Laws for the Government of New Mexico* (1846).

KEARNY, town, New Jersey, in Hudson County, altitude 120 feet, located at the head of Newark Bay, between the Passaic and Hackensack rivers, 9 miles west of New York. It is served by the Erie, the Pennsylvania, the Lehigh Valley, the New Jersey Central, and the Delaware, Lackawanna and Western railroads. Kearny has ten miles of waterfront on the two rivers, both of which afford tidewater channel passage to large ships in coastal trade. Nearby is Newark Airport; state and federal highways provide means for motor transportation. Many of the nation's greatest manufacturing concerns have plants at Kearny. Among the many products are machinery, truck bodies, shoes, varnishes, chemicals, linoleum, drugs, plastics, and plumbing supplies; shipbuilding and oil, gold, and platinum refining are also important Kearny industries. The town is governed by a mayor and eight councilmen, two from each of the four wards. Kearny combines with five other municipalities in control of water supply under the

North Jersey District Water Supply Commission. The town has two libraries and a hospital.

In 1668 a William Sandford from Barbados bought up the land including the present city of Kearny for the East Jersey proprietors, paying them £20 and paying the Indians, among other things, 200 fathoms of wampum and 19 black coats. He named his land New Barbados and from it were eventually formed the towns of Lodi, Harrison, and Kearny. In 1765 Kearny, then a part of Harrison, was settled by an influx of Germans, and in 1871 it was incorporated separate of Harrison and named in honor of Gen. Philip Kearny. With the establishment of heavy industry in Kearny a great many Scots settled here to work in the mills and they still form a large proportion of the population. Pop. (1950) 39,352.

KEARSARGE, kēr'sārj, a mountain, New Hampshire, in Merrimack County, with a height of 2,937 feet. It was once called Kyar-Sarga, and is part of the White Mountains.

KEARSARGE, The, a ship of the United States Navy which played a conspicuous part in the only sea fight of the Civil War, when it destroyed the *Alabama*, a ship built in England at Birkenhead on the Mersey by the Lairds under contract with the Confederate States at a cost of \$250,000, and sent to sea as a privateer, in the spring of 1862. The vessel was known as "290."

received on board as armament two pivot guns amidships and six 32-pounders, eight guns in the fore and aft. The manning of the ship was 25 officers in all and 124 men. Stores for a long cruise were taken aboard, and the vessel, equipped for both steam and sail, entered promptly upon her memorable career. On the night of Jan. 11, 1863, the United States steamer *Hatteras* engaged the *Alabama* off the coast of Texas and was sunk. The *Alabama* roved the seas for two years, seeking to cut off commerce of the United States from both hemispheres. The privateer was supposed to have destroyed one-half the American merchant marine, then second in tonnage only to that of Great Britain among the nations. On the forenoon of June 11, 1864, the *Alabama* anchored in the port of Cherbourg, France. The intent of Captain Semmes was to dock his ship for much-needed repairs. While Semmes was awaiting the consent of the Emperor Napoleon III to the use of the government docks, the news of the arrival of the privateer spread over the land. Captain John A. Winslow, commanding the United States ship *Kearsarge*, lying at Flushing, was apprised of the fact by William Lewis Dayton, United States minister to France, and made for Cherbourg, sailed into the harbor and out without anchoring, but took position outside. Semmes rightly construed the conduct of the *Kearsarge* as the equivalent of a challenge to combat. The *Alabama* steamed out on Sunday morning, June 19, 1864, in faultless weather. The *Kearsarge*

The United States screw-sloop *Kearsarge* at the time of her encounter with the *Alabama*. After the engagement alterations were made in the *Kearsarge* which considerably changed her appearance.

The name indicated only that the vessel was number 290 in order of launch from the builders' yards. Protest had gone to the British government from the American minister at the Court of St. James, Charles Francis Adams (q.v.), against the sailing of the ship. Meantime Capt. Raphael Semmes and 24 young naval officers from the Confederacy arrived in Liverpool with commissions in their pockets to take command. For sake of prudence Captain Semmes ordered the "290" to sail for the island of Terceira, one of the Azores, under command of a young officer of the British merchant marine. Semmes immediately followed as a passenger on an English ship. His armament had been already shipped to the same rendezvous. At Terceira the privateer ran up the Confederate colors, took her name as ordered by the Confederate government, and

machinery was additionally protected by a chain armor covered with one-inch deal boards. However, as that part of the ship was struck but twice the armor was of no material aid. The *Kearsarge* had 162 men and seven guns; the *Alabama* 149 men and eight guns. The metal carried by the *Kearsarge* guns was heavier than the metal of the *Alabama* guns. The battle was fought in a circle and lasted one hour and two minutes, resulting in the sinking of the *Alabama*. In the first 30 minutes the *Alabama* lodged a rifled percussion shell near the sternpost of the *Kearsarge*, which from a faulty cap failed to explode. The shell is now to be seen, in the wood where it buried itself, in the ordnance museum of the navy yard at Washington. Captain Semmes remained on the deck of his ship until it went down. He and 41 others from the sunken vessel were res-

ued by the *Deerhound*, a pleasure yacht belonging to John Lancaster, an Englishman. Many persons had come from Paris to view the battle and the hills along the coast were lined with spectators as it progressed. After the close of the war the British government paid an indemnity to American shippers of \$15,500,000, representing losses inflicted by the *Shenandoah* (in part), the *Florida* (in full), and the *Alabama* (in full).

Bibliography.—Semmes, Raphael, *The Cruise of the Alabama and the Sumter* (London 1864); Sinclair, Arthur, *Two Years on the Alabama* (Boston 1895); Edge, F. M., *An Englishman's View of the Alabama-Kearsarge Battle* (New York 1908).

KEARY, kē'ri, Annie, English novelist: b. Bittan near Wetherby, Yorkshire, March 3, 1825; d. Eastbourne, Sussex, March 3, 1879. Beginning a literary career with books for children, she made her reputation with stories of Irish life, although she never had been in Ireland, and became very popular, *Castle Daly* (1875) being her best work. Among other fictions by her are *Clemency Franklyn* (1866), and *A Doubting Heart* left unfinished at her death and completed by Mrs. Katharine Macquoid. She also published such historical works as *Early Egyptian History* (1861) and *The Nations Around* (1870).

KEATS, kēts, John, English poet: b. London, Oct. 29 or 31, 1795; d. Rome, Feb. 23, 1821. He was the eldest child of Thomas Keats, employee and son-in-law of a livery-stable keeper named Jennings, and was born at the stable in Finsbury Pavement. There were four other children, three of whom reached maturity, George, Thomas, and Frances (Mrs. Llanos). In 1804, Thomas Keats, who like his wife, Frances, seems to have been a strong character, died from a fall from his horse. His widow soon remarried, but was speedily forced to leave her new husband and to reside with her mother at Edmonton, where she died, after a rapid decline, in 1810.

Meanwhile the boys had been placed at Mr. John Clarke's school at Enfield, where John distinguished himself by his manly pugnaciousness and, later, by his zeal for literary studies, particularly mythology. He formed a friendship with the master's son, Charles Cowden Clarke (q.v.), an underteacher, who encouraged his literary tastes; but unfortunately Keats' guardian, in 1810, took him from school before he had begun Greek, and apprenticed him for five years a surgeon at Edmonton.

He was still near enough to young Clarke to profit from the latter's influence, and Elizabethan poetry, especially Edmund Spenser's *The Faerie Queene* awoke his poetic genius. His earliest known poem, *Imitation of Spenser*, dates probably from 1813. The study of medicine became distasteful to him and a break with Hammond, the surgeon, followed in 1814. Keats went to London, studied fitfully in the hospitals, and more and more gave himself up to reading and writing verse. The best of his early poems, the *First Looking into Chapman's Homer*, seems to date from the summer of 1815, and was composed after a night of reading with Clarke. Besides this friend certain fellow students and his brothers formed Keats' chief society. In the winter of 1816 Clarke introduced him to Leigh Hunt (q.v.) whose influence upon him was at first very strong. Through Hunt, Keats was led to widen his reading, especially in the direction of Italian

poetry, and to develop an appreciation of the arts; but the elder poet also encouraged his new protégé's luxuriant sentimentality and, through his own unpopularity, prepared the way for the critical hostility which Keats encountered as a member of the so-called "Cockney School."

The first of his poems to be printed was the sonnet *O Solitude*, which appeared in Hunt's *Examiner* for May 5, 1816. A little later Keats, who had previously been appointed a dresser at Guy's Hospital, passed his examination as licentiate at Apothecaries' Hall; but we hear more of literary plans and of acquaintances, such as Percy Bysshe Shelley and John Hamilton Reynolds, than of preparations for practice. He was much at Hunt's cottage at Hampstead, he visited the seashore, he wrote epistles in verse and prose to friends and relatives. By the winter of 1816-1817 he had become intimate with the painter, Benjamin R. Haydon, had published several sonnets in *The Examiner*, and had made up his mind definitely to abandon medicine for poetry. His first volume, *Poems by John Keats*, with a dedication to Hunt, was published early in March 1817.

The book, naturally, fell flat. Keats was still immature in thought and feeling, he had reacted too far from the pseudo-classical taste of the majority of readers toward the unrestrained luxuriance of style of the later Elizabethans, and he had submitted too unreservedly to the mawkish and shallow aestheticism of Hunt. The young poet took his disappointment well and resolved to improve himself by study. In April 1817 he went alone to the Isle of Wight, then with his brother Tom he visited other places, and by midsummer he was domiciled with both his brothers at Hampstead, where he saw much of literary and artistic friends, including Charles Wentworth Dilke, Charles Armitage Brown, and the painter, Joseph Severn. More important for his poetical development, however, was the growing influence of William Shakespeare and of the loftier, more spiritual portion of William Wordsworth's verse, which may be seen in *Endymion*. This ambitious poem was begun on the Isle of Wight, steadily labored upon during the summer and fall despite distractions such as a visit to Oxford, and finished at the end of November 1817, at Burford Bridge, near Dorking. Keats spent the winter of 1817-1818 in London, seeing *Endymion* through the press, frequenting theaters, and having a rather gay time with his friends. Before *Endymion* was published in April 1817, he had begun with J. H. Reynolds the experiment of making metrical versions of tales from Boccaccio, and in *Isabella, or the Pot of Basil* he had given evidence, not only of maturing thought and of increasing control of his emotions, but of a manly faculty of self-criticism that enabled him to perceive without flinching the faults that jostled the beauties of *Endymion*.

The last-named poem received a few favorable reviews, but made little impression on the public. Still fascinated with Greek mythology, Keats chose another subject from it, that of the fall of the Titans; but, before beginning *Hyperion* he wisely resolved to study a more restrained model than his beloved exuberant Elizabethans—to wit, John Milton. Meanwhile his brother George married and removed to Kentucky, and Keats with Armitage Brown took a tour, partly on foot, through the Lake Region and a portion of Scotland. Exposure and

strain undermined Keats' health so much that a physician at Inverness had to order him home. He reached London in August 1818, where the sad task awaited him of nursing without hope his consumptive brother Tom through more than three months of decline. Just at this time an ironical fate decreed that the *Quarterly* and *Blackwood's* should publish their now notorious diatribes upon 'Endymion' (by John Wilson Croker and, probably, J. G. Lockhart, respectively). Keats on the whole bore the attacks well; but unfortunately Byron and Shelley have made the world think otherwise.

During the fall of 1818 Keats began 'Hyperion,' and wrote long letters to George and his wife in America. He also made the acquaintance of a handsome girl of 17, Miss Fanny Brawne, and speedily falling in love, became engaged to her. Rarely at his best in his relations with women, owing partly perhaps to his antecedents, partly to his sensuousness, partly to the struggles of his spirit to escape from its actual environment to the ideal world of beauty and romance, Keats gave himself up to this passion with an abandonment that might be described as disgusting, did not one make allowances for his slowly failing health.

After the death of Tom Keats, 1 Dec. 1818, the poet resided for a time with Armitage Brown at Wentworth Place. Here he not only worked at 'Hyperion,' but wrote many of the poems that mark the zenith of his genius, such as 'The Eve of Saint Agnes,' the odes 'On a Grecian Urn,' 'To a Nightingale,' and 'To Psyche,' and the ballad 'La Belle Dame sans Merci.' It was an extraordinary six months' work (December 1818-May 1819) for an ailing poet in his 24th year. And he was not merely sick in body but poor in purse, most of his patrimony having been tangled up by his guardian, or spent, or loaned to impecunious friends. Other friends, like Brown, stood by him, however, though this fact can scarcely have made the marriage he dreamed of seem much more possible. He took summer excursions, wrote on a tragedy, 'Otho the Great,' with Brown, and completed his own 'Lamia,' in some respects the most individual and promising of his narrative poems. He abandoned 'Hyperion,' rightly judging that it was too Miltonic, yet he did not cease to form literary plans and to face the present and the future bravely. But on his return to London, he came once more under the influence of Miss Brawne, and he lost ground in health, courage and literary power. His work in the drama and in satire proved on the whole unavailing; he recast 'Hyperion' for the worse ('The Fall of Hyperion'); and he lost his cheerfulness, becoming moody, suspicious and somewhat dissipated.

Early in February 1820 he had his first hæmorrhage from the lungs and was confined for several weeks, Brown being his indefatigable nurse. With Fanny Brawne, who was living next door, he kept up a correspondence which many of his admirers could spare. When he was stronger, Brown having left for Scotland, Keats occupied himself by seeing through the press his third volume—one of the most memorable in the history of our literature, for it can scarcely be disputed that in color and form latter-day English poetry owes more to Keats than to any other writer among the moderns. It was entitled 'Lamia, Isabella, The Eve of

Saint Agnes and Other Poems,' and was welcomed, not only by friends like Hunt, but by such a critic as Jeffrey, in the *Edinburgh*. It appeared early in July 1820, just after two hæmorrhages had shown that its author must be soon cut short in what promised to be nothing less than a marvelous career.

During his new illness, Keats was kindly nursed by the Hunts; then ungrounded suspicions of their friendship caused him to leave them, and he was welcomed by Mrs. Brawne and her daughter. Becoming more tranquil, he determined to see what the climate of Italy could do for him, and with Severn he sailed for Naples in September. On the voyage he wrote his last poem, the fine sonnet 'Bright star, would I were steadfast as thou art.' After reaching Rome about the middle of December, he suffered many violent attacks of fever and pain; then he lingered in a calmer state of mind and body until death took him from the arms of the faithful Severn, in the early morning of 23 Feb. 1821. He was buried three days later in the old Protestant cemetery at Rome and on his tomb was placed at his desire the non-prophetic epitaph, "Here lies one whose name was writ in water." In 1881 Severn was laid by his side; long before (December 1822) the ashes of the author of 'Adonais' had been buried nearby.

In person Keats was small, but evidently in his early years strong and well made. His features were clear cut and his eyes large, dark and full of meditative depth. In character he seems to have been essentially open, kindly and manly. That his social status and his exceptionally sensuous nature were without deleterious effects upon his life, as well as upon his poetry, it would be idle to assert; yet it would be equally beside the mark to think of him chiefly as a hyperæsthetic anomaly among the men of his day. He was far more than a lower middle-class Briton of the Regency; but he was also more than the neo-Greek, or the neo-Elizabethan, or the idolatrous priest of beauty that some have fancied him. He was a wonderfully endowed poet of strong human interests, keen intelligence, ever deepening moral sense, extraordinary sensitiveness to physical impressions—not only upon eye and ear, but upon taste and touch—growing appreciation of artistic form, and steadily developing power of self-control. He filled all the rôles his admirers have claimed for him; but he filled them, or was learning to fill them, in combination—a fact which makes him greater than even some warm admirers have fancied.

His rank among English poets is not easy to determine. In a sense Matthew Arnold was right when he declared that Keats "is with Shakespeare." It might be added that he is with Milton also; but he is with these supreme poets only in respect to certain qualities of genius. He is obviously not with them in sustained power, in unexcelled majestic achievements, in breadth and duration of popular appeal. Even when he is compared with his contemporaries he is found to lack, in a measure, Byron's passion and cosmopolitan influence, Wordsworth's power to calm and ennoble the spirit and quicken the vision, Coleridge's ineffable secret of casting glamour, and Shelley's gift of interpenetrating poetry and life with the radiance of a pure idealism. In quantity of

approximately perfect work he falls short; of course, through no fault of his own. The juvenile volume of 1817 and 'Endymion,' though in a sense the latter confirms the truth of its first line that "a thing of beauty is a joy forever," are on the whole immature, and the posthumous poems and letters, though abounding in merits, are uneven in value and below the highest excellence. It is mainly on the magnificent volume of 1820—on the impressive artistic mastery shown in 'Lamia,' on the romantic charm of 'The Eve of Saint Agnes,' on the tender pathos of 'Isabella,' on the matchless harmonies, the deep, subtle appeal to mind and heart, and the indescribable richness of the great odes, on what it is hardly rash to call the dewy felicity of some of the less elaborate lyrics that the claim of Keats to rank among the greater English poets rests, and rests securely. To lovers of poetry he has long been almost an idol; the public has scarcely yet realized the full significance of his noble, and in some respects unique, genius.

Bibliography.—Keats' poems were first collected, with those of Coleridge and Shelley, in 1829. In 1848 R. M. Milnes (Lord Houghton) published the 'Life, Letters and Literary Remains' (revised 1867); biographical material then began to accumulate through such books as Hugh Hunt's 'Autobiography.' In 1876 Mr. H. Forman edited the letters to Fanny Brawne, in 1885 the works in prose and verse in four volumes (reissued and augmented in 1889). In 1911 G. Speed, of the American branch of the mily, issued a volume of 'Letters and Poems.' In 1887 brief lives of the poet appeared in 'Great Writers' and the 'English Men of Letters' by W. M. Rossetti and Sidney Colvin respectively. In 1891 Mr. Colvin edited 'Letters of John Keats to His Family and Friends.' In 1905 Mr. Forman issued the complete correspondence (1 vol.), and in 1901 what is the best monograph of the entire works (5 vols.). The American Cambridge edition of the poems and letters is also good. There are numerous editions of the poems, including several by Lord Houghton (especially the Aldine, 5th ed., 1890), one by W. T. Arnold (1883), the 'Golden Treasury' by F. T. Palgrave (1884), and the latest and best by E. de Selincourt (1905). On 18 May 1914 the London *Times* published two previously unpublished sonnets by Keats. Books dealing with Byron, Shelley and Hunt usually touch on Keats, and the mass of criticism upon him is large. Among his chief critics are Matthew Arnold, Robert Bridges, DeQuincey, Dowden, Leigh Hunt, Imagination and Fancy'), Lowell, Masson, J. Robertson, Swinburne and Woodberry. Consult also Sharp's 'Life and Letters of Joseph Severn' (1892); Marie Gotheim's 'John Keats, Leben und Werke' (1897); Colvin, S., 'John Keats' (1917); Brandenburg, A. J., 'Life of John Keats' (1929); Murry, J. M., 'Studies in Keats' (1930). See also ENDYMION; HYPERION; ISABELLA; LAMIA; ODE ON A GRECIAN URN; ODE TO A NIGHTINGALE. WILLIAM P. TRENT, Late Professor Emeritus of Literature, Columbia University.

KEBBEL, Thomas Edward, English journalist: b. 1826; d. November 1917. Educated in London and Oxford, he was called to the bar in 1862; but he had already drifted into jour-

nalism in 1855, and for 60 years he strenuously followed that profession. In 1873 he joined the *Standard* in London, and contributed political, biographical and literary articles to its columns until that paper ceased publication in 1916. He also wrote freely on sporting matters and country life. Kebbel was for many years a close personal friend of Disraeli (Lord Beaconsfield), whose biography he wrote. Among his publications in book form are lives of Lord Derby, the poet Crabbe, a collection of Beaconsfield's speeches, 'Essays on History and Politics,' and a history of Tory administrations. His 'Agricultural Labourer' is a successful study of country life and ways. In 1911 he published a volume of recollections of his long career entitled, 'The Battle of Life.'

KEBLAH. See KIBLAH.

KEBLE, kē'bl, John, English Anglican clergyman and poet: b. Fairford, Gloucestershire, 25 April 1792; d. Bournemouth, Hampshire, 29 March 1866. He was educated at Corpus Christi College, Oxford, and took his degree in 1811 with high honors. Going to Oriel College as a Fellow, he became tutor and public examiner, and in 1831–41 was professor of poetry. He took priest's orders in 1816 and was his father's curate for some time. He was appointed vicar of Hursley, near Winchester, in 1836, a position which he held until his death. To the world at large he is best known as the author of the famous volume of religious verse, 'The Christian Year.' He also wrote the 'Lyra Innocentium,' and, with Newman and others, the 'Lyrica Apostolica.' He was a zealous High Churchman, and wrote several of the celebrated 'Tracts for the Times' (1833). Keble College, Oxford, was founded as a memorial of him. Consult 'Lives' by J. T. Coleridge (1869), and Lock (1892); Yonge, 'Musings over the Christian Year' and 'Lyra Innocentium'; Shairp, 'Studies in Poetry and Philosophy' (1868); Newman, 'Apologia pro Vita sua' (1864); Yonge, 'John Keble's Two Parishes' (1898). See CHRISTIAN YEAR, THE.

KEBLE COLLEGE, one of the colleges of Oxford University, built by subscription as a memorial of the Rev. John Keble, the author of 'The Christian Year,' and incorporated in 1870 by royal charter. The intention of its founders was to establish a "college wherein sober living and high cultivation of mind may be combined with Christian teaching based upon the principles of the Church of England." It is governed by a warden and a council composed of not less than nine and not more than 12 members. There are from 250 to 300 undergraduates in attendance. One of the adornments of its beautiful chapel is Holman Hunt's famous picture, 'The Light of the World.'

KECSKEMET, kēch'kē-mât, city in Pest, Hungary, about 65 miles from Budapest. It is noted for its great annual cattle fair. It is the centre of an agricultural district which is engaged principally in the raising of grapes, and other fruit, tobacco, grain, cattle and vegetables. Large quantities of wine are exported and a very extensive trade is carried on in brick and flour, which are home products, and apples and apricots. Pop. 79,418, principally Magyars.

KEDAH, kă'dă, state, Federation of Malaya, bounded on the north and northeast by Thailand (Siam), on the southeast and south by Perak, on the southwest by Province Wellesley, on the west by the Andaman Sea, and on the northwest by Perlis. The area is 3,660 square miles, and the population in 1948 numbered 561,411. Several islands are included within the state, among them Langkawi, off the northwest coast, which rises to a peak 2,888 feet in height. Kedah has a length, north to south, of 115 miles, and a maximum breadth of 46 miles; the coastline is 65 miles long. A mountain range along the eastern border rises to a maximum elevation of some 6,000 feet. Rivers are short; the principal ones are the Kedah and the Muda, the latter forming the boundary with Province Wellesley. Alor Star (pop., 1947, 32,424), the capital, is on the Kedah River 10 miles from its mouth. Next largest town is Sungei Patani (pop. 10,000), near the coast 15 miles north of Butterworth, Province Wellesley. The state is traversed by the west coast line of the Malayan Railway. There are numerous rubber estates, and rice is cultivated on a large scale; other crops include tapioca, and there are many coconut trees. Livestock is reared in the eastern part of the state. Kedah became subject to the sultan of Achin (Sumatra) in the 17th century, but subsequently came under the suzerainty of Siam. Control was slight, however, and in the 18th century the East India Company was able to negotiate with its ruler, leasing from him Penang in 1786 and Province Wellesley in 1800. The Siamese government exercised stricter control over the state from 1821 down to 1909, when it came under British protection. Thereafter Kedah was one of the Unfederated Malay States until 1946, when it was absorbed into the newly organized Malayan Union; in 1948 this was reconstituted as the Federation of Malaya.

KEDGE, a small anchor used for the handling of ships under various conditions, generally while in the harbor. The kedge has an iron stock and is frequently used as an ordinary anchor for small vessels and boats. The English sailor, who has forgotten that kedge means, in itself, anchor, frequently speaks of a kedge anchor.

Kedging, in seamanship, is a method of moving a small ship without the use of sails or engine. The anchor, made fast to the ship by a line (or chain), is carried by boat in the desired direction, then dropped, and the ship is moved by hauling in on the line by hand or winch.

KEDIRI, kă-dê'rê, town, Indonesia, located in East Java, on the Brantas River 65 miles southwest of Soerabaja (Surabaya). It is one of the centers of the sugar industry. Besides sugar cane, in the fertile plain of the Brantas in the neighborhood of Kediri, coffee, cacao, cassava, and coconuts are cultivated. In former times the town was the capital of the Hindu-Javanese kingdom of Kediri. It is the capital of a similarly named residency. Pop. (1951 est.) 100,000.

KEEBLE, Sir Frederick William, British botanist: b. March 2, 1870. He was educated at Caius College, Cambridge University, and in 1914 he became director of the Royal Horticultural Society's Garden, at Wisley. From 1920 to 1927 he was Sherardian professor of botany at Oxford, and during 1938-1941 he was Fullerton professor at the Royal Institution. He was knighted in

1922. His numerous writings included *Science Lends a Hand in the Garden* (1939).

KEEFE, Daniel Joseph, American labor leader: b. Chicago, Ill., Sept. 27, 1852; d. there Jan. 2, 1929. In boyhood a worker in a shingle mill, he became active in the labor movement. In 1892 he was elected president of the International Longshoremen, Marine, and Transport Workers Association. From 1908 until 1913 he was United States commissioner general of immigration.

KEEFER, kē'fēr, George Alexander, Canadian engineer: b. Cornwall, Ontario, 1836; d. 1912. Educated at Upper Canada College, Toronto, as engineer, he entered the employ of the Grand Trunk Railway as surveyor. At the age of 36 he became engineer to the government of Canada, working on railway constructing and survey until 1886, during which period he built an important section of the Canadian Pacific Railway and later on constructed the waterworks system of the city of Vancouver. After serving from 1900 as resident engineer of the Dominion Public Works in the province of British Columbia, he became head of a commission of Canadian engineers appointed by a Canadian syndicate to make a report upon the proposed route of the Trans-Siberian Railway between Vladivostok and the Amur River. This report, which was made, was subsequently used by the Canadian company for the building of the section of the road from Vladivostok.

KEEFER, Samuel, Canadian engineer, b. Thorold, Ontario, Jan. 20, 1811; d. Brockville, Ontario, Jan. 7, 1890. He was a brother of T. C. Keefer (q.v.). In 1841-1853 he was chief engineer of the government Board of Public Works, in 1853 was appointed resident engineer of the Grand Trunk Railway, and in 1857-1864 was government inspector of railways and deputy commissioner of public works. He completed in 1860 the Niagara Falls suspension bridge, then the longest existing single-span structure.

KEEFER, Thomas Coltrin, Canadian engineer: b. Thorold, Ontario, Nov. 4, 1821; d. Ottawa, Jan. 7, 1915. He was a brother of Samuel Keefer (q.v.). He was educated at Upper Canada College (Toronto), began practice as a civil engineer in 1838, and in 1850 was appointed by the government to survey the rapids of the St. Lawrence and explore the region between the headwaters of the St. John and the St. Lawrence. In 1851 he became engineer-in-charge of the Toronto and Kingston section of the Grand Trunk Railway, and made surveys at Montreal for the Victoria Bridge across the St. Lawrence. He wrote *The Philosophy of Railways* (1849) and an essay on *The Influence of the Canals of Canada on Her Agriculture* (1850). President of the Royal Society of Canada in 1898, he was a leading hydraulics engineer.

KEELER, James Edward, American astronomer: b. La Salle, Ill., Sept. 10, 1857; d. San Francisco, Calif., Aug. 12, 1900. After graduating Johns Hopkins University in 1881 he accompanied the famous expedition of Samuel Pierpont Langley (q.v.) to the top of Mount Whitney, California. He was on the staff of the Allegheny Observatory until 1883, and in 1884, after a year of study in Germany, he was appointed assistant at Lick C

rvatory (1886), and later astronomer there (1888). In 1891–1898 he was active at the Allegheny Observatory as its director and professor of astrophysics in the Western University of Pennsylvania, and from 1898 until his death as director of the Lick Observatory. His spectroscopic work included valuable studies of the nebula in Orion and of Saturn's rings.

KEELEY, kē'li, Leslie E., American physician: b. St. Lawrence County, N. Y., in 1842; d. Los Angeles, Calif., Feb. 21, 1900. He was graduated at Rush Medical College (Chicago) in 1863, was a surgeon in the federal army during the Civil War, practiced medicine at Dwight, Ill., there opened (1880) a sanitarium for the cure of alcoholics and drug addicts. His system was based on a secret compound said by him to contain bichloride of gold, and hence called the "gold" cure. He published *The Morphine Eater* (1881).

KEELEY, Mary Anne Goward, English comic actress: b. Ipswich, Nov. 27, 1805 or 1806; d. London, March 12, 1899. She made her first appearance in Dublin in 1823; and two years later she went to London where she joined a Covent Garden company and married one of its prominent members, Robert Keeley (q.v.) in 1829. She made a great reputation for herself in important parts like Nerissa (in *The Merchant of Venice*), Smike (in *Nicholas Nickleby*), Sairy Gamp and Betty Martin.

In company with her husband she toured the United States (1836–1837) where she was everywhere received enthusiastically. On their return to England, the Keeleys took over the Lyceum Theatre in London, which they managed very successfully from 1844 to 1847. After 12 years' further success Mrs. Keeley retired from the stage at the age of 53, a retirement which was timed to last 40 years.

consult Goodman, Walters, *The Keeleys on the Stage* (London 1895).

KEELEY, Robert, English comic actor: b. London, 1793; d. London, 1869. After playing comic parts throughout the interior of England he reached the London stage in 1818. He lost at once became a favorite in important comic roles like Touchstone Jimmy Green (in *My Lady's Man*), Mr. Bounceable (in *What Have I Done?*), Peter Pall Mall (in *The Prisoner of War*) and Sir Andrew Aguecheek. He married Mary Anne Goward in 1829. (See KEELEY, MARY ANNE GOWARD.)

KEELHAULING, the dragging of an offender in the navy underneath the ship across the keel from side to side. This punishment was at one time common in the British and other navies; and was greatly dreaded by seamen and marines.

KEELING ISLANDS. See Cocos.

KEELSON, or KELSON, kīl'sūn, a line of timbers on the middle of the floor, timbers of ship over the keel. They are joined and bolted together, and, by means of long bolts, they help to bind the floor-timbers to the keel. In iron vessels a combination of steel or iron plates takes the place of the timber keelson of the wooden ship. The word which was also formerly written "kilson" and "kelsine" appears,

in one form or another, in all the Norse and Germanic tongues.

KEELUNG, kē-lōōng', or KIRUN, kē-rōōn, city, is the principal port and naval base of the island of Formosa (Taiwan). It has an excellent harbor, a large chemical industry producing phosphates and fertilizers, and exports tea, camphor, and sugar. Gold, sulphur, and copper mines are nearby. It has railway and highway connection with Taihoku (Taipei), the capital. Pop. (1950) 145,240.

KEELY, John Ernest Worrell, American adventurer: b. Philadelphia, Pa., Sept. 3, 1837; d. there, Nov. 18, 1898. In early life he was a carpenter. Prior to 1872 he became interested in music, and afterward claimed that the tuning-fork had suggested to him a new motive power. In 1874 a stock company was formed for the purpose of supplying funds for the perfection and promotion of the alleged discovery. Keely built and destroyed many models, gave exhibitions at which numerous remarkable and unexplained effects were produced, but never attained any important result. Upon his death it was found that the so-called Keely motor was operated by an invisible compressed-air apparatus, and that the entire scheme was fraudulent.

KEEN, William Williams, American surgeon: b. Philadelphia, Jan. 19, 1837; d. there, June 7, 1932. He was graduated at Brown University in 1859, and from Jefferson Medical College in 1862 and served as an acting assistant surgeon in the federal army during part of the American Civil War. For two years he studied in Europe, returning to Philadelphia in 1866 where he established his practice and also lectured on anatomical subjects at Jefferson Medical College. He was in charge of the Philadelphia School of Anatomy during 1866–1875, was professor of artistic anatomy at the Pennsylvania Academy of Fine Arts during 1876–1879, professor of surgery at the Women's Medical College during 1884–1889, and thereafter until his retirement in 1907, professor of surgery at Jefferson Medical College.

A specialist in the surgery of the brain and nervous system, Dr. Keen was among the first in the United States to perform successfully new and difficult operations in this field.

During World War I he was a major in the Medical Reserve Corps and was a member of the National Research Council.

In 1912, on the 50th anniversary of his graduation, the Jefferson Medical College gave him the honorary degree of Sc.D. He also received the degree of LL.D. from Brown University (1891), Northwestern and Toronto universities (1903), the University of Edinburgh (1905), Yale University (1906), University of Saint Andrews (1911); an honorary M.D. from University of Greifswald (1906) and honorary Ph.D. from the University of Upsala (1907). He was the senior member of the Corporation of Brown University, having been elected in 1873. He was elected president of the American Surgical Association in 1898; of the American Medical Association in 1899; of the College of Physicians of Philadelphia in 1900; of the Congress of American Physicians and Surgeons in 1903 and of the International Congress of Surgery for the session of 1917, and was president of the American Philo-

sophical Society after 1907. He was also foreign corresponding member of the Surgical Society of Paris, the Belgian Surgical Society, and the Clinical Society of London. He was an honorary fellow of the Royal College of Surgeons of England and the Royal College of Surgeons of Edinburgh, and of surgical societies in Germany, and Italy, as well as a fellow of the American Academy of Arts and Sciences and the American College of Surgeons.

He is the author of *Surgical Complications and Sequels of Typhoid Fever* (1898); *Animal Experimentation and Medical Progress* (1914); *Medical Research and Human Welfare* (1917); *The Treatment of War Wounds* (1917). He edited Gray's *Anatomy* (1887); *American Text Book of Surgery* (1892); and *Keen's System of Surgery* (1906-1921).

KEENE, Charles Samuel, English humorous artist: b. Hornsey, England, Aug. 10, 1823; d. London, Jan. 4, 1891. He began to study architecture only to give it up for the study of wood engraving. Gaining some reputation on the *Illustrated London News*, he attracted the attention of *Punch*, the staff of which he joined in 1851 and continued on it until his death. Aside from his humorous work in *Punch*, he illustrated the works of such authors as Charles Reade, George Meredith, George Eliot, Douglas Jerrold, and William M. Thackeray, sometimes in volume but more often in the serialized version in a periodical. His engravings may be found in the compilation *Four Hundred Pictures of Our People* (1888).

KEENE, Laura, American actress and manager: b. England, 1826?; d. Montclair, N. J., Nov. 4, 1873. Her real name is unknown but it was as Laura Keene that she became famous in England in the role of Pauline in *The Lady of Lyons*, before coming to the United States in 1852 where she made her home the remainder of her life. After touring the Pacific coast and Australia, she opened *Laura Keene's Varieties* in New York, and from 1856 to 1863 she was the lessee and manager of Laura Keene's Theatre (later the Olympic). Miss Keene's airy and lilting humor assured a successful run of any play, and her abilities as a director attracted much new talent to her theater, in spite of current competition. The most noted play produced by her was *Our American Cousin*, brought out in 1858 with Edward A. Sothern and Joseph Jefferson in the cast. While he was witnessing this play at Ford's Theatre in Washington, D.C., President Abraham Lincoln was assassinated.

KEENE, city, New Hampshire and Cheshire County seat, on the Ashuelot River, 49 miles northwest of Nashua, served by the Boston and Maine Railroad and a municipal airport. Keene is a busy retail and wholesale market center in an agricultural and vacation resort section. There are manufactures of wooden textiles, chairs, shoes, machinery, boxes, wood heels, novelties, metal polish, office supplies, and celluloid novelties; and mica and feldspar are quarried in the vicinity.

The city is noted for the number of its beautiful homes and for its scenic background. Mount Monadnock is 10 miles to the east, and Keene's winter sports facilities include toboggan and ski slides that rank among the longest and safest in the East. Keene Teachers College, a coeduca-

tional school founded in 1909 and one of the largest in New England, is here. Upper Ashuelot was founded on the site in 1736, but the first permanent settlement was in 1750; incorporation as the town of Keene followed in 1753, and the city charter dates from 1873. Government is by city manager. Pop. (1950) 5,638.

KEENER, William Albert, American jurist and educator: b. Augusta, Ga., March 10, 1856; d. New York City, April 22, 1913. Graduated from Harvard Law School in 1877 he practised law in New York city, became a justice of the Supreme Court of the State of New York and professor of law at Harvard (1883-1890) and at Columbia University (1890-1902) and Dean of the Law School (1891-1901). Among his law writings are *Treatise on the Law of Quasi-Contracts* (1893); *A Seduction of Cases on the Law of Private Corporations* (1899).

KEEP, Robert Porter, American educator b. Farmington, Conn., April 26, 1844; d. there, June 3, 1904. Graduating from Yale University in 1865, he became a Greek tutor there two years later, a position he resigned to become United States consul at the Piræus, Greece (1869-1871). On his return home he continued teaching, particularly at the Free Academy, Norwich, Conn., where he taught from 1885 to 1902.

Among his published works are G. G. P. Autenrieth's *Homeric Dictionary for Schools and Colleges* (translation 1877); *Stories from Herodotus* (1879); *Uses of the Moods in Greek and Latin* (1879); and *Greek Lessons* (1885).

KEEP, William John, American inventor and manufacturer: b. Oberlin, Ohio, June 3, 1842; d. Sept. 30, 1918. Graduated as a civil engineer from Union College (1865), he began the manufacture of stoves to which he later added that of testing machines. After many experiments he discovered the relation existing between the shrinkage and the chemical composition of cast iron (1885); he contributed to many technical journals on that subject. He published *Cast Iron* (1902).

KEEWATIN, kê-wă't'n, district, Canada, an administrative division of the Northwest Territories, lying west and north of Hudson Bay and extending north to the Arctic Ocean. Its original area was 516,571 square miles and it was created in 1876. The northern part of Lake Winnipeg and its outlet, Nelson River, were once in Keewatin. The main lakes, almost all of which belong in the basin of Hudson Bay, are Nulturn, Dubawnt, Baker, Maguse, Aberdeen, Garrv, Pelly, and Kaminuriak, and the rivers draining the district are the Back, Dubawnt, Kazan, and Thebon. A great part of the district consists of the Barren Grounds, level, treeless, Arctic plains, which support a few Eskimos and fur trappers.

The district has undergone division and reorganization at different times, with parts of it being added to the provinces of Ontario and Manitoba, and is now limited southwards at 60° N. latitude by Mackenzie District, northwards by Franklin District. Its area, including water bodies, now is 228,160 square miles.

KEEWATIN, kê-wă't'n, the earliest epoch of the Archaeozoic Era, and the series of rocks then formed, consequently the oldest known rocks

The name is derived from the territory of Keewatin in Canada. In the type region around Lake Superior, the Keewatin rocks consist mostly of much metamorphosed lava flows interbedded with small amounts of sedimentary rocks. The whole series is usually much metamorphosed and is commonly spoken of as the greenstone series. The iron ores of the Vermilion Range in Minnesota are of Keewatin age.

KEFIR, or **KEPHIR**, kē'fēr (Turkish *kaif*, delight), a native drink of the people of the Caucasus. It is made from fermented milk, the fermentation being caused by kefir grains, which require from two to three days to complete their action. This fermentation, when properly effected, leaves the kefir effervescent.

KEI, **KAI**, kī, or **KE**, kē, Netherlands Indies, a group of islands in the Banda Zee, southeast of Ceram and west of the Aru Islands. The largest island is mountainous, and all of the group are well wooded and fertile. The islands have an aggregate area of 572 square miles. The inhabitants, of Papuan stock with an admixture of Malay blood, total about 36,000.

KEIDEL, **George Charles**, American librarian: b. Catonsville, Md., June 16, 1868; d. Washington, D. C., April 12, 1942. Graduating at Johns Hopkins University in 1889 he continued studies there in French, Italian, and Latin, securing the Romance fellowship and in 1895 being awarded his doctorate in philosophy. In the fall of 1895 he joined the faculty of his alma mater as assistant in Romance languages. He became an instructor in 1897, and the next year was appointed associate professor of Romance languages. At Johns Hopkins he came under the direct personal influence of Aaron Marshall Elliott (1844–1910), the Nestor of the Romance scholars of the United States. For 20 years he made investigations in comparative literature in connection with a critical edition of the *Fables* of Marie de France upon which the members of the Romance seminary were engaged. In 1911 he resigned his university appointment to become the foreign language expert of the copyright office in the Library of Congress at Washington. He was a contributor to the *ENCYCLOPEDIA AMERICANA*, and among his books were *Manual of Aesopic Fable Literature* (1896); *Earliest German Newspapers of Baltimore* (1927); *Early Maryland Newspapers* (1933).

KEIFER, kī'fēr, **Joseph Warren**, American lawyer, soldier, and politician: b. Bethel, Ohio, Jan. 30, 1836; d. Springfield, Ohio, April 22, 1932. He was educated at Antioch College, and in 1856 began to study law at Springfield. In 1858 he was admitted to the bar, but at outbreak of the American Civil War he was commissioned major of the 3d Ohio Infantry. He was brevetted brigadier general of volunteers in 1864 for "gallant and meritorious services at the battles of Opequan, Fisher's Hill, and Middletown, Va.," and the next year he became major general; he had fought in a total of 27 battles, and was wounded four times. After the war he resumed law practice in Springfield and entered politics as a Republican, serving in the Ohio State Senate during 1868–1869. In

1876 he was elected to the United States Congress; he served until 1885, being Speaker in 1881–1883. With outbreak of the Spanish-American War in 1898 he was commissioned a major general of volunteers, and for a time he commanded the 7th Corps, encamped near Havana. From 1905 to 1911 he again served in Congress. He was president of the Laconia National Bank of Springfield from 1873 to 1927. He wrote *Slavery and Four Years of War* (1900).

KEIGHLEY, kē'li, England, a municipal borough of the West Riding of Yorkshire, 17 miles northwest of Leeds. It is connected with both Liverpool and Hull by the Leeds and Liverpool Canal. Manufactures include woollens, paper, tools, and machinery. Pop. (est.) 52,450.

KEIJO. See **SEOUL**.

KEITEL, kī'tēl, **Wilhelm**, German army officer: b. Helmscherode, near Brunswick, Sept. 22, 1882; d. Nurnberg (Nuremberg), Oct. 16, 1946. Entering the German Army in 1901, he was a captain of artillery during World War I, and became colonel in 1931. After Adolf Hitler acquired power in 1933 Keitel became one of his outstanding political generals. He was promoted major general in 1934, and the next year, with the rank of lieutenant general, he was appointed chief of the administration department of the ministry of war. In 1938 Hitler assumed personal and direct command of Germany's armed forces, exercising his authority through "a supreme command of the armed forces headed by Gen. Wilhelm Keitel." Following outbreak of World War II the following year Keitel became a member of the Cabinet council for the defense of the Reich. In June 1940, with the rank of field marshal, he signed in Compiègne Forest the armistice with the defeated French, and in 1941 he was given command of the German armies invading Russia; but on May 9, 1945, at the Berlin headquarters of Russian Marshal Grigori Konstantinovich Zhukov, he formally ratified Germany's unconditional surrender. With other German leaders, later in the year he was brought to trial at Nurnberg before the International War Crimes Tribunal as a major war criminal. On Oct. 1, 1946 he was convicted of conspiring to wage aggressive war; crimes against the peace; crimes violating the laws of war; and crimes against humanity. He had assisted in planning the annexation of Austria, the occupation of Czechoslovakia, and the invasion of Poland, Denmark, Norway, Belgium, the Netherlands, Greece, Yugoslavia, and Russia. He signed orders for the execution of paratroops, commandos, and Soviet prisoners of war, and for the killing of 50 to 100 Russians for each German soldier; and he ordered that civilians suspected of offenses against German troops should be shot without trial, and that Russian prisoners of war should be used in German industry. He was hanged.

KEITH, kēth, **Arthur**, American geologist: b. St. Louis, Mo., Sept. 30, 1864; d. Alexandria, Va., Feb. 7, 1944. After securing his master's degree at Harvard in 1887 he joined the United States Geological Survey. From 1913 to 1921 he was in charge of areal geology east of the 100th meridian; he investigated the structure, stratigraphy, and earthquakes of the Appalachian Mountains.

KEITH, Sir Arthur, British anthropologist: b. Old Machar, Aberdeen, Feb. 5, 1866. He studied medicine at the universities of Aberdeen, London, and Leipzig. From 1917 to 1923 he was Fullerton professor of physiology at the Royal Institution. He served as president of the Royal Anthropological Institute (1913-1914) and of the British Association (1927), and was rector of the University of Aberdeen (1930-1933). In 1921 he was knighted for his work in the field of anthropology, notably in the reconstruction of prehistoric man from fragments or fossil remains. His works included *Introduction to the Study of Anthropoid Apes* (1896); *Human Embryology and Morphology* (1901); *Ancient Types of Man* (1911); *The Human Body* (1912); *Antiquity of Man*, 2d ed. (1925); *Religion of a Darwinist* (1925); *Concerning Man's Origin* (1927); *New Discoveries Relating to the Antiquity of Man* (1931); *Darwinism and Its Critics* (1935); with T. D. McCown, *Stone-age of Mount Carmel Human Fossil Remains* (1939).

KEITH, Benjamin Franklin, American theatrical manager: b. Hillsboro Bridge, N. H., Jan. 26, 1846; d. Palm Beach, Fla., March 26, 1914. In 1883, after managing a circus, he joined with Edward F. Albee (1857-1930) in organizing and directing the Keith-Albee chain of vaudeville theaters. With Frederick Francis Proctor (1851?-1929) he formed in 1906 the Keith and Proctor Amusement Company; after the death of the founders this was merged into the Radio-Keith-Orpheum (RKO) circuit. Keith was credited with originating the continuous performance program.

KEITH, George, Scottish missionary in America: b. Peterhead, Aberdeenshire, about 1638; d. Edhurton, Sussex, England, March 27, 1716. Reared as a Presbyterian, he became a Quaker in 1662 and in 1677 went to the Netherlands with William Penn and other leaders. In 1684 he sailed for New Jersey to become its surveyor general, and five years later he was made principal of Penn's Quaker school in Philadelphia, Pa. He was denounced by Penn in 1692, when he formed a sect termed Christian (or Baptist) Quakers, known also as Keithians. In 1700, however, he entered the Church of England, and between 1702 and 1704 he was a missionary in Pennsylvania and New Jersey for the Society for Propagation of the Gospel in Foreign Parts. Returning to England in 1705, he became rector of Edhurton.

KEITH, George, 10TH EARL MARISCHAL, Scottish Jacobite: b. 1693?; d. 1778. After the failure of the Jacobite rising of 1715 he fled to the European continent, as did his brother, James Francis Edward Keith (q.v.). He was a leader of the small Spanish force which landed in Scotland in 1719 and was defeated at Glen-shiel. Subsequently he entered the service of Frederick the Great of Prussia, who appointed him to a diplomatic mission in Paris (1751) and governor of Neuchâtel (1752). In 1758 he became Prussian ambassador to Spain, and although George II of Great Britain pardoned him the next year he continued to serve Frederick.

KEITH, George Elphinstone, VISCOUNT.

See ELPHINSTONE, GEORGE KEITH, VISCOUNT KEITH.

KEITH, James Francis Edward (known as MARSHAL KEITH), Scottish soldier in Prussian service: b. Inverurie, Aberdeenshire, June 14, 1696; d. Hochkirch, Saxony, Oct. 14, 1758. With his brother, George Keith, 10th Earl Marischal (q.v.), he fought in the Jacobite rising of 1715 and the Spanish expedition of 1719, and following failure of the latter he became a colonel in the Spanish Army. During 1726 he participated in the abortive Spanish siege of Gibraltar, but two years later transferred his services to Russia. As a major general he fought well against the Turks (1737) and Swedes (1741-1743), only to fall into disfavor at the Russian court. In 1747 Frederick the Great appointed him field marshal in the army of Prussia, and two years later he became governor of Berlin. He fought brilliantly in the early years of the Seven Years' War, meeting his death at the battle of Hochkirch.

KEITH, Minor Cooper, American railroad builder: b. Brooklyn, N. Y., Jan. 19, 1848; d. West Islip, N. Y., June 14, 1929. Between 1874 and 1890 he constructed a railroad from Limon, chief port of Costa Rica in the Caribbean, to San José, the capital. After establishing a shipping company to transport bananas from Limon to the United States he extended his interests to banana plantations in Panama and Colombia, and in 1899 he merged his properties with those of the Boston Fruit Company to constitute the United Fruit Company; this concern became the dominant factor in the banana trade of Central America. In 1912 he established the International Railways of Central America, embarking upon a program of railroad construction which envisaged a line to the Panama Canal. He bequeathed to the American Museum of Natural History, New York, his notable collection of Aztec gold images and ornaments.

KEITH, Sir William, British colonial governor: b. Peterhead, Scotland, 1680; d. London, Nov. 18, 1749. Although, as a Jacobite supporter, much of his early life had been spent as an exile in France, Queen Anne appointed him in 1714 surveyor general of customs for the southern colonies in North America. In 1717 he became lieutenant governor of Pennsylvania and Delaware, but he lost the post in 1726 for taking the part of the Assembly in its dispute with the proprietors and council. He returned to England in 1728, and two years later he was instrumental in negotiation of a treaty with visiting Cherokee chiefs. In 1720 he had inherited from his father an estate encumbered with debt, and because he was unable to liquidate the liability he was imprisoned at the Old Bailey in 1734, remaining there till his death.

KEKULE VON STRADONITZ, kâ'kôo-lâ fôn shtrâ'dô-nits, **Friedrich August**, German chemist: b. Darmstadt, Sept. 7, 1829; d. Bonn, June 13, 1896. He was professor of chemistry at Ghent from 1858 to 1865, and thereafter he held a like chair at Bonn. He established the valence theory and originated the ring, or closed chain, theory of the constitution of the benzene molecule, applying this knowledge to the

tudy of numerous compounds. His work in synthetic dyes gave Germany a start in their manufacture which she held until World War I deprived her of it. Kekulé wrote much on chemical subjects.

KEKULE VON STRADONITZ, Reinhard, German writer on archaeological subjects: b. Darmstadt, 1839; d. Berlin, 1911. Educated at Göttingen and Berlin, he became professor of archaeology at Bonn, and later at Berlin. Among his published works, most of which are the result of personal investigation, are *Die antiken Terrakotten* (1880–1884); *Das Leben Friedrich Gottlieb Wilckers* (1880); *A History of Greek Art* (1890).

KELANTAN, kě-lăn'tăn, state, Federation of Malaya, on the east side of the Malay Peninsula. It is bounded on the north by Thailand, and northeast by the South China Sea, on the east by Trengganu, on the south by Pahang, and on the west by Perak. The area is 5,750 square miles, and the population in 1948 numbered 444,743. The greatest length, from north to south, is 115 miles, and the maximum breadth is 60 miles. The southern part of the state is hilly, but the northern area is level and fertile. The principal river is the Kelantan, 150 miles in length, which rises on the southwest border and flows in a northeasterly direction to empty into the South China Sea; its numerous tributaries include the Galas, Lebir, and Pergau. Kota Bahru (pop. 22,736), the capital, is on the Kelantan River six miles from its mouth; its seaport is Tumpat. The state is traversed by the east coast branch of the Malayan Railway; about half of the line within Kelantan was removed during the Japanese occupation in World War II. Large quantities of rice are grown, and stock raising is of importance; there are several rubber plantations, and large numbers of coconut and betel palms. Minerals include tin, gold, and galena, but mining is only on a small scale. Kelantan was a tributary of the Sumatran kingdom of Palembang in the 13th century, and in the 14th it was subject to the kingdom of Malacca. In the 19th century it became a suzerain of Siam, and this status continued until 1909, when it came under British protection. As an unfederated state it had a large measure of autonomy. In 1946 it became one of the states of the Malayan Union; and in 1948 the latter was reorganized as the Federation of Malaya.

KELAT. See **KALAT**.

KELCEY, Herbert Lamb, Anglo-American actor: b. London, England, Oct. 10, 1856; d. July 10, 1917. He made his first stage appearance at Brighton in 1877, and three years later he was in the cast of *Bow Bells* in London. In 1882 he went to the United States, where he continued to make his home. In New York he was connected with Wallack's Theatre and Daniel Frohman's Lyceum company. He played important parts in companies traveling throughout the United States.

KÉLER-BÉLA, kă'lěr-bă'lă (pseud. of ALBERT VON KÉLER), Hungarian composer and violinist: b. Bartfeld, Hungary, Feb. 13, 1820; d. Wiesbaden, Germany, Nov. 20, 1882. Educated at Vienna, he became leader of the Gung'l Band in

Berlin in 1854. After several years' experience in the orchestra of the Theater an der Wien, in Vienna, in 1867 he became conductor of the Kur Orchestra, a position he held until 1872. He was very popular as a composer of orchestra and dance music.

KELLAND, Clarence Budington, American novelist and short-story writer: b. Portland, Mich., July 11, 1881. Soon after graduating at the Detroit College of Law in 1902 he adopted a literary career. From 1907 to 1915 he edited the *American Boy*, and he scored a great success with his first book, *Mark Tidd* (1913). Following World War I he became one of the most popular contributors of short stories to such periodicals as the *Saturday Evening Post*, the *American Magazine*, and *Cosmopolitan*. Perhaps the best known of the characters he created was "Scattergood Baines." A collection of his stories under that title was published in 1921. *Opera Hat*, one of his finest short stories, was made into a highly successful motion picture entitled *Mr. Deeds Goes to Town* (1936). Later volumes by him included *Star Rising* (1938); *Skin Deep* (1939); *The Valley of the Rising Sun* (1940); *Silver Spoon* (1941); *Sugarfoot* (1942); *Archibald the Great* (1943).

KELLER, Albert von, German painter: b. Gais, Switzerland, April 27, 1844; d. Zürich, Switzerland, July 14, 1920. For several years he painted in Italy, France, Great Britain, and the Netherlands. He became a professor at the Munich Academy of Art, and served as president of the Munich Secession Society. In 1898 he was raised to the rank of nobility. He excelled as a portraitist and as a painter of Biblical and historical subjects. The Munich New Pinakothek acquired his *Chopin*; and the Berlin National Gallery, his *Portrait Painter*.

KELLER, Arthur Ignatius, American illustrator and painter: b. New York City, July 4, 1867; d. there, Dec. 2, 1924. His art studies were made at the National Academy, New York City, and in Munich. From 1890 he maintained a studio in his native city. He won a reputation as one of the finest American illustrators. Among the books which he illustrated were *The Virginian* (Owen Wister), *Kate Bonnet* (Frank Richard Stockton), and *The Right of Way* (Gilbert Parker). He also illustrated the works of Bret Harte, Henry Wadsworth Longfellow, Washington Irving, Silas Weir Mitchell, and Francis Hopkinson Smith. Besides his work as an illustrator, he was also a skillful oil and water-color artist. Many prominent galleries in the United States and elsewhere acquired examples of his work.

KELLER, or **KELLER VOM STEIN-BOCK**, fôm shtin'bök, Friedrich Ludwig, Swiss-German jurist and politician: b. Zürich, Oct. 17, 1799; d. Berlin, Sept. 11, 1860. He was educated at Berlin and Göttingen and, following his return to Zürich in 1825, he was appointed professor of civil law in the university. In 1831 he became president of the Swiss superior court. Turning to politics, he was elected to the grand council in 1830, and he served as president of that body in 1832 and again in 1834. He was one of the leaders of the Liberal Radical Party, but for political reasons he was forced to flee from Switzerland in 1839. Going back to Germany, from 1843 to 1847 he was a professor in the University of Halle. He then

taught at the University of Berlin and became active in politics as a Conservative in the Prussian government. A specialist in Roman law, he also was a champion of the historical approach to legal study.

KELLER, Gottfried, German-Swiss short-story writer and novelist: b. Zurich, Switzerland, July 19, 1819; d. there, July 15, 1890. The son of a lathe-worker who died when Keller was only five years old, he lived a carefree life in Zurich under his mother's indulgent surveillance until, at the age of 15, he was expelled from school for a boyish prank, which hardly deserved the severity of the punishment. Forced by his mother's poverty to find an occupation, he apprenticed himself to a landscape painter in 1835 and in 1840 went to Munich to study painting. He soon found he had little talent in this direction and returned to Zurich (1842), where he associated with German political refugees and began to find himself as a writer, publishing a volume of poetry (*Gedichten*) in 1846.

With the aid of a scholarship from his native canton, he studied from 1848 to 1850 in Heidelberg, where the philosophy of Ludwig Feuerbach profoundly influenced his thinking. Later, in Berlin (1850-1855), he wrote the first version of what was to become his best-known work, *Der Grüne Heinrich* (1854). This fictional autobiography of his youthful experiences was later expanded and revised (1879) in Zurich whence he had returned in 1855—after he had devoted a number of years to the civil duties of clerk of his canton (1861-1876).

Der Grüne Heinrich made little impression at first, but after he changed the tragic ending to a more optimistic one, it gained wide acclaim. As an educational novel (*Bildungsroman*) it cannot be compared with Goethe's *Wilhelm Meister*, and it falls short of Keller's shorter *novellen*, as do his poems, his dramatic attempts, and another novel, *Martin Salander* (1886), which highlights the conflict between democratic ideals and European culture.

Keller's penetrating descriptive powers, his characterizations, and his humor find their highest expression in his volumes of short stories (*novellen*), which include *Die Leute von Seldwyla* (1856); *Sieben Legenden* (1872); *Zürcher Novellen* (1878); and *Das Sinngedicht* (1882), a series of stories within a story (*Rahmenerzählung*), which marked the summit of Keller's narrative technique. Set mostly in a middle-class society, these stories unfold a great diversity of characters and scenes, often by caricature and exaggeration, and always with a wealth of physical description. Among the best of them are *Die drei gerechten Kammacher*, a satire on bourgeois morality; and *Romeo und Julia auf dem Dorfe*, Shakespeare's plot in a Swiss village setting (both from *Die Leute von Seldwyla*).

Most of Keller's works reflect a warm Christian humanism, founded on the political liberalism he imbibed as a young man and the materialistic philosophy of Feuerbach, whose atheism, however, failed to alter the faith he inherited from his mother. His philosophical outlook was based on the need he saw for converting men's religious drives into practical ethics, and inferred a moral law underlying all of nature.

Bibliography.—Consult the critical edition of Keller's works by Jonas Frankel and Carl Helbling, 24 vols. (Bern and Leipzig 1926-49) and his *Gesammelte Briefe*, ed. by Carl Helbling (Bern 1950-53). For biography, bibliog-

raphy, and commentary, consult Bächtold, Jakob, *Kellers Leben. Seine Briefe und Tagebücher*, 3 vols. (1891-97), new ed. by Emil Ermatinger (Stuttgart 1916-19), Hübner, Ricarda, *Gottfried Keller* (Leipzig 1904); Zippertmann, C. C., *Keller-Bibliographie 1844-1934* (Zurich 1935); Lukacs, G., *Gottfried Keller* (Berlin 1947), a Marxist interpretation; and Boeschstein, Hermann, *Gottfried Keller, Grundzüge seines Lebens und Werkes* (Bern 1948).

KELLER, Helen Adams, American author and lecturer: b. Tusculum, Ala., June 27, 1880. She was 19 months old when a severe illness, diagnosed as brain fever, deprived her of her sight and hearing. Her education, begun when she was seven, was placed in the hands of Miss Anna Mansfield Sullivan (Mrs. John A. Macy) of the Perkins Institute of the Blind. Under the care of Miss Sullivan, who came to live with her, she learned the deaf-and-dumb language by touch and learned to read by the braille system and to write, using a special typewriter. In 1890 she also learned to speak under the instruction of Miss Sarah Fuller of the Horace Mann School for the Deaf in Boston. She attended the Wright Humason School for the Deaf in New York (1894-1896) and the Cambridge School for Young Ladies (1896-1900) where Miss Sullivan was with her to all classes and repeated the lectures and discussions by touch. Accompanied by Miss Sullivan, she then attended Radcliffe College (1900-1904), where she graduated with honors. There her textbooks were printed in braille, and she wrote her examinations with her own typewriter and had special conferences with her instructors instead of taking part in recitations. She also took part as much as possible in the college social life.

Her life after graduation was not always free from financial worries. She made many lecture tours, wrote several books, made one motion picture based on her life, and even appeared on the Orpheum Circuit (vaudeville) for two years to help support herself as well as to carry out her dedicated task to stimulate public interest in the problems of the physically handicapped.

After the death of Miss Sullivan in 1936, she found a new companion in Miss Polly Thomson, who had become her secretary in 1914. Miss Keller served on the Massachusetts Commission for the Blind and inaugurated the Helen Keller Endowment Fund for the American Foundation of the Blind. After World War II she visited American veterans' hospitals and made many tours in Europe, Asia, and Africa, bringing her message of courage and hope to the handicapped everywhere. Her books include *The Story of My Life* (1903); *Optimism, an Essay* (1903); *The World I Live In* (1908); *The Song of the Stone Wall* (1910); *Out of the Dark* (1913); *My Religion* (1927); *Midstream—My Later Life* (1930); *Peace at Eventide* (1932); *Helen Keller in Scotland* (1933); *Helen Keller's Journal, 1936-1937* (1938); and *Let Us Have Faith* (1940).

KELLER, Henry George, American artist: b. Cleveland, Ohio, April 3, 1869; d. San Diego, Calif., Aug. 3, 1949. After three years of study at the Cleveland School of Art (1887-1889), he went to Germany (1890), where he studied at Karlsruhe for two years before returning to Cleveland to complete his course of study there. Later, he studied in Düsseldorf (1898) and Munich (1899-1902), where he won a silver medal at the Royal Academy. Thereafter he was a member of the faculty at the Cleveland School of

Art and traveled extensively in Spain, Mexico, and California seeking subjects for his canvases, many of which reveal a regionalism and a keen understanding of animals. His works are found in leading American museums.

KELLER, kē-lār', Jean Jacques, Franco-Swiss goldsmith and metal founder: b. Laufen, Switzerland, Dec. 17, 1635; d. Colmar, France, 1700. He was appointed commissioner of artillery by Louis XIV at the royal foundry in Paris. There, with his younger brother, JEAN BALTHASAR KELLER (b. Zurich, March 16, 1638; d. Paris, 1702), who was inspector of the foundry at the Arsenal, he cast most of the bronze statues in the gardens of Versailles, as well as the statue of Louis XIV after a model of François Girardon, which was cast in 1674 and erected in Lyon in 1715, and another of the king on horseback in the Place Vendôme, Paris (1699). The brothers also cast artillery, but their cannon, although artistic in design, were faulty in construction and caused many accidents.

KELLER, Mathias, German-American song and hymn writer: b. Urm, Württemberg, Germany, March 20, 1813; d. Boston, Mass., Oct. 12, 1875. Educated in music in Stuttgart and Vienna, he was first violinist in the Royal Chapel (1829-1834) and then bandmaster of the Third Royal Brigade (1834-1841). In 1846 he left Vienna for America, where he was a theater musician in Philadelphia before starting a violin shop, which he called "Keller's Patent Steam Violin Manufactory." Later, in New York, he won a prize for his *American Hymn (Speed Our Republic, O Father on High)*, which was often played and was chosen especially to be played by Gilmore's band for a flag ceremony in Boston after the Civil War. Other patriotic songs by Keller were *Up with the Flag of the Stripes and the Stars* and *Our Banner's Constellation*. He also wrote *The Girls of Dear New England*; *Good Night Little Blossom*; *The King and the Miller*; *Mother, O Sing Me to Rest*; *Angels, Let Her Still Dream On*; and *Ravel Polka*. To many of his songs he supplied his own texts, and in 1874 published a *Collection of Poems*.

KELLER, Otto, German classical philologist: b. Tübingen, Germany, May 28, 1838; d. Ludwigsburg, Feb. 16, 1927. Educated at the universities of Tübingen and Bonn, he later became known for his studies of Horace, including the critical works, *Horatii Opera*, 2 vols. (1864-1870), prepared in collaboration with Alfred Holder; *Epilogomena zu Horaz*, 3 vols. (1879-1880); and *Pseudononius Scholia in Horatium Vetustiora*, 2 vols. (1902-1904). He held professorships at Freiburg (1872), Graz (1876), and Prague (1881), where he remained until his retirement (1909) on a pension. He also wrote *Lateinische Volksetymologie* (1891) and *Die Antike Tierwelt*, 2 vols. (1909-1913).

His father, ADELBERT VON KELLER (1812-1883), was a philologist and translated the works of Cervantes and Shakespeare into German.

KELLER, Paul, German novelist and short-story writer: b. Arnsdorf, Germany, July 6, 1873; d. Breslau, Aug. 20, 1932. The author of humorous and often sentimental stories laid in his native Silesia, he was also the founder (1912) and editor of the monthly periodical *Die Bergstadt*. His

works, widely read during his lifetime, display his optimistic human outlook, uncomplicated by intellectualism, and are characterized by a firm moral quality. They include *Waldwinter* (1902); *Die Heimat* (1904); *Das letzte Märchen* (1905); *Sohn der Hagar* (1909); *Ferien vom Ich* (1915); *Ulrichshof* (1929); and *Drei Brüder suchen das Glück* (1929).

KELLER, Walter, American organist and composer: b. Chicago, Ill., Feb. 23, 1873; d. there, July 7, 1940. A student of F. G. Gleason in Chicago and of P. Homeyer and C. Piutti in Leipzig, he taught at Northwestern University (1898-1904) and in 1911 became the director of the Sherwood Music School in Chicago, where he had taught since 1906. He was also organist of St. Vincent's Church (1903-1918), dean of the music department of De Paul University (1912-1920), and dean of the Illinois chapter of the American Guild of Organists (1914-1916). A frequent recitalist, he also composed a comic opera, symphonic pieces, and numerous organ and choral works.

KELLERMANN, kēl'ēr-män, Bernhard, German novelist: b. Fürth, Bavaria, March 4, 1879; d. Klein Glienicke (near Berlin), Oct. 17, 1951. He was an inveterate traveler, and many of his works drew their setting from his knowledge of other lands than his own. He lived in various cities in Europe before World War I, episodes of which he recorded in two journalistic works, *Der Krieg im Westen* (1915) and *Der Krieg im Argonnenvald* (1916). Following World War II he took part in the founding of the Cultural League in the eastern zone of Berlin (Kulturbunde zur demokratischen Erneuerung Deutschlands), of which he was vice president at the time of his death, having been awarded a prize by the Communist government the previous year.

His most famous novel was *Der Tunnel* (1913), published in English as *The Tunnel* in 1914. Among his numerous other works are *Yester und Li* (1904); *Der Neunte November* (1920); *Die Stadt Anatol* (1932); *Das blaue Band* (1938); *Wendlandts Heimkehr* (1939); and *Totentanz* (1948).

KELLERMANN, kē-l'ēr-män', François Christophe, Duc de VALMY (originally GEORG MICHAEL KELLERMANN), French marshal: b. Wolfsbuchweiler-an-der-Tauber, Württemberg, Germany, May 30, 1735; d. Paris, France, Sept. 23, 1820. As a young man he took part in the campaigns of the Seven Years' War and later became a zealous supporter of the French Revolution. In 1791 he was placed in charge of the defense of Alsace; in the following year he received the command of the army of the Moselle, with which he joined the main French forces under Gen. Charles François Dumouriez in September, and on Sept. 20, 1792 repulsed the celebrated attack of the Duke of Brunswick at Valmy.

Imprisoned briefly under the Terror (1793), he thereafter received various commands and was appointed inspector general of the Dutch army by the Directoire. He was made a senator (1799) and marshal of France and duc de Valmy (1808) by Napoleon, after whose fall he rallied to the cause of the Bourbons and was made a peer by Louis XVIII (1814).

His son, FRANÇOIS ÉTIENNE DE KELLERMANN,

DUC DE VALMY (b. Metz, France, Aug. 4, 1770; d. Paris, June 2, 1835), served in his father's regiment before entering the diplomatic service in 1791. Returning to the army two years later, he again served under his father and in 1796 became Napoleon's adjutant general. In 1797 his services at Tagliamento led to his promotion to brigadier general, and at Marengo his cavalry charge won the battle and gained for him the rank of general of division. Thereafter he served at Austerlitz and in the peninsular campaign.

During the restoration he remained in the army, but rejoined Napoleon's service upon his return from Elba, and commanded a cavalry corps at the Battle of Waterloo, where he was severely wounded. After the fall of Napoleon he vigorously opposed the Bourbons until the fall of Charles in 1830. His unpublished memoirs were used by his son, FRANÇOIS CHRISTOPHE EDMOND DE KELLERMANN (1802-1868) in the preparation of *Histoire de la Campagne de 1800* (Paris 1850).

KELLEY, Edgar Stillman, American composer: b. Sparta, Wis., April 14, 1857; d. New York, N. Y., Nov. 12, 1944. A student of F. W. Merriam (1870-1874) and then Clarence Eddy and N. Ledochowski in Chicago (1874-1876), he went to Stuttgart, where he graduated from the conservatory in 1880. Upon his return to America he held several church appointments and for a brief period was a conductor of a comic operetta company touring the eastern states (1890). Later he taught in San Francisco where he became music critic of the *Examiner* (1893-1895).

In 1896 Kelley settled in New York City, teaching in the New York College of Music, an extension of New York University. Five years later he went to Yale University as acting professor of musical theory, and from 1902 to 1910 resided in Berlin, where he taught pianoforte and composition. After his return to the United States he became professor of music at the Western College for Women in Columbus, Ohio, and professor of composition at the Cincinnati Conservatory of Music.

Kelley's best-known works are his oratorio *The Pilgrim's Progress* and the choral pieces *My Captain* (on Walt Whitman's text) and *The Sleeper* (Edgar Allan Poe). Among his other works are symphonies, orchestral suites, and the comic opera *Puritania* (first perf. Boston, 1892). He was also the author of *Chopin the Composer* (1913) and *Musical Instruments* (1925).

KELLEY, Edward, English alchemist and charlatan: b. Wrochester, England, Aug. 1, 1555; d. Prague, Bohemia, 1595. Brought up as an apothecary, he became skilled in chemistry and was said to have studied at Oxford. In London about 1580 he lost his ears in the pillory for some misdeed, undoubtedly the outgrowth of his interest in the occult sciences and the transmutation of metals. In 1582 he joined that frequent attendant on Queen Elizabeth I, Dr. John Dee, in his supernatural researches; the two of them spent several years in Europe and were received briefly in the court of the emperor, Rudolph II. He became invaluable to Dee as his "skryer" (seer), but later Kelley's profligacy led to the dissolution of their partnership. Kelley was twice imprisoned by the emperor in Prague (1589 and 1595), and the last time was killed while trying to escape. Although a charlatan he seems to have had a persuasive imagination.

KELLEY, Florence, American social worker and social reformer: b. Philadelphia, Pa., Sept. 12, 1859; d. there, Feb. 17, 1932. She was the daughter of William Darragh Kelley, a staunch opponent of slavery, to whom she owed her lifelong interest in social problems. After graduating from Cornell University, where she went at the age of sixteen as one of its first women students, she attempted to enter the University of Pennsylvania law school, but was refused admission because of her sex. Having already dedicated herself to the amelioration of the conditions of women and children in factories, she decided to study law in Zurich, Switzerland, where, under the influence of the doctrine of Karl Marx, she became a convinced socialist and translated into English Friedrich Engels' *The Conditions of the Working Classes in England in 1844* (London 1886). Before returning to America, she was married to a young Polish doctor, Lazare Wisniewski (1884), but divorced him six years later for nonsupport and gained custody of their three children.

In 1891 she went to live in Hull House (q.v.) in Chicago, where she was not only active in social advisory and field research work, but also in the campaign for the Sweatshop Act of 1893, and, after its passage, as the first chief factory inspector to serve in Illinois. While in Chicago she also found time to complete her work for the law degree at Northwestern University (1894) and to be the American editor of the *Archiv für Sozialgesetzgebung* (1897-1898). In 1899 she became secretary of the National Consumers League, which was established to correct industrial abuses by means of consumer pressure, and in the same year moved to the Henry Street Settlement in New York City, where she worked until 1924.

Although many times reviled in the United States Congress for her socialistic beliefs, she nevertheless adhered to her faith that proper legislation would prove to be the necessary check on the heedless exploitation of American workers, especially women and children—a task which subsequent labor laws did much to justify. She was the author of *Some Ethical Gains Through Legislation* (1905) and the editor of Edmond Kelly's *Twentieth Century Socialism* (1910).

Consult Goldmark, Josephine, *Impatient Crusader. Florence Kelley's Life Story* (Urbana, Ill., 1931).

KELLEY, Hall Jackson, American promoter of the Oregon Territory: b. Northwood, N. H., Feb. 24, 1790; d. Jan. 20, 1874. A graduate of Middlebury College, Vt., he taught school in Boston (1818-1823), then took up surveying, and in 1828 allied himself with the Three Rivers Manufacturing Company in Palmer, Mass., both as an investor and engineer. Having lost most of his fortune in this enterprise, he organized the American Society for Encouraging the Settlement of the Oregon Territory (incorporated 1831), which, under a barrage of journalistic criticism, was gradually dissolved, and from the only group that made the journey, headed by Nathaniel J. Wyeth, Kelley was left out.

He then left his family and headed for the west coast via New Orleans and Mexico. In California he was aided by the trader Ewing Young in reaching Fort Vancouver (1834), where, sick and discouraged, he spent one winter before making the long journey home. He spent his later

ears in poverty and blindness in the village of Three Rivers, Mass. His life-long interest in Oregon, although fanatical and impractical, contributed to some extent to arousing public interest in the eventual American occupation of the territory. In 1839 he submitted his *Memoir*, a personal account of Oregon geography, to Caleb Cushing, who included it in his report on Oregon to the 5th Congress.

KELLEY, Oliver Hudson, founder of the Grange movement; b. Boston, Mass., Jan. 7, 1826; d. Washington, D.C., Jan. 20, 1913. He was a newspaper reporter in Illinois and then a telegraph operator in Iowa before settling in Minnesota (1849), where he traded with the Indians and encouraged the settlement of the region by "advertising" in eastern newspapers. In 1864 he became a clerk in the Bureau of Agriculture, Washington, D.C., for which, in the following year, he made a survey of agricultural conditions in Minnesota. While making a similar survey in the South in 1866, he conceived the idea of a farmers' fraternal organization, and in 1867 he became the secretary of the National Grange of the Patrons of Husbandry (see GRANGE), of which he was one of the founders. The movement was slow in growing, as the farmers saw little to be benefited from such an organization. But Kelley continued to present his views to the agricultural press, stressing the political value of a united front against monopolies oppressive to the farmers, and by the time of the farm depression in the 1870's there were over 20,000 granges in the South and Middle West. Kelley resigned as secretary of the order in 1878, after he had already embarked on a land promotion scheme in Florida, whence he had moved three years earlier and where he founded the town of Carrabelle. After the termination of this venture he lived in Washington, D.C., until his death. He was the author of *Origin and Progress of the Order of the Patrons of Husbandry* (1875).

KELLEY, William Darrah, American legislator; b. Philadelphia, Pa., April 12, 1814; d. Washington, D.C., Jan. 9, 1890. The son of a watchmaker who died when he was two years old, Kelley left school when he was eleven and worked in various trades. However, he studied in his leisure time, became recognized as a lecturer and debater, and in 1838 began the study of law in Philadelphia. After his admittance to the bar (1841), he served for two years as a Philadelphia prosecutor and then as a judge of the court of common pleas. A staunch opponent of slavery, he was one of the founders of the Republican Party in 1854 and two years later ran unsuccessfully for Congress. In 1860 he was elected Congressman from the Fourth Philadelphia District and filled that office for 14 terms, endorsing all legislation for the abolition of slavery and the establishment of suffrage for the freedman.

Kelley is best known for his advocacy of high tariffs after the Civil War. He believed that the protection of American industries was necessary to their expansion and diversification, as well as to keep the country independent of England, to encourage immigration, and to keep out European cheap-labor goods. His efforts in behalf of higher duties on iron and steel were so persistent that he was nicknamed "Pig Iron." He was the father of Florence Kelley (q.v.), a

leader of the industrial reform movement in the following generation.

KELLEYS ISLAND, an island in Lake Erie, a few miles north of Sandusky, Ohio, and included in the administration of Erie County, Ohio. The village of Kelleys Island lies on the south shore and in 1950 had a population of 324. The island covers 2,888 acres, rises to an altitude of 642 feet, and has a maximum width of 7 miles and 18 miles of irregular, rock-ribbed coast.

Settled in 1833 by two brothers, Irad and Datus Kelley, the island became noted for its fruit orchards, vineyards, and later for its limestone quarries, which, along with fishing and truck gardening, represent the chief modern industries. Summer tourists are attracted to the Glacial Grooves State Park along the north shore and Inscription Rock, a flat limestone surface bearing Indian petroglyphs, on the south shore.

KELLGREN, chēl'grän, Johan Henrik, Swedish poet and critic; b. Floby, Skaraborg County, Sweden, Dec. 1, 1751; d. Stockholm, April 20, 1795. He was educated at the University of Åbo (Turku) in Finland, and had already gained recognition as a poet when he became privatdocent there in 1774. He then made his home in Stockholm (1777), where he founded, with Carl Lenngren, the *Stockholms Posten*, of which he became editor. In 1780 he became librarian to Gustavus III, in whose operatic ventures he collaborated and whose private secretary he became in 1785. In the following year, on the founding of the Swedish Academy, he was made one of its original members.

A champion of the rationalism of the European enlightenment, Kellgren engaged in a journalistic controversy with the *Sturm und Drang* poet, Thomas Thorild, beginning in 1782, and, at the onset of the French Revolution, enthusiastically supported its cause. His lyrics, which are among the most notable products of the Gustavian period in Swedish letters, are often satirical or imbued with a sensualism which was part of his creed. In 1787 he created for the readers of the *Stockholms Posten* an imaginary society, *Pro sensu communi*, whose task was to combat all forms of mysticism and occultism. Among his satirical works, the most notable are *Nyt Försök till orimnad vers; Mina löjen (My Jest)*; and *Ljusets fiender (The Enemies of Light)*. His sensualism, evident in such works as *Till Rosalie* and *Sinnenas förening (Union of the Senses)* was eventually replaced by the expression of a richer imagery and deeper feeling in the love poem *Den nya skapelsen eller Inbillningens värld* (1789), which marked the dawn of Swedish literary Romanticism. See also SWEDISH LITERATURE—Eighteenth Century.

KELLOGG, kēl'ög, Clara Louise, American opera singer; b. Sumterville, S. C., July 12, 1842; d. New Hartford, Conn., May 13, 1916. After her operatic debut (1861) as Gilda in Verdi's *Rigoletto* at the Academy of Music in New York, she sang in opera and concert, touring the United States (1868-1873) and appearing in London (debut 1867). In 1873 she organized an English opera company, with which, during the 1874-1875 season, she attempted to popularize Italian and French operas in English. Subsequently she sang with an

Italian opera company and later appeared on the concert stage. In 1887 she married her manager, Carl Strakosch, and soon after retired from professional life. She published her memoirs in 1913 under the title *Memoirs of an American Prima Donna*.

KELLOGG, Elijah, American Congregational minister and writer for the young: b. Portland, Me., May 20, 1813; d. Harpswell, Me., March 17, 1901. He was graduated from Bowdoin College in 1840, from the Andover Theological Seminary in 1843, was pastor of the Congregational church at Harpswell, Me., 1844-1855. From 1855-1867 he was pastor of the Mariners' church in Boston, Mass., and chaplain of Sailors' Home there. He was later for a time in charge of a congregation at Rockport, Mass., but soon returned to Harpswell, and there devoted himself to literary work. He published 29 juveniles, including *Good Old Times*, in *Our Young Folks* (1867) and in book form (1878); *Lion Ben* (1869); *The Young Ship-Builders of Elm Island* (1870); *The Mission of Black Rifle* (1876); *A Strong Arm and a Mother's Blessing* (1881). But he is best known for his familiar blank verse addresses, *Spartacus to the Gladiators*, *Regulus to the Carthaginians* and *Pericles to the People*.

KELLOGG, Frank Billings, American lawyer and senator: b. Potsdam, N. Y., Dec. 22, 1856; d. St. Paul, Minn., Dec. 21, 1937. He removed to Minnesota with his parents in 1865, and was admitted to the bar in 1877. He was city attorney of Rochester, Minn., for three years and county attorney of Olmstead County for five years. In 1887 he went to St. Paul, joining the law firm Davis, Kellogg and Severance. He was counsel for different railroads and mining concerns and later served as special counsel for the United States government in its cases against the Standard Oil Company, the paper trust, the Union Pacific, Southern Pacific and Harriman railroads. He was elected president of the American Bar Association in 1912 and in 1916 was elected to the United States Senate, serving until 1923. The following year he was appointed ambassador to Great Britain. On March 4, 1925, and until 1929, he was secretary of state in President Calvin Coolidge's cabinet. Under him the Tacna-Arica dispute between Chile and Peru was settled. He promoted the pact for the outlawry of war called the Kellogg-Briand Pact (q.v.) signed at Paris, Aug. 27, 1928. In 1929 he was awarded the Nobel Peace Prize. He served as a member of the Permanent Court of International Justice at The Hague, 1930-1935.

KELLOGG, George, American inventor: b. New Hartford, Conn., June 19, 1812; d. there, May 6, 1901. Among his inventions were a machine for the manufacture of jack-chain, with a capacity of a yard per minute; a dovetailer; a type-distributor.

KELLOGG, John Harvey, American physician: b. Tyrone, Mich., Feb. 26, 1852; d. Battle Creek, Mich., Dec. 14, 1943. He was a student at the Michigan State Normal School, and received his M.D. from the Bellevue Hospital Medical College in 1875; thereafter he served as superintendent and surgeon of the Battle Creek Sanatorium from 1876. He was a member of the

Michigan State Board of Health 1878-1890 and 1912-1916. He was founder and president of Battle Creek College; and invented improved apparatus for medical and surgical purposes. He wrote many technical papers, and textbooks and charts for the use of schools in addition to *The Art of Massage* (1895); *Rational Hydrotherapy* (1901; 4th ed., 1910); *The Home Book of Modern Medicine* (1906); *Neurasthenia or Nervous Exhaustion* (1914); *Autointoxication* (1918); *The Natural Diet of Man* (1923); *How to Have Good Health* (1932). See also BATTLE CREEK SANATORIUM.

KELLOGG, Martin, American clergyman and educator: b. Vernon, Conn., March 15, 1828; d. Berkeley, Calif., Aug. 26, 1903. He was graduated from Yale in 1850, from the Union Theological Seminary in 1854, was ordained as a Congregational minister and sent as a missionary to California in 1855. There he held a pastorate at Grass Valley, Nevada County, and at Shasta City. He was professor of Latin and mathematics in the College of California (1860-1869); and when the college was merged into the university held the chair of Latin and Greek in the latter institution in 1869-1876. In 1876-1894 he was professor of Latin language and literature, in 1890-1893 acting president, and in 1893-1899 seventh president of the university. He resumed teaching in 1900 as professor emeritus in Latin. He published *Ars Oratoria*, an edition of selections from Cicero and Quintilian (1872), and *The Brutus of Cicero* (1889).

KELLOGG, Paul Underwood, American editor and social worker: b. Kalamazoo, Mich., Sept. 30, 1879. He was graduated at the Kalamazoo High School, and took special courses at Columbia University 1901-1906, and at the New York School of Philanthropy in 1902. He was reporter, then city editor, on the Kalamazoo *Daily Telegraph* in 1898-1901; managing editor, associate editor and editor of *The Survey* (N. Y.) of which he has made a notable success. He was director of the Pittsburgh Survey in 1907-1908; and edited *Findings of the Pittsburgh Survey* (6 vols., 1910) for the Russell Sage Foundation. He was one of the directors of the New York City Committee on Congestion of Population, also a bureau director of the American Red Cross in France, 1917-1918, and on the Emergency Red Cross Committee in Italy, 1917; he initiated and was a member of the board of the Foreign Policy Association (1918); vice chairman of the advisory council of the President's committee on economic security (1934-1935); president of the national council on social work (1939). He is a joint author with Arthur Gleason of *British Labor and the War* (1918).

KELLOGG, Samuel Henry, American Presbyterian missionary and scholar: b. Quogue, Long Island, N. Y., Sept. 6, 1839; d. Landour, India, May 3, 1899. He was graduated at Princeton College in 1861 and at the Theological Seminary in 1864, and after being ordained to the Presbyterian ministry, went as a missionary to India, where he remained till 1877. He was professor of systematic theology in the Allegheny Theological Seminary 1877-1885, and pastor of Saint James' Square Presbyterian Church, Toronto, 1886-1892. He returned to India in 1892.

and remained there till his death. His publications include *A Grammar of the Hindi Language* (1876); *The Jews: or, Prediction and Fulfilment* (1883); *The Light of Asia and the Light of the World* (1885); *The Genesis and Growth of Religion* (1892); *A Handbook of Comparative Religion* (1899).

KELLOGG, Vernon Lyman, American entomologist and zoologist; b. Emporia, Kans., Dec. 1, 1867; d. Hartford, Conn., Aug. 8, 1937. He was graduated from the University of Kansas in 1899, and joined its faculty the following year as assistant and associate professor of entomology. He also studied at Cornell University 1891-1892, at Leipzig 1893-1894 and 1897-1898, and at Paris 1904-1905 and 1908-1909. From 1894 to 1920, when he retired, he was professor of entomology and lecturer in bionomics at Stanford University. He was assistant to the Samoan expedition of the United States Fish Commission in 1902, and was president of the Entomological Society of America in 1915.

At the invitation of Herbert C. Hoover, Dr. Kellogg served as director of the American Committee in Brussels during 1915-1916, assisting in Belgian relief work; and when Mr. Hoover became United States Food Administrator in 1917, Dr. Kellogg served as his assistant until 1919. He headed a mission to Poland and served as a special investigator in Russia for the American Relief Administration at the close of World War I. In recognition of his war services he was decorated by France, Belgium, and Poland. After the war he served as permanent secretary of the National Research Council in Washington until his retirement as secretary emeritus in 1932. He was also chairman of its division of educational relations 1919-1929, and acting director of Science Service 1929-1931.

Besides several textbooks on entomology and zoology Dr. Kellogg wrote: *American Insects* (1904); *Animal Studies*, with David Starr Jordan and Harold Heath (1905); *Evolution and Animal Life*, with D. S. Jordan (1907); *Darwinism Today* (1907); *Insect Stories* (1908); *Scientific Aspects of Luther Burbank's Work*, with D. S. Jordan (1909); *In and Out of Florence*, under the pen name Max Vernon (1910); *The Animals and Man* (1911); *Beyond War* (1912); *Economic Zoology and Entomology*, with R. W. Doane (1915); *Losses of Life in Modern Wars and Race Deterioration*, with G. Bodart (1916); *Headquarters Nights* (1917); *The Food Problem*, with A. R. Taylor (1917); *Fighting Starvation in Belgium* (1918); *Germany in the War and After* (1919); *Herbert Hoover—the Man and His Work* (1920); *Nuova, the New Bee* (1921); *Human Life as the Biologist Sees It* (1922); *Mind and Heredity* (1923); *Reading with a Purpose—Biology* (1925).

KELLOGG, William Pitt, American lawyer; b. Orwell, Vt., Dec. 8, 1830; d. Washington, D.C., Aug. 10, 1918. He was educated at the Norwich Military Institute and removed to Illinois, where he studied law. Being admitted to the bar in 1852, he began his practice at Canton. He became active in the Republican Party, was chairman of his delegation from Fulton County at the Bloomington Convention on May 29, 1856. Abraham Lincoln was chairman of the delegation from Sangamon County in the same convention. Here the Republican Party of Illinois was or-

ganized. He was a delegate to the National Convention in 1860, and one of the presidential electors in the same year, voting for Lincoln. In 1861 the president appointed him chief justice of the State of Nebraska, then a federal territory, but later granted him leave of absence that he might raise a regiment of cavalry in Illinois, of which he became colonel. He remained in the army two years, serving in the Missouri campaign with John Pope, but was compelled to resign on account of ill health. He was collector of the port at New Orleans (1865-1868). His commission as collector is dated April 13, 1865, the day before President Lincoln was assassinated. He was United States senator in 1868-1872, governor of Louisiana in 1873-1877, and a member of Congress in 1883-1885. He was a delegate at every Republican National Convention from 1876 to 1896. He was one of the 306 delegates who voted for Ulysses S. Grant in the Republican Convention of 1880. He was delegate at large from Louisiana in 1896, and after the election of President William McKinley he retired from active politics.

KELLOGG, city, Idaho, in Shoshone County, is located 75 miles east of Spokane, Washington, in the Coeur d'Alene lead, silver, and zinc mining district of the Bitterroot Mountains. It is served by the Union Pacific Railroad, and has an airport. Chief industries are mining, milling, smelting, and logging; with agricultural and fruit areas in the valleys. The city has good schools, several churches, a library, and recreational facilities. It was founded as Milo in 1893, renamed in 1894, and incorporated in 1913. Pop. (1950) 4,913.

KELLOGG-BRIAND PACT. A treaty renouncing war as an instrument of national policy, signed in Paris by the plenipotentiaries of 15 nations, on Aug. 27, 1928. Aristide Briand, French foreign minister, in a note to the United States on July 20, 1927, suggested a pact of perpetual friendship between France and the United States, to which Frank B. Kellogg, secretary of state, replied on December 29th, proposing to invite the nations of the world to join in such an agreement. It was decided to ask Great Britain, Germany, Italy, and Japan, and later the British Dominions, Belgium, and Czechoslovakia to join. On Aug. 27, 1928, 15 leading nations signed the pact, later to be joined by 48 others. It was invoked unsuccessfully in 1931 when Japan invaded Manchuria, and in 1935 when Italy invaded Ethiopia, but with some success in South America to help settle disputes between Bolivia and Paraguay, and Colombia and Peru. With the outbreak of World War II, the pact lost its force.

KELLOGG FOUNDATION, The W. K., an American philanthropic foundation with headquarters in Battle Creek, Mich., established in 1930 by Will K. Kellogg to promote the health, education, and general welfare of mankind, especially children, irrespective of race, creed, or nationality. It administers the Michigan Community Health Project, grants subsidies for national study of hospital needs and resources, directs national and international health promotion activities; subsidizes a community school service and school camps, and an educational program for school librarians and library trus-

tees. It also lends support to a cooperative program of health education given by the health and education departments of 28 states, and to a rural editorial service that provides data on rural life to state education association journals.

KELLOR, Frances, American sociologist and author: b. Columbus, Ohio, Oct. 20, 1873; d. New York City, Jan. 4, 1952. She was graduated from Cornell Law School in 1897; took undergraduate studies at the University of Chicago, 1898 and in 1904. She was secretary and treasurer of the New York State Immigration Commission, 1909; chief investigator for the New York State Bureau of Industries and Immigration, 1910–1913; member, New York Research Council, 1915; director of immigration, Transatlantic Steamship Passenger Conferences, 1922; president, American Association of Foreign Language Newspapers, 1919–1920; vice president of the Publishers' Association of American Press, in Foreign Languages, 1920; 1st vice president, Arbitration Society of America 1926–1952.

Her publications include: *Experimental Sociology* (1902); *Out of Work* (1904, 1915); *Straight America* (1915); *Immigration and the Future* (1920); *Federal Administration and the Alien* (1921); *Security Against War* (1924); *The United States and the International Court* (1925); *Arbitration in Action* (1941); *Arbitration and the Legal Profession* (1952).

KELLS, kēlz (Ceannanus Mor, meaning great residence), town, Ireland, County Meath, and on the Blackwater River, 39 miles northwest of Dublin. The town is noted for its antiquarian remains, chief of which are St. Columba's house; a round tower of the 12th century 99 feet in height; and several fine stone crosses. Conn of the Hundred Fights, an Irish king, resided there in the 2d century and a palace of Dermot, king of Ireland, existed in 544–565. In the 6th century Kells was granted to St. Columba (q.v.) but there are no remains of the monastery he built there. A bishopric founded there about 807 became a noted seat of learning, a testimonial of which exists in the famous *Book of Kells*, an illuminated manuscript copy of the Gospels in Latin and containing local records, considered one of the finest of its kind in existence. The manuscript dates from the 8th century and is in possession of Trinity College, Dublin. Pop. (1946) 2,141.

KELLY, kēl'i, Colin Purdie, American army captain and aviator: b. Madison, Fla., July 11, 1915; d. Luzon, Philippine Islands, Dec. 10, 1941. He was graduated from West Point in 1937, and commissioned as 2d lieutenant in the infantry. He became a captain in the Army Air Forces in 1940, and it was his bomber, a B-17, that with three direct hits destroyed the Japanese heavy cruiser *Haruna* off Aparri, Luzon Island, after the attack on Pearl Harbor. When his airplane was set afire by enemy fighter planes as he was returning to his home base, he ordered his crew to bail out. Six of them were saved, but Capt. Kelly died in the crash of his ship. The first United States air hero of World War II, he was posthumously awarded the Distinguished Service Cross.

KELLY, Edmond, American lawyer and

Socialist: b. Toulouse, France, May 28, 1841; d. Paris, Oct. 4, 1909. He was educated in early years in England and was graduated from Columbia University in 1870, was admitted to the bar and later studied at Cambridge University. He opened a law office in Paris, where he became known as an authority on international marriages and where he served also as counsel to the American legation. He returned to New York in 1890 and became active in municipal reform; but when his efforts to organize workingmen into good government clubs did not succeed, he resumed his law practice in Paris. In the United States again in 1905 he participated actively in socialistic propaganda and made special investigations of the tramp problem.

His writings include *Evolution and Effort and their Relation to Religion and Politics* (1895, 2d ed., 1898); *Government, or Human Evolution* 2 vols. (1900–1901); *The Unemployables* (1907); *Twentieth Century Socialism* (1910).

KELLY, Howard Atwood, American surgeon: b. Camden, N. J., Feb. 20, 1858; d. Paltmore, Md., Jan. 12, 1943. He was graduated from the University of Pennsylvania, A.B., in 1877, M.D. in 1882. He was associate professor of obstetrics, University of Pennsylvania, 1888–1889. In the latter year he joined the faculty of the newly organized medical school of Johns Hopkins University as professor of gynecology and served as such until he retired as professor emeritus in 1919. He was gynecological surgeon of Johns Hopkins Hospital 1899–1919. With Sir William Osler, and Doctors William Stewart Halstead and William H. Welch he helped to give the Medical School of Johns Hopkins University its international reputation, a fact commemorated in the famous painting by John Sanger Sargent which now hangs in Gilman Hall of the university. He founded Kensington Hospital in Philadelphia, and was a pioneer in the radium treatment of cancer. He published over 500 scientific articles, and numerous books including *Operative Gynecology* 2 vols. (1898, 1900); *Medical Gynecology* (1908, 1912); *Dictionary of American Medical Biography*, with W. L. Burrage (1928); *Electrosurgery*, with Grant Ward (1932).

KELLY, Hugh, Irish playwright and miscellaneous writer: b. Killarney, Ireland, 1739. d. London, Feb. 3, 1777. Possessed of little education and originally apprenticed to a staymaker he went to London in 1760 to embark upon a literary career. He secured employment as a newspaper and magazine worker, wrote a novel, some satiric verse and several plays. His adroitness in securing the favor of David Garrick doubtless had much to do with the success of his play *False Delicacy* produced at the Drury Lane Theatre in 1768; the play had little merit but was successful and afterward was translated into French, German, and Portuguese. It was followed by *A Word to the Wise* (1770) which was withdrawn from the Drury Lane Theatre because of factional enmity engendered by Kelly's service as newspaper writer for Lord North (Frederick North), but was successful in the provinces although of inferior quality. *Elementina* (1771, Covent Garden) was played only nine nights, but *A School for Wives* was successful on the stage and ran through five large printed editions (1774–1775). Other plays were *The*

romance of an Hour (1774), and *The Man of Reason* (1776). Kelly's success was now dwindling and he abandoned playwriting, was called to the bar from the Middle Temple in 1774 and devoted himself to the practice of law. He failed at this and died in poverty. He wrote one novel, *Memoirs of a Magdalen, or the History of Louisa Wildmay*, 2 vols. (1767).

KELLY, James Edward, American sculptor: b. New York City, July 30, 1855; d. there, May 25, 1933. He studied at the National Academy of Design, and up to 1881 was known as an illustrator of books and magazines. From that time on he successfully devoted himself to sculpture, and chose subjects from American history or treatment by his patriotic chisel; so great was his success that he won the title of "Sculptor of American History." His well-known works include *Sheridan's Ride* (1878); *Paul Revere*, a statuette (1882); *Monmouth Battle Monument*, with five illustrative panels (1883-1885); groups of the *Saratoga Monument* (1887); *Grant at Fort Donelson* (1886); *General Devlin* and the *Sixth New York Cavalry Monument* (1890), at Gettysburg; *Call to Arms*, colossal figure for the *Troy Soldiers' Monument* (1891); *Buford Monument* (1895), at Gettysburg; *Battle of Harpers Heights* (executed for the Sons of the Revolution at Columbia University, 1897); and a group monument to commemorate the defense of New Haven (1911); *Count Rochambeau* at Southington, Conn.; *Father Hecker*, founder of the Paulist Congregation; equestrian monument of Caesar Rodney, Wilmington, Del., 1923; also a bust of Thomas A. Edison (1927).

Forty generals of the Civil War, including Grant, Sherman and Sheridan, gave sittings for the sculptor. A series illustrating the leading generals and admirals of the Spanish-American War followed, witnessing to his skill and industry as a portrait sculptor.

KELLY, John, American politician: b. New York City, April 21, 1821; d. there, June 1, 1886. After a public school education, he was apprenticed to the mason's trade, in 1845 established successful business of his own, was elected alderman in 1854, in 1855-1859 was a Democratic representative from New York in the 34th and 35th Congresses, and in 1859-1862 and 1865-1867 was sheriff of New York County. In 1868 he was the candidate of the Democratic Union for mayor, but was defeated by Oakey Hall; and in 1871 assisted Charles O'Connor, Samuel J. Tilden and others in the reorganization of Tammany Hall which followed the Tweed "ring" troubles. He became comptroller of New York in 1876, but was removed in 1879 by Mayor Cooper. In 1878 he caused the city delegates to vote the Democratic State Convention of that year, and was himself nominated for governor by the bolters on an independent ticket in opposition to Robinson, the regular candidate. He received 77,566 votes, and thus caused the election of Alonzo B. Cornell, Republican. In 1885 and 1886 he was chairman of the Tammany Hall general committee. See also TAMMANY SOCIETY.

KELLY, Myra, American author and educator: b. Dublin, Ireland, Aug. 26, 1875; d. Torquay, Devonshire, Eng., March 30, 1910. She came to the United States when a child and was graduated at Teachers' College, Columbia

University, in 1899. She was a teacher in the New York public school system in 1899-1901; and in 1902-1903 she was critic teacher at Speyer School, Teachers' College. She came swiftly into prominence as a writer of short magazine fiction; her material, that of the pathetic children of the lower East Side of New York, being handled with charming sympathy and humor. She also wrote several novels.

She was the author of *Little Citizens* (1904); *The Isle of Dreams* (1907); *Wards of Liberty* (1907); *Rosnah* (1908); *Golden Season* (1909); *Her Little Ladyship* (1911).

KELLY, William, American inventor: b. Pittsburgh, Pa., Aug. 22, 1811; d. Louisville, Ky., Feb. 11, 1888. He early turned his attention to invention, engaged in the forwarding and commission business at Pittsburgh, Pa., and from 1846 in the iron business in Kentucky. In 1851 he finally perfected his process in decarbonizing iron by means of a current of air, and thus by a converter directly transforming pig-iron into steel. This method, "Kelly's air-boiling process," was the same as that patented by Sir Henry Bessemer in England in 1856 (or 1857), and Kelly asserted that Bessemer had gained knowledge of it through American workmen. Bessemer's application in the United States was refused, and the patent awarded to Kelly. Kelly's interests were safeguarded by a syndicate, and steel was first manufactured under his patents in the foundry at Wyandotte, Mich. He is said to have introduced Chinese labor into the United States.

KELLY, William, American mining engineer: b. New York, April 17, 1854; d. Oct. 1, 1937. In 1874 he was graduated at Yale University and in 1877 from the Engineering School of Columbia University. He was assistant superintendent of the Chemical Copper Company of Phoenixville, Pa., in 1879-1880; superintendent of the Kemble Coal and Iron Company of Riddlesburg, Pa., in 1881-1885; of the Glamorgan Iron Company of Lewistown, Pa., in 1885; of the Kemble Iron Company from 1886-1889; general superintendent of the Penn Iron Mining Company of Vulcan, Mich. (1889-1923).

KELLY'S FORD, Engagements at. During the American Civil War, Kelly's Ford, Virginia, on the Rappahannock River six miles above its junction with the Rapidan was the scene of several engagements between Union and Confederate forces. The first was a cavalry encounter in August 1862. Again on March 17, 1863, Gen. W. W. Averell with 2,100 Union cavalry and a six-gun battery, after a sharp action, crossed the ford, engaged Gen. Fitzhugh Lee's cavalry brigade, and was driven back. On Nov. 7, 1863, Gen. W. H. French forced a passage at the ford, while Gen. John Sedgwick crossed at the railroad bridge five miles above. Success of these actions enabled the Army of the Potomac to cross next day.

KELOID, kē'loid, (1) *in medicine*, a fibrous hyperplasia (excessive formation of tissue) of the skin appearing usually at the site of an injury. The keloid rises above the skin surface, is rounded, hard, white, sometimes pink, and has ill-defined borders. (2) *In anthropology*, the ornamental pattern of raised scars on the bodies of some Australian and African savages.

KELOWNA, kē-lō'nā, city, British Columbia, Canada, in the center of the Okanagan Valley, an extensive irrigation area lying on the east side of Okanagan Lake, and devoted largely to fruit growing, vegetable and tobacco production, and dairying. The area is served by an experimental station of the Dominion Department of Agriculture at Summerland established in 1914, and by a substation at Kelowna established in 1931. The town has canneries, sawmills, wooden box, basket, and other manufactories. Pop. (1951) 8,517.

KELP, kēlp, any of several large broad-leaved fucoid seaweeds which usually grow in large beds in the shallower portions of the ocean. Some are used commercially as fertilizer for soils and also as a source of iodine.

The name is also applied to the slag or ash obtained by burning seaweed sometimes called varec. This ash was at one time produced in large quantities by slowly charring several tons of the weed in shallow pits. The yield in ash was about five per cent of the weight of the mass burned. This crude ash contained several salts, especially carbonates and sulphates of sodium and potassium, with other substances in smaller proportions.

KELP CRAB, a large, squarish, edible crab (*Epiplatys productus*), numerous in rocky weed-covered places along the Pacific coast from Monterey to Puget Sound.

KELP GOOSE, a white plumaged goose similar to the brant and closely related to the Magellanic and other southern hemisphere species. It is native to Patagonia and Falkland Islands and is variously classified as *Chloephaga hybrida*.

KELPIE, or **KELPY**, kēl'pī, the angry spirit of the water, a Scottish mythological personage, who figures prominently in folklore. He is described as a fearful water spirit who delights in rushing out of the lake, the river or the sea to catch some poor human victim and to devour him or to drag him down to his death beneath the surface of the water. As he rushes out of his native element the water tumbles from his back with a terrible swishing noise like the roar of the angry sea. According to some stories the kelpie was so named because he lurked among the kelp or seaweed, which grows very high and tangled in many parts along the coasts of Scotland. Blown by the sea breezes and lashed by the tide at high water, it assumes fantastic forms which are pictured by the Scotch storytellers as taking the form of the kelpie himself who tradition says has, like the Grecian Cyclops, but one eye, but that more fearful than any two eyes. Other authorities claim that the word kelpie is related to the Old High German *chalp* or German *kalb* suggested by the roar which it was supposed to make when it rushed upon its victims.

KELSEY, kēl'sī, **Francis Willey**, American archaeologist: b. Ogden, N. Y., May 23, 1858; d. Ann Arbor, Mich., May 14, 1927. He was educated at the University of Rochester and in Europe; was professor of Latin, Lake Forest University, 1882-1889, and thereafter head of the Latin department at the University of Michigan. He organized the latter's archaeological expedi-

tions to the Near East. He edited numerous Latin books, and wrote others.

KELSEY, Henry, British explorer: b. London, England, 1670; d. 1729. He was apprenticed to the Hudson's Bay Company at the age of 14, and sent to Fort Nelson on Hudson Bay. In 1688 Kelsey was sent with an Indian companion to the Churchill River country to contact Indian tribes. In 1690 he was sent on a similar mission to the interior. His diary records his journey, which extended into 1691, up the Saskatchewan River and through the northern plains of Saskatchewan. He became factor and then governor of York Factory.

KELSO, kēl'sō, burgh, Scotland, on the Tweed River, 43 miles southeast of Edinburgh. Now mainly an agricultural center, Kelso has the ruins of an abbey established in 1128 by David I, and partially destroyed by the English in 1545. Pop. (1951) 4,119.

KELSO, city, Washington, Cowlitz County seat, is on federal highways, and on the Northern Pacific, Union Pacific, and Great Northern railroads. Smelt fishing, dairy farming, and lumbering are the chief industries. Kelso has council government; a public library, hospital, radio station, and an airport. Pop. (1950) 7,345.

KELSON. See **KEELSON**.

KELT, kēlt, Scottish and North of England term for a salmon that has spawned. Such salmon are also called black salmon.

KELTS. See **CELTIC PEOPLES**.

KELTIE, kēl'tī, **Sir John Scott**, Scottish geographer: b. Dundee, Scotland, March 29, 1840; d. London, Eng., Jan. 12, 1927. He was editor of the *Statesman's Year Book* from 1880, editor of the *Geographical Journal*, 1893-1915 and joint editor, 1915-1917; and wrote extensively on geographical and scientific topics in newspapers and periodicals. He was a member of geographical societies all over the world, was the recipient of numerous honors and honorary degrees, and was knighted Jan. 2, 1918.

KELVIN, Lord. See **THOMSON**, **SIR WILLIAM**.

KEMAL ATATURK, kē-māl' ā-ta-turk', (MUSTAFA OR MUSTAPHA KEMAL), founder and 1st president of the Turkish Republic: b. Salonika, then a Turkish city, 1881; d. Istanbul, Nov. 10, 1938. The son of a customhouse official, at 12 he entered a military school in his native city where his teacher of mathematics, delighted with his grasp of that science, called him "Kemal" (Perfection). He was then sent to a military college at Bitolj (Monastir) and, in 1902, graduated and was commissioned lieutenant at the Infantry Academy, Istanbul. Continuing his studies, in 1905 he was promoted staff captain. It was a time of revolutionary ferment, the Young Turks bitterly opposing the tyrannical and corrupt government of Sultan Abdul-Hamid II. Mustafa Kemal associated himself with the more radical wing of the Young Turks. Under the slogan and party name "Fatherland and Liberty," later changed to "Union and

progress," the revolutionaries in 1908 forced the sultan to reestablish the constitution of 1876. Having helped to achieve the victory, Kemal found himself in disagreement with party policies and so, for a time, gave up thoughts of a political career.

At the outbreak of the Italo-Turkish War (1911-1912) Capt. Mustafa Kemal volunteered for active service in Tripoli, and was there promoted to the rank of major. He fought in the Second Balkan War in Thrace in 1913, after which he went to Bulgaria as military attaché with the rank of lieutenant colonel. At the beginning of World War I, he was sent to Gallipoli on the Dardanelles, where he organized a new army division. At the first landing of Allied forces, Kemal attacked vigorously and held the invaders to their shore positions. For this victory he was made a colonel. His defeat of the last great Allied assault on Aug. 10, 1915, earned him the sobriquet "the Hero of the Dardanelles." He was made a brigadier general in command of an army corps fighting the Russians, and in 1916 he defeated them at Muş and Bitlis. Having been entrusted with the command of an army in 1917, he suddenly resigned his commission in protest against too strong German influences. However, after accompanying the future sultan to Germany as military adviser, in 1918 he accepted command of the army in Syria. By brilliant generalship he succeeded in limiting the enemy's advance to a line corresponding with Turkey's southern frontier. After the armistice was signed at Mudros (Oct. 30, 1918) General Kemal returned to Istanbul, then controlled by the Allies. He expressed impassioned opposition to the harsh terms imposed on Turkey, in particular the seizure of so much national territory and the abolition of the military forces.

He managed to obtain an appointment as army inspector in Eastern Anatolia, and immediately on arriving at Samsun (May 19, 1919) he began organizing the national movement of resistance, with a firm determination to restore the dignity and prestige of his country. He headed a regional congress at Erzurum (July 23) and a national congress at Sivas (September 4). Resolutions adopted by these congresses were recognized by the Ottoman Parliament at Istanbul on Jan. 12, 1920, as constituting the "National Pact." Whereupon the Allies occupied Istanbul and the Parliament was dissolved. Kemal's counter-stroke was the convocation of a Turkish National Assembly at Ankara on April 3, 1920. Electing him its president the Assembly pledged itself to defend the country by force. Thus was born a new government opposed equally to the sultanate and the victorious Allies.

The war with Greece strengthened Kemal immeasurably. He succeeded in driving them from Anatolia, which they had attempted to occupy in 1921, and in 1922 he was awarded the title Ghazi (Victorious) by the Assembly for his successful rout of their forces. On Nov. 1, 1922 Kemal put an end to the sultanate, leaving only the title caliph to the successors of the Ottoman dynasty. The treaty of Lausanne, a great victory for Kemal, recognized the political and economic independence of Turkey. It was signed on July 24, 1923, and on Oct. 29, 1923, Kemal was unanimously elected as the republic's first president, an office to which he was subsequently re-elected in 1927, 1931, and 1935.

His chief aim on assuming power was the

westernization of Turkey by the elimination of all medieval and oriental customs and heritages, and the establishment of a modern secularized progressive republic. His reforms included the adoption of the Gregorian calendar, the Swiss civil code, and universal education. Monogamy was made the law, women were given equal rights, and the fez, symbol of the legacy of the past, was abolished in favor of the Western hat. Convinced of the need of an alphabetical reform, Kemal went about the countryside like an itinerant teacher expounding the advantages of the simpler Latin alphabet over the unwieldy Arabic one. Finally, on Nov. 1, 1928, a modified Latin alphabet was officially adopted by the National Assembly. When a law was enacted requiring every Turk to have a surname, the National Assembly as an expression of their devotion to Kemal gave him the surname of Atatürk (Father of the Turks).

"Peace in our land, peace throughout the world" was his motto and the inspiration of his foreign policy. At first he sought to insure peace and security through bipartite agreements; but after Turkey became a member of the League of Nations he shifted his policy to base it rather on collective security alliances such as the Balkan pact (1934), Montreux agreement (1936), and Sadabad pact (1937).

President Kemal's death at Istanbul followed a long illness. İsmet İnönü, for 20 years his most intimate collaborator, succeeded him in the presidency. A great mausoleum at Ankara contains the remains of the man whose genius made of the 19th century "sick man of Europe" the strong independent republic of our day and a major stabilizing force in the Middle East.

FAIK REŞİT UNAT,
Professor of Modern Turkish History, Gazi Teachers College, Ankara.

KEMAL BEY, kē-māl' bā' (real name MEH-MED NAMIK), Turkish poet, writer, and patriot: b. Tekirdag, Turkey, Dec. 21, 1840; d. Chios, Greece, Dec. 2, 1888. From an old aristocratic family, he was educated by private tutors, and joined the staff of a revolutionary newspaper at an early age. He was forced to flee to Europe where he helped publish the revolutionary paper, *Hürriyet*. With his stirring writings he exerted a strong effect on the Young Turk movement, becoming one of the most influential writers of his time. He wrote much verse in Arabic, Persian, and Turkish, and translated, among others, Francis Bacon and Jean Jacques Rousseau. His patriotic play *Vatan*, (meaning Fatherland) caused his arrest and brief exile in 1872. He was also the author of historical novels, biographies, and a history of Turkey.

KEMBLE, kem'b'l, **Charles**, English actor: b. Brecon, Wales, Nov. 25, 1775; d. London, England, Nov. 12, 1854. The 11th child of Roger Kemble, he was educated in France and England, and made his first appearance at Drury Lane as Malcolm to his brother's Macbeth in 1794. He successfully produced a number of foreign plays, and as an actor he gained fame for his portrayals of such characters as Romeo, Charles Surface, Cassio, and Benedick. His impersonations were greatly heightened by his fine voice, handsome features, and tall athletic figure. About 1840 he was appointed examiner of plays, and shortly thereafter made his last stage appear-

ance, although he subsequently gave occasional public readings from Shakespeare.

KEMBLE, Edward Windsor, American caricaturist and illustrator: b. Sacramento, Calif., Jan. 18, 1861; d. Ridgefield, Conn., Sept. 19, 1933. After a period at the Art Student's League in New York City, he became regular art contributor to the *Graphic*, and later to the *Century* and other local magazines. He specialized in Negro characters, illustrating many of his own books. He was illustrator for *Colliers* (1903-1907) and for *Harper's Weekly* (1907-1912). He illustrated editions of *Huckleberry Finn*, *Pudd'nhead Wilson*, and *Uncle Tom's Cabin*, as well as numerous other books.

KEMBLE, Elizabeth. See WHITLOCK, ELIZABETH KEMBLE.

KEMBLE, Frances Anne, English actress: b. London, England, Nov. 27, 1809; d. there Jan. 15, 1893. Fanny, as she soon came to be known, made her debut in 1829 at Covent Garden, then managed by her father, Charles Kemble, playing Juliet to his Mercutio, with her mother playing the nurse. For the next three years she played leading parts in tragedy and comedy, distinguishing herself especially as Juliet, Portia, and Louise de Savoy in her own play *Francis the First*, written when she was 17. In 1832 she accompanied her father to the United States where she was an immediate success. In 1834 she retired from the stage to marry Pierce Butler, a southern planter, by whom she had two daughters. In 1835 she published *Journal of a Residence in America*, considered by many to be too critical of the young republic. She was shocked by the conditions of slavery, and she separated from her husband shortly after her first stay on his plantation in 1838. They were divorced in 1848. In 1863 she published *Journal of a Residence on a Georgian Plantation* to influence British opinion during the Civil War.

She wrote *A Year of Consolation* in 1847 after a year spent in Italy, and in 1848 she began a series of Shakespearean readings in Boston and other cities. After the death of Pierce Butler in 1867, Fanny alternated her time between her two married daughters, one of whom was the mother of the writer Owen Wister. She continued writing throughout her life, and her works, mostly autobiographical, reveal a keen intelligence as well as providing an illuminating record of the American stage in the mid-19th century.

KEMBLE, Gouverneur, American manufacturer: b. New York, N. Y., Jan. 25, 1786; d. Cold Spring, N. Y., Sept. 16, 1875. He graduated from Columbia College in 1803, and, after a period in business, he became United States consul at Cadiz, Spain. He made a close study of the methods of European armament manufacture, and on his return to the United States he established a foundry at Cold Spring, N. Y., where the first successfully cast cannon were produced in the United States. He served as a Democratic Congressman from 1837 to 1841. He was a close friend of Washington Irving who used Kemble's house as the model for Cockloft Hall in *Salamagundi*.

KEMBLE, John Mitchell, English philologist and historian: b. London, England, April 2,

1807; d. Dublin, Ireland, March 26, 1857. He was educated at Trinity College, Cambridge, and devoted his study to the ancient manuscripts of the Anglo-Saxon language in the libraries of Germany and England. In 1833 he published *The Poems of Beowulf*, and in 1849 he brought out his most important work, *The Saxons in England*. He was for many years editor of the *British and Foreign Review*, and in 1840 he succeeded his father, Charles Kemble, as censor of plays, an office he occupied until his death.

KEMBLE, John Philip, English tragedian: b. Prescott, Lancashire, England, Feb. 1, 1757; d. Lausanne, Switzerland, Feb. 26, 1823. He was educated in England and France, and made his debut in *Hamlet* in 1783. In 1788 Kemble obtained the management of the Drury Lane Theatre where his sister, Mrs. Siddons, was the main attraction. In 1802 he became manager of the Covent Garden Theatre, and continued his success there until the theater's destruction by fire in 1808. In 1809 the new edifice which had been constructed with an increase of prices, and which with certain unpopular arrangements in regard to private boxes, created for a series of nights the disturbances known as the O. P. riot, so called because of the badges worn by the demonstrators of a return to old prices. Kemble's merits were variously evaluated, but he was regarded as a highly gifted actor by all. He retired from the stage in 1817.

KEMBLE, Maria Theresa, English actress: b. Vienna, Austria, Jan. 17, 1774; d. Chertsey, Surrey, England, Sept. 3, 1838. A member of a family of musicians and dancers, she made her debut on the London stage at the age of six. In 1806 she married Charles Kemble with whom she appeared for the next 13 years. She was the author of several plays which were popular in their time; her daughter Fanny inherited her ability both as an actress and a writer.

KEMBLE, Roger, English actor and theatrical manager: b. Hereford, England, March 17, 1721; d. Dec. 6, 1802. He established a traveling company (1753) in which his entire family (including his daughter Sarah, afterwards Mrs. Siddons) appeared. He achieved some local success in the role of Falstaff, although he is noted more for his progeny than for his dramatic ability.

KEMBLE PLAYS, a collection of English dramas made by the actor and producer John Kemble. Among the original manuscripts are the first editions of Shakespeare. At the time of his death the collection brought £2,000 at auction; it is now in the Devonshire House library, London.

KEMENY, ké'mān-y', **BARON Zsigmondy**, Hungarian writer: b. Alvinc, Transylvania, Jan. 1814; d. Hungary, Dec. 22, 1875. Combined newspaper work with his literary efforts. He was editor of *Pesti Hírlap* and *Pesti Napló*. In 1846 he brought out his first great novel, *Gyulay*. Before his brief exile, he was a member of the revolutionary Diet of 1848, and as a supporter of Ferencz Deák he was elected to the Diet of 1867. Primarily a historical novelist, Kemény is considered one of Hungary's greatest writers; a collection of his essays appeared in English under the title of *Studies*.

KEMEROVO, kēm'ě-rō-vō, oblast, USSR, in the central part of the country. It is an administrative district, established during World War II out of Novosibirsk Oblast, and includes some of the most important heavy industry in the Soviet Union. This rapidly growing region has steel mills, chemical industries producing fertilizer and other necessities, and iron ore mines. In the more mountainous areas, cattle raising, gold mining, lumbering, and fur trapping are engaged in. The region is about 36,900 square miles in area. Pop. (1939) approximately 1,950,000.

KEMEROVO, city, USSR, capital of Kemeroovo Oblast. Until about 1935 the city was known as Scheglovsk. Located on the Tom River, where it has a large power station, Kemeroovo is one of the most important coal mining centers of the entire Kuznetsk Basin. It also has iron, lead, and zinc mines, and is connected to the Trans-Siberian Railway. Its great industrial growth, under the various Five-Year plans, has been comparatively recent. Pop. (1939) 132,978.

KEMEYS, kēm'ēz, **Edward**, American sculptor: b. Savannah, Ga., Jan. 31, 1843; d. Washington, D. C., May 11, 1907. After serving as a captain in the artillery during the Civil War, he traveled to the West where he became familiar with Indian life and the habits of wild animals. In Paris and London, where he visited in 1877, exhibits of his sculpture attracted favorable attention. Although he made wild animals his specialty, gaining fame for his fidelity to nature their lifelike representation, he was also remarkably successful in his figures of the North American Indian.

KEMI, kē'mi, seaport, Finland, located in the northern part of the country at the mouth of the Kemi River, on the Gulf of Bothnia, 55 miles northwest of Oulu. The city, with rail connection to Murmansk, is a timber shipping center with large lumber and pulp mills. The Kemi River, the most important Finnish river in terms of power, rises near the Russian border and flows southwest about 345 miles into the Gulf of Bothnia. At its mouth there are salmon fisheries and cellulose mills. Pop. (1949) 23,387.

KEMMERER, kēm'ēr-ēr, **Edwin Walter**, American economist: b. Scranton, Pa., June 29, 1875; d. Princeton, N. J., Dec. 16, 1945. He was educated at Wesleyan and Cornell, and taught economics at Cornell and Princeton. In 1903 he was made financial adviser to the Philippine Commission, and in the years following served in an advisory capacity on fiscal matters for the governments of Mexico, Guatemala, Colombia, Chile, Ecuador, Bolivia, and Peru. He wrote numerous books on finance and fiscal policy, including: *The United States Postal Savings System* (1917); *High Prices and Deflation* (1920); *Kemmerer on Money* (1934); *The ABC of Inflation* (1942).

KEMNITZ or **CHEMNITZ**. See **CHEMNITZ**, **MARTIN**.

KEMP, kēmp, **Harry Hibbard**, American writer and novelist: b. Youngstown, Ohio, Dec. 15, 1883. His first novel, *Tramping on Life* (1922), is based on a trip around the world which he started with 25 cents. He was the founder

and manager of the Poets' Theater, and the author of the play *Judas*, produced in 1910. Among his works of poetry are: *The Cry of Youth* (1914); *Chanteys and Ballads* (1920); *The Sea and the Dunes* (1926). His novels include: *More Miles* (1920); *Love Among the Cape-Enders* (1931); *Mabel Turner, an American Primitive* (1936).

KEMP, **James Furman**, American geologist: b. New York, N. Y., Aug. 14, 1859; d. Great Neck, N. Y., Nov. 17, 1926. After graduation from Columbia School of Mines in 1884, he studied at Munich and Leipzig, and taught at Cornell. In 1891 he returned to Columbia, becoming (1892) professor of geology. He was one of the organizers of the Geological Society of America, and served as its president in 1921. The author of many textbooks and scientific papers, Kemp was considered a world authority on ore deposits. His *Handbook of Rocks* (1911) is still regarded as a standard work.

KEMP or **KEMPE**, **John**, English prelate: b. near Ashford, Kent, England, c.1380; d. London, March 22, 1454. He was educated at Merton College, Oxford, and took up the practice of ecclesiastical law. He was an assessor at the trial of Sir John Oldcastle, and became dean of the Court of Arches in 1415. He was given a place in the government of Normandy, and later became chancellor there. In 1419 he was chosen bishop of Rochester, being consecrated at Rouen in the same year. In 1426 Kemp was made chancellor and became archbishop of York. He remained in the office of chancellor until 1432, and succeeded in keeping a close restraint on Humphrey of Gloucester. To placate the latter Kemp's resignation was brought about in 1432. He was still an important member of the council, and in 1435 he was sent to the Congress of Arras and in 1438 to that in Calais. He was created cardinal in 1439, and in 1450 he became chancellor for the second time. Although he was a compromise choice for that office, he dealt firmly with Cade's Rebellion (See **CADÉ**, **JOHN**) and vigorously upheld the royal authority. He was made archbishop of Canterbury in 1542.

KEMPEN, kēm'pēn, town, Germany, in the Province of North Rhine-Westphalia, in the western zone. Located about 40 miles northwest of Cologne, it is a rail junction and a center of textile manufacturing. Kempen has a Gothic church, a 14th century castle, and is the birthplace of Thomas a Kempis. It was first chartered in 1294. Pop. (1946) 9,827.

KEMPENER, kēm'pē-nēr, or **KEMPE-NEER**, **Peter de** (Span. **PEDRO CAMPAÑA**), Flemish painter: b. Brussels, Spanish Netherlands, c.1503; d. there, 1580. He went to Italy about 1530 to study the Italian masters, and lived in Venice and later in Bologna, where he painted some of the decorations of the triumphal arch for the reception of Charles V. He subsequently lived in Seville, Cordova, and other cities of Andalusia, and in 1563 he returned to Brussels where he became chief engineer of the duke of Alva, and director of the tapestry works there. In style his paintings combined to some extent the characteristics of the school of Raphael and the Flemish painters. He is reported to have been greatly admired by Murillo. His mas-

terpiece, *The Deposition from the Cross*, is found in the cathedral at Seville, where his *Purification* and *Resurrection* are located. The Berlin Museum also has an excellent example of his work, *The Adoration of the Magi*. The National Gallery in London contains his *Christ Preaching in the Temple*.

KEMPENFELT, kēm'pĕn-fĕlt, **Richard**, British naval officer: b. Westminster, London, England, 1718; d. off Spithead, England, Aug. 29, 1782. Of Swedish descent, he entered the navy and saw service in the West Indies during the capture of Portobello. He was made a rear admiral in 1780, and in 1781 achieved a brilliant victory over a far superior French fleet at De Guichen. He was junior to Lord Richard (Black Dick) Howe, and had his flag on the *Royal George* when Howe took command of the fleet in 1782. In the refitting of this ship, her guns were shifted to give her a slight list and facilitate the repair of a leak. However, the hull would not stand the strain, and she broke up and went down with Kempenfelt and 800 others aboard.

KEMPER, kēm'per, **James Lawson**, American army officer and politician: b. Madison County, Va., June 11, 1823; d. Orange County, Va., April 7, 1895. He graduated from Washington College in 1842, and studied law in Charlestown, Va. He served in the Mexican War as a captain of volunteers, and for 10 years was a representative in the Virginia legislature. He served with distinction in the Civil War, rising from colonel to major general, and was seriously wounded leading the right wing of General George Pickett's charge at Gettysburg. He returned to the practice of law, and was Democratic governor of Virginia from 1874 to 1878.

KEMPER, Reuben, American frontiersman: b. Fauquier County, Va., 1770; d. Natchez, Miss., Jan. 28, 1827. He emigrated to Ohio in 1800, and later, with his two brothers, started a movement in the Mississippi Territory to rid west Florida of Spanish rule. His attempt to capture Mobile failed, but in 1812 he fought valiantly against the Spanish authority in Mexico. He added to his military reputation under General Andrew Jackson in the defense of New Orleans (1815).

KEMPF, kēmpf, **Louis**, American naval officer: b. Belleville, Ill., Oct. 11, 1841; d. Santa Barbara, Calif., July 29, 1920. He was graduated from the United States Naval Academy in 1861 and served with distinction throughout the Civil War. He was promoted captain in 1891 and became rear admiral in 1899. When the Boxer troubles began in China in 1900 he was placed in command of the United States naval forces in Chinese waters. On May 29 he sent 108 marines ashore, who cooperated with the men landed from the other foreign warships in the harbor at Taku. When on June 16 the senior naval officers of the other foreign nations drew up and signed a demand for the surrender of the Taku forts, Kempf declined to sign it on the ground that as long as the Chinese imperial authorities placed no obstacle in the way of his countrymen he had no just ground to commit an act of war against a country with which his own was at peace. During the subsequent bombard-

ment the United States ship *Monocacy*, which was some distance up the river above Taku and had her flag flying, was struck by a shot from the forts. Considering this an act of aggression Admiral Kempf committed his forces with the others. He retired in 1903.

KEMPIS, Thomas a. See THOMAS, KEMPIS.

KEMPT, kēmp't, **SIR James**, British soldier and administrator: b. 1764; d. London, England, Dec. 20, 1854. He entered the army in 1783, saw service in Holland and Egypt, and commanded a brigade in the Peninsula. He was wounded at Badajoz, and later commanded a division at Waterloo. He served as governor of Nova Scotia from 1820 to 1828, and was governor general of Canada 1828-1830.

KEMPTEN, kēmp'tĕn, city, Germany, located in Bavaria, in the western zone, about 80 miles southwest of Munich with which it is connected by rail. The town was an important Roman trading center, and flourished in the Middle Ages. It has picturesque buildings, a rebuilt Romanesque church, and a baroque castle. It is a commercial and manufacturing center with a metal working industry producing agricultural tools, and optical and precision instruments. It also has a lumber and paper milling industry, and raises a number of agricultural and dairy products. Created a free imperial city in 1525, it passed to Bavaria in 1802. Pop. (1950) 39,821.

KEN or **KENN**, kĕn, **Thomas**, English bishop and hymnologist: b. Little Berkhamstead, Hertfordshire, England, July, 1637; d. Longleat, Wiltshire, March 19, 1711. He was educated at Winchester and New College, Oxford, and in 1669 became prebend of Winchester. In 1680 he was appointed chaplain to Charles II, attended him in his last illness, and was nominated by him to the bishopric of Bath and Wells in 1684. He suffered deprivation with other non-jurors (q.v.) on the accession of William of Orange, for maintaining allegiance to James II (1691). He was one of the lights of the English church in one of the darkest periods of English social life, and by his zeal and devotion did much to maintain the standard of Christian conduct. His morning and evening hymns ("Awake my soul," and "Glory to Thee, my God, this night") earned him enduring fame.

KENA, kĕn'ā or **KENNEH** or **QENA**, capital of an Egyptian province of the same name on the Nile River.

KENAF (also known as **DECCAN**, **AMBARI**, **BOMBAY** or **INDIAN HEMP**, **BASTARD JUTE** or **HEMP MALLOW**), is a fast growing annual or perennial shrub, 8 to 12 feet high, with prickly stems and large yellow flowers with a crimson center. Its scientific name is *Hibiscus cannabifolius* (hemp-leaved hibiscus) and it belongs to the mallow family, Malvaceae. Native to India, it is also widely cultivated throughout the Old World tropics and, in the Western Hemisphere, especially in Cuba. Its coarse bast fibers are similar to those of jute and equally useful for making bagging, carpeting, twines, and many other products. The fibers are obtained from the inner bark by machine or more often by retting. In Cuba

ants grown from seed planted at the beginning of the rainy season, late in April or early in May, are ready for harvesting in about 100 days, but reach their optimum about 140 to 150 days after planting when they contain up to 8 per cent of water. Under favorable conditions an acre may yield about 5,000 pounds of dry fiber.

THEODOR JUST.

KENAI PENINSULA, kē'nī, peninsula, Alaska, in the southern part, with Prince William Sound on the east, the Gulf of Alaska east and south, and Cook Inlet on the west. The Kenai Mountains extend along the southeast coast, rising to a height of 7,000 feet. The peninsula is about 160 miles long and 110 miles across at the widest part. It has good harbors, valuable coal fields, and gold has been discovered.

KENDAL, kēn'd'l, **DAME Margaret Robertson** (GRIMSTON), English actress: b. Grimbsy, Lincolnshire, England, March 15, 1849; d. Chorley Wood, Hertfordshire, Sept. 14, 1935. Known on the stage as both Madge Robertson and Madge Kendal, she was a sister of T. V. Robertson. In 1869 she married William Hunter Grimston, who had taken the stage name of Kendal, and her life was identified closely with that of his thereafter. At the time of her marriage she had acted over 50 parts from Shakespeare to pantomime, and together the couple achieved great success at the Haymarket Theatre. Perhaps her crowning triumph came in 1902 when she appeared with Ellen Terry opposite Benbolton Tree's Falstaff in *The Merry Wives of Windsor*. After 1899 she made several successful tours in the United States and Canada, returning from the stage in 1908.

KENDAL, William Hunter (real name WILLIAM HUNTER GRIMSTON), English actor: b. London, England, Dec. 16, 1843; d. there, Nov. 11, 1917. He made his first stage appearance in 1861 and took the name of Kendal for his debut. From 1862 until 1866 he was a member of the company at the Theatre Royal in Glasgow, returning to the Haymarket Theatre in London for performance of *A Dangerous Friend* in 1866. He subsequently played such parts as Charles Dromio, Orlando, Romeo, and Captain Absolute, and with his wife Margaret (Madge) Robertson he played at the Opera Comique and the Haymarket Theatre during the season of 1874-1875. In 1875 he entered into partnership with Sir John Hare at the Court Theatre. From 1889 to 1908 he and Mrs. Kendal successfully toured the United States and Canada.

KENDAL, kēn'd'l, town and municipal borough, England, located in Westmoreland county on the Kent River, 20 miles north of Lancaster. It is a manufacturing center for shoes, hosiery, farm machinery, paper, soap, and carpets. It contains the ruins of a 14th century castle, and the remains of a Roman station are found here. The woolen industry introduced by Flemish immigrants has long been famous; during the Middle Ages the cloth which came to be known as "Kendal Green" was made here. op. (1951) 18,543.

KENDALL, kēn'd'l, **Amos**, American journalist: b. Dunstable, Mass., Aug. 16, 1789; d. Washington, D.C., Nov. 12, 1869. After grad-

uation from Dartmouth, he studied law and was admitted to the bar at Frankfort, Ky., in 1814. In 1815 he became postmaster and editor of the *Patriot* at Georgetown, Ky., and from 1816 until 1829 he was coeditor and part owner of the *Argus of Western America*. In 1829 he was appointed fourth auditor of the United States treasury, and throughout the administration of Andrew Jackson he was considered the most influential member of the "Kitchen Cabinet." He aided in the formation of the president's anti-bank policy and is believed to have written several of Jackson's state papers. Appointed postmaster general by Jackson in 1835, he was retained by Martin Van Buren, retiring because of ill health in 1840. He cleared the Post Office Department of debt and corruption and instituted reforms which remained in effect for many years after his retirement. After two unsuccessful publishing ventures, he became (1845) associated with S. F. B. Morse in the ownership and management of the Morse electric telegraph patents, and by his able direction both men made a fortune. A great deal of Kendall's money subsequently was given to various philanthropies in Washington. Although he called himself a Jacksonian Democrat, he strongly opposed secession and wrote influentially against it. His *Autobiography* was posthumously published in 1872.

KENDALL, Edward Calvin, American biochemist: b. South Norwalk, Conn., March 8, 1886. He graduated from Columbia in 1908, and received his doctor's degree from that university in 1910. He was head of the biochemistry section at the Mayo Clinic, and from 1921 until 1951 he was professor of physiologic chemistry at the University of Minnesota's Mayo Foundation. He is the recipient of numerous awards for his work in identifying the chemical structure and composition of the adrenal compounds, investigation which resulted in the compound cortisone, successfully used in the relief of rheumatoid arthritis. In 1950, together with his colleague Dr. Philip S. Hench and Professor Tadeus Reichstein of Switzerland, Kendall was awarded the Nobel Prize for medicine.

KENDALL, George Wilkins, American journalist: b. Mount Vernon, N. H., Aug. 22, 1809; d. Oak Springs, Tex., Oct. 21, 1867. Settling in New Orleans he was one of the founders of the New Orleans *Picayune* (named after the small coin then in use) in 1837, which, under his direction, became one of the leading journals of the South. He was one of the first war correspondents and his paper became famous for the wide and speedy coverage given to the war with Mexico. In 1851 he published *The War Between the United States and Mexico*.

KENDALL, Henry Clarence, Australian poet: b. Ulladulla district, New South Wales, Australia, April 18, 1841; d. Redfern, near Sydney, Aug. 1, 1882. He was in public service for many years, was active as a journalist in Melbourne, and for some time previous to his death he was an inspector of forests. Kendall was a great reader of poetry, and was impressed at an early age by the wild beauty of the landscape. His first volume of poetry, *Poems and Songs*, was published in 1862, followed by *Leaves from an Australian Forest* (1869). His last book was titled *Songs from the Mountains* (1880). He

has been called the poet of the bush because of his skillful delineation of the character of the Australian landscape. A collected edition of his verse, with a memoir, was published in 1886.

Consult Martin, A. P., "Concerning Australian Poets," *Australian Poets, 1788-1888* (London 1888); Sladen, D. B. W., "A Study of Henry Kendall as a Bush Poet," *Australian Ballads and Rhymes* (London 1888).

KENDALL, (William) Sergeant, American painter and sculptor: b. Spuyten Duyvil (now part of New York City), N. Y., Jan. 20, 1869; d. Hot Springs, Va., Feb. 16, 1938. He studied under Thomas Eakins (1883) and at the Art Students League of New York (1886). In 1888 he went to France, where he attended the École des Beaux-Arts and also studied under Luc Olivier Merson. Kendall was equally successful in figure, portrait, and landscape painting, and in his later years became a sculptor as well. His best work, however, is to be found among his many charming portraits of children. He received numerous honors, including gold medals at the expositions held in St. Louis in 1904 and San Francisco in 1915 and membership in the National Academy of Arts and Letters (1905), in acknowledgment of his talent as a colorist and draftsman. From 1913 to 1922 he was dean of the School of Fine Arts and William Leffingwell professor of painting and design at Yale University.

Kendall's paintings are exhibited in all the leading museums and galleries of the United States. Among them are *The End of the Day* and *An Interlude*, in the National Gallery, Washington, D.C.; *Psyche* and *The Seer*, in the Metropolitan Museum of Art, New York City; *Beatrice*, in the Pennsylvania Academy of Art, Philadelphia; *Narcissa*, in the Corcoran Gallery, Washington, D.C.; *Crosslights*, in the Detroit Institute of Arts; and *Intermezzo*, in the Rhode Island School of Design, Providence.

Consult Caffin, C. H., "The Art of Sergeant Kendall," *Harper's Magazine*, 117:568 (1908); Mather, F. J., Jr., "Kendall, Painter of Children," *Arts and Decoration*, 1:15 (1910).

KENDALL, William Mitchell, American architect: b. Jamaica Plain (now part of Boston), Mass., Feb. 13, 1856; d. Bar Harbor, Me., Aug. 8, 1941. He was graduated from Harvard in 1876, and then studied architecture for two years at the Massachusetts Institute of Technology and subsequently in France and Italy. In 1882 he became associated with McKim, Mead & White of New York City, and in 1906 was made a member of the firm. As such he participated in designing many notable structures, including the General Post Office, Municipal Building, Morgan Library, and buildings at Columbia University in New York City; the American Academy, Rome, Italy; the McKinley Memorial, Niles, Ohio; and the Arlington Memorial Bridge, Washington, D.C. He was a member of the National Academy of Arts and Letters.

KENDALLVILLE, city, Indiana, situated in Noble County, 27 miles north-northwest of Fort Wayne, on the New York Central and Pennsylvania railroads. The trading center for a fertile farming region producing onions, dairy products, livestock, soybeans, and grain, the city has industrial plants producing refrigerators, pumps, windmills, machinery, metal products, wheels, furniture, brushes and brooms, artificial

bait, wood products, fertilizers, and food products. Nearby are facilities for swimming, fishing, and boating. Kendallville has a hospital, a public library, and a municipal airport. It is governed by a mayor and council. Pop. (1950) 6,119.

KENDRICK, Asahel Clark, American scholar and classicist: b. Poultney, Vt., Dec. 7, 1809; d. Rochester, N. Y., Oct. 21, 1895. Following his graduation from Hamilton College in 1831, he became professor of ancient and modern languages at Madison (now Colgate) University where he remained until 1850, when he became professor of Greek language and literature at the University of Rochester, a post he retained until his death. From 1872 to 1880 he was a member of the American New Testament Revision Committee. His published works include *An Introduction to the Greek Language* (1841); *Biblical Commentary on the New Testament* (1856-1858), a revised version of a work by Justus Olshausen; *The Analysis of Xenophon* (1873); and *Our Poetical Favorites* (1871-1881).

KENDRICK, John, American navigator and trader: b. Harwich, Mass., c.1740; d. Honolulu, Hawaiian Islands, Dec. 12, 1794. He went to sea as a youth, and during the American Revolution he sailed as a privateer. In 1787 he left Boston in command of the *Columbia* and the *Washington* on a voyage that took him first to Nook Sound, where he transferred the *Columbia* to his assistant, Capt. Robert Gray (q.v.); then to the Queen Charlotte Islands, where he engaged in trade; and to China via the Hawaiian Islands. Returning to North America in 1791, he visited Japan on the way, one of the first Americans to do so. He crossed the Pacific again in 1794. Revisiting the Hawaiian Islands, he was killed by an accidental shot.

KENEDY, city, Texas, situated in Karnes County, about 60 miles southeast of San Antonio on the Southern Pacific Railroad. In an area raising cotton, corn, and flax and producing oil, the city has plants processing food and cotton seed. Kenedy is a health resort with hot mineral wells, and it holds an annual flax festival. Founded in 1882, it was incorporated in 1911. Pop. (1950) 4,234.

KENILWORTH, urban district, England, situated in Warwickshire, 5 miles southwest of Coventry. It has tanneries and engineering establishments. Kenilworth is celebrated as the seat of Kenilworth Castle, now in ruins. The castle was the scene of Sir Walter Scott's *Kenilworth* (q.v.), and it figured prominently in the history of northern England in the Middle Ages. Founded by Geoffrey de Clinton about 1120, it belonged to Simon de Montfort from 1254 to 1266. It was acquired by John of Gaunt in 1358 and passed to his son Henry IV. During the Wars of the Roses it changed hands frequently. In 1562, Queen Elizabeth I presented it to her favorite, Robert Dudley, earl of Leicester, and he entertained her there in 1566, 1568, 1572, and 1575. The last occasion is vividly described in Scott's novel. Kenilworth also has the ruins of an Augustinian priory established about 1120. Pop. (1951) 10,738.

KENILWORTH, village, Illinois, situated

Cook County, on Lake Michigan, 17 miles north of Chicago, of which it is a residential suburb. It is served by the Chicago and North Western and the Chicago North Shore and Milwaukee railroads. Kenilworth was incorporated 1896. Eugene Field is buried in the village. op. (1950) 2,789.

KENILWORTH, borough, New Jersey, situated in Union County, 4 miles northwest of Elizabeth, on the Rahway Valley Railroad (freight only). It has plants producing machinery, metal products, pipe, coal tar products, paper, rushes, and plastics. Kenilworth was incorporated in 1907. Pop. (1950) 4,922.

KENILWORTH. Sir Walter Scott's *Kenilworth*, first published in 1821, is a historical romance of the time of Queen Elizabeth I, involving the relations between the queen and Robert Dudley, earl of Leicester. Leicester is represented as having contracted a secret marriage with Amy Robsart, and as being torn between the two motives of love for his beautiful bride and a consuming ambition to rise superior to all his rivals in the royal favor. It is for fear of his jealous sovereign's displeasure that he has concealed his marriage and hidden his wife in Cumnor Place. At the opening of the story, Tressilian, her former lover, discovers her whereabouts and attempts to get her to return to her father's house. He is opposed by the machinations of Richard Varney, a retainer of Leicester's. Tressilian appeals to the queen to restore the lady to her parents. Discovery is imminent, but Varney temporarily saves the situation by claiming that she is his wife. Elizabeth commands that Amy be brought before her at her approaching visit to Lord Leicester's castle of Kenilworth. Varney, after trying in vain to induce her to pose as his wife, gives her a drug intended to produce an illness that will make her removal impossible, but, fortified with an antidote administered by a servant of Tressilian's, she escapes from Cumnor Place and journeys to Kenilworth seeking her husband. During the revels at the castle the queen inflames Lord Leicester's ambitions by letting him see that he may even aspire to her hand. Varney convinces him that Amy has been unfaithful and he gives orders for her death. Later, learning that Varney has deceived him, Leicester confesses the truth to Elizabeth in a paroxysm of remorse and is subjected to an outburst of royal anger. The messengers whom he is sent to Cumnor Hall, whither Amy has been hurried, arrive too late, and the unfortunate princess is killed by falling through a trap door laid at the entrance of her chamber by the hand of Varney.

In no novel of Scott's is the historical setting elaborated with more care than in *Kenilworth*. While indifferent to literal accuracy, Scott has brilliantly rendered the atmosphere of the time by multitude of characteristic details drawn from a wide reading of Elizabethan literature. The revels at Kenilworth, for example, are elaborately described after the contemporary account of Robert Laneham. The delineation of Elizabeth is a fine specimen of Scott's characteristic art of reading romance and human nature into the outlines afforded by historical record. The Amy Robsart story is based on rumors and traditions current in Leicester's time and recorded in contemporary documents, but Scott has com-

bined the actual circumstances of more than one of Leicester's marriages and has also drawn heavily on his imagination.

For the facts of Leicester's marriage to Amy Robsart, consult *The Dictionary of National Biography*, vol. 6, pp. 112-13 (London 1937-38).

JAMES H. HANFORD,
Professor of English, Western Reserve University.

KENILWORTH IVY, a trailing perennial plant (*Cymbalaria muralis*), with leaves like those of ivy. Native to Europe, it is cultivated in the northeastern United States as an ornamental ground cover, along walls, and in greenhouses.

KENITES, the name of a tribe which inhabited the rocky desert region between southern Palestine and the mountains adjoining Sinai in Biblical times. At the time of the Exodus, they pastured their flocks around Mount Horeb and Sinai. Jethro or Hobab, the father-in-law of Moses, was a Kenite. He is also called a Midianite, and it may be that the names are interchangeable or that the Kenites and the Midianites were closely related. A third conjecture is that the Kenites were the older family of Midianites, the later family descending from Abraham and Keturah. Because of their great kindness to the people of Israel, they were highly esteemed. When Saul attacked the Amalekites, he warned the Kenites to separate from them. In the time of David they still held their possessions in the south of Judah, but the small number left after the Babylonian conquest took refuge in Jerusalem.

KENITRA, the name until 1932 of Port Lyautey, French Morocco.

KENMARE, Nun of. See CUSACK, MARY FRANCES.

KENMORE, village, New York, situated in Erie County, on the Niagara River, just north of Buffalo, of which it is a residential suburb. There are plants producing chemicals, machinery, and metal and rubber products. The village has a public library, a junior and a senior high school, and a historical society which maintains a collection of documents on local history. Kenmore was incorporated in 1899. Government is administered by a board consisting of a mayor and four trustees. Pop. (1950) 20,066.

KENNAN, George, American journalist and author: b. Norwalk, Ohio, Feb. 16, 1845; d. Medina, N. Y., May 10, 1924. Interested in telegraphy from boyhood, he became a military telegraph operator in the Civil War. In 1865 he was sent by the Western Union Telegraph Company to Siberia to survey a telegraph route. From 1866 to 1868 he superintended the construction of the middle division of the line of the Russo-American Telegraph Company. He remained in Russia through 1871, exploring the mountainous regions of the eastern Caucasus and Dagestan. On his return to the United States he engaged in business and also became well known as a lecturer on Russia. From 1877 to 1885 he was assistant manager of the Associated Press in Washington, D.C. In 1885-1886, with

George A. Frost, an artist, he traveled in Russia for the Century Company, investigating the exile system in Siberia. He visited all the mines and prisons between the Ural Mountains and the headwaters of the Amur. Kennan served as correspondent for the *Outlook* in Cuba in 1898, and in Martinique in 1902, when he explored Mount Pelée and the scene of the St. Pierre disaster. In 1904 the *Outlook* sent him to the Far East. He reported the siege of Port Arthur, which he witnessed from the Japanese side, and he spent nearly two years in travel through Japan, China, and Korea.

His published works include *Tent Life in Siberia* (1870); *Siberia and the Exile System* (1891); *Campaigning in Cuba* (1899); *The Tragedy of Pelée* (1902); *Folk-tales of Napoleon* (1902); *A Russian Comedy of Errors* (1915); *The Chicago & Alton Case* (1916); and *E. H. Harriman: A Biography* (1922).

KENNAN, George F(rost), American diplomat: b. Milwaukee, Wis., Feb. 16, 1904. Nephew of George Kennan (q.v.), he was educated at Princeton University. Upon his graduation in 1925, he joined the Foreign Service of the United States State Department and was sent to Geneva as vice consul. He was transferred to Hamburg in 1927 and to Tallin in 1928. In 1929 he served successively as third secretary in Riga, Kovno, and Tallin. The State Department, anticipating the establishment of relations with the Soviet Union, next assigned him as a language officer to Berlin, where he made an intensive study of the Russian language and culture. After serving as third secretary in Riga (1931-1933), he accompanied Ambassador William C. Bullitt to Moscow as an expert on Russian affairs. In 1934 he was appointed third secretary of the embassy. After an interval in Vienna as consul and second secretary in 1935, he returned to Moscow as second secretary and remained there until 1937, when he was assigned to the State Department. He served as second secretary in Prague in 1938-1939, as second secretary in Berlin in 1939, and as first secretary in 1940-1941. He was interned for five months after the German declaration of war, and then went to Lisbon as counselor of legation. While there, he helped to negotiate the lease of bases in the Azores and participated in the negotiations for the Italian surrender. In 1944 he served as counselor to the American delegation to the European Advisory Commission in London. In the same year he returned to Moscow as minister-counselor, serving in this capacity and, on occasion, as chargé d'affaires, until 1946, when he was appointed deputy for foreign affairs at the National War College in Washington. In the following year he became head of the State Department's policy planning staff. In this capacity, he advocated the policy of containment of the Soviet Union that became one of the keystones of United States foreign policy in the succeeding years. In 1949 he was appointed deputy counselor and principal long-range adviser to the secretary of state. In the following year he obtained a leave of absence to write and study at the Institute for Advanced Study, Princeton, N. J. The fruit of his stay there, *American Diplomacy: 1900-1950*, was published in 1951. Early in 1952, Kennan was appointed ambassador to the USSR, but in October of that year the Soviet government demanded his recall because of

comments he had made on living conditions for foreigners in Moscow. Although the United States government rejected the Soviet demand, Kennan was out of the USSR at the time and could not return to his post.

His brother, **KENT WHEELER KENNAN** (b. Milwaukee, Wis., April 18, 1913), is a composer and teacher of music. He studied at the University of Michigan and the Eastman School of Music, where he received his B.Mus. degree in 1934, and his M.Mus. degree in composition in 1936, when he won the Prix de Rome. After studying in Rome at the Academy of St. Cecilia, he taught music at Kent State University (1939-1940) and the University of Texas (1940-1942). During World War II he served in the Army Air Forces. He taught at Ohio State University from 1947 to 1949, when he joined the music department of the University of Texas. Kennan has written numerous orchestral compositions, including *Symphony No. 1*, *Nocturnal Soliloquy*, *Promenade*, and *Air de Ballet*.

KENNEBEC RIVER, river, Maine, next to the Penobscot the most important in the state. Its principal source is Moosehead Lake, on the boundary between Somerset and Piscataquis counties. It flows southwest and south for about 150 miles and enters the Atlantic Ocean in Sagadahoc County through Sheepscott Bay, an irregular, island-studded indentation of the coast. The largest tributary of the Kennebec is the Androscoggin, which joins it 18 miles from the coast at Merrymeeting Bay. The outlets of a number of small ponds, and the Dead, Sebastook, and Sandy rivers also flow into it. The most important towns along its banks are Bath, Richmond, Gardiner, Hallowell, Augusta, and Waterville. It has been harnessed to supply power at Gardiner, Skowhegan, Waterville, Augusta, and Gardiner. The head of navigation is at Augusta, 42 miles from the sea, where there is a large dam (1870) across the river. The river is closed by ice at Hallowell from the middle of December to about April 1; below Bath it is open all seasons except in unusually severe winters.

The Kennebec was explored by Samuel Champlain in 1604-1605. Two years later George Popham and Raleigh Gilbert built a town at its mouth and established the first English colony in Maine. In 1628 a trading post was established in what is now Augusta by the settlers of Plymouth Colony. Later the river became an important waterway, and in the early part of the 19th century steamers plied between Augusta and Boston. With the development of railroads, river traffic declined, but the Kennebec gained new importance as a source of power for the lumber, paper, and textile industries.

KENNEBUNK, town, Maine, situated in York County, on the Mousam and Kennebec rivers, 22 miles south-southwest of Portland. It is served by the Boston and Maine Railroad and by buslines. The surrounding area contains dairy, poultry, and truck farms, as well as popular summer resorts. The town is a tail trading center and has industrial establishments producing shoes, trunks, leather twine, and lumber products. Kennebunk is one of the oldest towns in Maine, having been settled about 1650. It was part of the town of Wells until 1820, however, when it was separately incorporated. In colonial

was engaged in the West Indian shipping trade, and shipbuilding was carried on along the river front. There are a number of fine colonial and early federal homes. Pop. (1940) 3,698; (1950) 273.

KENNEBUNKPORT, town, Me., in York County; on the Atlantic Ocean, at the mouth of the Kennebunk River; about 3 miles southeast of Kennebunk (q.v.). Kennebunkport is a summer vacation resort, with elm shaded streets bordered by attractive homes, some of which were built in the 18th century, when the town was a shipbuilding center. It is a favored retreat of writers and artists, many of whom maintain summer homes here. To the south is Kennebunk Beach, with its rock promontories extending far into the ocean; and Porpoise Island, a noted fishing resort, lies to the north. There is a famous summer theater. Settled in 1629, incorporated as Cape Porpoise in 1753, and reincorporated as Arundel in 1717, the town has been called Kennebunkport since 1821. Pop. (1940) 1,448; (1950)

KENNEDY, SIR Alexander (Blackie William), English educator and engineer: b. Stepney, March 17, 1847; d. 1928. Graduated from Royal College of Mines he became a marine engineer with a reputation for inventiveness. Becoming professor of engineering at University College, London, he carried on his experiments there and established the first engineering laboratory. He did special and important work in devising means of testing machines of various kinds and he invented a recorder for testing the strength of materials. He designed lighting and power plants in Edinburgh, Manchester, Loch Leven, Calcutta, and Japan. He also acted extensively in the capacity of consulting engineer and was chief engineer to the Westminster Electric, Central Electric and St. James and Pall Mall Electric Supply companies, member of the Naval Boiler Committee, president of the Admiralty Committee on Machinery Design, associate member of the Ordnance Committee; member of Committee on Wireless Telegraphy; consulting electrical engineer to the London and North-Western and London and Southwestern railways and the London County Council Tramways; member of the Advisory Committee of the Ministry of Munitions, of the Munitions Inventions Panel, and vice chairman of the Anti-Aircraft Equipment Committee. He published *The Mechanics of Machinery* (1886); *Moore's Alps in 1864* (1902); a translation of Reuleaux' *Kinematik*; *from Ypres to Verdun* (1921); *Petra: Its History and Monuments* (1925).

KENNEDY, Archibald R. S., Scottish educator and Semitic scholar: b. White Hills, Warrington, Lancashire, 1859; d. Edinburgh, Oct. 25, 1938. He was educated at the universities of Aberdeen, Glasgow, Göttingen and Berlin (1875-1885). In the latter year he became Fellow of Glasgow University (1885-1887), going to Aberdeen University three years later as professor of Semitic languages (1887-1894); and in 1895 to University of Edinburgh as professor in the same capacity (to 1937). Among his published works are a series of grammars in the *Porta Linguarum Orientalium Series*, including Hebrew (1885); Syriac (1889); Assyrian (1890), and Arabic (1895); *Exodus* (in Temple Bible, 1901); *Joshua and*

Judges (1902); *Samuel* (1905); *Leviticus and Numbers* (in Century Bible, 1910). He also contributed extensively to Hastings' *Dictionaries of the Bible*; and the *Encyclopaedia Biblica*.

KENNEDY, Benjamin Hall, English educator and classical scholar: b. Birmingham, 1804; d. Torquay, April 6, 1889. Graduated from Cambridge in 1827 he became Fellow and lecturer in classics at Saint John's College in his alma mater; assistant master at Harrow, and head master of Shrewsbury School (1836-1866). In the latter year he became regius professor of Greek at Cambridge and canon of Ely the following year. In 1870 he became a member of the University Council, and also of the Committee on the Revision of the New Testament. He edited popular classical textbooks; made translations from Greek and Hebrew into English and wrote poetry in Latin, Greek and English, a volume of which was published in 1882 under the title of *Between Whiles*.

KENNEDY, Charles Rann, Anglo-American dramatist: b. Derby, England, Feb. 14, 1871; d. Los Angeles, Feb. 16, 1950. He began life as an office boy, largely educated himself and early began lecturing and writing. He later became an actor and press agent and theatrical business manager. This led to the production of dramas for the stage with which he combined the writing of short stories, critical articles and poems. Among his dramas are *The Servant in the House* (1908); *The Winter Feast* (1908); *The Terrible Meek* (1911); *The Necessary Evil* (1913); *The Idol-Breaker* (1914); *The Rib of the Man* (1916); *The Army with Banners* (1917); *The Fool from the Hills* (1919); *The Chastening* (1922); *The Admiral* (1923); *The Salutation* (1925). All of his plays deal with problems of society. He married Edith Wynne Mathison, the actress, in 1898.

KENNEDY, Grace, Scottish novelist: b. Pinmore, Ayrshire, 1782; d. Edinburgh, Feb. 28, 1825. Her novels, which are of a decidedly religious cast, were very popular in her day, though now when the age has become more liberal, they have lost most of their interest and are very little read. Her works, which have been translated in full into German, and in part into several other languages, show considerable talent and depict the religious spirit of her age in Scotland very well. They will, therefore, be of a secondary interest at least, to students of the religious tendencies of the first quarter of the 19th century. Her most popular story, *Father Clement* (1823), is strongly anti-Roman Catholic, and for this reason and on account of the vividness of the characters and situations, became immensely popular and was translated into most of the languages of Europe. Among her other novels are *Anna Ross*, *Dunallan*, *Jessy Allan*, and *Decision*. The best edition of her works is that published in Edinburgh in 1827.

KENNEDY, SIR James Shaw, British soldier and military writer: b. Straiton parish, Ayrshire, Oct. 13, 1788; d. Bath, Eng., May 30, 1865. His family name was Shaw and the Kennedy was added afterward. He became a general in 1863 after having seen much military service abroad in the Wellington Peninsular campaigns. His *Notes on Waterloo* were published

in 1865. He also left an autobiography; 'A Plan for the Defense of Canada'; and 'Notes on the Defense of Great Britain and Ireland' (1859), the latter of which has been frequently reprinted.

KENNEDY, John, Scottish religious writer: b. Aberfeldy, Perthshire, 1813; d. 1900. Educated at Aberdeen, Glasgow and Edinburgh universities he became a Congregational minister stationed in Aberdeen (1836-46). In the latter year he went to London to Stepney Congregation (1846-82). There he became professor of apologetics at New College (1872-76) and chairman of the council of that institution (1884-95) and was editor of *The Christian Witness* (1866-73) and *The Evangelical Magazine* (1887-90). Among his published works are 'The Divine Life' (1858); 'A Handbook of Christian Evidence' (1880); 'The Gospels; their Age and Authorship' (1884); 'Old Testament Criticism and the Rights of Non-Experts' (1897).

KENNEDY, Sir John, Canadian engineer: b. Spencerville, Ontario, 26 Sept. 1838; d. Montreal, 25 Oct. 1921. He was educated at McGill University, he became assistant city engineer of Montreal in 1863; division engineer (1871) and chief engineer of the Great Western Railways of Canada (1872-75); chief engineer of the Montreal Harbor Commission (1875-1907) and consulting engineer of same after 1907. Among his important public works are the deepening to 27½ feet of the ship canal between Montreal and Quebec and all the improvements made in Montreal harbor for nearly a third of a century. As a member of numerous important engineering committees, among them those on Lachine Canal, Floods at Montreal and Trent Valley Canal System, all of them royal commissions, he influenced many public undertakings in Canada.

KENNEDY, John Pendleton, American novelist: b. Baltimore, Md., 25 Oct. 1795; d. Newport, R. I., 18 Aug. 1870. He was graduated at Baltimore College in 1812, and in 1814 served as a volunteer in the ranks, taking part in the battles of Bladensburg and North Point. In 1816 he was admitted to the practice of the law, which he followed successfully for 20 years. In 1818 he commenced authorship, by the publication, in connection with his friend Peter Hoffman Cruse, of the 'Red Book,' a serial of light character in prose and verse issued about once a fortnight, and continuing two years. In 1820 he was elected to the Maryland house of delegates, and re-chosen the two next years. In 1832 he published his first novel, 'Swallow Barn, or a Sojourn in the Old Dominion,' descriptive of the plantation life of Virginia. In 1835 appeared 'Horseshoe Robinson, a Tale of the Tory Ascendancy,' the most successful of his writings. In 1838 he published 'Rob of the Bowl, a Legend of Saint Inigoes,' relating to the Maryland province in the days of Cecilius Calvert, second Lord Baltimore. Kennedy was a member of Congress 1839-45, and was prominent among the Whig members. In 1849 appeared his 'Life of William Wirt, Attorney-General of the United States,' and in 1852 he became Secretary of the Navy. His works not previously named include 'Annals of Quodlibet' (1840); 'Mr. Ambrose's Letters on the Rebellion'

(1865). He was a friend of Thackeray, and wrote or sketched in outline the fourth chapter of the second volume of 'The Virginians. Consult 'Life' by Tuckerman. See HORSESHOE ROBINSON.

KENNEDY, John Pitt, an Irish author, educator and engineer: b. Donogh, Donega County, Ireland, 1796; d. 1879. He superintended harbor construction in many parts of the world and built lighthouses, roads and quays. He was sub-inspector of militia in the Ionian Isles (1828-31). After a long absence from the army he returned to it in 1849, serving as secretary to Sir Charles Napier whom he accompanied to India. There Kennedy superintended the construction of the military road from Kalka, through Simla and Kuma-wur to Tibet. John Pitt Kennedy, notwithstanding the importance of his public engineering works, is best remembered on account of his efforts to settle, in a sensible way, the Irish question. He returned to Ireland in 1831; and he was at once struck with the lamentable condition of the people and filled with a desire to remedy it. He realized that any permanent improvement in the Irish situation must be preceded by a betterment of agricultural conditions. He seems to have got nearer the heart of the Irish people than any previous reformer and to have realized that the British method of dealing with the people had been largely faulty if not vicious. He became convinced that force would never conquer Ireland though it might hold her in subjection indefinitely. In 1835 he published a book which embraced his ideas on Ireland, and which bore the curious though very suggestive title 'Instruct, Employ; Don't Hang Them: or Ireland Tranquilized without Soldiers and Enriched without English Capital.' As inspector general of Irish Education, for a time; secretary of the Devon Commission (1843); and the Famine Relief Committee (1845) he labored to improve agricultural and social conditions and to advance public instruction in Ireland. To this end he wrote several works, all dealing with the problems he found in Ireland and suggesting solutions. He also wrote technical engineering works and was publisher and editor of the *British Home and Colonial Empire*.

KENNEDY, John Stewart, Scottish-American philanthropist: b. near Glasgow, Scotland, 1830; d. 1909. At the age of 24 he came to New York as the representative of a London iron firm. There he entered the firm of Morris K. Jesup in which he remained until 1867. On his retirement he began the reorganization of concerns on trouble through mismanagement or other causes; and was receiver for numerous concerns, among them The New Jersey Central Railroad; and in these enterprises he eventually made a large fortune; the greater part of which he expended in charities and in the encouragement of education. Of the \$30,000,000 which he is credited with having disposed of in this way he gave by will to Columbia University, the New York Public Library, the Metropolitan Museum of Art, Presbyterian Board of Home Missions, Presbyterian Board of Foreign Missions, the Presbyterian Church Erection Fund and the Presbyterian Hospital, \$2,500,000, or a total \$17,500,000. His will also provided for many

gifts to colleges ranging from \$1,500,000 to 50,000.

KENNEDY, Joseph Camp Griffith, American statistician: b. Meadville, Pa., April 1, 1813; d. July 13, 1887. He practiced law for a time, edited country newspapers, and finally, in 1849, assumed charge of the reorganization of the United States Census Bureau; and 10 years later became head of the census. He was largely instrumental in the holding of the Congress of statisticians held in Brussels in 1853. Later on he became examiner of national banks. To him the United States owes much of her early organization of statistical reports of all kinds.

KENNEDY, Thomas Francis, Scotch reformer: b. Greenan, near Ayr, Nov. 11, 1788; d. Dalquharran Castle, April 1, 1879. Graduated in law from Edinburgh University he went into politics and became a member of the Parliament in 1818. He became greatly interested in political reforms and in these matters he saw more clearly than most of his fellow members of Parliament. He obtained numerous rights for prisoners, among them that of peremptory challenge under a ballot method for the selection of jurors. He was largely instrumental in securing the extension of the franchise, the abolition of religious disabilities, the extinction of the Scottish Court of the Exchequer and the lowering of the duties on corn (that is, grain).

KENNEDY, William, Irish poet and prose writer: b. Dublin, Dec. 26, 1799; d. Paris, 1871. Educated at Belfast College, he drifted into literature, working on the *Paisley Magazine*, Scotland. Following this he pursued literature in London until 1838 when he accompanied Lord Durham as secretary to Canada, going to Texas in 1841 and becoming British consul at Galveston (1842-1849). In the latter year he was retired on a pension which allowed him to devote his time to literary work. He returned to London and finally went to reside in Paris.

Among his published works are *Fitful Fancies* (1827); *The Arrow and the Rose and Other Poems* (1830), both volumes of lyrical poetry for most part; *The Siege of Antwerp* (drama); *The Rise, Progress and Prospects of the Republic of Texas* (2 vols., 1841).

KENNEDY, William Sloane, American author: b. Brecksville, Ohio, 1850; d. West Yarmouth, Mass., Aug. 4, 1929. Educated at Yale and Harvard he joined the staff of the *Boston Transcript*, and later devoted considerable time to magazine work, criticisms, translation from French and Italian and published original works. Among the latter are *Henry Wadsworth Longfellow* (1882); *John Greenleaf Whittier* (1882); *Wendell Holmes* (1883); *Wonders and Vicissitudes of the Railway* (1884 and 1906); *John Whittier, the Poet of Freedom* (1892); *Reminiscences of Walt Whitman* (1896); *In Portia's Gardens* (1897); *Walt Whitman's Diary in Canada* (1904); *After Death—What?* (1909).

KENNELLY, Arthur Edwin, Anglo-American engineer: b. Bombay, India, Dec. 17, 1861; d. Boston, Mass., June 18, 1939. He was educated in France and England, and after extensive experience in the latter country, came to the United States in 1887 as principal assistant to Thomas A. Edison. He practiced as a con-

sulting engineer in Philadelphia, 1894-1901, and was professor of electrical engineering at Harvard University, 1902-1930, and also during 1913-1924, at Massachusetts Institute of Technology, where he was director of electrical engineering research and chairman of the faculty from 1917 until 1919. Important public works with which he was connected include the laying of the Vera Cruz-Frontera-Campeche cables for the Mexican government in 1903. In 1902 he announced the probable existence of an outer layer of ionized atmosphere favorable to radio-wave propagation now known as the ionosphere. Six months later Sir Oliver Heaviside (1850-1925) of England working independently of Kennelly made a similar announcement. In honor of these two distinguished discoverers, this region is often referred to as the Kennelly-Heaviside layer. See also IONOSPHERICS. Among Kennelly's works are *Notes for Electrical Students* (a collaboration with Wilkinson); *Theoretical Elements of Electro-Dynamic Machinery* (1893); *Electrical Engineering Leaflets* (in collaboration with Edwin J. Houston, 1897); *Electro-Dynamic Machinery* (1899); *Electricity Made Easy* (1899); *The Interpretation of Mathematical Formulæ* (1899); *Wireless Telegraphy* (1907); *The Application of Hyperbolic Functions to Electrical Engineering Problems* (1911); *Artificial Electric Lines* (1917); *Electrical Vibration Instruments* (1923); *Electric Lines and Nets* (1929).

KENNET, river, England. It rises in Wiltshire, flowing east through Berkshire, emptying into the Thames at Reading, after a course of 46 miles. It is a part of the waterway connecting the North Sea with Saint George's Channel.

KENNETH, kēn'ēth, the name of two kings of Scotland. **KENNETH I**, called **MACALPINE** (d. 858 A.D.) is the traditional founder of the Scottish kingdom. At first his influence extended over a restricted territory in Galloway; but this he gradually extended by successful military expeditions which resulted in the expulsion of the Danes (841) and the union of the Scottish and Pictish principalities. He made Dunkeld the ecclesiastical capital of his enlarged domains; and to this new capital he removed the relics of Saint Columba. This made the city the center of increased ecclesiastical activity which served as an inspiration to the Christians to maintain a desperate struggle against expiring paganism. Kenneth, among his other warlike activities, made six expeditions against Lothian, into which he penetrated on each occasion.

KENNETH II (d. 995 A.D.), son of Malcolm I, consolidated his lands but his reign (971-995) was one of continued warfare with the Norsemen on the one hand, and the Britons of Strathclyde and the English of Northumbria on the other. Later chroniclers say he was murdered by his own subjects, instigated by Fenella, daughter of a high steward of the earl of Angus. See **SCOTLAND—Civil History**.

Consult Lang, Andrew, *History of Scotland*, or any other good history of Scotland.

KENNETT, Robert Hatch, English educator: b. St. Lawrence, Ramsgate, 1864; d. Feb. 15, 1932. Educated at Cambridge, he served in that institution as chaplain, lecturer in Hebrew and Syriac (1887-1893); and lecturer in Aramaic (1893-1903), becoming, on the lat-

ter date, regius professor of Hebrew; canon of Ely (1905); Schweich lecturer (1900), and Bishop of Manchester (1913).

Among his publications are *The Hebrew Tenses* (1901); *In Our Tongues* (1907); *The Servant of the Lord* (1911); *The Composition of the Book of Isaiah in the Light of History and Archaeology*; *The Last Supper* (1921). He contributed to the *Journal of Theological Studies*; the *Encyclopedia Americana*; *Hastings' Encyclopedia of Religion and Ethics*; the *Hibbert Journal*, and other publications of a like nature.

KENNETT, White, English Episcopal prelate and writer: b. Dover, Aug. 10, 1660; d. Westminster, Dec. 19, 1728. Graduated from Oxford he entered the Church of England where he distinguished himself as a preacher, antiquarian, theologian and historian, and also on account of his strongly-pronounced anti-high church attitude. Rector of Ambrosden (1685); tutor and vice principal of Edmund Hall, Oxford (1691); archdeacon of Huntingdon (1701); dean of Peterborough (1707); bishop of Peterborough (1718); he made his mark upon the church politics of his day in England.

Among his numerous works are *Parochial Antiquities* (1695, 1818); vol. 3 (Charles I—Anne) of the *Compleat History of England* (1706); *A Register and Chronicle, Ecclesiastical and Civil, from the Restoration of King Charles II* (1728). Many of his historical and other valuable manuscripts are in the Lansdowne collection in the British Museum. His life was written by the Rev. William Newton (London 1730).

KENNETT, kĕn'ĕt, -ĭt, city, Missouri, Dunklin County seat, is located 42 miles southeast of Poplar Bluff, on the St. Louis-San Francisco Railway, in a cotton-growing area. Industries are cotton ginning and compressing, and shirt manufacturing. Pop. (1950) 8,685.

KENNETT SQUARE, borough, Pennsylvania, Chester County, is located 35 miles south of Philadelphia and 12 miles northwest of Wilmington, Delaware, on the Pennsylvania Railroad. The main industry is the raising and packing of mushrooms; there is a large greenhouse industry specializing in roses and carnations; machinery, fiber products, and hosiery are manufactured. It was incorporated March 13, 1855. Pop. (1950) 3,699.

KENNEWICK, kĕn'ĕ-wĭk, city, Washington, Benton County, is located on the Columbia River opposite Pasco, and is a river port for barges. It is in a fruit, dairy, and wheat region, and there is an atomic energy installation nearby. The city was incorporated in 1904. Pop. (1940) 1,918; (1950) 10,106.

KENNEY, kĕn'ĭ, **Charles Lamb**, English author and journalist, son of the Irish dramatist, James Kenney (q.v.): b. Bellevue (near Paris, France), April 29, 1821; d. Kensington, Eng., Aug. 25, 1881. He began active life as a clerk in the London general post office; and while there devoted his spare time to writing for the local press, soon becoming dramatic critic and assistant foreign editor of the *London Times*. In the meantime he studied law and was admitted to the bar in 1856, and did much to influence public opinion in favor of the Suez Canal.

Among his published works are *The Gates of the East* (in support of the building of the Suez Canal, 1857); *M. W. Balfe* (1875); *Balzac's Correspondence* (a translation, 1878), and light verse, and several very good light operas and musical sketches which were popular in their day.

KENNEY, James, British dramatist: b. Ireland, 1780; d. Brompton, Eng., July 25, 1849. Beginning as a bank clerk in London, where his father was manager of Boodle's Club, he gave more attention to amateur acting and play writing than to the banking business, which he soon gave up for dramatic writing. His plays were very popular in his day and some of them are still seen upon the stage. He had excellent dramatic talent and the power of character development.

Among his numerous plays the most popular and successful are *Turn Him Out* (a musical afterpiece, 1812); *Love, Love and Physic* (1812); *Sweethearts and Wives* (1823); *The Illustrious Stranger* (1827); *Masaniello* (1829); *Sicilian Vespers* (1840); *Infatuation* (1845).

KENNICOTT, kĕn'ĭ-kŭt, **Benjamin**, English clergyman and scholar: b. Totness in Devonshire, Eng., April 4, 1718; d. Oxford, Eng., Aug. 18, 1783. He was educated at the grammar school in Totness and at Oxford where he was elected fellow of Exeter College in 1747. He was Radcliffe librarian at Oxford 1767-1783, and from 1770 was Canon of Christ Church there. He is best known for his critical study of original Hebrew texts of the Old Testament begun in 1751 and culminating in the publication of his great work, *Vetus Testamentum Hebraicum cum Variis Lectionibus*, 2 vols. (Oxford 1776, 1780).

Besides this major work and numerous letters, dissertations and sermons his published works include: *Poem on the Recovery of the Hon. Mrs. Elizabeth Courtenay* (1743); *On the Oblation of Cain and Abel* (1747); *The State of the printed Hebrew Text of the Old Testament considered, a Dissertation* (1753); *On the Collation of the Hebrew Manuscripts of the Old Testament* (1770). The bulk of his collations, codices, correspondence, and other papers are in the Bodleian Library.

KENNY, kĕn'ĭ, **Courtney Stanhope**, English legal scholar: b. Halifax, Yorkshire, March 18, 1847; d. Cambridge, March 18, 1930. He was educated at Downing College, Cambridge, where he was elected fellow (1875). He was University Reader in English Law (1888-1907) and Downing Professor of Laws of England (1907-1918). His *Outlines of Criminal Law* (1902, 14th ed. 1932) is a legal classic.

KENNY, Sir Edward, Canadian statesman b. County Kerry, Ireland, July 1800; d. Halifax Nova Scotia, May 16, 1891. He removed to Halifax in 1824, where he engaged in business. He was member for 26 years of the legislative council of Nova Scotia, during 11 of which he was president; served as receiver-general of Canada (1867-1869); president of the council (1869-1870); and senator (1867-1876). He was knighted in 1870.

KENNY, Elizabeth, Australian nurse: b. Warialda, New South Wales, Australia, Sept. 20, 1886; d. Toowoomba, Queensland, Australia Nov. 30, 1952. Widely known for her method of

eatment for infantile paralysis victims, consisting of stimulation and re-education of affected muscles, she was the subject of much medical controversy. In 1944 a committee of orthopedic physicians of the American Medical Association criticized her claims that 80 per cent of the patients under her system recover without paralysis as compared with only 13 per cent under the orthodox method of immobilizing the paralyzed limbs with casts and splints. Sister Kenny (in Australia all nurses are called sister) opened a clinic in Townsville, Queensland, in 1933, but it was not until 1939 that her treatment was made available, upon the patient's request, in all Australian hospitals. In 1940 she began her work in the United States using facilities of the University of Minnesota and the Minneapolis General Hospital and in 1943 an Elizabeth Kenny Institute was established in Minneapolis. She was the author of *Infantile Paralysis and Cerebral Diplegia* (1937); *Treatment of Infantile Paralysis in Acute Stage* (1941); with John F. Pohl, *Kenny Concept of Infantile Paralysis and Its Treatment* (1943); with Martha Ostenso, *And They Shall Walk* (autobiography, 1943).

KENORA, kě-nōr'ā, formerly RAT PORTAGE, town and port of entry, Ontario Province, Canada, capital of Kenora district; altitude, 1,087 feet; is located at the outlet of the Lake of the Woods, 126 miles east of Winnipeg, on the Canadian Pacific Railway and the Canadian Pacific Airlines. It is a shipping point for gold mines to the north. The Winnipeg River with a depth of 16 feet from the lake furnishes Kenora and neighboring Keewatin with abundant power for sawmills, flour mills, pulp and paper mills. Fishing, especially for sturgeon, is a major industry; there is a government fish hatchery here; and the tourist trade for hunting and fishing is important.

The Hudson's Bay Company trading post at Rat Portage was the scene of serious riots in 1883 in the boundary dispute between Ontario and Manitoba. It joined Norman and became an Ontario town in 1892 with the name Kenora formed by combining the first two letters of Keewatin, Norman, and Rat Portage. Pop. (1951) 8,695.

KENOSHA, kě-nō'shā, city, Wisconsin, Kenosha County seat, altitude 587 feet, is located on Lake Michigan, 28 miles south of Milwaukee, on the Chicago and North Western Railway; and the electric railways, the Chicago North Shore and Milwaukee, and the Milwaukee Electric. It has an excellent harbor open throughout the year, and is an industrial center producing automobiles, brass and copper goods, re engines, furniture, mattresses, tools, underwear, wire rope, and other manufactured goods. It is also a trade and recreation center for a productive agricultural area; 83 per cent of its lake shore is municipally owned and has been developed for bathing and other park and recreational purposes. Around its civic center are located the county court house, the Kenosha Historical and Art Museum, the post office, and high school.

Settled in 1835 as Pine Creek Village, renamed Southport in 1837, it was chartered as the city of Kenosha in 1850. It has city manager government. Pop. (1950) 54,368.

KENOSIS, kē-nō'sis (Greek, an emptying, a depletion), the self-renunciation and self-limitation of the Son of God manifested in the incarnation. Even in very early Christian times there were at least three distinct views held as to the relation of the God-Christ to the man-Christ. These views were influenced by the Jewish conception of a traditional Christ, the Egyptian doctrine of the incarnation of Osiris, son of the great sun god, Ra, and the speculations of the Romans, Greeks and Persians as to the nature of their own gods which strangely mingled human with divine attributes. From Egypt, Rome and the Eastern Empire came views of the *kenosis*, influenced by local traditions and the early training and education of the contestants, in the days when Christian theology and dogma were in the making. The mystery of the self-emptying of the divine manner of being that took place at the incarnation of the second person of the trinity; the laying aside of the eternal and the assumption of a time form of existence formed an ever-fruitle subject of speculation in an age long given to speculation as to the manner of being of all things divine.

Christianity introduced a new feature in the speculation, that of the self-abasement of the God-Christ, a feature upon which the Christians laid great stress, no doubt owing to the strong character of Paul and some of the earlier fathers who linked the historical Christ firmly with the Jewish traditional Christ. This linking of the two created a wide field for speculation as the subject was viewed from the Jewish or the Christian point of view or it was influenced by the traditions and philosophical speculations of the scholars of the Eastern and the Western empires and the mythological conceptions of the new converts to Christianity in Egypt and from among the Germanic and other races of Europe and southwestern Asia.

The relation of the incarnate God to His own self-abasement in the assumption of humanity and the occultation of His own divinity; the restrictions, pains and penalties to which He submitted during His earthly life; and the exhibition of His divine power on noted occasions like the resurrection, ascension and transfiguration introduced a new element into the religious speculation of the early centuries of Christianity, an element that proved very attractive to the mystical, speculative spirit of the age with which Paul seems to have been well acquainted. Speculation concerned itself as to what extent the God-Christ laid aside His divine form of existence, dignity and glory on becoming incarnate; and as to how much of the divine essence He divested Himself of in the *kenosis*. Some speculative theologians maintained that the *kenosis* consisted in the simple laying aside the attributes of divine glory and the divine form of existence. Others held that with these went the divine power which could not be a co-dweller with incarnation; and that Christ's miracles were performed not by power that He had retained from his divine existence, but through the power that came to Him from God the Father. Other theologians went the extreme limit and upheld the doctrine that, at the incarnation, the Son of God completely emptied Himself of the divine essence, thus altogether suspending the union and the divine functioning of the trinity during His incarnate existence.

upon earth. Between these three more or less distinct views of the relation of Christ to his incarnation, there were various different shades of opinion, most of them influenced by the speculative thought of the age and the popular and the priestly doctrine of a paganism still vigorous in many strongholds. The Eastern and Western churches held different views of the *Kenosis*; and the opinions of the early church fathers did not agree with those who followed Augustine. The word *Kenosis* is really the modern application of an old term which, if not nominally so extensively employed, was virtually as widely used. The modern idea of the doctrine of the *Kenosis*, which is Protestant, and especially Lutheran, is based on the statement of Paul, who said that Christ "being in the form of God, thought it not robbery to be equal with God, but made himself of no reputation and took upon him the form of a servant" (Philippians 2:6-8).

Modern Doctrine.—As early as 1832 Ernst Saritorius and Johann König each separately applied the expression of *Kenosis*, almost in the sense of a doctrine, to the Christ. Little by little the term and what it stood for gained ground, especially among Lutheran theologians, until in 1845 it had assumed the form of a doctrine widely accepted in Protestant Germany. The position taken by those who adhered to the modern doctrine of *Kenosis* was that there is a perfect oneness in the person of Christ; since by his own will and in his divine form he laid aside the fullness of his divine nature insofar as all its external relations were concerned, thus making it possible for him to become fully incarnate, that is human, and capable of human existence and development. The doctrine of *Kenosis*, however, recognizes that Christ retained the use of his divine power for such special cases as were necessary for the redemption of his work. Reformed and United theologians followed the Lutheran leaders in their discussions and explanations of *Kenosis*, which its defenders claimed was the natural outcome of the previous development of dogma. In this view they are mistaken, since early orthodox exegesis was in no sense kenotic, nor were new theories, for a long time, kenotic. The idea that Christ left all his divine power behind him on his incarnation, obtained no hold in Christian theology previous to the 19th century. In fact the tendency of belief was to hold that, even on earth the glory and the power of Christ were still intact and that a veil had been drawn over them. This veil might be partially drawn, revealing glimpses of the divine power. Even John Calvin, the iconoclast in many other respects, seems to have held this view.

KENRICK, Francis Patrick, American Roman Catholic prelate: b. Dublin, Ireland, Dec. 3, 1796; d. Baltimore, Md., July 8, 1863. In 1815 he went to Rome to study for the priesthood, becoming ordained in 1821. The same year he was sent to the United States to become head of a newly founded theological seminary at Bardstown, Ky. Appointed in 1830 coadjutor bishop of Philadelphia, Pa., during the cholera epidemic of 1832 and the anti-Catholic riots of 1844 he was of considerable assistance to the civic authorities. He founded the Theological Seminary of Saint Charles Borromeo in 1838, and six years later introduced the order of

Hermits of Saint Augustine into his diocese. In 1851 he was consecrated archbishop of Baltimore, Md., and the following year presided over the first plenary council of American Roman Catholic prelates.

KENRICK, Peter Richard, American Roman Catholic prelate: b. Dublin, Ireland, Aug. 17, 1806; d. Saint Louis, Mo., March 4, 1896. After studying for the priesthood at Maynooth he was ordained in 1830, and three years later he went to the United States to join his brother, Francis Patrick Kenrick (q.v.), in Philadelphia, Pa. He was professor of dogmatics in the seminary of the diocese and assistant pastor at the cathedral, and subsequently became vicar general of the diocese of Philadelphia. In 1841 he was appointed coadjutor to Bishop Joseph Rosati of Saint Louis, Mo., and in 1843 succeeded to the bishopric. When Saint Louis was created an archiepiscopal see in 1847 he became first archbishop. He was opposed to the doctrine of papal infallibility, not objecting to its truth but to the necessity for official declaration. Nevertheless he gave it his acquiescence when it was decreed by the Ecumenical Council. (Consult O'Shea, J. J., *The Two Kenricks* (Philadelphia, 1904).)

KENSAL GREEN, a famous cemetery in London, England, located in the boroughs of Kensington and Hammersmith. Although it comprised 56 acres when it was opened in 1838, the cemetery has been increased to 70 acres. Illustrious people buried here include William Makepeace Thackeray, Leigh Hunt, Wilkie Collins, Anthony Trollope, Thomas Hood, and Charles Kemble. The cemetery was damaged considerably by bombings during World War II.

KENSETT, John Frederick, American landscape painter: b. Cheshire, Conn., March 22, 1816; d. New York City, Dec. 14, 1872. His uncle, Alfred Daggett, an engraver, gave him his first lessons in art, but in 1840 he went abroad and for seven years traveled in England, Switzerland, and Italy. The fruit of this travel was a large number of sketches and paintings, out of which he exhibited in 1845 in the Royal Academy. The sale of one of his pictures, view of Windsor Castle, encouraged him to persevere. On returning to the United States he lived chiefly in New York. His *View on the Arno* and *Shrine*, exhibited in New York in 1848, established his reputation in America, and he was elected in 1849 a National Academician. His landscapes are more remarkable for sweetness than for strength, but he maintains a uniform standard of merit in all of them. His technique is delicate and refined, especially in his small canvases. He delights in the scenery of the Hudson, and of the seacoast, and some of his effects are exquisitely charming. Among his landscapes the most interesting are *Sunset on the Coast* (1858); *October Afternoon* (1864), both in the Corcoran Gallery, Washington; *Noon on the Seashore*, which has been engraved by Hunt. More than 40 of his pictures are in the Metropolitan Museum of Art, New York, the finest of them being *White Mountains*, a masterpiece of its class. He was for some years a member of the national art commission appointed to direct the decoration of the Capitol at Washington, D.C.

KENSINGTON, England, a royal borough of London, located on the north side of the Thames River west of the heart of the city. It is bounded by the boroughs of Paddington on the north, Westminster on the east, Chelsea and Fulham on the south, and Hammersmith on the west. It covers an area of 2,291 acres and includes a high proportion of parks and gardens. It consists, for the most part, of pleasant, quiet, residential districts with their own complete shopping centers.

In the 17th century, William III purchased Nottingham House, a mansion on the edge of Kensington Gardens (q.v.), to which additions and alterations were made by Sir Christopher Wren, and which later became Kensington Palace. It was one of the favorite royal residences of Queen Victoria, who was born there and later spent a great deal of her time there as queen. Isaac Newton, Joseph Addison, the essayist, Talleyrand, Thackeray, John Stuart Mill, and John Richard Green, the historian, all lived for a time in Kensington. Within its limits are located the Victoria and Albert (formerly South Kensington) Museum, the Natural History Museum, the Geological Museum, the Science Museum, and the Imperial Institute. Kensington's 1945 population was 34,650; the borough returns two members to the House of Commons.

Air raids during World War II caused scattered destruction in Kensington. Holland House, built in 1607, which passed into the possession of Henry Rich, Earl of Holland, and was leased to one period by William Penn, of Pennsylvania, was probably the most severely damaged familiar landmark. Bombed on two different occasions, the entire section was burned to the ground. The Natural History Museum, hit by a high-explosive bomb and twice by V-1's, suffered all more from the many incendiaries which struck it. Though most of the exhibits had been removed, others were damaged or destroyed.

KENSINGTON GARDENS, a public park in London between Kensington Palace and Hyde Park, originally constituted the grounds of the palace. The nucleus, 26 acres in extent, was bought by William III from Lord Chancellor George Finch; Queen Anne added 30 acres, and Queen Caroline 200 acres. The Round Pond (which is actually octagonal), the Sunken Garden, the Long Water (extension of the serpentine, in Hyde Park), and the Broad Walk are features of interest. The gardens were opened to the public in the 18th century. Thomas Tickell (q.v.), in a poem published in 1722, imagined the gardens as peopled by person and his fairies. The scene of the story *The White Bird* (1902) was laid in Kensington Gardens by Sir James Barrie, and this formed the basis for his delightful play *Peter Pan* (q.v.); a statue of the hero, by Sir George Frampton, was erected near the Long Water in the gardens in 1912. Other statues in Kensington Gardens include a bronze figure by George Frederic Watts (q.v.), representing *Physical Energy*, a replica of the original erected at Groote Schuur, South Africa, in memory of Cecil Rhodes.

KENT, (Arthur) Atwater, American manufacturer: b. Burlington, Vt., Dec. 3, 1873; d. Hollywood, Calif., March 4, 1949. Educated at

the Worcester (Mass.) Polytechnic Institute, he established the Atwater Kent Manufacturing Works at Philadelphia in 1902 and began to manufacture telephones, voltmeters and, three years later, automobile equipment. His single-spark ignition system earned him the Franklin Institute's John Scott Medal in 1914. During World War I he made panoramic gun sights, clinometers and fuse setters for the armed services. In 1919 he incorporated the Atwater Kent Manufacturing Company which in 1923 commenced manufacturing radios. Having accumulated a large fortune by 1936, he retired to California where he established the Atwater Kent Foundation and devoted the remainder of his life to philanthropic interests.

KENT, Charles Foster, American Biblical scholar: b. Palmyra, N. Y., Aug. 13, 1867; d. May 2, 1925. He was graduated at Yale in 1889 and Berlin in 1892, and the following year became an instructor in the University of Chicago. In 1895 he was appointed professor of Biblical literature and history at Brown University; and from 1901 until his death he was Woolsey professor of Biblical literature at Yale.

KENT, Edward Augustus, DUKE OF, English prince: b. Nov. 2, 1767; d. Sidmouth, Devonshire, Jan. 23, 1820. The fourth son of George III, he entered the British Army and served in the French West Indies and elsewhere. In 1790 he commanded the 7th Foot at Gibraltar but, owing to his unpopularity, he was sent to Canada. He reached the rank of full general in 1799 and was made commander in chief of the forces in British North America, a post he vacated the following year. In 1802 he returned to Gibraltar as governor, but because of his severity he was removed in 1803. He was created field marshal in 1805. Prince Edward Island, the Canadian province in the Gulf of Saint Lawrence, was named for him. In 1818 he married Victoria Maria Louisa (1786-1861), daughter of Duke Francis, hereditary prince of Saxe-Saalfeld-Coburg, sister of Leopold I of Belgium, and widow of Emich Charles, hereditary prince of Leiningen-Dachsburg-Hardenburg; Alexandrina Victoria, their only child, became Queen Victoria of Great Britain.

KENT, George Edward Alexander Edmund, DUKE OF, English prince: b. Dec. 20, 1902; d. Scotland, Aug. 25, 1942. The fifth child of George V and brother of George VI, he was destined for a naval career but ill health terminated his studies. Subsequently he toured the world widely, visiting the United States several times. In 1934 Prince George (as he was then termed) was created duke of Kent, and the same year he married Princess Marina, daughter of Prince Nicholas of Greece. With outbreak of World War II he joined the Royal Air Force. He was killed in an airplane crash in the north of Scotland while en route to Iceland.

KENT, James, American jurist: b. Fredericksburg, N. Y., July 31, 1763; d. New York City, Dec. 12, 1847. After graduating at Yale University in 1781 he took up the study of law under Egbert Benson (q.v.). He was admitted to practice in 1785 as an attorney, and in 1787 as a coun-

sellor and commenced the practice of his profession in Poughkeepsie. He soon became remarkable among his contemporaries for his legal learning and literary attainments. He was elected successively in 1790 and 1792 a member of the legislature for Dutchess County. Kent became an active and leading Federalist, attracting the notice and confidence of Hamilton and Jay. It was by Hamilton's counsel that the reading of the young lawyer was directed to the doctrines of the civil law and the treatises of the jurists of continental Europe. In 1793 Kent removed to New York, was appointed one of the two masters in chancery for the city of New York. In 1796 he became a member of the legislature. He was also elected professor of law in Columbia College. The body of his lectures at Columbia formed in after years, in some degree, the basis of his celebrated *Commentaries*. In 1797 he was appointed recorder of the city and in 1798 judge of the Supreme Court. He continued a member of this tribunal till 1814, having been from 1804 chief justice. The Supreme Court at that time differed widely from the court as at present constituted. It was formed after the model of the English King's Bench, being composed of five judges, who rode the circuits to try jury cases, and convened during the year at four appointed terms to decide reserved questions of law. There were no American law books and no reports of American decisions, except those of Dallas just commenced. The proceedings of the court were languid and dilatory, and resort was had for rules of procedure and principles of law almost exclusively to English precedents and decisions. The accession to the bench of a young, energetic and able judge produced a striking change. By the constitution of New York as it then existed an important political duty was imposed on the judiciary of the state. The judges of the Supreme Court and the chancellor formed with the governor a council of revision with a qualified veto on legislative acts. This council was abolished in 1822. In 1814 Kent became chancellor and the seven volumes of Johnson's *Chancery Reports*, which contain Chancellor Kent's decisions, afford a profound exposition of the system of equity law. His term of office as chancellor expired in 1823, and returning to New York he resumed his professorship at Columbia and his lectures there were given to the world, in his *Commentaries on American Law* (1826-1830). This work has since passed through 14 editions and acquired a world-wide celebrity. It has assumed in the United States the position which Blackstone in his own country long filled by his *Commentaries on the Laws of England*. Consult Kent, William, *Memoirs and Letters of Chancellor Kent* (1898).

KENT, Rockwell, American artist and author: b. Tarrytown Heights, N. Y., June 21, 1882. He studied at the Columbia University School of Architecture. Best known as illustrator of magazine covers and de luxe reprints of American and European classics, he combines classical form with romantic feeling. Equally adept in the various media of oil, water color, pen-and-ink, wood block and lithography, his subjects include landscapes, seascapes, and powerful dramatic figures expressive of exalted or poignant moods. His copiously illustrated

travel and adventure books include *Voyaging Southward from the Strait of Magellan* (1924) N. by E. (1930) and *This Is My Own* (1940).

KENT, William, English artist, architect and landscape gardener: b. Yorkshire, 1684; d. London, April 12, 1748. He was apprenticed to a coachmaker in 1698, went to London in 1700, and there made some attempts at painting, and to Rome where he was a pupil of the Cavalier Luti, and whence he was brought back to England by the earl of Burlington, his patron for the rest of his life. He was employed in portrait-painting and the decoration of walls and ceilings, but Hogarth said that "neither England nor Italy ever produced a more contemptible dauber." However, he did invent a less formal method of gardening and planting and excelled as an architect. The Horse Guards and treasury buildings and Devonshire House, Piccadilly are his work. He published *Designs of Inigo Jones* (1727).

KENT, William, American engineer: b. Philadelphia, March 5, 1851; d. Sept. 18, 1918. Graduated Stephens Institute of Technology and Syracuse University, he became editor of the *American Manufacturer and Iron Works* (1877-79), at the same time exercising his profession of engineer from the latter date to 1880. Later he became editor of *Engineering News* (1895-1903) when he was chosen as dean of the L. C. Smith College of Applied Science, Syracuse University (1903-08). In 1906 he again became editor of the Industrial Section of the *Engineering News*. A lecturer on engineering subjects in several well-known colleges, he held numerous patents on his own inventions, and was well known as a contributor to encyclopaedias and technical magazines. Among his published works are *The Strength of Materials* (1879); *Strength of Hoisting Iron and Chain Cables* (1879); *The Mechanical Engineer's Pocket-book* (1895); *Steam Boiler Economy* (1901); *Investigating an Industry* (1915).

KENT, William Charles Mark, English poet and journalist: b. London, 1823, d. 1902. He entered journalism and soon became editor of the *Sun* (1845-70). He graduated in law in 1859, but did not give much attention to journalism and literature having much more attraction for him. He was a constant contributor to the magazines and literary columns of daily and weekly papers, and was editor of the *Roman Catholic Weekly Register* (1874-81). He published complete editions with memoirs and critical notes of famous British writers including Burns (1874), Lamb (1875), Moore (1879), Father Prout (1881), Lord Lytton (1875-98). Among his original publications are *Poems* (1870); *Leigh Hunt as an Essayist* (1888); *The Wit and Wisdom of Lord Lytton* (1883); *The Humor and Pathos of Charles Dickens* (1884).

KENT, a county of England, forming the southeast extremity of Great Britain and adjoining the counties of Essex (from which it is separated by the Thames), Middlesex, Surrey and Sussex. The Strait of Dover bounds it on the southeast. Its area is 1,525 square miles. Two principal ranges of hills, a continuation of the North Downs of Surrey and Hants

tend through the county from west to east, terminating in the cliffs of Dover, Folkestone, and Hythe. There are also a number of minor ranges. In the south are the Romney marshes and the tract called the Weald, which once contained extensive forests. In the north are the island of Sheppey, the former island of Thanet (now part of the mainland), and the mouths of the Medway, Stour, and Darent rivers.

Kent was the ancient country of Cantium (q.v.). It was at the mouth of the Stour in Kent that Hengist (q.v.) and his brother Horsa landed around 449 A.D., and the area was largely settled by Jutes. Kent was the earliest established kingdom of the Anglo-Saxon heptarchy and under King Ethelbert (r. 560-616) was the most powerful of the seven kingdoms. Ethelbert was converted to Christianity by St. Augustine or Austin in 597. Subsequently, the kingdom declined in power and, during the 8th century, lost its independence. After the Norman Conquest, Kent became an earldom, held at various times by Bishop Odo, the Holland family, and the Greys. In modern times, the title of duke of Kent was held by the father of Queen Victoria and the brother of King George VI.

The products of the county are varied. There are extensive market gardens and orchards, hops are raised, and there are many sheep and cattle farms. Paper, tiles, pottery, and gunpowder are manufactured, and there are numerous shipyards. The fishing industry is important. The capital is Maidstone. Among the major towns are the ports of Dover and Folkestone, the cathedral city Canterbury, and several well-known watering places, including Margate, Ramsgate, and Tunbridge Wells. In 1948, the parliamentary representation of Kent was increased to 18 (12 county constituencies and 6 borough constituencies), to take effect at the 1950 general election. Estimated civilian population (Dec. 31, 1948), 1,511,300. Consult Hasted, E., *The History and Topographical Survey of Kent* (Canterbury 1797-1801); *Victoria History of the County of Kent* (London 1908).

KENT, Ohio, city in Portage County, situated 10 miles northeast of Akron, on the Cuyahoga River, at an altitude of 1,070 feet. It is served by the Erie, Baltimore and Ohio, and Cleveland and Lake Erie railroads. There are manufactures of buses, electric motors, air compressors, automobile parts, locks, and furniture. The city is the seat of Kent State University, which until 1935 was a normal school. Settled in 1807, Kent was incorporated as a village in 1819, as a town in 1867, and as a city in 1923. It is governed by a mayor and council. Pop. (1950) 24,118.

KENT, Fair Maid of, the name given to Joan, wife of Edward, prince of Wales (the Black Prince), and mother of King Richard II. She was born in 1328, the daughter of Edmund of Woodstock, Earl of Kent, and was celebrated for her beauty. She died in 1385.

KENT ISLAND, the largest island in Chesapeake Bay, Md., some 15 miles long, situated 7 miles east of Annapolis. It was here that the first settlement in Maryland was made by William Claiborne (q.v.), in 1631. The largest town on the island is Stevensville; pop. (1950) 400.

KENTIGERN. See MUNGO, SAINT.

KENTON, Simon, American pioneer: b. Fauquier County, Va., April 3, 1755; d. Logan County, Ohio, April 29, 1836. At 16 he had an affray with a young man, and believing he had killed his adversary, fled beyond the Alleghenies and became a companion of Daniel Boone and other early pioneers of Kentucky. For a time he acted as a scout for Governor Dunmore of Virginia, and subsequently participated in the warfare waged against the British and the Indians west of the Alleghenies, showing remarkable courage, sagacity, and endurance. In 1782, learning that his former opponent was living, he returned to his native place and soon after moved with his father's family to Kentucky. He was frequently engaged in Indian warfare, until the expedition under Gen. Anthony Wayne in 1793-1794 restored tranquillity to the western frontier. As the country began to fill up with settlers his lands, to which, in consequence of his ignorance of or indifference to legal forms, he had never secured perfect titles, were taken from him, and by repeated lawsuits he was reduced to penury. In 1798 he moved to Ohio. He nevertheless in the War of 1812 fought with the Kentucky troops at the Battle of the Thames. In 1824, he appeared in Frankfort in tattered garments to petition the legislature of Kentucky to release the claim of the state upon some mountain land owned by him. His appearance at first excited ridicule, but upon being recognized he was treated with distinction by the legislature; his lands were released and a pension of \$240 was procured for him from Congress. He died near a spot where, 58 years before, he had narrowly escaped death at the hands of the Indians.

KENTON, Ohio, city and Hardin County seat, located on the Scioto River, 72 miles south of Toledo. It is served by the New York Central; Cleveland, Cincinnati, Chicago and St. Louis; and Erie railroads. Kenton is situated on the divide which separates the Ohio River and Lake Erie basins, in a fertile dairying, wheat, oats, and corn section. It is 10 miles east of one of the largest vegetable raising areas in the country, and nearby are limestone quarries. There are manufactures of flood control and hydrostation equipment, including electric cranes, hoists, and welders; machine tools; toys, novelties, and food products. Indian Lake State Park is 18 miles to the southwest. The city was laid out in 1833 and named for Simon Kenton (q.v.) Pop. (1950) 8,475.

KENT'S HOLE or **KENT'S CAVERN**, a station and cave near Torquay, Devonshire, England, noted for its implements of the Paleolithic and Neolithic periods. It has been actively explored several times since 1825. Under successive layers of limestone, black mold, stalagmite, and red cave earth lie the archaeological remains, which consist of bones of primitive horses, mammoths, wolves, lions, and rhinoceroses, together with stone implements of an early type. On the top of the red clay, in a deposit of black earth, evidently long exposed to the action of the air, are implements of the life of a comparatively early age in the history of human culture, such as flint chisels, scrapers, and bone and horn implements. This black deposit evidently represents a very considerable period of human prog-

ress, stretching from the Old Stone Age to the era of Roman occupation. The latter is represented by copper and bronze implements and weapons which naturally are found in the upper part of the layer. Human remains found in the cave include a brachycephalic skull, part of an upper jaw with teeth, and a jaw fragment with three teeth, all of the late Paleolithic type. The Torquay Natural History Society resumed excavations of the cave in 1926 jointly with a committee of the British Association.

KENTUCKY, kěn-tŭk'ī, one of the East South Central states. It is bounded on the northwest and north by Illinois, Indiana, and Ohio, the low-water mark on the north bank of the Ohio River forming the dividing line; on the east by West Virginia and Virginia; on the south by Tennessee; and on the west by Missouri, from which it is separated by the Mississippi River. The name Kentucky and its earlier forms, including Cane-tuck-ee, Cantucky, Kain-tuck-ee, and Kentuckee, have been accepted as either Iroquois or Cherokee in origin. Among meanings attributed to the name have been "dark and bloody ground," "prairie" or "meadow land," "barrens," "tomorrow," and "land of tomorrow."

State flag.

Land area	39,864 square miles
Water area	531 square miles
Total area	40,395 square miles
Latitude	36° 30'—39° 9' N.
Longitude	81° 58'—89° 34' W.
Altitude	257 feet to 4,150 feet
Population (1940)	2,845,627
Population (1950)	2,944,806
Capital city—Frankfort; Pop. (1950)	11,916
Admitted as a state	June 1, 1792
Bird	Kentucky cardinal, adopted Feb. 26, 1926
Flower	Goldenrod, approved March 1926
Motto	United We Stand, Divided We Fall
Nicknames—Bluegrass State; Corncracker State; Dark and Bloody Ground; Hemp State; Tobacco State	
Song—My Old Kentucky Home, adopted March 19, 1928	
Tree	No official tree

State seal.

Physical Characteristics.—Topography.—Kentucky resembles an irregular triangle, or, as Irvin S. Cobb (q.v.) described it, the figure of

a camel attempting to arise. Its greatest length from east to west is 425 miles; its greatest breadth is 180 miles. The state is divided into seven geological areas and ten soil groups. In the approximate center is the Bluegrass area, covering about 8,000 square miles. This is the location of the earliest settlements, and the center of the richest agricultural belt of modern Kentucky. Most of the soils in Fayette, Woodford, and Jessamine counties belong to the Trenton soil group. They consist of fertile loam underlain with rapidly disintegrating Lexington limestone and contain a high percentage of phosphorus and nitrogen. In the inner Bluegrass are large caverns, deeply eroded river channels, and shallow stream beds. There are many bowl-like depressions which drain through underground streams.

To the east of the Bluegrass is a narrow, crescent-shaped band of knobs covering approximately 2,200 square miles. The Knob area is characterized by steep ridges, a scrubby growth of timber, deeply eroded stream beds, and thin, eroded soils. It extends in an irregular strip around the Bluegrass from Vanceburg on the upper Ohio River to West Point below the Falls of the Ohio.

East of the Knob area, beginning at the Lewis-Greenup county line and extending south westward to the Clinton-Wayne county line on the Tennessee border, is the Cumberland Plateau, or eastern mountain region. It covers approximately 10,450 square miles. This is an area of steep ridges, deeply eroded stream beds, and outcroppings of limestone and sandstone. Big Black Mountain (4,150 feet) in Harlan County is the highest point in the state. There are both coniferous and deciduous trees, and, in many areas, mountain laurel and rhododendron. The river valleys are narrow but fertile, and the Eastern Coalfield contains rich coal seams.

West of the Cumberland Plateau and south of the Knob area is the Mississippian embayment, or Pennyroyal (pronounced locally "pennyrile"). This large area (8,000 square miles) consists of a rolling countryside marked by deep stream beds and outcroppings of sandstone and limestone. There are numerous limestone caves, of which Mammoth Cave (q.v.) is the most important. The Pennyroyal is an important agricultural area, producing grain, tobacco, and hay.

North and west of the Pennyroyal is the Western Coalfield region, which extends from the Daviess-Hancock county line to the Trade-water River and eastward to the Edmonson-Butler county line, and covers about 4,600 square miles. Within this area is the important Western Coalfield. It was here that the first coal was mined in Kentucky.

Between the Tennessee River and the Mississippi are the eight counties of the Jackson Purchase (see section on *History*). The land in this area varies from the thin red soils of the uplands to the rich alluvial bottoms of the Mississippi. Here is grown much of the Kentucky dark tobacco, and in Fulton County are the only cotton fields in the state. A small part of this county is cut off from the rest of the state by a bend in the Mississippi River. The economy of the southern tip of the Purchase closely resembles that of the Deep South.

The seventh Kentucky geological division is the thin, irregular shelf which borders the Ohio from the mouth of the Big Sandy River to the

south of the Cumberland. It is part of the Ohio flood plain.

Hydrography.—There are approximately 3,000 miles of navigable streams in Kentucky. The most important river is the Ohio, which flows along the northern border of the state from Catlettsburg at the mouth of the Big Sandy to just above Wickliffe, where it joins the Mississippi. When Virginia ceded its territory north of the Ohio to the United States government in 1784, it retained ownership of the river, and title passed to Kentucky when the state was separated from Virginia in 1792.

Many rivers and creeks flow down from the eastern mountains to the Ohio. The easternmost of these is the Big Sandy, which rises in Virginia. The Licking, which has its source in the mountains of Magoffin County, joins the Ohio opposite Cincinnati, between the towns of Covington and Dayton. Three streams combine to form the Kentucky River at Beattyville; from here the main stream cuts through the limestone area of the Bluegrass to Carrollton on the Ohio. Fourteen locks between Heidelberg and Carrollton convert the Kentucky into a deep, slack-water channel of navigation. With the disappearance of the large stand of mountain timber at its headwaters, however, the river is little used by commercial craft. South of the Kentucky are the Green and Barren rivers, which bisect the Mississippi plateau. The Cumberland rises in the hills of Letcher County and flows diagonally across the state to the Monroe County line, where it enters Tennessee. It re-enters Kentucky in Trigg County and joins the Ohio at Smithland.

The second most important river in Kentucky is the Tennessee, which flows from the Calloway-Trigg county line to Paducah. At Gilbertsville is the great Kentucky Dam of the Tennessee Valley Authority, which has created Kentucky Lake, one of the largest artificial bodies of water in the world. The lake furnishes hydroelectric power and affords facilities for recreation.

Climate.—The climate of Kentucky is moderate, with a mean winter temperature of 35°F., and a yearly average of 55°. Precipitation averages 44 inches a year, with occasional deficiencies in spring and summer. The growing season rises from 174 days in the northeastern part of the state to 189 days in the lower Mississippi flood plain.

Political Divisions.—**Cities.**—Kentucky is an agricultural state, and there are relatively few large towns and cities. The largest is Louisville, center of a metropolitan area which in 1950 had a total population of 576,900, and included Clark and Floyd counties of Indiana. Almost since its founding in 1778, Louisville has been an important trading center. It caters to a large local Kentucky and Indiana trade and carries out through its vast wholesale market to the entire South. Its principal business is in the sale of general merchandise, farm implements, meat products, plumbing supplies, automobiles, machinery, leather goods, grain and tobacco products, sporting goods, metals, and millwork. Lexington, the second largest city in the state, and Newport are included in the Cincinnati (Ohio) standard metropolitan area. Covington's chief trade is in metal products. Fayette County, with its chief city, Lexington, forms the Lexington metropolitan area. The city, in the bluegrass area, serves as the trading center for

a large portion of eastern Kentucky. It specializes in tobacco sales, horses, livestock, grain, whisky, and building supplies. Other important trading centers are Ashland, which has extensive oil and iron industries and, with Huntington, W. Va., is the center of a metropolitan area with a 1950 population total of 245,795; Paducah, a railroad and agricultural center with important livestock, tobacco, and commercial vegetable markets; and Owensboro, a distilling and agricultural market center. (See list of cities on the back of state map for populations.)

Counties.—Kentucky's 120 counties range in size from Gallatin, with an area of 100 square miles, to Pike, with 786 square miles. The oldest counties in the state are Fayette, Jefferson, and Lincoln, established in 1780; the newest is McCreary, created in 1912. The list of counties and county seats follows:

County	County Seat	County	County Seat
Adair	Columbia	Knott	Hindman
Allen	Scottsville	Knox	Barbourville
Anderson	Lawrenceburg	Larue	Hodgenville
Ballard	Wickliffe	Laurel	London
Barren	Glasgow	Lawrence	Louisa

		Wolfe	Versailles
		Woodford	

The People.—The Kentucky population pattern was established in the pioneer period. The original migration to the state included English, Irish, Scotch, Germans, French, and Negroes, in that order. This pattern prevailed until the 1840's, when there was an influx of Germans

into the communities along the Ohio River, particularly Louisville, Covington, Carrollton, and Maysville. Louisville also gained a considerable Irish population. According to the 1950 census, there were 2,742,090 whites, 201,921 Negroes, 234 American Indians, 335 Chinese, and 74 Japanese. Foreign-born whites numbered 16,068 and included 3,949 Germans, 2,583 persons from the British Isles, 1,067 Italians, 1,067 Canadians, and 1,038 Russians.

Between 1940 and 1948, the population of Kentucky declined from 2,845,627 to an estimated 2,819,000, or .9 per cent. The period of World War II saw a considerable movement out of the state on the part of service personnel and industrial and agricultural workers. Because of a lack of industries in the state, and because of the failure of a large number of submarginal farms, especially in eastern Kentucky, to support a larger population, industrial workers went to plants north of the Ohio River, and farm laborers, to the potato and cranberry fields of the eastern seaboard. By 1950, however, the census reported an overall 3.5 per cent gain since 1940 to 2,944,806, with the state's urban population comprising 36.8 per cent of the total.

Famous Men and Women.—There have been many celebrated Kentuckians. Because the state was first settled by a fairly mature population from the older states, a number of them were born elsewhere. Among the celebrated pioneers were Daniel Boone (1734–1820), Benjamin Logan (1743–1802), George Rogers Clark (1752–1818), and Simon Kenton (1755–1836). Statesmen included Isaac Shelby (1750–1826), John Breckinridge (1760–1806), Thomas Todd (1765–1826), and Henry Clay (1777–1852). In the field of journalism there were John Bradford (1749–1830), George D. Prentice (1802–1870), and Henry Watterson (1840–1921); in science, Ephraim M. McDowell (1771–1830), surgeon, and Robert Peter (1804–1894), chemist. Among later Kentuckians by adoption are Robert W. Bingham (1871–1937), newspaper publisher and diplomat, and Mary Breckinridge (1881–), director of the Frontier Nursing Service.

Native-born Kentuckians include Abraham Lincoln (Harding [now Larue] County, 1809–1865), 16th president of the United States; Richard M. Johnson (site, Louisville, 1780–1850), John C. Breckinridge (near Lexington, 1821–1875), Adlai E. Stevenson (Christian County, 1835–1914), and Allen W. Barkley (Graves County, 1877–), vice presidents; Jefferson Davis (Christian [now Todd] County, 1808–1889), president of the Confederacy; Samuel F. Miller (Richmond, 1816–1890), John M. Harlan (Boyle County, 1833–1911), Horace H. Lurton (Newport, 1884–1914), Louis D. Brandeis (Louisville, 1856–1941), Stanley F. Reed (Mason County, 1884–), Fred M. Vinson (Louisa, 1890–1953), and Wiley Rutledge (Cloverport, 1894–1949), justices of the Supreme Court; John J. Crittenden (Versailles, 1787–1863), James Guthrie (Bardstown, 1792–1869), Thomas Corwin (Franklin County, 1794–1865), Montgomery Blair (Franklin County, 1813–1883), Benjamin Bristow (Elkton, 1832–1896), and David R. Francis (Richmond, 1850–1927), Cabinet members; and John G. Carlisle (Campbell [now Kenton] County, 1835–1910) and Champ Clark (near Lawrenceburg, 1850–1921), speakers of the House of Representatives. Among those who have made notable contributions to the arts and sciences are Matthew H. Jouett (near Harrodsburg, 1787–1827) and Frank Duveneck (Covington, 1848–1919), painters; Robert J. Breckinridge (near Lexington, 1800–1871), John B. Bowman (Mercer County, 1824–1891), and Sophonisba P. Breckinridge (Lexington, 1866–1947), educators; Ormsby MacKnight Mitchel (Union County, 1809–62), astronomer; Joel T. Hart (near Winchester, 1810–77), sculptor; Nathaniel S. Shaler (Newport, 1841–1906), geologist; James Lane Allen (near Lexington, 1849–1925), John W. Fox (near Paris, 1863–1919), Alice Hegan Rice (Shelbyville, 1870–1942), Irvin S. Cobb (Paducah, 1876–1944), Elizabeth Madox Roberts (Springfield, 1885–1941), Arthur Krock (Glasgow County, 1886–), and Jesse Stuart (near Riverton, 1906–), writers; Benjamin K. Rachford (Alexandria, 1857–1929), physiologist; Ellen Churchill Semple (Louisville, 1863–1952), geographer; and Carl E. Bricken (Shelbyville, 1898–), composer. James G. Birney (Danville, 1792–1857), abolitionist; Albert Sidney Johnston (Washington, 1803–1862), Confederate general; Kit Carson (Madison County, 1809–1868), scout and Indian agent; and Simon B. Buckner, Jr. (near Munfordville, 1886–1945), World War II general, were also born in Kentucky.

Natural Resources.—When the first settlers came to Kentucky, they found magnificent stands of pines and hardwoods, including poplars, oaks, chestnuts, walnuts, and sycamores. At one time approximately three fourths of the state was forested. Reckless cutting, particularly after 1865, reduced the forest area to 11,857,000 acres at the beginning of 1945, and much of this has been cut over. Besides three state forests there are Cumberland National Forest, of over 1,350,000 acres extending southeastward from Rowan County to McCreary County, and a federal purchase unit, in Kentucky, of the Jefferson National Forest which lies mostly in Virginia.

Kentucky has abundant mineral resources, including coal, petroleum, natural gas, fluorspar, gravel, clay, sand, and stone. Of these, coal is the most important. Kentucky ranks second among the 48 states in the production of fluorspar, and third in bituminous coal. (See section on *Production and Manufactures*.)

Perhaps the state's most important natural resource is its open-stream water supply. Of the 5,582,000,000 kilowatt-hours of electric power produced in 1951, 1,655,000,000 were from hydroelectric plants. Three important centers for the production of hydroelectric power are the Falls of the Ohio at Louisville, the Kentucky Dam on the Tennessee River at Gilbertsville, and Wolf Creek Dam, located in Russell County and completed in 1951. There are dozens of desirable power sites along the numerous rivers and creeks. In 1952, Kentucky's undeveloped water power resources were estimated at 1,576,000 kilowatts.

Parks, Preserves, and Other Points of Interest.—There are 2 national parks and 24 state parks and memorials in Kentucky. Mammoth Cave National Park, which covers 50,946 acres in Hart, Edmonson, and Barren counties, was transferred to the National Park Service in 1936. At Hodgenville is Sinking Creek farm, the ancestral home of Abraham Lincoln, which is maintained as a national historical park. Here is preserved what is said to be the cabin in which Lincoln was born. The state parks are of two types, scenic and historic. Among the better-known scenic parks are Cumberland Falls and Natural Bridge, both in the Cumberland National Forest; Pine Mountain, in the southeastern part of the state; and Carter Caves, in the northeast. Two parks—Kentucky Lake and Kentucky Dam Village—were acquired from the Tennessee Valley Authority. Among points of historical interest preserved in state parks are a replica of a cabin built by Dr. Thomas Walker in 1750, near Barbourville; a reconstruction of Fort Harrod and a museum in Pioneer Memorial Park, in Harrodsburg; Federal Hill, a Georgian mansion near Bardstown in which Stephen Foster is reputed, though without substantial proof, to have written *My Old Kentucky Home*; the public square in Danville, where Kentucky's first constitution was framed in 1792; the home of Col. William Whitley, said to be the first brick house built west of the Alleghenies, in Stanford; the birthplace of Jefferson Davis, in Fairview; and the sites of the battles of Blue Licks and Perryville. (See section on *History*.)

Among other points of interest in the state are the numerous ante-bellum homes, in Georgian, Federal, and Greek Revival styles of architecture, found in and nearby Frankfort, Covington, Lexington, Louisville, Bardstown, Harrodsburg, and other towns; the buildings of the 19th cen-

KENTUCKY

ury Shaker colony in Shakertown; and the old apitol in Frankfort, which houses the state historical society. The thoroughbred horse farms in the Bluegrass area around Lexington, and Churchill Downs, scene of the Kentucky Derby, in Louisville, attract many out-of-state visitors.

In pioneer times, Kentucky had large numbers of buffalo, deer, elk, bear, and small game. Today there are no buffalo or elk, and deer and bear are to be found only in such protected wooded areas as the Kentucky Woodlands Wildlife Refuge, a 48,509-acre tract maintained by the federal government in Trigg and Lyons counties, and the park system. Small game animals include rabbits, squirrels, opossum, raccoon, skunks, mink, and woodchucks. There are quail and some pheasants, and the streams are stocked with crappie, bass, trout, perch, catfish, gar, and carp. The state maintains two game farms, four hatcheries, and two restocking units.

Production and Manufactures.—*Agriculture.*—According to the agricultural census of 1945, there were in Kentucky 238,501 farms, occupying 19,725,000 acres of land, or an average of 82.7 acres per farm. Between 1940 and 1945, the percentage of tenants among all farmers declined from 33.1 to 26.8.

In 1946, farm land and buildings in the state were valued at \$1,186,000,000. In that year, cash farm income totaled \$455,987,000, of which \$217,747,000 was derived from crops, \$221,619,000 from livestock and livestock products, and \$16,621,000 from government payments. Corn and tobacco are Kentucky's leading crops, and the state ranks second to North Carolina in the production of tobacco. In the accompanying table are shown comparative production figures of major crops for the years 1937-1948.

Crop (and unit of production)	Average 1937-46	Final 1947	Estimate 1948
Corn (1,000 bushels)	\$ 70,119	\$ 72,265	\$100,040
Oats (1,000 bushels)	1,883	2,415	2,754
Wheat (1,000 bushels)	6,072	5,184	5,184
Barley (1,000 bushels)	1,617	1,325	1,348
Rye (1,000 bushels)	285	518	420
Hay (1,000 tons)	2,130	2,704	2,194
Soybeans for beans (1,000 bushels)	729	1,750	2,299
Sweet potatoes (1,000 bushels)	1,362	1,040	960
Potatoes (1,000 bushels)	3,774	3,366	2,542
Tobacco (1,000 pounds)	366,501	385,073	413,390
Apples (1,000 bushels)	293	276	250
Peaches (1,000 bushels)	707	783	462
Pears (1,000 bushels)	193	134	118

Kentucky is the only state that grows hemp or seed. Production of this crop in 1948 was estimated at 176,000 pounds. As of Jan. 1, 1948, there were in the state 204,000 horses, 171,000 mules, 1,592,000 head of cattle, 803,000 sheep and lambs, and 1,499,000 hogs and pigs.

Forest and Mineral Industries.—In 1946, the state produced an estimated 580,000,000 board feet of lumber. In that year, Kentucky ranked eighth among the 48 states in value of mineral production, with an output totaling \$288,606,000. Production figures of leading minerals for 1946 are shown in the accompanying table.

Minerals (and unit of production)	Quantity	Value of production
Coal (short tons)	66,756,000	\$216,496,000
Natural gas (1,000 cubic feet)	80,000,000	36,800,000
Petroleum (barrels)	10,578,000	17,340,000
Stone (short tons)	4,745,560	5,205,820
Fluorspar (short tons)	63,143	1,889,454
Sand and gravel (short tons)	2,163,734	1,802,063
Natural gasoline and allied products (gallons)	54,291,000	1,480,000

* Exclusive of unclassified stone.

Manufactures.—Kentucky's principal industries, with value of production for the year 1946, are listed in the accompanying table.

Industrial groups	Value of production
Food and kindred products *	\$414,079,000
Tobacco products	138,581,000
Iron, steel, and products	79,065,000
Apparel and finished fabrics	57,019,000
Furniture and related items	55,688,000
Nonferrous metals	53,400,000
Chemicals and allied products	50,842,000
Machinery, except electrical	46,536,000
Lumber and timber products	43,752,000
Printing, publishing, etc.	38,524,000

* Including distilled liquors.

The value of all manufactured products in 1946 was \$1,162,242,000. The distilling industry is concentrated mainly in Owensboro, Lexington, Bardstown, Louisville, and Frankfort; iron products are manufactured in Louisville, Covington, and Ashland. Louisville also has aluminum, sporting goods, flour-milling, and packing plants. Following World War II, many small plants were established in the smaller towns of Kentucky. Among them are tool, woodworking, textile, leather, and building supply factories.

Transportation and Communications.—The first Kentucky highway was the Wilderness Road, which passed through the Cumberland Gap to Boonesborough and other pioneer forts (see section on *History*). From 1794 to about 1912 the road system was the responsibility of private and public toll companies. Thereafter, the state gradually began to assume responsibility for highway development and maintenance, and in 1948 took charge of intercounty primary roads and local highways. As of 1947, there were 10,069 miles of primary roads and 463 miles of primary city streets in Kentucky. There were 47,598 miles of local roads in 1946.

The first railroad in Kentucky was the Lexington and Ohio (now part of the Louisville and Nashville), which was chartered in 1830. The initial section of this road, a six-mile line from Lexington toward Frankfort, was opened in 1832. By 1947, there were 3,864 miles of railway in Kentucky. Major railroads operating in the state include the Louisville and Nashville, Southern, Illinois Central, Chesapeake and Ohio, and Gulf, Mobile, and Ohio. The lines of the Baltimore and Ohio and the Pennsylvania railroads touch the northern part of the state, and there is a limited amount of local mileage.

Except for traffic on the Ohio, Cumberland, and Tennessee rivers, water transportation has ceased to be a factor of importance in Kentucky. Moreover, although these three rivers bear a large amount of tonnage each year in interstate traffic, little of it stops at Kentucky ports.

As of Jan. 1, 1948, there were 64 airports in Kentucky. Four of these—Bowman Field at Louisville, Bluegrass Field at Lexington, Greater Cincinnati Field near Erlanger, and Paducah Field—are of major commercial importance. The state is served by six scheduled airlines: American, Chicago and Southern, Delta, Eastern, Piedmont, and Trans World.

Economic and Financial Factors.—On Dec. 31, 1947, there were 295 state banks in Kentucky, with total assets of \$1,017,116,000, and deposits amounting to \$948,028,000. As of Dec. 31, 1948, the 92 national banks in the state

had combined assets of \$681,918,000, and deposits totaling \$639,168,000.

Major sources of state revenue are cigarette, gasoline, alcoholic beverage, property, and income taxes and various franchises and license fees. Highways, public welfare, and education receive the largest allotments from state funds. On June 30, 1947, the net long-term debt of Kentucky was \$5,305,000. The assessed valuation of taxable property in 1946 was estimated at \$4,973,921,000.

Government.—The Commonwealth of Kentucky has had four constitutions, adopted in 1792, 1799, 1849, and 1891, respectively. The present constitution became effective on June 1, 1892; it has been amended 13 times. A proposal to call a constitutional convention must be approved by two successive sessions of the state legislature. It is then submitted to the electorate. A majority vote is required, said majority equaling at least one fourth of the qualified voters at the last election. Two such proposals were defeated at the polls, in 1931 and 1947, respectively. Amendments may be submitted to the voters by three fifths of the elected legislators; a majority vote is necessary for approval. No more than two amendments may be submitted to the electorate at one time; if defeated, an amendment may not be resubmitted within five years.

Executive.—The chief executive is the governor, who is elected by popular vote for a term of four years. He may not succeed himself in office. Other elective officials, all of whom serve four-year terms, are the lieutenant governor, secretary of state, attorney general, superintendent of public instruction, clerk of the court of appeals, auditor, treasurer, railroad commissioners, and commissioner of agriculture. The governor is responsible for the preparation of the state budget. A majority of the members elected to the legislature may override his veto of any bills. The following men have served as governors of the state:

GOVERNORS OF KENTUCKY

Isaac Shelby	Democratic-Republican	1792-1796
James Garrard		1796-1804
Christopher Greenup		1804-1808
Charles Scott		1808-1812
Isaac Shelby		1812-1816
George Madison		1816
Gabriel Slaughter		1816-1820
John Adair		1820-1824
Joseph Desha		1824-1828
Thomas Metcalfe	National Republican	1828-1832
John Breathitt	Democrat	1832-1834
James T. Morehead	National Republican	1834-1836
James Clark	Whig	1836-1839
Charles A. Wickliffe		1839-1840
Robert P. Letcher		1840-1844
William Owsley		1844-1848
John J. Crittenden		1848-1850
John L. Helm		1850-1851
Lazarus W. Powell	Democrat	1851-1855
Charles S. Morehead	Know-Nothing	1855-1859
Beriah Magoffin	Democrat	1859-1862
James F. Robinson	Union	1862-1863
Thomas E. Bramlette		1863-1867
John L. Helm	Democrat	1867
John W. Stevenson		1867-1871
Preston H. Leslie		1871-1875
James B. McCreary		1875-1879
Luke P. Blackburn		1879-1883
J. Proctor Knott		1883-1887
Simon B. Buckner		1887-1891
John Young Brown		1891-1895
William O. Bradley	Republican	1895-1899
William S. Taylor		1899-1900
William Goebel	Democrat	1900
J. C. W. Beckham		1900-1907
Augustus E. Willson	Republican	1907-1911
James B. McCreary	Democrat	1911-1915
Augustus O. Stanley		1915-1919
Edwin P. Morrow	Republican	1919-1924

William J. Fields	Democrat	1924-1927
Flem D. Sampson	Republican	1927-1931
Ruby Laffoon	Democrat	1931-1935
A. B. Chandler		1935-1939
Keen Johnson		1939-1943
Simeon S. Willis	Republican	1943-1947
Earle C. Clements	Democrat	1947-1951
Lawrence W. Wetherby		1951-

Legislature.—The Kentucky General Assembly consists of a House of Representatives of 100 members elected for two-year terms, and a Senate of 38 members elected for four-year terms. It convenes biennially in even years for a regular session of 60 days.

Courts.—The highest court in Kentucky is the court of appeals, which consists of seven judges elected for eight-year terms. Circuit court judges are elected for six-year terms, and county court judges, magistrates, and justices of the peace for four-year terms.

Suffrage and Elections.—All citizens 21 years of age and over, who have resided in the state for 1 year, in the county for 6 months, and in the district for 60 days, may vote in Kentucky elections. Registration is permanent, and absentee voting is permitted.

Local Government.—Each of the 120 counties in Kentucky maintains numerous officers and public functions. The present system of county government is basically that which was introduced into the region 16 years before the state government was organized under the first constitution. Local government is a powerful force in the administration of public affairs. It exercises independent taxing powers, controls the courts, regulates certain licensing laws, controls peace officers, exercises authority in matters of chancery, assesses property, and maintains schools. Cities are classified according to population their governing functions varying with classification.

Public Health and Welfare.—The state department of public health, through its local branches, inspects restaurants, barber and beauty shops, and food-handling establishments. A special law protects streams against industrial pollution.

Kentucky maintains four hospitals for the mentally ill, a home for the feeble-minded, a sanatorium for the tubercular, a children's home, and schools for the blind and the deaf. State laws provide for voluntary workmen's compensation and for old age pensions. The Frontier Nursing Service, founded by Mary Breckinridge in 1925, serves an extensive area in the mountains of eastern Kentucky. Correctional institutions maintained by the state consist of two prisons, a reformatory, and two schools.

Education.—The first school in Kentucky was opened at Harrodstown (now Harrodsburg) in 1775. In the early years most schools were private academies, but after 1833 an attempt was made to organize a statewide public school system. Although a public school law was enacted in 1838, it was not until after the constitution of 1849 was adopted that a genuine public school system was established. Through the influence of Robert J. Breckinridge (q.v.), the drafters of the constitution included a clause establishing a public school system as a state responsibility.

The state superintendent of public instruction is entrusted with the general supervision of Kentucky schools and the accrediting of public school teachers. In 1948, there were 5,691 public schools in the state. Of the 683,806 children enumerated in the school census of June 23, 1948, 580,567, or 84.9 per cent, were actually enrolled.

school. In the school year 1946-1947, the average state expenditure per pupil in average daily attendance was estimated at \$42.

Higher education in Kentucky was inaugurated in 1780, when the Virginia General Assembly chartered Transylvania Seminary (now Transylvania College, Lexington). The present university of Kentucky (Lexington) was founded in 1865. Among the 11 other colleges and universities in the state are Ashbury College (Wilmore), Berea College, Centre College of Kentucky (Danville), Georgetown College, Kentucky State College (Frankfort), the University of Louisville, and Union College (Barbourville). There are 5 teachers colleges, of which 4—Western Kentucky, Eastern Kentucky, Murray, and Morehead—are state supported; 5 professional schools; and 14 junior colleges.

History.—The exploration of Kentucky was undertaken as part of the rivalry between England and France in the Ohio Valley. In 1750, Dr. Thomas Walker was sent to the region by the Loyal Land Company, a Virginia company, and in the following year, Christopher Gist (q.v.) explored the Ohio Valley on behalf of the Ohio Company (q.v.). Both men kept journals which have proved of value to historians, but their expeditions had little immediate effect. Conditions along the frontier were disturbed by the French and Indian War, and it was not until 1769 that the first major white movement into Kentucky took place. In that year, Daniel Boone (q.v.), John Finley, and a party of hunters crossed the Cumberland Gap from the Yadkin Valley in North Carolina. After a two-year stay in Kentucky, Boone returned to North Carolina. In 1773, he moved with his family and several neighbors toward the West. After

Indian attack in Cumberland Gap, the party turned back to the Clinch River Valley, and Boone was denied the honor of being the first settler in Kentucky. In the following year, James Harrod and a party of surveyors appeared on the Kentucky River, and eight miles south of this stream they began building a series of cabins which were to become Harrodstown (now Harrodsburg), the first permanent settlement in the region. At the same time, a party of surveyors was laying claim to the lands near the Falls of the Ohio. Both groups were recalled because of the outbreak of Lord Dunmore's War (see COLONIAL WARS IN AMERICA), but Harrodstown was resettled in March 1775.

The Indian situation in Kentucky at this time was somewhat curious. No tribe had been able to claim the land for its own use, and there were no permanent Indian villages in the country. The old Shawnee trading village of Eskipakithiki (Indian Old Fields) in Clark County had disappeared, and Kentucky had become a hunting ground fought over by southern and northern tribes. White settlement west of the Appalachians was forbidden by King George III's Proclamation of 1763. Harrod and his men ignored the proclamation and founded a new civilization in what was technically Indian territory.

Meanwhile, Judge Richard Henderson (q.v.) of North Carolina had organized the Transylvania Land Company. In March 1775, the company negotiated the Treaty of Sycamore Shoals with the Cherokee Indians, thereby securing control of the land south of the Kentucky River, north of the Cumberland, and west of the Ap-

palachian highlands amounting to approximately 17,000,000 acres. Late in March, they dispatched Daniel Boone as their agent to blaze a trail from Cumberland Gap to the Kentucky. He arrived at the Kentucky in April and began building the fort which was to be called Boonesborough (now Boonsboro). Following on Boone's heels, Henderson came to take command of the Transylvania colony. He called a meeting of delegates from Harrodstown and other newly established posts to consider frontier legislation and to assist in establishing a colonial government. Apparently, Henderson wished to organize a 14th colony. He was opposed by George Rogers Clark (q.v.), who represented Virginia's interest in Kentucky. In June 1776, Clark organized a movement to establish a local branch of the Virginian colonial government in Harrodstown. He and John Gabriel Jones were sent as delegates to the Virginia General Assembly, but they failed to reach Williamsburg in time to meet with that body. Clark did, however, succeed in having Virginia's authority spread formally over the region by the organization, on Dec. 31, 1776, of Kentucky County, and he also secured a limited amount of military supplies for the defense of the settlers against Indian attacks. Henderson was forced to release the Transylvania colony's claims to land secured in the Sycamore Shoals grant, later receiving in exchange 200,000 acres in what is now Henderson County. Clark and Jones returned to Kentucky in 1777, but by the time they reached the Ohio it was evident that the Indian menace had become so great that more effective measures than a gift of powder and lead would have to be taken by the Virginia assembly.

Indian hostility had been intensified by the steady growth of white settlement. Between 1775 and 1777, a constant stream of settlers came down the Ohio River or over the Wilderness Road through Cumberland Gap (see WILDERNESS ROUTE). Most of them came from Virginia; others were natives of Pennsylvania, Maryland, and the Carolinas. They had left their former homes for varied reasons—fear of war in the East, the decreasing fertility of the land in some of the Virginia counties, the burden of debt, the spirit of adventure, a desire to speculate in Western lands, and claims for bounty lands due because of service in the Virginia line. For the most part, they were interested in making permanent homes in Kentucky.

It was clearly evident to the Indians that the white settlers were there to stay unless their early hold on the land could be broken. Encouraged by their British allies, led by Governor Henry Hamilton at Detroit, the Indians kept up a constant attack on the white settlers. The year 1777 was especially tragic. It became known to the settlers as the frightful year of the "three 7's" in which they almost perished from Indian attack and starvation.

Back at Harrodstown, Clark made plans for a campaign against the British. He sent two messengers across the Ohio to spy on the British-Indian posts of Vincennes and Kaskaskia. Upon their return, he left for Virginia to secure permission to take the war to the enemy as a means of halting the devastating raids on the settlements. Calling upon Governor Patrick Henry (q.v.) and other Virginian officials, Clark persuaded them to allow him to cross the Ohio with 350 men to attack Kaskaskia and Vincennes,

and eventually Detroit. His orders were issued in two sets, one public and one secret. The secret orders instructed him to raise 350 men outside of Virginia, with the promise that they would receive generous land grants, and to conduct an expedition beyond the Ohio.

Clark returned to Kentucky by way of Redstone and Fort Pitt on a recruiting expedition. His representatives also sought volunteers in the Holston settlements of Tennessee. In May 1778, he was at the Falls of the Ohio, where he established his post on Corn Island. He had far fewer than the 350 men he wanted, but his plans went forward, and on June 24, during a total eclipse of the sun, Clark and a band of about 168 men went over the rocky shoals of the falls in pirogues. On July 4, they captured Kaskaskia, and later occupied Cahokia and Vincennes. (See ILLINOIS and INDIANA.) Clark's campaign broke British strength in the Northwest.

Back in Kentucky, the Indian attacks had continued. In January 1778, Daniel Boone and a party of saltmakers were captured at the Lower Blue Licks and taken as prisoners of war to Detroit. Boone was adopted by Chief Blackfish, but escaped when he overheard the chief plotting an attack on Boonesborough. He returned to the fort to prepare the settlers for the attack, which they were able to repulse.

The failure of the attack on Boonesborough and Clark's victories north of the Ohio saved the Kentucky settlements from destruction. In August 1782, an Indian raid was repulsed at Bryan Station in Fayette County. In following up this attack, the settlers made an ill-advised assault upon the retreating Indians and were defeated. The Battle of Blue Licks, as it was called, nevertheless marked the end of any serious Indian menace. (Indian claims to Kentucky lands were finally eliminated in 1818, when Andrew Jackson and Governor Isaac Shelby (qq.v.) purchased some 7,000,000 acres in western Kentucky and Tennessee from the Chickasaw. The Kentucky section of the Jackson Purchase, as it was called, now forms eight counties.)

In the meantime, the Revolutionary War had ended, and soldiers came West to claim their bounties. They were followed by hundreds of other settlers. Lexington, Danville, Louisville, Washington, and other towns grew up. In 1776 and 1779, the Virginia assembly enacted land laws in an attempt to adjust conflicting claims, and in 1779 a land commission was created. The need for more effective local government became acute. Between 1784 and 1791, nine conventions were held in Danville to consider the creation of a new state of Kentucky, and Virginia prescribed the terms by which Kentucky should be separated in three enabling acts. Finally, in April 1792, a constitution was drafted, and on June 1, Kentucky was admitted to the Union as the 15th state. This first constitution provided for a governor chosen by an electoral college, a bicameral legislature, and a court of three judges. It included an elaborate bill of rights and a provision for manhood suffrage. Slavery was permitted.

By 1790, Kentucky had a population of 73,677, and the tide of immigration was rising. The pattern of the future agrarian state was fairly well developed. Socially, Kentucky was to retain many of the customs of the older society east of the Appalachians. As a surplus of agricultural products was created, trade be-

came important. Kentucky's chief market was down the Mississippi. At that time, Louisiana belonged to Spain, and Spain controlled navigation down the river. It was against this background of economic pressure that James Wilkinson (q.v.) sought to make Kentucky part of the Spanish Empire. (Kentuckians also became involved in the intrigues of Edmond Genêt (q.v.) in 1794. Democratic clubs were organized and some men in the state subscribed to plans to promote the French cause in the Ohio and Mississippi valleys.) By 1787, however, the Mississippi was opened to down-river trade, and free navigation was guaranteed by a treaty which Thomas Pinckney (q.v.) negotiated with Spain in 1795. By the end of the 18th century, whisky, hemp, flour, and tobacco were being sold down the Mississippi for a rather handsome cash return.

By 1798 the first constitution had proved inadequate, and a new convention was called in Frankfort for the following year. The second document created the office of lieutenant governor, corrected the defects of the court system, and provided for direct election of the governor and senators. An attempt by Henry Clay (q.v.) to have included an antislavery clause was defeated. Like other Western areas, Kentucky was antifederalist, and the Alien and Sedition Laws aroused considerable opposition. In 1798 and 1799, the legislature passed resolutions condemning the laws and favoring states' rights. (See KENTUCKY RESOLUTIONS.)

Between 1800 and 1850, Kentucky settled down to a period of maturing. The Louisiana Purchase in 1803 had removed foreign restrictions on the produce trade downstream. By 1811, steamboats were facilitating Kentucky trade. Louisville grew into an important trade center, and by 1820 it had supplanted Lexington as the chief Kentucky city. Between 1831 and 1860 the basic railroad system was built, and Kentucky trade in manufactured goods, slaves, agricultural products, and livestock increased materially.

The expansion of the slave system in the new states of the Deep South meant prosperity for Kentucky planters. Sentiment on the question of slavery was divided, however, and there were a number of prominent Kentucky abolitionists, including Cassius M. Clay, James G. Birney, and Robert J. Breckinridge (qq.v.). An attempt to abolish slavery at the constitutional convention of 1849 was defeated, and it was not until the adoption of the 13th Amendment to the United States Constitution in 1865 that slavery was finally ended in Kentucky.

Kentuckians wholeheartedly supported both the War of 1812 and the Mexican War. In fact, the efforts of two Kentucky leaders, Henry Clay and Richard M. Johnson (q.v.), who were motivated by the frontier spirit of expansion and fear of the Indians, did much to influence Congress in declaring war against Great Britain in 1812. Kentuckians participated in the fighting between the whites and the Indians at Tippecanoe in Indiana in 1811, and they contributed more than 7,000 men to the militia and the army in the War of 1812. They also played a major role in the fighting in Mexico in 1847.

With its divided loyalties, Kentucky chose to remain neutral in the Civil War, hoping to preserve a spirit of conciliation between the opposing sides. (See BORDER STATES.) Because

strategic position and the partisanship of any of its citizens, however, its neutrality was not respected. On Sept. 3, 1861, Confederate general Leonidas Polk invaded the state to seize the bluffs overlooking the Mississippi at Columbus. For four years, the state was caught in a vise between invading forces. Early in the war, Louisville was captured by Union troops and remained under Union control until the end of 1862, another Confederate general, Edmund Kirby Smith (q.v.), captured Lexington, and in September of that year, Gen. Braxton Bragg (q.v.) invaded the state from the South. Bragg was defeated by a Union army led by Gen. Don Carlos Buell (q.v.) at Perryville on Oct. 8, 1862, and thereafter the Southern forces withdrew from Kentucky. (See PERRYVILLE, BATTLE OF, AND THE KENTUCKY CAMPAIGN OF 1862.)

John Hunt Morgan's forces dashed through Kentucky on two major raids (see MORGAN'S RAID INTO INDIANA AND OHIO), and there was considerable skirmishing through eastern Kentucky by Union and Confederate troops, but by 1863 the major portion of the fighting in the state was over. Nevertheless, guerillas kept up a continuous struggle which necessitated the maintenance of a strong home guard. Perhaps the most important effect of the war on the state was the disturbance of its political life and economy.

Before the war, the Whig, and later the Know-Nothing, parties had been strong in Kentucky, and after the war the Republican Party had some adherents. Because even the strongest Unionists disapproved of the Reconstruction policy of the federal government, the Democratic Party became dominant after the war, and it was not until 1895 that a Republican governor was elected. Thereafter, control of the state was divided between the two parties.

Economically, the state grew rapidly. After 1867, Burley tobacco became a major crop, and by 1890 tobacco had displaced hemp as Kentucky's leading crop. By 1889 the railroad system had expanded sufficiently to permit the opening of the eastern coal fields. In 1894, there was violent resistance to the continuation of the private toll road system, and the state was forced to take over the highways. In 1912, a department of public roads was created, and by 1918 the construction of a modern road system had begun.

Between 1890 and 1922 a complete revolution took place in the sale of tobacco. A buyers' monopoly was broken by the so-called Black Patch War of 1906-1909, in which night riders terrorized growers who refused to boycott the monopoly. In 1921, the tobacco industry was badly hit by the postwar depression. Through the organization of the Burley pool, which controlled marketing conditions by initiating the open-floor auction system and by supplying the market demand, the tobacco industry was somewhat stabilized. Both the Agricultural Adjustment Act of 1933 and the Soil Conservation Act of 1937 were supported by Kentucky tobacco growers.

The history of Kentucky in the 20th century has closely paralleled that of the nation. In World War I, 75,043 Kentuckians served in the armed forces, and in World War II, 323,798. The barriers of isolation, particularly strong in western Kentucky, have been lowered; and new industries, improved education facilities with a

consequent sharp drop in illiteracy, improved farm and industrial income, and closer connections with other areas have helped to make the state a keystone of the Ohio Valley border region.

T. D. CLARK,
Professor of History, University of Kentucky.

KENTUCKY, Oil and Gas Resources of. Petroleum was first discovered in Kentucky in 1819, in the valley of the south fork of the Cumberland River, close to the Tennessee line in what is now McCreary County, but was then Wayne County. The strike was made by Martin Beatty, of Abingdon, Va., while drilling a shallow well for salt. Cumberland County followed with a flowing production from the Upper Ordovician rocks in 1829, and a few years later oil was found in the Lower Coal Measures near Harboursville, Knox County. In the late 1860's, a wave of oil and gas prospecting spread over Kentucky, following the post-Civil War depression. Allen, Barren, Clinton, and many other counties joined the list of growing producers. During the latter part of the 19th century, wells were drilled in every county in the state, and substantial, though small, new oil production came from deeper sands in Floyd, Knox, and Wayne counties. Martin, Meade, and Breckenridge counties at the same time developed gas in commercial quantity. In 1900, the Ragland field, in Bath and Rowan counties, was drilled in, production coming from the Onondaga or Corniferous limestone. The Sunnybrook pool of Wayne County was opened in 1901, the oil coming at a depth of 870 feet from the Mississippian sands. Deeper drilling in the older fields continued with varying success, the greater part of the oil being transported to the northeastern markets by the Cumberland pipeline. The Cannel City pool, in Morgan County, was discovered in 1912, and in 1913 this small field produced its maximum: 12,000 barrels of crude oil per month. This production came from the same Onondaga limestone, and in large quantity was relatively short lived. In 1903, the Campton pool of Wolfe County was discovered, oil being found in the Onondaga limestone at about 1,250 feet. About 300 wells, producing an average of 50 barrels each, were drilled in this field. The Menefee gas field was drilled in 1901, gas coming from the Onondaga limestone at an average depth of 600 feet. Small oil production was obtained in Estill County, near Irvine, in 1903, but because of the shallowness of the Onondaga limestone, this was soon exhausted. Additional pools were discovered during World War I.

Refineries are located at Louisville, Latonia, and Pryse, near Irvine, but most of the oil is refined outside the state. The total Kentucky oil production for 1946 was 10,578,000 barrels. In

the same year, the state produced 80,000,000,000 cubic feet of natural gas. Geologically, the accumulation of petroleum in Kentucky is generally anticlinal below the top of the Mississippian system, and synclinal above. Sand porosity is perhaps the greatest accompanying factor in the larger fields. The geological range of production is from Ordovician to Pennsylvanian, inclusive. Later developments in the eastern part of the state included fields in McGoffin, Johnson, and Lawrence counties. The developments in the southwestern part extended from Allen, Warren, and Barren into the adjoining counties, notably Cumberland, along the Tennessee line. Other fields were opened farther north, in the western coal basin near Whitesville in Daviess County and Fordsville in Ohio County. These two counties and the adjoining part of Hancock County soon formed the most active drilling area of the state. The structure there is determined largely by the Rough River anticline. In general, western Kentucky produces approximately 82 per cent of the state's total crude oil output.

PRODUCTION OF PETROLEUM IN KENTUCKY
(in barrels of 42 gallons)

1917	3,035,640
1919	7,926,200
1920-22 (average)	8,874,600
1926-30 (average)	7,094,400
1931-35 (average)	5,493,000
1940	5,193,000
1942	4,534,000
1943	7,883,000
1944	9,621,000
1945	10,325,000
1950	10,381,000

WILLARD R. JILLSON,
Kentucky State Geologist.

KENTUCKY, University of, a coeducational institution at Lexington, Ky. It was founded in 1865 as the department of agriculture and mechanic arts within Kentucky University (now known as Transylvania College). In 1878, this department was removed from the university, transferred to Lexington, and reorganized by an act of the legislature into a separate state-supported institution under the name of the College of Agriculture and Mechanical Arts. In 1908, the latter became the State University of Kentucky, and in 1916, the University of Kentucky. The university has colleges of arts and sciences, agriculture and home economics, engineering, law, education, commerce, and (at Louisville) pharmacy; a graduate school; a summer session; and university extension courses. The campus comprises 106 acres and over 50 buildings. The university also maintains a 600-acre experiment station farm; a 15,000-acre forest reserve and subexperiment station at Quicksand; and a subexperiment station farm of 600 acres at Princeton. Biennial appropriations are received from the state in addition to aid from federal sources. The students number about 7,500.

KENTUCKY BASS. See **BASS.**

KENTUCKY BLUEGRASS. See **GRASSES.**

KENTUCKY COFFEE TREE (*Gymnocladus dioica*), a large tree allied to the locusts and redbuds, of the family Caesalpiniaceae. It grows rather sparsely throughout the middle Mississippi Valley. See **GYMNOCLADUS.**

KENTUCKY DERBY, major American horse race, held annually in May at Churchill Downs, near Louisville, Ky. See also **HORSE.**

KENTUCKY RESOLUTIONS, a series of nine resolutions introduced into the Kentucky legislature in 1798 by George Nicholas, although it was afterward known that they were written by Thomas Jefferson. The resolutions were directed against the Alien and Sedition Acts, and against laws passed to punish frauds on the Bank of the United States, and they emphasized the rights of the several states. They were the outgrowth, together with a similar series known as the Virginia Resolutions, of a feeling that the Federalists were making a strained and illegitimate use of the powers granted to the federal government by the Constitution. The Kentucky Resolutions were passed for the purpose of defining the strict construction view of the relative powers of the states and the federal government. They declared that the Union was not based on the "principle of unlimited submission to the General Government"; that the Constitution was a compact, to which each state was a party as over against its fellow states; and that, in all cases not specified in the compact, each party had a right to judge for itself both infractions and the mode and measure of redress. The resolutions declared the Alien and Sedition Acts unconstitutional and invited other states to join in declaring them void. No favorable response was received. In 1799, the Kentucky legislature went further and declared that nullification of a federal law by a state was the rightful remedy in cases of federal usurpation. The later doctrines of nullification and secession were founded on these resolutions.

KENTUCKY RIVER, a river of Kentucky, formed by three streams which rise in the Cumberland Mountains and meet near Beattyville. After a winding northwest course of about 250 miles, the river enters the Ohio at Carleton, midway between Cincinnati and Louisville. For part of this distance it passes between perpendicular limestone walls. It is navigable as far as Heidelberg, with the aid of 14 locks, but there is comparatively little traffic. At High Bridge, Jessamine County, midway between Nicholasville and Harrodsburg, is a celebrated bridge erected in the late 1870's, one of the first long-span cantilever bridges built in the United States. In 1910, a new structure was built 313 feet above the grade of the old bridge. The height of the top chord of the new bridge is more than 319 feet above the base of the foundation of the piers. In the pioneer period, the Kentucky was a major route into the area. On the river is the town of Boonsboro, built on the site of the fort erected in 1775 by Daniel Boone, and the state capital, Frankfort.

Consult Clark, Thomas Dionysius, *Kentucky in Rivers of America Series*, illustrated by A. Spelman, III (New York 1942).

KENTUCKY WARBLER (*Opaporhynchus formosus*), a warbler of the eastern and central United States. Its back is an olive green, and its under parts are yellow. The crown is black with a yellow strip around the eyes.

KENTVILLE, county town of Kin County, Nova Scotia, Canada. It lies about

miles northwest of Halifax. It is the headquarters of the Dominion Atlantic Railway, and contains the offices of the principal fruit-marketing companies of Annapolis Valley. Manufactures of the town include milling machinery, gasoline engines, and woodwork. In the vicinity is a Dominion experimental farm and a provincial sanatorium. Pop. 3,850.

KENYA COLONY AND PROTECTORATE, British territory in east central Africa, formerly known popularly as British East Africa. It is bounded on the east by the Indian Ocean and Somaliland (formerly Italian), on the north by Ethiopia and the Anglo-Egyptian Sudan, on the west by Uganda Protectorate and Lake Victoria, and on the south by Tanganyika Territory. The total area is 224,960 square miles, of which the protectorate comprises only some 2,000 square miles, principally mainland dominions of the sultan of Zanzibar; these latter, leased to Great Britain in 1895, consist of a strip of the coastal lands to a depth of 10 miles, together with a few small islands, of which the principal is Mombasa. The population of Kenya was estimated in 1944 to number 3,937,533; besides 3,825,533 Africans, there were 61,000 Asiatics (chiefly from British India), 32,000 whites, and 19,000 Arabs. The capital is Nairobi (pop. 65,000), situated on the interior plateau at an elevation of 5,452 feet, 330 miles by rail from Mombasa, and the principal seaport is Kilindini, on the west side of the island of Mombasa (pop. 89,837); Kisumu is a port on Lake Victoria, and inland centers of population include Nakuru and Eldoret. The status of the territory as colony and protectorate became effective in 1920, prior to which year the country had been under British control since late in the 19th century.

From a low-lying coastal zone varying in width from 2 to 10 miles, the surface rises steadily to an elevated plateau some 5,000–8,000 feet above sea level through which extends the remarkable terrestrial cleavage known as the Great Rift Valley (q.v.). Rising from the plateau are the Aberdares, and other mountain ranges, the highest peak of which is the extinct volcano, Mount Kenya, 17,040 feet, for which the colony and protectorate are named; the glaciers of the mountain on its northern slopes are exactly on the line of the equator. The boundary between Kenya and Uganda passes through the center of Mount Elgon, 14,136 feet, the upper part of which is sometimes covered with snow. The eastern third of the colony slopes gradually to Lake Victoria, the surface of which is 3,726 feet above sea level. On the western and northern borders of Kenya are lakes Victoria and Rudolf (q.v.), respectively, and numerous smaller lakes within the country include Naivasha and Nakuru. Lake Tana (q.v.) is the longest of the relatively few rivers. While the climate of the lowlands, both in the east and west, is tropical, with considerable heat and high humidity, the highlands constituting most of the center of the colony have an equable climate well adapted for white settlement; the coolest months are from June to August. Between March and May, the longer of the two rainy seasons, there is considerable rainfall, particularly in the highlands, some parts of which have an annual precipitation averaging 100 inches. Thornbush is characteristic of the lowland areas, with much mangrove near the seacoast, while the highlands consist of vast

stretches of grasslands interspersed with forest containing many varieties of valuable timber. Over the grass plains roam vast herds of big game, whose grazing lands stretch for great distances along either side of the railway. Lion, leopard, giraffe, buffalo, and other mammals are plentiful, as are gazelles, antelopes, and zebra in immense numbers. Large deposits of carbonate of soda at Lake Magadi, southwest of Nairobi, have long been worked, as have both gold and silver; other known minerals include arsenical pyrites, asbestos, graphite, manganese, mica, and talc.

While the protectorate is peopled largely by Arabs, the native inhabitants of the interior highlands of the colony comprise several divisions of the Masai (q.v.), a non-Bantu tribe. Farther to the west, where the land descends to the shores of Lake Victoria, Nilotic tribes predominate; nomadic tribes of Somali stock inhabit the arid northeastern portion of the country. There is a great diversity of languages, with Swahili, a Bantu language with large Arabic admixtures, employed as a lingua franca by natives, Indians, and whites alike. The white population is predominantly British in origin; early in the 20th century their numbers were augmented by some 700 Dutch men, women, and children who, leaving the Transvaal when its independence was lost in the South African War (q.v.), made the long trek (some 2,000 miles) through Mozambique and German East Africa only to settle, once again under the British flag, on the Uasin Gishu plateau of what was then the East Africa Protectorate. During World War II thousands of Italian prisoners and tens of thousands of refugees (Poles, Greeks, and others) were accommodated in the highlands, and many of these subsequently established their homes there. The Arabs and others in the coastal areas are Moslems, while the tribes in the highlands are pagan; among the latter work numerous British, American, French, and Swedish missions, both Protestant and Roman Catholic. The missions conduct the majority of the non-government schools (2,729 in 1944), which are, however, in receipt of state aid; schools directly administered by the government numbered 46 in 1944 (14 each for Africans and Indians, 11 for white children, and 7 for Arabs and Somalis).

Kenya is administered by a governor, who is aided by an Executive Council of eight members (four officials and four nominated unofficials) and a Legislative Council of 40 (11 elected white members, five elected Indians, one elected and one nominated Arab, two nominated unofficial representatives of the natives, and 11 ex officio and nine nominated officials); in 1944, for the first time, a native was nominated as one of the two unofficial representatives of native interests. Local government in Nairobi and Mombasa is conducted by elected municipalities. While white settlement in native reserves is forbidden, natives are encouraged to make their homes in white-settled districts. In 1944 the British government made available to Kenya £250,000 annually over a 10-year period for such long-term projects as hydrographic surveys and the establishment of additional agricultural schools for natives and teacher-training (agricultural) centers.

Kenya has great potentialities both as a source of foodstuffs and raw materials and as a market for manufactured goods. White settlers in the highland cultivate coffee, tea, wheat, corn

(maize), flax, and rye, and raise cattle on a large scale; wool, butter, and cheese production is of importance. The cultivation of pyrethrum was introduced during World War II, Japanese occupation of the Netherlands East Indies having deprived the world of cinchona, whence came quinine, used as a preventive of malaria. In the Kenya lowlands, east and west, sisal, sugar, coconuts, and cotton are produced. Lumbering is a considerable industry, the forests yielding olive and other hardwoods, conifers, and cedar, the last exported for the manufacture of pencils; another valuable export is the bark of wattle, an exotic tree established in numerous plantations. Industrial production received great stimulus in World War II, when lack of shipping necessitated local manufacture of many articles hitherto imported. Margarine was made from cottonseed oil and peanuts; vegetables were dehydrated; spinning and weaving became a new local industry; and locally-mined diatomite was used as a basis for various types of cleaning powders. Besides increased production of gold and sodium carbonate, numerous other minerals were mined in Kenya for the first time during the war. The colony exports a better grade of shade-dried animal hides than any other East African country; in the leather trade Kenya hides are known as "Mombasas," being named for the port of export. For customs purposes, Kenya and Uganda constitute a single administrative unit, and have a uniform customs tariff with Tanganyika Territory. The East Africa shilling, divided into 100 cents, is the unit of currency of Kenya, Uganda, Tanganyika Territory, and Zanzibar.

For many years, the Kenya and Uganda Railway lay exclusively within the former country, though at that period it was styled (solely) the "Uganda Railway." Built during 1895-1903 across British East Africa for a distance of 584 miles from Mombasa to Kisumu (at first known as Port Florence), on Lake Victoria, its original purpose was not the commercial development of the country but suppression of the slave trade then flourishing far from the coast, and more rapid communication with remote, land-locked Uganda, where a British protectorate had been established; the trials of the engineers and imported Indian laborers, beset by man-eating lions and hostile tribesmen during construction of the line, constitute an epic story. White settlement of the highlands followed the building of the line, and during 1924-28 the railway was extended from Nakuru around the northern end of Lake Victoria to enter Uganda, continuing to Kampala, the protectorate's commercial center. Including 10 branch lines, the total length of the system of the Kenya and Uganda Railway is 1,625 miles, of which the main line, from Mombasa to Kampala, accounts for 879 miles. The railway administration also operates steamer services on lakes Victoria, Kioga, and Albert (the two latter in Uganda), and on the upper reaches of the Nile, the route mileage being 3,853 miles; maintains sea and lake ports; and operates several motorbus services. Within Kenya lies 118 miles of the Great North Road, a highway running southward from Nairobi through Tanganyika Territory to Northern Rhodesia, a total distance of 928 miles; an extension of this highway northward from Nairobi continues through Uganda to reach Mongalla, in the Anglo-Egyptian Sudan. Kenya's roads of all types aggregate 16,537 miles in length, about one quarter of this

mileage being fit for motor traffic at all seasons of the year. Besides local air transport companies, Kenya is served by the Capetown-London planes operated by the South African and British governments; facilities at the Nairobi airport conform to international requirements. The postal and telegraphic services of Kenya are amalgamated with those of Uganda and Tanganyika Territory.

History.—With the interior of east central Africa wholly unknown in the western world, Mombasa was an important center of Arab power in the 8th century. The port was visited by Vasco da Gama (q.v.) in April 1498 and in 1505, it was captured by the Portuguese. Malindi, another port 66 miles to the northeast, shortly became the capital of Portuguese East Africa, and for 300 years the various Portuguese settlements withstood many attacks from the sea by Arabs and Turks and from the interior by African natives. With the loss of Mombasa in 1698 Portugal lost her hold on the east coast of Africa north of Mozambique; the Portuguese attacked the port in 1703, and again in 1710, and occupied it once more during 1728-1729, but by 1784 all trace of the former great influence of Portugal on the east African littoral had disappeared. Thereafter the ports were controlled by successive imams (rulers) of Muscat, in the Persian Gulf, whose representatives had their headquarters on the island of Zanzibar; renouncing allegiance to Muscat, in 1832 the imam's deputy at Zanzibar asserted his independence and claimed possession of a long strip of the mainland coastline. International agreements in 1886 defined these mainland territories as extending 10 miles inland, and within a few years the sultan sold outright his sovereign rights in those portions of them lying within German and Italian spheres of interest. The Imperial British East Africa (Ibea) Company, which received a royal charter in 1888 to develop the hinterland, obtained concession rights over the sultan's coastal lands between those strips sold to Italy and Germany, and proceeded, though slowly, to open up its hinterland territories. Because of financial difficulties which ensued, in 1895 the British government acquired the rights of the company in its territory, hitherto known as Ibea; while the company thereafter disappears from history, the name Ibea still survives in connection with the botanical names of certain trees.

The boundaries of the East Africa Protectorate (popularly termed British East Africa), as the country was then styled, were enlarged westward in 1902, the portion of Uganda east of Lake Victoria (through which ran the last section of the newly-constructed Uganda Railway), being transferred to it and becoming the province of Kisumu and Naivasha. Administration of the protectorate passed from the British Foreign Office to the Colonial Office in 1905, and that same year 6,000 square miles of fertile land in the highlands was offered for the colonization of Jews who had fled persecution in Russia; the offer was declined after an adverse report on the land by a Jewish representative. At this period however, began a steady influx of white settlers from Great Britain and South Africa, who farmed large areas in the highlands with the assistance of African labor. In consequence, administration of the country ceased to be a burden upon the British taxpayer, in 1912 the East Africa Protectorate becoming self-supporting

Forces from German East Africa crossed the border on outbreak of World War I to attack the Uganda Railway, but they were soon driven off, and thereafter most of the settlers and thousands of natives served in the campaign which resulted in expulsion of the Germans from their colony. In 1920 the protectorate, with the exception of the leased mainland domains of the sultan of Zanzibar, was annexed to the British crown as a colony, and thenceforward the country was styled Kenya Colony and Protectorate. The arid and barren region west of Lake Rudolf and south of the Anglo-Egyptian Sudan was transferred in 1923 from the Uganda Protectorate to Kenya Colony in order to simplify problems of the frontier with Ethiopia; and the following year Britain agreed to transfer to Italy (conforming to the 1915 secret Treaty of London) the Jubaland Province of northeast Kenya, some 16,000 square miles in area, for annexation to Italian Somaliland.

In the spheres of economic development, communications, and research, Kenya has much in common with her neighbors, Tanganyika Territory and Uganda, and in order to secure a more efficient coordination of policy and to provide a constitutional basis for common services, in 1945 the British government published proposals for an interterritorial organization. Beginning in 1952, British soldiers were called upon to halt the widespread massacres by Mau Mau terrorists pledged to drive Europeans from Kenya. Whites as well as their native adherents were included in the depredations.

Consult Hobley, Charles W., *Kenya from Chartered Company to Crown Colony* (London 1929); Huxley, Elspeth J., *White Man's Country: Lord Delamere and the Making of Kenya*, 2 vols. (London 1933); Dilley, Marjorie R., *British Policy in Kenya Colony* (London 1938); Coupland, Sir Reginald, *East Africa and Its Invaders: From the Earliest Times to the Death of Seyid Said in 1856* (London 1938); id., *The Exploitation of East Africa, 1856-1890: The Slave Trade and the Scramble* (London 1939); Huxley, E. J., *Race and Politics in Kenya* (London 1944).

KENYON, kēn'yūn, Sir Frederic George, English classical scholar: b. London, England, Jan. 15, 1863; d. Godstone, Surrey, Aug. 23, 1952. In 1889, after tutoring at Oxford University, where he had graduated at New College, he joined the staff of the British Museum. He became assistant keeper of manuscripts in 1898, and from 1909 until his retirement in 1930 he served as director and principal librarian of the institution. In 1912 he was created a knight commander of the Order of the Bath (K.C.B.). He edited many classical texts, including three editions of Aristotle's *Constitution of Athens* (1891, 1904, and 1920); prepared catalogues of manuscripts in various of the museum's collections; and published much about the poetical work of the Brownings. From 1920 he served as president of the British School of Archaeology at Jerusalem. He was an eminent Biblical scholar and wrote extensively on the history, manuscripts, and textual criticism of the Bible.

KENYON, William Squire American jurist and legislator: b. Elyria, Ohio, June 10, 1869; d. Bath, Maine, Sept. 9, 1933. Educated in law at the State University of Iowa, he began to practice his profession at Fort Dodge, Iowa. After filling the offices of county prosecuting attorney, district judge, district attorney, and general attorney for the Illinois Central Railroad

(1907-1910), he became assistant to the attorney general of the United States (1910-1911), and United States senator (1911-1922). He belonged to the progressive wing of the Republican senators, favoring much legislation considered in his day to be advanced. With Congressman Edwin Yates Webb he was co-sponsor of the Webb-Kenyon Act of 1913 which prohibited shipment of intoxicating liquors in interstate commerce. In 1922 he resigned his seat in the Senate to accept appointment by President Warren G. Harding as judge of the United States Circuit Court for the 8th District; in this capacity he presided at the Teapot Dome trial, involving Albert Bacon Fall (q.v.) and others.

KENYON COLLEGE, for men, Gambier, Ohio, was founded in 1824 at Worthington, Ohio, by Bishop Philander Chase, as the Theological Seminary of the Protestant Episcopal Church in the diocese of Ohio. It was moved to Gambier in 1827, and in 1891 the name was changed to Kenyon College. It has a school of theology granting the bachelor of divinity degree. The college is generously endowed, and has a campus of 415 acres, its own radio station, and an airfield for instruction in aviation. The library contains about 93,000 volumes. The college publishes the *Kenyon Review*, a literary quarterly. The average enrollment is about 600 students.

KEOKUK, kē'ō-kūk, American Indian, chief of the Sac tribe: b. about 1790, near the site of the present city of Rock River, Ill.; d. probably early in 1848, at the Sac Agency, Franklin County, Kansas. When Black Hawk (q.v.) supported the British in the War of 1812, Keokuk assisted the Americans; and after the Black Hawk War, in 1832, he became the acknowledged leader of both the Sacs and the Foxes. In 1833, and again in 1837, he visited Washington, D.C., on the latter occasion concluding a treaty of peace between the Sacs and the Sioux. His grave is in Rand Park, Keokuk, Iowa, to which his remains were brought in 1883.

KEOKUK, Moses, American Indian chief: b. 1818; d. near Kansas City, Mo., October 1903. He was the son of Keokuk (q.v.), with whom he visited Washington, D.C., after the Black Hawk War. He succeeded his father as chief of the Sacs and the Foxes. In 1868 he removed with his people from Quenemo, Kans., to their reservation in what became Oklahoma.

KEOKUK, city, Iowa, and Lee County seat; altitude 478 feet; at the confluence of the Des Moines and Mississippi rivers; 42 miles southwest of Burlington. It is served by the Burlington; Chicago, Rock Island and Pacific; Wabash; and Toledo, Peoria and Western railroads. In 1856 a 12-mile railroad was built to haul freight around the Des Moines rapids at this point, and the United States government built a 9-mile canal here in 1877. By 1905 the canal had proved too small and the Mississippi River Power Company secured from Congress the right to build a dam and a hydroelectric plant here, which were completed in 1913. In return for the power rights granted it, the company built for the government the huge drydock and lock here. Lake Keokuk, with an area of 100 square miles, was formed by the new dam.

Keokuk has valuable commercial fisheries. Its

principal manufactures are corn and oats products, steel castings and ferro-alloys, calcium carbide, plastics, shoes, and fiber boxes. The only national cemetery in Iowa, established by the government in 1861, is in Keokuk.

Between 1854 and 1856, Mark Twain (Samuel Clemens), then a journeyman printer, worked in Keokuk as a compositor in the printing shop of his brother, Orion Clemens, and set a large part of the city's first directory. The room in which he worked, together with his type cases, print shop pictures, and chairs, has been preserved in the Iowa State Insurance Building.

The Indians called the place Puck-e-she-tuck, or "place at the foot of the rapids." The first permanent white settlement was made in 1820. In 1829 the American Fur Company opened a trading post and named it for the Indian chief Keokuk. Platted in 1837 and again in 1841, Keokuk was incorporated as a city by special charter in 1847. Pop. (1950) 16,144.

KEOS. See **KEA**.

KEPHIR, kě'fēr, a native Caucasian drink made from fermented milk. See **KEFIR**.

KEPI, kă'pē', French infantry cap. In derivation the word is apparently related to the English cap, though its origin is uncertain. It was first worn by French troops in Algeria; but the use spread to all the French infantry soldiers, and to school boys first in France, but afterwards to students of other countries. It has been much affected as a military cap by military schools and schools having a military department and student uniforms in the United States. It varies in style, but is always flat-topped with horizontal or slightly inclined vizor.

KEPLER, kěp'lēr, Johannes, German astronomer and mathematician: b. Weilder Stadt, Württemberg, Dec. 27, 1571; d. Regensburg, Nov. 15, 1630. A contemporary of Galileo Galilei and Tycho Brahe (qq.v.), he was one of the world's greatest astronomers, the real founder of modern astronomy; the one who first reduced the theory of the telescope to its true principles and laid down the common rules for finding the focal lengths of single lenses, and the magnifying power of telescopes. His excursions in geometry produced epoch-making results; he established the symbolism of the *sectio divina* or *proportio divina*, later known as the "golden section," and towered above all his contemporaries in stereometric investigation. He worked his way through elementary schools by winning scholarships which enabled him to reach the University of Tübingen. In 1593 he was appointed a teacher of mathematics at Gratz (Styria), where he devoted himself with much ardor to the study of astronomy, and attracted the attention of Tycho Brahe by dissertations on celestial orbits. But in 1599 religious persecutions commenced in Styria, and Kepler, being a Protestant, gladly accepted Tycho Brahe's invitation to Prague, to assist in the preparation of the new astronomical tables, called the Rodolphine tables. Tycho died in 1601 and Kepler continued the work alone, being appointed imperial mathematician and astronomer. After many years of incessant labor the tables were completed in 1624 and published in 1627 at Ulm. Kepler had become the possessor of all Tycho Brahe's papers, and the mass of observations

made by that astronomer during 20 years, with a precision till then unsurpassed, enabled Kepler to establish the famous *Kepler's Laws* (q.v.). The latter part of his life was chiefly passed at Linz as professor of mathematics. He wrote much, but the work that has rendered him immortal is his *Astronomia Nova, seu Physico-Coelestis tradita Commentariis de Motibus Stellae Martis* (*New Astronomy, or Celestial Physics: delivered in Commentaries on the Motions of Mars*) (1609). His *Harmonice Mundi* appeared in 1619; *De Stella Nova in Pede Serpentarii* (1606); *De Cometis* (1619-1620); and *Chilias Logarithmorum* (1624).

KEPLER'S LAWS, in astronomy, three laws of motion discovered by Johannes Kepler (q.v.) on which were founded Newton's discoveries, as well as the whole modern theory of the planets: (1) Every planet describes an ellipse, the sun occupying its focus. (2) The radius-vector (line joining the center of the sun with the center of the planet) of each planet sweeps over equal areas in equal times. (3) The squares of the periodic times (the periods of complete revolution around the sun) of any planets are proportional to the cubes of their mean distances from the sun. These laws enabled Sir Isaac Newton (q.v.) to determine the laws of the attraction of gravitation, while another result of these discoveries was to ensure for the Rodolphine tables an accuracy far exceeding that of any previous ones. Kepler did not apply his theory to comets, as he believed that they never returned. According to his idea the tail of the comet was evidence that the sun was driving the body of the comet away and dissipating its substance forever. See **ASTRONOMY, HISTORY OF**; also **GRAVITATION**.

KEPPEL, kěp'ēl, Augustus, 1st Viscount KEPPEL, British naval officer: b. April 25, 1725; d. Oct. 2, 1786. He was the second son of the 2d Earl of Albemarle, entered the sea service at 15 and went round the world with Lord Anson aboard the *Centurion*. In 1748 on a mission to the Barbary States he persuaded the dey of Algiers to suppress piracy, and negotiated a treaty with him. During the Seven Years' War he was in continuous service. In 1757 he was on the court-martial which condemned Admiral Byng, but joined those who vainly attempted to secure Byng's pardon. He accompanied Sir George Pockock on the expedition which captured Havana in 1762, his share of the prize money amounting to £25,000. The same year he became rear admiral and in 1770 vice admiral. Although politically a Whig in opposition to the ministry, he nevertheless saw service in the war with France resulting from the French alliance with the United States. Admiral Keppel was placed in command of the Channel fleet in 1778 and in July of that year engaged the French fleet off Ushant. Having become partly disabled he signaled for his van and rear divisions, but Sir Hugh Palliser, in command of the rear, ignored the signal until too late. Palliser accused him of incapacity and cowardice, but Keppel was honorably acquitted. In 1782 he was created Viscount Keppel and Baron Eldon. He was first lord of the admiralty 1782-1783.

KEPPEL, Sir Colin (Richard), British admiral: b. Dec. 3, 1862; d. Bracknell, Berkshire, England, July 6, 1947. After military service in

Egyptian waters and the Mediterranean principally, he became commander in 1895. His services in command of gunboats on the Nile (1897-98) were very effective, as was also his work in the Sudan (1899). He became rear admiral and was in command of the Atlantic Fleet (1909-1910). D. Bracknell, Eng., July 9, 1947.

KEPPEL, Frederick, American writer on art: b. Tullow, Ireland, 1846; d. 1912. Educated at Wesley College, Dublin, he came to the United States on graduation and opened, in New York City, a place as an art dealer, in which he acquired a national reputation, especially as a judge of etchings and engravings. He lectured, translated, and wrote original works on art. Among his publications were *The Etched Work of Jean François Millet* (translation); *Modern Disciples of Rembrandt* (1890); *Christmas in Art* (1909); *The Golden Age of Engraving* (1910). He opened branch houses in Paris and London.

KEPPEL, Frederick Paul, American educator: b. Staten Island, N.Y., July 2, 1875; d. New York City, Sept. 9, 1943. He was educated at Columbia University, from which he graduated with an A.B. degree in 1898. In 1900 he became assistant secretary of that institution, and secretary two years later; and in 1910, at the age of 35, he was made dean of the college. He held this position until 1918. From 1908 to 1918 he was secretary of the American Association for International Conciliation, and for the following year acted as 3rd assistant secretary of war. During 1919-20 he served as director of foreign operations for the American Red Cross; in 1920-22 he was commissioner for the United States International Chamber of Commerce. From 1923 to 1941 he was president of the Carnegie Corporation of New York (qv). His publications included: *The Undergraduate and His College* (1917); *Education for Adults* (1926); *The Foundation* (1930); *Philanthropy and Learning* (1936). With Robert Luther Duffus, he also wrote *The Arts in American Life* (1933).

KEPPEL, Sir Henry, English admiral and author: b. Kensington, June 14, 1809; d. Jan. 17, 1904. Son of the Earl of Albemarle, he was educated for the navy, in which he served from 1822, becoming successively, lieutenant (1829), commander (1833), and post captain (1837). He saw service in India, the Mediterranean, South Africa, and the Pacific Ocean; and commanded the naval brigade during the Crimean War (1854-55). He later held, in succession, the following offices, naval commander in chief at the Cape of Good Hope and on the Brazilian coast (1860-67); and vice admiral in chief of the China-Japanese squadron (1867-69). He was promoted admiral (1869), was knighted (1871), and became admiral of the fleet (1877). Among his published works were *Expedition of H. M. S. *Porpoise* to Borneo*, 2 vols. (1847); *A Visit to the Indian Archipelago*, 2 vols. (1853); *Reminiscences* (1898); *A Sailor's Life under Four Sovereigns*, 3 vols. (1899).

KEPPLER, Joseph, American caricaturist: b. Vienna, Austria, Feb. 1, 1838; d. New York, Feb. 19, 1894. He early made his reputation as a satiric artist and the leading periodicals of his native city were publishing his witty sketches,

almost before he had left the Academy of Fine Arts. But art was not then a serious business to him and he took to the stage as a comedian and opera singer; and actually began to study medicine at Saint Louis, Mo., where he made his residence in 1868. But it was in Saint Louis that he found his real vocation. There he established the German *Puck*, which, while it failed as a commercial enterprise, made his reputation. It was seen at once that a caricaturist of rare skill as a draftsman, of mental fertility and freshness, of witty and incisive satire, had appeared. He was engaged from 1872 to 1877 as caricaturist for *Frank Leslie's Illustrated Newspaper* in New York, to which city he had removed, and in 1875 he started a New York German *Puck* in association with Adolph Schwartzman. This was followed in 1877 by *Puck* in the English language. He was the first to use colored cartoons in caricature, and drew upon a vast store of classical and historical incidents for adaptation in criticizing modern social and political life.

KER, John, Scottish ecclesiastical writer and minister: b. Tweedmuir, 1819; d. 1886. Educated at Edinburgh University, he spent some time in Germany in post-graduate work. He became pastor of East Campbell Church, Glasgow, in 1851; and in 1876 was appointed professor of practical training in the United Presbyterian Theological Hall. Among his published works were *Sermons* (1868-88); *The Psalms in History and Biography* (1886); *The History of Preaching* (1888); and *Letters* (1890).

KER, William Paton, British scholar: b. Glasgow, Aug. 30, 1855; d. Macugnana, Italy, July 17, 1923. He was educated at Glasgow University and at Balliol College, Oxford University, and from 1883 to 1889 he was professor of English literature and history in the University College of South Wales, Cardiff. In 1889 he was appointed professor of English language and literature at University College, London, a post he held until 1922. He was elected professor of poetry at Oxford in 1920. His books included: *Epic and Romance* (1897); *The Dark Ages* (1904); *Essays on Mediaeval Literature* (1905); *The Art of Poetry* (1923).

KERATIN (from Gr. *keras*, a horn), a substance obtained from claws, feathers, hair, horn, nails, wool and other epidermal appendages. This tissue or substance is distinguished from gelatinous tissue by becoming soft when acted on by water for some time but no glue is produced. It is insoluble in alcohol and in ether and contains a high percentage of sulphur.

KERATRY, kā'rā'trē, Auguste Hilarion de, French author and statesman: b. Rennes, 1769; d. 1859. During the French Revolution he was twice imprisoned and ran great danger of being executed on account of his high family connections. Later he became a member of the Chamber of Deputies, and in 1830 worked with the Liberals for the overthrow of Charles X. Louis Philippe, for this work in his behalf, made Kératry a peer of France (1837). Among his published works were *Inductions Morales et physiologiques* (1817); *Du beau dans les arts d'imitation* (1822); *Le dernier des Beaumanoirs* (1824); *Fredéric Styndall* (1827); *Saphura* (1835).

KERATRY, COMTE **Émile de**, French soldier, politician, and man of letters: b. Paris, 1832; d. April 7, 1905. He was the son of Auguste Hilarion de Kératry (q.v.). Entering the army in 1854, he saw active service in the Crimean War, and in Mexico during the brief regime of Maximilian (q.v.). He resigned from the army in 1865 and returned to Paris, where he edited the *Revue Moderne*; his articles in its columns on the French occupation of Mexico attracted wide attention. In 1869 he was elected to the Chamber of Deputies, and the next year, after the fall of the Second Empire, he became prefect of Paris. During 1871-1872 he was employed by President Louis Adolphe Thiers (q.v.) in suppression of uprisings in various parts of France.

KERCH, kërch, Russia, a seaport in the Crimean Region, Russian Soviet Federated Socialist Republic, at the most easterly point of the Crimean peninsula. The town itself is old, dating to the first centuries of the Christian era; but it is built upon the site of a prehistoric city, the ancient mounds of which are still standing close by. Nearby there are also some old catacombs, the walls of which are covered with inscriptions of an early date. The church of Saint John the Baptist, which dates back to the year 717, shows strongly the Byzantine influence in its architecture. Kerch is a place of some commercial and industrial importance. This is due to its favorable situation between the Azov and the Black seas, which makes it one of the principal carrying ports of the south of Russia. It handles iron, grain, wool, hides, fish, oil and fruit (dried, and in its natural state), in addition to its own manufactured products, the most important of which are flour, lumber, lime, beer, tobacco, soap, candles, cement, and leather. The history of Kerch merges into that of Panticapaeum, an ancient city which, in its later days, became the capital of the kingdom of the Bosphorus. The Tatars captured it in the 13th century; and it fell into the hands of the Genoese in the following century. By the latter it was called Cerchio. Hence its modern name, slightly modified by the Turks, who came into possession of the city the following century, only to yield it to the Russians in 1773. During 1854-1855, in the Crimean War (q.v.), the seaport suffered severely; and in World War II it was the scene of fierce fighting between the Russians and the German invaders. Pop. (1939) 104,471.

KERCH, Strait of, called also **STRAIT OF YENIKALE**, yën-ê-kä'lä, east of the Crimean peninsula, connects the Black Sea with the Sea of Azov. About 25 miles long, and from 2 to 10 miles broad, it is so shallow in some places as to leave a channel of little more than two fathoms deep.

KEREN-HAPPUCH. The name of the daughter of Job, born in the time of his restored prosperity. The name means horn of the face paint, i.e., a cosmetic box, or as we might say Joy-face. In the Septuagint the word is Amalthea-Keras, meaning horn of plenty, and in that sense has reference to Job's gratitude for his prosperity.

KERENSKI, kyî-ryân'skû-i, **Aleksandr Feodorovich**, Russian revolutionary leader: b.

Simbirsk (Ulyanovsk), 1881. After graduating at the University of Saint Petersburg he practiced as a lawyer, gaining a reputation for defending those accused of political offenses. Although in reality a Social Democrat, he joined the Labor Party and in 1912 was elected to the Third Duma, where he was an impassioned and forceful speaker. He was a recognized leader in the Fourth Duma, and when the provisional government was formed following the revolution of February 1917 he became minister of justice. Appointed minister of war in May of that year, he visited the disorganized Russian front and persuaded the troops in the southwestern sector to resume their offensive against the Germans. In July he succeeded Prince Georgi Evgenievich Lvov (q.v.) as premier, but quickly came into conflict with Gen. Lavr Georgievich Kornilov (q.v.), the commander in chief, for giving privates virtually equal rights with officers. Kornilov subsequently made proposals for restoring discipline, and his position was strengthened by the fall of Riga, which he had predicted. Tardily Kerenski agreed to accept Kornilov's suggestions, but meanwhile Kornilov had indicated his belief that only a military dictatorship could save Russia and the army. This led to a conflict between him and Kerenski, in which the latter prevailed, and Kornilov was arrested. On Sept. 15 Kerenski proclaimed the Russian Republic, with himself as president of the provisional government, and he also assumed the chief command of all Russian forces. During October the power of the Bolsheviks increased, though Kerenski formed a new cabinet composed of Socialists and Moderates for the purpose of uniting Russia. Leon Trotsky (q.v.) denounced this government, and on November 8 he and Nikolai Lenin (q.v.) carried out a coup d'état. Kerenski fled from Moscow and attempted to march on the capital at the head of some troops. When this effort proved abortive, he made his way out of Russia, and in June 1918 he appeared in London. Thence he went to Paris, where he became editor of the *Uni*, a newspaper of the Social Revolutionaries. He visited the United States in 1927, and later took up residence there. His books included: *The Prelude to Bolshevism* (1919); *The Catastrophe* (1927); *Crucifixion of Liberty* (1934).

KERESAN, or **QUERES** (the aboriginal stock name), a group of Pueblo Indian tribes in seven permanent villages on the Rio Grande and to the westward thereof, in New Mexico. They form the Queres, or Keresan, linguistic family, speaking a distinct stock language. The Indians claim to have had their origin at Shipapu, a mythical place in the north from which they gradually drifted southward and occupied, still in prehistoric times, the Rito de los Frijoles, west of the Rio Grande, where they excavated the cave lodges in the soft volcanic tuffa cliffs still to be seen. These were abandoned before the coming of Coronado, in 1540, who found the Queres in seven pueblos (excluding Acoma and probably Sia) forming the province of Quirix, along the Rio Grande. In 1630 they were reported by Fray Alonso de Benavides to number 4,000, but this and other early estimates did not include the Acoma tribe. (See also PUEBLO INDIANS.) The present Queres pueblos are as follows:

Cochiti (native **Kotviti**).—On the west bank of the Rio Grande, 27 miles southwest of Santa Fé. In prehistoric times the natives of Cochiti and San Felipe formed one tribe, but on account of the hostility of the Tewas (see **TAVOAN FAMILY**), they divided, the latter building a village near their present pueblo, the former settling in the Potrero Viejo, which they later abandoned, moving to near their present location, where they were found by Oñate in 1598. The Cochiti villagers were active participants in the Pueblo revolt of 1680, killing their missionary, but continuing to occupy their town. On learning of the approach of the Spaniards to reconquer their town a couple of years later, they fled, with the people of Santo Domingo and San Felipe, to the Potrero Viejo where they remained almost uninterruptedly until 1692, when they were induced by Vargas to return to their homes. The Cochiti and Santo Domingo people again fled to the Potrero, however, where they were assaulted by Vargas in 1693 and severely defeated, 200 of their women being captured and their pueblo burned. Cochiti became the seat of the mission of San Buenaventura early in the 17th century. Of the 16 clans 4 are extinct.

San Felipe (native name **Katishtya**) — On the west bank of the Rio Grande, 12 miles above Bernalillo. Formerly combined with the people of Cochiti, but independently occupying the vicinity of the present site at least since 1540. It was the seat of one of the earliest missions of New Mexico, its first church being erected prior to 1607. The inhabitants participated with those of Cochiti and Santo Domingo in the great revolt of 1680, but aided Vargas in dislodging the Cochiteños from the Potrero Viejo in 1693. They had no resident missionary at the time of the revolt, but aided in murdering the priests of Cochiti and Santo Domingo. After leaving the Potrero in 1692 the San Felipe people built a new pueblo on a mesa northwest of their present town, where a church (the walls of which are still standing) was erected in 1694. This was abandoned early in the 18th century and the present pueblo established, the fourth to bear the name Katishtya. Of the 30 San Felipe clans 9 are extinct.

Santo Domingo (native name **Kiwa** or **Diya**).—On the east bank of the Rio Grande, 18 miles above Bernalillo. In prehistoric times the inhabitants occupied successively the Potrero de la Cañada Quemada and two pueblos called Guipuy, in the latter of which, on the Rio Grande, they were found by Oñate in 1598. Like its predecessor, the second Guipuy, as well as Huashpatzena, the settlement which followed, was swept away by flood, and the present Santo Domingo had three similar but less severe disasters between its founding in 1692 and 1886, when a freshet destroyed its fine old church with carved doors bearing the Spanish coat of arms. At the time of the Pueblo rebellion of 1680, it was an important mission seat and the residence of the custodian of the province, who, with two other priests, were slain. The pueblo has 18 surviving clans.

Santa Ana (native name **Tamaya**).—On the northern bank of the Rio Jemez, a western tributary of the Rio Grande. Before the Spanish advent the inhabitants lived nearer the Rio Grande and in 1598 resided on a mesa between

the present pueblo and San Felipe. They joined the San Felipe and Santo Domingo people in the great revolt, but in 1687 their village was carried by storm and burned, several of the natives perishing. The present town was built after 1692. It became a mission early in the 17th century, but had no resident missionary at the time of the rebellion. Santa Ana has 7 clans.

Sia (native **Tsia**).—On the north bank of Jemez River, 16 miles northwest of Bernalillo. It was formerly a pueblo of great importance, and in 1583 was said by Espejo to be the chief one of five towns forming the province of "Punames." It early became the seat of Nuestra Señora de la Asuncion. Its inhabitants made a most determined stand during the revolt of 1680, but in 1689 they were assaulted by the Spaniards, their pueblo wrecked, and the tribe decimated in the bloodiest engagement of the rebellion. Since this time the little tribe has been declining; Sia formerly had 37 clans, but of these only 16 survive.

Acoma (from **Akóme**, "People of the White Rock").—This pueblo and Laguna form the western division of the Queres stock. Acoma is picturesquely and strongly situated on a rock mesa, 357 feet high, about 60 miles west of the Rio Grande. It was first mentioned as "Aco" by Marcos de Niza in 1539 and visited by Coronado in 1540. Acoma has the distinction of being the oldest continuously occupied town in the United States. The natives treacherously killed several Spaniards of Oñate's force late in 1598, but in the following January the Spaniards led an expedition against the mesa, stormed and captured the town, killed about half the inhabitants, and burned some of the houses. Acoma became the seat of the mission of San Estevan in 1629; the natives murdered their missionary in the revolt of 1680, and remained in their fortified retreat until 1699, when they were induced to submit to the Spanish authorities. The present large adobe church, with its remarkable cemetery filled in with earth carried from the valley below, dates from the reconquest. In prehistoric times the Acomas lived on the summit of an even loftier mesa, known as Katzima, or the "Enchanted Mesa," three miles northeastward. According to tradition (verified by an examination of the summit and the surroundings of the mesa by F. W. Hodge in 1897), the only trail was washed away in a storm, leaving some of the inhabitants to perish; the village was henceforth abandoned. Population in 1680, 1,500; in 1760, 1,052; in 1902, 566. Of the 20 original clans 6 are now extinct.

Laguna (Span "lagoon," from a lake formerly west of the pueblo; native name **Kawaik**).—The largest of the Queres towns, and the most recently established of all the southwestern pueblos, having been founded in 1697 by refugee Queres from other villages, particularly Acoma, as well as by Indians of other stocks. It is situated on the Santa Fé Pacific Railroad, 17 miles northeast of Acoma. The town is being gradually abandoned, many of its inhabitants having moved permanently to their eight farming villages to the north and west. The Lagunas are very intelligent, honest and industrious, and are largely in demand as railroad laborers. The mission name of Laguna is

San José, applied also to the rivulet on which the town is situated. The tribe has 20 clans. The total population of the Keresan Indians is between 4,000 and 5,000. (See PUEBLO INDIANS). Consult Goddard, P. E., 'Indians of the Southwest' (New York 1913).

F. W. HODGE,

Museum, American Indian Heye Foundation.

KERGUELEN (kèrg'ě-lě'n) **LAND**, or **DESOLATION ISLAND**, an island in the Indian Ocean, intersected by lat. 49° 3' S., long. 68° 18' E.; length about 100 miles; greatest breadth about 50 miles; area, about 2,500 square miles. It has a remarkably barren and desolate appearance, due to the fact that it consists of lofty masses of basalt and other volcanic rocks. These rise to the height of 2,500 feet, presenting numerous bold headlands and ranges of precipitous cliffs, and possessing a very scanty vegetation. The highest point, Mount Ross, is over 6,000 feet. Sea-fowl are numerous but no indigenous land animals exist on it. Its indentations furnish several bays and inlets affording good harbors. It was annexed by France in 1893, and some settlers have made their abode there at Port Jeanne d'Arc since 1907. Of the flora, which is arctic, the most noteworthy species is the Kerguelen cabbage (*Pringlea antiscurbutica*), a large edible plant, in many ways resembling common garden cabbage, and which has been valued on account of its antiscorbutic properties. The name of the island is derived from Kerguelen-Trémarec (q.v.), a Breton navigator who discovered it in 1772. Captain Cook (who named it Desolation Island) visited there in 1776, as also did the *Challenger* in 1874. There are some 300 smaller islands scattered around, and the waters abound in fish, whales and seals.

KERGUELEN-TREMAREC, kār'gě-lān-trā'mā'rěk, **Yves Joseph de**, French explorer: b. Brittany, 1734; d. 1797. He served in the navy and in 1771 was sent in command of a corvette by the French government to explore a great continent that was supposed to lie southeast of Africa. He discovered Kerguelen island (q.v.), took possession in the name of France, and returned home with the news that he had found the "continent." His claim was discredited, though he was promoted as a reward by Louis XV. A second voyage in 1773-74 still failed to convince him that he had only found an island. Various charges were brought against him; he was court-martialed and imprisoned, but pardoned by the king and ordered to write an account of his explorations. Captain Cook explored the archipelago 1776-77 and dispelled the continental theory, which led the French government to order the destruction of the copies of Kerguelen's 'Relation de deux voyages dans les mers australes faits de 1770 à 1774', of which very few copies now exist. He wrote some other works and was made vice-admiral during the Revolution.

KERKI, kër-kě, a city on the Amu Darya (Oxus) River in Turkmenistan, Central Asia, about 150 miles southeast of Bokhara. Kerki, with its Russian-built fortifications which, a few years ago, were considered very strong, is situated on the Russian frontier and constitutes a centre of caravan trade, several routes of which stretch out from it in different directions. Pop. 5,000.

KERKUK, or **KIRKUK**, a division and city of Iraq, 140 miles almost straight north of Bagdad. It is the centre of an important trade in petroleum and naphtha, the products of a neighboring oil region. Among the other industries are pottery-making, cotton goods and tanning; while its commerce includes fruit, timber, silk and hides. Tradition says that in the city is the tomb of Daniel the prophet. Pop. of division, 92,000; of city, about 20,000.

KERLEREC, kār'lār'ěk', **Louis Billouart, Chevalier de**, French sailor and colonial statesman: b. Quimper, France, 1704; d. in France, 1770. After serving in the French navy and making a brilliant record for himself he became governor of Louisiana in 1752. He strove to defend the colony from the English privateers, the assaults of the Indians and the intrigues of British agents up the Mississippi. He worked under great difficulties for the French king took no interest in his great American possession. On his return to France Kerlérec was tried and found guilty of malfeasance in office, apparently unjustly. He appealed from the decision of the court but died before the case was decided.

KERMAN, or **KIRMAN**, Persia, province in the southern part, bounded on the north by Yezd and Khorasan, on the south by Baluchistan and Gulf of Oman, on the east by Seistan and Baluchistan and on the west by Fars. The northern part is largely covered by desert, while the south is a more or less mountainous region. Although the climate varies greatly because of the different elevations it is generally disagreeable and unhealthy. Cattle raising is extensive, also that of the well-known Kerman goats from whose soft hair manufactured the beautiful shawls of the same name. The principal exports are shawls, carpets, cotton, silk, gum and dates. Area, 65,000 square miles. Pop. about 600,000. The capital Kerman, is located in a fertile region at an elevation of about 5,600 feet. Nearby are the ruins of two ancient forts; in many places the walls are still in perfect condition. Among others of less importance, the two mosques which deserve mention are Masjid i Malik, built in the 11th century, and Masjid i Jama, dating from about the middle of the 14th century. Pop. of city 59,000.

KERMANSHAH, or **KIRMANSHAH**, Persia, town, capital of the province of same name. It is situated on a small river at an altitude of 5,100 feet, about 250 miles southwest of Teheran. Formerly strongly fortified, it is now practically an open town, and its location on the high road between Bagdad and Teheran greatly increases its commercial importance. It is noted for the manufacture of fine carpets, and also for its splendid horses. It has a very good trade in barley, wheat and fruit. Pop. about 70,000.

KERMES, the scarlet grain of Poland, cochineal, lac-lake, lac-dye, and all the modifications of gum-lac (see LAC) are either the perfect insects dried, or the secretions which they form. The first-mentioned substance is the *Coccus ilicis*. It is found in great abundance upon a species of evergreen oak (*Quercus coccifera*), which grows in many parts of Europe, and has been the basis of a crimson dye in the earliest ages of the arts. It was known

he Phoenicians before the time of Moses; the Greeks used it under the name of *kokkos*, and the Arabians under that of *kermes*. From the Greek and Arabian terms, and from the Latin name *vermiculatum*, given to it when it was known to be the product of a worm, have been derived the Latin *coccineus*, the French *cramoisi* and *vermeil*, and the English crimson and vermillion. The early Jews, the Greeks, the Romans, and until lately the tapestry makers of Europe, have used it as the most brilliant red dye known. The scarlet grain of Poland (*Coccus polonicus*) is found on the roots of the *Scleranthus perennis*, which grows in large quantities in the northeast of Europe and in some parts of England. This, as well as several other species, which afford a similar red dye, have, however, fallen into disuse since the introduction of cochineal; and the introduction of aniline dyes has greatly injured the cochineal industry.

KERMES MINERAL, a name given to amorphous antimony trisulphide. The native antimony trisulphide occurs in well-developed orthorhombic prisms. When this compound is fused for some time, and suddenly thrown into cold water, its crystalline structure is entirely destroyed. Kermes is a brown-red powder, becoming blackish-gray when washed with boiling water. By fusion it may be obtained as a solid mass, but it is totally devoid of crystalline structure. See **ANTIMONY**.

KERMIS or **KERMES**, kûr'mîs, formerly a church festival held by the Dutch in Flanders, and later in other parts of Europe, on the feast-day of the principal saint of a place or church. In the United States the word has come into general use for entertainments given for charitable purposes.

KERN, kĕrn, Jan Hendrick, Dutch Oriental scholar: b. Java, April 6, 1833; d. 1917. Educated at Leyden and Berlin. He taught Latin in aestrict Athenaeum (1858-1862) and from 1865 on was a professor at Leyden. Among his principal published writings are *Handleiding bij het onderwijs der Nederlandsche taal* (1879-1883); *Kakuntata* (1862); *Die Glossen in der ex Salica und die Sprache der Salischen Franken* (1869); *A Manual of Astronomy* (1874); *Over de aartelling der zuidelijke Buddhisten* (1875); *Geschiedenis van het Buddhisme in Indië* (1881-1883); *De Fidji-taal vergeleken met hare verwanten in Indonesië en Polynesië* (1886); *Manual of Indian Buddhism* (1896).

KERN, Jerome David, American composer: b. New York City, Jan. 27, 1885; d. there, Nov. 1, 1945. He first studied piano with his mother, later with Eva Leale. After graduating from Newark (N.J.) High School in 1902, he took courses at the New York College of Music with Alexander Lambert and Paolo Gallico. He had additional lessons in theory with Dr. Austin Pierce and Albert von Doenhoff, and studied privately with tutors in Germany in 1904-1905. He made his debut as a composer in England in 1903, and for several years wrote opening numbers for London musical shows. In 1910, he rewrote the score for *Mr. Wix of Wickham*, and the next year composed his first original musical comedy for Broadway, *The Red Petticoat*. Later he did the music for such shows as *The Girl from Utah* (1914); *Very Good Eddie* (1915); *Have a Heart* and *Oh Boy* (1917); *Rock-a-Bye*

Baby (1918); *Sally* (1920); *Stepping Stones* (1923); and *Sunny* (1925). His greatest achievement was the score for the musical version of Edna Ferber's novel, *Show Boat*. Produced in New York on Dec. 27, 1927, it has often been called the best American folk operetta. Thereafter, he provided the music for *Sweet Adeline* (1929); *The Cat and the Fiddle* (1931); *Music in the Air* (1932); *Roberta* (1933); and *Very Warm for May* (1939). In 1930, he went to Hollywood where he wrote scores for the following films: *Men of the Sky* (1930); *I Dream Too Much* (1935); *Swing Time* (1936); *High, Wide, and Handsome* and *When You're in Love* (1937); *The Joy of Living* (1938); *One Night in the Tropics* (1940); *You Were Never Lovelier* (1942); *Cover Girl* (1944); and *Can't Help Singing* (1945). A well-trained musician and careful craftsman, Kern was able to invest his tender and seductive melodies with a great variety of harmonic and rhythmic interest. He composed almost exclusively for the theater, and was largely responsible for a more imaginative and original treatment of musical comedy materials. Among his best known songs are *They Didn't Believe Me*, *Look for the Silver Lining*; *Ol' Man River*; *She Didn't Say Yes*; *Why Do I Love You?*; *Smoke Gets in Your Eyes*; *The Song Is You*; *The Way You Look Tonight*; and *The Last Time I Saw Paris*. He was less successful in his two attempts at symphonic composition: *Show Boat, A Scenario for Orchestra* (1941) and *Mark Twain, A Portrait for Orchestra* (1942).

KERN LAKE, a body of water in Kern County, in the southern part of California; one of a small group of basins in the midst of an almost arid part of the state.

KERN RIVER, a stream of San Joaquin Valley, California, rising in the Sierra Nevadas and flowing southwest. It has great value in irrigation about Bakersfield, near which are located the Kern River oil fields.

KERN RIVER SHOSHONEANS, a small body of Indians of the Shoshonean family in southern California, isolated from the parent stock. It is so linguistically different from the other members of this very extensive family of languages that it has been classed as a major division of the Shoshonean tongue.

KERNAHAN, Coulson, English novelist: b. Ilfracombe, Devonshire, Aug. 1, 1858. He was for many years literary adviser to Ward, Lock and Company, London. He has contributed criticisms, verses, essays, and stories to numerous periodicals. Among his published works are *A Dead Man's Diary*; *A Book of Strange Sins*; and *Sorrow and Song*.

KERNER, kĕr'nĕr, Justinus, German poet: b. Ludwigsburg, Württemberg, Sept. 18, 1786; d. Weinsburg, Feb. 21, 1862. He belonged to the Schwabian school. He was at times fanciful, sensitive and poetic and endowed with a strange, fantastic humor. He graduated in medicine and practiced in several towns of Germany. Among his popular works are *Reisehatten* (1811), and *Die Seherin von Provost* (1829).

KERNSTOWN, Battle of. Gen. Stonewall Jackson abandoned Winchester, Va., March 11, 1862 and retreated up the Shenandoah Valley, followed by Shields' Union division

beyond Strasburg. Shields was recalled to Winchester on the 20th, and Jackson followed him, his advance cavalry under Turner Ashby engaging Shields on the afternoon of the 22d, near Kernstown, in which Shields received a severe shell-wound. Jackson came up on the afternoon of the 23d and, being informed that Williams' division of Banks' corps had left Winchester and was moving through the Blue Ridge for Manassas Junction, and that Shields had but four regiments in his front, determined to crush these and thus recall Williams and detain him in the valley. Shields had nearly 8,000 infantry and cavalry and 23 guns, two of his brigades on a ridge covering the road half a mile north of Kernstown, both under command of Col. N. Kimball. Jackson had about 3,000 infantry and 27 guns. Kimball was too well posted to be attacked in front, so leaving Ashby with the cavalry and a small brigade of infantry to hold the road and threaten Kimball's center and left, Jackson seized a low ridge on Kimball's right, and placed on it his artillery and infantry. Tyler's brigade, which had been held in reserve, was brought up and made unsuccessful efforts to dislodge him, upon which Kimball, drawing from his left and center, formed a column of seven regiments and, under a terrific fire of artillery and musketry, led it forward, came up on Tyler's left and after a fierce combat broke Jackson's line. Kimball pressed his advantage, and as night closed in, Jackson was in full retreat, leaving his dead and wounded and two guns on the field of his first defeat. He said that he considered the engagement "a fiercer fight during its continuance than any portion of the battle of Manassas." The Union loss was 118 killed, 450 wounded, and 22 missing; the Confederate loss, 80 killed, 375 wounded and 263 missing. Consult *Official Records* (Vol. XII); Allan, *Jackson's Valley Campaign*; The Century Company's *Battles and Leaders of the Civil War* (Vol. II).

KERNSTOWN (Winchester), **Second Battle of.** On July 22, 1864 General Crook, with four small divisions of infantry and cavalry, joined General Averell's cavalry division at Winchester, Va., Crook assuming chief command of the united force of 11,000 men. On the 23d Crook advanced four miles south to Kernstown and skirmished with Confederate cavalry, and on the 24th went into position on the same ground held by the Union troops in the battle of March 23, 1862. The infantry divisions of Colonels Thoburn, Duval and Mulligan covered the valley pike, with the cavalry of Duffié and Averell on either flank. Upon the approach of the enemy Averell was sent down the Front Royal road to turn his right. General Early, who, after his raid on Washington, had recrossed the Potomac and taken position beyond Cedar Creek on the 21st, hearing of Crook's advance, put all his army in motion on the morning of the 24th to attack him. At Bartonsville Ramseur's division moved by a road to get around Crook's right, while the divisions of Gordon, Rodes, Breckinridge and Wharton moved along the valley pike and on either side of it. The cavalry was divided and moved in two columns, one on the right along the Front Royal and Winchester road, the other on the left and west of Winchester, the two to unite in rear of Winchester and cut off

Crook's retreat. At 10 A.M. Crook's skirmishes were driven in, and it was discovered that he left extended through Kernstown, and that Averell having left, that flank was exposed whereupon Wharton's division was moved under cover of some ravines on the right to attack it. The movement was promptly executed, and Wharton struck the left flank and rear of Crook's Rutherford B. Hayes' command as it was advancing and threw its left into some confusion. Hayes changed front and, forming behind a stone fence, held Wharton in temporary check. Almost simultaneously with Wharton's flank attack, Rodes, Gordon and Ramseur advanced on Crook's center and right, and the entire line gave way and retreated through Winchester followed by Early's infantry and artillery beyond Winchester, and by Rodes' division as late as Stephenson's Depot. The retreat was continued on the 25th through Martinsburg to the Potomac, Crook crossing at Williamsport and marching down the north side of the river to Maryland Heights and Harper's Ferry. Early occupied Martinsburg and began the destruction of the Baltimore and Ohio Railroad. The Union loss, July 23-26, was 100 killed, 606 wounded and 479 missing. Among the mortally wounded was Colonel Mulligan, commanding division. The Confederate loss is not accurately known but it was comparatively light. Consult *Official Records* (vol. 37) and Pond, *The Shenandoah Valley in 1864*.

KEROSINE, an illuminating oil; once the chief product of the distillation of petroleum but forming now only a small fraction of the total refined crude. The oil is colorless, possessing a characteristic taste and smell, insoluble in water, moderately soluble in alcohol, but very soluble in ether, chloroform and benzene. It dissolves camphor, iodine, phosphorus, sulphur, fats, wax and many resins. The flashing point of a safe kerosine should not be less than 34° and the igniting point 43°. The finest quality of illuminating oil is produced from distillate, ranging in specific gravity from 0.775 to 0.780. It has a high flashing point, 48° to 60° and contains none of the lighter parts of the crude oil. A good illuminating oil should neither be too viscous nor too volatile, and it should not take fire when a light is applied to it. See also OIL; PETROLEUM.

KERR, Alfred, anti-Nazi critic and publicist: b. Breslau, Dec. 25, 1867; d. Hamburg, Oct. 13, 1948. He was a contributor to the ultra-modernist publications (*Neue deutsche Rundschau*, and others). His works are *Hermann Sudermann* (1903); *Das neue Drama* (1904) *Schauspielkunst* (1904).

KERR, kër, Michael Crawford, American politician: b. Titusville, Pa., March 15, 1827; d. Rockbridge, Alum Springs, Va., Aug. 17, 1876. He was graduated from the law school of Louisville University in 1851. The next year he moved to New Albany, Ind., and began the practice of his profession; in 1854 he was city attorney, and in 1855 prosecuting attorney for the county. In 1856 he was elected to the State legislature; in 1862 he was reporter for the Supreme Court of Indiana, and published five volumes of reports of unusual value. In 1864 he was elected to Congress as a whig.

nocrat, and served till 1872. In that year refused the nomination from his own district, but ran as congressman-at-large, and was elected by a very small majority; in 1874 he was re-elected to Congress in spite of much opposition, and was made speaker on the organization of the House. He served, however, only during the first session of that Congress (the 44th), as he died four days after its adjournment. While a member of the House he served on several important committees, including the committee on ways and means; he opposed the reconstruction policy of the Republican Party and was an advocate of free trade. He was also a close student of financial problems, favored the resumption of specie payment, and was strongly against the Greenback movement in regard to which he opposed a large part of his constituency and many of the politicians of his state.

KERR, Orpheus C. See NEWELL, ROBERT HENRY.

KERR, Sophie, American writer: b. Denton, d. Aug. 23, 1880. In 1904 she married John Underwood, and was divorced from him four years later. She was educated at Hood College, Frederick City, Md., and the University of Vermont, and at the age of 18 began to write stories. Her journalistic work for two Pittsburgh newspapers, she became managing editor of the *Woman's Home Companion*. Besides contributing stories to many leading periodicals, she published numerous books, including *Love at Large* (1916); *Painted Meadows* (1920); *Confetti* (1927); *Tigers Is Only Cats* (1929); *Stay Out of My Life* (1933); *Five to Look At* (1937); *Woman Going Up* (1940); *Jenny Declin* (1943); *Is Tall as Pride* (1949). She also wrote the play *Bio-Hearted Herbert*.

KERRIL, kër'îl, a sea snake (*Distira cyanonota*), olive with blue-black bands, numerous along the coasts from Persia to Japan, and considered to be one of the most venomous of its race.

KERRVILLE, kûr'vil, city, Texas, county seat, Kerr County; altitude 1,645 feet; on the Guadalupe River; and on the Southern Pacific Railroad, 55 miles northwest of San Antonio; has a municipal airport. Situated in a ranching region; stock raising and cotton growing are the chief occupations. Kerrville is an important market for wool and mohair. Schreiner Institute, a minor college, is here. West of town is Schreiner Game Preserve for buffalo and antelope. The Kerrville State Sanitarium is for tubercular cases. Kerrville has commission government, with a city manager. Pop. (1950) 7,691.

KERRY, kër'î, a county in the province of Munster, Ireland, lying between the Atlantic Ocean on the west and the mouth of the Shannon on the north. It is noted for its beautiful mountain scenery and the far-famed Lakes of Killarney. The county is, for the most part, rugged and inclined to be wild; and the mountains there rise to the highest elevation attained in Ireland, in the peak of Carrantual, 3,414 feet. The chief products of Kerry are cattle, butter, oats, and fish. The county town is Tralee; and the other market towns are Killarney, Listowel, Cahersivreen and Dingle. Area, 1,815 square miles. Pop. (1946) 133,893.

KERSAINT, kër'sân', COMTE DE (ARMAND GUI SIMON DE COETNEMPREN), kwêt-nêm-prên', French naval officer: b. Paris, July 29, 1742; executed there, Dec. 4, 1793. Following the family traditions he early entered the navy (1755) and was rapidly promoted. Though of noble birth he sided with the Girondists, and became one of the noted figures of the Revolution. Made vice admiral in 1793 he attempted to effect far-reaching reforms in the navy, which were balked by the excesses of the Revolution culminating in the mock trial and execution of Louis XVI. Against these acts Kersaint protested vigorously, with the only result that he himself suffered the same fate as his late sovereign.

KERSEY, kër'ze, a village in Suffolk, England, noted for its trade in woolen goods in the 13th century. The name "kersey" is also given to a light woolen cloth, which is looked upon as characteristic of the town. This cloth is most carefully finished; and this results in giving it a smooth surface and soft touch. Pop. (1951) 360.

KERTBENY, kirt'bâ-ně, Karl Maria, Hungarian writer: b. Pest, 1842; d. 1882. Many of his works are laborious and almost purely bibliographical and hence useful, but not of a distinctly literary character. He also translated into German the works of several Hungarian poets. His original work is found in his essays and literary criticism.

KERTCH. See KERCH.

KERVYN DE LETTENHOVE, kër'vin dě lêt'ën hō'vê, BARON Joseph Marie Constantin Bruno, Belgian historian: b. Saint Michel, Flanders, 1817; d. 1891. He was minister of public instruction 1870-1871, a careful, intelligent and laborious antiquarian and an authority, in his field, on matters relating to his native country. Among his published works are *Histoire de la Flandre* (1847-1850); *Jacques d'Artevelde* (1863); *Histoire et chroniques de Flandres* (1879-1880); *Relations politiques des Pays-Bas et de l'Angleterre* (1882-1887); *Les Huquenots et les gueux* (1883-1886); *Marie Stuart* (1889); and numerous translations and edited volumes.

KESHUB CHUNDER SEN, or **KESHAB CHUNDER SEN**, kâ'shōb chôn'drō sân, Indian religious reformer: b. Calcutta, 1838; d. Jan. 8, 1884. He was educated in Calcutta, and was employed there for a period as a clerk in the Bank of Bengal. In 1857 he joined the Brahma Samaj, a movement which sought to purify and reform Hinduism. He founded the *Indian Mirror*, a weekly, in 1861, and in 1863 published *The Brahma Samaj Indicated*. When dissension divided the movement, he headed in 1866 a section known as the "Brahma Samaj of India." In 1870 he visited England, there meeting with a friendly reception from the Unitarians, with whom he had much in common; he had little sympathy, however, with orthodox Christianity. Although he did much to reform the marriage laws of his country, he gave his child daughter in marriage to the rajah of Cooch Behar. Turning toward mysticism in his later life, he lost many of his followers, some of whom established in 1878 the dissenting Sadharana Brahma Samaj. His last book was *The New Samhita or the Sacred Laws of the Aryans of the New Dispensation*.

KESSEL, van, the family name of a number of notable Flemish painters, the first of whom was Jeroom van Kessel (q.v.). They covered a period from the beginning of the 17th century to the middle of the 18th, and collectively entered almost every department of painting. For leading members of this family, see the biographies given under the family name, which follow.

KESSEL, Jan van, THE ELDER, Flemish painter: b. Antwerp, 1626; d. 1679. He was a son of Jeroom van Kessel (q.v.) and a pupil of his father, his grandfather, Simon de Vos, and Jan Breughel. He also studied in Madrid, where he was highly esteemed as a painter of landscapes, flowers, fruits, and animals. He displayed much of the talent of his father and his grandfather, qualities which he transmitted to his son Jan the Younger (q.v.). Much of his work still exists. The Madrid Museum acquired *A Garland* (in one of his and Van Thuden's pictures) and some 40 other pictures. Among his other works were *Concert of Birds* (Antwerp Museum); *Fight between a Bear and a Snake*; *Birds Set in a Landscape*; *Boar-hunt*; *Fable of Stork and Fox* (Vienna Museum). But these were only a few of his many pictures which were to be found in many art galleries, among them those of Paris, Florence, The Hague, Stockholm, Nuremberg, Stuttgart, Berlin and Austria.

KESSEL, Jan van, THE LATER, a noted Flemish painter, supposed to belong to the famous van Kessel family of painters: b. Amsterdam, about 1641; d. 1680. He seems to have been a pupil of Jacob Ruysdael and Hobbema; at any rate he followed their style of painting. He was looked upon as one of the best landscape painters of his day. Of his surviving works, many were in the galleries of the Lowlands and Germany, among them Munich, Darmstadt, Amsterdam, Antwerp, and Rotterdam.

KESSEL, Jan van, THE YOUNGER, a son and pupil of Jan van Kessel, the Elder, whom he accompanied to Spain: b. 1654; d. 1708. In Spain father and son seem to have worked together. Jan the Younger, however, seems to have prospered better than the Elder. In six years after his arrival in Madrid he had become court painter to Charles II. He was very popular as a portrait painter and he had the patronage of the court nobility. Owing to the fact that most of his attention was given to portrait painting, there are not so many survivals of his work as there are of his father's (Jan, the Elder), or of his grandfather's (Jeroom Van Kessel); and as most of his active life was spent in Madrid nearly all of his work remained in Spain. Among his notable works were a portrait of Philip IV (Madrid Museum); *Psyche Surrounded by Wild Animals*, *Psyche and Cupid* (Alcazar, Madrid).

KESSEL, Jeroom, a noted Flemish painter and the founder of the famous van Kessel family of painters: b. Antwerp, 1578; d. about 1636. He was the most distinguished pupil of Cornelis Floris; and was the son-in-law of Jan Breughel, the famous landscape painter. Kessel did much work in collaboration with his father-in-law into whose landscapes he is said to have infused more animation by introducing animals and other figures. He traveled about Germany and the Low Countries painting portraits in various large cities, such as Frank-

fort, Cologne, and Strassburg. He also gained a reputation as a painter of still life and animals. His chief wanderings seem to have begun when he was about 28 and to have lasted some 12 years. After this, he probably made his home in Antwerp.

KESSELRING, kës'el-rîng, Albert, German military officer: b. 1887. The son of a government inspector of schools, he served during the First World War in the air force, where he became a close friend of Hermann Wilhelm Goering (q.v.). With the advent to power of Adolf Hitler (q.v.), and through the influence of Goering, he gained rapid promotion in the army, by 1936 becoming, under the latter, chief of the general staff of the air force. Early in 1939 he was given command of Air Fleet I, and when Poland was invaded in September he directed their operations between Danzig and Brest Litovsk. Transferred to Air Fleet II, he supported the invasions of the Lowlands and France during May-June 1940, for these services being promoted general field marshal by Hitler in July. He commanded the German air force during the Battle of Britain, August-October 1940, and, when the Soviet Union was invaded by German armies in June 1941, he commanded an air unit on the Russian front. In February 1942 he was transferred to Italy to take chief command of the German air forces in that theater of war, allegedly because of his lack of success in Russia. His aircraft in Italy were unable to force the capitulation of Malta or to assist Field Marshal Erwin Rommel (q.v.) hard-pressed in North Africa, but nevertheless in September 1943, he was given command of land and air forces on the central part of the Italian front opposing the advancing Allies. Early in 1944 he was appointed commander in chief of all German troops in Italy, in this post succeeding in putting up a stubborn defense against every Allied attempt to advance. Despite his successful record, he was withdrawn in March 1945 to take a command on Germany's western front, where the situation was, by the time, critical. At first, supreme commander of all German troops in the west, in succession to Field Marshal Gen. Karl von Rundstedt (q.v.), a month later the over-all command was divided, Field Marshal Gen. Ernst Busch taking over the forces north of Leipzig, and Kesselring directing the armies south of that area. In May 1945, following the collapse of all German resistance, he was captured by the United States Seventh Army. Wearing one of the Reich's highest decorations, the Knight's Cross of the Iron Cross with oak leaves, swords, and diamonds, he assured interviewers that Hitler had been a military genius, although "sometimes the ideas of a genius are misunderstood"; of Field Marshal Sir Bernard Law Montgomery (q.v.) his adversary for so long on two fronts, he commented, "I believe if I call him 'Monty' that is sufficient."

KESTER, Paul, American dramatist: b. Delaware, Ohio, Nov. 2, 1870; d. Lake Mohogean, N.Y., June 20, 1933. He was a brother of Vaughan Kester (q.v.). His greatest success was in the dramatic field. Among his published works were *His Own Country*; *Tales of the Real Gypsy*; and the following plays: *The Countess Roudine* (with Minnie Madden Fiske); *Zamar*; *What Dreams May Come*. T

'Cousin of the Ring' (with Vaughan Kester); 'Eugene Aram'; 'Sweet Nell of Old Drury'; 'When Knighthood was in Flower'; 'Made-moiselle Mars'; 'The Cavalier' (with George Middleton); 'Friend Hannah'; 'Don Quixote'; 'The Bill Toppers'; 'The Lady in the Case'; 'Beverly's Balance'; 'The Tragedy of Edith Cavell'; 'The Great Lady Dedlock'

KESTER, Vaughan, American novelist: b. New Brunswick, N. J., 1869; d. 1911. He devoted his life to literary work. Much of his best work was contributed to the *Cosmopolitan Magazine* on whose staff he was for some considerable time. Among his more serious published works are 'The Prodigal Judge'; 'The Manager of the B. and A.'; 'The Fortunes of the Landrays'; 'John o' Jamestown'; 'The Just and the Unjust'; 'The Hand of the Mighty.' In the latter, which was published after his death, is a biographical sketch of the author by his brother, Paul Kester.

KESTREL, one of the smaller of the European falcons (*Tinnunculus alaudarius*), resembling the sparrow-hawk, and formerly much used in falconry by the peasantry. The American sparrow-hawk and sharpshin (qq.v.) may be called kestrels.

KESWICK MOVEMENT, The. In 1874 Canon Harford-Battersby attended a conference at Oxford and there passed through a deep spiritual experience. On his return to his parish, Saint John's, Keswick, he was very desirous that his people should have the same experience. So the first Keswick Convention was called by the vicar and his helper, Mr Robert Wilson, in the year 1875. Its title was "Convention for the Promotion of Practical Holiness." Its purpose was "to help men to be holy." The following directions were given to those coming to the convention:

- 1 Come waiting on the Lord, desiring and expecting blessing to your own soul individually.
- 2 Be ready to learn whatever God may teach you by His word, however opposed to human prejudices and traditions.
- 3 Heartily renounce all known evil and even doubtful things ("not of faith").
- 4 Lay aside for the time all reading except the Bible.
- 5 Avoid conversation which has a tendency to divert our mind from the object of the meetings. Do not dispute with any, but rather pray with those who differ from you.
- 6 Eat moderately, dress simply, retire to rest early.

The convention became an annual affair attended by hundreds of people. The meetings were held in two tents each having a capacity of 2,250. Many subjects were discussed such as 'The Renunciation of Evil,' 'Holiness by Faith,' 'Heart Obedience,' etc. Canon Battersby died in 1883, but the work has been continued. The movement has been productive of considerable devotional literature by such writers as F. B. Meyer, W. H. A. Hay Aitkin, Bishop H. C. G. Moule, Andrew Murray, Hubert Brook, J. Stuart Holden, Arthur T. Pier-son and G. H. C. Macgregor.

At the Keswick Convention of 1891, those present from Scotland decided to hold a like meeting in their own land. As a result, for many years, beginning with 1892, an annual meeting has been held at Bridge-of-Allan. It was called "The Scottish National Christian Convention for the Deepening of Spiritual life." The movement is world-wide and of great influence in Christian circles. Consult

Harford, Charles F., 'The Keswick Convention: Its Message, Its Methods and Its Men' (1907), also Macfarlane, 'Scotland's Keswick; Sketches and Reminiscences' (1917).

KETCH, a vessel equipped with two masts, namely, the mainmast and the mizzenmast, and usually from 100 to 250 tons burden. Ketches were principally used in former times as yachts for conveying princes of the blood, ambassadors or other great personages from one place to another. Ketches in use at the present day are chiefly coasters.

KETCHAM, William Henry, American missionary: b. Sumner, Iowa, 1 June 1868. He was educated at Saint Charles College, Grand Coteau, La., and the Seminary of Mount Saint Mary's of the West, Cincinnati, Ohio. In 1885 he became a Roman Catholic, and was ordained a priest in 1892. Until 1897 he was missionary to Creek and Cherokee Indians and other tribes in and about Muskogee, I. T. From 1897 to 1900 he was missionary to the Choctaws at Antlers, I. T., and in the latter year was appointed assistant in the Catholic Bureau of Indian Missions, Washington, of which he was made director in 1901. From 1913 he served as United States Indian Commissioner. During his sojourn in the Indian Territory, he founded many schools and churches and converted many Indians to the Christian faith. He helped heal the breach between the government authorities and the Catholic Indian Bureau, and secured the abolition of the rule forbidding Catholic Indian children in government schools from attending Catholic religious services. He founded the *Indian Sentinel* and in 1908 was delegate to the First American Missionary Congress at Chicago. In the same year and again in 1910 he attended the Lake Mohonk conferences. Died 14 Nov. 1921.

KETONES, kē'tōnz. See ACETONE.

KETTELER, kē'tēl-ēr, Clemens August, BARON VON, German diplomat. b. Potsdam, 1853; d. Peking, 20 June 1900. He served for a time in the army, but entered the diplomatic service, in 1882 as attaché at Peking drew up the first treaty between Germany and Korea, in 1883 was appointed acting consul at Canton, in 1892 became secretary of the German legation at Washington, and when in 1893 the legation was made an embassy was appointed first secretary to the embassy and councillor of state. In 1896 he became Minister to Mexico, in 1899 Minister to China. In 1900, at the time of the "Boxer" disturbance in northern China, he was selected, owing to his familiarity with the Chinese language, to represent the foreign diplomats in their communications with the government. While on such a mission he was shot in the street. Prince Chun, brother of the emperor, was sent to Germany to apologize for the murder, and 18 Jan. 1903 a memorial arch, set up at the expense of the Chinese government, was dedicated at Peking.

KETTELER, Wilhelm Emanuel, BARON VON, German ecclesiastical leader. b. Münster, Prussia, 1811; d. 1877. Graduating in law after studies at Göttingen, Berlin, Munich and Heidelberg, he entered the civil service at Münster. This he soon left to study for the priesthood in the Catholic Church. Ordained in 1844, he became, through his talents and

his family connections, bishop of Mainz in 1850. He at once became the champion of the Catholic Church whose power and freedom from state control in Germany he labored to build up. He was, therefore, constantly in opposition to the policies of the chancellor and the royal family, a position he maintained to his death. Among his published works are *Freiheit, Autorität und Kirche* (1862); *Die wahren Grundlagen des religiösen Friedens* (1867); *Das allgemeine Konzil* (1874); *Die Katoliken im Deutschen Reiche* (1873). His works are still read in Catholic circles in Germany, where von Ketteler is looked upon as the greatest of modern German champions of the church.

KETTERING, Charles Franklin, American engineering executive and inventor: b. near Loudonville, Ohio, Aug. 29, 1876. Following education in district schools and graduation as an engineer from Ohio State University in 1904, he joined the National Cash Register Company at Dayton, Ohio. He rose rapidly to chief of the inventions department, resigning in 1909 after having designed a small universal motor for the first electrically operated cash register, and other register appliances. Subsequently he became vice president of the Dayton Engineering Laboratories Company (Delco), which in 1916 was absorbed by the United Motors Corporation (now General Motors). In 1917 he became president and general manager of the General Motors Research Corporation, later becoming vice president of the parent corporation and director of its Research Laboratories Division until his resignation in June 1947.

Recognized as one of the world's leading automotive engineers and inventors, Mr. Kettering's outstanding contribution was the self-starter (1911), which ended the hand-crank era in motoring, permitted the building of more powerful engines, and sped the advent of mass ownership of cars. During his career, he also invented or shared in the invention of Delco lighting (1916); ethyl antiknock gasoline (1922), for which his assistant, Tom Midgely, received credit as the inventor; Duco paint; crankcase ventilation (1925); the electric Frigidaire; a pioneering modern Diesel engine (1933-1934), which made possible the application of Diesel power to railway traction; and the hypotherm, which treats a variety of pathological conditions by artificially induced heat.

In 1947 he added to his accomplishments the revolutionary design of a superhigh compression engine which is considered practicable for near-future automotive manufacture, and which is expected to result in significant fuel economy. He has also financed and advised an intensive study of photosynthesis at Antioch College (Yellow Springs, Ohio), and helped establish (1945) and administer the Sloan-Kettering Institute for Cancer Research.

KETTLE CREEK, Battle of (Feb. 14, 1779), an engagement of the Revolution fought near Washington, Wilkes County, Ga., about 50 miles northwest of Augusta, which resulted in a complete check to the British invasion of Georgia. The hastily assembled Colonials were under command of Col. Andrew Pickens, Col. Elijah Clarke and Col. John Dooly. The fleeing enemy threw their kettles and camp utensils into the creek, hence the name.

KETTLE HOLE, a pit or depression in glacial outwash or morainic plain. These kettles are often occupied by small lakes. They may be merely depressions due to unequal deposition, but are more often caused by the melting of buried blocks of ice.

KETT'S REBELLION, an uprising in England under the leadership of the Kett brothers, in 1549. William and Robert Kett, landowners of Wymondham, Norfolk, were men of considerable influence in their own neighborhood. The people of the district rose in arms against the enclosure of common land and the eviction of tenants therefrom. Robert Kett, lord of the manor of Wymondham, was induced to join them as their leader; and with him went his three brothers. He soon had at his command 16,000 men under excellent discipline. This force proceeded to petition the Privy Council in London stating respectfully but fully their grievance. The answer of the government was to send against the insurgents a strong force under the Earl of Warwick. In the meantime Kett had captured Norfolk (Aug. 1, 1549). But he was finally defeated at Dussindale, in a bloody battle in which both sides suffered heavily. The government forces won the day with the help of German troops provided with firearms which gave them a great superiority over the peasantry provided only with longbows and crossbows. In the battle 3,500 of the insurgents perished and many more met death on the scaffold, among them the two Kett brothers.

(Consult Russell F. W., *Kett's Rebellion*, London, 1850).

KEUKA, kū'kā, or CROOKED LAKE, a body of water in New York state extending from Steuben County to Yates County, a distance of 18 miles. It is about 1½ miles wide and of irregular form. It has a depth of 200 feet and lies 718 feet above the sea. Steamboats navigate the lake in summer between Hammondsport and Penn Yan. The waters flow eastward to Seneca Lake. Keuka Lake is one of the Finger Lakes.

KEUPER, koi'pēr, a red sandy clay, in its primary signification, and in its secondary, the topmost division of the Triassic system in Europe. In both Germany and England the chief rocks in the Keuper are marl, sandstone and gypsum.

KEW, kū, a village, England, located in the county of Surrey, six miles from Hyde Park Corner, on the right bank of the Thames, opposite Brentford, with which it is connected by a bridge. The Royal Botanic Gardens and the connected pleasure grounds, the former covering about 75 acres, the latter 250, are the chief attraction of visitors to Kew. They contain the finest collection of plants in the world, and are decorated with various ornamental buildings, including a Chinese pagoda 163 feet high. Kew Palace is close by the northern entrance. Thomas Gainsborough, the celebrated artist, is buried in Kew churchyard.

KEW OBSERVATORY, a celebrated astronomical structure in Richmond Park, between Kew and Richmond, Surrey, England. It was built by George III as a private enterprise for the observation of the transit of Venus in 1768 and was then called the King's Observatory. It

was transferred to the British Association as a physical observatory in 1841, and given its present name. In 1871 it was placed under the control of the Royal Society.

KEWANEE, kè-wōn'è, city, Illinois, in Henry County; altitude 853 feet; on the Chicago, Burlington and Quincy Railroad, 131 miles southwest of Chicago. Distinctly an industrial city, it has manufactures of work-gloves and mittens, tools, and valves and fittings. Kewanee is well equipped with parks, playgrounds and recreational centers, the acreage devoted to parks exceeding 300. In 1836 settlers from New England founded, in what is now the southern section of Kewanee, a community called Wethersfield. In this year John Kilverton built the first log cabin, which now stands on the high school grounds. Kewanee, a new settlement founded in 1854, was incorporated as a city in 1897. In 1924 it absorbed the older settlement; the name Wethersfield, however, is still retained in local use as a neighborhood name. The city has commission government. Pop. (1940) 16,901; (1950) 16,770.

KEWAUNEE, kè-wō'nè, city, Wisconsin, Kewaunee County seat; altitude 586 feet; on Lake Michigan, at the mouth of the Kewaunee River; 120 miles north of Milwaukee; on the Kewaunee, Green Bay and Western Railroad; connected by car ferry with the Ann Arbor, and Pere Marquette railroads; has municipal airport. Its industrial products are aluminum ware, machinery, and office, school, and church furniture. A fur trading post was established here in 1795. A rumored gold discovery brought many settlers in 1836. Kewaunee has mayor and council. Pop. (1940) 2,533; (1950) 2,576.

KEWEENAW, kè-wé-nò, **BAY**, an arm of Lake Superior, north of Michigan. It is eight miles long, by two to six miles in width. The tip of Baraga lies at the head of the bay.

KEWEENAWAN, kè-wé-nò'an, **SERIES**, a great series of rocks, believed to be of pre-Cambrian age, typically developed on Keweenaw Point, Mich., but found over a large area in Michigan, Wisconsin and Minnesota. Rocks of the same age occur also in Canada, and possibly in the Adirondack Mountains in New York. They constitute the upper series of the Algonkian system. The series on Keweenaw Point and southward has a maximum thickness of perhaps 4,000 feet; the lower part consists mostly of thick sheets of lava and intrusive rocks with some sandstone and conglomerate; the upper part is a mass of sedimentary rocks. In the series occur the famous Lake Superior copper deposits.

KEY, SIR Astley Cooper, British admiral: b. London, 1821; d. 1888. After varied service in the British Navy, in South American waters, the Baltic and China, he became director of naval ordnance in 1866, and 12 years later president of the Royal Naval College at Greenwich, which he had organized. The following year he was knighted and raised to the rank of vice admiral and to full admiral in 1878 after having been commander in chief on the North American and West Indian stations. He had been steadily working to increase the efficiency of the British Navy which owes very much to his well-directed and sustained efforts. In 1882 in recognition of his services he was made senior naval lord of the Admiralty.

KEY, David McKendree, American jurist and Cabinet officer: b. Greene County, Tenn., Jan. 27, 1824; d. Chattanooga, Tenn., Feb. 3, 1900. After studying law he was admitted to the bar in 1849, and in 1853 took up his residence in Tennessee, establishing a successful law practice at Chattanooga. After vainly attempting to prevent the secession of Tennessee, when once that step was taken he joined the Confederate Army and served through the war, but at its close joined the Republican Party, succeeded Andrew Johnson in the United States Senate (1875); in 1877 was made postmaster general; and in 1880 was appointed United States district judge for the eastern and middle districts of Tennessee, a position he held till 1894.

KEY, kē'i, Ellen Karoline Sofia, Swedish social writer: b. Sundsholm, Dec. 11, 1849; d. Lake Vettern, April 24, 1926. She descended from a line of semi-noble ancestors. At the age of 20 she became secretary to her father, Emil Key, who was then a prominent member of the Riksdag. About this time she became noted as a contributor to the magazines and periodicals of her native country, dealing with literary, historical and later sociological subjects. She was forced to teach in a private school when her father lost his fortune but this did not prevent her lecturing and continuing her magazine and newspaper writing which was yearly increasing her reputation. The sale of her writings soon permitted her to give up teaching and to travel and lecture in foreign countries. She was a very advanced thinker and so she became a storm center between 1890 and 1910. Bitterly assailed by her opponents she was admired and supported and read by everyone, with the result that her books have been translated into most of the languages of Europe. Among her publications, are the following: *Ideas* (1898); *The Century of the Child* (1900); *Love and Ethics* (1911); *Rahel Vornhaagen* (1913); *The Renaissance of Motherhood* (1914); *The Younger Generation* (1914); *The Misuse of Woman's Power*; *Lines of Life* (1903-1906).

KEY, kē, Francis Scott, American lawyer and author of the national anthem, *The Star-Spangled Banner* (q.v.): b. Frederick Co., Md., Aug. 1, 1779; d. Baltimore, Jan. 11, 1843. Educated at St. John's College, Annapolis, he practiced law in Frederick City, then removed to Georgetown, D.C. After witnessing in a fever of anxiety from an American cartel ship the British fleet's bombardment of Fort M'Henry near Baltimore on the night of Sept. 13-14, 1814, he wrote the anthem as he was rowed ashore on the 14th, and made his final draft that night in a Baltimore inn. Sung to the tune of *To Anacraon in Heaven*, it achieved immediate popularity. Key served as United States attorney for the District of Columbia (1833-1841). The slim volume of his poems, published 1857, also contains the hymn, *Lord With Glowing Heart I'd Praise Thee*.

KEY, in heraldry, a heraldic bearing used in ecclesiastical connections. The idea of its use originally seems to be that the places bearing it were under the protection of Saint Peter, the

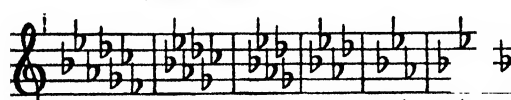

traditional bearer of the keys of heaven. This use of the symbol is based on a verse of the New Testament (Matthew 16:19; see also KEYS, POWER OF THE) and dates from the 5th century if not earlier. Papal arms frequently incorporate crossed keys, one of silver, one of gold, tied together by a cord. This symbol is found on the flag of Vatican City. Keys are also the symbol of St. Geneviève in art, but these are the keys of the city of Paris.

KEY, in music: (1) A mechanical contrivance for closing or opening vents, as in flutes or clarinets. By means of keys on such instruments, apertures too remote to be reached by the outstretched fingers are brought under control of the player.

(2) A lever which brings the pallets of an organ under the control of the hand or foot of an organist.

(3) A lever which controls the striking apparatus of a key-stringed instrument. In the harpsichord it acted on the jack; in the piano-forte it acts on the hammer. See also **KEYBOARD**.

--- FLAT KEYS ---

MINOR a^b e^b b^b f c g d

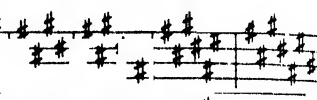

NATURAL

C G D A E B $F^\#$ $C^\#$

a e b $f^\#$ $c^\#$ $g^\#$ $d^\#$ $a^\#$

--- SHARP KEYS ---

Signatures and letter names of the keys.

(4) The starting point of the definite series of sounds which form the recognized scale. Different starting points require the relative proportion of the steps of the scale to be maintained by means of sharps or flats in the signature. The keys of C major and A minor require no flats or sharps for this purpose, hence are called natural keys. See also **MUSICAL ELEMENTS AND TERMS**.

KEY WEST, kē' wěst', city, Florida; seat of Monroe County; altitude 25 feet. The southernmost city in the United States, it is situated about 60 miles off the tip of Florida on Key West Island. The island, some 4 miles long and 2 miles wide, is at the southwestern end of the chain of coral islands called the Florida Keys. It is a port of entry and has passenger and freight air service to Miami and Havana. The principal industrial occupations are fishing, canning (turtle soup), and manufacture of cigars in limited quantity.

The city has a public library, an art gallery, and two private hospitals. The United States Navy and Civil Aeronautics Authority maintain radio plants. Among the points of interest are the naval station, an aquarium with exhibits of tropical fish, and the East and West Martello Towers—ruins of twin circular army forts of early Civil War days. The fish markets and turtle crawls also are of great interest.

In 1912 the Florida East Coast Railroad extended its line to Key West, giving through passenger and freight service to New York. The extension of the line was a notable engineering feat, but service between Key West and the mainland was not particularly successful. After being badly damaged by the hurricane of 1935,

it was no longer used for rail transportation, and with Public Works Administration financing, was converted into the Overseas Highway, completed in 1938. Many of the bridges abandoned by the railway have been incorporated into the highway structure.

The name Key West is explained as a distortion of the Spanish Cayo Hueso, meaning Bone Island. The word *key* is a corruption of the Spanish *cayo*, island. In 1815 the Spanish governor, Juan de Estrada, gave Key West to an army officer, Juan Pablo Salas, who sold it in 1822 to John Simonton of Mobile. Simonton organized a company to exploit the island's resources. The city was incorporated Jan. 8, 1822. Government is by city manager and commissioners. Pop. (1940) 12,927; (1950) 26,433.

KEYBOARD, the name given to a set of keys through which the tones of certain musical instruments are produced. The principal instruments which are at present operated in this way are the piano and organ. It is in connection with the latter that keys and key-

boards were first used. Their employment can be traced back to pre-Christian times, but little is known concerning them until we come to the Middle Ages. The organ keys of this time were huge, unwieldy affairs, each key being from three to six inches wide and correspondingly long. They were not operated by the fingers, of course, but the entire fist or elbow was used in their manipulation, a circumstance which made it impossible to play more than one note at a time with each hand. The keyboards of the period were limited in range, and confined almost entirely to the so-called diatonic tones (represented at present by the white keys). Later the sharps and flats (black keys) were added, and the size of the keys was gradually reduced to the present dimensions.

Keyboard with corresponding staff notation.

The clavichord and harpsichord, precursors of the piano, were further keyboard instruments. Here, also, there was a development from primitive conditions, but essentially the nature of the keyboard, when once established, was similar to that of the modern piano.

The piano keyboard, which is shown in the illustration, consists of 88 members or keys, 52 being white and 36 black. As is apparent, the latter are arranged in alternate groups of two and three keys. Thus the keyboard is divided into recurrent sections, known as octaves. More specifically, an octave is the distance from one key to the next one that is similarly placed. For example, the distance from the middle one of the three black keys near the centre of the keyboard, to the same key either right or left, is an octave. C is the white key immediately to the left of the group of two black keys. B and A successively follow to the left of this, D, E, F and G to the right. After G a new octave commences with A. The black keys are named after the adjoining white keys, and are called sharps when derived from the white keys immediately to the left, and flats when derived from those immediately to the right. Thus the first of the group of three black keys, counting from the left, may be either F sharp or G flat, the next, G sharp or A flat.

The organ keyboard is similar to that of the piano, only the number of keys is smaller. This does not imply, however, that the range is smaller too, for it is possible to raise or lower the pitch of the keys by means of the mechanical devices known as stops. The organ, unlike the piano, generally makes use of several keyboards, which are called manuals. These are placed above each other, and their number may reach up to five. Besides, there is a distinct series of keys to be operated by the feet, which is known as the pedal board. By means of the various manuals it is possible to produce a variety of successive effects; likewise to combine these effects through the use of different manuals for the two hands, and the reinforcement of the same, if desirable, by the pedal board. Furthermore, it is possible to combine all the manuals and pedal board in a grand total effect.

Although improvements and changes have constantly been made in the tone and mechanism of keyboard instruments, so great in some cases as to result in the formation of new instruments, no change has been made for centuries in the arrangement of the keys. Under the circumstances it is natural that this matter should also receive the attention of innovators. Is it likely, we are asked, that an arrangement which grew up under conditions as primitive as those of the Middle Ages, and which was intended for the crude application of fist and elbow, should also be the ideal one for the delicate fingers, so different in strength and shape? This supposition being rejected, various changes have been suggested, some of a mild nature, some radical in their scope. For example, instead of the straight, side-by-side alignment of the keys, one which is slightly fan-shaped, and with an inward curve, has been suggested. But entire redispositions of the keys, too, have been proposed, the most notable recent attempt in this direction being that of Paul von Jankó, a Hungarian inventor. He has devised a keyboard with six parallel rows of keys, one row behind the other, and each successive row slightly elevated above its anterior neighbor. One advantage of this arrangement is to be found in the immense simplification of performance in the different keys which it allows. It is necessary to learn only two

scales — one major, one minor — instead of the present 24. Furthermore, an octave can be spanned with about the same ease as a sixth on our actual pianos.

The invention is ingenious, and the new keyboard made considerable headway for a time; but the prospects for its universal adoption are meagre. Whatever the disadvantages of the present keyboard, it has the advantage of actual possession of the field. The substitution of a new system would involve the discarding of present instruments, the relearning of the art by those who were educated in the old way, and the abandonment of valuable pedagogical works adapted to the piano and organ as they are. It would correspond, in the realm of music, to the introduction of radical changes in the system of weights and measures, or in the spelling of entire languages. So great are the difficulties involved, indeed, that it is doubtful whether the change will ever be made. The present keyboard, firmly imbedded in the musical life of the world as it is, seems destined to retain the supremacy which it has so long enjoyed.

ALBERT GEHRING,

Author of 'The Basis of Musical Pleasure,' etc.

KEYES, Charles Rollin, American geologist: b. Des Moines, Ia., 24 Dec. 1864. Educated at State University of Iowa and Johns Hopkins, he became assistant to the United States Geological Survey (1889-90); paleontologist to the State of Missouri (1890-92); assistant geologist for the State of Iowa (1892-94); director of the geological survey of the State of Missouri (1894-97). The following two years he spent in travel and geological studies in Europe, Asia and Africa. On his return he became president of the School of Mines of the State of New Mexico, a position he gave up in 1906 to continue his geological foreign studies. Since then he has been consulting mining engineer in Des Moines, Iowa. Among his published works are 'Geological Formations' (1892); 'Coal Deposits' (1893); 'Organization of Geological Surveys' (1894); 'Paleontology of Missouri' (1894); 'Surveys' (1894); 'Maryland Granites' (1895); 'Origin and Classification of Ore Deposits' (1907); 'Ozark Lead and Zinc Deposits' (1909); 'Bibliography of Geology' (1913); 'Orogenic Consequence of a Diminishing Rate of Earth's Rotation' (1922); 'Astronomical Theory of Glaciation' (1925).

KEYES, kēz, Edward Laurence, American surgeon: b. Charleston, S. C., 28 Aug. 1843; d. New York, N. Y., 24 Jan. 1924. He was graduated from Yale in 1863 and from the medical department of the University of New York in 1866. He practised his profession in New York from 1867, and from 1869 to 1871 was a member of the faculty of Bellevue Hospital Medical College. He published 'Tonic Treatment of Syphilis' (1877; rev. ed., 1896); 'The Venereal Diseases' (1880); 'Treatise on Surgical Diseases of the Genito-Urinary Organs' (1881; 2d rev. ed. by E. L. Keyes and E. L. Keyes, Jr., 1905), etc.

KEYES, Erasmus Darwin, American soldier: b. Brimfield, Mass., 1810; d. 1895. In 1832 he was graduated at the United States Military Academy, West Point, and in the same year was stationed in Charleston, S. C., subsequently he was for several years engaged in suppressing Indian outbreaks on the frontier and in

garrison duty. When the Civil War broke out, Keyes was made colonel of the 11th Infantry and deputed to New York to organize the relief expedition to Fort Pickens. In May 1861, he was made brigadier general of volunteers and two months later participated in the first battle of Bull Run. Subsequently Keyes commanded the Fourth Corps in the Peninsular Campaign during which he was constantly in active service.

KEYNES, kânz, John Maynard (1st BARON KEYNES OF TILTON), English economist and financial expert: b. Cambridge, England, June 5, 1883; d. Tilton, Fife, Sussex, England, April 26, 1946. He was educated at Eton and King's College, Cambridge; served as a minor official in the revenue department of the India Office (1906–1908); and returned to Cambridge in 1908 as a lecturer in economics, a position he held until his death. A member of the Royal Commission on Indian Finance and Currency (1913–1914), he joined the Treasury Department in 1915, and in 1919 went to the Paris Peace Conference as principal representative of the Treasury and as deputy for the chancellor of the exchequer on the Supreme Economic Council. Convinced of the economic impossibility of the reparations clauses of the Versailles Treaty, he resigned in protest from the Treasury in June 1919 and later that same year published his best-known work, *The Economic Consequences of the Peace*. During the 1930's he diagnosed the cause of the depression as a lack of mass purchasing power caused by severe deflation and recommended wide government spending to restore prosperity. Although this theory did not win much favor with the British government, it formed the basis for President Franklin D. Roosevelt's New Deal recovery program. A member of the Committee on Finance and Industry from 1929–1931, he was appointed to the Treasury Consultative Council in July 1940. The next year he was elected a director of the Bank of England, and in 1942 was named first baron of Tilton. During World War II he urged that the government take steps to avoid inflation by a plan of "deferred savings," and certain of his suggestions were adopted in the British wartime budget. He played a leading role in helping to crystallize the plans for a world bank and stabilization of international currency at the United Nations Monetary and Financial Conference at Bretton Woods, N.H., in July 1944. Shortly before his death, he had served as chief negotiator of the British loan, and in March 1946 as a member of the International Monetary Conference at Savannah, Ga., where he participated in the first meeting of the governors of the World Bank and Fund, of which he was elected a vice president. He was generally considered to be Great Britain's most brilliant and influential economist. His works include: *A Treatise on Probability* (1921); *A Revision of the Treaty* (1922); *A Tract on Monetary Reform* (1923); *A Short View of Russia* (1925); *The End of Laissez-Faire* (1926); *A Treatise on Money* (1930); *Essays in Persuasion* (1931); *Essays in Biography* (1933); *The General Theory of Employment, Interest, and Money* (1936); *How to Pay for the War* (1940).

KEYNES, John Neville, English economist: b. Salisbury, Aug. 31, 1852. He was educated at London and Cambridge universities and later served as a fellow at both schools. He was

the father of John Maynard Keynes (q.v.). Among his published works are *Studies and Exercises in Formal Logic* (1884, 4th ed. 1906, reprinted 1928) and *Scope and Method of Political Economy* (1891, 4th ed. 1917, reprinted 1930).

KEYPORT, New Jersey, borough in Monmouth County; altitude 30 feet; on Raritan Bay and on the Central Railroad of New Jersey, 15 miles south of Jersey City. Its industries include boat building, airplanes, and furniture. Keyport had white settlers as early as 1665; oysters were planted there in Chingarora Creek in 1714. It was incorporated as a borough in 1908, it has a mayor and council. Pop. (1950) 5,888.

KEYS, Power of the. A doctrine based on the saying of Jesus recorded in the gospel of Matthew xvi, 19: "And I will give unto thee the keys of the kingdom of heaven: and whatsoever thou shalt bind on earth, shall be bound in heaven: and whatsoever thou shalt loose on earth, shall be loosed in heaven." In the Roman Catholic Church there have been many variations of the doctrine. Some have held that only a priest of pure life could absolve from sin, while others have held that any priest could pronounce absolution as the representative of God. Some have held that the priest could release only from "transitory" punishment and that only God could release from "eternal punishment." Another difference has arisen; some declared that the priest is absolving as a judge, and others that he is acting as a mediator, while a third group declared that he combined both functions.

The Protestant view is based on a different interpretation of the passage. The power of the keys was given to Peter as a sign of apostolic authority to establish the Church by preaching the forgiveness of sin and the establishing of the doctrine of the gospel.

KEYSER, kî'sēr, Cassius Jackson, American mathematician: b. Rawson, Ohio, May 1, 1862; d., New York, N.Y., May 8, 1947. He received his B.S. from Ohio Normal University in 1883 and studied at the universities of Missouri, Michigan, and Columbia, obtaining his Ph.D. from the latter in 1901. He was Adrain professor of mathematics at Columbia from 1904 until his retirement in 1927. His publications include *Mathematical Philosophy*.

KEYSER, kî'zēr, Ephraim, American sculptor: b. Baltimore, Md., Oct. 6, 1850; there, Jan. 26, 1937. He first studied art in Baltimore and later at the royal academies of Munich and Berlin. He taught sculpture and modeling at the Maryland Institute of Art and is remembered for such work as his statue of Maj. Gen. Johann deKalb at Annapolis, Md., and the statue and tomb of President Chester Arthur at Rural Cemetery, Albany, N.Y. He made portrait busts of several famous men, including Cardinal Gibbons and Sidney Lanier.

KEYSER, Leander Sylvester, American clergyman: b. Tuscarawas County, Ohio, May 13, 1856; d. Springfield, Ohio, Oct. 18, 1937. He was educated at Ohio Northern and Indiana universities and graduated from the Hanna Divinity School of Wittenberg College, Springfield, Ohio, in 1883. He was a minister in several middle-western, Lutheran churches and in 1911 became

a professor of theology at Hanna. He was also a student of natural history and published several books on ornithology and theology.

KEYSER, kī'zēr, city, West Virginia, and seat of Mineral County; altitude 805 feet; on the north branch of the Potomac River; 22 miles southwest of Cumberland, Md., and 58 miles west of Martinsburg; on the Baltimore and Ohio and Western Maryland railroads. It is in a hilly but fertile agricultural region growing strawberries, apples, and garden truck. The city has railroad shops, knitting mills, pottery, and bottling works. It was a supply point and battle ground in the Civil War. The early settlement was called New Creek. It was renamed and incorporated in 1874, and became a city in 1913. The government is by a mayor and three councilmen elected by the people. Pop. (1940) 6,177; (1950) 6,347.

KEYSERLING, kī'sēr-ling, **COUNT Hermann Alexander**, German philosopher: b. Könno (Russian Livonia), now Estonia, July 20, 1880; d. Innsbruck, Austria, April 26, 1946. He studied zoology, chemistry, and geology at various schools including Dorpat (now Tartu), Heidelberg, and Vienna. Before World War I, he was recognized as a person of marked ability. After the war, deprived of his possessions in Russia (his family were German-speaking nobility of Baltic Russia) he established the Society for Free Philosophy at Darmstadt and became widely known as a lecturer. An outspoken opponent of the Nazis, he was deprived of his German citizenship in 1934, although it was later restored because of adverse world opinion. Finally in 1942, he took refuge at Innsbruck after the Nazis had declared him "unworthy to represent the German spirit."

His writings include many political and social articles but his best-known work is *The Travel Diary of a Philosopher* (1925).

Among his other books are *The World in the Making* (1927); *Creative Understanding* (1929); *South American Meditations on Hell and Heaven*; *The Soul of Man* (1932); *Problems of Personal Life* (1934); *Art of Life* (1937); *Immortality* (1937); *From Suffering to Fulfillment* (1938).

KHABAROVSK, kŭ-hā'rŭfsk, city, USSR, capital of Khabarovsk Territory, about 300 miles north of Vladivostok on the Trans-Siberian Railroad. It is situated at the junction of the Amur and Ussuri rivers, and is a place of commercial importance, which has grown steadily since its foundation as a military station in 1858. Pop. (1939) 199,364.

KHAIBAR PASS. See **KHYBER PASS**.

KHADIJA, kă-dē'jā, wife of Mohammed (556-619). Daughter of Khuwailid and twice widowed, she was wealthy, about 40 years old and 15 years his senior when she married the prophet. She bore him three sons and four daughters. See **MOHAMMED**.

KHAFRE, Egyptian king of the IV dynasty. The Chephren (Χεφρην) of Herodotus, he built the second pyramid of Gizeh; the tomb chamber contains a granite sarcophagus. In the monumental approach to the pyramid, a granite and alabaster edifice misnamed the temple of the

Sphinx, A. E. Mariette (q.v.) found in 1853 a magnificent green diorite statue of the monarch, and debris of eight other statues. A brother and successor of Cheops, who built the first and largest of the pyramids, Khafre ruled for 56 years. The Egyptians so hated the memory of these tyrannical brothers that they called the pyramids not by their names but by that of a shepherd, Philiton, who tended his flocks nearby. See also **EGYPT—History**.

KHAKI, kāk'ī, a light-brown drab fabric used for military uniforms. It was introduced by Sir H. B. Lumsden for making uniforms for British East Indian regiments. In the South African War of 1899-1902 the British troops wore khaki uniforms for purposes of protective coloration. Khaki was also worn by the United States troops in the Spanish-American War, World War I and World War II. The name is derived from the Persian *khak*, meaning earth, dust; hence earth-colored, to render the wearer inconspicuous.

KHALIFA, kă-lē'fā, **The**, an Arab title meaning successor, adopted as his by **ABDULLAH ET TAAISHA**, the successor of the Mahdi (Mohammed Ahmed). Born in Darfur, he was one of the Bagara Arabs engaged in the slave trade who resisted the Egyptian annexation of his native province. On his way to Mecca, he came into contact with Mohammed Ahmed, the native of Dongola who was then plotting a general insurrection. Chiefly because of Abdullah's influence, the wild tribes of the southern Sudan acknowledged Mohammed Ahmed as a prophet, and Abdullah became the Mahdi's confidential adviser, and on Mohammed Ahmed's death, June 1885, he succeeded to the tyranny.

His capital was situated at Omdurman, near which, on Sept. 2, 1898, his army, though fighting with great bravery, was almost annihilated by the British and Egyptian forces under Sir Horatio Kitchener (Lord Kitchener). Abdullah escaped north to Kordofan but on Nov. 25, 1899, he was slain at the combat of Om-Debrakat.

KHAMA, kă'mā, a Christianized native African chief of a tribe in northern Bechuanaland: b. about 1846; d. Feb. 1923. Originally head only of the Bamangwato, a northern tribe of his country, owing to his struggle against the Boers he came to represent the interests of all of Bechuanaland. In 1884, after 12 years' struggle against the Boers on the part of Khama and other native chiefs, the whole of Bechuanaland was taken under British protection. Khama stood the firm friend of the British and assisted them against other insurgent tribes.

KHAN, kăn or kân, an unfurnished inn for travelers common in Turkey and other Eastern countries. There are two kinds, those for poor travelers and pilgrims, where a lodging is furnished gratis, and those for traders, which are usually more convenient, a small charge being made for each chamber. Khan is also the title of an Eastern or Asiatic ruler, as khan of Khiva. Such government is a khanate.

KHANDESH, khân-dēsh', or **CAN-DEISH**, Bombay, India, with an area of 10,041 square miles. In 1906 the district was divided into two new districts called West and

East Khandesh. Dhulia is headquarters for West Khandesh which has 5,320 square miles and a population (1941) of 912,214. East Khandesh, with Jalgaon for its chief city, has 4,598 square miles and a population (1941) of 1,327,722.

KHARGA, El, kār'gā, or **KHARGEH**, Upper Egypt, town, capital of the oasis of the same name in the Libyan Desert, 100 miles west of Thebes, in 25° 28' N., 30° 40' E. Among its numerous ruins are those of a temple of Ammon, and nearby is a remarkable necropolis. Pop. about 6,000.

KHARKOV, kār-kōf', (1) a northeastern oblast in the Ukrainian Republic of the USSR, bounded north by Sumy and Kursk, west by Poltava, east by Voroshilovgrad, and south by Dnepropetrovsk and Stalino. The area is a partially wooded steppe watered by tributaries of the Dnieper and Don rivers, and with a continental climate. Agriculture and stockraising are the chief occupations, the major products being grain, sugar beets, sunflower seeds, meat and dairy products. Potatoes and tobacco are other important crops. The principal city is (2) Kharkov, the oblast capital, and until 1934 capital of the Ukraine. The city was founded in the 17th century, and is 460 miles southwest of Moscow on the direct railway to the Crimea. Modern Kharkov is the 4th largest center of machine-building industry in the USSR, and has one of the largest tractor factories in Russia. Before World War II, it was the 4th largest city in the USSR. It is the Ukraine's largest industrial center and is supplied with steel and coal from the nearby Donets Basin. Besides tractors, the city manufactures airplanes, turbines, electric generators, locomotives, machine tools, farm implements, and military tanks. There also are large pulp and paper mills, woolen mills, and food processing, glass and shoe factories. During World War II, the city was badly devastated. Pop. (1939) 833,434.

KHARTOUM, kār-tōom', or **KHARTUM**, capital of Anglo-Egyptian Sudan, on left bank of the Blue Nile, near its junction with the White Nile. Founded under Mehemet Ali in 1823, it rapidly rose to be the chief town of the Egyptian Sudan, but after its conquest by the Mahdi it was abandoned for Omdurman, on the opposite bank of the river. In the latter part of 1898 it was again occupied by British and Egyptian troops, who found it in a ruined and neglected condition. It was then a straggling place covering a wide area, with irregular streets and houses mostly built of sun-dried bricks. Since the British occupation the town has prospered, great improvements have been carried out, and a handsome broad avenue on the bank of the Blue Nile has been laid out. There are a number of mosques, a Coptic church and the palace of the governor general. The strong strategic situation of Khartoum, with rail connections to Upper Egypt and the Red Sea, and water routes to Abyssinia, Uganda and the Belgian Congo, make it the natural emporium of a vast region. It was the scene of Gordon's heroic defense against the insurgent Sudanese and of his death in January 1885. The Gordon College, established here after the British occupation, was named in honor of him. This college trains aspirants for

minor magistracies in their work, has a manual training school and a well-equipped research laboratory. Pop. (1938 est.) 44,811.

KHASI, kā'sē, a section of India, occasionally said to be the rainiest area in the world. The Khasi States consist of 25 chieftanships, varying in importance, with a total area of 3,694 square miles. Myllem and Khyrim are the largest of the states. They are under the political control of the governor of Assam, with the capital at Shillong. The area was conquered by the British in 1833, but the government was left to the individual chiefs. The region abounds in fruits, plants, and vegetation of all sorts, and oranges, potatoes, and pineapples grow in profusion. The natives have had a low degree of civilization, and there have been examples of cannibalism. Valuable missionary work has been done among the people, however, with educational, religious, and medical training, and a large percentage of the population is Christian. Pop. (1941) 213,586.

KHASKOVO, kās'kō-vō, or **HASKOVO**, a town in south central Bulgaria, the capital of a department by the same name. It is situated on the country's main railroad line, and the important farm products of the area are grain and tobacco. Pop. (1934) 26,516.

KHATANGA, a river of the USSR in Siberia, its entire course being within the Arctic Zone. It flows through the Siberian tundra east of the Taimyr Peninsula into the Arctic Ocean. It has a vast glacially eroded estuary, the Bay of Khatanga. Its length is about 460 miles. The town of Khatanga is the most important of several valley settlements.

KHAYYAM, Omar. See OMAR KHAYYAM.

KHAZARS, a people of the Finnic stock known in the 7th century on the shores of the Caspian; in the 9th century their kingdom occupied the southeast part of Russia from the Caspian and the Volga to the Dnieper. Their capital was long at Astrakhan, called by them Balandshar. They were singularly tolerant of all religions, Jewish, Christian and Moslem; and a large part of the nation formally adopted the Jewish faith from Jews who fled from the persecutions of the Emperor Leo. It is not improbable that the modern Jews of Russia have at least an admixture of Khazar blood. Cyril converted many to Christianity in the 9th century. The power of the Khazars was broken in 965 by Sviatoslav. In the early part of the next century the destruction was completed by the Byzantine emperors and the Russians.

KHEDIVE, kē-dēv' (*Khidiv*), a Persian word signifying lord, the former title of the pasha of Egypt, granted by a firman from sultan June 12, 1867. In Persia it was at different eras adopted by provincial governors who were independent of the shah. The title, which had fallen into disuse both among Persian and Turkish governors was revived in Egypt to give additional honor to Ismail Pasha (1830-95), after whom the title was borne by his son and grandson, Mohammed Tewfik and Abbas II (q.v.). The latter was deposed on Dec.

914; the title of khedive was abolished and that of sultan substituted in its place.

KHELAT, or **KELAT**, *kē-lāt*, capital of Baluchistan, and residence of the chief khan of all the khans of Baluchistan. It is situated at an elevation of 6,780 feet above sea level on the sloping side of a mountain and it is surrounded by an ancient, massive abode wall, in places over 30 feet in height and of great thickness. The chief fortification of the city consists of the citadel surrounding the royal palace, the residence of the khan. The town has few industries but it is the centre of considerable local and foreign trade, the latter coming to it through its situation on various caravan routes reaching out to important neighboring industrial and commercial centres. The English forces took possession of Kelat during the Afghan War (1839); and since then the country has continued to maintain more or less close relationship with the British government, which obtained by treaty the right to have a British agent and military escort housed in the palace (1877). Since then British influence has been steadily on the increase. Pop. about 18,000.

KHERASKOV, *kēr'a-skōf'*, **Mikhail Matveevitch**, Russian poet: b. Pereyaslav, Poltava, of a Wallachian family, 1733; d. 1807. He began life as a soldier, but became assessor at the University of Moscow in 1755, in which institution he remained most of his life (1755-1801), devoting all his spare time to literature, pedagogy and journalism. He attempted almost every field of literary endeavor, but met with most success in the tragic drama, novel and fables. His most lengthy work is the 'Rossyad' (in 12 books) which is woven about the invasion of Kazan by Ivan the Terrible. It shows distinctly in form and manner of treatment, the influence of the 'Æneid' but it is quite Russian nevertheless.

KHERSON, or **CHERSON**, a former province and capital of the same name in Ukraine Russia. It lies between Kiev and Poltava on the north, Yekaterinoslav on the east, the Black Sea on the south and Padolia andessarabia, and has an area of over 27,000 square miles, of practically flat country lying at a very low elevation. Though watered by the Dniester, Bug and Dnieper, much of the country suffers frequently from insufficient rainfall. Among the industries of Kherson are foundries (principally for iron), machine shops, carriage and wagon factories, flour mills, agricultural machinery works, leather, hemp and wool establishments and marble and granite quarries. Stock-raising and fruit-growing form the chief agricultural pursuits of the south, while grain-growing is more popular in the north, and tobacco and wine are produced in favored localities throughout the whole "government." Population 3,500,000, principally Russians, with an admixture of Greeks, Germans, Bulgarians and Jews. Kherson, the capital, has a population of over 80,000, composed about the same as that of the "government" except that the Jews number over 30,000. It lies on the Dnieper, about 20 miles from its mouth. It is a distributing point to the interior for Odessa and Nikolaev of the imports of these centres of trade; and it helps to furnish exports for the foreign commerce of the district, especially in hides, flour, tallow, beer, wool and soap. Kherson is

one of the most progressive cities of southern Russia; it is modern in appearance and pleasing and the buildings are well constructed. It possesses an obelisk erected to the memory of John Howard who died there (1790). Among the industrial establishments of the city are tobacco factories and grain and woolen mills. The city, which was founded in 1778 by Prince Potemkin as a naval port with very strong fortifications, has erected a fine bronze statue to the memory of its founder. The fortifications of the new city were scarcely completed when Nikolaiev replaced Kherson as the southern naval port. The province is now called Odessa.

KHINGAN, *kīn-gān'*, a mountain range separating Mongolia from Manchuria, and running from the southeastern end of the Desert of Gobi to the Amur River, passing in its course through eastern Mongolia and western Manchuria. In some places the mountains reach an elevation of about a mile and a half above sea level. Further south in northeastern Manchuria on the southern side of the Amur the continuation of the range is known as the Little Khingan Mountains, while the larger range is known as the Great Khingan.

KHIVA, *kē'vā*, or **CHIVA**, formerly a vassal state of Russia, in central Asia, but now largely a part of the Socialist Soviet Republic of Uzbek. It is bounded on the north by the Sea of Aral, on the east by the river Oxus, and south and west by the Russian Transcaspian province. It formerly occupied a large extent of surface on both sides of the Amu-Daria or Oxus, but after the cession to Russia, in 1873, of its territory on the east of the Amu, was confined to the west side of this river. Its area is 24,000 square miles. A great part of the surface consists of deserts, thinly inhabited or uninhabitable, but along the Amu the land is of a very different character, consisting of rich alluvial loam of the greatest natural fertility. Owing to the great dryness of the atmosphere, however, it soon becomes so stiff and hard that it cannot be penetrated by any ordinary implement. For this the obvious remedy is irrigation; and accordingly, from the earliest period, a mode of culture resembling that of Egypt has been practised. Large canals from the river, with numerous minor branches, intersect every part of the surface, supplying moisture where it is wanted or removing it where it is in excess, and securing the most luxuriant crops of wheat, maize, rice, barley and legumes. Cotton, silk and madder are also generally cultivated. The vine thrives well, but requires to be defended against the winter cold by a covering of straw and earth; all the ordinary fruits, including apples, plums, cherries, apricots, figs and pomegranates, are common. Trade is carried on chiefly with Russia. The principal exports are raw and spun cotton, in return for which are received various articles of European manufacture, as metals and ironware, woolen, cotton and silk goods, etc. The government of Khiva was an unmitigated despotism. The greater part of the inhabitants are Tajiks and Uzbeks, in nearly equal numbers. After these are Persians, Karakalpaks, Jamshids and Turcomans. They are Mohammedan in faith. The designs of Russia on Khiva long caused disquietude in Britain, which has always been jealous of Russian advances in Asia, mainly from a dread of

interference with her Indian Empire. Accordingly Count Schouvaloff was dispatched to England in January 1873, to give explanation respecting an intended expedition to Khiva. Its object was represented as simply the suppression of brigandage, the recovery of a few Russian prisoners, and to teach the Khan to desist from acts of violence in the future. The emperor, it was said, had given positive instruction that Khiva should not be taken possession of. In spite of these protestations, however, Khiva was taken possession of on 10 June; and later in the year, though the nominal independence of the Khan was stipulated for, it was decided to annex to the Russian dominions the Khivan territory on the right bank of the Amu. The Khan also renounced all right of making wars or treaties without Russian sanction. The population is estimated at 519,000. Consult Abbott, 'Narrative of a Journey from Herat to Khiva'; Burnaby, 'A Ride to Khiva' (1887); Colquhoun, 'Russia against India' (1900).

KHLESL, klä'sl, **Melchior**, or **KLESEL**, Austrian prelate: b. Vienna, 1552; d. 1630. Educated in the Protestant faith, he became, early in life, a very strong Roman Catholic and an advocate of a united Christian faith, but one in which all should bow to the teachings of Mother Church. He soon became looked upon as the champion of Catholicism in Austria; and his influence extended throughout all the German-speaking countries. Owing to his earnestness and ability, he rose rapidly and became bishop of Vienna at the age of 50 and cardinal 13 years later. With each successive dignity his power increased. A great friend of the Archduke Matthias, he was appointed by the latter Chancellor on his coming to the throne. This gave him political as well as ecclesiastical power which he exercised with all his accustomed energy. But unfortunately he became mixed up in politics, took part against the Emperor Rudolph and tried to persuade Ferdinand II and Duke Maximilian of Bavaria to discontinue the war with Bohemia. As a result of this political interference he was imprisoned in the Castle of Ambras (in the Tirol). The case was appealed to Rome and Klesel was acquitted by the papal authority and sent back to Austria, where an armed truce existed between him and Ferdinand (1627). His correspondence and controversial works published in Vienna in four volumes (1847-51) form very valuable material for political and ecclesiastical history of his time. Consult Kerschbaumer, 'Kardinal Klesel' (Vienna 1865).

KHLYSTI, or **KHLISTI**, klis-ti', a Russian sect which made its appearance in the 17th century under the leadership of Daniel Philinovich, a fanatic soldier, who, deserting the army, wandered about the country proclaiming himself the incarnate God. With him went an adopted son whom he asserted was Jesus, the Christ, and the Son of God; and an adopted daughter whom he put forward as the Virgin Mary. Khlysti was a man of great oratorical power and exercised a strange influence over the country people who followed him and became fanatically attached to him. The sect grew with wonderful swiftness and its presence was everywhere made manifest by hysteria and religious exaggeration. In vain the government attempted to stamp out the movement;

for the adherents met in secret and the sect is still in existence. Out of it grew other sects of similar tendencies, all of which are noted for austerity of life and simplicity of dress. Fasting and other methods of weakening of the flesh were a part of their regular procedure from the beginning and still signalizes them. They all look upon themselves as gods, or children in the flesh of God and as such pray to one another and they address one another as God, Saviour, Redeemer and Mother. The heavy hand of the Russian Church and government fell upon them and they were accused of blasphemy. Hundreds of them were exiled to Siberia or imprisoned in Russia. The Khlysti are also commonly known as Daniches, from the baptismal name of their founders.

KHMERS, kmërz, the earliest-known inhabitants of Cambodia. In the course of time they have been forced to retreat to the low, marshy lands of the country and neighboring sections of Cochin-China and Siam. At the late date it is very difficult to tell whether they were originally a pure race consisting of one linguistic stock when they first came into the country they now occupy, or were then a mixed race. It is certain that they are now linguistically and ethnologically made up of different races; but this may be the result of their constant contact for many years with the various races by which they have been surrounded and with which they have come into touch. In their language are to be found traces of Mongolian, Dravidian and Aryan influences; but to which of these races they originally belonged, it now does not seem to have been definitely decided though much has been written on the subject and extensive investigations, chiefly of a linguistic nature, have been undertaken. These would seem to place the Khmers either among the Malays or Polynesians or among both, making them a hybrid race. Although their language retains many Mongolian affinities, their appearance is not typically Mongolian and they have normally neither Mongolian nor Mongolian eyes, the hair being inclined to be wavy and the eyes very like those of the Indo-European races. But these physical characteristics are not a sure indication that they may not have originally been of Mongol stock; for the Turks, for instance, have lost, through intermarriage and mixture of races, their very marked original racial characteristics. The Khmers are taller, darker and more slender of form than the races among which they live or by which they are surrounded. That they have long been a cultured race there seems little room for doubt; and it is generally conceded that they were the builders of the magnificent ruins of very ancient edifices to be found in what is generally conceded to be the primitive area of Khmers occupation. These consist of noteworthy pyramids, temples, palaces and other buildings executed with considerable taste, skill and knowledge of the principles of architecture as generally known in the more primitive stages of Indian culture. These edifices show progressive stages of development, just as do the buildings of pre-Columbian America, more especially those of Yucatan, Central America and Peru. There are indications that the later Khmers edifices were influenced by the lighter and more artistic in-

ian architecture and cultural taste. Evidence goes to show that the best of the architectural age of the Khmers extended from 700 to 1400 B. This span of 700 years was undoubtedly influenced by the then prevailing Indian architecture, though the base of all the Khmers building was certainly indigenous and not derived from India; the proof of this rests in the fact that these buildings are so different from anything that India produced at that time or since. The modern Khmers are still skilled mechanics, and are especially noted as gold and silversmiths. See CAMBODIA; COCHIN-CHINA; THAILAND.

KHNOPFF, knöpf', **Fernand**, Belgian painter, etcher, and sculptor, b. Termonde, Sept. 12, 1858; d. Grembergen, Nov. 14, 1921. He abandoned a career in law in favor of painting, and developed an excellent technique and breadth of view distinguished for its originality. Nevertheless, his beautiful and harmonious pictures, and exquisitely conceived and executed female figures frequently lacked vigor and strength of imagination. His originality was not of that forceful kind which has the power of creating original conceptions and presenting them in a vigorous and convincing form. His most beautiful creations, therefore, have their birth more often in imitation than in original thought. The best of his works were his portraits, and he seemed to find more than his usual inspiration in many of the faces he was called upon to reproduce. He was a very popular artist, especially as a portrait painter, and consequently many of his best and most interesting pictures are in the hands of private individuals. Among his better known works are *The Crisis*; *The Temptation of Saint Anthony*; *Memories*; *I Lock My Door upon Myself* (Brussels Gallery); *White, Black and Gold* (Brussels Museum); *The Idea of Justice*, *Isolde*.

KHOLM, Russian name of the Polish cityholm (q.v.).

KHOLMOGORI, kul-mû,gô'ri, Soviet Russia, town of the Arkhangelsk Region, Russian Soviet Federated Socialist Republic, situated on an island in the northern Dvina River, 10 miles southeast of Arkhangelsk. Excellent cattle are raised in the surrounding district and exported in considerable numbers. Peter the Great developed the town as a point of shipping the line of the White Sea trade, but later it was outstripped by Arkhangelsk. Pop. 1,000.

KHOMYAKOV, kô-myû-kôf', **Aleksei Stepanovich**, Russian dramatist and poet; b. Moscow, 1804; d. 1860. After serving through the Russo-Turkish War of 1828-1829 he adopted a literary career and soon became distinguished as a lyrical poet and a pronounced Slavophile. With the strongly imaginative sight of the born poet he saw in Russia the most beautiful, most wonderful, most nearly perfect, most ideal country in all the world. In the Slavs he saw the birth of a new race, destined to take the place of the effete West, the empire founded by the Germanic tribes upon the ruins of the Roman Empire. In the West, in the Germanic-Roman people, he could see nothing good; in the Pan-Slav countries, headed by Russia, he had a vision in which everything was altogether lovely

and alluring. Because of this he naturally found a very large following of pro-Russians more inclined to listen to flattery than to the naked truth. His first notable work was *Ermak* (1832), a tragedy in verse distinguished for its poetic touch and vivid imagination. This drama was followed the next year by a second, entitled *Pseudo-Demetrius*, built about the romantic career of one of the pretenders to the Russian throne who actually succeeded in deceiving a large percentage of the Russian people, and who made good his pretensions for a time. In felicitous prose he wrote *A Message from Moscow to the Serbians* (Leipzig 1860), which embodied his most ultra ideas on the Pan-Slavic question.

KHONDS, khôndz, or **KUL**, a people of India, of the Dravidian race, living in parts of Orissa and Bengal. They are of low stature, well built, and muscular, and of a warlike disposition which has made them good soldiers and consequently highly respected by their neighbors. They are less cultured than the races by which they are surrounded. They cling to the ancient Dravidian beliefs, in which nature worship forms the chief rôle. But among them almost every sect of India, and some of the European religions have a formal hold, though even where they prevail, they are grafted on the ancient religious beliefs and superstitions. The Khonds are said to have all the virtues of races in their stage of social evolution. They are kind and generous to one another, hospitable, faithful to their friends and allies, and implacable to their enemies. In one respect, they are above the standard of many races much more advanced than they, in that they are noted for their morality. Among their customs which have now practically disappeared was their practice of capture marriages and their human sacrifices, which were offered to the earth deity or to the mother of fertility and production.

KHORSABAD, kôr'sa-bâd. See NINE-VEH.

KHOSRAU, kô-srou', or **KHUSRAU**, kôo-srou', or **KHOSRU** (Greek CHOSROES, kôz'rô-êz), name of two kings of the Sassanidæ dynasty of Persia.

KHOSRAU I (called **KHOSRAU ANUSHIRVAN**, á-nôo-shêr-van', that is, "having an immortal soul"), reigned from 531 to his death in 579. His reign was the most eventful in the line of his dynasty. Though a younger son, he succeeded to the throne by the conditions of the will of his father, Kavadh I. At the time of his accession he was involved in a war with Justinian, Byzantine emperor. He terminated the war successfully in 532, but in 540 began a second attack upon the Byzantines, between whom and the Persians there had long been a standing enmity; in the bloody contest which ensued many of the battles were gigantic for their age. In the beginning of the campaign the Persians were the victors, sacking Antioch and extending their power to the Black Sea and the Caucasus, but failing to take Edessa in 544. Khosrau granted an armistice in 545, forcing Justinian to pay tribute, and in 562 made a peace which was to last for 50 years, in which the Persians promised not to persecute the Christians if they did not proselytize among the Zoroastrians.

Khosrau I, though a sincere adherent of the Zoroastrian faith was not fanatical, nor did he believe in persecuting those of other faiths but was tolerant of every Christian belief. Through his efforts Zoroastrianism was restored in full. War broke out again, however, in 571. The Persians were stirred to anger by the young Emperor Justin II, who treated their representatives at his court with notable disrespect, and added to this indignity by the seizure of Armenia in 570. Khosrau retaliated in 573 by the capture of Dara, which was the advance garrison of Grecian territory to the east. After several years of war with varying fortunes Khosrau was badly defeated in 577 at Melitine (Malatya) by Justin II, who was himself routed in Armenia two years later, shortly after the death of the Persian king. Khosrau I, who died in the fiercest part of the struggle, was long remembered as one of the greatest of Persian sovereigns. He greatly improved the government of the country, encouraged trade and commerce, promoted native industries, colonized unpopulated parts of the country, and rebuilt cities. He also extended the boundaries of Persia so that it stretched from the Arabian Sea far into central Asia, and from the Indus to the Red Sea. His name passed down into history with a cloud of striking legends and folk tales attached to it, so that he became, to the masses of the people, more a legendary than a real historical character.

KHOSRAU (called **KHOSRAU PARVEZ**, pâr-vâz', that is, "the victorious"), reigned from 590 to his death in 628. He was the son of Ormizd IV and grandson of Khosrau I. Following the deposition of his father, he was assisted by Mauricius, the Byzantine emperor, in securing the throne, having first defeated the Armenian insurgent Bahram Chobin. After Mauricius was assassinated by Phocas in 602, the Persian king made war upon the Eastern Roman Empire with almost unvarying success, and inflicted one defeat after another, punishing the Byzantines as they had never before been punished in all their history. He took from them all the land he had given them in the beginning of his reign (out of gratitude for services rendered him), and he invaded and conquered Syria (611), Palestine (614), Egypt and Asia Minor (616), and the following year Chalcedon. Heraclius, emperor of the Eastern Roman Empire, however, took courage from despair, and succeeded in a series of brilliant campaigns between 623 and 628, in recovering his lost provinces. Khosrau, repeatedly defeated in this second campaign, was driven back to the Tigris and completely overthrown at Nineveh. As the Byzantines advanced toward Ctesiphon, Khosrau fled with his favorite wife, Sira, without offering resistance. After witnessing the massacre of his numerous sons he was thrown into a dungeon where he was put to death by order of his eldest son who had deposed Khosrau and who was proclaimed king as Kavadh II.

KHOTIN, khô'tên, or **HOTIN**, hô'tên, Soviet Union, town of Bessarabia, Ukrainian Soviet Socialist Republic, on the right bank of the Dniester near the border of Poland. It is an important agricultural center, and has manufactures of leather goods and bricks. A Genoese colony in the Middle Ages, it was held successively by the Moldavians, Poles, Turks, and

Russians before becoming part of the kingdom of Rumania. With cession of Bessarabia to the Soviet Union after World War II the town reverted to Russian domination. Pop. 15,280.

KHUEN-HEDERVARY, kōō'ên hâ'dê vâ-rî, Count **Karl**, Hungarian statesman, Freiwaldau, Upper Silesia, 1849; d. 1918. At the age of 25 he became a member of the Hungarian House of Deputies, and in 1883 he was appointed ban (governor) of Croatia and Slavonia. In his score of years in this office during which he founded the pro-Hungarian Croatian Nationalist Party, he displayed a constant inability to understand the people and a facility for antagonizing them. He became minister president (premier) of Hungary in 1903. He achieved great unpopularity because of his want of tact and constructive ability and was overthrown by the Independents. During 1904-1905 he was a minister in the government formed by Istvan (Stephan) Tisza (to), and in 1910 again became minister president. Constant administrative difficulties compelled him to resign in 1912. He founded the National Workers' Party in 1913.

KHUFU, kōō'fōō (Greek *ΧΗΦΩ*, *ke'ups*) Egyptian king, founder of the IVth (Memphite) dynasty. He reigned about 2900-2877 B.C., the capital being Memphis. The builder of the largest of the pyramids of Giza, according to Herodotus he employed 100,000 men on the work constantly for 20 years.

KHURASAN, kōō'râ-san', Iran, extreme northeastern province, bounded on the north by the Soviet Union and on the east by Afghanistan. The area is about 140,000 square miles and the population is estimated to number 1,000,000. The mountainous region of the north has many well watered valleys with fertile soil but most of the center and south of the province comprises sandy desert. The most valuable mineral is the turquoise. Cotton, tobacco, grains, and fruit are cultivated, and aromatic plants and drugs are numerous and valuable. The principal manufactures are silks, woollens, carpets, and swords. Meshed is the capital.

KHUZISTAN, kōō'zî-stân', Iran, a southwestern province, south of Luristan and Bakhtiari and bounded on the west by Iraq. The area is approximately 30,000 square miles, and the population is estimated to number 300,000, of whom one third are nomads. Cereal and other crops do well in the fertile highlands in the northeast of the province, but the oil fields in the hot and unhealthy southern area, developed by the Anglo-Iranian Oil Company, are of prime economic importance. Oil refineries are on the island of Abadan, in the delta of the Shatt-al-Arab, nine miles south of Khorramshahr (Mohammerah) the capital).

KHWARIZMI, al-, ăl-kwâ'riz-mê (also **AL-KHUWARIZMI** or **AL-KHOWARIZMI**; full name in Arabic, **MUHAMMAD IBN-MÛSA AL-KHWARIZMI**), Arab mathematician: b. Khwarizm (nor Khiva), 780 A.D.; d. 850 or thereafter. He was the librarian of the Caliph al-Mamun at Baghdad and also worked in the observatory there, where he carried on his astronomical and mathematical studies. His learning, much of it founded on Hindu sources, had a powerful effect on the

development of mathematics in medieval Europe, where his works were known chiefly in Latin translation.

Al-Khwarizmi's best known works were: a geographical treatise, based on Ptolemy; a work on Hindu arithmetic; the oldest known astronomical tables, translated into Latin by Adelard of Bath in the 12th century; a work on algorism (this term is derived from his name), in which the so-called Arabic numerals and calculation by decimal notation were introduced to Europe; and a famous treatise on algebra. The latter, *al-jabr wa-al-Muqābala*, was based on a work by the Hindu astronomer Brahmagupta and was translated into Latin by Gerard of Cremona in the 12th century. It discusses the quadratic equation and other algebraic problems. The very word "algebra" comes from the title of this work.

KHYBER PASS, kī'bēr, in the Safed Koh range, the most important of the passes on the Pakistan-Afghanistan frontier. It is 10½ miles west of Peshawar and connects that city with Jalalabad and Kabul. The narrow defile winds northwest through a range of hills for a distance of about 33 miles and forms the bed of two streams, the one flowing northwest, the other south-southeast. The pass is at one part as narrow as 50 feet in width, ranging up to 450 feet wide, and in many places the cliffs on either side are inaccessible, rising at one point to 1,000 feet or more. Nine and a half miles from the Pakistani entrance to the pass is the former British fort of Ali Masjid, which was the scene of fighting during the Afghan wars of 1839-1842 and 1878-1880 and during the Afridi campaign of 1897. The highest point of the pass is at Landi Kotal, another British fort, on the Afghan border, 3,373 feet above sea level.

KI TSE, CHI-TSE, or more correctly, **CHI-TZU**, jē'dzū', Chinese feudal lord: flourished about the middle of the 12th century B.C. Tradition credits him with being the founder of Korean civilization and an ancestor of the Chinese philosopher and religious teacher Confucius. Semilegendary, semihistorical accounts of his life show him as a man of great strength of character and determination coupled with honesty of purpose. According to these accounts he attempted to reform the licentious Chinese emperor Chou Hsin (r. 1154-1122 B.C.), last of the Shang dynasty, who had developed into a ferocious and bloody tyrant, and was imprisoned for his pains until the overthrow of Chou Hsin. Liberated from prison by the conqueror, Wu Wang, Ki Tse still remained loyal and faithful to his sovereign and sooner than remain under the domination or submit to the government of the new ruler of China, he is represented as going off with 5,000 adherents far eastward and there founding a new kingdom in what is now modern Korea. The capital of this new kingdom was P'yongyang, where the remains of a very ancient tomb are still pointed out to the tourist and visitor as his.

There seems to be some doubt as to whether Ki Tse ever really existed, or if he did, that he performed all the things attributed to him. He was to the Koreans what Moses was to the Jews, their great lawgiver, leader, and, in a sense, prophet. He taught them most of the important activities of their national life, among them agriculture, in all its branches, and especially the

rearing of the mulberry tree and of silk worms, and the manufacture of silk, including its spinning and weaving. Ki Tse seems to have been more than a lawgiver and teacher of industrial activity, for he is credited with having formulated the Korean conception of morality, the proper relations of man to man and to society and the court; and he is credited with having laid great stress upon honesty and integrity in all the relations of life. *Shu Ching* (Book of History), one of the Five Classics, is attributed to him by the Koreans.

It is more than probable that Korean civilization was largely derived from China, but there is nothing in Chinese history which would support the Korean story of the coming of the founder and philosopher Ki Tse. In fact, the account of his wanderings and of his forced exile from his own country is exactly in accord with the adventures attributed to most of the great culture heroes of the world.

KIA K'ING, or CHIA CH'ING, jē-ä' ching', Chinese emperor: b. Nov. 13, 1760; d. Chengteh, Jehol, Sept. 2, 1820. He was the fifth emperor of the Ch'ing dynasty. Chia Ch'ing (or Kia K'ing) was his reign name, his personal name being Yung-yen. He was the fifth son of the Emperor Ch'ien Lung (or Kien Lung; 1711-1799), who in 1773 selected him as his successor, although this choice was not made public until 1795, when Ch'ien Lung announced his intention to abdicate. In the interval Chia Ch'ing was carefully educated, but chiefly in the classics, in the manner of the time in China. The new emperor ascended the throne on Feb. 9, 1796, but until his father's death the actual power lay in the hands of Ch'ien Lung and his minister Ho-shên. The latter used his position for personal profit, and in 1799, shortly after his father's death, Chia Ch'ing had the minister arrested and compelled him to commit suicide.

In 1799 the empire was in a lamentable condition, oppressed by extorting officials, torn by the rebellions of their victims, and, due to the great increase in population since about the middle of the century, was subject to severe famines in time of war or flood. The armed rebellions, of which the most serious was the Pai-lien chiao (White Lotus Society) revolt in Hupeh and Szechwan, were not put down until 1803 or 1804; the pirates active along the South China coast were not repressed until 1810; and there were frequent floods of the Hwang Ho.

Confronted with unrest and a constant drain on his treasury, Chia Ch'ing, due perhaps to his education and the habits formed during his apprenticeship, was unable to take the drastic steps necessary. Although he effected savings through rigid personal economies, the corruption among officials continued unabated.

A mission under William Pitt Amherst attempted to gain trading advantages for Great Britain in 1816. This followed a previous attempt by George Macartney in 1793, and like it, was fruitless, the issues remaining to be settled by the so-called Opium War of 1840.

KIABOUCCA, KIABOCCA, or KYA-BUKA, WOOD, all ki-ä-bōō-kä (also AMBOINA WOOD), a beautiful mottled wood coming, for the most part, from the Moluccas and Guinea, though also found in other countries. It is formed much in the manner of curly maple

and other similar woods, by the union of the branch with the tree or through excrescences on the outer part of the trunk and larger limbs. The darker shades of Kiaboucca resemble the lighter shades of gateado wood of Mexico and the Central American countries, while the lighter shades run into varying yellows or reddish yellows and oranges. This gives it a very rich appearance which makes it valuable for cabinet work and fancy caskets of various kinds, among them snuff and tobacco boxes. Wood of a somewhat similar appearance is to be found in India, though the Indian shades are neither so rich in color nor so varied in shades and combinations of shades. These Indian woods are obtained from the *Petrospermum rubiginosum* and the *Petrospermum suberifolium* and several other allied trees all of which produce valuable cabinet or building woods. Some of these have been successfully exported from India to Europe and there employed in the manufacture of fancy furniture. In general the representatives of these Indian woods in Guinea and Moluccas, with the one exception of the kiaboucca, have not been, to any extent, used outside their native country. Kiaboucca is frequently known on the market as Amboyne wood.

KIAKHTA, *kē-āk'tā*, a town in Buriat Mongolia, Siberia, not far from the Chinese border. It was originally surrounded by a wooden wall but the growth of the original trading station has been so great that it has spread beyond the fortress enclosure. Previous to 1860 it was the chief point through which the trade between Russia and China passed. The tea trade, which formed the chief international business of Kiakhta, amounted to over \$10,000,000 yearly in 1895. Since then this trade has declined to some extent, and with it went, for some time, the prosperity of the city, which had declined in inhabitants to about 5,000 in 1895. But since then Kiakhta has again begun to prosper on account of the rapid growth of Siberia and the general extension of trade, commerce and agriculture throughout the more habitable parts of these great eastern Russian domains. Pop. 32,000.

KIAMIL PASHA, Turkish statesman: b. Cyprus, 1833; d. there, 14 Nov. 1913. The son of an artillery officer, he was educated at the military school at Alexandria, Egypt, devoting himself mainly to the study of languages. Besides his native tongue, he learned English, French, Arabic, Greek and Persian. His first post was that of dragoman (interpreter) to the governor of Crete; after holding various offices in Cyprus and several governorships he became Minister of the Interior at Constantinople in 1878, followed by three other ministerial portfolios. From 1885 to 1891 he was Grand Vizier, and again in 1895 for a few weeks, when he was dismissed and made governor of Aleppo and later of Smyrna. Suspected of liberal views, he was deposed in 1907 and declared exiled. He took refuge at the British consulate, and after the intervention of the British Embassy was allowed to return to Constantinople. He was again made Grand Vizier after the revolution of 1908, but resenting the dictation of the Young Turk Committee he dismissed the ministers of War and

Marine in 1909, which led to a censure by the Turkish Parliament and his resignation. For the fourth time he was called to the helm of state in 1912 in succession to Ghazi Mukhtar Pasha. In January 1913 he was driven from office by the Young Turk *coup d'état* and retired to Cyprus, where he died the same year. Kiamil Pasha was a cordial friend of Great Britain, and it was his boast that he had been a reader of *The Times* for over half a century.

KIANG, *kē-äng'*, **DZIGGETAI** or **KULAN**, the large wild ass of Tibet and Mongolia, characterized by its large size (11 to 12 hands high), dark reddish color and the narrowness of the black stripe along the spine; some have faintly barred legs. They dwell upon the lofty, sterile plateaus north of the Himalayas, moving about in bands which travel at amazing speed over the stony plains and up and down the steep hillsides, feeding mainly on twigs of woody desert plants, and acquiring great hardiness. They are hunted by the Mongols as game, yet are not shy as a rule, coming close to a traveling party or camp, apparently actuated by extreme curiosity, unless driven away. The voice has been described as like the neigh of a horse; but the general and truer opinion is that it is more nearly the shrieking bray of the ass. The animal is nowhere domesticated, except a few captive specimens in zoological gardens. See **ONAGER**.

KIANG-SI, *kē-äng'sē*, or **KIANGSE**, an inland province of China. It is bounded on the north by Hupeh and Ngan-Hui, on the east by Che-Kiang and Fu-Kien, on the south by Kwang-Tung, and on the west by Hupeh and Hunan. The area is 69,480 square miles. The province contains the treaty port of Ku-Kiang on the Yang-tse-Kiang. The Nan-Ling or Southern Mountains traverse the eastern half of Kiang-Si, and in the north is the large inland lake of Po-Yang-Hu. Here are established famous manufactories of porcelain. The principal river aside from the Yang-tse-Kiang, is the Kin-Kiang. The province produces tea silk, cotton, tobacco. There is great mineral wealth, especially of copper and iron. The English have large railway concessions. There are telegraph lines connecting the treaty port with other centres of commerce. The capital is Nanchang. Pop. 15,820,000.

KIANG-SU, *kē-äng'soo*, an important maritime province of China proper, bounded north by the province of Shan-Tung; east by the Yellow Sea; south by the province of Che-Kiang, and west by the provinces of Ngan-Hui and Ho-Nan. Kiang-Su has an area of 38,600 square miles (about that of Pennsylvania). The great commercial importance of this province is denoted by its possession of four treaty ports, Shanghai, Nanking, Su-Chau and Chin-Kiang. Kiang-Su was in fact the first province opened to foreign commerce by means of a treaty port. It is traversed almost its whole length by the Grand Canal, the ancient Chinese system of canalized rivers and lakes. The British have valuable railway concessions and the Germans claim mining rights here. Half the foreign population of China is established in this province.

The Yang-tse-Kiang empties into the sea through this province and enables it to control

the trade of all southern China. Possessed of a soil of great fertility it is famous for its production of rice and silk and cotton. There are large mills. The capital of the province is Chin-Kiang, while Nanking is the capital of the Chinese republic. The Tai-Ping rebellion of 1853-54 had its headquarters in this province. Kiang-Su is rapidly becoming the centre of Chinese manufacturing industries, especially in textiles. Commercially, the province is controlled by the English, who have invested largely in railways, mills and government concessions. Pop. estimated 36,469,000.

KIANGANES, a Philippine tribe. See QUANGANES.

KIAO-CHAU, kē-ā-ō-chow', or **KIAO-CHOW**, a Chinese walled city and the name of a German leased territory which from 1915 to 1922 was held by Japan. The territory lies around the shores of Kiao-Chau Bay on the east coast of the province of Shan-tung and the city way outside the German sphere of influence. The bay is some 15 miles from east to west and from north to south, and has deep water anchorages in its southeastern portion. The territory of Kiao-Chau was seized by Germany in November 1897 in retaliation for the murder of two German missionaries by the Chinese, and in March 1898 Tsing-tau harbor, on the east of the bay, and the district adjoining, about 200 square miles, were transferred to Germany by treaty on a lease for 99 years. It was then declared a protectorate of the German Empire, placed under control of the navy department, and declared a free port. The territory comprised 33 townships, with a population of 192,000. Around the leased territory was a neutral zone, 2,500 square miles in area. Great improvements and construction works were then set on foot; a sum of \$7,000,000 was expended on the harbor of Tsing-Tau, a great coaling dock being constructed. An excellent water supply, electric lighting and telephone service were introduced into the city. The city was placed in 1906 under the Chinese Maritime Customs, 20 per cent of the receipts to be handed over to the German authorities. A railway was constructed from Tsing-Tau to Sinang, 252 miles in length, through the Shan-tung province, tapping a rich agricultural and mining section. The revenue of the protectorate in 1914 was £463,000, and expenditure £920,500. In 1913, 923 vessels cleared at Tsing-Tau (pop. 1,000), with a tonnage of 1,298,622 tons.

On 16 Aug. 1914, after the outbreak

of the Great European War, Japan called upon the German authorities to deliver up the leased territory by the 15th of September, and on 23 August declared war. The investment began on

1 August, and after a heroic resistance on the part of the German garrison, the city surrendered to the combined Japanese and British forces on 7 November, and from that time to 22 it was occupied by the Japanese. On 25 May 1915, it was announced that, following on negotiations between China and Japan, the territory would be returned to China on the conclusion of peace, on condition that the German privileges in the leased territory be transferred to Japan. The Chinese Maritime Customs was opened on 6 Aug. 1915. In accord with the Washington pact the former leased territory was

KIBITKA, a covered carriage without springs used in Russia; also the name of a tent used by the nomad tribes of Kirghiz Tartars.

KIBLAH, or **KEBLAH**, the point toward which the Mohammedans turn their faces in prayer. The term literally means "to lie opposite" and is derived from the Arabian "kahala" which bears this meaning, it being understood that the point indicated is opposite to the south. This point is, for those at a distance, the temple at Mecca, or rather the Kaab (q.v.) contained therein. It is said that Mohammed changed three times the direction in which his followers should face when praying. Finally he settled upon the Kaab (16 Jan. 624).

KICKAPOOS, a tribe of Algonquin Indians, formerly occupying a portion of the Ohio Valley. They were a powerful nation in the early history of that region, and were constantly in arms against the whites until in 1819 they concluded the sale of most of their lands and removed to the Osage River Reservation in Kansas. In 1852 a considerable number of them went to Texas and from there to Mexico; some of these returned, however, and settled in the Indian Territory. See INDIANS.

KICKHAM, kīk'am, **Charles Joseph**, Irish novelist; b. Mulinahone, County Tipperary, 1836; d. 1882. He was very active in anti-government and revolutionary circles; and he appeared, at the age of 22, prominently in the Young Ireland Movement. He received a warning, and later on he was arrested, tried and convicted of treasonable acts and sentenced to fourteen years' imprisonment (1865), only four years of which he served when he received a pardon. Previous to his arrest he had been active in the editorial department of *The Irish People*, the Fenian organ; but, on his liberation from prison he did his best to keep faith with the government. Then began the most active and brilliant period of his public career. He possessed a strange, tragic, though somewhat uncontrolled power which required only more mastery on his part to have made of him a notable novelist. Among his published works are 'Sally Cavanagh' (1869); 'Knocknagow' (1879); and 'For the Old Land' (1886). These are all characteristically Irish in their humor, their power of minute and careful observation, and the spirit of romance coupled with a depth of homely feeling which makes him one of the best delineators of Irish peasant and country life.

KICKING BIRD (TĒNÉ-ANGPÓTE), Kiowa Indian chief; b. about 1810; d. 5 May 1880. His grandfather was a Crow captive who had been adopted into the Kiowa tribe. The young man early distinguished himself by his martial gifts. He also won fame as a warrior. He saw the hopelessness of the struggle with the whites and used all his influence to induce his tribe to submit to the inevitable. He signed the first agreement to accept a reservation on 15 Aug. 1865 at Wichita, and the treaty concluded at Medicine Lodge 21 Oct. 1867, definitely fixing the Kiowa-Comanche-Apache reservation in the present Oklahoma. He took part in the resistance of the Indians to removal in 1868 nor in their raids into Texas. When the Federal authorities in 1873 failed to carry out their agreement to release the Kiowa chi-

imprisoned in Texas, he lost faith in the government and was induced to join the hostiles for a short period, but later he induced two-thirds of his tribe to return to the agency at Fort Sill, and thereafter he was recognized as the head chief of the Kiowa. In 1873 Kicking Bird invited and assisted in the establishment of the first school among the Kiowa. He died suddenly, by poison, according to the suspicions of his friends and at the request of his family was buried with Christian rites.

KIDD, Benjamin, English sociologist: b. 9 Sept. 1858. He entered the inland revenue service of Great Britain in 1877, and rose to sudden fame by the publication of 'Social Evolution' in 1894. The volume was translated into most of the languages of Europe and gave rise to considerable controversy, President Roosevelt publishing a series of papers in opposition of the views propounded in it. Its main proposition was that high moral and religious development in society was a process that ran exactly contrary to natural evolution and the Darwinian process of survival. He also published 'The Control of the Tropics' (1898); and 'Principles of Western Civilization' (1902); 'Herbert Spencer and After' (1908); 'Two Principal Laws of Sociology' (1909). D. 1916.

KIDD, John, English writer and geologist: b. London, 1775; d. 1851. Graduated in medicine at Oxford he became assistant in chemistry at the latter university (1801-03) and professor of the same subject (1803-22); regius professor of medicine (1822-34); and keeper of the Radcliff Library (1834-51). Though his main work was devoted to chemistry he also lectured on geology and mineralogy in which he took a very active interest and toward the popularization of which he contributed very considerably. Among his published works are 'Outlines of Mineralogy' (2 vols. 1809); 'A Geological Essay on the Imperfect Evidence in Support of a Theory of the Earth' (1815); 'Adaptation of Eternal Nature to the Physical Condition of Man' (1833); 'Medical Reform' (1841); 'Further Observations' (1842).

KIDD, William, American pirate: b. probably Greenock, Scotland, about the middle of the 17th century, executed London, 24 May 1701. He appears to have followed the sea from his youth, and about 1695 was known as one of the boldest and most successful shipmasters that sailed from New York. At this time the depredations of pirates upon British commerce had become so extensive that a company was organized in England, in which William Kidd and several noblemen were shareholders, to fit out an armed vessel for the purpose of suppressing the practice, as well as of deriving a profit from recaptures. Kidd, who had obtained some experience as captain of a privateer against the French, received a commission signed by the king, and directed to "the trusty and well beloved Captain Kidd, commander of the ship *Adventure Galley*," a vessel of 30 guns. Sailing from Plymouth, England, in April 1696, he cruised off the American coast for some months, occasionally entering New York, and finally sailed for the East Indies and the east coast of Africa. Upon his way he resolved to turn pirate, and finding his

crew not averse to the project, forthwith commenced a career of plunder and outrage among the shipping which frequented the coasts of Malabar and Madagascar, returning in 1698 with a large store of booty to New York. He took the precaution to bury a portion of his treasure on Gardiner's Island at the east end of Long Island, and subsequently went to Boston, where he boldly made his appearance in the streets, not doubting that under his commission he could clear himself from any charge of piracy. Such, however, had been the scandal which the report of Kidd's depredations had caused in England, that the Earl of Beilamont, governor of Massachusetts and New York, and one of the shareholders in the enterprise, caused him promptly to be arrested and conveyed to England for trial. The charge of piracy was difficult to prove; but having been arraigned for killing one of his crew, named Moore, in an altercation, he was convicted after a grossly unfair trial, and hanged at Execution dock. His name and deeds have been interwoven into popular romance, and form the subject of the well-known ballad commencing "My name is Captain Kidd, as I sailed, as I sailed," many of the incidents of which, however, are apocryphal. The treasures he had left, consisting of 738 ounces of gold, 847 ounces of silver, and several bags of silver ornaments and precious stones, were secured by Beilamont. But according to popular belief this inconsiderable amount constituted but a tithe of all he had collected, and down to the present time the shores of Long Island Sound and various parts of the banks of the Hudson River continue occasionally to be explored in the hope of discovering the abandoned wealth of the great pirate.

KIDDER, Daniel Parrish, American clergyman and educator: b. Darien, N. Y., 18 Oct. 1815; d. Evanston, Ill., 29 July 1891. He was educated at Hamilton College and Wesleyan University. He entered the ministry of the Methodist Episcopal Church in 1836. He was missionary to Brazil 1837-40. The death of his wife necessitated his return to the United States with his two little children. After brief pastorates in Paterson and Trenton, N. J., he was elected secretary of the Sunday School Union of the M. E. Church, 1844-56. At the same time he was editor of the Sunday School publications and tracts of the Church; professor of Practical Theology in Garrett Biblical Institute, Evanston, Ill., 1856-71; professor of Practical Theology in Drew Theological Seminary, 1871-81; secretary of the Board of Education of the Methodist Episcopal Church 1880-87, resigning because of poor health. He was editor of the *Sunday School Advocate* 1844-56. While secretary of the Sunday School Union he edited 819 volumes. He was a prolific writer. His most important works are 'Brazil and the Brazilians' (8th ed., 1857, 1868); 'A Treatise on Homiletics' (1864; rev. ed., 1868); 'The Christian Pastorate' (1871); 'Helps to Prayer' (1874).

KIDDER, Frederic, American historical writer: b. New Ipswich, N. H., 1804; d. Melrose, Mass., 1885. He was an authority on the language and religion of the New England Indians, and published 'The Expeditions of

Capt. John Lovewell (1865); *Military Operations in Eastern Maine and Nova Scotia During the Revolution* (1867); *History of the First New Hampshire Regiment in the War of the Revolution* (1868); *History of the Boston Massacre* (1870); also many short articles on historical subjects. Though he showed no great talent for narrative writing, he displayed capacity for painstaking, laborious and minute research. The New England Historical and Genealogical Society possesses his "Memorial of the Jones Family from 1648 to 1876," which contains an autobiography.

KIDDER, kĭd'ēr, **Kathryn**, stage name of Mrs. L. K. Anspacher, American actress: b. Newark, N. J., 1868; d. New York, N. Y., Sept. 7, 1939. After studying dramatic art in New York, London and Paris she made her debut as Lucy Fairweather in *The Streets of New York* by Mayo, in Chicago in 1885. Later she appeared in *Davy Crockett*, *Nordeck*, and *Little Lord Fauntleroy*. After 1894 she starred continuously in old English comedies, Shakespearean tragedies, and French dramas. Her earliest success was in Sardou's *Madame Sans-Gêne*, of which she obtained exclusive performing rights in the United States and Canada, in any language except French. She also played in *Molly Pitcher* (1902); *Salamambo* (1904); the part of Elizabeth in *The Embarrassment of Riches* (1906); Leonora in *A Woman of Impulse* (1909); Elinor in *The Glass House* (1911); and Nora Cathleen in *Shadow of the Glen*. In 1912 she starred in *The Washerwoman Duchess*, a version of Victorien Sardou's *Madame Sans-Gêne*.

KIDDERMINSTER, a city in Worcestershire, England, on the Stour River. It is noted for its carpets which are famous the world over. This industry which dates back to 1735 has gradually increased in importance and efficiency until now it is one of the largest and best conducted in the world. Already when the carpet industry first began in Kidderminster, the town was an incorporated place and its own establishment dated back as far as the Norman Conquest of England if not to an earlier date. It is probable that the making of carpets there had really begun before the date usually given as that of the establishment of the industry there, as it was a favorite town with the Norman aristocracy of the neighborhood who were given to patronizing the continental arts and crafts. The city has canal and rail communication with Hull, Bristol and Liverpool with which it does considerable business. Kidderminster has other very active industries besides that of carpets, among them being spinning and weaving mills, tin-plate factories and dye-works. Among the persons of note who were born in Kidderminster are Roland Hill, father of cheap and universal postage, and Richard Baxter the noted and eloquent Nonconformist minister. The trade between the United States and Kidderminster is considerable. Pop. (1947) 36,670.

KIDDERMINSTER CARPET, so called from being made in the town of that name in England. Another of its names, ingrain, signifies that it is made of wool or worsted dyed in the grain; that is, before manufacture. Its names two-ply or three-ply indicate the number of webs which go to the making of the fabric.

KIDERLEN-WAECHTER, kē'dēr-lēn-vĕktēr, **Alfred von**, German Foreign Minister: b. Stuttgart, 1852; d. there, Dec. 30, 1912. The son of a banker, he served in the war of 1870 and afterward studied law. He entered the Foreign Office in 1879 and some years later accompanied the emperor to Russia, Sweden and Denmark. He was minister in the free town of Hamburg in 1894, in Copenhagen 1895-96, and later at Bucharest. In Rumania he gathered a deep knowledge of Eastern politics, which led to his acting temporarily as ambassador at Constantinople and as chief at the Foreign Office. He became Foreign Minister in 1910. He conducted the Agadir negotiations in 1911 and was severely criticised both at home and abroad for his provocative attitude in the *Panther* incident. He succeeded, however, in relieving the strained relations between Germany and Great Britain, and endeavored to make a friend of Russia. See MOROCCO.

KIDNAPPED, by Robert Louis Stevenson, purports to be, as the subtitle sets forth, the "Memoirs of the adventures of David Balfour in the year 1751; how he was kidnapped and cast away; his sufferings on a desert isle; his journey in the wild Highlands; his acquaintance with Alan Breck Stewart and other notorious Highland Jacobites; with all that he suffered at the hands of his uncle, Ebenezer Balfour of Shaws, falsely so called." This romance, with a hero bearing a name taken from his own family tree, Stevenson declares to be the only one of his books in which "the characters took the bit in their teeth" and spoke and acted out the story for themselves. "I began it," he confesses, "partly as a lark, partly as a pot-boiler, and suddenly it moved, David and Alan stepped out from the canvas, and I found I was in another world." Because of the author's illness, the story, published in 1886, was broken off short with the return of the hero and the discomfiture of the wicked uncle. It was concluded in a sequel published in 1893 under the name of *David Balfour* in the United States, and *Cairiona* in Great Britain. *Kidnapped* owed its success largely to the admirable portrayal of the Highlander, Alan Breck. Matthew Arnold was delighted with it, and Andrew Lang pronounced it "a volume containing more of the spirit of Scott than any other in English fiction."

ARTHUR GUITERMAN.

KIDNAPING (from kidnap: *kid*, a child + English dialect *naf*, to seize or grasp). The original meaning of the word was the carrying away of a person to forced labor in the British colonies in America. Blackstone in his *Commentaries* defines it as "the forcible abduction or stealing away of a man, woman, or child from their own country, and sending them into another." In Great Britain the term was also formerly applied to the forcing of men into the army, and especially the navy, by press gangs. In the common law of today the term is used in a broader sense: thus, if a person is forcibly taken out of his way for any distance in his own country or locality, the individual so constraining him is held guilty of the crime.

In a limited sense the term "kidnapping" has been applied to the seizure of Negroes in Africa by enemy tribesmen, and by Arabs, Europeans

and Americans, with intent to sell them into slavery. This barbarous traffic continued in the South Seas as recently as the early years of the 20th century, but was finally suppressed by concerted action of the colonial powers.

In the United States long before the Civil War every state had enacted laws making kidnapping a criminal offence.

The first notorious case of kidnapping for ransom in the United States occurred on July 1, 1874, when kidnappers seized four-year-old Charley Ross in Germantown, Pa. They demanded a ransom of \$20,000 by mail, but were so fearful of detection that all attempts to make contact with them failed. The child was never found. The next notable case was that of the kidnapping in 1900 of the young son of E. A. Cudahy, an Omaha meat packer, by Pat Crowe, a professional criminal; the boy was returned to his parents on payment of a ransom of \$25,000. Although Crowe was afterward apprehended, tried for the crime and confessed, by a gross miscarriage of justice he was acquitted.

After 1920, with the rise of gangsterism during the prohibition epoch kidnappings greatly increased and constituted a national disgrace. The Chicago police in 1932 estimated that there had been 200 kidnappings in the past two years, and ransoms paid amounted to \$2,000,000. The kidnapping on Mar. 1, 1932 of the 18-month-old son of Col. Charles A. Lindbergh (the infant was murdered immediately after its abduction) caused enactment of federal laws in 1932 and 1934 prescribing severe penalties for interstate abduction, with the death sentence for cases in which the victim had been harmed or not returned before sentence was passed.

Notwithstanding the passage of these laws, there were many kidnapping cases in 1933, 1934, and 1935. Some of the victims were returned after payment of ransoms, but in other cases they were killed after extortion of ransoms in order to eliminate a witness. After 1935 the fine work of the Federal Bureau of Investigation (q.v.) in capturing and obtaining convictions of criminal gangs proved effective in greatly reducing the incidence of this type of crime. See also ABDUCTION.

KIDNEY BEAN, a bean of the genus *Phaseolus*, of which European species and varieties have been cultivated from time immemorial. (See BEAN). The wild kidney bean of the United States is a high-climbing vine (*P. polystachyus*), bearing small purple flowers. The so-called "kidney-bean tree" is *Histaria* (q.v.).

KIDNEYROOT, the purple boneset (q.v.).

KIDNEYS, the principal excreting organs of the body. Their main function is the excretion of urine. There are two organs, situated in the posterior part of the abdominal cavity on either side of the vertebral (spinal) column. They do not occupy the peritoneal cavity, being posterior to it and covered by a layer of fat and loose areolar tissue. Their upper portions are on a level with the last or 12th thoracic vertebra; the lower portions are level with the third lumbar vertebra. The kidney has a characteristic bean-shaped appearance, and is dark red to purplish in color. There is a deep indentation, the hilus, at the inner margin, which allows for the passage

of the renal artery and renal vein. The main portion of this indentation corresponds to the upper part of the ureter, whose funnel-shaped expansion merges with the pelvis of the kidney, which is the urine collecting portion. Kidneys vary in size somewhat, weighing on the average about 150 grams. The right organ is generally lower than the left. The kidney is covered by a firm membrane, the capsule, which in health strips off easily if incised. At the upper pole each organ is situated a suprarenal body, or capsule.

Anatomically the right kidney, anteriorly, is in direct relation with the under surface of the liver, the duodenum, the right or ascending colon at its flexure, and with the small intestine. The left kidney, anteriorly, is in direct relation with the spleen, the body of the pancreas, the stomach, and the descending colon. The interior anatomy of the kidney is best appreciated by sectioning it medially from pole to pole which reveals the cortex, medulla, pyramids, and sinuses. The kidney structure itself, while dense and seemingly tough, is torn easily by rough handling. Internally, the indented part of the kidney is found to expand into a central cavity, the renal sinus. This contains the upper part of the renal pelvis just referred to. Penetrating deeply into the kidney substance are the calyces, cup-shaped tubes or prolongations of the hollow portion of the organ, from 7 to 13 in number. The solid portion of the kidney is made up of an internal or medullary substance and an external or cortical substance. The former consists of red-colored, conical masses known as pyramids, whose bases are directed toward the circumference of the organ, the apices converging toward the renal sinuses, where they form exceedingly minute papillae which bulge slightly into the interior of the calyces. The cortical substance lies just beneath the kidney capsule and covers the bases of the pyramids. Here are contained the renal columns and the cortical arches. Much of the minute anatomy of the kidney can be seen only with the aid of a microscope, and especially in examining, microscopically, stained sections of kidney tissue. Such studies reveal that the kidney, for the most part, is made up of tiny tubules which have their origin in the cortical substance, winding a circuitous course through cortical and medullary substance and ending at the apices of the renal pyramids. Here they empty their minute mouths into the kidney pelvis, a so-called collecting bowl for emptying the excreted urine into the bladder, from which at intervals it is expelled from the body. Each papilla, or bulk into a renal pyramid, will be found to contain from 15 to 20 of these tubular openings. Each tubule begins in the renal columns as a renal corpuscle, not more than 0.02 mm. in diameter. A portion of this is known as the glomerulus, a lobulated network of twisted capillaries held together by loose connective tissue. The capillaries are both afferent and efferent, it is difficult to distinguish between arterial and venous vessels. Surrounding the glomerulus is a capsule, the *Malpighian capsule*. It has been estimated by scientists that from two to three million glomeruli may be present in each kidney. Anatomical malformations of the kidney are often observed. One organ is sometimes absent but, more commonly, one may be congenitally atrophic although normal in function. The commonest malformation is a fusing of two kidneys

one. Here they are joined generally at the two ends so as to form a single, horseshoe-shaped organ having a single ureter and situated in the middle of the abdomen. Again, the two kidneys may be united into a disklike body with one ureter. Double ureter is sometimes seen, and even the presence of a third kidney has been reported. The kidneys are frequently congenitally misplaced, being situated at a higher or a lower level than is considered normal. Sometimes a kidney may not be fixed firmly, but will be freely movable, appearing as a tumor, easily felt through the abdominal wall. This is known as "floating kidney" and is not to be confused with the acquired displacement of a single kidney known as "movable kidney." This last is fairly common, especially in women. Most of the departures from the normal which have been described cause few or no symptoms and may remain undiagnosed because of this fact.

Functions of the Kidney.—While the most important function of the kidney is the excretion of urine, one must not suppose that the organ is in any sense a purely mechanical filter. As pointed out in the section on anatomy, the structural unit of excretion is the renal corpuscle and the glomerulus and the renal tubule, the latter having three divisions—proximal tubule, Henle's loop, and distal tubule. This unit is often referred to as the *nephron*. Not all these tubules are in action at the same time, for nature maintains a reserve so that a considerable portion of the kidney may be damaged and its function still not interfered with. Again, if there is any unusual strain placed upon the kidneys, they are able to meet it with this reserve of excretory ducts. The actual operation of kidney functioning depends upon the passage of fluid through the glomerulus, and thus, in turn, is dependent upon such factors as arterial blood pressure and the permeability of the glomerular capillaries. The excretion of urine by means of the blood supply to the glomeruli and the tubules themselves is influenced by the sympathetic and parasympathetic nerves arising from the thoracic and lumbar nerve trunks and the vagus nerve. This excretory apparatus, controlled as it is by the sympathetic nervous system, is exceedingly complex, small changes in blood pressure causing changes in the urinary flow by its effects upon the glomeruli. Drugs (for example, adrenalin) will alter the rate of excretion. While glomerular filtration is an established fact, there is known to be a certain amount of reabsorption in the renal tubules, not all the fluid being excreted. Neither do all the substances present in the glomeruli find their way to the bladder. For example, sugar, chlorides, and sodium, all present in the blood, are excreted in the urine only if they exceed a certain concentration. Other substances, such as urea and creatinine, if kidney function is normal, are excreted whatever their concentration in the blood. It is stated that glomeruli can exercise a selective function in the excretory process. The volume of urine may be increased by more rapid filtration, by a reduced rate of absorption, or by a combination of both. As is well known, ingestion of large quantities of water increases urinary output. Other and secondary functions of the kidney are maintenance of blood pressure at proper levels, and maintenance of water balance.

Urine.—The quantity of urine passed by an average healthy adult will vary from a quart to

a quart and a half in 24 hours (1,000 to 1,500 cc.). Normal urine is a clear, straw-colored, or amber fluid with a specific gravity of from 1.015 to 1.025. It has a slightly acid reaction and is free from albumin and protein substances. Occasionally a normal sediment will contain a few leucocytes and other cells. Casts of kidney tubules are absent. Also in sediment may be found, without being evidence of disease, sodium and calcium salts, oxalates, and an occasional uric acid crystal. Sugar, except in the most minute amounts, is not found in normal individuals. Abnormalities of urine in various conditions are mentioned under the section on kidney diseases. Ingestion of large amounts of fluid will result in urinary output being increased many times. Fluid so taken is eliminated in about four hours. Normal or hypertonic salt solution taken by mouth causes only a slight increase in urinary output. After a large amount of water is drunk, the specific gravity of the urine may sink to 1.000 or 1.002, with chlorides and urea greatly diminished. Urinary flow is reduced by muscular exercise, in cardiac failure and inflammatory diseases of the kidney, as well as in fevers and dehydrated states. The amount of urine excreted at night is much less than during the day. Urine passed a short time after rising, and also that voided after a meal, is found to be much less acid than at other times. This is called the "alkaline tide" of the urine. From 40 to 60 per cent of the total fluid intake in 24 hours is excreted by the kidneys, and the amount varies inversely with the amount of water excreted by the lungs, skin, and bowels. Young children excrete, for their weight, about three or four times as much urine as do adults. Substances found in urine are classed as inorganic and organic. The former includes chlorides (NaCl), sulphur, sodium, calcium, and magnesium. The latter includes urea, uric acid, ammonia, and creatinine. Other organic substances, found only in minute amounts, include sugar, fatty acids, carbonates (or bicarbonates), diastase, and mucin.

Pathology of the Kidney.—From the time of Richard Bright (1789–1855), physicians have endeavored to classify diseases of the kidney according to their pathologic anatomy. Kidney lesions are associated intimately with pathologic processes and changes in other organs, and are thus only a part of a general systemic disease affecting the entire body. A clinical classification of kidney diseases is fully as important as one based on tissue changes which can be demonstrated only by post-mortem examination. Pathology and clinical medicine are so closely allied that it is useless to study or attempt to comprehend either alone. In general, a pathologic classification containing the essential features of Bright's disease (to use the eponymic and all-inclusive term) will divide kidney diseases, but not surgical conditions, into three main groups as follows:

(1) Acute or chronic nephroses, in which the lesion is degenerative, the kidney tubules being involved principally, although the glomeruli also may be involved, the clinical course being insidious and accompanied by edema of the tissues, but in which hypertension is absent. The urine shows casts, without blood elements or signs of acute inflammation of the kidney. The prognosis is variable and often unpredictable.

(2) Glomerulonephritis, in which the lesion is always inflammatory, the glomeruli being involved in a destructive process of greater or lesser degree, the clinical course varying in acuteness.

Red blood cells will be found in the urinary sediment, accompanied by casts, especially hyaline, granular and those having red blood cell elements. Such a process may lead to complete renal failure and death from uremia, or in recovery, complete or partial, with no definite time limit.

(3) Nephrosclerosis (arteriosclerosis of the kidney) in which the disease process involves the blood vessels of the kidney, the arterioles being hardened and contracted, with endarteritis and cell necrosis. Here the onset is often undetected, but as the years go by, there is increasing hypertension although edema is generally absent. The urine may show little but the presence of hyaline casts, and it usually gives only limited information as to the severity of the lesions. In this type of kidney disease, death may result from cardiac failure, apoplexy, or uremia.

The classification given here is a simple one but it must be subdivided further for a fuller understanding. The nephroses, for example, are not all alike and follow several patterns. There are several varieties recognized: the acute nephrosis, the rare lipid nephrosis (seen only in children), and the chronic nephrosis. In all of these, the pathologic process involves both kidneys, which are enlarged, and show cloudy swelling, fatty changes, and calcification. The capsule is easily stripped off and the underlying kidney is flabby, with the cortex greatly increased in thickness. In glomerulonephritis (acute, subacute, and chronic) the clinical division is somewhat artificial since transition stages are encountered. The pathologic anatomy in these different stages is of similar character. In the acute form, the kidneys are sometimes very large, weighing as much as 300 grams each. The capsule is tense, and if it is removed, areas of minute hemorrhage can be detected. The kidney substance is soft, cutting with diminished resistance. From the cut surface red fluid exudes. Blood vessels in all parts of the kidney are engorged, since the inflammatory process involves the whole kidney with the exception of the pelvis. In subacute forms the inflammation is less severe and the kidneys less enlarged. Here the kidney substance is often pale in color. All pathologic changes are less marked than in the acute form. In chronic glomerulonephritis the kidneys are characteristically reduced in size and an extremely small white kidney is indicative of the disease. The capsule is adherent and the kidney has a granular appearance, the granules being yellowish or pinkish. The kidney substance is tough and resistant, and sections with difficulty. The architectural pattern of the cortex and medulla, so characteristic of the normal organ, is largely obliterated or even absent.

Medical and Surgical Diseases of the Kidney.—Like the heart, the kidney is an organ one lives by. Nature, unwilling to trust man's life to a single organ of elimination, has endowed us with two. Should one kidney be destroyed by accident or disease, the remaining kidney will hypertrophy and carry on the function of excretion without appreciable disturbance to the health of the individual. It is impossible to divide sharply the medical diseases of the kidney from the surgical, for the medical disease of today may become the surgical disease of tomorrow. While not true in the strictest sense, it may be said that medical diseases of the kidney are those not amenable to surgical treatment and generally involve both kidneys. Surgical diseases of the kid-

ney are concerned usually with a single organ. In many cases, surgical invasion of a kidney, or its entire removal, will restore a patient to complete health.

Perhaps the most important and the most far-reaching disease of the kidney, involving a complexity of conditions and symptoms, is best described under a general and inclusive term known as renal (kidney) failure or renal insufficiency. Its manifestations are numerous, since the kidney has several functions. If the kidneys cannot excrete the nitrogenous waste products of the body, the latter accumulate in the circulatory system, with the result that, if unchecked, a condition develops known as uremia. If no relief can be obtained, this condition will end fatally. The principal nitrogen (nonprotein) waste products are urea, uric acid, and creatinine. They are present normally in certain amounts, but if these are exceeded, the percentage present, as determined by blood chemistry examinations, will often serve to indicate the progress of a uremic attack and to give warning if a fatal termination is to be expected. The symptoms of renal insufficiency are not only surprisingly numerous but they are infinitely variable. Renal failure, while sudden in acute cases, is indicated oftenest by gradual deterioration of health and strength, accompanied by poor appetite, upset digestion, frequent headache, and an otherwise unexplained anemia. In severe cases, cerebral disturbances are common; there is frequently stupor, sometimes coma. Even without such a seizure, patients are often irrational.

The heart may show evidence of disease, and in some cases swelling of the limbs (edema) or accumulation of fluid in the abdomen (ascites, dropsy) may be present. Not infrequently liver is detected. Two forms of renal failure are recognized, in one of which water is eliminated with difficulty (the common form of chronic nephritis), in the other, the kidneys fail to eliminate nitrogenous waste products, which, if continued, can lead only to a terminal uremia and death. Chronic nephritis, either with or without edema, received the name Bright's disease following a series of observations by Richard Bright (1827-1831). Although the eponym is less used now than formerly, it has endured for more than a century, earning a permanent place in historical medicine.

No description of renal failure is adequate without presenting the important chemical tests of blood and urine. The mere presence of albumin may have little significance. The simplest procedures are those of ordinary urinalysis. The color should be noted, especially if high or brownish, the volume should be known, and if markedly greater or less than the normal, this may be of importance, considering that excretion in 24 hours is in inverse ratio to the activity of the skin and bowels. Albumin is indicated by coagulation tests, using heat or mineral acids. It cannot be detected by a mere inspection of the urine. Microscopic examination of sediment is important in determining the presence of cellular elements, casts of the urinary tubules, and blood cells. Epithelial kidney cells are of diagnostic value. The most important abnormal elements are casts which are molds of the kidney tubules and consist of cylindrical bodies, transparent or granular, with cells attached. The presence of red blood cells indicates an acute inflammatory process somewhere in the urinary tract and not necessarily in the kidney. If the cells are

hed to the casts, the kidney alone is involved. An excessive number of white cells indicates pus in the urinary tract. Locations from which pus may arise are in the urinary tract, the kidney pelvis, the bladder, and the urethra. Other constituents of urinary sediment which may be detected microscopically are various salts, phosphates, oxalates, uric acid, and urates. Most of these are found in normal urine in small amounts, and only if these are excessive, do they point to disease. Blood chemistry in relation to kidney disease was practically unknown a generation ago, but is now considered indispensable in the intelligent study of nephritis and kidney function. The various tests in use give reliable information as to whether waste products which should be eliminated by the kidney are accumulating in the blood in unduly large quantities. Those most important are, nonprotein nitrogen (urea) and creatinine. If these constituents reach a certain level, this is a danger signal. Other important tests are the phenolsulfonphthalein test, introduced by Leonard G. Rowntree (1883-) and John T. Geraghty (1876-1924) in 1910; and the urea clearance test, first in use about 1928. The former consists of the injection of a dye into a vein, a fixed amount of water being drunk at the same time. The rate of excretion of the phenolsulfonphthalein by the kidneys is studied in fractional portions of urine passed in the succeeding two hours. If more than 25 per cent of the dye is excreted in the first quarter of an hour, kidney function is assumed normal. The test is not always completely reliable within narrow limits, but if it indicates less than 10 per cent of the dye eliminated in the entire two hours, the individual has but a few months to survive. The urea clearance test is a delicate one for estimating kidney function, requiring urea determination of both blood and urine specimens. If the kidneys fail to clear more than 50 per cent of the normal maximum (75 cc.) of blood of its normal urea per minute, when secreting at least 2 cc. of urine per minute, the fact may be regarded as evidence of serious impairment. Other tests, not given here in detail, are the concentration test, to determine the power of the kidney to concentrate (one of its functions), the dilution test, and the simple water-drinking test. In the last, the specific gravity of the urine is taken at intervals, after a definite quantity of water is drunk. In most cases of chronic kidney failure the specific gravity of the urine remains low (1.010), the normal average being 1.020.

Among specific clinico-pathologic conditions found in cases of renal failure, many of which were grouped formerly—and still are grouped by many—under the name Bright's disease, are the nephritides, a modern term indicating inflammation of the kidneys. Clinicians recognize both acute and chronic forms. The acute diffuse inflammation (acute glomerulonephritis) is characterized by gradual onset, with slight malaise, moderate fever, headache, and oftentimes sore throat, but with little physical evidence of involvement of the kidneys. The urine is highly colored, smoky, and diminished in amount. Albumin and casts are present and the sediment shows red blood cells. At the outset, blood chemistry may be normal. The cause is not always ascertained, but an attack of scarlet fever or acute tonsillitis may be responsible. Exposure to wet and cold may be a factor. The causative organism in many cases is a streptococcus. This

type of kidney disease lasts about two months, perhaps less, and ends in the great majority of cases without ascertainable kidney damage or predisposition to chronic nephritis. In from 15 to 20 per cent of cases, the patients do not escape so happily. In these, instead of the disease clearing up, it becomes chronic. This form of chronic glomerulonephritis, which follows upon an acute attack, is perhaps the only one in which the cause can be taken for granted. The patient may have few symptoms, or none at all, and yet the kidneys are functionally impaired as shown by tests. There is no specific treatment for acute glomerulonephritis. Dietetic and symptomatic care of the patient is most important. Until recovery sets in, bed rest is insisted upon. Protection from fatigue, cold, and wet should not be neglected. Attention to the bowels and the amount of fluid taken must be given. A subacute glomerulonephritis has been described, in which the onset and causation is much the same as in the acute form. There is progressive, massive edema of the limbs, anemia, and rapid loss of strength. The principal aid in the diagnosis of this condition is the time involved. In general, if a patient does not recover from an acute nephritis in two or three months and becomes worse, with edema more and more marked, a fatal termination may be looked for within one or two years.

Of all long-standing diseases of the kidney, the gradual diffuse inflammation known as chronic diffuse glomerulonephritis is the best known. It is this type that is so often referred to as Bright's disease. At one time it was thought to present a more or less constant set of symptoms, but two forms are now recognized, the wet and the dry. The ailment develops gradually, the wet or edematous variety being encountered less often than the dry, in which no swelling of the limbs is observed. The actual cause of this disease is generally in doubt, but in some instances it can be traced to an infection of years before. Whereas acute nephritis is commonly seen in young people, the chronic ailment is seen most often in those between 40 and 50 years of age. Its course may extend over many years. The kidney is generally small and contracted and its structure is atrophic. Renal function is much diminished, in late cases being only a fraction of the normal. Those afflicted show the common symptoms of renal failure. There is general malaise, loss of weight, pallor and anemia. Digestive upsets are frequent. A common symptom is an increase in night urine. Since the kidney has lost its power to concentrate the urine, the amount passed in a day is greater than normal. Although the low specific gravity of the urine and the presence of albumin and casts indicate the diagnosis, this does not tell the patient's actual condition, and reliance must be placed upon the blood chemistry and tests of renal function. During this long and wearisome disease, the patient will often suffer acute attacks and exacerbations, each one of which leaves him with further kidney damage.

Many patients perish from intercurrent diseases or infections following their weakened condition. A considerable number die of uremia. Individuals who have everything in their favor, such as excellent care, freedom from worry, and favorable climatic surroundings, may survive many years, while others not so favorably placed will live but a few years at most. In addition to the commoner types of kidney disease, there are acute and chronic inflammations of the kidney pelvis,

known under the general term of pyelitis, an infectious disease arising from a variety of causal agents such as the colon bacillus, the streptococcus, and the staphylococcus. It is frequently classed as surgical. Other diseases are the rare amyloid kidney, seen in chronic wasting diseases of long standing and resulting from general body deterioration. Occasionally the ingestion of drugs and poisons will cause irreparable kidney damage. The most serious is bichloride of mercury poisoning, accidental or suicidal. It is marked by acute hemorrhagic nephritis which may result in complete cessation of kidney function (anuria). Many cases are hopeless from the start, and the earlier bold attempts to save life by a decapsulation operation have not been brilliant successes. Ingestion of carbolic acid solutions is also damaging to the kidney as well as to other organs. Careless use of sulfonamides may cause serious symptoms requiring prompt recognition and treatment.

Still other diseases of the kidney are cysts of great variety and type, some small, others of huge size and unilocular or multilocular; occasional rare tumors; and circulatory disturbances often associated with disease of the general circulatory system, in which the kidney has a part. Many of the last are included under the term arteriosclerosis. Another term often employed is cardio-vascular-renal disease, another way of saying that the patient's heart, blood vessels, and kidneys are all deteriorating. A considerable number of abnormal conditions affecting the kidney, including many which were once treated medically, require surgical treatment, either instrumental or operative. Most of these affect the urogenital system as a whole.

Surgical diseases of the kidney present many varieties. The best known surgical malady is undoubtedly renal calculus, or stone in the kidney. This was described, including its relation to disease of the bladder, by Galen (c.130-c.201 A.D.) and it has plagued mankind ever since. More properly, the disease is called urinary calculi since the stones are usually multiple and are to be found in the kidney, in the ureter, and in the bladder, as part and parcel of the same continuing deposit of urinary salts. Sometimes stones occur with the patient's knowledge; but more often, in the kidney, they cause a train of symptoms which are classic and which, if they occur in middle life, are practically diagnostic. The exact cause of stone is not entirely settled, but it is probable that infections and disorders of nutrition are concerned in the process. A number of body chemicals are involved, mostly oxalates and uric acid which compose a large proportion of stones. Calculi vary in size from a small granule (gravel) to huge masses which may occupy a great part of the kidney pelvis and calyces (staghorn calculus), leaving little room for the collection of urine. A stone that is stationary may cause no symptoms, but if there is obstruction to the flow of urine, there is usually a severe, dull, ache in the loins due to distension of the kidney pelvis. If a stone is of small size and becomes movable, passing into the ureter on its way to the bladder, this will be accompanied by sudden, agonizing pain which soon becomes unbearable. Few bodily complaints are met with which demand immediate relief so urgently. The pain is referred first to the abdomen and later to the groin. Following relief from pain, which may be sudden if the stone passes into the blad-

der, blood may appear in the urine. Occasionally biliary colic may simulate kidney colic but the pain is usually higher and is on the right side. The usual treatment is by opiates and watchful waiting in the acute stage, with bed rest. In complete obstruction of the ureter occurs, in which the stone lodges in the ureter thereby blocking the passage of urine, surgical instrumentation or open operation may be required. Stones in the kidney which are not movable, due to their size, may demand surgical removal if the function of the kidney in which they are situated is not markedly lowered or lost. Large staghorn stones in which function of the kidney in which they lie has been destroyed, may be left where they are, or may be treated by removal of the affected kidney if the remaining kidney functions adequately. Tumors of the kidney are classed as benign and malignant, but only the latter are of importance. Cancer of the kidney is indicated by pain, by the presence of a tumor which may be felt upon bimanual examination, and by the occurrence of bleeding from a single kidney. The location cannot be determined by the patient but is revealed by examination of urine passed from each ureter through a ureteral catheter. Some malignant tumors do not progress to a fatal termination, but the outlook for recovery by any method of treatment is not favorable. Infections of the kidney are responsible for a number of diseases. The commonest are those caused by the tubercle bacillus, the colon bacillus, and various types of staphylococcus and streptococcus. Infection may come from the blood stream, the lymph channels, or by direct ascension to the kidneys from an infected bladder. Ultimately such infections may cause a localized abscess within the kidney, an abscess outside organ (perinephritic abscess), or result in pus in the kidney pelvis (pyelitis). Such diseases are frequently serious and are attended by prostration, fever, and prolonged ill health. In perinephritic abscess, evacuation of the pus by operation is necessary. Pyelitis is often recovered from promptly, but not infrequently the disease becomes chronic with continued ill health because of exacerbations accompanied by fever and prostration. Tuberculosis of the kidney may occur without much evidence of tuberculosis elsewhere, although it is regarded as secondary to a focus in some other location. If limited to a single kidney and not involving the ureter or bladder surgical removal of the kidney (nephrectomy) will result, in a majority of cases, in complete cure. However, in renal tuberculosis, surgical measures demand complete knowledge of the actual conditions present. Operation is never a routine procedure. Severe traffic and industrial accidents often require operation upon the kidney for repair of the injured or ruptured organ. If blood supply of the kidney remains adequate, such measures often save a kidney which might appear at first sight to necessitate removal.

Relationship of the Kidneys to Other Organs of the Urinary Tract.—A diseased kidney should be considered as a part of the urogenital system, particularly the urinary tract. This will include the kidneys, the ureters, the bladder, the prostate (in males), and the urethra. Not infrequently surgery of the kidney will involve surgery of the ureter as well. Damaged kidneys can result from infection of the bladder following contracted bladder, from stone in that organ, or from infection incident to an enlarged prostate.

Thus the successful treatment of a kidney ailment may be dependent upon treatment of bladder or prostatic disease. Finally, the diagnosis of surgical conditions of the kidney and urologic tract require a careful history, with recognition of important symptoms, such as the occurrence of chills, fever, and pain with especial reference to its location and character. Supplementing this, a complete study of the individual case with roentgenograms outlining the kidneys through the use of contrast media, together with cystoscopic examinations of the ureters and bladder, in most cases will indicate the source of trouble. In about 90 per cent of cases, urinary stones are revealed by X-ray films. The treatment of pyelitis may be medical or surgical. Surgical treatment consists in lavage of the kidney pelvis, if medical treatment fails of relief. The use of penicillin in selected cases is often helpful. Treatment of chronic bacterial infections of the kidneys is still a problem not always easy of solution, but there is reason for belief that in the future, specific medication will give better results than in the past.

HAROLD W. JONES, M.D.

Former Director, Army Medical Library

KIDO, kē'dō, Takayoshi, Japanese statesman; b. Hagi, Chōshū, 1832; d. Kyoto, May 27, 1877. His father, a prominent physician, gave his son the best education obtainable in Japan. His day, and the boy, intelligent, quick and ambitious, made the best of his opportunities. Coming of a semi-noble family he found almost no office open to him that he cared to aspire to. He had a strong faculty for taking infinite pains and doing things well; and the story is told of him that when Commodore Perry's forces visited Japan in 1854, he secured employment with it disguised as a laborer in order to learn all he could about the western nation that seemed to be pressing upon Japan conditions for which she had no love nor inclination. He did his work so well and maintained his disguise so completely that he was never discovered. This feat was characteristic of the man. But the adventure seems to have changed the whole trend of his thought. His contact with western life in this intimate manner gave him an insight into western ways that set him thinking in a new direction; and the result was that he continued to study the new conditions and civilization that he had thus unexpectedly discovered, with the result that he became convinced that Japan could no longer afford to continue isolating herself from the world. The natural result was that in 1868 he finally joined the revolutionary party of which he became the greatest thinker and planner. With Okubo, Saigo and Iwakura he worked out the details of the *coup d'état* of Jan. 3, 1868, which placed a new government in power subject to the Mikado alone and in reality changed the whole trend of the life of Japan, political as well as social. This revolution overthrew the power of the daimios and caused the abolishment of the feudal system. As a result 270 daimios relinquished their feudal power and agreed to hold their landed property directly

from the Crown. Thus Japan was placed, at one blow, on the road to that modern progress which astonished the western world. Kido, with his eyes ever turned westward, realized the power of the modern press and he founded the first real newspaper in Japan, the *Shimbun Zasshi*, which, under his able management, became a power for progress and modern ideas; and thus helped greatly to the leading of Japan along the pathway of western progress. This paper, founded in 1868, linked him firmly to western ideas; and turned his face ever westward. It also increased his desire to see and to know at first hand the civilization of which he had become, in a sense, in his own country, the champion. So, in 1873, he started out for a voyage round the world, as vice-president of a "traveling Japanese embassy," an idea of which he had himself been, in a sense, the sponsor. With him went another notable Japanese character, Prince Tomomi Iwakura (q.v.), one of the most intelligent of the Japanese revolutionary leaders. This world-wide trip made Kido a still stronger advocate of western civilization which he made every effort, through his court influence and his newspaper, to introduce into Japan. The translation which he had made of Montesquieu's *L'Esprit des lois*, which he caused to be published at his own expense, and which he largely advertised, did a great deal to influence the thinking class of the country in favor of a new and liberal constitution for Japan, which was finally secured in 1889. This constitution did away with the last vestiges of the feudal system and provided the machinery for a much more democratic administration of the affairs of the country, though it left it still firmly monarchical. Thus the result of his life-long labors bore fruit 11 years after his death. On his return to Japan in 1874, from his trip around the world, Kido became Privy Councillor to the emperor, a position which he retained until his death, and which enabled him to still further work for the ideas which had ever guided his life from the time he first made the acquaintance with western civilization through his first hand knowledge gained from his adventure with the Perry expeditionary party. His great qualities as a statesman and his single-heartedness in working for the good of Japan were recognized by posthumous honors during the exercises held in connection with the promulgation of the constitution of 1889 and in the raising of his son to the rank of a noble. Consult Morris, J., *Makers of Modern Japan* (London 1906), or any modern history of Japan.

KIDRON, kē'drōn, the Valley of Siloah (Wady Silwan), or the Valley of the Lady Mary (Wady Sitti Maryam), which lies to the east of Jerusalem, stretching from the foot of Mount Scipus north of the city, southward, then eastward, passing between Jerusalem and the Mount of Olives to En Rogel, south of the city, from whence it continues on southward to the Dead Sea under the name of Wady en Nar. The Valley of Kidron is frequently mentioned in Biblical narrative; and recent excavations show that it was, at one time, a place of much more importance than it is at present, for now it is the dried bed of a stream which flowed in Biblical times. Recent excavations show that the bed of the ancient stream now lies buried beneath nearly 40 feet of debris. An aqueduct cut into the rock in ancient times was

unearthed in 1880; and since then other evidence of the importance of the valley has been found buried beneath the sands that have blown in upon them. Among the important Biblical references to the Kidron are the following: when David fled from Absalom, he is credited with having crossed it; Absalom forbade Shimei to cross it; there Asa burned the idol which his mother had erected; there Josiah burned the asherah which had been taken from the temple; and there Hezekiah is said to have thrown into the Kidron River the altars found in Jerusalem.

Kidron was for generations a burial place for both Mohammedans and Jews, because of the belief that this spot is to witness the last judgment. To Christians the Valley of Kidron is of special historical interest because, according to the account of John, Jesus visited a garden there, in company with his disciples, shortly before his betrayal, judgment, and crucifixion. In 1950 this territory was annexed by the Hashemite Kingdom of the Jordan.

For 19th century archaeological discoveries in the valley, consult Benzinger, Immanuel, *Hebraische Archäologie* (Freiburg 1894; 3d ed., Leipzig 1927); Buhl, Frantz, *Geographie des Alten Palästina* (Freiburg 1896); Cheyne, Thomas K., and Black, J. S., eds., "Kidron," *Encyclopædia Biblica* (London 1899-1903).

KIDSGROVE, urban district, England, in northwest Staffordshire, 6 miles northwest of Stoke-on-Trent. Situated in a major coal mining district, it manufactures metal goods. It is in the neighborhood of the Five Towns or "Potteries" district of which Arnold Bennett wrote. Pop. (1951) 16,231.

KIDSON, Frank, English musical antiquary: b. Leeds, England, Nov. 15, 1855; d. there, Nov. 7, 1926. Kidson was one of the founders of the Folk-Song Society, and became a leading authority in his subject. His researches into the popular music of 18th century England are the foundation for later study. The collection of manuscripts he made was left to the Mitchell Library in Glasgow. He wrote *Old English Country Dances* (1890); *Traditional Tunes* (1891); *English Folk-Song and Dance* (1915); *The Beggar's Opera, its Predecessors and Successors* (1922). Another subject in which he became a specialist was Leeds pottery. With his brother, J. R. Kidson, he wrote *Historical Notes of the Leeds Old Pottery* (1892).

KIEFT, këft, Willem, Dutch colonial governor: b. Amsterdam, Netherlands, bap. Sept. 13, 1597; d. at sea, Sept. 27, 1647. The fifth governor of the New Netherlands colony, he arrived in New Amsterdam (New York) on March 28, 1638, and proceeded to carry out a number of construction projects and administrative reforms besides acquiring large tracts of land in what are now Queens and Westchester counties. His attempt to exact tribute from the Raritan Indians in 1640, however, led to a series of bloody reprisals; and when he proposed to launch a punitive war, the colonists refused to support him. Then, in February 1643, Kieft ordered a massacre of Weckquaesgeeks and Tappans who had sought refuge in the colony from the Mohawks. A general Indian war ensued, with many lives lost among the colonists in the remote settlements, Anne Hutchinson (q.v.) being one of the victims. Meanwhile, Kieft had been compelled to agree to the formation of a Board of Eight Men to participate

in the government of the colony. In the fall of 1644 the board began to petition the Dutch West India Company and the States General for its recall, and he was finally replaced by Peter Stuyvesant in May 1647. He died in a shipwreck off the coast of Wales on the voyage home. See also NEW YORK (city)—*History* (The City's Founding).

KIEL, kël, Friedrich, German musical composer: b. Laasphe, Westphalia, Germany, Oct. 7, 1821; d. Berlin, Sept. 14, 1885. While teaching music in a public school, he continued his studies, attaining a reputation as a local musician which led to his becoming a member of the private orchestra of Prince Karl von Wittgenstein-Berleberg. He studied at Coburg and at Berlin from 1842 to 1844. Many years later he was a professor in the Hochschule für Musik in Berlin. His compositions were mainly religious: an oratorio, *Christus*; a *Stabat Mater*, a *Requiem*, and a *Missa Solemnis*; but he also composed for piano, voice, and orchestra. He was distinguished particularly as a master of counterpoint and fugue, and was an influential teacher.

KIEL, Henry William, American public official: b. St. Louis, Mo., Feb. 21, 1871; d. there, Nov. 26, 1942. He received his education in the public schools and at Smith Academy. After learning the trade of bricklayer under his father's supervision he became vice president, later president of Kiel and Daues Bricklaying and Contracting Company, which was employed on many important contracts in St. Louis. Entering Missouri politics, he was first chairman of the Republican city committee, then presidential elector at large from Missouri in 1908. He was mayor of St. Louis from 1913 to 1925.

KIEL, city, Germany, capital and seaport of the state (*Land*) of Schleswig-Holstein, at the east end of the Kiel Canal, 55 miles northeast of Hamburg. Kiel was Germany's chief naval base, and in World War II was badly damaged by bombing, and its famous docks and shipyards reduced. Its university and many of its historic buildings were also damaged.

A very ancient town, it was a member of the Hanseatic League in 1284. In the 18th century it was part of Denmark. The Peace of Kiel in 1814 gave Norway to Sweden and Helgoland to England. In 1866 Schleswig-Holstein became part of Prussia. During World War I Kiel was the headquarters of the imperial fleet of Emperor William II, and surrendered in 1918, after which the fleet mutinied, beginning the short-lived revolution. Considerably restored since World War II, it now manufactures, among other things, machinery, precision instruments, chemicals, textiles, ceramics; prepares its famous *Kiele Sprotten* (smoked sprats); mills flour, and brews beer. It also builds fishing boats for deep-sea fishing. Pop. (1950) 253,857.

KIEL CANAL, Germany, in the state (*Land*) of Schleswig-Holstein, 61 miles long connecting the North Sea near Brunsbüttelkoo at the mouth of the Elbe estuary with the Baltic Sea near Kiel. Built primarily for military purposes in 1887-1895 to enable the German fleet to move between the two branches of the ocean without having to round the Danish peninsula, the canal also served the Baltic trade. Just before

World War I it was enlarged to take the big naval ships. Proclaimed an international waterway after World War I, its status was withdrawn by Adolf Hitler in 1936. Called the Kaiser Wilhelm Canal until the emperor's downfall, it is now often called the North Sea-Baltic Canal. It was damaged by bombs in World War II.

KIELCE, kyěl'tsě, province, Poland, in the southeast central region, comprising about 7,545 square miles. It is a hilly district, drained by the Vistula and other rivers. Its boundaries were rearranged by the USSR after World War II. Most of the former Russian provinces of Keltzy and Radom are included in the present Kielce. Its manufactures are mainly leather goods, textiles, paper, and trucks, and it produces several kinds of grain, flax, and livestock. The capital is Kielce.

KIELCE, city, Poland, capital of Kielce Province, 65 miles northeast of Kraków. The city passed through many hands during the long history of Poland, from its founding in 1173. Until 1818 it belonged to the bishops of Kraków, and developed as a town late in the 19th century. While part of Russia after 1815, it was the capital of Keltzy. During World War I there were battles here between the Russians and the Germans. Afterwards it was part of the newly-constituted Poland. During World War II it was a German administrative headquarters, was captured by Russia in 1945, and became part of a satellite Poland under USSR control. It is a rail junction; manufactures railroad cars and other iron goods; carries on brewing, milling, and processing; quarries stone, lime, and marble. In 1946, after a pogrom, most of the Jewish population left for the American Zone in Germany. Pop. (1946) 49,960; (1950 est.) 62,113.

KIELHORN, kēl'hörn, (Lorenz) Franz, German Sanskrit scholar: b. Osnabrück, Germany, May 31, 1840; d. Göttingen, March 19, 1908. After study at the universities of Berlin, London, Oxford, Breslau, and Göttingen, he became professor of Sanskrit at the Deccan College in Poona, India, where he was one of the founders of the *Bombay Sanskrit Series* in 1866. He returned to Göttingen in 1882. His *Sanskrit Grammar* has been used wherever Sanskrit is taught in European colleges. Contributions to *Indian Antiquary* and *Epigraphia Indica* made him widely known as a leading authority. He edited *Grundriss der indo-arischen Philologie* and translated and published Sanskrit texts in three volumes between 1878 and 1885.

KIELLAND, kēl'län, Alexander Lange, Norwegian novelist and playwright: b. Stavanger, Norway, Feb. 18, 1849; d. Bergen, April 6, 1906. Born into a wealthy middle-class family, he turned to literature primarily as a means of social criticism, publishing his first book, *Novelletter*, in 1879. His novels and short stories, marked by wit, stylistic elegance, and great descriptive power, castigate hypocrisy in the clergy, bureaucracy in official circles, and the oppression of the poor in Norway. After 12 feverishly productive years, he virtually stopped writing in 1891, serving thereafter as burgomaster of Stavanger and then as governor of Romsdal. Among his most powerful novels are *Garman og Hølse* (1880; Eng. tr., *Garman and Worse*, 1885); *Else* (1881; Eng. tr.,

1894); and *Skipper Worse* (1882; Eng. tr., 1885). His plays include *Tre par* (1886), *Betty's formynder* (1887), and *Professorer* (1888). A number of his short stories appear in translation in *Norse Tales and Sketches* (1896).

KIELMANSEGG, kēl'män-sěg, Count Erich von, Austrian statesman: b. Hannover, Germany, Feb. 13, 1847; d. Vienna, Austria, Feb. 5, 1923. On completing his education he entered government service, passing through the usual routine of various administrative posts in the provinces and in the Ministry of the Interior, finally becoming governor of Lower Austria (1889-1911) and minister of the interior (1895). For a short time he was prime minister. In his official capacity he showed himself a man of action, intelligence, and desire to better the conditions of affairs as he found them. He increased the size and importance of Vienna by taking into the city limits the suburban towns and villages; and he passed sanitary laws and other measures that benefited both town and country.

KIEN LUNG. See CH'IENT LUNG.

KIENSHUI or **CHIEN-SHUI**, jyēn'shwā, town, China, in central Yunnan Province, capital of Kienshui County, on the railroad that runs through Viet Nam to the coast. It is 100 miles south of Kuming, at an altitude of 4,836 feet. Manufactures of cotton and textiles are carried on, and there are rice mills. The agricultural products are mainly wheat, millet, beans, and sugar cane. It was formerly called Linan. Pop. (1948 est.) 27,618.

KIENSI or **CH'IENT-HSI**, chyēn'-shē, town, China, in west central Kweichow Province, capital of Kien County, 50 miles northwest of Kweiyang. Millet, tobacco, and rice are grown; cotton textiles are manufactured, as well as lacquer goods and tung oil. Pop. (1948 est.) 20,228.

KIENZL, kēn'ts'l, Wilhelm, Austrian composer: b. Waizenkirchen, Austria, Jan. 17, 1857; d. Vienna, Oct. 3, 1941. He studied in Graz, Prague, and Munich, where he met and was encouraged to compose by Adolf Jensen and Franz Liszt. His book on musical declamation brought him to the notice of Richard Wagner, whose influence became apparent in his operas. Kienzl's most popular opera in Germany, based on folk tunes, was *Der Evangelmann* (1895); he became known in the United States when *Der Kuhreigen* (Eng. tr., *The Dance of Death*) was produced in New York and Chicago in 1913. Other operas were *Urvasi* (1886); *Heilmars der Narr* (1892); and *Das Testament* (1916). An autobiography, *Meine Lebenswanderung*, appeared in 1926.

KIEPERT, kē'pěrt, Heinrich, German geographer, cartographer, and philologist: b. Berlin, Germany, July 31, 1818; d. there, April 21, 1899. His life interest was in all branches of geography and map making, and he traveled extensively to explore and to publish accurate maps. His first exploration in Asia Minor (1841-1842) led to the publication of *Atlas von Hellas und den hellenischen Kolonien* (1841-46). This was followed by *Neuer Atlas der Erde* (1857-61), *Atlas antiquus* (1859), and similar works. His fame brought him an appointment as director of the Geographical Institute of Weimar (1845-1852),

and professor in the University of Berlin (1859-1899). He published *Lehrbuch der alten Geographie* (1878), and an autobiography (1899).

KIEPURA, kyē-pōōr'ā, Jan (Wiktor), Polish tenor: b. Sosnowiec, Poland, May 16, 1902. As a boy he served with the Polish Volunteers (1920). After studying privately he sang on the concert stage in 1923, and made his debut in opera in Warsaw in 1925, singing in Charles Gounod's *Faust*. His popularity was such that he was known as the Polish Caruso. He toured Europe, singing in all the leading opera houses, and in Brazil in 1930. His first appearance in the United States was in *Tosca* with the Chicago Civic Opera in 1931. His debut with the Metropolitan Opera in New York was as Rodolfo in Giacomo Puccini's *La Bohème* in 1938. In 1939 he served with the Polish Legion in France, and toured the combat areas with his wife, Marta Eggerth. After the fall of Warsaw he devoted much of his time to singing for Polish War Relief in the United States, where he made his home. In 1943 he appeared with his wife in a revival of the *Merry Widow*. He made his first motion picture in England in 1931 and then several in Berlin, of which *Be Mine Tonight* was the most popular.

KIERAN, kē'rān, John (Francis), American newspaper writer and radio personality: b. New York, N. Y., Aug. 2, 1892. Educated at the City College of New York and at Fordham University, he taught in a country school, where he acquired an exceptional knowledge of birds and flowers. His active mind continued to acquire languages, law, and literary knowledge. In 1915 he became a sports writer on the *New York Times*, and (from 1927) the first to sign a daily column in that paper. He went on the road with New York baseball teams, visiting nearly every large city, and adding to his encyclopedic knowledge by visiting museums and libraries. All this stood him in good stead when he joined (1938) the panel of the radio show *Information Please*. He is the author of many magazine articles, as well as *Nature Notes* (1941); *American Sporting Scene* (1941); *Footnotes on Nature* (1947); and with Arthur Daley, *Story of the Olympic Games 776 B.C.—1952 A.D.* (1952); and is the editor of *Information Please Almanac* (yearly from 1947).

KIERKEGAARD, kīr'kē-gōr, Søren Aabye, Danish philosopher: b. Copenhagen, May 5, 1813; d. there, Nov. 11, 1855. Although Kierkegaard died in 1855, more translations and commentaries on his work and thought have appeared in the mid-20th century than in his own period. Princeton University has been particularly prolific in publishing translations of his work. He has profoundly influenced modern schools of thought in Europe and in the United States, such as existentialism (q.v.), and such philosophers as Jean Paul Sartre and Reinhold Niebuhr. He was radically opposed to the system of philosophy of Georg W. F. Hegel, to whom absolute knowledge was possible and rational. The idealism of Aristotle, Plato, and their followers, which assumes that man has the truth in himself and needs only to become conscious of this truth, was to Kierkegaard completely false. Truth, he said, must come from outside. God, or the Teacher, gives man not only truth, but the ability to understand it. Man has freedom of choice and must

exercise that freedom. Religion and faith involve suffering. "To be what one is by one's own act is freedom." This saying of Kierkegaard's is one of the tenets of existentialism.

He attacked established religion in the form that Christianity had taken by the 19th century, but held that though it is difficult to rationalize the existence of God, man must accept it by faith.

Educated at Copenhagen and in Germany Kierkegaard studied theology, then philosophy. On his return he went into retirement as a student, broke his engagement to Regine Olsen and wrote constantly for 25 years. Several of his books deal with his relationship to Regine, and his *Journals* go into detail. He frequently used pseudonyms to enable him to propose and discuss several points of view. His first publication, *Enten—eller (Either—or)*, 1843, was a kind of dialogue. It does not pretend to answer questions posed by philosophy, but presents the alternatives. Man has freedom to choose good or evil, aesthetically and ethically. *Stadier paa Livets vej (Stages on Life's Way)*, 1845, purporting to be written by "sundry persons," contained religious as well as aesthetic and ethical discussion. *Philosophiske smuler (Philosophical Fragments)*, 1844, was an introduction to his most important work, *Hyttende videnskabeligt efterskrift (Concluding Unscientific Postscript)*, 1846. *Synspunkter for en forfattervirksomhed (Point of View for an Author)*, 1848, describes his own education in Christianity. *Sydommen til døden (Sickness Unto Death)*, 1849, deals with the despair which was inherent in his thinking, and considers true Christianity the only cure for despair, or what the church calls sin.

His chief translators are Walter Lowrie and David and Lillian M. Swenson. His *Journals* edited and translated by Alexander Dru in 1938 are a valuable source of information. A collected edition in English reached 20 volumes by 1948. See also DANISH LITERATURE—The Modern Period.

Bibliography:—Allen, E. L., *Kierkegaard: His Life and Thought* (New York 1936); Haacker, Theodor, *Søren Kierkegaard*, tr. by Alexander Dru (New York, 1938); Lowrie, Walter, *Kierkegaard* (New York 1938); Borg, Robert, ed., *A Kierkegaard Anthology* (Princeton 1941); Collins, J. D., *Mind of Kierkegaard* (Chicago 1951); Hohlenberg, Johannes, *Søren Kierkegaard*, tr. by T. H. Croxall (New York 1954).

KIERSY, kyār'sè, or **QUIERZY**, Capitulary of, an edict of Charles the Bald (823-840), king of France and Holy Roman emperor, issued in 877—during his expedition into Italy. It provided that if any of Charles' followers died during this expedition, Louis the Stammerer, Charles' son and regent, should continue the deceased nobleman's son in his father's honors. It did not, however, provide that his lands would automatically become the son's, since the king maintained his right to dispose of vacant fiefs. The edict did not originate the feudal system which had been developing for some time, but assisted in its progress.

KIESEWETTER, kē'zē-vēt-ēr, Raphael Georg, EDLER VON WIESENBRUNN, Austrian writer on musical subjects: b. Holešov, Moravia (now Czechoslovakia), Aug. 29, 1773; d. Baden, near Vienna, Austria, Jan. 1, 1850. He was made an imperial councilor in 1803, and his home in Vienna attracted the most important musicians of his day, who performed there many works by Italian and German composers. He subsequently began to make a collection of old musical

instruments superior to any other in the city, and to write. Among his published works, in addition to numerous articles on ancient musical instruments, on which subjects he was an excellent authority, are *Geschichte der europäischen-ländischen oder Unserer heutigen Musik* (Leipzig 1834 and 1846); *Guido von Arezzo; sein Leben und Wirken* (Leipzig 1840); *Die Musik der Araber Originalquellen* (Leipzig 1842).

KIESLER, kēs'lēr, Frederick J(ohn), Austrian-American architect and designer: b. Vienna, Sept. 22, 1896. After attending the Technische Hochschule and the Akademie der Bildenden Künste (Academy of Plastic Arts) in Vienna, he began his architectural career in slum clearance and rehousing projects in his native city. Turning to designing stage settings, he introduced as the first of his many innovations the use of motion pictures rather than painted canvas as backdrops for the Berlin production of *R.U.R.*, in 1922. In a production of *The Emperor Jones* he introduced what he called the "space stage," with "continuous motion of scenery coordinated with acting, speech and lighting." He was appointed director and architect of the International Theater and Music Festival at Vienna in 1924, and two years later went to the United States on the invitation of the Theatre Guild and other organizations. The same year he received the commission to design New York's Museum of Modern Art. He won a prize competition for the design of a community center and theater at Woodstock, N. Y. In 1934 he joined the faculty of the Juillard School of Music as director of scenic design, and three years later was appointed director of Columbia University's School of Architecture laboratory for design correlation. In an article entitled "On Design Correlation and Biotechnology," he declared that "Design is in my definition not the circumscription of a solid but a deliberate polarization of natural forces toward a specific human purpose." In the 1930's he constructed the exhibition of the Association of American Designers and served as consulting architect for the National Public Housing Conference.

KIEV, kē'yēf, (1) an oblast in the north central section of the Ukrainian Soviet Republic of the USSR, bounded on the north by Belorussian SSR, on the west by Zhitomir and Vinnytsa oblasts, on the south by Odessa and Kirovograd oblasts, and on the east by Chernigov and Poltava oblasts. In the north, the region is a heavily forested plain with both deciduous and fir trees, and containing many swamps. The southern section is a partially wooded steppe with rich black soil. The climate is mild, winters are not severe, and rainfall is adequate. Agriculture and stockraising are the chief occupations, with a large production of meat and dairy products. Grain and potatoes are the main crops in the north, and sugar beets in the south. Many sugar mills are scattered throughout the southern section. Mining is almost nonexistent.

The capital and principal city is (2) Kiev, lying amid hills along the western bank of the Dnieper River. Filled with greenery, Kiev is one of the most beautiful cities in the USSR. The main part of the city is overlooked by castle-crowned heights with their walls and ancient fortifications, which still preserve an air

of the past. Kiev is one of the oldest cities in Russia, and was so prominent in history for so many centuries that it is known in Russia as the "mother of cities." It was already a town in the 5th century, and during the following four centuries continued to grow in importance and wealth until it finally became the capital and chief city of a principality of the same name. It had the distinction of being one of the first principalities in Russia to adopt Christianity. Under Vladimir I (q.v.) in the 10th century it became Christian. The prince had become convinced that connection with Rome would be very much to his advantage. So he set out with a large force against the Byzantine Empire, forced the Emperor Basil to give him his sister Anna in marriage and scared the pope into baptizing him. On his return to Kiev he sent forth a proclamation that all who did not come to the river to be baptized should be looked upon as rebels. The people flocked to the Dnieper, bringing their idols with them, as they had been ordered to do, and they were there baptized and their idols broken to pieces by order of Vladimir. Not satisfied with this work in his capital, Vladimir sent word to all the villages, cities and districts of his kingdom that the inhabitants, without exception, should follow the example of Kiev and become Christians.

From the time of Vladimir, Kiev continued to grow and prosper as the religious center of Russia and its richest and most famous city. It attracted the attention of the conquering Mongols of the 13th century, who descended upon it as they did upon other wealthy centers of Russia. The struggle was long and bitter, but finally the wealth, power and glory of Kiev passed away temporarily before the ravages of the Mongol hordes. In 1320, however, Kiev, coming under the rule of Lithuania, became a place of considerable importance, and retrieved a part of its past prestige and glory as a commercial and industrial city and the religious center of western Russia. When Lithuania became part of Poland in 1569, Kiev still formed a part of Lithuanian territory. It remained united with Poland until 1668, when it became Russian territory. Peter the Great paid considerable attention to Kiev, and made it one of the strongest fortresses in Russia in his day. Naturally, with so much momentous history, many relics of Kiev's past greatness are preserved in its ancient buildings. Among these are numerous churches dating to the time when it was the "city of churches." Of these ecclesiastical remains the monastery of Caves (Petcherskaya Lavre) is one of the most noteworthy, forming in itself a walled town with its many rows of cells. The city was the scene of massacres of Jews during the revolutionary disturbances of 1905, and it witnessed considerable fighting during the revolution of 1917. When the Ukrainian Republic was declared in January 1918, Kiev became its capital, but soon afterward the city was occupied successively by the Bolsheviks, the Germans, and the ataman Simon Petlyura. For a brief period during the Russo-Polish war of 1920 it was occupied by the Poles (May 7-June 11, 1920), but was recaptured by the Bolsheviks. During World War II it was badly devastated.

The third largest city in the USSR before World War II, modern Kiev is the capital of

the Ukrainian Soviet Socialist Republic. It is the largest city and greatest center of light industry in the Ukraine. The chief manufactures are river ships, chemicals, chemical machinery, machines for light and food industries, woodwork, food products, and cotton and linen textiles. Kiev also is an important river port and rail junction, as well as the cultural center of the Ukraine. Pop. (1939) 846,293.

KIFTI (IBN AL-KIFTI, ib'n ăl kēf'tē), Arabian historian and vizier: b. Kift, Upper Egypt, 1172; d. 1248. Born of one of the best families in the country he was well educated at Kift and Cairo. His father holding a position under the Sultan in Jerusalem, which had lately been conquered by Saladin (1187), Al-Kifti went to that city, where he became interested in studying the life of the people and the result of the conquest of the country on the inhabitants. These historical studies he was destined to continue all his life. In 1202 he was made vizier by the Sultan, a position he held until the death of the latter in 1216. But he was soon again called to the highest office in the land under the Sultan (1219-31) and again for the latter part of his life (1236-48). His administration was notable in the history of Arabian viziers. He not only attended strictly to state affairs and succeeded in helping greatly the prosperity of the country as a whole, but he encouraged literature and art and learning of every kind; and he set the example himself by undertaking extensive research work and writing histories. His work in this latter field was very extensive and highly esteemed in his day; but only one of his histories has survived to our day, the others having been destroyed during the Mongol invasion of 1260, only 12 years after his death. His one surviving work is known as 'Information of the Wise Men Regarding the History of the Scientists' (Kitāb Ikhhār al'Ulamā bikhhār al-Hukamā), and has come down to us only in part and that simply in extensive extracts made in another work in 1249. It treated of Mohammedan, Syriac and Greek philosophers and scientists. Consult Muller, A., 'Ueber das sogenannte ta'rikh al-hukamā des Ibn el Qifti' (Proceedings of the Eighth International Congress of Orientalists, Vol. I, Leyden 1891).

KIKUYU, kē-koo'yoo, a part of the Kenya Colony near Nairobi, Africa, situated upon the equator. It is principally noted for the controversy in the Anglican Church there, between the extreme High Church and the Low Church, the accusation being on the part of the former, that the bishop of Uganda, Dr. Willis, and the bishop of Mombasa had admitted to communion persons not members of the Church of England. On this charge Dr. Weston, bishop of Zanzibar, demanded the impeachment of the offenders. The matter was finally brought to the archbishop of Canterbury, who appointed a council to decide the question at issue.

KILAUEA, kē-low-ā'ā, an active volcano in Hawaii. It has an oval crater, nine miles in circumference, with a lake of red and boiling lava at the bottom over 1,000 feet below the crater's mouth. The volcano lies 10 miles from the sea, and 30 miles from Hilo, on the eastern slope of Mauna Loa, 4,000 feet above the sea. Kilauea

crater forms a great cavity on the side of the mountain, 3 miles long, 2 miles wide and 8 feet deep. At the southwestern end is a small lake of boiling lava called Halemanman, House of Everlasting Fire. Great eruptions occurred here in 1789, 1823, 1832, 1840 and 1880.

KILBOURNE, James, American pioneer b. New Britain, Conn., 19 Oct. 1770; d. Worthington, Ohio, 9 April 1850. He was successively employed as an apprentice, clerk, merchant and manufacturer, and having secured competence, presented himself as a candidate for orders in the Protestant Episcopal Church and was ordained about 1800. In 1801-02 he organized the Scioto Company, under whose auspices a colony of about 100 persons, under the lead of Kilbourne, was in 1803 established what is now the township of Worthington, Ohio. Having organized here the Episcopal parish of Saint John's, as well as others in the neighborhood, and procured the establishment of a western diocese by the General Convention of the Protestant Episcopal Church, he retired from the ministry in 1804, and was soon afterwards appointed a civil magistrate, an officer of frontier militia, and surveyor of a large portion of the public lands. In 1812 he was one of the commissioners to settle the boundary between the public lands and the great Virginia reservation, and also commissioned as a colonel in the frontier regiment; and in the succeeding year he entered Congress, of which he remained a member until 1817. He was the first to propose donations of lands to actual settlers in the northwest territory and afterward served for some years in the Ohio legislature.

KILDARE, kil-dār, parish, county and town of the same name in Ireland. The town, which is 25 miles southwest of Dublin, dates back to the 5th century when the present site was the seat of a monastery said to have been founded by Saint Bridget, daughter of an Irish king or chief, as the legend or story is variously stated. Bridget later became a nun, receiving the veil at the hands of no less a personage than Saint Patrick himself, according to the church legend which bears marks of authenticity. The famous monastery and the town itself are both in a somewhat decayed condition but they are still interesting on account of the many legends, stories and historical associations which cluster around them. Among the historical buildings of the town are the Round Tower, over 100 feet in height, on the top of the most elevated part of the site of the town; the convent of Saint Francis with its abbey and the abbey of the Carmelites. A very interesting relic of the past is the "Fire-house," a part of the chapel of Saint Bridget, in which there was maintained, according to the legend, perpetual fire for centuries, probably a remembrance of the pre-Christian fire worship of the Irish people. Pop. 3,000.

KILDEER. See KILLDEER.

KILGO, John Charles, American ecclesiast and educator: b. Laurens, S. C., 22 July 1861. He entered the ministry of the Methodist Episcopal Church South in 1882, continuing his college studies afterward so that he was graduated with the degree of M.A. from Wofford College 10 years later. He became agent for Wofford College (1889-94) and professor of

philosophy there during the same period, and for the following six years he was president of Trinity College, Durham, S. C. This position he resigned to accept the appointment of bishop (1910). He died at Charlotte, N. C., Aug. 10, 1922.

KILGORE, kīl'gōr, city, Texas, in Gregg and Kusk counties, at an altitude of 371 feet, 25 miles east of Tyler, and served by the Missouri Pacific Railroad and state and federal highways. It is in the center of an oil field some 60 miles long and 10 miles wide and all its businesses have to do with oil refining, oil supplies, and oil transportation. The surrounding country produces livestock, vegetables, figs, strawberries, and peaches.

The city is the site of Kilgore Junior College, and has a public library, a hospital, and over 40 churches. The town was first settled in 1872 and was incorporated in 1931, following the oil boom of 1930. Government is by a mayor and commission. Pop. (1950) 9,638.

KILHAM, kīl'ām, Alexander, founder of the Kilhamite or New Methodist Connexion sect: b. Epworth, Lincolnshire, July 10, 1762; d. Nottingham, Dec. 20, 1798. He professed conversion at 18, became a preacher in 1783 and two years later was enrolled by John Wesley as a regular itinerant. He was strongly in favor of complete separation from the Established Church and on the death of Wesley this subject came under discussion. He at once urged separation and sought moreover for the distribution of administrative power between the ministry and the lay members. For several offensive passages in his *Progress of Liberty* (1795), the pamphlet in which these views were expounded, he was tried at a conference held in 1796 and expelled from the denomination, upon which he immediately organized the New Methodist Connexion, sometimes called Kilhamites.

KILIMANJARO, kīl-i-mān-jā'rō, Mount (the Great Mountain), a double-peaked, snow-clad mountain of Africa, in Tanganyika, about 175 miles inland from the port of Mombasa. The highest peak, Kibo, estimated at 19,317 feet, is the highest known in the African continent.

KILKENNY, kīl-kēn'ī, an inland county, Ireland, in the province of Leinster, bounded on the north by Laoighis, on the east by Carlow and Wexford, on the south by Waterford and on the west by Tipperary. Its greatest length, north-south, is 45 miles, and its greatest width, east-west, is 23 miles. The name derives from Cill 'hoinnigh, that is, the Church of St. Canice (d. 598). The county is mostly hilly. There are coal (anthracite) deposits at Castlecomer and good black marble is also to be found. The Barrow, the Nore and the Suir rivers flow through the county. There are many ruins of historical and archaeological interest in various parts. Chief towns are Callan, Castlecomer and Kilkenny. Area 796 square miles. Pop. (1951) 65,131.

KILKENNY, an inland city, Ireland, and capital of the county of the same name. It is 73 miles from Dublin and is situated on both banks of the river Nore which is crossed by two bridges. It is also a station on the railway line which runs from Dublin to Waterford. Kilkenny, until recent times, was a most important center of civil and ecclesiastical affairs. For many hundreds of years it was regarded as the capital of

Ireland. Kilkenny as a town dates back to the 11th century. It was named after a church established there by St. Canice in the 6th century. It has always been a British stronghold and was originally given by the treacherous king, Dermot MacMorrough, to his daughter Eva as a wedding present when she became the wife of Strongbow. Later it passed into the possession of the Ormonde family. In 1367 a parliament was held here and a statute passed designed to prohibit English settlers from adopting Irish manners. It was furthermore made a capital offense for an Englishman to marry an Irish woman. Kilkenny was also the site of the parliament of the Confederation from 1642 to 1648 when the Anglo-Irish joined with the native Irish in an attempt to establish Ireland as a politically independent country. Many notable men have been educated at the grammar school there, among whom are George Berkeley, Jonathan Swift, and William Congreve. Some of Ireland's earliest dramatic performances took place at the Market Cross in Kilkenny. It is a very beautiful city and has many structures of great archaeological and historical interest, including Kilkenny Castle, overlooking the Nore, and St. Canice's Cathedral (13th century). It is now a market town for dairy and other agricultural products. There is also a fine grade of black marble quarried nearby and so the town has come to be called the "Marble City." In the city are published *The Post*, *The Kilkenny Journal*, and *The Kilkenny People*. Pop. (1951) 10,571.

KILLARNEY, kī-lār'nī, an inland town, Ireland, in the county of Kerry on the Coras Iompair Eireann railroad system. The Lakes of Killarney, one mile from the town, are world famous. Nearest the town is the large lower lake, Lough Leane. The peninsula of Muckross separates it from the middle lake, Muckross Lake. A long strait called "The Long Range" connects with the upper lake. The area around the lakes is covered with oak, arbutus, birch, holly, and ash trees. In summertime Killarney is a popular holiday resort. In the neighborhood is a 10,000-acre national park, and there are ruins of the 15th century Muckross Abbey. Pop. (1951) 6,301.

KILLARNEY, town, Canada, Manitoba, on the Canadian Pacific Railway about 160 miles west of Winnipeg and 47 miles south-southeast of Brandon. It is the center of an agricultural country with which it carries on a rather extensive trade. The handling of grain from nearby farms has necessitated the erection in Killarney of several modern grain elevators. The town has lumber yards, a sash and door factory, a cement plant, flour mills and agricultural implement works. There are department stores and several groceries. Killarney is 35 miles from Peace Garden and is rapidly becoming popular as a summer resort on account of the nearby lakes. Pop. (1951) 1,262.

KILLARNEY, Lakes of, three connected bodies of water, Ireland, the lowermost of which is within one mile of the town of Killarney. These famous lakes are situated in a basin in the midst of the mountains of Kerry, some of which rise abruptly from the water's edge densely clothed with trees from base to summit. In the lower lake (Lough Leane) are a number of finely wooded islands, on the prin-

cipal of which are the remains of Ross Castle. Between the lower and the middle lakes is the fine ruin of Muckross Abbey. A channel winds $2\frac{1}{2}$ miles from the middle to the upper lake. The upper lake is the most enchanting of the three, and is thickly studded with islets.

KILLDEER (*Charadrius vociferus*), the most common and best known of American plovers. It is found over most of North America and in some parts of western South America. Though migratory in the north, it is quite hardy, lingering late in the fall and arriving early in the spring. During migration it is found, sometimes in flocks, on the seacoast but it also visits the most isolated water holes in the western deserts. When nesting, the killdeer is more independent of water than are most plovers. Seeking out an open pasture, field or village green, it scoops out a depression in the gravel and lays four protectively colored, spotted eggs. When the nest is approached, the setting bird sneaks away from it and then feigns having a broken wing, meanwhile calling *kill-dee, kill-dee* loudly to divert the attention of the intruder from the eggs. Indeed, the killdeer is one of the noisiest of American birds, heard by night as well as by day—hence the name "vociferus." Soon after hatching the four downy young follow their parents, instinctively snatching at small moving insects, which form a large part of their food.

KILLDEER

The killdeer is brownish gray above, with a chestnut rump, and a tail marked with black and white. The white underparts are set off by two black bands on the throat, not by one band as in many of the related species. The killdeer was never an important game bird.

DEAN AMADON,
Associate Curator, Department of Birds, The
American Museum of Natural History.

KILLER WHALE, *Orcinus orca*, of the family Delphinidae, a kind of whale or large porpoise also called Orca or Grampus. A full grown male reaches a length of 30 feet; a female half that size. The head is slightly rounded, ascending gradually and smoothly to the dorsal fin. In old males the triangular dorsal fin, the rounded flippers and the tail flukes are enormously developed, the dorsal reaching as high as 6 feet. In the female the development is much less great. The color is a startling contrast of clearly defined black and white. The belly, the chin, an oval patch above and behind the eye, and the under surface of the tail are white. About three-quarters of the way toward the tail, the white of the ventral surface projects upward and backward onto the side in an oval. Behind the dorsal there is a faint light saddle mark. In the young, the white areas are tinged with yellow. The conical

teeth are large and powerful, from 20 to 24 in each of the massive jaws. The upper and lower teeth interlock. The killer is the largest and most powerful member of its family. It hunts in pack, of from 3 or 4 to 40 individuals and is rapacious and exceedingly voracious. Unlike all other cetaceans, it feeds upon warm-blooded aquatic birds. It attacks the larger whales without hesitation, biting them on the lips and throat, sometimes in order to force them to surrender their young, which are torn to pieces and devoured. In one instance the stomach of a killer was found to contain the bodies of 13 porpoises and 14 seals. It has a world-wide distribution but is most commonly found in the Antarctic and Arctic oceans. Consult Norman, J. R. and Fraser, F. C. *Giant Fishes, Whales and Dolphins* (New York 1938).

CHRISTOPHER W. COATES,
Curator, The Aquarium, New York Zoological
Society.

KILLIECRANKIE (kīl-i-kräng'kī) mountain pass, Scotland, in the Grampians of northern Perth County, 34 miles northwest of Pitlochry by rail. Near here John Graham of Claverhouse, 1st Viscount Dundee, defeated the forces of William III led by General Hugh Mackay on July 17, 1689. Viscount Dundee was, however, killed in the moment of victory.

KILLIFISH, one of a group of small fishes of the family Cyprinodontidae. They have broad, depressed, scaly heads, large cycloid scales, a lateral line, and small very protractile mouths with several rows of pointed teeth. The common killifish or mummichog (*Fundulus heteroclitus*) seldom exceeds three or four inches in length and is exceedingly abundant in shallow waters along the shores of bays and estuaries, in brackish pools and tidal rivers from Maine to Mexico. It is extremely hardy and is beneficial to man because its omnivorous feeding habits include the larvae of salt marsh mosquitos. It is also widely used as bait. The sexes differ in color, the males taking on brilliant orange and bluish reflections. The striped killifish (*F. majalis*) reaches a length of eight inches, and is found in shallow salt and brackish bays from Florida to Cape Cod. Males have transverse and females longitudinal black bars. The species of *Fundulus* are oviparous but some genera of related families are viviparous.

CHRISTOPHER W. COATES.

KILLINGLY, kīl'ing-li, town, Conn., including several villages, in Windham County; alt. 300 feet; on the Quinebaug and Five Mile rivers; about 20 miles east of Willimantic. The railway station is at Danielson, on the New York, New Haven and Hartford Railroad. It was settled in 1693, and until 1708, was known by its Indian name of Aspinock. It was a textile manufacturing community until the shift of that industry to the South in the 1920's. Absorbent cotton is manufactured in East Killingly. South Killingly was the home of Mary Kies, probably the first woman to receive a patent in the United States, granted May 1809 for her straw and silk weaving machine. Pop. (1940) 9,547; 1950 (est.) 10,001.

KILLINGTON, kīl'ing-tūn, PEAK, in the Green Mountains, in the State of Vermont, about 10 miles southeast of Rutland. It is 4,241 feet high, and the view from

s summit is most beautiful; a large number of pretty villages and charming valleys may be seen on a clear day.

KILMAINHAM, kīl-mān'hām, a township of Dublin County and a suburb of Dublin City. It lies to the west of the city and is known generally throughout the British Empire on account of its military hospital which bears the name of the place itself, and its jail in which numerous political offenders have been confined, among them Parnell, who was placed there in 1882.

KILMARNOCK, a town situated on the Kilmarnock, in Scotland. It is in Ayrshire, only 12 miles north of the city of Ayr, and is the largest town in the shire. It is noted for its connection with the national poet, Robert Burns, whose first book was published there. The neighborhood of the city is given greatly to the production of cheese and one of the yearly events of its life is a great cheese show to which people come from far and near with tubs. The city, which has grown rapidly within the past 30 years, has a very active industrial life. It possesses large engineering establishments and various factories. Its blast furnaces also form one of the most prominent features of its industrial life. In addition to these, Kilmarnock also produces various other products. Pop. about 40,000.

KILMER, Joyce, American author; b. New Brunswick, N. J., 6 Dec. 1886; killed in France, 1 Aug. 1918. He was educated at Rutgers and at Columbia University, being graduated from the latter in 1908. In 1908-09 was instructor in Latin in Morristown High School; in 1909-12 was editorial assistant on the 'Standard Dictionary'; in 12-13 was literary editor of *The Chur. Human*. After 1913 he was a member of the staff of the *New York Times Sunday Magazine* and the *New York Times Review of Books*. He was a regular contributor to the *Literary Digest* and other periodicals. He published: 'Summer Love' (1911); 'Trees and Other Poems' (1916); 'Main Street and Other Poems' (1917); 'Literature in the Making' (1917); and edited 'Verses by Hilaire Belloc' (1916); 'Dreams and Images: an Anthology of Catholic Poets' (1917). In 1917 he enlisted in the 165th Infantry (old 69th New York National Guard), National Army; went to France and was killed in action near the Ourcq. See the work by his mother, Mrs. A. E. Kilmer, 'Memories of My Son, Joyce Kilmer' (New York, 1920).

KILN POTTERY. In modern practice, kilns, as used in the clay industries may be described in three general types, up-draft, down-draft and muffle kilns. The last named stands alone, as its distinctive feature lies not in the method of firing or the direction of the draft but in the fact that the kiln consists of a single laboratory closed to the direct entrance of flame and heated by radiation through the walls. This type of kiln is used in cases where it is necessary that the contained wares should be protected from dust and smoke, but where it is not convenient to enclose them in saggars. Large ware such as porcelain bath-tubs and sinks, heavy pieces of terra-cotta, etc., cannot be set in saggars as pottery is on account of weight and size. They are best burned in a

muffled kiln, being set directly upon the brick floor. Muffled kilns are also used for burning painted wares. These are smaller than the kilns for heavy goods and are burned to a much lower temperature. Such kilns can be set, burned, cooled and drawn in 24 hours, while the large muffles cannot be turned in less than 10 days.

General kilns for pottery burning are of the open type. The wares are enclosed in saggars which are set over one another in tiers (bungs). Saggars are cases made of refractory clay and suited as to size to the wares they are to contain. The flames and kiln gases pass freely round the saggars and the whole chamber is uniformly heated.

The usual form of kiln is cylindrical with a slightly domed crown. Outside this is the "hovel" or conical top familiar to the inhabitants of pottery towns. The hovel serves the purpose of a chimney, and collects the smoke from a number of apertures in the kiln crown. The fire mouths range in number from 6 to 10 according to the size of the kiln. In the up-draft kiln the gases simply pass up between the bungs of saggars and find a free vent at the top. In the down-draft type the top of the crown is closed and the gases after passing up the walls and under the crown are led down a centre stack and up again through flues arranged for the purpose. The structure of the down-draft kiln is more complicated than the up-draft, but a considerable economy of fuel is effected. The kiln also cools more rapidly.

Kilns for burning bricks follow the same general lines but vary in form. For this purpose the square kiln is among the most popular, being usually operated on the down-draft principle.

Many plans have been devised for the perfect utilization of heat, but none that is entirely satisfactory. One of the best is that of the continuous kiln. This has been applied in Germany to the burning of porcelain, and its use in America increases. The continuous kiln is a long low tunnel built in the form of a parallelogram with rounded ends. This is divided into as many chambers as may be necessary, each chamber having an entrance at each side and two fire mouths. Paper partitions are used in order to secure the correct movement of the draft, and as each successive chamber is filled with ware and the proper dampers opened the heat from the burning chambers is drawn through the unburned brick, bringing them up to a high temperature without any additional fuel. Meanwhile the chambers in which the firing has been completed are beginning to cool and so the work goes on continuously. The economy of the method is very great, but a considerable output is necessary in order to avoid stoppage. Kilns are, for the most part, burned with coal, both hard and soft coals being used. Those in the gas belt are successfully burned with natural gas and in some places oil is used. The temperatures at which different wares are burned are about as follows:

Roofing tile and paving brick	1030°-1070°C
Common brick and drain tile	1090°-1170°C
Porcelain art pottery -- glaze	1150°C
Porcelain art pottery -- body	1230°C
Sewer-pipe and stoneware	1250°-1290°C
Earthenware dishes	1290°-1313°C
Hotel china	1330°C
Bone china	1330°C
Hard porcelain	1390°-1410°C

KILO. See METRIC SYSTEM.

KILOGRAMME, or **KILOGRAM**, a French measure of weight = 1,000 grammes. See METRIC SYSTEM.

KILOLITER, or **KILOLITRE**, a French measure of capacity for fluids, 1,000 litres. See METRIC SYSTEM.

KILOWATT. See ELECTRICAL TERM; UNITS; WATT.

KILPATRICK, Hugh Judson, American soldier: b. Deckertown, N. J., 14 Jan. 1836; l. Valparaiso, Chile, 4 Dec. 1881. He was graduated at West Point in 1861, and in the autumn of that year became a lieutenant-colonel of cavalry. He was appointed a brigadier-general of volunteers in May 1863, and in the following March was active in a raid to Richmond for the release of Federal prisoners. He commanded the cavalry of Sherman's army in its march from Atlanta to Savannah in 1864, and in June 1865 was promoted major-general of volunteers. After the War he was prominent as a lecturer and a Republican political speaker. He was Minister to Chile from 1865 to 1870, and was reappointed in 1881. In 1887 his remains were removed from Chile and interred at West Point. Consult Moore, 'Kilpatrick and our Cavalry' (1865).

KILWA (kēl'wā) **KIVINJE**, kē-vēn'yā, or **QUILOA**, kē-lō'ā, seaport town in Tanganyika Territory. It is situated on the east coast about 180 miles south of Zanzibar, and was, before the outbreak of the European War, the chief port of entry of the German government in German East Africa. At that period its extensive roadstead was frequented by trading vessels from all parts of the world, for its trade and commerce were very extensive. Before the German occupation of the country the city was a place of considerable importance in the native economy, but it was extremely unhealthy for Europeans and not any too sanitary for the natives. The Germans did a great deal to improve the health conditions of the town which they made fairly habitable for white people and blacks alike. All the neighborhood of Kilwa was noted, during the Arab occupation of the coast, as one of the hotbeds of the African slave trade. Kilwa (Kilwa Kisiwani), the centre of these Arab operations, which is some 17 miles further down the coast, has fallen into decay and is almost deserted, and there is little commercial or industrial activity on the island on which it is situated or in the immediate neighborhood. The population of the modern city, which is known as Kilwa Kivinje, is over 100,000.

KILWINNING, an industrial town in Ayrshire, Scotland, quite close to Irvine. It possesses woollen factories, coal mines, iron works, engineering and fire-clay establishments. It is situated in historic ground and the whole neighborhood is rich in Highland and Lowland traditions. Near to the town is Eglinton which possesses extensive iron works and the famous castle of the same name, the scene of the Eglinton Tournament (1839). Kilwinning claims the honor of being the mother of the freemasonry of Scotland. Pop. about 5,000.

KIM, by Rudyard Kipling, ranked by some critics as "the author's highest attainment in

fiction," narrates the colorful adventures of young Kimball O'Hara, son of an Irish soldier in India, reared from babyhood as a w among low-caste Hindus and known among his variegated native acquaintances as "Little Friend of all the World." Kim attached himself, as disciple and protector, to a splendidly wise yet simple old Tibetan lama, who wandered through India in search of a mystic river that is to wash him clean of all earthly sins, sorrows and penalties. The boy's European parentage is discovered, and Kim, with the lama's aid, is sent to school where he is educated with a view to his employment in the British secret service, for which he is peculiarly fitted by his natural gifts and his intimate knowledge of native life. Then, still in his teens, and unofficially attached to the secret service, he resumes his wanderings with the lama through India and far into the Himalayas, where he is instrumental in defeating the machinations of foreign spies among the native princes. On its first appearance in book form, 19 Oct. 1901, 'Kim' was enthusiastically hailed as a marvelous revelation of Hindustan. Thus a reviewer in *The Academy* (London) writes, "'Kim' is hardly a novel. It is a kinematograph of a people, telling what they feel—what they have felt through time, as the effect of that immemorial feeling on the life of to-day." And Edgar Allen Forbes who followed the route of the tale through India declares "'Kim' is to me the best guide book and the most faithful interpreter that a traveler may find in India. No other book that I know of so clearly unfolds that wonderful land and its mysterious customs."

ARTHUR GUTERMAN

KIMBALL, Arthur Lalannc, American writer: b. Succasunna Plains, N. J., 16 Oct. 1856. Educated at Princeton and Johns Hopkins universities, he became a member of the teaching staff of the latter institution for a while, being finally called to the chair of physics in Amherst College in 1891. Among his published works, which are almost altogether on physics, are 'The Physical Properties of Gases' (1890), and 'College Physics' (1911). He died 22 Oct. 1922.

KIMBALL, Heber Chase, American Mormon leader: b. Sheldon, Franklin County, Vt., 14 June 1801; d. Salt Lake City, Utah, 22 Jan. 1868. In 1832 he was baptized into the Church of Latter-Day Saints, in the same year was ordained an elder of the Church by Joseph Smith and in 1835 became one of the 12 Mormon apostles. In 1838 with Brigham Young he led the Mormons from Missouri into Illinois, where they finally settled at Nauvoo, and in 1847 was a pioneer in the exodus to the valley of Great Salt Lake. He was successively chief priest of the order of Melchizedek (1846), a councillor to Young (1847) and chief justice and lieutenant-governor of Deseret.

KIMBALL, James Putnam, American geologist: b. Salem, Mass., 26 April 1836; d. 23 Oct. 1913. Educated at Harvard, Berlin, Göttingen and Freiberg (Saxony, school of mines), he became professor of chemistry and economic geology in the New York State Agricultural College (1861-62), and assistant ad-

king as captain. He took a very active part in the Civil War and was with the Army of the Potomac, serving on the staffs of McClellan, Burnside, Hooker and Meade. At the conclusion of the war he became a mining engineer, serving in the meantime as honorary professor of geology at Lehigh University (1874-85), becoming, upon the latter date, director of the United States Mint (1885-88). He contributed extensively on his special subjects to American and other magazines.

KIMBALL, Martha Gertrude, American philanthropist: b. Portland, Me., 1840; d. 1894. She led a very active life which was marked by charitable impulses. During the Civil War she acted as a nurse with Sherman's army on its march into Georgia. She took a very great interest in the soldiers, and finally became inspector of hospitals. Her first connection with the army in the field was when she accompanied her husband to the front during the early part of the war. The fact that her husband was appraiser of captured cotton, an important position in the army, gave her an opportunity of seeing army life that she could not easily have otherwise obtained without becoming a part of the military organization as she later on actually did. She is credited with being the originator of the Decoration Day idea, which she is said to have suggested to General Sherman, who at once welcomed it and put it into practice.

KIMBALL, Richard Burleigh, American author: b. Plainfield, N. H., 11 Oct. 1816; d. New York, 28 Dec. 1892. He was graduated at Dartmouth College in 1834 and later admitted to the bar; practised his profession at first in Waterford, N. Y., and afterward in New York. He founded the town of Kimball, Tex., and constructed the first railroad in that State, extending from Galveston to and beyond Houston. His publications include 'Letters from England' (1842); 'Cuba and the Cubans' (1850); 'Saint Leger' (1850); 'Romance of Student Life Abroad' (1853); 'Under-Currents of Wall Street' (1862); 'Henry Powers, Banker' (1868); 'To-day in New York' (1870); 'Stories of Exceptional Life' (1887).

KIMBALL, Sumner Increase, organizer of the United States Life Saving Service: b. Lebanon, Me., 2 Sept. 1834; d. Washington, D. C., 21 June 1923. He was graduated from Bowdoin in 1855; studied law and was admitted to the bar in 1858. In 1859 he served in the State legislature and was a member of the committee on judiciary. In 1862 he became a clerk in the second auditor's office in the Treasury Department at Washington and in 1871 was made chief of the Revenue Marine Service. In that position he had occasion to investigate the condition of the government stations on the New Jersey and Long Island coast where surf boats and other apparatus were stored under the charge of a keeper for use in case of shipwreck; he found the property badly cared for and the service inefficient. Obtaining an appropriation from Congress he entirely reorganized the service, and so successfully that it was soon extended to Cape Cod and other points on the Atlantic Coast. In 1878 the Life Saving Service was organized as a separate bureau and was extended to the Pacific Coast and the

Great Lakes. He was made the head of the bureau and introduced many improved methods, including the patrol system and telephonic connection between adjacent stations; he also obtained the passage of the law, to the effect that inspectors, keepers and crews in the service should be appointed on a strictly non-partisan basis "with reference solely to their fitness." He also served as acting register, acting comptroller and acting solicitor of the Treasury, and in 1889 he was the United States delegate to the International Marine Conference. He published 'Organization and Methods of the United States Life Saving Service' (1889), the most complete monograph on the subject, and 'Joshua James—Life Saver' (1909).

KIMBALL, William Wirt, American naval officer: b. Paris, Me., 9 Jan. 1848. Graduated from the United States Naval Academy (1869), he entered at once upon military life and was promoted as rapidly as the service permitted, becoming captain (1905) and rear-admiral (1908). He performed a great deal of service in almost every water where the United States fleet is stationed. Among his other experiences he was one of the first of American naval officers to see service on an American torpedo boat. Aside from this he gave much attention to the development and perfection of machine and magazine guns and submarines. For this reason he was given command of the American Atlantic torpedo boat flotilla during the Hispano-American War. After the close of the war he was a member of the boards of construction, examination and retirement, and he was in command of the Nicaraguan expeditionary squadron (1909-10), notwithstanding the fact that, by law, he was automatically retired in 1909. Died 28 Jan. 1930.

KIMBERLEY, kím'ber-lē, John Wodehouse, EARL OF, English statesman: b. London, 1826; d. 1902. Educated at Oxford, he succeeded his father as third Baron Wodehouse while still in his teens, and he soon entered public life as Under Secretary of State for Foreign Affairs (1852-56 and also 1858-61). The intervening time he spent as encumbent of the Russian Embassy. He was special envoy to Copenhagen to represent the government in the Schleswig-Holstein affair (1863), and on his return to England the following year he was appointed Under Secretary at the Indian Office, a position he soon relinquished to become Lord Lieutenant of Ireland (1864-66). He was recalled to England by the Gladstone government as Lord of the Privy Seal (1868-70) and Secretary for the Colonies (1870-74). The latter position he again held (1880-82) until he was appointed Secretary of State for India (1882-86), a position he was again called to occupy (1892-94), but relinquished to become Foreign Secretary in the Rosebery Cabinet (1894-95). Two years later he became leader of the Liberals in the House of Lords, and in 1899 he was elected chancellor of London University. In 1866, at a comparatively young age, he was raised to the dignity of Earl of Kimberley, for services rendered the empire. Kimberley was a man of brilliant executive gifts and his work in Ireland and as Colonial Secretary and Secretary of State for India redounded to his credit and that of the British government.

KIMBERLEY, Australia, a northern district of Western Australia, brought into notice by the discovery of gold fields in 1886. It contains immense tracts of excellent pasture and much land suitable for cultivation. The chief port for the district is Derby, on the Fitzroy River, near King Sound. The district, which has an area of 144,000 square miles, is divided into East and West Kimberley. It is separated from the more populous part of the state by the Great Sandy Desert.

KIMBERLEY, Union of South Africa, town of Cape of Good Hope province, 647 miles by rail northeast of Capetown. It lies at an altitude of 4,012 feet above sea level and was named for the first earl of Kimberley (q.v.). Founded in 1870, it owes its existence and prosperity to the mining of diamonds, first discovered in the area on the Du Toits Pan and Bultfontein farms. Lime, salt, and gypsum are also found in the neighborhood, and the town is the center of an important dairying and agricultural district. During the South African War a British force was besieged in Kimberley from Oct. 14, 1899, till Feb. 15, 1900, when it was relieved by Gen. Sir John D. P. French (later the 1st earl of Ypres). Pop. (1946) 74,847.

KIMCHI or **KIMHI**, kīm-kê, David (called RE-DAK, rē-dák', from the initials of his name, Rabbi David Kimchi), Hebrew philologist: b. Narbonne, Provence, France, c. 1160; d. c. 1235. He was the most learned member of a medieval Jewish family of Hebrew grammarians and Biblical scholars. Besides Biblical commentaries, he wrote in Hebrew *Sefer ha-Shorashim* (Book of Roots); *Sefer Miklol* (Book of Completeness); and *Et Sofer* (Pen of the Scribe), which treated of the Massora and the Hebrew accents.

KIMMEL, kīm'el, Husband Edward, United States naval officer: b. Henderson, Ky., Feb. 26, 1882. Graduating from the United States Naval Academy in 1904, he was commissioned ensign in 1906, and in the course of the next 30 years served the navy in many capacities; during World War I he was executive officer of the U.S.S. *New York*, of the Sixth Battle Squadron, on patrol duty in the North Sea. Promoted rear admiral in 1937, after three years of shore duty as budget officer of the navy he was given command of Cruiser Division 7, which he took on a goodwill cruise to Latin American republics. In 1939 he became commander of the Cruisers Battle Force, of the United States Fleet, and on Feb. 1, 1941, having been promoted admiral, he was appointed to command of the Pacific Fleet. He had been placed above 46 higher ranking officers in receiving this topmost command of the United States Navy, and he was at Pearl Harbor, Hawaii, with most of his ships when the Japanese made their surprise attack on Dec. 7, 1941. Ten days later he was relieved of his post, and following the report of a board of inquiry on Jan. 24, 1942, that he and Lieut. Gen. Walter C. Short, commander of the Hawaiian Department of the Army, had been guilty of "dereliction of duty" the two men were retired. A Congressional Investigating Committee reported on July 20, 1946, that "the errors made by the Hawaiian commanders [Kimmel and Short] were errors of judgment and not derelictions of duty."

KIMONO, loose robe of the Japanese. The sleeves are cut in one piece with the rest of the gown, which is embroidered with characteristic designs. Decorative and comfortable, it has been adopted by women in Western countries for lounging.

KIN, persons related by blood. In common law, next-of-kin is the nearest blood relation of a deceased person. The method is to count one degree for each link in the chain, which starts from the deceased person. Thus, father and mother, and all children, are in the first, while grandparents and grandchildren, brothers and sisters, are in the second degree of kin.

KINABALU, kīn'ū-bū-lōō', loftiest mountain in Borneo, located near the northwestern extremity of the island, in the British colony of North Borneo. The height is 13,451 feet.

KINCARDINE, kīn-kār'dīn, Canada, town in Bruce county, Province of Ontario, situated on Lake Huron north of Goderich. One of the most thriving towns of the western Ontario peninsula, it is a port of entry and has extensive fisheries, knitting and spinning mills, and furniture factories. Pop. (1941) 1,810.

KINCARDINESHIRE or **KINCARDINE** (known also as **THE MEARNS**), Scotland, an eastern maritime county north of Angus and south of Aberdeenshire; it has about 32 miles of bold and rugged coast on the North Sea. The Grampians occupy the west and central portions of the county, which has an area of 382 square miles. Agriculture is pursued in the valleys and around the coast, and there are deer forests and moors. Fishing, both river and sea, is important. Stonehaven (pop. 1947, 4,551) is the principal town. Pop. (of county, 1931) 39,804.

KIND, kint, Johann Friedrich, German poet, dramatist, and novelist: b. Leipzig, 1768; d. 1843. He is best known as the author of the librettos for *Das Nachtlager von Granada*, to the music of Konradin Kreutzer; *Der Holsdieb*, to the music of Heinrich Marschner; and *Der Freischütz*, to the music of Karl M. F. E. von Weber.

KINDERGARTEN, The, is an educational program for children between the ages of four and six. In 1951 such programs were accessible through the public schools to slightly more than half the five-year-old population of the United States. The ratio of kindergartens to the number of children was greater in large cities than in small cities and in the northern part of the country than in the southern.

Origin and Development in Europe.—Credit for the origin of the kindergarten is given to Friedrich Froebel (1782–1852, q.v.), the first educator to combine a theory of preschool education with practical methods for its operation. Apparently, Froebel was not much affected by the contemporary development of infant schools in England under the leadership of Robert Owen (q.v.), nor by the French *salles d'asile* sponsored by such philanthropists as Jean Denis Marie Cochin. Such institutions had been founded primarily to prevent neglect of very poor children, while Froebel was concerned with the early education of all children. He was, however, influenced by John Amos Comenius, who as early as 1628

and emphasized the importance of early training; Jean Jacques Rousseau, with whose faith in the inherent goodness of the child's nature Froebel appears to have agreed; and by Johann Heinrich Pestalozzi (q.v.), who formulated definite methods of teaching young children and with whom Froebel studied. Believing in the inherent worth of the child's "creative self-activity," Froebel stressed the importance of plays and games. At the same time he developed a mystical conception that the child had within him latent understandings of the great truths of life and nature which could be awakened symbolically. Thus the "gifts and occupations" which became part of his method were not merely toys and games but reflections of the plan of the universe, to be used in a precise and ritualistic order.

By 1872, Froebelian kindergartens, promoted by Baroness Berta von Marenholtz-Bülow, had spread throughout Europe. In France, Froebelian methods had effected some reforms in the *écoles maternelles*, but these were brought to an end by the Franco-Prussian War and the attendant bitterness toward anything of German origin. In Italy, from 1907 work with young children was influenced by the educational experiments of Maria Montessori (q.v.), whose emphasis on child study, on equipment designed for "training of the senses," and on the value of the child's participation in the activities of real life was eventually reflected in kindergarten programs in other European countries and in the United States. In England the few kindergartens established under Froebelian influence were forerunners of the nursery school movement which developed there just before World War I.

Development in the United States.—Froebel's ideas were first introduced in the United States in private schools founded by German immigrants after the revolution of 1848. The first American kindergarten for English-speaking children, and the one which most directly influenced the kindergarten movement, appears to have been that established by Elizabeth Palmer Peabody (q.v.) in Boston in 1860. Following the principles established by Froebel, a training school for kindergarten workers was opened several years later. With it began the pattern which was to shape kindergarten practice for some time. Young women concerned with young children enrolled in the new school, which familiarized them with the materials to be used in the kindergarten, taught them its songs and games, and endowed many of them with a zeal for accomplishment which has perhaps never been matched by any other educational endeavor. Some of these early kindergartners went into slums to establish free kindergartens supported by churches and philanthropic organizations, some worked in private schools, and the most inspired eventually organized their own training schools.

In 1873 the first kindergarten in a public school was opened in St. Louis, Mo., by Susan Elizabeth Blow (q.v.). The period between 1870 and 1890 saw a rapid increase in the number of kindergartens, many of them operated by free kindergarten associations and a few being accepted in the public schools. In the following decade a number of the philanthropic kindergartens were incorporated in public school systems. Throughout these years, however, the kindergarten was regarded as a unique educational institution. Although it might be housed in a public school, it had little in common with it. Even

when the kindergarten teacher's training was broadened to include music, art, physical education, and nature study, she received this training not in a normal school or college but in a very specialized, privately supported kindergarten training school.

The relative insulation of the kindergarten and the dedication of its leaders to the principles and methods of Froebel combined to make its program rigid and resistant to change. As early as 1890, however, new concerns for children, their welfare, and their education were challenging the traditional kindergarten. Anna Bryan, who had opened a training school in Louisville, Ky., and her student, Patty Smith Hill, were among the first to recognize that strict adherence to Froebelian practice with its long periods of sitting still, fine handwork, and lack of opportunity for experimentation must exert a stultifying effect on the developing physical and mental powers of the young child. They were supported in their views by the growing child study movement led by Granville Stanley Hall, and by the newer educational philosophy advanced by John Dewey (q.v.). The latter identified learning with the child's actual experiencing of the world around him and saw the teacher as a guide arranging an environment in which the child, exercising his curiosity and powers for observation and experimentation, could grow in understanding.

As a result of these influences, life in the kindergarten became much less precious. Children moved about more freely and were encouraged to vigorous physical activity with swings, slides, seesaws, and jungle gyms. They no longer spent long hours making miniatures from paper and cardboard, but instead were aided in constructing objects useful for their play from sturdy materials. There was also greater regard for rest and nutrition. Such changes developed slowly, however, and evidences of the traditional forms lingered on into the 1930's.

From 1920 the kindergarten began to be subjected to a new pressure, that of the emerging nursery school movement. Nursery schools had originated in England, where they were designed to promote the physical health of children too old to be supervised by baby health centers and too young to benefit from the so-called infant schools. In the United States the nursery school idea was taken over by psychological research centers, which began an intensive study of the mental, social, emotional, and physical development of young children. The effect on the kindergarten was threefold:

(1) A variety of child development information, much of which supported the theories of those who believed that children needed a vigorous program, was made available to kindergartners.

(2) The nursery school program itself showed how an informal way of working with youngsters encouraged spontaneity and creativity.

(3) Although the nursery school included children younger than those in kindergartens, the two programs often overlapped at the four- and five-year-old levels, making a comparison possible.

The more progressive kindergartners supported and welcomed the developing nursery schools. Occasional kindergarten training schools began to include courses for nursery school teachers. In some instances, as kindergartens were taken over by the public schools, the free kindergarten as-

sociations began to operate nursery schools. On the other hand, there were kindergartners who feared the encroachment of the nursery school, and who felt that children who had known its freedom and independence might be difficult to manage in the more patterned program of the kindergarten and perhaps bored with its offerings. Although this attitude persisted for a number of years, it gradually diminished as studies of children stressed continuity of development, as colleges of education added nursery school and kindergarten groups to their demonstration programs, and as an increasing number of public schools sponsored federally financed nursery schools.

Very much as some kindergartners were slow to accept the nursery school, so many first-grade and primary teachers resisted the kindergarten. The full incorporation of the kindergarten in the public school program developed very slowly. The process was one by which the kindergarten influenced the primary grades in certain ways and was in turn modified by them.

Even when the kindergarten remained aloof from the rest of the school, it played some part in changing the traditional elementary school program. Its bright, spacious room, with toys and gay picture books, plants and pets, time for games and singing, afforded striking contrast to the traditional first grade with its screwed-down desks, dull primers, and chalk dust. Inevitably, good first-grade teachers began to ask why such a pleasant atmosphere was not equally desirable for their six year olds. In addition, the kindergarten, more than any other level of education, demonstrated the meaning of constructive home-school relationships. The kindergartner spent much of her time in home visiting. She knew rather intimately the backgrounds of her children, and her sympathetic interest in them and in their parents was an asset to her work. Many kindergartens organized mother's clubs and a variety of child study programs.

As kindergartens became an integral part of public school programs, they were able to reach an increasing number of youngsters, enrollments attaining a high point of 723,443 children in 1930, but they also were involved in the same problems as the schools. Some were closed during the depression years (enrollments dropped to 601,775 by 1934 and did not reach the 700,000 mark again until 1944). In other instances school systems retained the kindergartens but instituted double sessions whereby one teacher met with one group in the morning and another in the afternoon. This practice seriously limited work with parents. The use of the same space and equipment for two different groups of children also tended to disturb day-to-day continuity in program. After World War II even more serious problems of overcrowding arose. Many teachers, unable to give individual attention to large groups, found themselves carrying on programs with the high organization and formality characteristic of the traditional kindergarten.

Despite postwar difficulties in maintaining existing school programs, the eventual responsibility of public education for the improvement and extension of kindergarten facilities received increasing acceptance. Federally subsidized nursery school and child care center programs developed to meet the emergencies of depression and war had shown many parents and communities the importance of the early years in the lives of

children. Research had indicated that to a large extent the patterns for healthy emotional and social development are established before the age of six. Moreover, young children, exercising their curiosity and explorative powers, learn much that is essential to their eventual understanding of the world in which they live. Some children can find in their home and neighborhood setting companionship with their peers, understanding guidance in the normal problems of growing up, and sufficient space and equipment to challenge and satisfy their expanding mental and physical powers. There are many others, however, who lack some or all of these essentials to healthy development. For them, educational programs to supplement home living are essential. Such thinking was inherent in the recommendation of the Educational Policies Commission of the National Education Association and the American Association of School Administrators in 1945, favoring "the extension of school services downward to at least the third or fourth year." A similar position was taken in 1950 by the Mid-Century White House Conference on Children and Youth, which recommended "that as a desirable supplement to home life, nursery schools and kindergartens, provided they meet high professional standards, be included as part of public educational opportunity for children."

The availability of kindergartens is dependent on adequate financial support. Laws in some states have prohibited the use of state education funds for children below first-grade age. By 1945, however, two thirds of the states had authorized use of state funds for the support of kindergartens. Kindergartens were maintained in 42 states, with local tax levies providing support where state funds were not available.

In several states there has been a definite trend toward the inclusion of children under six in state educational planning. In many instances this has meant providing guidance for the integration of kindergarten and primary programs. Some states have made an effort to continue the wartime programs which included children of nursery school as well as of kindergarten age and to interpret them to elementary school workers.

The tendency to think of the kindergarten-primary program as continuous has been reflected in school organization. The "primary" or "early childhood" unit which includes the kindergartner as well as the first three grades of the elementary school has become increasingly common. Such organization recognizes the many characteristics which children from five to eight have in common and provides for closer understanding among their teachers. In some school systems teachers may stay with the same group of children as they move through kindergarten and first grade and occasionally into the second and third grades. Some schools have experimented with two year kindergarten programs for children who seem to need a considerable amount of informal experience before entering first grade. These programs have been given such titles as "kindergarten extension," "junior primary," and "transition unit," but have tended to resemble kindergarten more than the traditional first grade.

The preparation of modern kindergarten teachers usually includes experience in the primary grades and sometimes in nursery school. By 1948 special certification for kindergarten-primary teachers had been established in Arizona, Delaware, Illinois, Ohio, Pennsylvania, South Dakota,

nd Wyoming; New Hampshire and the District of Columbia provided for the inclusion of kindergarten in an elementary grades certificate; and Connecticut had a special kindergarten certificate.

The Modern Kindergarten Program.—Although kindergarten programs vary widely, depending on the age of the children at entrance, the number of children in the group, and the equipment and facilities available, general guidelines for their operation have been established. The Association for Childhood Education, formed in 1930, has been particularly active in furthering understanding of good kindergarten programs.

The age of entrance to the modern kindergarten may be either four or five years. The admission of children who are closer to their fourth than to their fifth birthday necessitates a two-year program, since the aim of early entrance to school is not to begin first-grade work at a younger age, but to see that children have had a rich and satisfying background when they do begin such work. The kindergarten program for four year olds is usually slower paced than that for five year olds, provides a relatively greater amount of time for individual and small group activities, and often involves less extensive neighborhood exploration.

In the modern kindergarten program one enters to every 10 to 15 four year olds and to 15 to 20 five year olds is recommended. In small group, in which the teacher can know individual well, the young child gains confidence and skill in establishing happy, friendly relations of getting along with other people. Such ability is not expected to blossom immediately upon school entrance, and provision is usually made for the child to become acquainted with his school and his teacher in a gradual fashion. Sometimes the child visits the kindergarten in the spring before he enters in the fall, or the opening days are staggered so that not all the children enter at the same time, or provision may be made for parents to stay with their children until their sense of newness wears off.

The modern kindergarten is housed in a spacious, light, and airy room with easily accessible toilet and washing facilities. Space for the child's outdoor clothing is so located as to make the teacher's supervision of dressing and undressing simple and informal. During the day the room may undergo many changes. There are times when all the children may be sitting around the teacher, either in their chairs or on the floor. Other times they will be working and playing in various areas of the room. Occasionally the room will be cleared for dancing and body movement.

When lunch is served, all will be seated at tables. Sometimes cots are set up. In one corner of the room there is likely to be a housekeeping corner. Here the children play at being parents, caring for their doll babies, cooking, eating, cleaning, entertaining, and strengthening their understanding and feeling for family living. In another area low cupboards may be filled with blocks with which the children can lay out elaborate schemes of streets or roads, homes, trees, and farms—whatever they have observed in the world has become important to them. Using small blocks, trucks, tractors, and other toy accessories, the children here work out in their play some of the relationships between people and their jobs which are important to an eventual understanding of the real world surrounding them. Often a carpentry area is provided near the block section. Here,

under close supervision, children not only find emotional release in vigorous sawing and hammering, but also begin to develop a sense of appreciation for good craftsmanship. Somewhat away from the main bustle of the room big sheets of paper, good-sized brushes, and bright poster paints are available. Some kindergarten children revel in colors, the slap of the brush on the paper, the intricate designs that emerge as they work; others struggle to portray something they have seen. Many find in painting a means of expression for feelings which cannot be put into words. Other art media include finger paint, clay, crayons, and bright-colored paper for cutting and pasting. At this level of development some children are still in the manipulative and exploratory stages of using art materials; others may begin to ask for help with techniques. Characteristic of the modern kindergarten is its abundance of attractive books. The children enjoy looking at them and like to listen to the teacher read them. Sometimes two or three children sit together and pretend to read to each other. Not all the books are story books; many illustrate aspects of living which not all the children could have experienced directly.

The budding curiosity of the kindergarten child demands many sources of information to satisfy it. For this reason, the modern kindergarten offers children many opportunities for observation of simple scientific phenomena. They collect various kinds of rocks, observe the growth of plants, take care of pets, experiment with magnets, and test the possibilities of pulleys, levers, and other elementary machines. As they become accustomed to each other and learn acceptable group behavior, they carry their explorations outside the classroom, going on short excursions to visit places of interest in their neighborhood, to see a railroad station, a food market, or perhaps a ship in dock. Even when there are no trips to be made, good kindergarten living is not confined within the four walls of a classroom but includes provision for vigorous outdoor play. Safe places on which to climb—ladders, big boxes and boards, as well as a jungle gym; smooth surfaces for wagons and tricycles; grassy plots for running and rolling; sandboxes or pits for digging are found in the play yard adjacent to the well-equipped classroom.

The daily program varies somewhat with the age and experience of the children and with the length of time they are in school. It begins with an informal health inspection in which the teacher notes whether there are any children with apparent symptoms of impending illness. The day continues with the alternation between quiet and vigorous activity which is essential to the well-being of the young child. Thus, a work period in which children have been building, painting, or playing in the doll corner may be followed by a group discussion, a story, a singing time, or by such sedentary occupations as looking at books, working puzzles, drawing, or pasting. Provision is also made for a full release of energies in outdoor play, dancing, and rhythms.

The program also provides for a variety of experiences to accustom the child to life in society. There is opportunity for each child to follow his own choices and to work or play by himself, as when he looks at his favorite picture book or sits down for a moment to play with the turtles. There are other times when he enjoys the companionship of two or three other

children as he helps to put a roof on the garage they have made, or tries to climb above them on the jungle gym. There are still other times when he senses his role in the total group, as when he must wait his turn to tell about a trip he has made. There are many times when he must share his teacher, yet now and again she is able to sit by him while he dictates a story or poem he has made up or explains to her what he would like to do with the two pieces of wood from which he plans to make a boat.

The modern kindergarten program likewise attempts to maintain a balance between expression of feelings and the restraints necessary to peaceful group living. That it is not always easy to wait one's turn; that to have a laboriously built garage carelessly toppled over can be a real tragedy; that there are days on which nothing goes right; that children have strong feelings about these and many other matters—all these are accepted as a matter of course, and children are not censured for having such feelings. Rather they are helped to learn how to find acceptable ways of dealing with them.

Since the modern kindergarten conceives its function to be that of supplementing the home life of young children, its program may be adapted to the kind of living common to the neighborhood it serves. Some cities have followed a policy of providing full-day programs in schools located in congested areas. Where children are undernourished and homes are crowded, the program which includes a hot noon meal and an afternoon nap has much to offer. Such a program has also been adopted in certain more privileged communities in which it has been felt that the more relaxed atmosphere prevailing in the longer day results in more effective learning. A similar program has also been necessary in consolidated rural schools to which children are brought a considerable distance. A number of authorities however, have questioned the wisdom of long bus trips for young children, and have suggested that early childhood education units for kindergarten and primary grades be established on a smaller neighborhood basis than has been customary in many consolidation plans. Others have proposed that mobile units take kindergarten programs into rural neighborhoods which have few services for preschool children.

Increasingly schools and parents have recognized that the education of young children is a joint responsibility. It is at the kindergarten level that cooperative efforts are most easily begun. In a good program the teacher has time to become acquainted with the parents as, or even before, the child enters school. Periodically she meets with each child's parents to discuss his progress at home and at school. In a number of school systems such informal conferences have replaced report cards. Parents are also invited to observe and participate in the kindergarten program. In many kindergartens parents and teachers have organized child study groups. From such experiences parents often gain new perspective on their youngsters' behavior, and a healthy mutual respect between home and school is promoted.

Contribution to Later School Success.—As early as the 1920's studies showed that children who had had kindergarten experience made better progress in school than those who had not. In the 1930's studies of the process of learning to read suggested that the apparent superiority of

kindergarten children might be a matter of their having developed greater "readiness" for formal reading instruction because of having had more experience in following the teacher's direction, in communicating with other people, and in looking at and talking about books and pictures. Some authorities suggested that the primary job of the kindergarten might be to prepare children for first-grade reading instruction. Others noted wide individual differences in the age at which children were successful in beginning reading and concluded that success was largely dependent on the attainment of a certain degree of mental maturity rather than on the child's experiences. As understanding of child development has deepened, it has become apparent that both the child's rate of development and his experience are important factors in his interest and ability in reading. A kindergarten provides a living situation in which there are many books, and in which situations arise necessitating some use of reading: a recipe is used for cookies; the third grade sends an invitation to a party; a child brings in an insect which can be identified only by consulting a science book. In such an environment some children spontaneously develop some reading abilities and begin to recognize some words and phrases; others are too busy working out social relationships and dealing with concrete problems to pay much attention to reading. All, however, gain some understanding of the uses to which reading can be put and some sense of its importance in modern living. Equally important is the fact that all are developing the concept essential for understanding printed language. It is in these ways that the kindergarten contributes most to the child's reading abilities. The modern kindergarten program recognizes this and tries to give each child a variety of experience calculated to enhance his total living and growth. It does not emphasize reading "readiness" at the expense of other aspects of the child's development. In the long run, the contribution of the kindergarten to school progress lies less in its specific training than in the fact that it has helped each child to have successful years of being four and five and has thus given him a good start.

MILLIE ALMY

Associate Professor of Child Development
Family Life, University of Cincinnati.

KINDI, al- (Arab. ABU-YŪSUF YA'QŪB IBN ISHĀQ AL-KINDI), Arab philosopher: b. Al Kul 9th century A.D. He was well educated at Basra and Baghdad through the efforts of his father.

was Governor under two famous Arabian rulers, Mahdi (775-85) and Harun al-Rashid (80-809). He was a very prolific writer and credited with having written over 200 treatises on philosophy and science, over the whole of which as known in his day he wandered. He was a very clever and original thinker and even to-day, after a lapse of nearly 200 years, his name stands high among the Arabs. Many of his works are now only a name, having long since been lost; yet some relating principally to astrology and medicine, remain to attest his worth as a philosopher and original thinker. Probably numbers of his works disappeared when his library was seized during the reign of Motawakkil (847-61). Consult De Boer, 'Geschichte der Philosophie im Islam' (Stuttgart 1901); Flügel, 'Al Kindi genannt der Philosoph der Araber' (Leipzig 1857); Nagy, 'Die philosophischen Abhandlungen des al-kindî' (Münster 1897).

KINEALY, kī-nē'li, John Henry, American engineer and educator: b. Hannibal, Mo., 8 March, 1864. Graduated from Washington University as a mining engineer, he became instructor in that institution (1886-87); professor of agriculture and mechanics in the College of Texas (1887-89); professor of agriculture in the North Carolina College of Agriculture and Mechanical Arts (1889-92); and professor of mechanical engineering in Washington University (1899-1902). On the latter date he retired from college work and became consulting and mechanical engineer, first in Boston (1902-04) and then in Saint Louis. He invented a number of noteworthy devices such are in general use. Among his published works are 'Steam Engines and Boilers' (1905), 'Charts of Low Pressure Steam Heat' (1899); 'Slide Valve' (1899); 'Centrifugal Fans' (1905); 'Mechanical Draft' (1906); and numerous magazine articles on similar subjects. He died, 6 May 1928.

KINEMATICS OF MACHINERY. Mechanism may be defined as the study of motion of the circumstances which influence or affect it. The study of motion alone is a branch of geometry in which the element of time enters. Ampère, 'Philosophie des sciences' (1843), due to this geometry of motion the name *kinematics*; Reuleaux, 'Theoretische Kinematik' (1875) and others before him called it *phoronomics* but this term has not been accepted in mechanics. *Kinematics of machinery*—also called *kinematics of mechanism*, theory of mechanism, applied or technical kinematics—is that phase of the subject which is useful in engineering. It deals with the motions of a complex deformable system subjected to such constraints as will make the motion unique or determinate. According to Koenigs, 'Introduction à une théorie nouvelle des mécanismes' (1905), it is the study of the constraints in machines, a machine being an assemblage of resistant bodies (rigid, flexible or fluid) under mutual constraint upon which force may act. The methods necessary for the mathematical, as distinguished from the graphical, solution of the most complicated problems were known long before kinematics existed as a separate science. The first attempt to separate kinematics from mechanics in general was made by Monge in 1794; his program was elaborated

and published in 1808 by Lanz and Bétancourt, 'Essai sur la composition des machines.' Their system aroused interest, but whatever benefit to the science may have accrued through this stimulus was certainly outweighed by the harm that arose through emphasizing the idea that it was more the province of kinematics to classify and describe machines than to devise simple methods of finding velocities and accelerations. This point of view was strengthened by Willis, who published his famous 'Principles of Mechanism' in 1841. To judge from the 20-page preface to his second edition (1870) Willis regarded classification as of first and last importance. Nevertheless he gave proper kinematic descriptions of an enormous number of mechanisms, was the first to investigate velocity ratios—the ratio of the velocity of the driver to that of the follower—and occasionally improved methods of designing and calculating. It is not easy to-day to understand how Willis exerted so deep an influence for a generation. When one considers the brilliant work done in mathematical kinematics by Euler, Lagrange, Laplace, Poisson, Poincaré and Coriolis, it is not unfair to say that Willis was as antiquated in his own time as he is now. The next noteworthy book in the development of kinematics is Reuleaux, 'Theoretische Kinematik: Grundzüge einer Theorie des Maschineneuwesens' (1875), English edition by Kennedy in 1876. To Reuleaux classification is still of fundamental importance. Willis classifies machines according to the way they transmit motion, for example, by rolling contact, sliding contact, wrapping connectors (belts and chains), linkwork and ratchets, each being subdivided according to whether the velocity ratio or the direction of the velocity is constant or variable. Reuleaux on the other hand examines the elements of which machines consist and finds that they always occur in *pairs*, a number of pairs being connected to form a *chain*. In kinematic pairs there may be relative sliding (e.g., crosshead and guide), turning (hinge or pin joint) or sliding and turning (screw and nut). If the contact is between surfaces, as in these examples, the pair is called *lower*; if there is line contact, as in gear wheels, the pair is *higher*. Reuleaux showed that many different mechanisms may be made from the same kinematic chain by holding different elements or links fixed. Neither Willis nor Reuleaux had an efficient method of finding velocities in a mechanism; neither attempted to find accelerations and neither gave sufficient emphasis to the fundamental problem of kinematics, namely, to devise general methods for the determination of velocities and accelerations. The most important treatise on kinematics from this point of view is Burmeister's 'Lehrbuch der Kinematik' (1888); this is decidedly superior to anything written before that time and has not yet been surpassed.

Fundamental Theorems.—Three theorems suffice as a basis for the analysis of velocity and acceleration in mechanisms. On account of their importance a rigorous mathematical proof will be given. It is customary to base their derivation on the *postulate of superposition* which states, briefly, that kinematic vectors may be superposed according to the parallelogram law; this method is not convincing when

applied to accelerations and sometimes leads to serious mistakes

In Fig. 1 it is required to find the velocity of any point P of a rigid body moving in a

FIG. 1.

plane, the velocity of O and the angular velocity ω of the body being given. The body has three degrees of constraint specified by the co-ordinates ξ, η, θ , i.e., given values of them will fix its position. If a constraint is removed by permitting the corresponding co-ordinate to vary, the body has one degree of freedom. In the following equations, one dot over a letter will denote the first time-derivative. From Fig. 1

$$x = \xi + r \cos \theta, \quad y = \eta + r \sin \theta;$$

hence since r is constant and $\dot{\theta} = \omega$

$$\dot{x} = \dot{\xi} - r\omega \sin \theta, \quad \dot{y} = \dot{\eta} + r\omega \cos \theta \quad \dots (1)$$

where $(\dot{\xi}, \dot{\eta})$ and (\dot{x}, \dot{y}) are respectively the velocities of O and P with reference to the fixed axes xy and are thus the so-called absolute as distinguished from the relative velocities. $r\omega$ is that part of the velocity of P which is due to the rotation of P about O ; it is normal to OP and is the relative velocity of P with respect to O . Equations (1), giving the components of the relative and absolute velocities of O and P , state that P has two superposed velocities: the absolute velocity $(\dot{\xi}, \dot{\eta})$ of O and the linear velocity r due to the rotation of P about O . Hence

THEOREM I.—The velocity of any point P of a rigid body having plane motion is the resultant of the velocity of any other point O and the linear velocity due to the rotation of P about O . Let u and v be the absolute veloc-

FIG. 2.

ities of O and P ; then Fig. 2 shows v as the resultant of u and $r\omega$. In symbols

$$v = u + r\omega, \text{ vectorially.}$$

This theorem is the basis of the graphical method of velocity diagrams devised by R. H.

Smith (Royal Society of Edinburgh, 1885) and now in general use. Consult also his 'Graphics' (1889); and Burmester's 'Kinematik'

By differentiating equations (1) and denoting the angular acceleration ω by a we find

$$\begin{aligned} \ddot{x} &= \ddot{\xi} - r a \sin \theta - r \omega^2 \cos \theta \\ \ddot{y} &= \ddot{\eta} + r a \cos \theta - r \omega^2 \sin \theta \end{aligned} \quad (2)$$

where $(\ddot{\xi}, \ddot{\eta})$ is the absolute acceleration of O , $r\omega^2$ the radial acceleration, directed from P to O , due to angular velocity; ra is the tangential acceleration normal to OP due to angular acceleration. Hence

THEOREM II.—The acceleration of any point P of a rigid body having plane motion is the resultant of the acceleration of any other point O and the linear accelerations of P due to the angular velocity and acceleration of P about O . ω and a specify the absolute rotation of the body. The theorem may be expressed in a vector equation; if a and a' are the accelerations of P and O

$$a = a_0 + ra + r\omega^2, \text{ vectorially.} \quad \dots (3)$$

Theorem II is the basis of all graphical solutions. It can be put into another form. In Fig. 3 let the point C be fixed and let O be a hinged or pin-connected joint so that CO and

FIG. 3.

OP may have independent angular motions. If ω_r and a_r specify the relative motion of r with respect to l and if ω and a are the absolute motions of r , and ω_0 and a_0 those of l ,

$$\omega = \omega_0 + \omega_r, \quad a = a_0 + a_r$$

all quantities being measured in the same sense. By substitution in the previous equation and putting $r\omega_r = v_r$ we get

$$a = (l+r)a_0 + (l+r)\omega_0^2 + ra_r + r\omega_r^2 + 2v_r\omega_0 \quad (4)$$

The plus signs indicate vector addition; for example, $l+r$ is CP . Therefore $(l+r)a_0$ is normal to, and $(l+r)\omega_0^2$ along, CP ; $ra_r + r\omega_r^2$ is the acceleration of P relative to the system CO . The term $2v_r\omega_0$ is called the Coriolis acceleration after Coriolis, who is 1835 discoverer of the theorem of which equation (4) is a special case. Since it came from $r(\omega_0 + \omega_r)$ it is directed from P toward O ; if ω_0 and ω_r are opposite it points from O toward P . Hence we have

THEOREM III.—The acceleration of any point P of a body in motion with respect to a moving system is the resultant of (1) the acceleration of P regarded as fixed to the moving system, (2) the acceleration of P relative to the moving system, (3) the Coriolis acceleration $2v_r\omega_0$ where v_r is the relative velocity of P and ω_0 the absolute angular velocity of the moving system.

ω_0 is directed toward the centre of curvature of the relative path of P unless ω_0 and ω_r be opposite. For other demonstrations consult F. Deimel, *Mechanics of the Gyroscope* (1929); Hurmester was the first to apply the theorem to mechanisms.

Analysis of Velocities.—The following are practically all of the typical velocity problems occurring in the theory of plane mechanisms:

I. Given the velocity of one point of a rigid body, to find the velocity of another point constrained, as by a guide, to move in a given manner.

Fig. 2 illustrates this case; u is the given velocity, and the direction but not the magnitude of v is known; the construction determines v completely. The drawing of the two parallels u may be avoided by noticing that u and v have equal projections on the line between the two points; this means that the line is extensible.

II. Two rods AP and BP are hinged at P , velocities u and u' of A and B being given v , that of P , is required. At P draw the normals u and v ; from the head of u draw a line perpendicular to AP , and from the head of

FIG. 4.

a perpendicular b to BP . Now P is on the line AP , therefore if the arrow representing its velocity starts at P it must, by I, end on a ; v must also end on b . Hence v goes from P to the intersection of a and b .

III. Given the velocities of two points of a rigid body to find that of any other point.

In Fig. 4 u and v are given and w is required. From equation (1) if the velocity v of P in Fig. 1 is zero $\xi/\eta = -\tan \theta$;

therefore since ξ/η is the cotangent of the angle the velocity of O makes with X , that point whose velocity is zero at a certain instant lies on a normal to the velocity of O . There is evidently only one such point for if there were two the whole body would be instantaneously at rest. This point is called the

instantaneous centre of rotation; it was discovered by John Bernoulli, 'De Centro Spontaneo Rotationis' (1742) but Descartes had previously placed it in studying the cycloid. In Fig. 4 the normals to u and v intersect at C which, being the instantaneous centre, lies on a normal to w . As the body rotates instantaneously about C , the velocities are proportional to the

instantaneous radii, which fact furnishes an obvious method for getting w .

When C lies off the drawing paper proceed thus. Since the body is rigid u and w must have equal projections on PR , and v and w equal projections on QR . Draw the projections at R and erect normals at their ends; the head of w will lie at the intersection of these normals. This method fails when P, Q, R are collinear. If the instantaneous centre cannot be used note that (a) the projections of u, v, w on PR must be equal, and (b) as the body cannot

FIG. 5.

FIG. 6.

FIG. 7.

bend, the components of u, v, w normal to PR , at P, Q, R must end on a straight line; w is then found from its two components.

IV. To find the velocity of any point on a rod moving in a sleeve. There are several cases which are shown in Figs. 5-7. In Fig. 5 the sleeve is a tube free to rotate about a fixed axis; the rod slides in the sleeve and turns with it. Suppose u to be known. The only point, besides P , whose direction of motion is known is that point R on the rod which is also

at the axis of rotation of the sleeve: it moves along the rod but has no transverse component. Hence the velocity of R is found as in II, and that of any other point as in III.

In Fig. 6 the sleeve slides on A and is pivoted on B . The centre of the sleeve has two motions: s along and u normal to A ,

FIG. 8.

their resultant v being perpendicular to B , so that if one of these three velocities is known the vector triangle in Fig. 6 gives the other two.

If, as in Fig. 7, the sleeve is rigid at the end of a rod B , any point P on A will have two motions: s along A , and u normal to OP , their resultant being v . The reader should observe that Figs. 6 and 7 were solved by using the principle of superposition.

V. *Sliding pieces.* These occur in two forms. In an iris diaphragm, a photographic shutter, or a pair of shears, two blades slide over each other, it being required to find the velocity of the point common to the two overlapping edges; in cams and gear teeth two tangential surfaces slide and roll on each other, the problem being to find the velocity ratio of the two pieces.

In Fig. 8 i, A is fixed and B rotates. The velocity v of P is the resultant of u , due to rotation, and s due to sliding along B ; v is tangent to A at P . In the toe and lift mechanism, shown schematically in Fig. 8 ii, v is the resultant of u , due to rotation, and s due to sliding along the common tangent. If both pieces in Fig. 8 i turn use the method of superposition: hold A and B fixed in succession. Fig. 9 shows two cams or parts of two gear

FIG. 9.

teeth turning about fixed centres C_1 and C_2 ; it is required to find the angular velocity ratio ω_1/ω_2 . The point of contact on A has a velocity v_1 normal to C_1P and on B the velocity v_2 is normal to C_2P ; these are the actual velocities of points fixed on A and B ; they must be equal for

pure rolling. If the two surfaces are not to separate, v_1 and v_2 must have equal projections on the common normal. If the normal components are equal the tangential component cannot be, for v_1 and v_2 would be opposite along the same line; hence sliding takes place and the motion is not pure rolling. Now suppose the contours to touch at some other point C . The velocities there can be collinear: only if C lies on C_1C_2 ; if they are equal there will be pure rolling without sliding. In this case the relative motions of A and B are rotations about C , hence as the relative velocities at P are along the tangent and are due to relative rotations about C , C must lie on the normal at P . C is the pitch point and C_1C and C_2C the radii of the pitch circles. The angular velocity ratio is found from $C_1C\omega_1 = C_2C\omega_2$; it is constant, as in gear wheels, C must remain fixed, whence the normals at successive points of contact of the teeth must pass through the pitch point. This is the basic law of gear teeth design.

VI. *Pure Rolling.* The simplest case of pure rolling is that of a gear or wheel train;

FIG. 10.

Fig. 10 shows the pitch circles, all centres being fixed in position. By equating rim velocities

$$R_1\omega_1 = r_2\omega_2, R_2\omega_2 = r_3\omega_3, R_3\omega_3 = r_4\omega_4,$$

the product of which gives

$$R_1R_2R_3\omega_1 = r_2r_3r_4\omega_4$$

in which capitals refer to drivers and lower case letters to followers. Sometimes the shafts all the wheels are mounted in a rigid frame. Let the frame turn $+n$ times around the shaft of the second wheel while this wheel is prevented from turning. The number of turns made by the other wheels is found by the method of superposition as follows. First let R_2 (and of course r_2) turn with the frame; then R_1 , R_3 and r_4 make $+n$ turns, there being no relative motion of the wheels. Now hold the frame fixed and give $-n$ turns

R_2 ; then R_1 , r_3 and r_4 turn respectively $+n$

$+ \frac{R_2}{r_1}n$ and $\frac{R_2R_3}{r_1r_4}n$ times. Superpose

two motions or imagine them to occur simultaneously. Similar considerations lead to an occasionally surprising result that if a 25-cent piece is rolled once around the circumference of a fixed 25-cent piece it will make two around its own centre.

Quadric Chain; Inversion; Theorem of Three Centres.—The simplest mechanism consists of four pin-connected or hinged links, Fig. 11, called by Reuleaux the *quadric chain*; it may be regarded as the kinematic unit of mechanisms having surface contact. A considerable number of different mechanisms may be derived from it by *inversion*; this consists in

FIG. 11.

ing any two points on any one link. The theorem, due to Reuleaux, is useful in giving an insight into the relationships in families of mechanisms. (Consult Durley, 'Kinematics of Machines,' 1903). Inversion does not change relative motions. The points (12), (23), (34) and (14) are the relative instantaneous centres of the links whose numbers they bear. For example if 4 or 2 is fixed then (24) is the I.C. (instantaneous centre) of 2 and 4 for motion relative to each other; likewise (13) is the relative I.C. of 1 and 3. Observe that (24), (23) and (34), and (21), (23) and (13) are collinear triplets of the form (yx) , (yz) , (xz) . This is a special case of the *theorem of three centres* now to be proved. Consider Fig. 12, representing three bodies having relative plane motion.

The I.C. of the relative motion of two pieces is that pair of coincident points (one on each body, extended if necessary) having the same velocity, for their relative velocity is then zero;

FIG. 12.

each body thus turns about the relative I.C. of the other. Let (12) and (13) be known in Fig. 12. If (23) is at some such point as C, the velocity of C, considered as being part of 2, is normal to (12) C; when it belongs to 3 its velocity is normal to (13) C. These velocities have different directions and cannot be vectorially equal unless they are collinear, whence (23), the correct position of C, must lie on

(12) (13). The utility of the theorem of three centres is illustrated in Fig. 13; the two crosses indicate fixed centres. By the theorem, (13) is collinear with (12) and (23), and also with (15) and (53); therefore it lies at the intersection of two lines through these pairs. For a discussion of this theorem and other relevant topics consult J. H. Billings, *Applied Kinematics* (1946).

Kinematically Determinate Mechanisms.—Any system of interconnected bodies is kinematically determinate when the velocity of one point determines the relative velocity of every other point. When the mechanism consists of P pins interconnected by l links the criterion of determinateness is found as follows: It takes 3 links to connect 3 of the pins into a rigid triangle; each remaining pin requires 2 links to fasten it rigidly to the frame already formed, hence $3 + 2(p - 3) = 2p - 3$ links

will connect p pins into a rigid coplanar network. Each link represents a constraint. If one link is removed one degree of freedom will be introduced and the frame will be uniquely deformable. Hence

$$l = 2p - 4$$

is the relation between the number of links and pins in a kinematically determinate mechanism.

FIG. 13.

The criterion requires interpretation in special cases.

(i). Fixed pins are those fastened to some frame of reference. Two such pins are equivalent to one link; for f fixed pins there are virtually $2f - 3$ links. If f of the p pins are fixed and there are l actual links

$$l + 2f - 3 = 2p - 4.$$

(ii). One link having 3 pins on it counts as 3 links since it may be regarded as a collapsed triangle; a link with m pins counts as $2m - 3$ links.

(iii). A crosshead or sleeve is equivalent to a link of zero length; it must therefore be counted as 2 pins and 1 link.

(iv). A point at which there is line contact, as in cams and gears, counts as 2 pins and 1 link.

Centroides.—The locus in space of the instantaneous centre is called the *space centrode*; the locus in the body is the *body centrode*. The term *centrode* is due to Clifford, 'Elements of Dynamics' (1878); the idea, however, is found in Poinsot, 'Théorie nouvelle de la rotation' (1851) and Reuleaux. The latter used it in

place of the foregoing methods. In Fig. 14 C , C_1 , C_2 and C , c_1 , c_2 represent simultaneous or corresponding points on the two centrodes. Since the instantaneous centre will take the positions C_1 and C_2 , c_1 and c_2 must fall on them

FIG. 14.

during the motion. No sliding will occur since the body rotates about the instantaneous centre, hence the body centrode rolls on the space centrode. For example, the circumference of a wheel is the body centrode and the line along which it rolls is the space centrode.

Accelerations.—It is not easy to find accelerations except in simple mechanisms; fortunately only simple cases arise in practice. In the four-bar linkage or quadric chain, Fig. 15 i,

FIG. 15.

if ω_0 and α_0 are known, ω and ω_1 can be found because the linear velocity of P can be found by the method shown in Fig. 2. Hence $l\omega^2$ and $R\omega^2$, the radial accelerations of P , can be computed. If v is the velocity of P relative

to O , $v = l\omega$ or $v/l = \omega$; i.e., $l\omega^2$ is a third proportional to l and v and may therefore be found by geometric methods; this applies also to $r\omega^2$ and $R\omega^2$. By Theorem II above the acceleration of P is the resultant of $r\omega^2$, $r\alpha_0$, $l\omega^2$, $l\alpha$; it is also the resultant of $R\omega^2$ and $R\alpha_1$, whence the construction in Fig. 15 ii. Other methods are given by Land "Geschw. — und Beschl. — Plan für Mechanismen" (*Zeit. d. Ver. deut. Ing.*, 1896) and Rittenhaus, "Der Civilingenieur" (1880, p. 244). The ordinary connecting rod mechanism may be solved by special methods which are quicker. Let the crank in Fig. 16 turn at constant speed ω . The velocity of C is given according to Fig. 2 by the construction at C ; v is the velocity of C relative to P . Draw OQ vertical, then OPQ is similar to the velocity triangle. If ω is called

FIG. 16.

unity the triangles will be equal so that OP represents both the relative velocity v and OP represents both $r\omega$ and $r\omega^2$. With P as centre and radius $PQ = v$ draw an arc; on the connecting rod as diameter draw an arc intersecting the former in two points and through them draw the chord. Since BD is a common ordinate in the two semi-circles on CQ

$$BD^2 = (v + BP)(v - BP) = (l - BP)BP$$

$$\text{or} \quad BP = \frac{v^2}{l}$$

Hence as two sides ($PO = r\omega^2$ and BP) and directions of the acceleration polygon of C are known the remaining quantities are determined i.e., AO is the acceleration of the crosshead. This construction was found independently by Kirsch, "Graphische Bestimmung der Kolben beschleunigung" (*Zeit. d. Ver. deut. Ing.*, 1890) and Klein, "Force of Inertia of Connecting Rods" (*Journal Franklin Institute*, 1891). The following method is due to Mohr, "Konstruktion der Beschleunigung am Kurbelgetriebe," *Der Civilingenieur* (1). From where the horizontal through Q in Fig. 16 cuts the crank draw a vertical RB and then BA perpendicular to the connecting rod. AO is the acceleration of C because from similar triangles

$$\frac{BP}{v} = \frac{PR}{PO} = \frac{v}{l}$$

$$\text{or} \quad BP = \frac{v^2}{l}$$

as before.

The acceleration of any other point C' of the connecting rod is needed in Dynamics Machinery (q.v.). $AB + BP = AP$ is the

ration of C relative to P and, being of the form $1 + 10^2$, is proportional to $l = PC$. The relative acceleration of any other point C' is thus proportional to PC' ; consequently if $C'A'$ is drawn parallel to CO , $A'P$ will be the relative acceleration of C' , PO the acceleration of P , and $A'O$ the resultant acceleration of C' .

RICHARD F. DEIMEL.

KINETIC THEORY OF GASES, a theory that regards gases as composed of a very large number of molecules per cubic centimeter, each very small in size, so small that at a pressure of one atmosphere the total volume of all the molecules is negligible in comparison with the volume of the gas. If the molecules are assumed to be exceedingly small in proportion to the volume in which they are free to move, the probability of a collision involving three or more molecules becomes vanishingly small in comparison with a collision between only two molecules; this simplifies the theoretical treatment. One can get some idea of how small the molecules of air really are by considering that if 1000 cm³ (cubic centimeters) of air under standard conditions of temperature and pressure were liquefied, there would be only a little over 1 cm³ of liquid air, and even then the liquid molecules would not fill all the volume of the 1 cm³, only about one-half of it. However, there is an enormous number of molecules (2.703×10^{19}) in 1 cm³ of a gas at normal temperature and pressure; so many that if placed side by side in a line they would extend about 25 times around the earth at the equator.

There are many ways of determining the diameter of a molecule of gas. But it must be remembered that a molecule is not a hard elastic sphere like a glass marble, but rather an electromagnetic field with lines of force emanating from what may be called the "nucleus" of the molecule. These lines of force may be compressed more or less, and so the value of the diameter will depend somewhat on the method of measurement. The following table shows the value of the diameter of the hydrogen molecule obtained by various methods.

Method	Diameter
Viscosity	2.18×10^{-8} cm
Molecular Refraction	1.86
van der Waals' b	2.76
Diamagnetism	2.90
Packing in liquids	4.00
Slow electrons	4.00

In the early development of the kinetic theory of gases, the molecules were assumed to be hard, smooth, perfectly elastic spheres because spheres can collide in only one way, which is not true for other shapes; these assumptions were made in the main to simplify the mathematical difficulties. It is to be noted that while the above values for diameters vary considerably, they are of the same order of magnitude; furthermore, one cannot be quite sure of what he is measuring when he measures the "diameter" of a molecule because it is not a hard, smooth sphere.

That the molecules are perfectly elastic is quite a rational assumption and is shown by the following. The hydrogen molecule at 0°C. has a root-mean-square velocity of about 18.4×10^4 cm per sec., and its mean free path (see MOLECULAR THEORY) is about 18.4×10^{-8} cm, so that the average molecule of hydrogen is in collision with other

molecules about ten billion times per second. Now, if these molecules lacked only an infinitesimal fractional part of being perfectly elastic, at this collision rate they would soon come to rest if the gas was well insulated from outside heat energy. And so it is generally assumed that there is no loss of kinetic energy in collisions between molecules.

Boyle's Law and van der Waals' Equation.—Robert Boyle discovered (1662) that at constant temperature the volume of a given mass of gas was inversely proportional to its pressure, or

$$P_1 V_1 = P_2 V_2 = P_3 V_3, \text{ etc.} \quad (1)$$

This law holds very well for ideal gases but fails for real gases because at high pressures the molecules occupy an appreciable part of the volume of the vessel, and because when close together they attract one another. Therefore, to get the true pressure, a term must be added to P and for the true volume a term must be subtracted from V .

Johannes Diderik van der Waals proposed the following equation as a substitute for Boyle's law:

$$(P + \frac{a}{V^2})(V - b) = RT \quad (2)$$

where V equals gram molecular volume; T the absolute temperature; R the universal gas constant; and a and b the so-called van der Waals' constants which are characteristic of the gas under examination. For the concepts of these terms and their values, the reader is referred to the books listed at the end of this article. Equation (2) was developed for real gases and holds throughout a far greater range than does Boyle's law.

Law of Gay-Lussac.—This law states that at constant volume, different gases exhibit the same change in pressure when subjected to the same change in temperatures; or

$$P_t = P_0(1 + \alpha t) \quad (3)$$

where P_0 is the pressure of the gas at 0°C., P_t the pressure at t °C., and α is known as the pressure coefficient of the gas at constant volume. If we multiply each side of equation (3) by V_0 , the volume of one mole of the gas, we get

$$P_t V_0 = P_0 V_0(1 + \alpha t), \text{ or from Boyle's law}$$

$P_t V = P_0 V_0(1 + \alpha t)$; now, since α has been found to be very nearly equal to $1/273$, this becomes

$$V = P_0 V_0(1 + \frac{t}{273}) = \frac{P_0 V_0}{T_0}(273 + t) = RT \quad (4)$$

R , the universal gas constant per mole, may readily be calculated as equal to 8.315×10^7 ergs per mole per degree.

Joule's Equation.—What may be called the most characteristic property of a gas is its tendency to expand indefinitely. If a gas is confined in a vessel, this tendency to expand produces a pressure against the walls of the containing vessel. James Prescott Joule, using some simplifying assumptions regarding the size and the velocities of molecules in a gas, showed (1851) that the exact relation existing between the pressure exerted by a gas and the mean kinetic energy of translation of its molecules was

$$P = \frac{1}{3}nm\bar{v}^2 = \frac{1}{3}p\bar{v}^2 \quad (5)$$

where m is the mass of a molecule, n the number of molecules per cm³, \bar{v}^2 the root-mean-square

velocity of the molecules and ρ the density of the gas. From this we may calculate this velocity for any gas; e.g., for hydrogen at 20°C. this velocity is a little over one mile per second.

Since the total kinetic energy of translation for n molecules is $\frac{1}{2}nmv^2$, it is seen from equation (5) that the pressure exerted by a gas is numerically equal to two-thirds of the kinetic energy of translation of the molecules in unit volume, which gives $PV = \frac{2}{3}E$, where E equals the kinetic energy of translation of the molecules in volume V . And so the condition for constant temperature of a gas is a constant mean kinetic energy of translation of its molecules.

Avogadro's Law.—Multiplying both sides of equation (5) by V , we get $PV = \frac{1}{3}nmv^2$, where N is the total number of molecules in the volume V . If we have two different gases,

$$P_1V_1 = \frac{1}{3}N_1m_1v_1^2 \text{ and } P_2V_2 = \frac{1}{3}N_2m_2v_2^2,$$

and if we make $P_1 = P_2$ and $V_1 = V_2$, then

$$\frac{1}{3}N_1m_1v_1^2 = \frac{1}{3}N_2m_2v_2^2.$$

Multiplying both sides by $\frac{3}{2}$, we have

$$\frac{1}{2}N_1m_1v_1^2 = \frac{1}{2}N_2m_2v_2^2$$

From mechanics and the theory of probability, James Clerk Maxwell showed (1854) that the kinetic theory of gases leads to the conclusion that, at the same temperature, the molecules of all gases have the same average kinetic energy of translation except at very low temperature. Now if the temperature is the same for the two gases, then $\frac{1}{2}m_1v_1^2 = \frac{1}{2}m_2v_2^2$ and $N_1 = N_2$. That is, equal volumes of all gases at the same temperature and pressure contain the same number of molecules. The number of molecules in one mole of gas at normal temperature and pressure is called *Avogadro's number* and the accepted value is $N = 6.06 \times 10^{23}$. N has very nearly the same value when calculated from such different experiments as Brownian movements, mean free path and van der Waals' b , density fluctuations in a liquid, the blue of the sky, measurement of unit electric charge, charge on an alpha particle, number of alpha particles in volume of helium, law of atmospheres, half-life of radium and rate of emission of alpha particles, kinetic energy of alpha particle, and black-body radiation. See also **AVOGADRO'S HYPOTHESIS**.

Specific Heat of a Gas.—According to a famous principle known as the *equipartition of energy*, when a dynamical system is in equilibrium at a given temperature, the same amount of energy is associated with each "degree of freedom," that is, with each independent mode of motion in the system. Any molecule has three degrees of freedom of translation; a *diatomic* molecule has in addition two degrees of freedom of rotation; a *triatomic* molecule has three degrees of freedom of rotation. If the atoms in a molecule vibrate, then there is a degree of freedom for each mode of vibration.

The total energy of molecular translation in unit volume of a gas is

$$\frac{1}{2}nmv^2 = \frac{1}{2}\rho v^2 = \frac{3}{2}pRT$$

Hence, for unit mass of a gas, the kinetic energy equals $\frac{3}{2}RT$. And if the gas is heated only 1°C., as is specified in the definition of *specific heat*, this increase in energy is $\frac{3}{2}R$. Therefore, the specific heat of a gas at constant volume, C_v , should be $\frac{3}{2}R$, provided the molecules absorb no other energy than energy of translation. This is true for

the inert gases helium, argon, etc., which are monatomic and have only three degrees of freedom. For diatomic molecules one must add two degrees of freedom of rotation, or $C_v = \frac{5}{2}R$. In considering specific heat at constant pressure, C_p , one must add to C_v the work done by the gas expanding against atmospheric pressure, and thus C_p is greater than C_v . Ludwig Boltzmann showed that $\frac{C_p}{C_v} = \gamma = 1 + \frac{2}{n}$ where n is the number of degrees of freedom of the gas. For monatomic molecules $\gamma = 1.66$, which agrees with experiment; for diatomic molecules $\gamma = 1.40$, which is the value for oxygen, nitrogen, carbon monoxide, etc.

Maxwell-Boltzmann Distribution Law.—Maxwell and Boltzmann showed that if we postulate a gas with all molecules moving at a certain instant with a common velocity, these molecules, due to collisions, would immediately have different speeds in accordance with the equation

$$N_{dr} = \frac{4N}{\alpha^3\sqrt{\pi}} e^{-\left(\frac{v}{\alpha}\right)^2} dv$$

where N_{dr} represents the number of molecules having speeds between v and $v + dv$, N is the number of molecules per cm³, and α represents the most probable speed. While this equation would indicate the possibility of almost any velocity, the enormous number of collisions per second seems to enforce a sort of average velocity for most of the molecules. Calculation shows that only two or three molecules per thousand would have velocities over 400,000 cm per sec, about twice the average velocity for the hydrogen molecule at 20°C. Also, an infinitely small number would have a velocity of ten times the average velocity. Several experiments have been devised to test the Maxwell-Boltzmann law of distribution and all have agreed within the limits of accuracy of the experiments.

Brownian Movements.—In 1827, Robert Brown, a Scottish botanist, observed in a microscope that pollen grains suspended in water had irregular motions which never ceased. He made similar observations on many suspensions and found it to be a quite general phenomenon. He had the idea that the motions were due to the unequal bombardment of the particles of matter by the molecules of the liquid in which they were suspended. In 1909, Jean Baptiste Perrin began experiments with very small particles of quite uniform size immersed in various liquids to determine whether or not these small particles in suspension distributed themselves as do the molecules in the atmosphere. It is a well-known fact that the air is less dense at the top of a mountain than it is at the bottom. Perrin found that the density of the particles increases exponentially as the height decreases, which is exactly the same as Laplace's equation for the distribution of molecules with height above the earth's surface. Furthermore, in 1906 von Smoluchowski, and little later Albert Einstein, developed an equation showing a relation between the lengths of the irregular paths of suspended particles and, among other things, Avogadro's number, N . By very careful measurements, Perrin found a value for N which agrees very closely with the most accurate determinations of this constant. Thus Brownian movements provide a visual demonstration for the

reality of the thermal motions postulated by the kinetic theory. See also BROWNIAN MOVEMENT.

GEORGE WINCHESTER.

KING, Charles Glen, American chemist: b. Entiat, Wash., Oct. 22, 1896. After graduating B.S. at Washington State College in 1918 he served in an army unit during the last months of World War I, then resumed chemistry studies at the University of Pittsburgh which awarded him M.S. (1920) and Ph.D. (1923) degrees. From 1926 to 1930 he pursued graduate studies at Columbia and Cambridge universities. Meanwhile he had been teaching at Pittsburgh, continuing (1930-1943) as professor. Scientific director of the Nutrition Foundation in 1942, the same year he served as visiting professor at Columbia and was given a faculty appointment in 1946. He achieved international note in 1932 upon isolating Vitamin C.

KING, Clarence, American geologist: b. Newport, R. I., Jan. 6, 1842; d. Phoenix, Ariz., Dec. 24, 1901. He was graduated from the Sheffield Scientific School of Yale University in 1862, in 1863-1866 was a member of the California geological survey under the direction of Prof. J. D. Whitney (q.v.), discovered Mounts Whitney and Tyndall, and with J. T. Gardiner executed the first survey of the Yosemite Valley. In 1866 he originated the plan for a survey of the western Cordilleran region at its widest point. This plan was finally sanctioned by the government and under the auspices of the army engineering department and King's direction, was executed as the survey of the 40th parallel and completed in 1872. The survey was characterized as a signal contribution to the material of science. The volume on *Systematic Geology* (78), the first of six, was written by King. In 1872 certain swindlers sowed a tract in zona broadcast with rough gems; the discovery of valuable diamond fields was announced, and companies were organized for the exploration of the find. The "fields" proved to be within the local limits of the 40th parallel survey, and thereupon examined by King, who detected and proclaimed the fraud.

In 1878 King organized the various surveys now active into the United States Geological Survey under the general direction of the secretary of the interior, and was appointed the first director of the survey. He resigned in 1881, gained a large practice as a mining expert, and undertook an uncompleted series of experiments to determine the action of the primal constituents of the Earth under the conditions assumed as existing at the time of its separation from the sun.

KING, Edward, Anglo-Irish poet: b. Ireland, 1612; d. in shipwreck off Welsh coast, Aug. 9, 1637. Educated at Cambridge University, he became a fellow there in 1631. He was a man of scholarly attainments and good poetic taste which was shown in his Latin poems. He met Milton at Cambridge, and the two became very close friends. Milton had a strong influence over King and, had the latter lived, he might have produced some literary work of more general interest than that which he left at his premature death. As it is, he is chiefly noted as being the

inspiration of 13 poems by his classmates published under the title of *Obsequies to the Memory of Mr. Edward King* (1638), to which Milton contributed *Lycidas*.

KING, Edward (VISCOUNT KINGSBOROUGH), Irish writer and archaeologist: b. Cork, Ireland, Nov. 16, 1795; d. Dublin, Feb. 27, 1837. He was the eldest son of the third earl of Kingston and was educated at Oxford. Leaving college, he became a member of Parliament (1818-1826); but after eight years of public life he resigned his seat in favor of his brother, who took a great deal more interest in politics, than did the elder member of the family who had already become a confirmed antiquarian, deeply attracted toward the ancient civilizations of Mexico.

After several years spent in the work of examining and collecting the Aztecs and other manuscripts of the pre-Columbian Mexican civilization, he began, in 1830, the publication of his monumental work on *The Antiquities of Mexico* . . . which was gradually issued in London in nine superb volumes, profusely illustrated. He set out with the intention of proving that the people of Mexico were of Jewish origin and the descendants of the lost 10 tribes of Israel. To this all his acute reasoning, his undoubted erudition and his enthusiasm combined with his diligence were directed. From all the libraries of the Old and the New World he collected manuscripts and codices and other remains of pre-Columbian life supplemented with other documents following the conquest of Mexico. All the documentary material in the form of codices and several most valuable documents of post-conquest days he included in his publications, the codices being reproduced in color at an enormous expense. In fact so great was the cost of collection, examination and publication of this material that it exhausted Kingsborough's fortune, and he was arrested by his printer and cast into a debtor's prison in Dublin where he died of typhus contracted in what was then one of the most insanitary prisons of the British domains. Among the valuable texts published in Kingsborough's work is the *Monuments of New Spain* by Sahagun, which is the most fruitful and interesting of the existing documentary evidence of the pre-Columbian civilization of Mexico and Central America, with perhaps the one exception of the existing codices relating to pre-conquest Mexico. Kingsborough's work was looked upon as a marvel of the printer's and engraver's art in his day.

KING, Ernest Joseph, American naval officer, commander of all U.S. naval forces during World War II: b. Lorain, Ohio, Nov. 23, 1878. The son of James C. King and Elizabeth (Kearney) King, he graduated with distinction from the United States Naval Academy in the class of 1901, standing fourth in the class. Before graduating he saw service in the Spanish-American War as a naval cadet on the U.S.S. *San Francisco* and was under enemy fire on that ship in Havana Harbor.

On graduation he was assigned to duty on the U.S.S. *Eagle* in the West Indies. During the next five years he served on the U.S.S. *Cincinnati*, the U.S.S. *Illinois* and the U.S.S. *Alabama*. He was promoted to lieutenant in June 1906 and shortly thereafter was ordered to duty as an instructor in the Department of Ordnance

and Gunnery at the Naval Academy. In 1909 he went to sea on the staff of the commander in chief of the United States Atlantic Fleet. During this tour of sea duty lasting until 1912, he spent about a year as the engineer officer of the U.S.S. *New Hampshire*. This duty was followed by two years at the Engineering Experimental Station, Annapolis, Md.

His next sea duty beginning in April 1914 and lasting until May 1919 included command of the destroyer *Cassin* and of a destroyer division followed by duty in various capacities on the staff of the commander in chief United States Atlantic Fleet ending up as assistant chief of staff. He was awarded the Navy Cross for his services on that assignment.

Admiral King had now reached the rank of captain and was in May 1919 detailed as the head of the Postgraduate School of the Naval Academy which position he held until July 1921, when he went to sea in command of the U.S.S. *Bridge*. Later during the cruise he was assigned to submarine duty. From September 1923 until July 1926 he was in command of the Submarine Base, New London, Connecticut. While on that duty he was in charge of raising the U.S.S. *S-51* which was sunk off Block Island on 25 Sept. 1925. He was so outstandingly successful in this undertaking that when the U.S.S. *S-4* was rammed and sunk off Provincetown, Mass., in December 1927, he was assigned to temporary duty in command of the force that raised the vessel, although he was not at that time on submarine duty. For the first of these achievements he was awarded the Distinguished Service Medal to which was added the Gold Star for his work in raising the *S-4*.

After his New London tour of duty, he took up aviation, first as commanding officer of the airplane tender *Wright*, followed by flight training at Pensacola where he qualified as a naval aviator in June 1927. From August 1928 to August 1929 he was assistant chief of the Bureau of Aeronautics, followed by command of the Naval Air Station, Norfolk, Va., two years as commanding officer of the U.S.S. *Lexington*, a year at the Naval War College, Newport, R.I., and from April 1933 to June 1936 as chief of the Bureau of Aeronautics with the rank of rear admiral. He was promoted to the permanent rank of rear admiral in November 1933.

From June 1936 until February 1941 when he was appointed commander in chief, Atlantic Fleet, with the rank of admiral, he held various assignments including commander, Aircraft Scouting Force; commander, Aircraft Battle Force; and a year on the General Board at the Navy Department.

The attack on Pearl Harbor on 7 Dec. 1941 made it necessary to consolidate immediately all United States naval forces under one commander in chief. President Roosevelt had an easy decision to make in selecting the officer best fitted for that assignment. No other officer in the United States Navy had had such breadth of experiences as Admiral King as will be noted from even the brief outline of his career given above. He had had surface ship, submarine, and aviation duty. He had had scientific and engineering training. He was as much at home in the engine room as on the bridge of a ship and he had demonstrated his qualifications as a leader, and as an administrator by brilliant achievements.

President Roosevelt appointed Admiral King commander in chief of the United States Fleet on 20 Dec. 1941. In order to consolidate still further authority with responsibility in the administration of the navy as a war machine, the duties of the commander in chief, United States Fleet and of the Chief of Naval Operations were combined by executive order on 12 March 1942. On 13 March 1942, President Roosevelt nominated Admiral King as Chief of Naval Operations in addition to his duties as commander in chief of the United States Fleet, and he was confirmed in that office by the Senate on 18 March 1942 for a term of four years. On 1 Dec. 1944, by vote of the Senate, he was made a five-star Fleet Admiral.

KING, Grace Elizabeth, American writer b. New Orleans, 1852. She was educated in New Orleans, contributed much to periodicals and published in the *New Princeton Review* in 1886-88 Creole sketches which won considerable reputation and constituted the story *Monsieur Motte* (1888). Among her further works are *Tales of Time and Place* (1888); *Earthlings* (1889); *Chevalier Alain de Trison* (1889); *Jean Baptiste Lemoine, Founder of New Orleans* (1892); *Balcony Stories* (1893); *New Orleans. The Place and the People* (1896); *De Soto and His Men in the Land of Florida* (1898); *History of Louisiana, Stories from History of Louisiana* (1916); *Pleasant Ways of St. Médard* (1916); *Creole Families of New Orleans* (1921); *Madame Girard, an Old French Teacher of New Orleans* (1922); *La Dame de Sainte Hermine* (1924). Died 12 Jan. 1932.

KING, Helen Dean, American biologist; b. Oswego, N.Y., 1869. Graduated from Vassar and Bryn Mawr colleges she taught biology at the latter school (1897-1907), during a part of which time she was fellow in research work at the University of Pennsylvania and she became assistant, in this latter institution, in anatomy (1908-09). She has also been connected with other colleges and has devoted much of her time and efforts to the determination of sex and the problems connected therewith, subject on which she has written and lectured extensively. In 1937, she was chosen vice president of the American Society of Zoologists.

KING, Henry Melville, American Baptist clergyman: b. 3 Sept. 1838; d. 6 June 1915. Educated at Bowdoin College and Newton Theological Institution he was ordained to the Baptist ministry 28 Aug. 1862. He was instructor in Hebrew in Newton Theological Institution 1862-63, and then served in turn Dudley Street Church, Boston, 1863-82; Emmanuel Church, Albany, N.Y., 1882-91, and First Church, Providence, R.I., 1891-1906, when he was made pastor emeritus. He was an officer and trustee of several church societies and institutions. He was president of the Northern Baptist Educational Society, 1875-82, and of the Rhode Island Baptist State Convention, 1891-95. He was an authority on the history of his denomination. His works include *Early Baptists Defended* (1880); *Mary's Alabaster Box* (1883); *The Gospels* (1895); *Summer Visit of the Rhode Islanders to Massachusetts Bay* (1896); *The Mother Church* (1896); *The Baptists of Roger Williams* (1897); *The Messiah*

the *Psalms* (1899); *Why We Believe the Bible* (1902); *Religious Liberty* (1903); *John Mylsey and the Founding of the First Baptist Church in Massachusetts* (1908); *Historical Catalogue of the First Baptist Church in Providence* (1908); *Sir Henry Vane, Jr.* (1909); *Prayer and Its Relation to Life* (1912); and *Thinking God's Thoughts After Him* (1914).

KING, Horatio, American editor, author, attorney, and postal official; b. Paris, Me., June 21, 1811; d. Washington, D.C., May 20, 1897. As a youth he was a printer's devil on the *Paris Jeffersonian*, a weekly newspaper that supported the Democratic Party. At 20 he was the owner and editor of the *Jeffersonian*, which he moved to Portland, Me., and a staunch adherent of Jacksonian Democracy. After 1838 he held a clerkship in the Post Office Department in Washington, D.C., and rose through successive promotions to be superintendent of the foreign mail service. In this post he inaugurated cheap transatlantic postage and extended the service to South American countries, the West Indies, France, Belgium, and several German states. He was briefly postmaster-general in the cabinet of President James Buchanan (February 1861).

King was well known in Washington society and had considerable political influence. He is said to have been the first man in public office to deny the right of secession from the Union (in a letter to Representative J. D. Ashmore of South Carolina, Jan. 28, 1861). He supported the Union and President Abraham Lincoln throughout the Civil War. He was the author of *Sketches of Travel; or Twelve Months in Europe* (1878), and *Turning on the Light* (1895), a defense of the administration of President James Buchanan.

KING, James Gore, American financier; b. New York, N. Y., May 8, 1791; d. New York, N. Y., Oct. 3, 1853. The third son of Rufus King (q.v.), he was educated in London and Paris and at Harvard University. He became an attorney, but gave up his practice to serve as assistant adjutant general of militia in the War of 1812. Subsequently he turned to finance and after 1824 was a partner in the banking firm of Prime, Ward, and Sands. In the financial panic of 1837, he secured a loan of £1,000,000 from the Bank of England to the banks of New York City and thereby saved many of them from ruin. Elected to the House of Representatives as a Whig in 1838, King supported the administration of President Zachary Taylor and voted against several measures conceding various demands of Southern slave interests, including the Fugitive-Slave Bill.

KING, John, American physician and pharmacologist; b. New York, N. Y., Jan. 1, 1813; d. North Bend, Ohio, June 19, 1893. He entered the reformed Medical College of New York City and came under the influence of Dr. Wooster Beach, a physician who hoped to improve medical practice by substituting the use of organic drugs for feeding and other traditional treatments then accepted by the majority of physicians. King was graduated in 1848, subsequently taught at the college, and in 1848 became the first secretary of the National Eclectic Medical Association, an outgrowth of the Reform movement in American medicine. Thereafter King was one of the leaders of Eclectic medicine (q.v.). He was celebrated for his achievements in pharmacology, notably his

introduction into medical use of sanguinaria, hydrastis, and various resins, including podophyllin and the oleo-resins of capsicum and iris. He was the author of *The American Dispensatory* (1852), regarded as a monumental contribution to materia medica; *American Obstetrics* (1853); *Women: Their Diseases and Treatment* (1858); *The Microscopist's Companion* (1859); *The American Family Physician* (1860); *Chronic Diseases* (1866); *The Urological Dictionary* (1878); and the *Coming Freeman* (1886). The last named he wrote in behalf of the laboring classes and dedicated it to the Knights of Labor. He is sometimes regarded as the father of American materia medica.

KING, John Alsop, American politician and official; b. New York, N. Y., Jan. 3, 1788; d. near Jamaica, N. Y., July 7, 1867. The eldest son of Rufus King (q.v.), he was educated at Harrow School (England) and in Paris. He was admitted to the bar, but his practice was interrupted by military service in the War of 1812. Subsequently entering politics, he was several times elected to the New York state assembly (1832, 1838, 1840). His early political affiliations were successively with the Democrats, anti-Masons, and National Republicans; his later affiliations were Whig and Republican. He was a delegate to the Whig national conventions of 1839 and 1852, and in 1849, as a Whig, was elected to Congress, where he opposed various measures intended to compromise the slavery dispute between North and South, notably the Fugitive-Slave Bill. In 1856 he was a delegate to the first Republican National Convention and was elected governor of New York. He was one of the presidential electors in 1860, casting his vote for Abraham Lincoln. After 1861 he lived in retirement at his home near Jamaica, N. Y.

KING, Jonas, American Congregationalist missionary and consular official; b. near Hawley, Mass., July 29, 1792; d. Athens, Greece, May 22, 1869. He was graduated from Williams College in 1816 and from Andover Theological Seminary in 1819. After being ordained by the South Carolina Congregational Association in 1819, he studied Arabic in Paris to prepare himself for missionary work and spent three years in a mission in Palestine. Subsequently he was a missionary in Greece, where he hoped to establish a Greek Protestant Church. He published several theological and polemical works in modern Greek, including a collection of sermons (1859). King's evangelical activities often brought him into conflict with the Greek Orthodox Church. He was charged with slandering the church and tried at Athens in 1852, but escaped punishment. In 1863 he was anathematized by the Synod of Athens and one of his books was publicly burned. Between 1851 and 1857 King was the United States consular agent at Athens, and he was briefly a vice consul at the Piraeus in 1868.

Consult Haines, F. E. H., *Jonas King: Missionary to Syria and Greece* (New York 1879).

KING, Leonard William, English Assyriologist, and educator; b. London, England, 1869; d. Aug. 20, 1919. Educated at Rugby and Cambridge, he became greatly interested in the earlier civilizations of western Asia; and in 1903-1904 he was commissioned by the British Museum to carry on for it excavations at the site of Nineveh;

which he did successfully, collecting many very interesting and valuable rock inscriptions dating back to a comparatively early period of Assyrian civilization and culture. Through this and other work of a like nature he was chosen lecturer in King's College, London, and assistant keeper of Egyptian and Assyrian antiquities in the British Museum. In connection with this position he prepared a guide of the treasures under his care (1900).

Among his published works are *Babylonian Magic and Sorcery* (1896); *Cuneiform Texts in the British Museum* (1896-1914); *Assyrian Chrestomathy* (1898); *Letters and Inscriptions of Hammurabi* (1898-1900); *Babylonian Religion and Mythology* (1899); *Assyrian Language* (1901); *Annals of the Kings of Assyria* (1902); *Egypt and Western Asia in the Light of Recent Discoveries* (1906, with H. R. Hall); *Inscriptions of Darius on the Rock of Behistûn* (1907, with R. C. Thompson); *A History of Sumer and Akkad* (1910); *Boundary Stones and Memorial Tablets in the British Museum* (1912).

KING, Louis Vessot, Canadian physicist: b. Toronto, Ont., April 18, 1886. He was educated at McGill University and at Cambridge. In 1912 he became assistant professor of physics at McGill; associate professor in 1915; and Macdonald professor of physics there in 1920. In 1915-1920 he investigated submarine acoustics for the electrical and submarine committee of the British Inventions Board; in 1919 he was awarded the Howard N. Potts Gold Medal of the Franklin Institute for his invention of the hot-wire anemometer and in 1934 was awarded the Flavelle Medal of the Royal Society of Canada for conspicuous scientific achievement. At intervals since 1913 he has engaged in researches on fog alarms and the measurement of sound at sea, the measurement of air velocities by the hot-wire anemometer, and has made studies on the intensity and distribution of light from the sky. His publications include *On the Numerical Calculations of Elliptic Functions and Integrals*; memoirs on various scientific topics.

KING, Philip Parker, English naval officer and hydrographer: b. Norfolk Island, in the Pacific Ocean, Dec. 13, 1793; d. Sydney, Australia, Feb. 26, 1856. Entering the naval service in 1807, he was raised to the rank of lieutenant in 1814 and from 1817 to 1822 he was in complete charge of an important survey in Australian waters. Later on he spent four years in making surveys and charts of the southern coast of South America (1826-1830). Subsequently, he settled in Sydney, New South Wales, where he became, among other things, a legislative councillor and manager of the Australian Agricultural Society. In 1855 he was raised to the rank of rear admiral and placed on the retired list. Among his published works are *Narrative of the Survey of the Intertropical and Western Coasts of Australia*, 2 vols. (1827); *Sailing Directions to the Coasts of Patagonia* (1830); *Voyages of the "Adventure" and the "Beagle"*, 3 vols., of which King wrote only the first, Robert Fitz-Roy the second, and Charles Darwin the third (1839). He also made many very important charts which were long in use and upon which some of the later charts have been based. King's charts were issued by the Admiralty Hydrographic Department in 1825, and at subsequent dates. Some of

his later charts saw publicity through other sources.

KING, Preston, American statesman: b. Ogdensburg, N. Y., Oct. 14, 1806; d. New York Nov. 12, 1865. Graduated from Union College in 1827, he studied law and practiced for some time in St. Lawrence County, but constantly with an eye on politics and a hand in it. In 1830 prompted by his political inclinations, he founded the *St. Lawrence Republican* as the organ of the Jackson party in northern New York. This paper he edited vigorously in the interest of party politics, and he received his reward from Jackson in the shape of the postmastership of Ogdensburg (1831-1834). He resigned this appointment when he was elected a member of the New York Assembly. After his fourth term he suffered a mental breakdown, but soon recovered and served in the United States Congress, 1843-1847, 1849-1853. Throughout this time he had been a member of the Democratic Party, though he held different views from those of the majority of his party on the slavery question. He joined the Republicans in 1854 and strenuous political work for this party resulted in his election to the United States Senate (1857-1863). As a delegate to the Republican Convention at Baltimore in 1864 he was largely instrumental in securing for Andrew Johnson the nomination for the vice presidency of the United States. Later on King became collector of the port of New York. While holding this latter office he again became deranged and finally committed suicide by jumping from a ferry boat on the Hudson River.

KING, Rufus, American statesman: b. Scarborough, Mass. (later Maine), March 24, 1755; d. Jamaica, Long Island, N. Y., April 29, 1827. He was graduated from Harvard in 1777 and admitted to the bar in 1780. In 1784, after serving in the Massachusetts General Court, he was a delegate to the Continental Congress. He took an active part in framing the Federal Constitution. He removed to New York in 1788 and served as a senator from that state, 1789-1794. He was United States minister to Great Britain (1796-1803), and after some years spent in partial retirement was sent for the third time to the Senate in 1813, and won renown as an orator by the brilliant speech he made on the burning of Washington by the British. In 1819 he was again elected to the Senate, serving till 1825, when he was appointed the second time minister to the Court of St. James's. He was the Federalist candidate for the vice presidency in 1804 and 1808 and for president in 1816. In collaboration with Hamilton he wrote the *Camillus Letters* explaining the Jay Treaty.

KING, Rufus, American journalist and diarist: b. New York, Jan. 26, 1814; d. there, Oct. 13, 1876. He was graduated from West Point in 1833, entered the Corps of Engineers, resigned from the army in 1836, became assistant engineer of the New York and Erie Railroad, and was adjutant general of New York State, 1839-1843. He was associate editor of the *Albany Advertiser*, 1839-1841, and of the *Albany Evening Journal*, 1841-1845. In the latter year he moved to Wisconsin and became editor of the *Milwaukee Sentinel and Gazette* until 1861. In 1847-48 he was member of the state constitutional convention. In May 1861 he was commissioned

igadier general of the Wisconsin volunteers. e commanded a division in the Department of e Rappahannock in March-August 1862, was a member of the court-martial for the trial of Maj. en. Fitz-John Porter (1862-1863), resigned ct. 20, 1863, and was minister at Rome in 1863-1867. In 1867-1869 he was deputy customs collector of New York port.

KING, Samuel Archer, American aeronaut and scientist: b. at Tinicum, near Philadelphia, April 9, 1828; d. Philadelphia, Nov. 3, 1914. At the age of 21 he began making balloons, in which he took a great interest. He made his first ascension two years later at Philadelphia. His interest in the matter created interest in others, so that balloon ascensions became features of expositions, traveling shows, and other affairs at which many people were assembled. King himself sometimes made ascensions at such places, notably at the Centennial Exposition (Philadelphia 1876) and the Columbian Exposition (Chicago 1893). Altogether he made more than 400 ascensions, the last when he was nearly 80. The first aerial photograph was taken in 1860 from a balloon navigated by him. The use of balloons for Atlantic crossings was the object of many of his later studies and experiments.

KING, Thomas Butler, American lawyer and congressman; b. Palmer, Mass. Aug. 27, 1800; d. Waresboro, in Ware County, Georgia, May 10, 1864. As state senator from Georgia in 1832, 1834, 1835 and 1837 he promoted and founded the National Observatory in Washington and promoted aid for American shipping through mail subsidies. In 1849 he went to California as personal adviser to President Taylor on the California statehood question and in 1851 became collector for the port of San Francisco. He was elected to the state senate in 1859, and, after Georgia left the Union, served as her commissioner to England, France and Belgium. He was opposed to secession but served the Confederacy loyally until his death.

KING, Thomas Starr, American Unitarian clergyman and lecturer, generally known as STARR KING; b. New York, Dec. 17, 1824; d. San Francisco, March 4, 1864. In 1848-1860 he was pastor of the Hollis Street Unitarian Church of Boston, during this period gained great popularity as a lyceum lecturer in the northern states. Best known was his *Substance and Show*, but other familiar subjects were *Goethe, Sight and Insight, The Laws of Disorder, Socrates*. He became pastor of the First Unitarian Society of San Francisco in 1860; was among the first, by newspaper article and lecture, to call attention to the Yosemite Valley, and when, in the presidential campaign of 1860, the idea of the establishment of California as an independent Pacific republic was discussed, denounced the project from the lecture platform and preserved the state to the Union. During the Civil War he was active in obtaining in California large and necessary funds for the Sanitary Commission. His name was at one time associated with the White Mountains, which he thoroughly explored, and which became known chiefly through his writings, particularly *White Hills; Their Legends, Landscape and Poetry* (1859; new ed., 1887). One of the peaks of the White Mountains has been called Starr King in his honor, and one in Yosemite National

Park is named for him. A memorial to him was set up in Golden Gate Park, San Francisco, Calif., in 1889.

KING, William, English author: b. London, 1663; d. there, Dec. 25, 1712. Graduating from Oxford in 1685 he studied law but turned to a literary life. He soon proved himself a caustic critic who unerringly found the weak spots in human nature. Yet there was enough of humor in his work to lighten his caustic vein and to make it popular. His first dramatic effort, which was directed in favor of the Tory High Church party, was entitled *Dialogue Shewing the Way to Modern Preferment*. He was, from this time on, in favor with the court and the recipient of successive political preferments, among them the judge of the Admiralty Court in Ireland, vicar general of Armagh, and keeper of the records of Dublin Castle. These offices all left him plenty of time for his literary labors but he did not employ it to the best advantage. His undoubtedly great talents were often misdirected or not directed at all. His indolence went even to the neglect of the preservation and publication of his manuscripts, some of which were lost and others of which were not published during the lifetime of the author.

Among his published works are *A Journey to London in the Year 1698 and Useful Transactions in Philosophy and Other Sorts of Learning*, sparkling with humor and originality. It was not until more than half a century after his death that his works were published as a whole, that is, such as were still preserved. This edition was due to John Nichols, who issued it in three volumes in 1776.

KING, William, American politician, first governor of the State of Maine: b. Scarborough, Mass. (later Maine), Feb. 9, 1768; d. Bath, Maine, June 17, 1852. He was, during the greater part of his life, the last 50 years of which were passed in Bath, an active and successful merchant, but is better known by his public services. At an early period of his career he became a member of the Massachusetts General Court and later served as a senator, in which capacity he was distinguished by his efforts in behalf of religious freedom and of securing to original settlers upon wild lands the benefit of their improvements. He was an early and ardent advocate of the separation of Maine from Massachusetts, and upon the consummation of that act presided over the convention which met in 1819 to frame the constitution of the new state. He was subsequently elected the first governor of Maine, but resigned in 1821 to become one of the United States commissioners for the adjustment of Spanish claims.

KING, William Frederick, Canadian astronomer and surveyor: b. Stowmarket, Suffolk, England, Feb. 19, 1854; d. Ottawa, Ontario, April 23, 1916. The family emigrated to Canada in 1861 and he was graduated from Toronto University in 1875. He entered the employ of the Dominion government as land surveyor in the great Northwest, becoming finally chief inspector of surveys in 1886. Four years later he became chief astronomer of the Department of the Interior, in 1905 director of the Dominion Astronomical Observatory at Ottawa, and in 1909 superintendent of the Geodetic Survey of Canada. For this and other work for the encouragement of science he

was made a companion of St. Michael and St. George in 1908. He published *Astronomy in Canada* and many scientific papers.

KING, William Lyon Mackenzie, Canadian statesman: b. Berlin (now Kitchener), Ontario, Dec. 17, 1874; d. Ottawa, Ontario, July 22, 1950. At the time of his resignation, Nov. 15, 1948, he had been leader of Canada's Liberal Party for 29 years and prime minister for more than 21 years, a longer period in such office than had been attained by any other statesman in the history of the British Commonwealth. He was the son of a noted jurist, John King.

After obtaining degrees from the University of Toronto, King studied for four years (1896–1900) on fellowships at Chicago and Harvard universities. In 1900 he was called to Ottawa by Sir Wilfrid Laurier, then prime minister, to the post of deputy minister of labor (1900–1908). Elected to the Dominion Parliament, 1908, for North Waterloo, Ontario, he was chosen, 1909, to be minister of labor, and served for two years with conspicuous success in the adjustment of labor disputes; he was much sought after in the United States during World War I as industrial conciliator.

He became prime minister in 1921 and with brief intervals served as such through the years 1921–1930, and 1935–1948. He was president of the Imperial Privy Council and secretary of state for external affairs; and Canada's representative at the imperial conferences in London, 1923, 1926, and 1927, and at the League of Nations conferences in Geneva, 1928 and 1936. In August 1940 he concluded with President Roosevelt the Ogdensburg agreement for the study of common defense problems; and in April 1941 signed a pact of United States-Canadian cooperation in aid of Britain's war machine. He attended Allied war conferences in 1942 and 1943 and had a voice in certain of the Churchill-Roosevelt parleys in Washington and Quebec. In London, 1944, he persuaded the conference of empire prime ministers to accept Canada's wish that the British Commonwealth of Nations be continued along its present lines; and in 1945 he led the Canadian delegation at the San Francisco United Nations Conference on International Organization.

Mackenzie King's tenure of office was marked by three great objectives: first, the unity of Canada, in which he again showed his skill as a mediator in his shrewd handling of the French-Canadian problem; second, the complete autonomy of Canada, while preserving her historic associations (his period as prime minister witnessed the definite emergence of his country as a sovereign nation); third, the strengthening of friendly relations with the United States.

His most important published work, aside from his parliamentary addresses, is *Industry and Humanity* (Boston and New York 1918; abridged ed., Toronto 1935 and 1947); also *Canada at Britain's Side* (1941); and *Canada and the Fight for Freedom* (1944).

KING, William Rufus Devane, American statesman, 13th vice president of the United States: b. Sampson County, N. C., April 6, 1786; d. at his home near Cahaba, Ala., April 18, 1853. He was graduated from the University of North Carolina in 1803; studied law; was admitted to the bar in 1806; the same year was elected to the legislature, and was re-elected in 1809. In 1810

he was elected to Congress, and was twice re-elected. In Congress he united with Clay, Calhoun, and others who advocated the war policy of Madison's administration, and voted for the war declaration of 1812. In the spring of 1811 he resigned his seat to become secretary of legation at Naples under William Pinkney with whom he was transferred to St. Petersburg (now Leningrad) later that year. After his return in 1818 he settled in Alabama. In 1819 he was elected one of the United States senators from the new state, and was successively re-elected in 1823, 1828, 1834, and 1840. In April 1844 he was appointed minister to France. England was known to be decidedly opposed to the United States annexation of Texas, then pending, and it was believed that she was urging France to join in a protest against it. King directed his effort to prevent this joint protest and he was successful. He returned to the United States in November 1846. In 1848 Senator Arthur P. Bagby was sent as minister to Russia, and King was appointed to fill the vacancy thus created. In 1849, the term for which he was appointed having expired, he was elected for a full term of six years. In 1850, on the accession of Vice President Fillmore to the presidency, King was unanimously elected president of the Senate. In 1852 he was elected vice president of the United States. By special act of Congress he took the oath of office in Cuba, where he had gone for his health but was never able to serve.

KING, a person vested with supreme power in a foreign state, territory, or nation. According to feudal usages, the king was the source from whom all command, honor, and authority flowed, and he delegated to his followers the power by which they exercised subordinate rule or authority. There is now no very clearly marked distinction between a king and an emperor. A queen-regent, or a princess who inherited the sovereign power in countries where female succession to the throne is recognized, possesses all the political rights of a king.

KING CONCH, the great wing-shells of the genus *Strombus*, especially *S. gigas* of the W. Indies and *S. pugilis* of Florida. The larval helmet-shells (*Cassia*) of the same region are often called "queen conchs."

KING COTTON, a popular name given to cotton plant in the United States. "Cotton king" was a frequent declaration before the Civil War, when the supremacy of cotton in commerce and politics was strongly asserted by public men especially in the South.

KING CRAB. See HORSEFOOT CRAB.

KING CROW. See DRONGO.

KING DORY, a bird-dealers' name for Australian parrots of the genus *Aspromictus*.

KING DUCK, the spectacled eider. EIDER DUCK.

KING GEORGE V LAND, a name given to a part of the Antarctic Continent discovered by Sir Douglas Mawson in 1911 and explored by him in that and the following two years. It covers a very considerable extent of country, stretching as it does from

ong. 144° E. to 153° E.; and the whole region s covered by a great cap of ice.

KING GEORGE SOUND, an inlet of the Indian Ocean, located along the southwestern coast of Western Australia. Its width is 5 miles at its mouth, and its length is 10 miles. The port of Albany is on Princess Royal Harbour, one of the arms of the sound.

KING GEORGE'S WAR, the American phase of the War of the Spanish Succession (1744-1748), involving England and France. In the New World the fighting consisted principally of border action between the English and French colonists, with the Indian allies of the latter playing a prominent role. The most ambitious exploit of the war was the capture, in 1745, of the town of Louisburg in Nova Scotia by an expeditionary force of some 4,000 men from Massachusetts and other English colonies, led by Sir William Pepperell and assisted by the British fleet. The treaty of Aix-la-Chapelle returned the town to France three years later. The war, named after George II of England, was a conspicuously futile one which decided nothing while adding bitterness to the rivalry existing between the French and English settlers. See also **COLONIAL WARS IN AMERICA—1744-48**. *Third Intercolonial War: King George's War*; UNITED STATES—*The English Colonies in America, 1607-1763* (Anglo-French Rivalry).

KING HENRY THE FIFTH, the last of the tetralogy of history plays by William Shakespeare which began with *Richard the Second*; was foreshadowed by the Epilogue to Part II of *King Henry the Fourth* (q.v.) and uses the same sources as the other chronicles in the series. The play was probably begun in the fall of 1598; the Chorus to Act V with its reference to the Irish campaign of the earl of Essex could not have been written until the end of the following March; the reference to his success precedes his return in disgrace in September. No doubt production occurred in the spring or summer of 1599. The play was first published in a cut and pirated version in 1600 as *The Chronicle History of Henry the fifth, With his battell fought at Agincourt in France. Together with Auntient Pistoll. As it hath bene sundry times played by the Right honorable the Lord Chamberlaine his seruants*. Quartos of 1602 and 1619 (falsely dated 1608) have no better authority; the only sound text is that of the Folio of 1623.

With omissions and alterations for dramatic reasons, *Henry the Fifth* follows Raphael Holinshead's account of Henry's invasion of France, culminating in his triumph at the Battle of Agincourt (1415). The immediate treaty and preparation for marriage are Shakespeare's compression of the sieges and negotiations of the next five years. The wooing of Katharine, much enlarged, derives from *The Famous Victories of Henry the Fifth*, which also suggested a few minor scenes. To provide the bridges for the almost epic action, the playwright uses the device of the Chorus, here a single actor, who presents exposition and narrative connections and pleads apologetically that spectators use their imaginations to participate in the creation of "so great an object . . . within the girdle of these walls [the theater] . . . turning th'accomplishment of many years into an hour-glass."

Though he heightens and develops, juxtaposes and adds details, Shakespeare's view of the historical characters is essentially that of his sources. Dominating the action is the king himself. At various times readers, reinterpreting history in the light of other information or their own principles, have found Henry of Monmouth substantially a worldly man of action, his claims to France precarious and selfishly ambitious, his invasion unjustifiable, his nationalism mere chauvinism, but to historian Edward Hall he was "the mirror of Christendom," and to Elizabethans generally the glorious "star of England," a national hero. It is so Shakespeare pictures him. Having shown his growth to maturity in the earlier plays, the dramatist concentrates on scenes which exhibit his breadth: his courage is matched by his wisdom, his sense of justice by mercy, his geniality by dignity, and his leadership and his mundane success by good humor, humility, and piety. If as a lover he is something less than romantic, he is never the tyrant, and there is no reason why Katharine should have found her conqueror, arranging a politically expedient marriage, unattractive. Through Henry, the play emerges as a paean of patriotism at a time of English unity and power.

Since comedy was an essential element of the *Henry* series, Shakespeare could not do without it, even had he wished to, but despite the Epilogue already cited he could retain only part of his expectation about Falstaff. Perhaps because of a change in his actors, certainly because Sir John would interfere with both the characterization and the dominance of Henry, Falstaff had to go. He does not appear in person in *Henry the Fifth*; Shakespeare has his death reported in a touching farewell by Mistress Quickly, now married to Pistol. Pistol, Bardolph, and Nym cannot and do not take Falstaff's place but they serve, and their humor is supplemented by national types, soldierly banter, braggadocio both English and French, and the seriocomic courtship; the proportion seems just.

Henry the Fifth has been most popular on the stage in times of national stress. If the Spanish threat seemed just about over, Shakespeare could not but have been aware of the aptness of his play to the expedition in Ireland. That it was initially successful we know both from its piratical printing and a court performance on Jan. 7, 1605. Restoration and early 18th century notices are scanty but thereafter there have been frequent productions. John Philip Kemble, William Charles Macready, Samuel Phelps, and Charles Kean played the title role, with increasingly spectacular elements in their presentations. Richard Mansfield's 1900 performance in America was outstanding. Productions in this century have been numerous, especially in England. Among them are the fine film made by Sir Laurence Olivier (1946), a remarkable marriage of good Shakespeare and good cinema, and the production of the whole cycle at Stratford in the summer of 1951.

Bibliography.—The most useful modern edition of the play is that edited by J. Dover Wilson (Cambridge 1947); a revised edition by J. H. Walter in the Arden Shakespeare (Cambridge, Mass.) has been announced. For criticism, see the bibliography under **HENRY THE FOURTH**.

ROBERT HAMILTON BALL,
Professor of English, Queens College of the City of New York.

KING HENRY THE FOURTH, the general name for two history plays by William Shakespeare, or, as some scholars consider, one play of two parts, forming the central portion of the tetralogy which opens with *Richard the Second* and concludes with *Henry the Fifth*. The question of the unity of the individual parts and of the whole group depends somewhat on whether Shakespeare deliberately planned the whole cycle or whether it grew by accretion, a problem currently much debated. Performances of the cycle at Stratford on Avon, England, in the summer of 1951 stressed continuity; critics, while agreeing that one history helps to interpret another, divided on whether the impression created was dramatically comprehensive or quadruple. In the early quartos—there were eight quartos in all—the first part of *King Henry the Fourth* (1623 folio) was called, with minor variations, *The History of Henrie the Fourth; With the battell at Shrewsburie, between the King and Lord Henry Percy, surnamed Henrie Hotspur of the North. With the humorous conceits of Sir Iohn Falstaffe*. The second part of *King Henry the Fourth* (Folio) was titled in the only quarto (1600) *The Second part of Henrie the fourth, continuing to his death, and coronation of Henrie the fift. With the humours of sir Iohn Falstaffe, and swaggering Pistoll*. The first quarto of the first part (1598) is the basic authority for the text; quarto and folio versions of the second part show considerable variations, with correction and revision in the latter. The composition of both parts is usually assigned to 1597-1598 with immediate production by the Lord Chamberlain's company.

Though Shakespeare may have in part derived his conception of history from Edward Hall, the principal source for his historical material was the *Chronicles* of Raphael Holinshed, which he follows fairly closely. He does, however, make various changes in chronology and in the juxtaposition of his characters for dramatic reasons. Some of the comic material, such as the highway robbery and the rehearsal of the pending interview between Hal and his father, was suggested by an old play, *The Famous Victories of Henry the Fifth*, which limns the prince's reckless youth and introduces a riotous companion, Sir John Oldcastle. For his fat knight, indeed, Shakespeare at first adopted the name of Oldcastle, as is shown in Part I by Act I, scene 3, line 47 and in the Epilogue to Part II, but when there was objection to the misrepresentation of a man who was both a brave soldier and a religious martyr, the dramatist substituted the name, slightly altered, of another historical character who had once been the owner of the Boar's Head Tavern, Sir John Fastolfe. Needless to say, the character is Shakespeare's own.

Historically, Part I deals with the revolt of Hotspur (Henry Percy, the son of the Earl of Northumberland), allied with Scottish forces under Archibald, Earl of Douglas, and Welsh under Edmund Mortimer, against Henry IV, and his defeat by the king and his son, Prince Hal, at the Battle of Shrewsbury (1403). In the play, Hal is shown in relation both to the martial and political events and characters, and to a group of lively companions with whom he pranks and sows his wild oats. Part II covers some of the next 10 years, the crushing of further rebellion, the death of Henry IV, and the accession of Hal as Henry V. Comic incidents con-

tinue with the addition of other characters and culminate in the dismissal of Falstaff by the now thoroughly responsible new king.

Hal is the central figure, a very human and likable young man whose facets of character are reflected by a variety of associates, brilliantly characterized, none more so than his expedient father and the impetuous Hotspur. He is, in these plays, on the way to becoming Shakespeare's ideal king. Nonetheless, it is Sir John Falstaff, the coward and the cheat, the toper and wench, who by his wit and gusto has paradoxically usurped the admiration and affection of readers, and theatergoers alike. He has been variously interpreted, from the time of Maurice Morgann's famous though misleading essay of 1777, but no one doubts that his importance to the plays in relation to other characters is proportionate to his bulk in contrast to that of other men. He has become the supreme example not of the friend to be trusted in emergency, but of the boon companion of one's softer hours. "I am," he says truly, "not only witty in myself, but the cause that wit is in other men." It is no wonder Shakespeare had to promise in the Epilogue to Part II that if the public were not "too much cloyed," he would continue the story "with Sir John in it."

Such a play, or plays, with an interest both historical and comic, inevitably has had an enormous stage history. Originally popular, as the early editions and references to it make clear, the first part especially has been the delight of both actors and audience. Thomas Betterton played both Hotspur and Sir John. James Quin and John Henderson were famous 18th century Falstaffs. Later Charles Kemble, Edmund Kean, and William Charles Macready impersonated Hotspur—note that stars preferred the dashing Hotspur to the morally questionable prince—and George Frederick Cooke and Samuel Phelps, Falstaff. In America James Henry Hackett acted Sir John during a forty-year period. There have been many modern revivals, here and abroad. Maurice Evans as Falstaff under Margaret Webster's direction in 1939 and the remarkable productions of both parts by the Old Vic Company in 1946, with Sir Laurence Olivier as Hotspur and Justice Shallow, and Sir Ralph Richardson as Falstaff, are among New York City's cherished memories.

Bibliography.—The elaborate variorum editions by S. B. Hemingway (Part I) and M. A. Shaaber (Part II) (Philadelphia 1936, 1940) contain both text and full criticism. J.—Dover Wilson's editions of both parts (Cambridge 1946), and G. L. Kittredge's and R. C. Bald's of the first part (Boston 1940; New York 1946) are briefer and less expensive. Valuable criticism will be found in Tillyard, E. M. W., *Shakespeare's History Plays* (New York 1946); Wilson, J. Dover, *The Fortunes of Falstaff* (Cambridge 1944); Palmer, John Leslie, *Political Characters of Shakespeare* (London 1935); Campbell, Lily B., *Shakespeare's Histories: Mirrors of Elizabethan Policy* (San Marino 1947); Nicoll, Allardyce ed., *Shakespeare Survey*, vol. 6 (Cambridge 1953).

ROBERT HAMILTON BALL.

KING HENRY THE SIXTH, the general title of three plays, or one play in three parts published in the first collected edition of William Shakespeare's dramatic work, the Folio of 1623. Seldom read except by the professed specialist and even more seldom acted before the public, they are among the most puzzling in the Shakespearean canon and have occasioned much controversy among those scholars who have investigated them in detail. Among the questions of dispute are

quence of composition, and authorship. Causes of argument lie in the uneven quality of the plays themselves; the imperfectly assimilated and joined material; contradictory styles and references; a text by Philip Henslowe in his *Diary*; and an acknowledgment in *A Groatworth of Wit* by a contemporary playwright, Robert Greene, variously interpreted as expressing scorn of Shakespeare, the actor, and as an accusation of plagiarism against Shakespeare, the dramatist. Some advances toward solutions have been made in recent years, but it cannot be said that the problems have been settled. It is sufficient here to indicate that the tendency now is to see the plays less as mere visions of the work of other men—especially Greene, though George Peele, Thomas Nash, and Christopher Marlowe have been named—and more as substantially Shakespeare's, with or without interlayers by other hands. The plays must have been recognized in the theater and by Shakespeare's fellow actors as essentially Shakespeare's; they would not have been included in the Folio. Beyond that, the present writer's attitude is firmly and cheerfully agnostic on the ground of a Scotch verdict of "Not proven."

At any rate all the plays were early ones in Shakespeare's career. Greene's allusion shortly before his death in September 1592 makes clear that Part III was on the stage in that year, and that Part II probably stems from 1591. Evidence has been adduced but not universally accepted that Part I was composed in its present form after the other parts as a kind of preamble for the inclusion of the early years of Henry's reign and to take advantage of the success of the other plays. Henslowe records a "Harey the vij" as "ne" (that is, new) in the spring of 1592; it is not clear to what he refers. Thomas Nash in *Pierce Penitence* (1592) makes unmistakable reference to Part I. Part I was not printed until the Folio, which contains the only substantive text. Two plays, parallel to Parts II and III, *The First Part of the Contention betwixt the two famous Houses of Yorke and Lancaster . . .* and *The true Tragedie of Richard Duke of Yorke . . .*, first printed respectively in 1594 and 1595 and once held to be sources which Shakespeare adapted, are now fairly generally accepted as piratical versions of the plays later published in the Folio. The historical sources for all three plays are the chroniclers, chiefly Raphael Holinshed and Edward Hall, whose somewhat biased accounts are very freely adapted in order to compress a long stretch of years into the compass of the dramatic form.

King Henry the Sixth, together with *King Richard the Third*, forms a tetralogy which deals with the loss of the French possessions gained by Henry V, the disintegration of the English kingdom by factionalism resulting in the Wars of the Roses, and the final victory of Lancastrianism over the Yorkists. All the plays are episodic and difficult to follow. Part I is chiefly concerned with the struggle in France, with Lord Talbot and the English pitted against the French and Joan La Pucelle (Joan of Arc). Talbot is a heroic figure who falls in battle; correspondingly, Joan of Arc is depicted not as a French saint but as a witch and courtesan who deserved her death at the stake. Accompanying this action are the evident weakness of Henry VI—though not so drawn, he was only nine months old at the time the play opens—the faction of the king's uncles, the duke of Gloucester and the bishop of

Winchester; and the rise of Richard Plantagenet, Duke of York. The play ends with the negotiations for the marriage of Henry to Margaret of Anjou, and covers historically the period from 1422 to 1444. Parts II and III deal with the Wars of the Roses. Part II extends from the royal marriage through York's struggle for the crown, the overthrow of Humphrey, Duke of Gloucester, the Jack Cade Rebellion, and culminates in York's defeat of the king at St. Albans (1455). In Part III, the protagonist is really Queen Margaret. When Henry yields the succession to the York family, thereby disinheriting her own son, she battles with Richard, who is defeated and slain. The latter's sons, Edward, George, and Richard, duke of Gloucester (later Richard III), are in turn triumphant; Henry and Margaret flee, and Edward becomes Edward IV. Though Henry is reseated, Edward again triumphs, and Henry is confined to the Tower. The queen's forces are defeated at Tewkesbury; her son is murdered by the Yorkist brothers, and Henry by Gloucester, as Edward resumes the throne (1471). Of the three plays, Part I is clearly the worst and Part II probably the best. There is some fine but spotty characterization interlarded with poetry of varying merit, but the plays have not been of much interest to the modern reader.

Philip Henslowe cited 16 performances of "Harey the vij" in 1592 and 1593. Part I was revived at Covent Garden for one night in 1738 and then not until the Stratford Festivals of 1889 and 1906. On the last occasion Frank Benson produced all three parts. Robert Atkins in 1923 produced a combination of Part I and half of Part II at the Old Vic, and the three parts were included in performances of all Shakespeare's English histories in 1935 at the Pasadena Community Playhouse. Parts II and III were presented by the Birmingham Repertory Theatre in 1951 and 1952 respectively; the latter production was also given at the Old Vic in 1952. There have been several unimportant alterations. The paucity of the record and the lack of enthusiasm with which *King Henry the Sixth* has been greeted by audiences tell their own story.

Bibliography.—The best edition of the plays is by John Dover Wilson. 3 vols. (Cambridge, Eng., 1952), which contains full but controversial commentary, and bibliography, with stage histories by C. B. Young. A new edition by A. S. Cairncross is announced for the revised Arden series (Cambridge, Mass.). See also Alexander, Peter, *Shakespeare's "Henry VI" and "Richard III"* (Cambridge 1929); Tillyard, E. M. W., *Shakespeare's Historical Plays* (New York 1944); Nicoll, Allardyce, ed., *Shakespeare Survey*, vol. 6 (Cambridge 1953); Prouty, C. T., *The Contention and Shakespeare's 2 Henry VI* (New Haven 1954).

ROBERT HAMILTON BALL.

KING HENRY THE EIGHTH, a spectacular history play, first published in the 1623 Folio edition of the plays of William Shakespeare. It is a good text, marked by elaborate stage directions, and is the only substantive authority for later editions. Despite some recent arguments for single authorship, internal evidence of style points strongly to collaboration of one kind or another between Shakespeare and John Fletcher, with whom Shakespeare was also working on other plays at the date of composition, perhaps at the time of his retirement to Stratford. Since 1850, most scholars have accepted as Shakespeare's Act I, scenes 1 and 2 (*Wolsey v. Buckingham*); Act II, scenes 3 and 4 (Anne's elevation and Katherine's trial); Act III, scene 2 (lines 1-203, the turn in Wolsey's fortunes); and Act V, scene 1

(the birth of Elizabeth) with perhaps traces elsewhere. The bulk of the play, though not necessarily its planning, is therefore by Fletcher. The lack of unity in structure and characterization is accounted for partly on the basis of collaboration, partly on the disparities in Raphael Holinshed's *Chronicles*, followed closely for the first four acts, and John Foxe's *Actes and Monuments*, which supplies material for the fifth.

The play, under an alternate title of *All is True*, is called "new" in a letter to Sir Edmond Bacon from Sir Henry Wotton, July 2, 1613, describing the "many circumstances of pomp and majesty" of its performance by the King's Men on June 29. One of the "circumstances" resulted in the burning of the Globe playhouse: "Now King Henry making a masque at the Cardinal Wolsey's house, and certain chambers being shot off at his entry [Scene I, l. 4, 49], some of the paper, or other stuff, wherewith one of them was stopped, did light on the thatch, where being thought at first but an idle smoke, and their eyes more attentive to the show, it kindled inwardly, and ran around like a train, consuming within less than an hour the whole house to the very ground . . . yet nothing did perish, but wood and straw, and a few forsaken cloaks; only one man had his breeches set on fire, that would perhaps have broiled him, if he had not by the benefit of a provident wit put it out with a bottle of ale." Completion of composition must have occurred not long before this memorable occasion. *King Henry the Eighth* is therefore one of the latest plays in which Shakespeare had a hand.

Historically, the events of the plot cover the period from the Field of the Cloth of Gold (1520), referred to in Act I, scene 1, to Archbishop Cranmer's trial (1544), presented in Act V, scene 3. There are a number of changes in order for dramatic reasons; for instance, the christening of Elizabeth (1533) with the prophecies for the future is put last. It cannot be said that the playwrights have succeeded in welding history and drama. Holinshed's treatment of the reign of Henry VIII is itself untrustworthy and contradictory; his Cardinal Wolsey is a combination of different attitudes; his Henry, hearty and conscientious, is conventionally drawn. So these characters emerge in the play. On the other hand separate scenes, enhanced by carefully projected pageantry, are strikingly effective. Indeed, the play is less a chronicle play than others by Shakespeare which have kingly titles, and more an elaborate show through which nominally historical personages move with pathos, celebration, and poetry in courtly and religious intrigues. It is only fair to Fletcher to say that some of the best things are his.

Despite its artistic deficiencies, the pictorial quality of the play has made it popular on the stage. It was probably played at Blackfriars, the original setting for the Queen's trial, and there was a revival at the rebuilt Globe in 1628. Richard Burbage, Henry Condell, and John Heming played in it originally; according to the unreliable John Downes, John Lowin, who acted Henry, was instructed by Shakespeare. A sumptuous production in 1663 had Thomas Betterton as the king and his wife as Katherine. Barton Booth played the title role in 1727, the coronation year of George II, and John Philip Kemble revived the play in 1788 with Mrs. Sarah Siddons as the unfortunate queen. Kemble afterwards (1806) impersonated Wolsey, and later actors.

Charles Kean (1855), Henry Irving (1892), and Sir Herbert Beerbohm Tree (1910; in the United States, 1916) preferred this part. American revivals have included Edward Loomis Davenport, John McCullough, Edwin Booth, Lawrence Barrett, Charlotte Cushman, and Helena Modjeska. More recent performances have involved Dame Sybil Thorndike (1925), Charles Laughton (1933), and Walter Hampden (1946). Tyrone Guthrie's production at the Shakespeare Memorial Theatre, Stratford, in 1950 was a great success and recast, was revived at the Old Vic during the coronation year of Elizabeth II, who attended Coronation celebrations were also marked by the first presentation of *King Henry the Eighth* in equatorial Africa, where the play was staged in the National Theatre, Nairobi, Kenya colony.

Bibliography.—There is no up-to-date single volume edition of the play. Useful texts are the Yale Shakespeare edition, ed. by John M. Berdan and C. F. Tucker Brooke (New Haven 1925), and the Arden Edition, ed. by C. K. Pooler, rev. by R. H. Case, gen. ed. (London 1936). Good text and commentary may be found in the edition edited by Hardin Craig, *Complete Works of Shakespeare* (Chicago 1951). For further commentary see Knight, G. Wilson, *The Crown of Life* (London 1948), but on authorship, Partridge, A. C., *The Problem of Henry VIII Reopened* (Cambridge, England, 1949).

ROBERT HAMILTON BALL,
Professor of English, Queens College of the City of New York.

KING ISLAND, the name of several islands, including the following:

(1) An island at the western end of Bass Strait, about 50 miles northwest of the Australian island of Tasmania, south of the Australian continent. It is about 42 miles long and 16 miles wide. Tungsten and tin are mined there, and much of the island is fertile.

(2) One of the large islands of the Mergu Archipelago in the Andaman Sea, west of the southern extremity of Burma. It is about 40 miles long and predominantly mountainous, rising at one point to an elevation of 2,125 feet. It has rubber plantations and manganese deposits.

(3) A small island at the southern end of the Bering Strait in Alaska. West of the Seward Peninsula, it has a small population of Eskimos, most of whom hunt walrus. It was discovered by Captain Cook in 1778.

(4) An island in British Columbia, about 40 miles long and 10 miles wide, located directly south of the town of Ocean Falls. The island is carved out of the mainland by the Dean and Burke channels.

KING JOHN, a chronicle play by William Shakespeare published in the Folio of 1623; *The Life and Death of King John*, was mentioned by Francis Meres in his *Palladis Tamia: Wits Treasury* in 1598. Its source is an anonymous dramatic treatment of the same subject, *The Troublesome Raigne of Iohn King of England*, first printed in 1591. There is no clear external evidence for the time of composition of Shakespeare's play; though there may have been earlier revision, scholars generally accept 1594-1596 as the date of the published form of *King John*, largely on the bases of stylistic resemblances to *Richard the Second*, and its suitability for Lord Chamberlain's Company.

The Troublesome Raigne, though only lines longer than Shakespeare's play, was in two parts; its condensation of Raphael Holinshed's chronicle provided Shakespeare with the plot:

general structure; *King John* is the only one of Shakespeare's histories for which he used a dramatic source and did not work directly from the chronicles themselves. Part of his task was therefore already done for him. Yet *King John* is a different and much better play than *The Troublesome Raigne*. The earlier work is heavy in detail, mixed and mediocre in style and language, chauvinistic and violently anti-Catholic in sentiment, in line with the tradition which regarded John as a national British hero in his refusal to bow to Rome. Shakespeare cuts and condenses events of the reign, expands incidents for dramatic effect, completely rewrites the verse, and adopts an attitude of rather dispassionate objectivity with regard to the national and religious controversies. Most of all, he changes the characterization. Shakespeare was not enthusiastic about the king and shows his wickedness and weaknesses at the same time as raising Faulconbridge, the Bastard, from swaggerer to clear-eyed champion of England; he develops Arthur, heir to the throne, into a pathetic figure, and emphasizes his mother's concern and sufferings; in short, he humanizes his persons and writes for them scenes which exhibit them under the stress of emotions.

Nevertheless, if his characterization is sharp, it somewhat lacks warmth. As a whole, *King John* is able rather than great, as if Shakespeare used his skill for deliberate contrivance rather than because his feelings and imagination were deeply aroused. He presents clearly and effectively the conflicting authority of John and Arthur, the ruler of England, the war with France, the cruel plan to murder Arthur which miscarries because of Hubert's compassion, the disaffection of the nobles, and the deaths of the rival claimants, but the whole is not fused because the fire is not there. The reader admires but seldom succumbs.

Evidently the play acts better than it reads. There is little evidence of original popularity and it was not revived under the Restoration, but from 1737 in England and 1768 in America it was frequently on the stage. The parts of John, Faulconbridge, and Constance attracted such actors and actresses as David Garrick, Suzanna Cibber, John Philip Kemble, Sarah Siddons, William Charles Macready, Samuel Phelps, Henry Irving, and Beerbohm Tree, and in the United States the Booths and the Vandenhoffs. No longer so popular, it is still occasionally revived, especially for Shakespeare festivals.

Bibliography.—Though the play is in the Variorum series, ed. Horace Furness, Jr. (Philadelphia 1919), the best modern text is John Dover Wilson's (Cambridge 1936), which has full commentary, and a stage history by Harold Child. A new edition is announced, ed. E. Honigmann, in the revised Arden Shakespeare (Cambridge, Mass.). See also Tillyard, E. M. W., *Shakespeare's History Plays* (New York 1946), and Campbell, Lily B., *Shakespeare's Histories* . . . (San Marino 1947).

ROBERT HAMILTON BALL.

KING LEAR, the vastest and most profound of the tragedies of William Shakespeare, was entered in the Stationers' Register on Nov. 26, 1607 as . . . his historie of Kinge Lear, as yt was played before the Kinges maiestie at Whitehall vppon Sainct Stephens night at Christmas Last, by his maiesties seruantes playinge vsually at the Globe on the Bankside, and published in quarto the following year. The court performance of Dec. 26, 1606, and borrowings from Samuel Harsnett's *Declaration of . . . Popishe Impostures* (1603) indicate composition between those

dates. Its relationship to an old and quite different play, *The True Chronicle History of King Leir*, published in 1605, and other subsidiary evidence make 1605–1606 the most probable time of writing.

The text of *King Lear* is a bibliographical puzzle and notwithstanding elaborate scrutiny is still a matter of controversy. Despite proper entry, the 1608 Quarto, though based upon manuscript, probably a derivation from Shakespeare's somewhat illegible foul papers, was also partially the result of memorial reconstruction; in addition, the sheets were corrected as they went through the press, and corrected and uncorrected pages were bound up together with the result that no two surviving copies are exactly alike. Another quarto bearing the date of 1608 was actually not printed until 1619. The text printed in the Folio of 1623 adds 100 lines, omits 300 lines, and is otherwise different. Allowing also for revision, the Folio text was based on the Quarto of 1608, as corrected or interleaved by some sort of playhouse copy. As a result of this confusion, modern texts are eclectic and different from each other; there is not yet a textually satisfactory edition of *King Lear*.

The Lear story, which embodies folk material, is an old one, widespread by Shakespeare's time. Written down in Geoffrey of Monmouth's *Historia Regnum Britanniae* (c.1135), it was subsequently retold in poem, chronicle, and drama. In addition to Geoffrey, Shakespeare used Raphael Holinshed's *The Mirror for Magistrates*, William Camden's *Remains*, Edmund Spenser's *The Faerie Queene*, and the old *Leir* chronicle play. Shakespeare was responsible for making the story the tragedy of King Lear, whom he causes to go mad; he added the Fool; and he enforced the theme of filial ingratitude by including a second plot based on the tale of the blind king of Paphlagonia in Sir Philip Sidney's *Arcadia*. This supplementary action of Gloucester, Edmund, and Edgar provides dramatic event when Lear himself becomes largely passive, introduces agents for the removal of the wicked daughters, and permits the enlargement and universalization of the theme to a titanic war between good and evil, in which a convulsed Nature participates.

Out of this concatenation of materials and Shakespeare's imaginative re-creation has emerged one of the great masterpieces of English drama, awe-inspiring in its impact, cumulative in its effect. To say that it deals with a rash old king who divides his kingdom between his daughters according to their expressions of affection for him; who finds that the two who say the most are heartless and that Cordelia, relatively silent and therefore disinherited, loves him and succors him; who himself learns the meaning of love through suffering and madness, and dies because he learned too late; to say that it also deals with another man, the earl of Gloucester, who also misunderstands the true nature of his two sons and pays with his eyes—all this is to convey little of the quality of *King Lear*. For embedded in the complex plot are characters, huge and elemental, who unleash evil and see good devoured by it, who suffer out of all proportion for their pride and misjudgment, who are sanest when mad, and most perceptive when blind. The play is constructed on a vast scale, and its implications are far-reaching. Plot, characters, passions, ideas, the view of man in his world are blended in poetic expression, now agonizingly

simple, now profoundly probing, but always imaged by the sure hand of a great artist. *King Lear* plumbs the depths; its own depths cannot be sounded.

Nineteenth century criticism considered *King Lear* too huge for the stage, a misconception fostered by the attempt to confine so expansive a play within the framework of the proscenium arch. It was not so in Shakespeare's theater, as court performance shows. But the Restoration thought the play disorderly, and neoclassic doctrine and the picture-frame stage abetted the view. Nahum Tate's dreadful perversion of *King Lear* in his adaptation of 1681 superseded in one form or another Shakespeare's original for 150 years, and involved Thomas Betterton, David Garrick—a great Lear despite the mangling—John Philip Kemble, and Edmund Kean. It was William Charles Macready who first toppled Tate and restored something like the true play in 1838; and Samuel Phelps, Edwin Forrest, the Booths, Tommaso Salvini, and Sir Henry Irving followed him in this respect, though like him with structural alterations. Theatrical critics admired the acting; literary critics, betrayed by the proscenium conventions, created an artificial dichotomy between *King Lear* in the study and *King Lear* on the stage. But Shakespeare wrote his play for the stage, and in our times it has been widely revised, if not always with success, at least with the understanding that despite its difficulties it is great drama meant for the theater. Lately *King Lear* has been presented in England, France, South Africa, Switzerland, Germany, Belgium, the Scandinavian countries, the USSR, Australia, Canada, the United States, and elsewhere. It is not surprising to find a review in an English annual of "Four Lears" (*Shakespeare Survey*, I, pp. 98-102). Among recent Lears have been John Gielgud, Laurence Olivier, Donald Wolfit (New York 1947), Michael Redgrave, and Louis Calhern (New York 1950).

Bibliography.—The Variorum edition of *King Lear*, ed. H. H. Furness (Philadelphia 1880), is full but out of date. Recent modern texts are edited by G. I. Duthie (Oxford 1949) and Kenneth Muir (Revised Arden, Cambridge 1952); less expensive is R. C. Bald's (New York 1949). Valuable criticism from various points of view will be found in Bradley, A. C., *Shakespearean Tragedy*, 2d ed. (London 1905; often reprinted); Granville-Barker, Harley, *Prefaces to Shakespeare*, Vol. I (Princeton 1946); Heilmann, R. B., *This Great Stage* . . . (Baton Rouge 1948); Danby, John F., *Shakespeare's Doctrine of Nature* . . . (London 1949); Lothian, John M., *King Lear* . . . (Toronto 1949); Harrison, G. B., *Shakespeare's Tragedies* (London 1951); James, D. G., *The Dream of Learning* . . . (Oxford 1951).

ROBERT HAMILTON BALL,
Professor of English, Queens College of the City
of New York.

KING MONKEY, *Colobus polykomus*, a species of guereza (q.v.) found in Sierra Leone and Liberia. Known also as the ursine guereza, it is black in coloring, with white whiskers, forehead band, and tail.

KING NUT, *Carya laciniosa*, the big or bottom shellbark hickory. The tree has shaggy bark and oblong lanceolate leaflets, generally seven in number. The nut is ellipsoid or subglobose and obscurely four-angled, and has thick yellowish or reddish shells. The kernel is sweet.

KING-OF-ARMS, an officer in the heraldic establishment of a country. In England the officers of arms comprise kings-of-arms, heralds,

and pursuivants, who are members of the Herald's College. The three kings-of-arms are Garter King-of-Arms, Clarenceaux King-of-Arms, and Norroy King-of-Arms.

KING OF THE MACKERELS, either of two large ocean sunfishes (see **SUNFISH**), *Ranzania truncata*, a widely distributed species of the Atlantic Ocean, or *Ranzania makua* of the Pacific.

KING OF THE MULLET. See **CARDINAL FISH**.

KING PENGUIN. See **PENGUIN**.

KING PHILIP'S WAR, the bloodiest of the 17th century wars between the American colonists and the Indians. It takes its name from Philip (Indian: Metacom), chief of the Wampanoag tribe. Though this tribe, under Philip's father, had been friendly to the settlers for a number of years, Philip appears to have been secretly planning the extermination of the colonists. When an informant among the Indians reported this plot to the English, Philip had him killed. The colonists promptly executed his murderers and retaliations and counter-retaliations soon mushroomed into full-scale hostilities.

The numerically superior settlers quickly defeated the Wampanoags and forced Philip to take refuge with the independent, hostile tribes of the interior. From that time, early in 1675, until the death of Philip, on Aug. 12, 1676, the Indians conducted a series of raids on the New England frontier towns which were never to be equalled in their ferocity. The tribe known as the Nipmucks, of western Massachusetts, completely destroyed at least 12 settlements in that area and burned a number of others, giving little quarter wherever they struck. The war ended after the near-annihilation of the Narragansetts in Rhode Island in the winter of 1675-1676 and several decisive defeats of the Nipmucks during the following spring. See also **COLONIAL WARS IN AMERICA—1675**. *King Philip's War*.

KING RAIL. See **RAILS AND RAIL SHOOTING**.

KING RENE'S DAUGHTER (**KONG RENÉ'S DATTER**). Henrik Hertz's lyrical drama, *King René's Daughter*, was written in 1845. Besides *Svend Dyrings Hus* it is the best known of all the dramas, about 40 in number, by this Danish author. The play met at once with great success and has been translated several times into German and English, also into Polish and Spanish. It is based on an event in the life of René, king of Provence in the 15th century, celebrated as a troubadour. His daughter, Yolande, married Tristan. In the play Yolande is blind, and the plot turns on her being awakened by Tristan and informed of her blindness, of which she has been brought up in ignorance, on the very day when such a proceeding was necessary to the recovery of her sight by the arts of a Moorish physician. *King René's Daughter* is an exceedingly beautiful poem, as effective on the stage as psychologically interesting and charming by the grace and glow of the language. To those who can read the Danish original the fascination lies principally in the fine, chivalrous tone of the style, the lyric soaring of the expressions, the courteous and

hoice language. "It is a dainty piece of dessert or fastidious palates," as Brandes says in his critical analysis of the play. It is not to be criticized, but read or heard and enjoyed. Peter Ilich Tchaikovsky, in the opera *Yolande*, has used this poem for a libretto. There is an English translation by Theodore Martin.

GISLE BOTHNE

KING RICHARD THE SECOND, the first of the tetralogy of chronicle plays by William Shakespeare which includes the two parts of *King Henry the Fourth* and *King Henry the Fifth*, published as *The Tragedie of King Richard the Second* in six quartos, dated 1597, 1598 (2), 1608, 1615, and 1634. The First Quarto is a good text, and each later quarto was set from the one immediately previous. The deposition scene (Act IV, scene 1) first appears in the 1608 edition in a reported version; probably it had been censored earlier for reasons which will appear hereafter. The text in the Folio of 1623 was printed from a prompt book made up from the third and fifth quartos and includes a corrected version of the deposition scene. Borrowing from Samuel Daniel's *Civil Wars* and a contemporary letter confirm 1595 as the date of composition. So numerous are Shakespeare's sources that some editors postulate an earlier play which drew some of them together. There were earlier plays on the reign of Richard II, but extant ones do not resemble Shakespeare's, and the supposition seems, in the light of our knowledge of Shakespeare's reading, unnecessary. His basis of information and suggestion is mainly the *Chronicles* of Raphael Holinshead, though he evidently consulted other historians as well and felt free to take some liberties with fact in the interest of dramatic effect. There are obvious resemblances to Christopher Marlowe's play, *Edward the Second*.

Elizabethans saw certain analogies between the reigns of Richard II and their queen. Perfectly loyal supporters were not unaware that she enjoyed flattery and that some of her advisers were untrustworthy. Elizabeth resented the implications of their hints. On one occasion she was moved to remark, "I am Richard II, know ye not that?" Disaffection was not unwilling to take advantage. On the eve of the abortive rebellion of the then disgraced earl of Essex, one of his adherents persuaded the reluctant Lord Chamberlain's company to revive a play "of the deposing and killing of King Richard II." There can be little doubt that it was Shakespeare's work which was presented on Feb. 7, 1601. There is nothing treasonable in *King Richard the Second*, but it portrays treason, and the occasional use of it was. The persuader was tried and executed; neither Shakespeare nor his company suffered harm. Nevertheless the supposed analogies probably account for the failure to print the deposition scene until the time of James I.

King Richard the Second is both a chronicle play and a tragedy. It deals with the reign of an English king in whose history Elizabethans were interested. But it makes no attempt to cover the reign; it is concerned with the period from April 29, 1398 to January 1400, less than two years. The emphasis therefore is on Richard's downfall and the causes which led to it. On another level it treats a problem of great fascination to the 16th century, the conflict between a king who rules by clear title and divine right but who is incompetent, and an aspirant who can make no

such claims but who is capable and nationally valuable. The problem is not resolved in the play—it continues through the tetralogy and indeed Shakespeare's other one as well—but it is embodied in the central conflict between Richard of Bordeaux and Henry Bolingbroke and the kind of men they are. Bolingbroke is clear-eyed, efficient, a political opportunist who takes advantage of the outrageous injustice meted out to him to take the throne. Richard is more complicated. The king is willful, unstable, wasteful, and childishly tyrannical, and stands on his prerogatives rather than his abilities; he is a sentimentalist who dramatizes his dreams of himself; his own character carries his royal doom. On the other hand he is personally attractive, adored by his wife and servants, an artist both in his histrionics and his mastery of lyrical utterance. If he martyrs himself, he is nevertheless a martyr, and our sympathy goes to him. It is his tragedy which concerns us personally; it is his which Shakespeare sings in a play of sharp design and exuberant poetry.

The play originally must have been unusually popular, as the number of editions shows. Elizabeth herself spoke in 1601 of 40 performances. It was probably played in 1607 on an English ship on the high seas, and the Quarto of 1608 indicates it was "lately acted by the Kinges Majesties seruantes at the Globe." There was a revival in 1631. The Restoration and 18th century saw few performances, and these in adaptations. In the 19th century it was occasionally acted in one form or another by Edmund Kean, the Booths, and William Charles Macready, and for a considerable run by Charles Kean. Sir Herbert Beerbohm Tree was successful with a spectacular production in 1903. In the 1930's there was a clear emergence of popularity with leading representatives being John Gielgud (1937), and Maurice Evans, who in Margaret Webster's production in the same year achieved 171 performances in New York City. Other cities which have witnessed the play recently are London, Stratford on Avon, Birmingham, Liverpool, Dublin, Toronto, Sydney, Avignon, Milan, and Zurich.

Bibliography.—The best text with commentary is edited by John Dover Wilson (Cambridge 1939); the Variorum edition by Matthew W. Black is in process; an inexpensive one is Theodore Spencer's (New York 1949). For discussion see Tillyard, E. M. W., *Shakespeare's History Plays* (New York 1946); Campbell, Lily B., *Shakespeare's Histories* . . . (San Marino 1947); Palmer, John, *Political Characters of Shakespeare* (London 1948); Nicoll, Allardyce, ed., *Shakespeare Survey*, Vol. VI (Cambridge 1953).

ROBERT HAMILTON BALL,
Professor of English, Queens College of the City
of New York.

KING RICHARD THE THIRD, a chronicle play by William Shakespeare which constitutes the sequel to the three parts of *King Henry the Sixth*, was first published in 1597 as *The Tragedy of King Richard the third. Containing, His treacherous Plots against his brother Clarence: the pittieful murthur of his innocēt [sic] nephewes: his tyrannicall usurpation: with the whole course of his detested life and most deserved death. As it hath bene lately Acted by the Right honourable the Lord Chamberlaine his seruants.* Though properly entered in the Stationers' Register, the text is a curious one, evidently based on an abridged manuscript involving memorial reconstruction. Later quartos in 1598, 1602, 1605, 1612, 1622, 1629, and 1634 are

printed from each other and derive ultimately from the text of 1597. The version in the Folio of 1623 has 230 lines not in the quartos, omits 40 lines found therein, and in other respects differs; it clearly has independent and better authority. It seems to have been printed from a copy of the Sixth Quarto which had been corrected by reference to a playhouse document, probably a defective Shakespeare autograph, which had been patched by sections of the Third Quarto. The play in both style and subject follows closely upon *King Henry the Sixth*, and was probably composed in 1592 or 1593.

Shakespeare's sources, in addition to material taken from the play which appeared in garbled form in 1594 as *The True Tragedy of Richard the Third*, were the chronicles of Edward Hall and Raphael Holinshed. The conception of Richard which Shakespeare obtained from them reflects the Lancastrian bias of Polydore Vergil and the life of Richard attributed to Sir Thomas More. Richard's conqueror was Queen Elizabeth's grandfather, and it was the fall of the house of York which ended the War of the Roses, established the Tudors on the throne, and made her reign possible. It is, however, a tribute to Shakespeare that his elaboration of the character, however distorted, still provides the common view of Richard, for no one today except the professed specialist reads the Tudor historians. His Richard may be inaccurate, but he is compellingly real.

Indeed, the unity of the play is achieved partly by the historical conception. It covers the fourteen years from 1471 to 1485, but Richard dominates the events and engineers most of them. Something of both those events and his part in them are suggested by the title page already quoted. He is a hero-villain embodying, too, what Shakespeare had learned in his early career from the technique and characterization of Thomas Kyd and Christopher Marlowe, and, partly through them, of Seneca and Machiavelli. He is the virtuoso in villainy. Distinguished by his courage, his intellect, his resourcefulness, and his energy, he triumphs over his physical deformity by his candid pride and his insolent wit, and for conscience he substitutes craftiness, strength, and ruthless cruelty. Other people are pawns to be moved at his will. Lion and fox, he surmounts all obstacles until he reaches the throne. But there is another kind of unity too, which embraces not only this play but the whole tetralogy, the idea of nemesis, of a divine justice which will restore England, rent by faction, to unity, peace, and prosperity. Many of Richard's opponents were no better than he, only less successful. The moral ideas, therefore, are included here in scenes of deliberate formality, such as the foreshadowing curses and the retributive ghosts. The victory of the almost uncharacterized Richmond, who was to become Henry VII, represents the triumph of order over the chaos of diabolism, and the end of the play is a paean of patriotism.

King Richard the Third is not one of Shakespeare's masterpieces. If it shows an advance over *King Henry the Sixth* in conception and unity, and in the skill of the central characterization, poetry frequently yields to rhetoric, and oversimplification makes for melodrama. But it provides the actor a rich and varied opportunity, and through him the play was for many years an enormous theatrical success. Richard Burbage, we know, was practically identified with the title role. The number of editions is an index of

popularity. It was played at court as late as 1633. In 1700 the acting version of Colley Cibber, who rewrote some lines, omitted some characters, and concentrated on Richard, provided Cibber himself with a part he enacted for almost 40 years, and superseded the original text. In the 19th century the great stars established the play as inevitable. In England, George Frederick Cooke, Edmund Kean (who was probably the superlative Richard), William Charles Macready, and Charles Kean played Cibber's adaptation, Macready with some modification. Samuel Phelps and Sir Henry Irving restored Shakespeare. In the United States, the famous representatives were Cooke, the Keans, Edwin Forrest, the Booths, John McCullough, Lawrence Barrett, Richard Mansfield, and John Barrymore (1920). Since then the play has faded. Acting styles and theatrical tastes have changed. The complication of family and political motivations, not clear without knowledge of *King Henry the Sixth*, and the horrendous violence no longer please. It is often and widely revived but despite the participation of Laurence Olivier, Marius Goring (Stratford, England), Alec Guinness (Stratford, Ontario), and José Ferrer, the last three in 1953, the effect tends to be that of a museum piece, exciting enough but, notwithstanding its power, somewhat old-fashioned.

Bibliography.—The Variorum edition (Philadelphia 1908) is out of print but may be consulted in libraries. The best text is John Dover Wilson's (Cambridge 1941), a revised Arden, edited by L. H. Brooks (Cambridge, Mass.) has been announced. For commentary, see Wood, A. I. P., *The Stage History of King Richard the Third* (New York 1909); Tillyard, E. M. W., *Shakespeare's History Plays* (New York 1946); Campbell, Lily B., *Shakespeare's Histories* . . . (San Marino 1947); Palmer, John, *Political Characters of Shakespeare* (London 1948); Nicoll, Allardyce, ed., *Shakespeare Survey*, Vol. VI (Cambridge 1953).

ROBERT HAMILTON BALL,

Professor of English, Queens College of the City of New York.

KING SALMON, another name for the quinnat salmon, *Oncorhynchus tshawytscha*, the most important of the several species of salmon (q.v.) found on the Pacific coast of the United States.

KING SNAKE, an innocuous colubrid (*Lampropeltis getulus*) of the United States noted for its serpent-eating propensities and the boldness with which it attacks even venomous species like rattlesnakes, hence its name. It also feeds on lizards, amphibians, mammals, and even turtle eggs. Glossy black above, the head is spotted with white or yellow; a series of crossbars of the same hue along the back diverge on the sides where they often merge with lateral bands to produce a chainlike pattern that has gained for the king snake the alternative name of chain snake. While black predominates on the undersurface it is liberally variegated with yellow or white. However, many strikingly different geographical races occur throughout the king snake's extensive range in the United States and Mexico. Several of these subspecies are popular as pets, not merely on account of their handsome appearance, but because of their gentleness, for most king snakes tame readily and do not resent being handled. While usually averaging about a yard long, exceptional individuals of almost double that length have been recorded.

KING VULTURE. See **CONDOR**.

KING WILLIAM'S WAR, a war waged by Great Britain and its colonies in America against France and its Indian allies in 1689–1697. The Treaty of Ryswick terminated the war. However, the fighting resumed in 1702, the new struggle being called Queen Anne's War. See COLONIAL WARS IN AMERICA.

KINGBIRD, a member of the genus *Tyrannus* of the tyrant flycatcher family (Tyrannidae). There are ten recognized species of which the best known is the common eastern kingbird (*T. tyrannus*) of eastern North America. It is blackish above, white below, with a white-tipped tail and a partly concealed scarlet crest. The pugnacious behavior that gave the name "tyrant flycatcher" to the members of this family is very evident in the kingbird. It vigorously attacks any hawk, crow or other large bird that ventures within its domain. Uttering staccato scolding notes, the kingbird dives at its larger adversary, pecking it on the shoulders and driving it far away, before returning triumphantly to its mate and nest.

KINGBIRD

Kingbirds attack furiously any person who attempts to climb to their nest and intruders have been known to fall to the ground utterly confused by the savage onslaughts of these small birds. The nest itself is a substantial cup, lined with soft material such as plant down and sometimes with wool. The four or five eggs are white, flecked with brown. Like other flycatchers the kingbird sallies out after flying insects, snapping them up in its broad bill. Its partiality for bees has given it the name "bee martin" in some districts. Fortunately it prefers the useless drones, perhaps because they are stingless, but how it can tell them from the worker bees is a mystery. The eastern kingbird migrates south in the winter to South America, for it is dependent upon flying insects for food. In western North America the common species is the Arkansas or western kingbird (*T. verticalis*). It is closely related to the eastern form but is yellowish below, as are several other species of the group found in the tropics. The western kingbird occasionally appears on the east coast of America during migrations. In Florida one finds the gray kingbird (*T. dominicensis*), while Cuba boasts the giant kingbird (*T. cubensis*). In the kingbirds, as in the tyrant flycatchers generally, the center of distribution is in the American tropics and the few species that visit the temperate regions during the summer to nest must return to the tropics in winter.

DEAN AMADON,
Associate Curator, Department of Birds, The
American Museum of Natural History.

KINGDOM OF GOD. The idea of the Kingdom of God is prominent in the Old Testament, but especially so in the New Testament,

finding its center in the teachings of Jesus. The Kingdom of God is a goal set before the race; not a Utopian dream, but a realization through character development. It is also a philosophy of history. The phrase Kingdom of God or Kingdom of Heaven is not found in the Old Testament, but the idea was early developed (Judges 17:6; 18:1) and all the prophets foretold it. Back of their belief in a coming Kingdom of God was faith in God himself and their earliest political unity was theocentric. Their faith was built on a future in which there was to be a more perfect kingdom. The idea of a Messianic reign is carried from the prophets into apocalyptic literature where it is sometimes strongly stated (Daniel 2:44; 7:13, 14, 27).

From the beginning Jesus connected his own person with the Messianic Kingdom and distinctly taught that it was to be a spiritual kingdom, culminating in the heavenly kingdom. The members of the kingdom were to be, first of all, his immediate followers, and then their successors in the years to come. The fully developed kingdom cannot be recognized here, only in heaven. The Book of Revelation developed the idea of the millennial reign of Christ on earth before His final reign in heaven. The Montanists held their own views of the Kingdom of God—a puritanical rigor of morals was fundamental. The millennial idea continued until it was superseded under Constantine with the idea of a Christian empire. Monasticism next arose as a possible method for the seeker after the Kingdom of God.

Augustine developed the idea that the Church is the Kingdom of God on earth. This was in two parts—the visible and invisible. The medieval theologians built on that conception the idea of an omnipotent Church with its complete centralization of power, culminating finally in the work of Gregory VII and Innocent III.

Dante combated this idea in his *De Monarchia* in which he argues for the divine sanction for the secular life apart from the spiritual, and demands that the Pope be only the spiritual head of the spiritual Church. And again, as in the early Church, monastic poverty was sought as a means for entrance into the kingdom and so the mendicant orders of Friars flourished. William of Ockham and Marsilius continued to develop the idea of Dante. John Wyclif was the first to oppose the medieval idea theologically. Then came the Reformation following the intellectual awakening of Europe, in which many voices protested against an omnipotent church. As a universal idea it was a failure. The Reformation, however, did not put an ideal in its place. The Counter Reformation and the Renaissance were Catholic attempts to reconstruct the idea. The present-day tendency in Protestant circles is to reinterpret the biblical sources of the doctrine. It is a part of the growth of the science of biblical theology. The present idea is that "the Church is the Kingdom of God in the making" as far as she represents the ideals of the sources of the doctrine. The bibliography of the subject is very extensive.

F., *The Kingdom and the Messiah* (Edinburgh 1911); Otto, R., *The Kingdom of God and the Son of Man* (London 1938); Grant, F. C., *Gospel of the Kingdom* (New York 1940); Sharman, H. B., *Son of Man, and Kingdom of God* (New York 1943); Galus, W. J., *Universality of the Kingdom of God in the Gospels and the Acts of the Apostles* (Washington, D.C. 1945).

KINGFISH, the name of various fishes of notable power or superior excellence, especially certain Spanish mackerel of the genus *Scomberomorus*. One, the cavalla or king cero, is a favorite game fish in Florida (see CERO). The kingfish of New York waters (*Menticirrhus saxatilis*) is one of the whittings, of the family Sciaenidae, closely allied to the drums (see WHITING). It is a moderately large migratory marine fish, dusky gray above, sometimes blackish, the back and sides with distinct dark oblique crossbands running down and forward, and a V-shaped blotch on each side of the nape. It is also known as seamink, and is an excellent food-fish, but has become rare, although formerly ascending the Hudson River in schools, in early spring, for 40 miles or so. Other fishes so called are the little roncador (q.v.) of California, and the opah (q.v.).

KINGFISHER, Okla., city and Kingfisher County seat, situated at an altitude of 1,066 feet 36 miles south of Enid; it is served by the Rock Island Railroad. The city is an important agricultural center. Settled in 1889, it lies on the old Chisholm Cattle Trail and was named for King Fisher, a cattleman; the city was incorporated in 1893. Pop. (1940) 3,352.

KINGFISHER, a bird of the family Alcedinidae, characterized by the short, compact body and large head, with a large, straight, acute bill; the somewhat usually short, square tail of 12 rectrices, the short rounded wings having 10 primary quills; the short, weak legs and nearly unique cohesion of the middle and outer toes. Two sub-families are commonly recognized, the Daceloninae, or Kinghunters, with a broader, depressed, sometimes curved bill and usually insectivorous habits; and the Alcedininae, or true kingfishers, with a compressed, carinated bill, and usually piscivorous. About 20 genera and 125 species have been described, half of which are confined to the Australian region. About five genera and 50 species are distributed between tropical Africa and Asia, and one species alone, the brilliantly colored *Alcedo ispida*, is found in Europe; while all of America has only eight species of *Ceryle*, three of which extend their range into the United States. Of these three, two (*Ceryle torquata* and *C. americana*) are really Mexican and Central American, but the third, the belted kingfisher (*C. alcyon*), is a widely distributed and highly characteristic member of the North American avifauna. Throughout North America, from the shores of the Arctic Ocean to the Gulf of Mexico, and from the Atlantic to the Pacific, is the summer breeding home of the belted kingfisher, which in winter retreats south of the limit of freezing. The large, crested head, very large bill and deep blue color, with black and white markings, and largely white under parts, give to this bird a very characteristic aspect, which is heightened by its peculiar habits. Each pair selects a hunting ground somewhere in the vicinity of water, and other pairs seldom intrude upon this preserve. There the kingfisher perches on a tree overhanging the water and watches for the passage of a fish, when it plunges headlong and usually emerges with a small fish held firmly in the beak. As it rises a spasmodic shake dispels the water from its compact oily plumage, and on returning to its perch, the

fish is usually tossed into the air and swallowed head first. Sometimes the kingfisher hunts more in the manner of a tern and plunges from a suspended position in mid air. The only call is a peculiarly loud, harsh, rattling cry. A burrow six to nine feet long, dug horizontally into a bank, serves as a nesting place, in the slightly enlarged end of which the six or eight pure white eggs are laid on a bed of regurgitated fish bones.

The daceonine kingfishers have very different habits, and might more properly be called kinghunters. They are usually woodland birds, caring little for the neighborhood of water, since their food consists of insects caught mainly on the wing, or else of tree frogs, lizards, and other small reptiles found on the ground or about trees. The jackass kingfisher (q.v.) of Australia is a prominent example. A peculiar group of the Papuan Islands (genus *Tanysiptera*) has long, racket-shaped tail feathers and other peculiarities of plumage. The small East Indian species have only three toes. Those of Africa are inhabitants of deep woods, but when hard pressed for food will resort to streams and pick up small fishes. All these breed in holes in trees and not in earth-burrows.

KINGHSIEN, Chinese seaport, also known as Ningpo (q.v.).

KINGHUNTER, a kingfisher of the subfamily Daceloninae; specifically the jackass kingfisher (q.v.).

KINGLAKE, Alexander William, English historian; b. Taunton, Somersetshire, Aug 5, 1809; d. Jan. 2, 1891. He graduated from Cambridge University in 1832, and five years later he was called to the bar at Lincoln's Inn. In 1835 he had made a tour of the Near East, and his personal impressions of Moslem manners and morals he subsequently recorded in *Eothen: or, Traces of Travel Brought Home from the East* (1844), a volume marked by truth to nature, poetry, humor, and imagination; it is regarded as an outstanding narrative of travel. His interest in military matters took him in 1845 to Algiers, where he joined a French column under Gen. A. J. Leroy de Saint-Arnaud. During 1854 he was with the British Army in the Crimea, where he witnessed the battle of the Alma River. At the request of the widow of Lord Raglan, commander in chief of the British forces in the Crimean War, he undertook to write an account of the campaign. His monumental *Invasion of the Crimea*, 8 vols. (1863-1887) was a brilliant performance, almost exhaustive in its details, picturesque, and telling in description and narrative. From 1857 until 1868 he represented Bridgwater in the House of Commons. See EOTHEN.

KINGLET, a very small bird of the thrush family dwelling in northern forests and visiting southern Europe and the United States only in winter. These smallest of songsters, hardly more than four inches in total length, are olive-green and gray in color, with a half-concealed yellow crest in one of the two species, the goldcrest (*Regulus satrapa*), and a flame-colored one in the other (*R. calendula*), called ruby-crown. Both, especially the ruby-crown, sit

weetly in the spring before going to make their
spline nests in some evergreen tree.

KINGMAN, Kans., city and Kingman County seat, situated at an altitude of 1,504 feet, 45 miles west of Wichita; it is served by the Atchison, Topeka and Santa Fe and the Missouri Pacific railroads. In the midst of rich agricultural and stock-raising country, Kingman has grain elevators, flour mills, and creameries. Founded in 1872 on the north bank of the Ninnesah River, settlers on the opposite bank six years later founded a rival Kingman. Early in the 1880's they united to become the county seat. West of the town is the Kingman County State Park. Government is by commission. Pop. (1950) 3,200.

KINGMAN REEF, in the North Pacific, 920 miles south of Honolulu and 33 miles northwest of Palmyra Island, is a United States possession. The reef, 9 miles long and 5 miles broad, encloses a lagoon which was used during 1937-1938 by Pan American seaplanes. Discovered in 1798 by Edmund Fanning (1769-1841), the American navigator, and named for Captain Kingman, who visited it in 1853, the reef was annexed by the United States on May 3, 1922; administration was entrusted to the Navy Department by Executive Order No. 6935, dated Dec. 29, 1934.

KINGS, Books of. These two books in the Hebrew Bible formed originally one work. In the Greek version (the Septuagint), Kings and Samuel were reckoned as four Books of Kingdoms. This fourfold division passed into the Christian Bibles through the Vulgate, and was adopted in the printed editions of the Hebrew. Jerome, however, preferred the title Kings, hence our present name for the second twofold work.

Like Judges, Kings is a product of the era of historical interpretation inaugurated by the publication of Deuteronomy in 621 B.C. (See DEUTERONOMY and JUDGES.) The reign of Solomon and the history of the divided kingdom furnished more abundant and varied illustration of the central principles of the prophetic law book than even the age of the Judges. For the period included in Kings, the writers of the exile did not have, as they did for the time of the Judges, a completed history already at hand, which they needed only to edit. For this era, they must themselves compile the earlier documents. Kings is therefore the great, original contribution of the Deuteronomistic school of historians. Some passages, implying that the Temple is still standing and the Davidic dynasty uninterrupted, suggest that the compilation was undertaken in pre-exilic days, but the work as a whole carries the history in detail to the events following the destruction of Jerusalem in 586 B.C., and cannot have been finished before the exile.

The completed work falls into three great sections: (1) The reign of Solomon (1 Kings i-xi); (2) The divided kingdom (1 Kings xii-2 Kings xvii); (3) Judah after the fall of Israel (2 Kings xviii-xxv). At the close of the first and second sections, the compilers introduce at length their own interpretation of the preceding events in characteristic Deuteronomistic terms. At the opening and close of each reign they give their judgments on the successive kings in stereotyped formulas. These formulas include

also the chronological data in accordance with which they arrange the synchronisms of the reigns. For their sources the compilers had on hand a book of the Acts of Solomon and separate Chronicles (Hebrew, Acts of Days) of Israel and Judah. They also had collections of stories concerning Elijah, Elisha and other prophets. Reference is made by title to the Acts of Solomon and the Chronicles of Israel and Judah for additional information not included in Kings. Whether these books were the original state documents we cannot be sure. From the time of David, a Recorder (Hebrew, Remembrancer) seems to have been a regular officer of the court. Directly or indirectly his records may be supposed to underlie the sources on which the compilers rely for information concerning the public activities of the kings, but it is commonly felt that the Chronicles to which they refer were not the original court records. They seem, rather, to have been compositions based on these and including also materials that would find no place in official annals. The narratives concerning Elijah, who appears so prominently in the fateful reign of Ahab of Israel, were doubtless composed in prophetic circles not long after his death. The sudden way in which the prophet is introduced (1 Kings xvii, 1) implies that the stories are taken out of a larger work in which fuller information is given concerning him. Some of the other stories in which prophets appear show more traces of the accretions which indicate oral transmission; those may have been handed down by word of mouth for some time before they were committed to writing. As a whole the books of Kings give the national history for a period of 400 years from the death of David to the exile, in a form that commends itself as affording one of the most reliable histories composed in pre-Christian times. Taken in connection with the books of Judges and Samuel, they give a comprehensive survey of Hebrew history, covering a period of nearly 600 years, from the struggles of the tribes for the possession of the land, through the federation into the monarchy, the division into two kingdoms, their interrelated history, and the separate history of Judah after the fall of Israel until her own downfall. In this series of books, Samuel was already in a form which so satisfied the exilic historians that they made very slight editorial additions, but Judges received much editing from their hands, and Kings, as has been indicated, is their own compilation. When their work was accomplished, a century before the time of Herodotus, their nation had a history of remarkable completeness and reliability, as compared with other ancient peoples.

In literary form, the books of Kings offer an interesting study. The 11 chapters concerning Solomon's reign center in the description of the building and dedication of the Temple. To this central part are prefixed the account of the king's accession and notices of his wisdom, power, and wealth, and there are appended further notices of his wisdom and splendor and of his apostasy and adversaries. The histories of the divided kingdom are most skillfully interwoven so that the contemporary events are kept in close connection and yet the distinction between the two kingdoms is made clear. From the downfall of Israel in 722 B.C., the compilers' task was comparatively simple as they dealt with the records of Judah alone.

The brief epitomes of many of the reigns afford little scope for literary art, but the fuller narratives concerning Elijah and Ahab are among the best told and most inspiring stories of antiquity. Other narratives which show the vigor of Israel's early prose concern the wars with Damascus (1 Kings xx, xxii). The sections in which the compilers pass their judgment upon Solomon or Israel are marked by the solemn earnestness and rhythmic speech so characteristic of Deuteronomy and of the writers influenced by its noble style and profound convictions. Even the monotonous formula, condemning all the kings of Israel for walking in the way of Jeroboam and in his sin wherewith he made Israel to sin, gives something of the impressiveness of the tolling of a deep toned bell, that adds its own element to the effect of the whole work.

HENRY THATCHER FOWLER,
Professor of Biblical Literature and History,
Brown University.

KING'S BENCH, Court of. See COURT.

KING'S CHAPEL, a religious edifice in Tremont street, Boston, Mass., built in 1745 on the site of an older church. During the War of the Revolution it was for a time forsaken by its Loyalist congregation. In the burial ground adjoining which has been in use since 1630, many of the early Puritans, including Governor Winthrop, are interred.

KING'S COLLEGE, a college of Cambridge University, England, founded by Henry VI in 1441, as the College of Saint Nicholas for a provost and 70 scholars, with Eton College as a preparatory school. Exemption from the jurisdiction of the archbishop of Canterbury, the bishop of Ely, and even of the university in matters scholastic, were some of its unusual privileges, and until 1857 members of King's College could take a degree without passing the university examinations, a course which did not conduce to a high standard of scholarship. In its roll of celebrated alumni are Archbishop Sumner, Bishop Pearson, Richard Croke, the Greek scholar, the first Sir William Temple, Sir Robert Walpole and Lord Stratford de Redcliffe. The college had in addition to a provost, 46 fellows, 48 scholars, 200 undergraduates. The college chapel is the finest in the world in size, form and decoration. It contains some of the best stained glass and wood carving examples in England.

KING'S COLLEGE, London, a college established by private subscription and incorporated in 1829, its constitution being amended

by an act of Parliament in 1882. It was established for the purpose of providing an education in accordance with the principles of the Established Church. Education is imparted in the departments of theology, general literature and science, applied sciences and engineering, laws and medicine. The department of general literature and science is intended to prepare students for the universities, for the army and the Indian and home civil service; and there are also special classes for civil service candidates. There is a department for women. The college possesses a library and a museum, the latter containing Babbage's calculating machine and King George the Third's collection of philosophical instruments and mechanical models. It is now a constituent college of London University. Among its celebrated scholars are Prof. Thorold Rogers and Cayley, Sir James Fitzjames Stephen, Dean Farrer, Dante Gabriel Rossetti and his brother William.

KING'S COLLEGE, now in Halifax, and definitely affiliated with Dalhousie University, was originally at Windsor until a great fire, on 5 Feb. 1920, destroyed the entire college residence. There it had the distinction of being the oldest college in the dominions overseas. Its establishment was the work of British Loyalists, chiefly from the State of New York, after the close of the War of the Revolution. Of these about 18,000 settled in the Nova Scotia Peninsula. As early as 8 March 1783 a meeting of Loyalists was held in New York, and "A Plan of Religious and Literary Instruction for the Province of Nova Scotia" was drawn up and forwarded to the colonial secretary; and when Dr. Charles Inglis, who had formerly been rector of Trinity Church, New York, was consecrated first bishop of Nova Scotia in 1787, one of his first cares was to carry the scheme into effect. First, a grant was obtained from the provincial legislature for an academy at Windsor. This academy (now known as the Collegiate School) was opened 1 Nov. 1788, and the following year an act was passed for "the permanent establishment and effectual support of a college at Windsor," and the sum of £400 sterling per annum granted toward its maintenance. Under this act King's College was opened in 1790 in temporary quarters, and the erection of a building of wood was begun the following year.

The first president of the college was Rev. William Cochran, a graduate of Trinity College, Dublin, who had been professor of Greek and Latin in King's (now Columbia) College, New York, but who, on account of his Loyalist sympathies, resigned and came to Nova Scotia in 1788.

A royal charter, giving to King's College full university powers, was granted by George III in 1802, and was accompanied by an imperial grant of £1,000 a year, which was continued until 1834. The board of governors under this charter was a political body, consisting of the lieutenant-governor, the bishop and six members of the government. The task of framing statutes for the college was entrusted to a committee of three, two of whom were uncompromising Tories, and by their rigid adherence to the Oxford model in the matter of religious tests inflicted a lasting injury upon the college and almost effected its ruin. The requirement

made that all students, on matriculation, subscribe to the Thirty-nine Articles. To the bishop strenuously objected, and sent protest to the archbishop of Canterbury, who was, under the charter, patron of the college. The archbishop compromised by withdrawing the test at matriculation, but requiring of all those who were admitted to degrees, instead of at once publishing this amendment, the governors kept the matter quiet, and Lord Dalhousie, who became governor of the province in 1816, seems not to have heard of it until he had arranged for the establishment of another institution (Dalhousie College) (q.v.) at Halifax.

Although the religious tests were finally removed in 1829, in spite of repeated attempts to secularize it and amalgamate it with Dalhousie College, Halifax, King's College still retained its connection with the Church of England, and indeed the requirement that the president should be a clergyman was only abolished in 1902. Of the three King's Colleges established at Windsor, N. S., Fredericton, N. B., and Toronto, it is the only one which has maintained its original status, the others having relinquished their charters and become secularized.

In 1846 a meeting of alumni of the college was held, and it was determined to form an association for furthering the interests of the college. Accordingly a provincial act incorporating "The Alumni of King's College, Windsor," was obtained in 1847, and six years later another act abolished the old political board of governors and constituted a new board, the members of which were, for the most part, to be elected by the alumni. The provincial grant of \$400 was discontinued in 1849, and for some years the smaller grant of \$1,000 a year was continued, but this ceased in 1881, and since that time the college has been thrown upon its own resources. The progress of the college was rapid under the new régime. The number of students increased. A beautiful stone convocation hall and library was erected in 1861 and a chapel in 1877.

Following the great fire in 1920, it accepted the offer of Dalhousie to erect its new buildings in Halifax, on Dalhousie grounds, which it has been able to do through a generous grant from the Carnegie Corporation. A scheme of a university federation of the maritime provinces was thus put into effect. King's College now is within a five minute walk of Dalhousie. Students of that university have the privilege of attending lectures in the Arts by professors of King's, and King's students, except freshmen, may attend the classes at Dalhousie. Dalhousie grants all degrees in arts and sciences, the name of King's College appearing on the diploma where the student originally enrolled at King's. Women students are accepted at King's on the same basis as men. Degrees granted are the B.A., B.Sc., LL.B., M.D., C.M., D.D.S. King's has a School of Divinity. It retains its own board of governors which, as defined by the Acts of 1923, consists of the bishops of the dioceses of Nova Scotia and Fredericton, the president and the treasurer of the university, with 10 members elected by the alumni association and eight by each of the synods of Nova Scotia and Fredericton. The faculties of King's are combined, for purposes

of instruction only, with those of Dalhousie, in the arts and sciences. King's otherwise retains its entire corporate organization, residential life, and internal discipline.

A. STANLEY WALKER, *President*.

KING'S (QUEEN'S) COUNSEL, in England, Ireland and several of the British colonial possessions, a title given to a barrister at law, by letters patent, to be the counsel of the Crown. It is a title much prized by the legal profession, simply because it is now largely one of advancement in the profession. There is no general law title and dignity which correspond to the British King's Counsel, because the latter is based upon the privileges of the Crown, which, in this respect, are little more than nominal.

KING'S DAUGHTERS AND SONS, International Order of The, an organization of men, women and children of all religious denominations, whose objects are the development of spiritual life and the stimulation of Christian activities. The original circle consisting of 10 women was founded in 1886 in New York City by Mrs. Margaret Bottomo. The order is organized into circles, county and city unions, and chapters; also national, State and provincial branches. There are 37 branches in the United States, one organized country (Canada), and six provincial branches. The badge is a small silver Maltese cross bearing the initials I. H. N. (In His Name). The society publishes a monthly magazine, *The Silver Cross*. The membership in 1939 was 70,000. The order owns Memorial Headquarters at 144 East 37th Street, New York City, and a Scholarship House at Chautauqua, N. Y. The branches have established, and are maintaining, 124 institutions in different localities, with a property value of approximately \$4,000,000; annual maintenance \$1,500,000.

KING'S (or QUEEN'S) EVIDENCE, the British equivalent of State's evidence. See INFORMER.

KING'S EVIL. See SCROFULA.

KING'S LYNN, or **LYNN REGIS**, a port town in Norfolk, England, near the mouth of the Great Ouse. It is noted for its fine docks covering more than 100 acres, and its excellent harbor. King's Lynn was once strongly fortified by a massive wall and moat, the ruins of which still exist. Of these ruins one of the interesting features is the so-called "South Gates," a handsome Gothic structure. The town is one of the oldest in England. After years of life as a local municipality, it received a charter as an incorporated place in the reign of King John (1204). During its official civic career it has been variously known as Lynn Episcopi, Bishop's Lynn, Lynn Regis and King's Lynn. It was several times, during the European War, the victim of aerial attacks on the part of the German air fleet, the first of which took place in 1914. King's Lynn is noted for its fine churches and schools and other public buildings, some of which are of considerable age. Among the industrial establishments of the town are iron foundries, machine shops, beer and malt establishments, oil mills and shipyards. It does a very considerable export and import business. Among the famous natives of the place were Eugene Aram and Frances Burney. Pop. 19,968.

KINGS MOUNTAIN, town, North Carolina, in Cleveland County, is located 11 miles west of Gastonia and 33 miles west of Charlotte, on the Southern Railway. The chief industry is textile manufacturing. It was incorporated in 1874, and has a city manager-commission form of government. Pop. (1950) 7,206.

KINGS MOUNTAIN, a low mountain or ridge, 1,040 feet high, running southwest from Cleveland County, North Carolina, into York County, South Carolina. It was on this ridge near the border line of the two states that the battle of King's Mountain took place, Oct. 7, 1780, between about 900 Americans under Cols. John Sevier, Isaac Shelby, William Campbell, and Otho Holland Williams, and some 1,100 British under Maj. Patrick Ferguson. The British were defeated with a loss of 242 killed and wounded and 664 taken prisoner; the American loss was 28 men killed and about 90 wounded. This was one of the most brilliant victories of the Revolutionary War and had an important influence in breaking British power in the South.

Consult Draper, Lyman Copeland, *King's Mountain and its Heroes* (Cincinnati 1881); McCrady, Edward, *The History of South Carolina in the Revolution, 1775-80* (New York 1901).

KING'S PEAK, the highest point in Utah, is a peak of the Uinta Mountains, 13,498 feet high, in the northern part of the state, 80 miles east of Salt Lake City. It was named for Clarence King (q.v.), director of the survey of the 40th parallel. Nearby are Emmons Peak, 13,428 feet, and Gilbert Peak, 13,422 feet.

KING'S SPEECH, The, in British Parliamentary procedure, is the speech read from the throne in the House of Lords at the commencement of each session. It reviews the political situation and outlines the ministerial legislative program. The Parliament is opened by the king (or queen regnant) in person, who reads the speech, which is composed by the Prime Minister in consultation with his Cabinet. In the absence of the sovereign Parliament is opened by commission, when the speech is read by the Lord Chancellor. The reply to the speech is called the address.

Consult Sir William Reynell Anson's *Law and Custom of the Constitution* (Oxford 1922).

KINGSBOROUGH. See KING, EDWARD.

KINGSBURY, kīngz'běr-ī, John, American educator: b. South Coventry, Conn., May 26, 1801; d. Providence, R. I., Dec. 21, 1874. A pioneer for better education, after graduating from Brown University in 1826 he developed a high school for girls where Latin, algebra, geometry, natural science and advanced English were taught. He was a leader in the movement for free public schools in Rhode Island. He was a member of the Royal Historical Society, and was elected fellow of the British Academy in 1924. Among his published works are *Song of Lewes* (1890); *Chronicles of London* (1905); *Stow's Survey of London*, with introduction and notes (1908); *The First English Life of Henry V* (1911); *English Historical Literature in the Fifteenth Century* (1913); *Early History of Piccadilly, Leicester Square, Soho, and their Neighbourhood* (1925).

KINGSFORD, kīngz'fērd, Charles Lethbridge, English historical writer: b. Ludlow, Shropshire, Dec. 25, 1862; d. Kensington, Nov. 27, 1926. Upon graduation from Oxford (1886) he joined the editorial staff of the *Dictionary of National Biography*, and was assistant secretary and examiner of the Board of Education, 1905-1912.

KINGSFORD, William, Canadian historian: b. London, England, Dec. 23, 1819; d. Toronto, Canada, Sept. 28, 1898. He entered the army and came to Canada in 1837 with the 1st Dragoon Guards, receiving his discharge in 1841. He then took up surveying and engineering, and was widely employed by the government and various railways. After his retirement he produced his voluminous work, *The History of Canada* (1880).

KINGSFORD, city, Michigan, in Dickinson County, is located on the Menominee River, 2 miles southwest of Iron Mountain, in a dairy, fruit, and truck farming area. It has a sawmill, drying kilns and chemical plant, chiefly for the manufacture of wooden auto parts. There is iron ore in the vicinity, and facilities for skiing and other winter sports are nearby. It was incorporated as a city in 1947, and has commissioner-manager government. Pop. (1950) 5,038.

KINGSFORD-SMITH, Sir Charles Edward, Australian aviator: b. Brisbane, Feb. 9, 1897; d. Nov. 7-8, 1935. During World War I he served first in the Australian Imperial Force in Egypt and Gallipoli, and then in the Royal Flying Corps. After the war he entered commercial aviation, and from 1927 on set a number of world records for long distance flying. He was lost en route to Singapore on the first leg of a flight from England to Australia in 1935.

KINGSLEY, kīngz'li, Calvin, American clergyman, educator and editor: b. Annsville, Oneida Co., N. Y., Sept. 8, 1812; d. Beirut, Syria, April 6, 1870. He entered the ministry of the Methodist Episcopal Church in 1841, the same year he graduated from Allegheny College, where he was professor of mathematics, 1846-1856. The General Conference of 1864 elected him bishop. In 1867 he attended the mission Conference in Europe, and two years later visited India and China. He died at Beirut while on a journey to the Holy-Land, and his grave there is marked by a monument erected by American Methodists. He was author of *Round the World: a Series of Letters*, 2 vols. (1870).

KINGSLEY, Charles, English clergyman, novelist and poet: b. Holne Vicarage, near Dartmouth, Devonshire, June 12, 1819; d. Eversley, Hampshire, Jan. 23, 1875. He was a pupil of Derwent Coleridge at Helston, Cornwall, studied at King's College, London, and at Magdalen College, Cambridge, where he was graduated with high honors in 1842. He took orders in the Established Church, obtained the curacy of Eversley, and became its rector in 1844, a position he held until his death; and he was also canon of Chester 1869-1873, and of Westminster from 1873 till his death. From 1860 to 1869 he was professor of modern history at Cambridge. Early in his career as a clergyman of the Church of England, he associated himself with F. D. Maurice, Julius Hare

and others, both in their religious views and their social aims. With them he considered the peculiar duty of the church to improve the condition of the working classes. To that end he was a strong advocate of cooperative association.

He was called the "Chartist Clergyman." His early novels, *Alton Locke* (1850), a novel of extraordinary power, and *Yeast* (1851), showed sympathy with Chartism (q.v.). The most important of his later novels are *Hypatia* (1853), *Westward Ho!* (1855), perhaps the most popular of his stories, and *Hereward the Wake* (1866). Among other of Kingsley's works are *The Water Babies* (1863), a fairy-tale of science; and *At Last: a Christmas in the West Indies* (1871). He was also the author of numerous sermons, lectures and essays, and of various poems, the chief of which are *The Saint's Tragedy*, and *Andromeda*, the latter being one of the most successful experiments in English hexameter.

Kingsley was a strong opponent of Tractarianism (q.v.). He was a contributor to several periodicals, including the *Christian Socialist*, and *Macmillan's Magazine*. It was a book review by Kingsley in *Macmillan's* that began the controversy with Cardinal John Henry Newman in the course of which the cardinal wrote his famous *Apologia pro Vita Sua* (1864), a history of his intellectual development and conversion to Catholicism.

See also *HYPATIA; WATER BABIES, THE; WESTWARD HO!*

Consult *Charles Kingsley: His Letters and Memorials of his Life*, by his wife (1877).

KINGSLEY, James Luce, American scholar and educator: b. Scotland, Conn., Aug. 28, 1778; d. Aug. 31, 1852. Having graduated from Yale (1799) he was, in 1801, appointed tutor there. He became the first professor of ancient languages—Greek, Latin, and Hebrew—at Yale, but later, and until his retirement in 1851, he devoted himself exclusively to Latin. He also acted as librarian from 1805 to 1824. Being a scholar of wide intellectual sympathies, with a native bent toward mathematics and science, he was greatly distinguished in his generation. He was well acquainted with English literature, and was one of the best authorities of his day on American history, particularly the histories of Connecticut and New England regarding which he was a frequent, and generally anonymous, contributor to magazines. His contributions to the *American Quarterly Register*, and the *American Biblical Repository* on the history of Yale College were recognized criteria. Although few have equaled, or excelled, him in mastery of Latin, his publications in that language were few, mainly textbooks.

KINGSLEY, Mary Henrietta, English authoress and traveler: b. Islington, London, Eng., Oct. 13, 1862; d. Simonstown, Union of South Africa, June 3, 1900. She came of noted literary stock, being daughter of George Henry Kingsley, brother of Charles Kingsley, famous novelist and poet (q.v.). Miss Kingsley developed an intellectuality above the average of women of her day. At Cambridge University she studied sociology, and became a great admirer of Darwin, Lubbock, and Huxley as well as other pioneers in biological science and kindred research. Being deeply interested in biology, and in the

native religions of West Africa, she resolved, in 1893, to continue her studies at first hand by visiting the regions of the Lower Congo. After a brief visit to England, she returned to West Africa and, in her intrepid pursuit of knowledge, she visited some territory then unknown to Europeans. Her travels covered great stretches of the country, including the Niger Coast, French Congo and the German Cameroon. The story of her scientific studies, adventures, and experiences while investigating the customs and fetiches of West African Negroes is told in her *Travels in West Africa* (1897). Her plans for a third voyage in behalf of the West African Negroes were changed by the Boer War. She went, instead, to South Africa where, in nursing wounded soldiers, she contracted enteric fever which proved fatal. Among her published works are *West African Studies* (1899), and *The Story of West Africa* (1899).

KINGSPORT, kingz'pört, city, Tennessee, in Sullivan County, on the Holston River, altitude 1,284 feet, on federal highways, is served by the Clinchfield Railroad. It has bus connections to all parts, and a motor freight service. The Tri-City Airport provides frequent service by main airlines.

Kingsport's products and plants include chemicals, plastics, synthetic yarn, industrial glass, book manufacturing, cotton cloth, pulp and paper, leather belting, book, shade, and label cloth, cotton piece goods finishing, heavy castings, cement, brick and cinder block, hosiery, flour mills, dairies, bakeries, bottling plants, sheet metal works, building material, and store equipment.

The city has a broad cultural program including a community chorus, a civic symphony orchestra, and a theater guild. It has a good public school system, and churches representing most denominations; a civic department of recreation, a civic auditorium, and a stadium for outdoor sports. Kingsport is on the Boone Trail, as marked by a bronze plate at the Circle. Although its history traces back to revolutionary days, the modern city was not founded until the advent of the Clinchfield Railroad in 1909. The city biennially elects a board of mayor and aldermen which board employs a city manager. Pop. (1950) 19,636.

KINGSTON, king'stün, **Charles Cameron**, Australian statesman: b. Adelaide, Australia, Oct. 22, 1850; d. there, May 11, 1908. Graduated in law at his native city, he at once became interested and active in politics, and was, in 1881, elected to the Assembly of Adelaide, a seat he held for years. After holding the office of attorney general he became premier in 1893 and held the chief executive office for 8 years, when he entered the federal cabinet of the Australian Commonwealth, with the cabinet office of minister of trade and commerce (1901-1903), from which date until his death he was a member of the Commonwealth. He was very advanced in his politics and favored most of the measures put forward by the Labour and Socialist parties. He was instrumental in the passage of laws of a very radical nature for the regulation of factories and the employment of labor, and for the extension of the franchise to women.

KINGSTON, seaport, Jamaica Island, British West Indies, capital of the colony of

Jamaica, situated by a well protected, deep-draught harbor on the southeast coast of the island. It stands opposite the ruins of old Port Royal, once one of Great Britain's most flourishing ports in the New World, but destroyed by an earthquake in 1692. Kingston, long the most important city on the island after that, became the official capital in 1872 and was itself almost destroyed by an earthquake in 1907, as well as by several hurricanes since then. Possessing one of the best harbors in the West Indies, Kingston is a regular port of call for steamers and does a large export business in coffee, sugarcane, coconuts, and bananas.

The city is connected by the Jamaica Railway to inland cities as far as Montego Bay on the northwest coast. It manufactures biscuits, jam, clothing, furniture, cigaretttes and cigars, shoes, drugs, and cosmetics, and has copra processing, fruit canning, brewing, and tanning plants.

Still retaining its provincial air, Kingston has become known as a resort center. It has many fine old buildings, among them the St. Andrews Parish house, and there are a museum and library in the Institute of Jamaica. The city has an excellent school system for both natives and whites, and the University College of the West Indies, established in 1949, is located seven miles out of the city. Government is by a mayor and council. Pop. (1947 est.) 120,000.

KINGSTON, city, New York, and Ulster County seat, at an altitude of 0 to 300 feet, situated on the west shore of the Hudson River, at the mouth of Rondout Creek, 53 miles south of Albany and 89 miles north of New York, and served by the West Shore division of the New York Central Railroad. The city is connected by ferry with highways on the eastern side of the Hudson, and has additional transportation by steamboat, and by bus and truck lines over state highways. West of the city, back from the river, rise the first ranges of the Catskill Mountains, and in this region, 10 miles from Kingston, is the Ashokan Reservoir (q.v.). In the era of canal transportation Kingston, at the junction of the Delaware and Hudson Canal with the Hudson River, was active in boatbuilding. Through the latter half of the nineteenth century, great quantities of cement were produced here. The shops and factories of the city produce dresses, shirts, lace curtains, articles of wood, airplane parts, machinery, and refrigerators, and brick and cement are shipped.

Kingston has good public and parochial schools, 40 churches of different denominations, hospitals, theaters, hotels, and banks. Its parks and playgrounds, and the Kingston Youth Center, provide adequate recreational facilities. Besides the customary civic and service organizations, it has music and dramatic societies. In addition to the city's public library, there is a law library. The Daughters of the American Revolution maintain a museum stocked with local memorabilia, and in the "Senate House" (built 1676), the first sessions of the New York legislature's upper house were held. In the museum there is a collection of relics connected with colonial history, and the Revolutionary and Civil wars. Specially interesting exhibits are relics of the famous old Hudson River steamboats, particularly the steering wheel of the *Mary Powell*.

History.—The first permanent settlement was made here in 1652 by the Dutch who named the

place Esopus. A stockade was built in 1658 and on May 16, 1661, Governor Peter Stuyvesant granted a charter to the village which he named Wildwyck (Wiltwyck). By the Treaty of Breda, July 21, 1667, the settlement passed with the rest of the Dutch provinces along the Hudson River into the possession of the English; the first governor, Francis Lovelace, changing the name to Kingston in honor of his family seat, Kingston L'Isle, near Wantage, Berkshire, England. On Feb. 19, 1777, the first state convention of the State of New York adjourned from Fishkill to Kingston, and the first state constitution was proclaimed in front of the courthouse on April 22, 1777. On September 9, of the same year, Chief Justice John Jay opened in Kingston the first state supreme court. The first state legislature met here in September of the same year, but was dispersed by the approach of the British, who, under General Vaughn, entered the place on October 16, and destroyed nearly the whole town by fire, in revenge for the part taken in the War for Independence by Kingstonians. It was rebuilt, and, on April 6, 1805, incorporated as a village and chartered as a city on March 29, 1872, comprising the former villages of Kingston, Rondout (incorporated April 4, 1849), Wiltwyck which connected the two, and the hamlet of Wilbur. The city's government is administered by mayor, who holds office two years, and a common council. The water supply system is municipally owned, and draws from a reservoir at Woodstock, N. Y. Pop. (1950) 28,817.

KINGSTON, city, Ontario, Canada, an industrial, educational, and residential city of marked historic interest, the county seat of Frontenac County, situated at the mouth of the Cataraqui River, at the northeastern extremity of Lake Ontario. The Bay of Quinte, a winding arm of the lake enclosed by Prince Edward County, lies to the west, while eastward begins the well-known Lake of the Thousand Islands which gradually narrows into the main stream of the St. Lawrence. With its commodious harbor, sheltered by Wolfe and Amherst islands and having a grain elevator of 2,350,000 bushels capacity, Kingston commands the shipping of the Great Lakes and the St. Lawrence, being regularly served by the Canada Steamship and other freight and passenger lines. The Rideau Canal built (1827-1832) for military purposes to bypass the international portion of the St. Lawrence route between Montreal and Kingston, connects it with Ottawa but has ceased to be of either military or commercial importance though remaining, with its feeders the Rideau Lake and River, an exceptional attraction for pleasure craft of all kinds. The city is also on the main line of the Canadian National Railway between Montreal and Toronto, about 150 miles east of the latter; while the Kingston and Pembroke line leading to the north is now an integral part of the Canadian Pacific Railway system.

Frontenac County, traversed by the latter, is an area of lakes and streams in much favor with sportsmen and summer residents: it has scattered deposits of mica, feldspar, and corundum, but is not of importance agriculturally. Industrially however, Kingston is noted for its large locomotive, engine, and shipbuilding works; in the latter a graving dock 200 feet long and 16 feet deep owned by the Dominion government is under lease to the Kingston Shipbuilding Company.

er manufactures include aluminum, chemicals, tiles, biscuits, leather, and lumber. Altogether 65 establishments employ 5,556 and have a ss output of \$49,992,267 (1949).

The city is noted also as the site of Queen's iversity (q.v.), founded in 1841 as a Presby- an institution but now undenominational, ich grants degrees in arts and science, en- eering, and medicine, and has an enrollment 1,200 in arts alone; an important division is School of Mines, while Queens Theological llege (United Church) is an affiliate. A second ll-known educational institution is the Royal ilitary College of the Dominion government for e training of officers for the higher military mmands. Founded in 1876, it gives four-year urses in applied science and engineering. An ilitary school is an adjunct. Other institutions clude a general hospital (371 beds), in addition hich there are military and veterans' hospitals he Dominion government (of 50 and 150 ds respectively), and the Rockwood provincial ental institution (capacity 1,130). One of the ldest and largest penal institutions of the Do- minion government is in the adjacent suburb of ortsmouth, with a section at Collins Bay nearby: a 1950 there were 4,650 male and 90 female in- mates, the latter including all females in the Dominion under sentences of over two years.

Kingston, which has both Anglican and Ro- man Catholic cathedrals, is substantially built, characteristically of limestone, hence is popularly known as "the limestone city." With its attrac- tive parks and waterfront, and with immediate access to unusually picturesque scenery both by land and water, it has a large holiday and sum- tourist trade.

History.—Because of its strategic location gton is a notable name in Canadian history. present city was founded in 1783 by United pire Loyalists under circumstances of unusual lship. Eight years later it was the point at ch Sir John Simcoe, first governor of Upper ada, convened the legislative council of the ly founded colony for the drawing up of as for settlement and administration. For f a century it could be reckoned "the most siderable town" in Upper Canada. The first lin what is now Ontario was built in Kingston 1784, and the first newspaper was issued here 1810. In the war of 1812–1814 it was the base British naval operations on Lake Ontario in eral engagements with American forces operat- from Sacketts Harbor and Oswego opposite. e first steamship to be built in Ontario was ed here in 1816. After 1818, however, by ention with the United States, the naval was given up. As a military measure, ever, Fort Henry, overlooking the harbor, already been built, and was rebuilt and en- ed, notably by four Martello towers, to be the strongest fortification in Canada after e and Halifax. Notwithstanding a large ling industry which it had attracted, gh by now (1846) incorporated as a city, ston declined as an entrepot after the 1840's continued to play a large part in the political of Canada. In 1841, owing in part to its try strength, reinforced as this had been by recent completion of the Rideau Canal, it had chosen by Lord Sydenham, pioneer of re- ible government in Canada, as the first al of the newly united provinces of Upper Lower Canada—a distinction it retained until

1844. Thereafter, it is remembered as the con- stituency for which, with one interruption, Sir John A. Macdonald sat throughout his career as a leading architect of the Canadian Confederation in 1867 and as its first prime minister. Sir Oliver Mowatt, long time premier of the Province of Ontario, was also its representative, while the career of Sir Richard Cartwright, a prominent Liberal leader of the final quarter of the century, was associated with it in many ways as resident and parliamentarian.

The still earlier story of the Kingston site, however, leads far into the past—into the days of the Comte de Palluau et de Frontenac, the "fighting governor" of New France, under whose direction Sieur de La Salle in 1673 built a fort at the mouth of the Cataraqui ("Katarauqui" in French annals) and named it after his chief. It was the first outpost to be established by the French on the lower lakes west of Montreal. The immediate purpose was to overawe the Iroquois allies of New England in what is now the State of New York, and a historic pageant and confer- ence with them was staged on the spot at the same time by Frontenac. When the fort and surrounding area were ceded to La Salle three years later, it became a base for the famous expeditions which under his leadership discovered the Ohio, traversed the Upper Lakes and the Illinois country, and finally (1682) descended the Mississippi to its mouth. Abandoned owing to Indian pressure in 1689, but soon rebuilt, Fort Frontenac in 1756 was the point from which Louis Joseph de Montcalm launched his success- ful attack upon the British outpost at Oswego. It was taken and finally destroyed by the British two years later. Only after another quarter of a century was the site reoccupied and given its present name in honor of King George III. Fort Henry, the British successor of Fort Frontenac, after many decades of decay was restored as a museum in 1938 and with its interesting souvenirs of the past is today a special point of pilgrimage for tourists. A popular history of the locality is Miss Agnes Maule Machar's *Kingston of Old* (Toronto 1908). Pop. (1951) 33,459.

ROBERT HAMILTON COATS,
*Formerly Dominion Statistician, and Visiting
Professor of Statistics, University of Toronto,
Ontario, Canada.*

KINGSTON, borough, Pennsylvania, in Luzerne County, at an altitude of 546 feet, situated on the Susquehanna River, opposite Wilkes-Barre, 18 miles southwest of Scranton, and served by the Delaware, Lackawanna and Western and the Lehigh Valley railroads. The principal in- dustry is coal mining. There are railroad repair shops here, and garments, cans, silk, rayon, nylon, and cigars are manufactured. Kingston was named from the Rhode Island town of that name. It has a library and is the seat of the Wyoming Seminary, founded in 1844.

It was settled in 1769 and in its early period it was called the "Forty Township" from the fact that the first permanent settlement was made by 40 pioneers. It was incorporated in 1857 and is governed by a mayor and council. In this area of Wyoming Valley (q.v.) occurred the Indian Massacre of 1778. Pop. (1950) 21,096.

KINGSTON ON THAMES, municipal borough, England, county seat of Surrey, on the Thames River, 12 miles west-southwest of Lon-

don, and connected to that city by an electric train. It is a part of Greater London and is known as a pleasure resort. The derivation of the name is uncertain, but it is said to have had its origin in an ancient stone in the marketplace of the city upon which were engraved the name of several early kings of England of Saxon line. This stone, tradition says, was, like the famous stone of the Scottish kings, a sacred object upon which the kings were crowned, and it was intimately connected with the traditional life of the Saxon sovereigns and people, with their mythology and religio-tribal ceremonies, according to certain archaeologists who have given it close attention and study. This stone was in the chapel of St. Mary until 1850.

The town itself is a place of considerable commercial and industrial importance. It manufactures aircraft, leather goods, plastics, and paint, and has metalworking shops. It has grown outside its original boundaries since 1880 and expanded westward. Pop. (1951) 40,168.

KINGSVILLE, city, Texas, and Kleberg County seat, at an altitude of 66 feet, situated 20 miles inland from the Gulf of Mexico, 34 miles southwest of Corpus Christi and 119 miles north of Brownsville, and served by the Missouri Pacific Railroad and federal highways. The country surrounding the city has diversified farms, and the mild and semiarid climate makes it possible to grow large quantities of olives and dates on them. There are palm trees in evidence, also groves of citrus fruit trees. Kingsville is a shipping point for their products and for the dairy and beef cattle raised here. Its chief manufacturing industries are a synthetic chemical plant, oil works and refineries, railroad shops, an electric power plant, and an ice factory.

The city is named after the King Ranch, and the county after Robert Kleberg, manager of the ranch and son-in-law of its owner. Containing over 987,000 acres, the ranch is known as one of the largest, if not the largest, in the world, and is probably the most scientifically and efficiently managed, with over 75,000 head of cattle and 3,500 horses roaming its plains.

In 1854 Richard King, formerly a steamboat captain on the Rio Grande, began buying land here for ranches, and eventually acquired an area of nearly 2,000 square miles. Artesian wells were driven in 1900 and humped Brahma cattle, immune to tick fever, were brought from India in 1915 and interbred with native stock. Hereford and Shorthorn are the stock with which the Brahmas are mixed.

Kingsville is primarily the King Ranch headquarters. The South Texas State Teachers College (1925) was reorganized here in 1929 and became the Texas College of Arts and Industries, with many courses beside the normal training. It has a 250-acre campus with varied experimental planting including citrus groves and date palms, and with Spanish and Moorish style buildings. The college has a marine biological laboratory on the coast near Corpus Christi, and it also has an experimental citrus farm near Weslaco in the Lower Rio Grande Valley. The town was incorporated in 1911; the city was incorporated in 1916, and is governed by a city commission. Pop. (1940) 7,782; (1950) 16,898.

KINGWOOD, a very handsome Brazilian wood, also known as violet wood, believed by

many to be a derived species by crossing, while others claim that it belongs to the species *Dalbergia cearensis* of Ceará, which has numerous representatives in India and the southern countries of Asia generally. Kingwood, which is generally very handsomely streaked with violet of different shades and densities of color, is used in the making of fancy cabinets and cabinet ornaments of smaller dimensions.

KINKAID, kin-kād', **Thomas Cassin**, American naval officer: b. Hanover, N. H., April 3, 1888. He graduated at the United States Naval Academy in 1908, and during the last months of World War I was gunnery officer aboard the battleship *Arizona*. Previously he had been attached to the British Navy as an observer. After the war he specialized in ordnance and war tactics, and in the fall of 1938 was assigned as a captain to the embassy at Rome as a naval attaché for air. He was withdrawn in March 1941 to take a sea command, receiving his rear admiral's stripe a month before Pearl Harbor. During 1942 he served against Japan, participating in the battles of the Coral Sea, May 4-8, Midway, June 4-6, Guadalcanal, August 7-9, and the Solomon Islands, November 14-15, and in 1943, as commander of naval forces in the North Pacific, he protected the landing of troops on Kiska, in August; the operation was unopposed, for the Japanese had abandoned this Aleutian island. He had been promoted vice admiral in June 1943, and in October he was transferred to the Southwest Pacific, taking command of all Allied naval forces in that theater under Gen. Douglas MacArthur (q.v.). During April-May 1944, he covered the landings on Bial Island and, in New Guinea, on Hollandia, and in June he was given command of the U.S. Seventh Fleet. In October 1944 he supported the invasion of the Philippines, inflicting great losses upon the Japanese in the critical Battle of Leyte Gulf, October 24-25. His ships shelled Ormoc November, and on Jan. 9, 1945, they bombarded enemy beachheads in Lingayen Gulf prior to the American invasion of Luzon. In the succeeding months he provided support to MacArthur's successive landings on islands of the Philippines and for the assaults on the east and west coasts of Borneo, which commenced in May 1945. As a full admiral, he landed troops in Korea in 1950 and received at Seoul the Japanese surrender. In January 1946 he was placed in command of the Eastern Sea Frontier and Atlantic Reserve.

KINKEL, kīng'kēl, **Gottfried**, German and art critic: b. Obercassel, Germany, Aug. 1815; d. Zurich, Switzerland, Nov. 13, 1884. Graduated in theology he entered the Protestant ministry, where he distinguished himself as an eloquent preacher, lecturer, and public speaker. Among his other duties he was lecturer in the University of Bonn from 1836 to 1848, from that time, though not regularly, his special subject being poetry, the history of art, and ecclesiastical history. His usefulness was cut short in his own country through his getting mixed up in the Revolution of 1848-1849. His arrest followed, but with the aid of his friend Carl Schurz (q.v.) he managed to escape and make his way to the United States, where he made his living for some time as a teacher of languages. Later he was in London and Zurich in the same capacity. He was never able to return to Germany.

He was a poet of some power and originality. Among his published works were *Gedichte*, 2 vols. (1843); *Otto der Schutz, eine rheinische Geschichte in zwölf Abentheuren*, a narrative poem which nearly 100 editions were published (1845); *Geschichte der bildenden Künste bei den kristlichen Völkern* (1845); *Nimrod*, a tragedy (1857); *Mosaik zur Kunstgeschichte* (1876); *Idyll aus Griechenland* (1883); and, with his wife, Johanna Kinkel, *Ersählungen* (1849).

KINO, *kē'nō*, a kind of gum which exudes from certain trees when an incision is made, and dried without artificial heat. The East Indian or Malabar kino comes from a leguminous tree (*Pterocarpus marsupium*); Bengal or Palas kino from *Butea frondosa*; and Australian or Botany Bay kino from *Eucalyptus resinifera*; West Indian from a third plant (*Coccolobis wrightii*). It consists of dark red angular fragments, rarely larger than a pea, and easily splitting into still smaller pieces. It is very soluble in spirits of wine, and in general behavior closely resembles catechu, and yields by similar treatment the same products. In medicine it is an astringent and tonic.

KINSTON, city, North Carolina, and Lenoir County seat; altitude 46 feet, on the north bank of the Neuse River, 25 miles east-southeast of Goldsboro, on the Atlantic Coast Line and Atlantic and East Carolina railroads. As one of the most leaf tobacco markets in the world, Kinston's chief commercial interests center upon this commodity. Fourteen warehouses and seven nurseries handle the crop during the marketing season each fall. Lesser industries produce farmers, lumber, paper boxes, bricks, cotton yarn, hosiery, nylon, shirts, and beverages. Cotton, tobacco, and tobacco are the principal products of the surrounding region.

History.—In 1740, the home of William Herge, New Bern planter and jurist, occupied the site of present-day Kinston. His property lay along the Neuse River at what was then known as Atkins Bank. The establishment of a town here was authorized in 1762 by Governor Dobbs. First known as King's Town in honor of George III, its name was changed to Kinston during the Revolution. The Lenoir County Courthouse, on the city's busiest corners, replaces two earlier buildings; the first, erected in 1792, was burned, and with it, Lenoir County's early records. On the courthouse grounds is a monument to Richard Caswell (1729–1789), first North Carolina governor under the constitution. Nearby is the scene of the Battle of Wise Forks, an engagement in 1865 which marked one of the last Confederate victories during the Civil War. Governed by city manager. Pop. (1950) 18,336.

KINSTON, Battle of. On March 1, 1865, Gen. Jacob D. Cox, with three divisions of infantry, pushed forward from New Bern, N. C., toward Goldsboro to open communication with Gen. William T. Sherman, who was marching northward from Savannah, and on the 7th two of his divisions were at Wise's Forks, near Southfork Creek, a tributary of the Neuse River, with a third division three miles in rear. A brigade was sent to a crossroad about midway between the main line and the creek. Gen. Robert F. Lee, with his Confederate division, crossed the

creek on the night and early morning of the 7th and 8th, flanked, surprised, and routed the advance brigade, taking over 900 prisoners and, pressing on, fell upon the left of Cox's line, but was repulsed. He renewed the attack and was again repulsed. On the 9th there was sharp skirmishing and the Confederates made repeated efforts to turn Cox's right, which were foiled. On the morning of the 10th Hoke and Gen. Daniel H. Hill made vigorous and successive attacks first upon the left and then on the right of Cox's line, but were repulsed, and Gen. Braxton Bragg, who was in supreme command, made no further effort, retreated across Neuse River during the night, burning all bridges behind him, left a small guard at Kinston and, with the rest of his command, hastened through Goldsboro to join J. E. Johnston, who was concentrating everything available to oppose Sherman. Gen. John M. Schofield joined Cox with troops from Wilmington, and reached Goldsboro on the 21st, Sherman joining him two days later. The Union loss at Kinston was 65 killed, 319 wounded and 930 missing; the Confederate loss is not known. D. H. Hill reports a loss in five brigades of 118 killed and wounded and 16 missing. Schofield estimated the entire Confederate loss at 1,500, which is probably excessive.

Consult Cox, J. D., *The March to the Sea*; Franklin and Nashville (New York 1882); id., *Military Reminiscences of the Civil War* (New York 1900).

KINTYRE, *kīn-tir'*, or **CANTYRE**, a peninsula of Scotland, between Kilbrannan Sound and the Atlantic, forming the division of Argyll. It is 40 miles long, from the Isthmus of Tarbert to the Mull of Kintyre, and has an average breadth of about six and one-half miles.

KINZIE, *kīn'zī*, John, American pioneer: b. Quebec, Canada, Dec. 3, 1763; d. Chicago, Ill., Jan. 6, 1828. His name was originally McKenzie. His father, a British army surgeon, dying soon after the boy's birth, his mother married again and removed to New York, John Kinzie was educated there, but, at the age of 10, ran away from home and made his way to Quebec where he was a silversmith's assistant for some years. He became a trader in the western United States at the age of 18, moved to St. Joseph River, Ohio, in 1796, and in 1804 established a post outside of Fort Dearborn on the site of the present Chicago, of which he was the earliest white settler. He also set up stations on the Illinois, Kankakee, and Rock rivers. He was very successful as a trader and, as a result of his honesty and generosity, made many friends amongst the Indians. It was due to this fact that his life and the lives of his family were saved during the massacre in 1812. After the end of the second war with England John Kinzie and his family returned to Chicago from Detroit where they had sought safety, though he himself had finally been taken prisoner by the British and sent to Quebec. He early recognized the possibilities of Chicago and acquired extensive real estate holdings.

KIOSK, *kē-ōsk'*, a Turkish word meaning pavilion. It has a tent-shaped roof, open on all sides and is supported by pillars, round the

foot of which is a balustrade. It is built of wood, roofed with straw or similar materials, and is chiefly erected to afford a free prospect in the shade, but it also serves to embellish a rural or garden view. This kind of pavilion has been introduced from the Turk and Persian into the English, French and German gardens. The word has, however, gradually acquired a wider meaning and is now applied to temporary or permanent structures of the type described above, irrespective of the purpose for which they are used or of the material from which they have been built. Thus pavilions for musicians in public parks, booths for the sale of newspapers and similar articles, are now called kiosks. The most famous Turkish kiosks are Bagdad Kiosk (Istanbul), summer palace of the former Sultans, Chinli Kiosk (Istanbul), dating probably from the 15th century and now housing part of the collection of the Imperial Museum of Antiquities; Yildiz Kiosk (near Istanbul), summer palace of the Turkish Sultan and frequently used to designate the late Turkish court and government.

KIOTO or **KYOTO**, kyō'tō, city, Japan, in the prefecture of the same name, and capital of Kyoto; situated on a flat plain about 26 miles north-northeast of Osaka. A high range of hills to the east separates this plain from Lake Biwa, and on these some of the finest temples connected with the city are built. The city is rectangular in form, the longer streets running north and south parallel to the Kamo River, which flows along the base of the ridge. At the north end are situated in an enclosure the plain wooden buildings where the emperors of Japan dwelt so long in seclusion. The Honganji temples of the Monto sect of Buddhists, fine structures of their kind and the center of the Buddhist faith in Japan rise at the south end of the city. The Imperial University, founded in 1897, and Doshisha, a Christian college, are located there. The pottery, porcelain, lacquer ware, velvets, and brocades of Kyoto are highly esteemed. Its embroideries, enamels, and inlaid bronze works are marvels of skillful handicraft. Kyoto has become a part of the great industrial Osaka-Kobe area, manufacturing electrical equipment, chemicals, and aircraft parts.

The city was founded as Heian-kyo, and was made the capital of Japan in 794 by Emperor Kwammu, and remained the classical capital until 1869 when the mikado and his court took up residence at Tokyo. Pop. (1948) 1,040,000. See also JAPAN.—*Political Divisions and Population*.

KIOWA, ki'ō-wā, (from ká'i gwū meaning "principal people" in their own language), one of the most warlike Indian tribes of the Southern Plains. Their language, long considered distinct, is now recognized to be related to that of the Tanoan-speaking Pueblos of the Rio Grande Valley, New Mexico. This relationship renders questionable claims to a traditional Kiowa homeland near the headwaters of the Missouri River at the eastern base of the Rockies in present Montana. However, in the 18th century the Kiowa played a prominent role in supplying Spanish horses to the Indian tribes of the upper Missouri. The Sioux claim to have driven the Kiowa from the Black Hills of South Dakota prior to 1800. Lewis and Clark located them on the North

Platte in 1805. Moving southward they made peace with the Comanche and later, with the Arapaho and Cheyenne. In the mid-19th century the Kiowa resided in the valleys of the upper Arkansas and Canadian rivers in west Oklahoma and southeast Colorado. With the Comanche allies they vigorously opposed white settlement on the Southern Plains and made daring raids far into Mexico carrying off large numbers of horses and many Mexican captives. They were nomadic buffalo hunters who lived in portable skin-covered lodges, held an annual sun dance and revered a small image called the Taimo. They owned large horse herds and were expert horsemen. Their camp circle comprised 6 bands, one of which was the Kiowa Apache, a small Athapaskan tribe traditionally associated with the Kiowa. The Kiowa were a party to the Medicine Lodge Treaty in 1867, and were assigned a reservation between the Washita and Red rivers in southwest Oklahoma in 1868. However, as long as there were buffalo to be hunted the Kiowa did not confine their activities to the reservation. Portions of the tribe remained hostile until early in the year 1875. Not until large numbers of their horses were captured and destroyed and several of their leaders imprisoned were the Kiowa pacified. They now live within the area of their 1868 reservation. In 1945 the Kiowa numbered 2,692.

KIP, William Ingraham, American clergyman: b. New York, New York, Oct. 3, 1811; d. San Francisco, Calif., April 7, 1893. He was educated at Rutgers College and at Yale, where he was graduated in 1831. His theological training was acquired at the Protestant Episcopal Theological Seminary of New York City from which he graduated in 1835. The same year he was ordained deacon and priest. He was rector of St. Peter's, Morristown, N. J., 1835-1836; curate of Grace Church, New York 1836-1837; rector of St. Paul's, Albany, N. Y., 1837-1853; first missionary bishop of California, 1853-1857; first bishop of California, 1857 until his death.

He was the author of *The History, Object and Proper Observance of the Holy Season of Lent* (1843); *The Double Witness of the Church* (1844); *The Christmas Holidays in Rome* (1845); *Early Jesuit Missions in North America* (1846); *Early Conflicts of Christianity* (1850); *Catacombs of Rome* (1854); *Recantation, a study of domestic life in Italy* (1855); *The Unnoted Things of Scripture* (1868); *The Olden Time New York, 1664-1775* (1872); *Historical Scenes from the Old Jesuit Missions* (1875); *The Church of the Apostles* (1877).

KIPLING, John Lockwood, British Indian civil servant: b. Pickering, England, 1837; d. J. 26, 1911. He entered the Indian Education Service; was architectural sculptor in the Bombay School of Art, 1865-1875; and principal of the Mayo School of Art, and curator of the Central Museum, Lahore, 1875-1893. He is author of *Beast and Man in India* (1893).

Rudyard Kipling (q.v.), the distinguished novelist, was his only son.

KIPLING, Rudyard, English novelist and poet; b. Bombay, India, 30 Dec. 1865; d. London Jan. 1936. His father, J. L. Kipling, the author of 'Beast and Man in India,' was at that time a professor of sculpture in the school of art at Bombay. The novelist's mother, Jane Macdonald, a woman of beauty and talent, was a daughter of a Methodist preacher at Lichfield, in Staffordshire. The boy was named, as said, from Rudyard Lake in Staffordshire, where his parents first met. Taught to read by his mother, he was taken to England, at the age of five, and placed, with a younger sister, in the care of a relative at Southsea, a suburb of Portsmouth, where he remained for seven years, subject, it has been inferred from the opening chapter of 'The Light That Failed,' to a narrow and irksome discipline. In 1878, he was sent to the United Service College of Eastward Ho, near Bideford, in Devonshire. It was a school managed by civil and military officers for young men who intended to enter the Indian service. The rough life passed there is described in 'Stalky and Co.' (1899), wherein Kipling, who edited for two years the college *Chronicle*, figures as Beetle, the clever miscreant. In 1882 Kipling went out to India and obtained, by the aid of his father, a position on the editorial staff of the *Lahore Free Press and Military Gazette*. After five years of this, he became assistant editor of the *Pioneer* at Allahabad, a position which he held until 1889. While on these papers he gained his wide and intimate knowledge of Indian life and affairs at first hand. The newspaper office at this time, he has said, attracted "every conceivable sort of person" from respectable army-officers and missionaries down to inventors of breakable swords" and "every dissolute man that ever tramped the Grand Trunk Road." Out of these motley people, what they told him, and what he saw and divined of them, he built up his tales. By 1886, when appeared 'Departmental Ditties and Other Verses' in a buff paper wrapper, he was known to a large circle of readers in India by his short-stories, local verse-satires and parodies, in which he was contributing to his own and other newspapers. Then came 1888, the *annus mirabilis*. In that year Kipling published seven volumes of stories: 'Plain Tales from the Hills'; 'Soldiers Three'; 'The Story of the Dabys'; 'In Black and White'; 'Under the Stars'; 'The Phantom Rickshaw and Other Tales'; and 'Wee Willie Winkie and Other Child Stories.' In 1889, he made a tour of the world, with his stories and manuscripts, hoping especially to find a publisher in the United States. In this aim he was immediately disappointed. His severe strictures on America, contributed to the *Pioneer*, were afterward published in New York, and are now included in his works as a part of 'From Sea to Sea.' After a hard struggle, recognition in the literary world came to him in 1890, while he was staying in London. To this and the next year belong 'The Courting of Dinah Shadd' and 'Other Stories'; 'The City of Dreadful Night and Other Sketches'; 'Life's Handicap'; and 'The Light that Failed.' While in London, Kipling met Mr. Wolcott Balestier, an American author, with whom he collaborated

on 'The Naulahka.' In 1892, he married his friend's sister, Caroline Starr Balestier, and settled near the Balestier estate at Brattleboro, Vt., eventually building on the hillside a long, low bungalow, called the Naulahka. There he wrote many of his best poems and stories. For verse may be cited some of the 'Barrack-Room Ballads' (1892) and 'The Seven Seas' (1896); and for fiction, 'Many Inventions' (1893); 'The Jungle Books' (1894-95), and 'Captains Courageous' (1897). Leaving Vermont in 1896, Kipling went out to South Africa in 1898, and paid a brief visit to New York in 1899, where he barely escaped death from pneumonia. He had already made his home in a little English village near Brighton, in Sussex. To this later period belong 'The Day's Work' (1898); 'From Sea to Sea' (1899); 'Kim' (1901); 'Just-So Stories' (1902); 'The Five Nations' (1903), a volume of verse; 'Traffics and Discoveries' (1904), and 'Puck of Pook's Hill' (1906); 'Actions and Reactions' (1909); 'Rewards and Fairies' (1910); 'A History of England,' with R. C. L. Fletcher (1911); 'Songs from Books'; 'The Harbour Watch' (1913); 'France at War' (1915); 'Sea Warfare' (1916); 'Inclusive Verse' (1919); 'Letters of Travel' (1920); 'Irish Guards'; 'Land and Sea Tales' (1923); 'Debits and Credits' (1926); 'Book of Words' (1928).

Kipling has been one of the most striking figures in English literature since he first came to his own in 1890. He revealed India to the western world in a wonderfully direct and realistic way. Of rare perceptive powers, he saw the import of things and was able to convey it to his reader exactly. His early tales comprehended nearly every phase of the English government in India so far as it came under his eyes. In them jostle the English soldier, the English civilian, and the native man and woman. He kept most closely to the Punjab, which he best knew; to its sweltering heat under which the mercury climbs slowly to the top of the glass and the printing presses grow red hot; to its drenching rains, fever and cholera, in other seasons; its blinding sand storms, and the picnics and intrigues they interfere with; the immense perspective of a star-lit heaven; the filth and superstition of the natives; the haphazard process of law-making; villages invaded and blotted out by the jungle; and barrack-room yarns in which Tommy Atkins tells of his practical jokes, adventures and death grapples on the battlefield with giant Afghans.

The conditions under which he first worked demanded great concentration of incident and style. Engaged to sort telegrams and clippings or to write editorials for his newspaper, he had little time for developing his stories at length. They were dashed off rapidly from first impressions and made to fit into the scant space that was left for them. Merely the sketch or the outline was given in short jerky sentences, and the salient points in character were suggested by the epithet that comes only under the intense pressure of the moment. No other story-teller was ever able to put so much as Kipling into so little space. When more at his ease, he developed a type of his own running from 25 to 50 pages. Taken all in all, considering matter and treatment, the best story Kipling ever wrote is 'The Man Who Would be King.' What happens to one or

the other when the Englishman involves himself with the affairs of the Hindoo woman is told in 'Without Benefit of Clergy,' and 'Beyond the Pale.' For the uncanny and ghastly may stand 'At the Pit's Mouth' and 'The Gates of a Hundred Sorrows,' and for ludicrous extravaganzas 'My Lord the Elephant' and 'The Incarnation of Krishna Mulvaney.' Among superb battle pieces are 'The Taking of Lungtungpen,' 'The Lost Legion,' 'With the Main Guard,' and 'Drums of the Fore and Aft.' In the 'Jungle Books' Kipling gave fresh life and meaning to the ancient beast-fables of India.

Trained from the beginning in the short story, Kipling seems unable to break from its limitations. 'The Light that Failed,' and 'Captains Courageous' are most readable, but in neither case was the theme thoroughly grasped or the treatment adequate. 'Kim' is not so much a novel as a short story long drawn out. But within the province of the short story Kipling may be classed with Stevenson. A tendency to obscure symbolism, apparent now and then in his early work, grew upon him, to the harm, it would seem, of his art. 'They,' for example, beautiful as it is, was difficult to understand, and some of the other stories in 'Traffics and Discoveries' were clearly an attempt to transfer to prose the dramatic monologue of Browning. Combined with this endeavor is also a fondness for coincidences, which, though cleverly managed, are unnecessary and unconvincing. The romancing of machinery in '007,' and 'The Ship that Found Herself,' so striking and novel at the time of their appearance, have since ceased to interest. Much of Kipling's later work has, however, its own grace and beauty. 'An Habitation Enforced' is certainly a fine story, and 'Puck of Pook's Hill' is a notable experiment in English folk-lore and legend. The later work of Kipling includes three volumes dealing with phases of the Great European War. 'France at War' (1915) is a tribute no less to the iron nerve and valor of the soldiers of that country than it is to the quiet, patient, day-by-day heroism and self-sacrifice of the women. 'Fringes of the Fleet' (1915) visualises the work of the submarines, destroyers, and smaller craft of the British navy. 'Tales of The Trade' (1916) tells of the remarkably daring and successful work of the British submarines, especially at the Dardanelles, while 'The Eyes of Asia' (1918) gives the Asiatic view of the war and Europeans. In these, his latest works, Kipling shows all the astounding mastery in phrase-making, the same sure instinct for the inevitable word, that first brought him into fame.

It should be remembered that Kipling was a verse-maker before he wrote tales. As early as 1881 appeared for private circulation his 'School Boy Lyrics.' 'The Departmental Ditties' were humorous and satirical jingles, which were originally thrown off without effort to fill in the blank spaces of his newspaper when other copy was wanting. His first great success was with 'Barrack-Room Ballads,' mostly in the slang of the British 'Tommy' dialect. They are not narrative ballads of the traditional type; they are rather songs with choruses and refrains, easily lending themselves

to memory. In their kind there is nothing better than 'Tommy,' 'Danny Deever,' 'Fuzzy Wuzzy,' 'Soldier, Soldier,' and 'Mandalay,' wherein "the very refuse of language" is made poetical. Kipling's theme broadened with time. No poems of the present generation are better known than 'The Recessional' (1897), composed on witnessing the naval review Spithead on the occasion of Queen Victoria's diamond jubilee, and 'The White Man's Burden' (1899), an appeal to the spirit of imperialism in the United States. Something of the same exalted strain characterizes his short poem written on the outbreak of the Great European War, 'For All We Have and Are.' He was awarded the Nobel prize in literature in 1907. See BARRACK-ROOM BALLADS; JUNGLE BOOKS, THE; SOLDIERS THREE; KIM.

Bibliography.—Among the collected editions of Kipling's works in verse and prose are the 'Outward Bound' and the 'Swastika,' 'A Kipling Primer,' by F. L. Knowles (Boston 1899) contains a brief biography, and bibliography to date. Richard Le Gallienne 'Rudyard Kipling' (London and New York 1900) is the most complete estimate. Consult also 'Rudyard Kipling, the Man and His Work' (London 1899) by G. F. Monkshouse (the pen-name of W. J. Clarke); Young, 'Dictionary of Characters and Scenes in the Story and Poetry of Rudyard Kipling' (1911); D. Brand, 'Handbook to the Poetry of Rudyard Kipling' (1914), and a biography by Hopkinson (1930).

WILBUR L. CROSS,
Former Professor of English, Yale University

KIPPER, a kippered herring, that is not preserved by smoking or pickling. Ancient in Scotland the word signified a salmon taken after the spawning season, and split, salted and dried, because of its inutility when fresh.

KIP'S BAY, Battle of, in the American Revolution. When Washington retreated from Brooklyn after the battle of Long Island (q.v.) he took position on Harlem Heights, New York, leaving troops lower on the island to oppose Howe's advance. On 15 Sept. 1777 Howe began to land his troops at Kip's Bay where the Americans had thrown up defensive works. When the British advanced the Americans became panic-stricken and, despite the efforts of Washington and Putnam, fled in disorder, whereupon all the troops were withdrawn to the position at Harlem Heights (q.v.). Consult Johnston, H. P., 'The Campaign of 1776'; id., 'Battle of Harlem Heights'; Lossing, 'Field-Book of the Revolution,' (Vol. II, p. 610 *et seq.*); Lowell, E. J., 'Hessians in the Revolution' (p. 72); Jones, 'New York in the Revolution' (Vol. I, p. 604); Livingston, William F., 'Life of Putnam' (pp. 308-309).

KIPTCHAK, *kēp-chāk'*, or **KAPTCHAK** the "Kingdom of the Golden Horde," the successor to the kingdom of the famous Mongol conqueror, Genghis Khan, by whose descendants it was ruled almost to our day. It was very much mixed up with the affairs of Russia for many years, and the Romanoffs, the last royal Russian family, had in their veins the blood of the rulers of the Golden Horde, which at one time included much of modern Russia reaching as it did westward to the Dnieper

and extending far into central Asia. Its capital, Sarai, which was founded on the Volga in 1242, became, in the course of time, noted for its wealth, barbaric splendor and slave market, where the Russians taken in the almost ceaseless contests between Mongol and Slav, were sold. In 1395 the Terrible plundered Sarai and the surrounding country in 1395, and it suffered several times in later years at the hands of the Russians. The kingdom of the Golden Horde before whose magnificent barbaric court many a powerful Russian prince was forced to bow for centuries finally fell because of dissensions within itself which divided the kingdom into two independent governments. These fell, one by one, before the growing power of the grand princess of Russia, but not without many a bloody struggle which the Slavs long remembered. (See GENGHIS KHAN). Consult any good history of Russia; also Curtin, *The Mongols* (Boston 1908); Douglas, *Life of Genghis Khan* (London 1877); Holworth, *History of the Mongols* (London 1877-88); Hoyle, *History of the Mongols*. (London 1890); Johnston, *Famous Cavalry Leaders* (Boston 1908).

KIRBY, kër'bī, William, Canadian author; b. Kingston-upon-Hull, England, Oct. 13, 1817; d. 1906. He removed to Canada in 1832. In 1839 he went to Niagara, Ontario, where he edited and published the *Mail* for 25 years, and from 1871 to 1895 was collector of customs. He published *U. E., a Tale of Upper Canada*, a poem (1859); *Le Chien d'Or*, a novel (1877); *Pontiac* (1887); *Canadian Idylls* (1888); *Annals of Niagara* (1896). His title to fame rests on his great historical romance, *The Golden Dog*, a work that depicts with remarkable power the historical personages associated with the last years of the French regime in Canada, and has been instrumental in sending thousands to visit the city of Quebec, in which the scene of the romance is laid.

KIRCHER, kīr'khūr, Athanasius, German scholar and mathematician: b. Geisa, May 2, 1601; d. Nov. 28, 1680. He entered the Jesuit order, and taught ethics and mathematics at the University of Würzburg until 1631. During 1635-43 he was a professor at the College of Rome, and thereafter he devoted himself to scientific research. His pioneer works on Egyptian hieroglyphics included *Lingua Aegyptica restituta* (1643). In his *Ars magna lucis et umbrae* (1646) he described the magic lantern, the invention of which is sometimes attributed to him, and reputedly he perfected the aeolian harp and the speaking tube. His notable collection of antiquities was bequeathed to the College of Rome.

KIRCHHOFF, kerk'höff, Charles William Henry, American editor and steel expert: b. San Francisco, Calif., March 28, 1853; d. Asbury Park, N.J., July 22, 1916. He graduated at the Royal School of Mines, Clausthal, Germany, in 1874, and after two years as chemist at the Delaware Lead Mills, Philadelphia, he entered technical journalism. In 1884, following experience with the *Metallurgical Review* and the *Engineering and Mining Journal*, he was appointed editor in chief of the *Iron Age*. He retired in 1909. In 1898-99, and again in 1911-12, he served as president of the American Institute of Mining and Metallurgical Engineers.

KIRCHHOFF, Gustav Robert, German physicist: b. Königsberg, 1824; d. 1887. Graduated from the university of his native city, he was elected professor of physics at Breslau (1850), and four years later he went in the same capacity to Heidelberg, and from there to Berlin (1875-87). He made many original investigations in the realm of physics and was joint discoverer with Bunsen of the spectroscope. His collected works, consisting principally of essays on his special subject of teaching, physics, were published in 1882, and a second edition was issued four years after his death.

KIRCHHOFF, kerk'höf, Johann Wilhelm Adolf, German writer and classical scholar: b. Berlin, 1826; d. 1908. Educated in his native city he was a teacher in various colleges, finally becoming professor in Berlin University (1865-1908). He was an indefatigable worker in the field of classical philology, linguistics, mythology and antiquities. A great deal of his investigations saw the light in print, hence his publications are many, and all of them are distinguished by depth of thought, excellent judgment and careful and minute investigation. Among the most noteworthy of his published works are *Umbriische Sprachdenkmäler* (1849-51); *Die Stadtrecht von Bantia* (1853); *Euripides* (1855); *Die homerische Odyssee und ihre Entstehung* (1859); *Ueber die Entstehungszeit des herodotischen Geschichtswerkes* (1870); *Studien zur Geschichte des griechischen Alphabets* (1874); *Thucydides und sein Urkundenmaterial* (1895), and edited editions of *Plotinus* (1856); *Aeschylus* (1880); *Respublica Atheniensium* (1881); *Christian Inscriptions*.

KIRCHWEY, George Washington, American writer on legal subjects: b. Detroit, Mich., July 3, 1855. Graduated in law from Yale University, he practiced his profession in Albany, N.Y., for 10 years (1882-91), where he was dean of the Albany Law School and professor of law in Union University (1889-91). On leaving Albany he became professor of law in Columbia University (1891-1901), dean of the law school there (1901-10), and Kent professor of law Columbia University (1902-16), warden of Sing Sing Prison (1916). Professor Kirchwey has been president of numerous societies of note, legal, and otherwise, among them the American Peace Society, American Society of International Law and the American Institute of Criminal Law and Criminology, and he has contributed extensively to legal, technical and other magazines. In 1917 he became head of the department of criminology of the New York School of Social Work. Among his published works are *Historical Manuscripts of the State of New York* (which he edited, 1887-89); *Readings in the Law of Real Property* (1900); *Select Cases and other Authorities on the Law of Mortgage* (1901). He died March 3, 1942.

KIRENSK, kī-rěnsk, a district and town in the Irkutsk region of the R.S.F.S.R. The district, northwest of Lake Baikal, has valuable mineral resources, particularly coal, iron and salt, though the inhabitants (about 50,000) are chiefly engaged in hunting and trapping. The town (pop. 5,000) is located at the confluence of the Lena River and the Kirenga. From Taishet, on the Trans-Siberian Railway to the southwest, a line runs to Kirensk and continues

to the eastward as far as Komsomolsk; and from Kirensk is also a motor highway to Irkutsk. During summer months freight vessels travel down the Lena from Kirensk to Yakutsk, capital of the Yakut A.S.S.R., a distance of 1,100 miles.

KIRGHIZ, kîr-gêz, **SOVIET SOCIALIST REPUBLIC**, or **KHIRGIZIA**, a union republic of the U.S.S.R., situated in Soviet Central Asia. It is bordered on the north by Kazakhstan, on the west by Uzbekistan, on the southwest by Tadzhikistan, and on the southeast and east by the Sinkiang province of China. The area is 75,950 square miles, and the population in 1941 was 1,533,439. It is a country of great mountain ranges, the summits always snow-covered, and between them are fertile valleys and numerous lakes; the latter include Issyk Kol, having an area of 2,395 square miles, Chatir Kol and Son Kol. Stock raising has long been a principal occupation of the people. The country produces a fine type of small horse, as well as cattle and sheep which have been much improved by crossbreeding. Wheat is the principal grain crop, and other products of the soil, largely dependent upon irrigation, include sugar beet, cotton, hemp, barley, oats, tobacco and *kenef*, the last an indigenous fibrous plant impervious to water. The chief orchard fruits are apples, apricot, peach and melon. Kirghizia is rich in mineral wealth, 60 of the known elements having been discovered. Improved means of transportation have given great impetus to the production of coal, which has replaced in the factories of Tashkent coal formerly imported from the Ukraine. Mercury and lead are produced in considerable volume, and other deposits mined commercially include indium, gallium, niobium, tin, zinc, antimony, tungsten and gold. Hydroelectric power is employed extensively in the republic's cotton mills and clothing and shoe factories. Frunze, the capital, lying in the valley of the Chu River, has a population of 100,000; among other towns are Rybachy, Karakol and Dzhalal-Abad. A motor highway connects Frunze with Osh, in the southern part of the country, and with Kashgar, in Chinese territory. A spur line from the Turkestan-Siberian Railroad in Kazakhstan runs to Frunze and continues to Rybachy, on Lake Issyk Kol; and Osh and Dzhalal-Abad are connected by rail with the Central Asian system, in Tadzhikistan. The Kirghiz-Kazaks are a widely-spread nomadic people, of Turkish-Tatar race, who inhabit the steppes that extend from the lower Volga and the Caspian Sea in the west to the Altai and Tien Shan Mountains in the east, and from the Sea of Aral in the south to the Tobol River on the north. The term Kirghiz belongs only to the Kara-Kirghiz (Black Kirghiz, called also Buruts or Pruts). In their physical type they belong to the Mongolian race. They speak the Turkish dialect of the Uzbeks, and they profess the Mohammedan faith. Their food is chiefly mutton and horseflesh, with koumiss or fermented mare's milk, from which they extract an intoxicating spirit. Kirghizia formed part of the Turkestan autonomous republic within the R.S.F.S.R. which succeeded the Russian imperial governor generalship of Turkestan after the Revolution of 1917. Together with Kazakhstan, it was reconstituted in 1925 as the Kirghiz S.S.R.; Kazakhstan was detached in 1936 to form

the Kazak S.S.R.; and on March 23, 1937 the Kirghiz S.S.R. became a separate constituent republic of the U.S.S.R.

Consult Kunitz, J., *Dawn Over Samarkand* (New York 1935); Mikhailov, N., *Land of the Soviets* (New York 1939); Davies, R. A., and Steiger, A. J., *Soviet Asia* (New York 1942); Mandel, W., *The Soviet Far East and Essays on Central Asia* (New York 1944).

KIRI, a large tree *Paulownia tomentosa* of the family Scrophulariaceae, cultivated in China and Japan for its extremely light wood. From its seeds an oil is obtained which is used in waterproofing paper. See PAULOWNIA.

KIRIN, kē-rên', the central province of Manchukuo (Manchuria), and its capital. The name, which means "Lucky-forest," is in Chinese Ki-lin. Kirin province lies between the Sungari River on the north, the Usuri River and Russia on the east, Korea and Shengking province on the south, and the Sungari River on the west. A part of the country is very mountainous, the elevation rising, in places, to the regions of perpetual snow, but that section of the province which lies within the bend of the river Sungari is level and inclined to be low in places. The highest range of mountains in Kirin is the Shan-ah-lu, the upper ranges of which are known as Chang Peh-Shan, or Ever-white Mountains. These rise in places, to an elevation of over 10,000 feet, are covered, in their highest peaks, throughout the year with snow, hence their name. In addition to the two important rivers already mentioned Kirin has a third great river, Hurka, which is inferior only to the Sungari, which, after a long and tortuous course, ultimately reaches the Amur. The Usuri, which is over 500 miles in length, is also a tributary of the Amur. A large part of the province is level and well adapted to agriculture and cattle raising, but it is not so largely cultivated as the provinces of China. The mountainous regions are still in a state of sylvan wildness and the tigers, mountain cats and various species of wild animals and birds abound, and the rivers and streams in the upland course are abundantly filled with fish. Among the products of the agricultural section of the country are barley, corn, millet, pulse and other grains, potatoes and other root crops, and in the low sections rice, while poppies are grown everywhere. Among the important cities of the province are Kirin, 138,910; Ashiho, 60,000; Petuna, 40,000; San Sing, 30,000; Lalin, 26,000; and Ninga, 25,000. The capital Kirin, which lies on the foothills on the shore of the Sungari River, is the most beautiful and favorably situated town of the province. It is surrounded by tobacco plantations and upland forests, which furnish it with a very considerable portion of its export trade. The tobacco goes to China, the timber to the regions farther down in the flat country where timber is not so plentiful. Owing to the abundance and excellent quality of the wood in the market the city does an extensive business in the building of boats for river trade; for this reason the Chinese call the city the "Navy Yard" ("Chuen Chan"). The neighboring mountains are rich in minerals, some of which has been exploited, especially silver, but most of it awaits future development. Kirin is well paved and is one of the cleanest cities in the province. Its many

tended squares and small parks give it a decided homelike appearance. Pop. of province (1950) 930,818.

KIRK, Alan Goodrich, American naval officer and diplomat: b. Philadelphia, Pa., Oct. 30, 1888. Graduate of the United States Naval Academy (1909), he served as naval attaché at London (1939-1941) and was director of naval intelligence 1940-1941. During World War II he commanded the amphibious force, United States Atlantic Fleet, which invaded Sicily (1943) and the United States naval forces in the invasion of Normandy (1944). He was vice admiral in command of the United States naval forces in France, 1944-1945, and acting Allied naval commander of the expeditionary force (1945). Retiring in 1946 with the rank of admiral, he was ambassador to Belgium and minister to Luxembourg (1946-1949) and ambassador to Russia (1949-1952), returning to the United States to head the Psychological Strategy Board, which coordinates United States Government information and psychological programs to combat communist propaganda. He was awarded the Legion of Merit (1943), Distinguished Service Medal (Army) in 1944, and the Distinguished Service Medal (Navy) in 1951.

KIRK, Edward Norris, American Congregational minister: b. New York, N. Y., Aug. 14, 1811; d. Boston, Mass., March 27, 1874. Following his graduation from Princeton Theological Seminary in 1825 he was an agent for the Board of Foreign Missions and in 1829-1837 was pastor of the Fourth Presbyterian Church of Albany, N. Y. While there he helped found the Troy Theological Seminary, forerunner of the Union Theological Seminary of New York City. In 1836 he inaugurated regular worship for American Protestants in Paris. An outspoken abolitionist, he was president of the American Missionary Association.

KIRK, Grayson Louis, American educator: Jeffersonville, Ohio, Oct. 12, 1903. After attending Miami and Clark universities he obtained a Ph.D. degree at the University of Wisconsin, where he taught political science from 1929 to 1931. In 1940 he joined Columbia University as associate professor of government, becoming professor in 1942. He headed the security section, division of political studies, of the United States Department of State, 1942-1943, and in 1945 was an adviser at the San Francisco conference to organize the United Nations. In 1950 he became president and provost of Columbia, and in 1953 succeeded Dwight D. Eisenhower as president of the university. He is the author of *Philippine Independence* (1936) and *The Study of International Relations* (1947).

KIRK, Sir John, Scottish naturalist and administrator: b. Barry, Angus, Scotland, Dec. 19, 1877; d. Sevenoaks, Kent, England, Jan. 15, 1922. Serving as a physician in the Crimean War (1855-1856) he accompanied David Livingstone, physician and naturalist on his second expedition to the Zambezi River in Africa (1858-1863), exploring Lake Nyasa and Victoria Falls and making large collections of the flora of tropical Africa. He then went to Zanzibar, island off the east coast of Africa, as a medical officer in 1866. By 1873 he had become consul general and by 1878

political agent, assuming a large measure of control over the island. At his insistence the sultan declared slavery illegal in the island in 1873.

While opposing German expansion in the island, Kirk in 1887 obtained from the sultan large territorial concessions for the British. The Kirk Range, west of the Shire River in Nyasaland, is a tribute to his work.

KIRKBRIDE, Thomas Story, American physician: b. near Morrisville, Bucks County, Pa., July 31, 1809; d. Philadelphia, Dec. 16, 1883. Of Quaker ancestry, he received his M.D. from the University of Pennsylvania in 1832 and was appointed resident physician of the Society of Friends' insane asylum at Frankfort, Pa. In 1841 he became superintendent and physician in chief of the Pennsylvania Hospital for the Insane, an office he held until his death. He was president of the Association of Medical Superintendents of American Institutions for the Insane, wrote a textbook for the regulation of such hospitals, and in 1853 was the first head of such an institution in the United States to separate the sexes in distinct buildings. In many other respects he was in the forefront of American alienists, holding advanced views on the medical and hygienic treatment of the insane.

KIRKCALDY or KIRKALDY, kûr-kôl'dî, **Sir William**, Scottish soldier and politician: b. 1520; d. Aug. 3, 1573. Active in the Scottish religious wars, he took part in the murder of David Cardinal Beaton at Saint Andrews (1546). After serving as secret agent for Edward VI of England he took up the cause of the king of France. He opposed the marriage of Mary Queen of Scots to Lord Darnley (1565). On his return to Scotland he became prominent as an ultra-Protestant leader and took part in the murder of David Rizzio, Mary's favorite, and contributed powerfully to her defeat at Langside.

Then, finding Protestantism not altogether conducive to his ambitious schemes, he deserted the Protestant party and took up the queen's cause, a step that led to his own downfall. Retreating to Edinburgh Castle before a strong English force, he held it for five years but in the end surrendered and was hanged. John Knox, with whom he had once been hand in glove, later denounced him as a traitor, murderer, and cutthroat.

KIRKCALDY, kûr-kôl'dî; -kô'dî; -kâ'dî, seaport burgh in Fife County, Scotland. Situated on the Firth of Forth, 10 miles north of Edinburgh, it has an extensive and excellent harbor. Because it extends for about four miles along the coast, it is often called "Lang town." It is in a coal mining region and exports much coal to the United States, Canada, and South America. Its manufactures include iron and steel products, linoleum and oilcloth, farm machinery, textiles, and pottery. It is the birthplace of the economist Adam Smith; Thomas Carlyle once taught school there. The town dates back to the 12th century; since 1930 it has included Dysart. Pop. (1951) 50,518.

KIRKCUDBRIGHT, kûr-kôo'brî, burgh, southern Scotland, seat of Kirkcudbright County, at the head of the Dee River estuary, 25 miles southwest of Dumfries. The town and surrounding region saw much warfare through the centuries. Captured by Edward I in 1300, it was once under the royal steward and the Douglas family

der Heiligen im christlichen Altertum' (1900; English trans., by J. R. McKee, 1910); 'Illustrierte Geschichte der katholischen Kirche' (Part I, 1905); 'Die Geschichte der Kirche, ein Zeugnis ihrer höheren Sendung' (1912); and 'Die Frauen des Altertums' (1912). He collaborated in other historical works, notably with Ehrhard in 'Forschungen zur christlichen Literatur- und Dogmen-geschichte' and with Büchi in *Zeitschrift für Schweizerische Kirchengeschichte*, and contributed articles to 'The Catholic Encyclopedia.' He died 6 June 1923.

KIRSCH, or **KIRSCHWASSER**, kërsh'-väs'ër, a liquor in general use in Germany. It is made from cherries, hence its name which signifies literally "cherry water." It is a distilled liquor and is made chiefly in the Black Forest and in Switzerland. In English-speaking countries kirschwasser is frequently called cherry-brandy. This is really what it is; but it must be distinguished from the ordinary cherry brandy which is made from a mixture of the juice of cherries and ordinary brandy.

KIRSCHNER, kërsh'n'ër, **Lola (Aloysia)**, Austrian novelist; b. Prague, 1854. She wrote very much under the pseudonym of Ossip Schubin, a name by which she is still generally better known to the reading public of her works than by her own. Her nom-de-plume she took from 'Helena,' a novel by Turgeneff. She came of good family and was privately educated by excellent tutors at home, at Lockov. She traveled extensively and frequented the capitals of Europe where the fashionable sets of the various nations were and still are accustomed to meet. This society in Berlin, Brussels, Paris and Rome attracted her irresistibly and she set herself to study it. She soon began to reproduce it in works of vivid presentation and truth of characterization. She is especially severe on the military and ruling classes of Austria which she depicts with great detail intermingled with biting sarcasm. All her works show great talent; but they are too often marred by haste and want of care in details. Among her published works are 'Ehre' (1882); 'Die Geschichte eines Genies' (1884); 'Unter Uns' (1884); 'Gloria Victis' (1885); 'Erlachhof' (1887); 'Es fiel ein Reif in der Frühlingsnacht' (1888); 'Ausbein aus dem Leben eines Virtuosen' (1888); 'Boris Lensky' (1889); 'Unheimliche Geschichten' (1889); 'O du mein Oesterreich' (1890); 'Finis Poloniae' (1893); 'Toter Frühling' (1893); 'Gebrochene Flügel' (1894); 'Die Heimkehr' (1897); 'Slawische Liebe' (1900); 'Marska' (1902); 'Refugium Pecatorum' (1903); 'Der Guadenschuss' (1905); 'Der arme Nicki' (1906); 'Primavera' (1908); 'Miserere nobis'; 'War and America' (1914).

KIRTLAND, kért'land, **Jared Potter**, American physician and educator; b. Wallingford, Conn., 10 Nov. 1793; d. Cleveland, Ohio, 10 Dec. 1877. He studied in the medical department of the University of Pennsylvania and was graduated from that of Yale in 1815; practised at Wallingford (1815-18) and Durham (1818-23), Conn., from 1823 at Poland, Ohio; in 1829-32 and 1834-35 was a member of the Ohio Legislature; and was professor of the theory and practice of medicine in the Ohio Medical College (Cincinnati) in 1837-42. In

1843 he assisted in founding the medical department of the Western Reserve University where he was professor of the theory and practice of medicine in 1843-64. He assisted in founding and became president (1845) of the Cincinnati Academy of Sciences, from 1865 the Kirtland Society of Natural History. His zoological studies are of great importance. He discovered parthenogenesis in insects and the distinction of sex in the species *Unionida*.

KIRWAN, kër'wän, **Richard**, Irish writer and scientist; b. Cloughballymore, County Galway, 1733; d. 1812. Educated in France by the Jesuits he was graduated in law and began the practice of his profession, which he soon largely neglected for the study of the natural sciences, for which he had shown special aptitude while in college. He was one of the first great and accurate students in English of mineralogy and the composition of acids. He also gave considerable attention to scientific agriculture. He was looked upon, in his day, as one of the greatest of scientific thinkers and honors came to him from many quarters. He was elected a member of the Royal Society in 1780 and of the Royal Dublin Society, both of which societies presented him with gold medals for brilliant work done in connection with them. He had a very wide range of acquaintances among the scientific and learned of Europe, with all of whom he was very popular on account of his great learning, his ability to consecutive and careful thought and his genuine Irish wit and good humor. Among his writings which cover a wide range of subjects all of which are handled in a truly scientific manner, are 'Elements of Mineralogy' (1784); 'Essay on Phlogiston and the Composition of Acids' (1787); 'Temperatures of Different Latitudes' (1787); 'Geological Essays' (1799); 'The Analysis of Mineral Waters' (1799); 'Logick' (1807); and 'Metaphysical Essays' (1811).

KIRYU, kër'yoo', a Japanese city in the prefecture of Gumma. It lies north by north west of Tokio, by which it is connected by rail over a distance of some 80 miles. It is a very considerable local trade, has been growing steadily of late and produces extensive quantities of excellent silk, for the manufacture of which and of satin it has large mills fitted with the latest modern machinery. Kiryu is one of the most progressive of the smaller cities of Japan. Pop. about 40,000.

KISER, ki-zër, **Samuel Ellsworth**, American journalist and author; b. Shippensburg, Pa., 2 Feb. 1862. During the Civil War was taken by his mother to Washington, D. C. where his father, a soldier, was stationed for a brief period. He entered journalism in 1881, later engaged in editorial work in Chicago and has been a regular contributor since 1900 to magazines and newspapers. He is a lecturer and advertising specialist. He published 'Budd Wilkins' (1898); 'George' (1900); 'Love Sonnets of an Office' (1902); 'Ballads of the Busy Days' (1902); 'The Whole Glad Year' (1911); 'The Land Little Care' (1912); 'Glorious Day' (1922); 'His to Laugh' (1927).

KISFALUDY, kish'fö-lü-dí, **Alexander (Sandor)**, Hungarian poet and dramatist.

g, Zala County, 27 Sept. 1772; d. in his town, 28 Oct. 1844. He was an elder brother of Karoly Kisfaludy (q.v.) and with him exercised a notable influence upon Hungarian literature and language. Coming of a family he received an excellent education at Pressburg; and on graduation entered the Austrian army where he proved a active and efficient soldier during several campaigns, in one of which he was made prisoner and remained in captivity for some time. This captivity brought him into contact with Western literature and gave him a new view of literary life. On his return to Hungary he at once began devoting all his attention to literature; and he soon met with great success. As the elder brother, to him he inherited the paternal estate, which he continued to live at his home and where he led the life of a country gentleman. His literary genius lay in the same age (29) as his brother when he appeared before the public with a serious literary effort, which in his case was 'Himfy's Love' ('Himfy szerelmei'). His first effort met with general approbation, and he continued one morning to find that he had literally become famous overnight. His poem was read recited everywhere and by everyone in middle and upper class society in Hungary. This was followed in 1807 by a continuation of the now generally known as the second part 'Himfy's Loves,' which was also well received by the public. This was followed, in the next year, by 'Legends of the Olden Time in Hungary' ('Regek a magyar eloidobol'); 'Julia's Love' ('Gyula szerelme'); and his historical dramas, mostly tragedies, of which the most noteworthy are 'Hunyadi Janos' and 'László.' Many of his works have been translated into German, and some of them into this latter language into French, English and other of the languages of Europe. Both he and Machik have turned his 'Legends of the Olden Time' into German; and 'Julia's Love' has also been translated into German by Hell-Ennisburg. An excellent edition of Kisfaludy's works appeared in Budapest in

1882. He also wrote good poems and excellent short stories and longer tales and talented humorous pictures of Hungarian life. His efforts in this direction created a school of younger writers who, if they did not equal the work of their master, at least helped to make the literature of the country imaginative and truthful to life. But his services in the development of the Hungarian theatre surpass all his other efforts and have justly made him one of the foremost figures in Hungarian literary life. The Kisfaludy Society, founded in honor of him and his brother, to promote the interests of Hungarian literature, has recognized, to the full, his literary services and has made his work well known, not only at home but in foreign countries. Consult Bánóczi, for his life and works (Budapest 1882); Gaal, 'Theater der Magyaren' (a translation of the best of his dramatic works, Bonn 1820); Hornyánszky, J., 'Irene' (translated into German, 1868). One of the best collections of his works is that published by Bánóczi at Budapest in 1893. Previous to this six other editions had already been published, and several complete or partial editions have been issued since then.

KISFALUDY, Charles (Karoly), Hungarian poet and dramatist: b. Tet, 5 Feb. 1788; Pest, 21 Nov. 1830. A brother of Sandor Kisfaludy (q.v.), he early showed the family interest for literature and its talent for imaginative thinking and description. After some time spent in literary preparation he went to Pest in 1817 and there began turning out, with wonderful rapidity, work covering almost every field of literary endeavor, until he soon placed himself in the fore rank of poets and dramatists in his own country. He became by far the most popular of the Hungarian dramatists of his day; and he made of comedy a feature of the Hungarian stage to such an extent that he is to-day looked upon as the founder of the Hungarian drama. Many of his comedies have been translated into German, French and other European languages. He also wrote tragedies which are only slightly inferior to his comedies, and superior to the work of his contemporaries. The best of his tragedies is 'Irene'; and of his comedies are 'The Murderer' and 'The Suit-

KISH, Dynasty of (4401 to 3815 B.C.), the second of the Babylonian dynasties of the Sumerian rulers. It followed the Opis dynasty, which appeared in the north of Arabia, and east of the Tigris, and counted six known rulers. The Kish dynasty arose in the east of Babylonia superseding the Opis rulers; and the sovereigns appear to have been both temporal and spiritual rulers, that is, they were both high priests and kings; and it seems probable that, at this time in the history of Babylonia, belief was held that the sovereigns were of divine origin and hence the representatives of the gods, or at least the chief of the deity upon earth. That the Kish sovereigns played an important rôle in Babylonia in their day is evident from their written records which have survived the ravages of time. These are comparatively plentiful. They show that the dynasty consisted of at least eight rulers designated as follows: Azag Bau, who is said to have been a woman and to have reigned 100 years; Basha Enzu, 25 years; Ur Zamama, 6 years; Zimudar, 30 years; Uziwidar, 6 years; Elmuti, 11 years; Igu Babbar, 11 years; Naniyachi, 3 years; a total of only 192 years, more than half of which time is occupied by the reign of one sovereign out of the eight. Yet the total length of the duration of the dynasty is given as 586 years. Undoubtedly the first sovereign, Azag Bau, is either altogether traditional, or is the family or tribal name of a number of sovereigns. Even at this early period in their history the Sumerian people gave every evidence of having been highly advanced in civilization. They had their own peculiar system of writing which was quite different from that of the Semitic races, by whom they were surrounded then or at a later date. From the nature of the existing records of the Kish dynasty it seems probable that they recount the deeds of the more prominent of the rulers of the Sumerians at this comparatively early period in their national existence. The records give lists of other rulers who flourished on or about the same time as the kings

of the Kish dynasty; but, so far, there seems to be no reason for supposing that they belonged to the dynasty itself, but rather that they were rulers of adjacent territory over which they held independent sovereignty. Probably further discoveries of records and the decipherment thereof may bring to light more definite and detailed information relative to the Kish rulers, those ancient Asiatic sovereigns who appear upon the sun-line of the horizon of semi-mythical history, behind which even the brightest tradition grows cloudy.

KISHINEV, kish'î-něf (Rumanian, CHIȘNĂU, kē-shē-nū'ōō), a city in Bessarabia which is now the capital of the Moldavian Soviet Socialist Republic of the USSR. It is on the Kodry plateau on the Byk River, a tributary of the Dniester. The city has an airline to Kiev, and is also on a railway from the Ukraine to Rumania.

Kishinev was founded in the 15th century as a monastery town, and captured by Russia from the Turks in 1812. Rumania seized it from Russia in 1918, when the Soviet government was involved in civil war. The USSR tolerated, but never recognized this seizure, and in 1940 retook the city from Rumania by force, along with all Bessarabia. Kishinev is famous in Russian history as a place where the great poet Pushkin was exiled. Industry is poorly developed, and consists mainly of food canning and winemaking. Great damage was done to the city during World War II, but in the postwar period Kishinev is being rebuilt, and its light industries are being expanded.

KISHON, kish'ōn, or **Qishon**, kî'shōn, river, Palestine. It rises on Mount Gilboa, and pursues a northwesterly course through the plain of Esdraelon, and empties into the Bay of Acre. Here Elijah slaughtered the priests of Baal (1 Kings 28:40), and Deborah and Barak defeated Sisera (Judges 5:21). The French and Turks fought a battle on its banks in 1799. Its length is approximately 50 miles.

KISS, kîs, **August**, German sculptor: b. near Pless, Oct. 11, 1802; d. Berlin, March 24, 1865. Educated for his profession in Berlin, he soon showed, after graduation, considerable originality which one of his teachers, Christian Daniel Rauch, had early discovered in him. His first notable work, *A Mounted Amazon Attacked by a Tiger*, was produced for Louis I of Bavaria (1842), in marble and afterward cast in bronze, for the portico of the Berlin Museum. Kiss made a very careful study of animals at rest and in action and was able to seize, in a notable manner, the striking features of animal life and to couple them with infinite and carefully wrought out details. These and other qualities, especially dramatic action and clever grouping, which distinguish all his work, are especially present in this, his first great effort, which is, by the general consensus of opinion, looked upon as the best expression of his ideals, his planning and his execution. Kiss made numerous statues, all executed on a high plane, some of them of notable persons and others of them developing some incident or scene. Among the most notable of his works are *Equestrian Statue of Frederick the Great*, *St. Michael Fighting the Dragon*, *St. George Slaying the Dragon*, and *Faith, Hope and Charity*.

KISS, kîsh, **Josef**, Hungarian Jewish poet: b. Temesvár, 1843; d. Budapest, Dec. 31, 1921. His name was originally Klein. His poems, which deal principally with Jewish life, legend and history, are often mingled with Magyar life, customs and traditions. His work is of two distinct kinds, religious and nonreligious. His general popularity, which grew from year to year, was acquired, for the most part, from his nonreligious writings, while he gained an added hold on the deeply religious Jews of Hungary through his religious poems. He wrote lyrical, narrative and descriptive poems and excellent ballads and hymns. His first volume of lyrics, though displaying considerable power, attracted little attention because the author had not as yet acquired the individuality of style and subject matter which afterward was to distinguish him from the other writers of Hungary. He owes his popularity more to his ballads than to any other of his literary efforts, because of their life and his individualistic manner of treatment of his subjects. He published a volume of *Poems* (1868); *Lyrics* (1878), and *Religious Poems* (1888). But between times he contributed to the local press and especially to the Jewish organs poems covering a wide range of subjects and a notable variety of treatment. In 1913, this date being the 70th anniversary of his birth, he was made honorary member of the Hungarian Society of Science and special festivities were held in his honor throughout the cities of Hungary.

KISS. See SALUTATION.

KISSIMMEE, city, Florida, seat of Osceola County, located on Lake Tohopekaliga, 18 miles south of Orlando. It is served by the Atlantic Coast Line Railroad, the Greyhound buslines, U.S. Highway 17-92, and U.S. Highway 441. Osceola is Florida's leading range cattle county, and Kissimmee is known as the "Cow Capital" of Florida. Cattle raising and citrus growing and shipping are the leading industries. Smaller occupations have to do with the manufacture of Fiberglas fishing rods, jellies, garden fence and tools, armature rewinding, and chicken processing. The Silver Spurs Rodeo, an annual affair, attracts thousands of people, and brings to Florida bronco busters, bull riders, and calf ropers from all sections of the country. Until 1951, when it was held February 25 and 26, it has always been held on July 4. The change in dates was made, it was said, to permit more people to see the show. The first whites are said to have located at Kissimmee in early 1881. Before that there had been a trading post for settlers farther south, but the place did not begin to flourish until after the Disston land purchase in 1881 when draining and dredging projects made possible the establishment of sugar cane plantations and sugar mills. There still stand in Kissimmee many large old frame houses with galleries and wide porches which were built and occupied by wealthy cattlemen more than half a century ago. The monument of states, built of stones from every state in the Union and several foreign countries, is an attraction. The Hart Memorial Library is an old building. Pop. (1950) 4,329.

KISSING BUG. See CONE-NOSE.

KISSINGEN, kîs'îng-ën, Bavaria, a celebrated watering place on the Saale, 62 miles ea-

Frankfurt by rail. It is surrounded by walls,anked with towers, and has a magnificent bathing establishment. The springs, celebrated from the 9th century, are five in number, and all saline, contain a large quantity of carbonic acid gas, are used both internally and as baths, and are considered efficacious in gout and affections of the stomach and chest. Pop. (1939) 9,517.

KISTNA, kīst'nā, also formerly **KRISHNA**, river, India, which separates the Deccan from southern India. It rises among the Western Ghats, 4,500 feet above sea level, in the State of Bombay, 42 miles from the Malabar Coast, passes through Hyderabad, where it receives the Krishna on its left, and the Tungabhadra on its right bank, both flowing, like it, from the Western Ghats. Previous to the junction it is commonly called the Krishna, a name which is frequently given to the whole river. The united river falls into the Bay of Bengal. Its course is estimated at 700 miles. A canal 90 miles long connects it with the Godavari River, and numerous channels make its waters available for irrigation purposes.

KIT, originally that which contained tools or necessities; hence the tools or necessities themselves. The term, which was probably derived from the Dutch "kit" or Middle Dutch "katie," a large bottle, beaker or decanter, has today various significations, among them a large bottle, wooden tub for milk, fish, butter and other household articles, a soldier's kit, a sailor's chest and contents and a shoemaker's kit; and is also used in the sense of the whole outfit, the whole amount, the whole company, as in the expression "the whole kit of them." Used in this way it is often employed in a deprecatory sense. As a military term kit generally signifies the more intimately related articles of a soldier such as shoes, boots, socks, shirts, undershirts, brushes, combs. The soldier's kit weighs from 50 pounds upward, the weight depending upon whether the soldier is under ordinary or heavy marching orders. The heavy marching outfit of the British infantry soldier is a knapsack containing shirts, extra uniform, boots, socks, brushes and a few other personal articles, mess tin, bread, rations for a certain time, generally of short duration, coat, cap, rifle, bayonet, ammunition and cartridge kit. This outfit, however, varies, according to the work for which a detachment of troops is destined for the moment.

KIT-CAT CLUB, a club formed in London about 1688, originally for convivial purposes, but which soon assumed a political character, arising in the reign of Queen Anne become the resort of Marlborough, Walpole, Addison, Steele and other leading Whigs. Its founder was Jacob Tonson, the eminent publisher, and its name was derived from that of Christopher Cat, who supplied the club with mutton-pies. It was originally composed of 39 members, later enlarged to 48. The portraits (about three-quarters length) of the members were painted by Sir Godfrey Kneller, and hence a portrait of this length is called a "kit-cat." The club was dissolved about 1720.

KIT FOX (*Vulpes macrotis* or *velox*), also called swift fox, a species found in western and northern regions of the United States and also in Canada, is the smallest of the North American

foxes, the combined length of head and body being only eighteen to twenty inches and the tail twelve. Its weight does not exceed five pounds. The somewhat variable color is usually buff to brownish gray, lighter below, and tends to change with the season. It constructs a burrow in which the young are born and reared, and hunts at night, preying chiefly on small rodents and birds. Kit fox fur has not much commercial value. See also FOX; CANIDAE; CARNIVORA.

KITCHEN CABINET, a popular name applied to certain intimate political friends of President Andrew Jackson, who were supposed to have more influence over his actions than his official advisers. They were Gen. Duff Green, editor of the *United States Telegraph* at Washington, the confidential organ of the administration; Maj. William B. Lewis, of Nashville, Tenn., second auditor of the treasury; Isaac Hill, editor of the *New Hampshire Patriot*, and Amos Kendall (q.v.) of Kentucky. Kendall was leader of the kitchen cabinet; worked for the Jackson "second choice" movement in Kentucky; and received the office of fourth auditor of the treasury. He was a man of exceeding ability, but of low moral perceptions, and, as a politician, was the incarnation of the worst evils of the American system. Harriet Martineau wrote of him, "I was fortunate enough once to catch a glimpse of the invisible Amos Kendall, one of the most remarkable men in America. He is supposed to be the moving spring of the whole administration."

KITCHEN MIDDENS, mounds of shells, bones, charcoal and refuse, remaining upon the site of prehistoric settlements along the coasts of seas, lakes and rivers in many parts of the world. The exploration of them has brought to light many relics of the Palaeolithic and Neolithic men who formed them, and contributed greatly to the knowledge of prehistoric archaeology. Extensive deposits of this kind occur in various parts of the United States, where they are known as shell-heaps.

KITCHENER, kīch'ē-nēr, **Horatio Herbert, 1st Earl Kitchener of Khartoum** and of Broome, British soldier: b. Croter House, Ballylongford, County Kerry, Ireland, June 24, 1850; drowned west of the Orkney Islands, Scotland, June 5, 1916. Though of Irish birth, he was of English descent, his father being Lieutenant Colonel H. H. Kitchener, of the 13th Dragoons. He was educated at the Royal Military Academy, Woolwich, and received his commission in the Royal Engineers on Jan. 4, 1871. Between the time of his entering the military academy and receiving his commission he had seen service in the Franco-Prussian War. He was at Dinan when war broke out, offered his services to the French authorities and served as a private in the Second Army of the Loire under the command of Gen. Antoine Chanzy. After three years of routine home duty he was loaned to the Palestine Exploration Fund in 1874 and commenced those eminent services for the British Empire in the East which would continue through most of the remainder of his life. In Palestine, working on topographical surveys, he acquired his first knowledge of the Arabs and Arabic. When Britain acquired Cyprus in 1878, he went there to survey the island. He was employed from 1882-1892 in assisting in

the reorganization of the Egyptian army, and in 1892 became sirdar or commander-in-chief. The next four years were spent in preparations for the reconquest of the Soudan, and in 1896 he began operations against the Khalifa, whose forces he defeated at Firket. The result of this engagement was the recovery of the province of Dongola. In 1898 he again defeated the Khalifa's forces at Atbara. Kitchener had learned well the lessons of warfare in Egypt and behind each advance constructed a railroad. On 2 September of that year the Khalifa's forces were utterly defeated at Omdurman and two days after the battle Kitchener entered Khartoum. For these services Kitchener was raised to the peerage as Baron Kitchener of Khartoum. A remarkable feature in the conquests was the economy with which the three campaigns from 1896-98 were conducted, the total cost exceeding little more than \$12,000,000.

Then occurred an episode that might have led to war between England and France, when a French officer, Colonel Marchand, with a small force of Senegalese soldiers, established themselves at Fashoda, on the White Nile, 600 miles above Khartoum on territory claimed for Egypt. Kitchener met the situation very tactfully; he visited Fashoda, permitted the tricolor to remain hoisted and arranged with Marchand that the disputed occupancy should be referred to the diplomatists of the two countries.

In 1899 Kitchener was summoned from Egypt to join Lord Roberts as chief of the staff when the latter took over the supreme command of the British forces during the Great Boer War. Here his untiring energy was devoted first to the work of organization. He was responsible for the decision to attack the Boers at Paardeberg and his tactical dispositions on that occasion were subjected at the time to severe criticism. In November 1900, after both of the Boer capitals had been occupied, and it appeared as if the object of the war had been attained, Lord Roberts handed over the command to Lord Kitchener and to him fell the difficult and arduous task of coping with the guerrilla methods thereafter adopted by the Boers, and to which the country was well adapted. He first made his railway communications safe and secured the important centres; then he brought the non-combatant population into concentration camps; and finally he established a vast system of protective block-houses hugging the railway lines, which were finally used as armed bases against which long lines of mounted men swept parties of the Boers. In the negotiations preceding the Treaty of Vereeniging in 1902, which ended the war, Kitchener took an active part, and he favored the granting of generous conditions of peace. As a mark of appreciation for his services he was raised a step in the peerage by being created a viscount, promoted to the rank of general and was awarded the Order of Merit.

Shortly after the conclusion of the Boer War he was appointed commander-in-chief in India, and this post he held till 1907, carrying through a number of important reforms in the organization of the Indian army. At the end of his term he was appointed commander-in-chief in the Mediterranean, but this appointment he subsequently declined. In leaving India he paid a visit to Japan and then proceeded to

Australia and New Zealand, where he drew up schemes for the defense of these dominions which were subsequently put in operation. In April 1910 he returned to England, when there ensued a brief respite from military duties and a relapse into civil life.

In 1911 Kitchener succeeded Sir Eldo Gorst as British Resident in Cairo. In this position he devoted himself to the suppression of the disloyal and anarchist agitation which had been gathering head during Sir Eldo Gorst's régime, and to the initiation and furtherance of measures for the economic development of the country. Largely owing to his exertions the value of the Egyptian cotton field has largely increased, roads were constructed and improved, public health safeguarded by adequate sanitary measures and the fellahen protected by legislation against the exactions of usurers.

The summer of 1914 found Kitchener in England in consultation with the imperial authorities. On 2 August he was boarding a steamship at Dover on his return to Egypt when, owing to the threatening situation in Europe, he was summoned back to London. On the 4th war was declared and on the following day he was appointed Secretary of State for War—an announcement that was hailed with enthusiastic approval in Great Britain. The task that fell to him then was one of unexampled difficulty. The British army for effective purposes was composed of a striking force of 160,000 men; he expanded it into an army of 5,000,000, in a country traditionally devoted to voluntary enlistment, and his prestige and personality were main factors in the striking results achieved under the voluntary system and in the acceptance by the nation with so little friction of the final resort to conscription. Certain it is, however, that he took on himself a burden that was too heavy for one man to bear. Following on a campaign of criticism in a section of the press the Ministry of Munitions was created and the powers of chief of the staff enlarged with a view to keeping the War Secretary to matters strictly within his own department. On 2 June 1916 he invited the members of the House of Commons, some of whom had attacked his conduct as War Minister, to a secret conference at the House, and there he is said to have emerged triumphantly from what must have been for him a trying and somewhat distasteful experience.

The termination of his career followed a few days thereafter with tragic and appalling suddenness. Accompanied by the members of his staff, he embarked on 5 June on the cruise *Hampshire* at an unknown port in the north of Scotland, with the intention of proceeding to Archangel, and thence to Petrograd to confer with the Russian government. The cruiser was accompanied by two destroyers, but owing to the heavy seas that were running these had to be detached. At eight o'clock in the evening an explosion occurred on board which was observed from the shore; for boats were seen to leave the vessel, but they were apparently swamped and the sole survivors of the wreck were 12 sailors who managed to reach shore on a raft. It was afterward officially stated that the *Hampshire* struck a mine. The news of the disaster

received with consternation and grief in all parts of the British Empire. Kitchener was followed as Minister of War by Mr. Lloyd George, and his elder brother, Lieut.-Col. Henry Elliott Chevallier Kitchener, succeeded to the title.

Kitchener in popular tradition was regarded as a stern, austere and somewhat unapproachable man; but his aloofness was due in the main to shyness, the conditions of his early service in Palestine, Cyprus and Egypt fostering a love of solitude that became a second nature with him. From the time of his Sudan campaigns he was regarded by the British public as an organizer of victory, one who never struck without making full and adequate preparation for the blow. This characteristic was fully revealed in his final task. When, at the outset of the great European conflict, a short war was generally anticipated, he had the courage and foresight to state the disagreeable truth and to make adequate preparations for a long war. No hope of temporary successes in the early stages of the conflict could divert him from his purpose, to ensure that, in what he conceived would be a war of exhaustion, the superiority in man power, munitions and equipment should in its later stages rest incontestably with the allied powers. Consult Begbie, H., 'Lord Kitchener' (London 1915); Burleigh, B., 'Twixt Sirdar and Khalifa' (London 1898); Doyle, Sir A. Conan, 'The Great Boer War' (London 1903); Moser, H. G., 'Lord Kitchener' (London 1914); Hackwood, F. W., 'Life of Lord Kitchener' (1913); Steevens, G. W., 'With Kitchener to Khartum' (1899-1914); Wheeler, F., 'Life of Lord Kitchener' (1914); 'The Boy's Life of Lord Kitchener' (1917); Ballard, R., 'Kitchener' (1930).

KITCHENER, Canada, city and county-seat of Waterloo County, Ontario, on the Canadian National Railway, 62 miles west of Toronto. It was originally settled by Pennsylvania Dutch, and later by Germans from Europe. Prior to the World War it was called Berlin. Industries include the manufacture of boots and shoes, rubber goods, foundry products, furniture, automobile tires, leather, buttons, skates, clocks, gloves, shirts and collars, and white wear. Kitchener has an excellent sewerage system, water-supply system, and street-railway system. There are also gas and electric light and power plants, seven banks, one daily newspaper, 12 schools and numerous churches. It is the seat of a Roman Catholic college. Pop. (1931) 30,793; (1939) 33,450.

KITE, a bird of prey associated with the buzzards in the sub-family *Buteoninae* of the family *Falconidae*, characterized by weak grasping-power in the feet, slender form, usually a forked tail, and long wings suited to the swift and graceful flight that distinguishes the group. These buoyant birds," says Evans, "are fond of perching but soar with ease, quartering the plains like harriers, or hovering with uplifted wings to dart down on their prey of insects, snakes, small mammals, and more rarely birds." They build their nests on trees, or in some cases on bushes and reeds in marshes; and their eggs are whitish, marked in various degrees of spotting. The cries of most kites are loud

and mournful, but some utter sharp, whistling notes. The Brahminy kite is exceedingly numerous in India and eastward, and is valued for its vermin-killing; and an Australian species, the whistling kite, is a powerful aid in suppressing insect-plagues. The red kite, or "gleed," of Europe eats almost every sort of small creature, and like some of the others does not disdain carrion. In the 16th century large flocks of gleeds dwelt in and about London, and were welcome as scavengers, as they are to-day in Cairo and other Oriental towns, but they have suffered almost total extermination in Britain, mainly because of their depredations on poultry, pheasants, etc. The gavinda, or Pariah kite, is the scavenger of Hindustan. Several species of these handsome hawks inhabit tropical America, one of which, the Everglade kite, comes to southern Florida, where it subsists exclusively on the snails (*Ampullaria*, etc.) that throng on the bushes in the mangrove swamps: hence it is locally known as snail-hawk. The swallow-tailed kite, black with purple and blue reflections, is commonly seen in the southern United States, and is pre-eminently a bird of the air. "It captures its prey, devours it, and drinks, while under way. Its flight possesses all the marvelous ease and grace of a swallow's." The white-tailed is a species of Texas and southward, haunting marshes rather than uplands. The Mississippi kite, however, wanders in summer all over the southerly interior, where it is generally known as the blue kite. All these are migratory. Consult Newton, 'Dictionary of Birds' (London 1896); Evans, 'Birds' (New York 1900); and American ornithologies, especially Bendire, 'Life Histories of North American Birds' (Vol. I, Washington 1892).

KITE, a common aerial toy in the form of two crossed sticks covered with paper and balanced with a tail or string, on which are tied bits of cloth or paper. Kites were first employed in aid of science in 1749 by Dr. Alexander Wilson and Thomas Mellville of Scotland, who by means of a thermometer attached to a kite were able to take temperatures above the earth's surface. Franklin's experiments with electricity by means of a kite and key are familiar to everyone. Among the men who have given much thought and labor to improve kite making are W. A. Eddy, S. P. Langley, Octave Chanute, Lawrence Hargrave, J. B. Millet, J. W. Davis, C. F. Lamson, H. D. Wise, Captain Baden-Powell, Professor Marvin, C. F. Moore and others. The first improvement was to make a tailless kite, and this was perfected by Mr. Eddy.

In 1895 Captain Baden-Powell of England, weighing 150 pounds, was enabled to hoist himself 100 feet in the air by a tandem of five kites. Mr. Hargrave, with three kites, raised a total weight of 208 pounds to the height of 16 feet, as far as he cared to go. Lieutenant Wise, in 1897, with four kites, rose to 42 feet, the entire weight raised being 229 pounds. Mr. Eddy has done much to develop tandem kite flying. In 1897 he made a tandem of nine Eddy-Malay kites on a cord two miles long, with an elevation of 5,595 feet, the same being kept up for 15 hours. At Blue Hill Observatory, near Boston, this height was exceeded, by the tandem of seven Malay and two Hargrave

kites, with an area of 170 feet, rising 8,740 feet above Blue Hill, or 9,375 feet above sea-level. It took three miles of piano-wire and the work of three men for 12 hours to accomplish this feat. Piano wire has been found preferable to cord, having greater tensile strength and presenting less surface to the wind.

In the United States Weather Bureau para-kites are used for the purpose of recording the velocity of the wind and the humidity and temperature at high altitudes, by the meteorograph. These can be obtained at a single observation and several hours before the effects are known in the lower atmosphere. Photographs have been taken by means of a camera fastened on the frame of a kite and operated by a cord, and Mr. Eddy had an arrangement of eight cameras strapped together in which all the shutters can be opened at once, and by this means a complete view of the horizon can be taken. Inventors of flying and soaring machines have made extensive use of kites in planning the construction of their various contrivances. Since 1905 meteorological observations by kites have been carried on continuously by the Weather Bureau at Mount Weather, Va. The instruments were raised to 23,835 feet on May 5, 1910 when 10 kites and 8½ miles of wire were used.

The first permanent station for kite flying in Europe, and the first in the world established under governmental auspices, is that at Viborg, in the extreme northern part of Denmark, the governments of Denmark, Sweden and France cooperating in the scheme. The most important building at the station is a tower 33 feet high, mounted on circular rails, so that it can be rotated easily and left open on one side. No matter from which direction the winds blows the tower is turned with this gap to leeward. Thus the operator can sit within, where the windlasses are, and watch his kites. The latter, of course, naturally take their lines down the wind. There are two windlasses, controlled by electric motors, one being held in reserve for immediate use in case the wire on the other breaks while in service. Kites have also been used to throw lines across streams or chasms or to bring life-lines to stranded ships.

Consult *Proceedings of the International Conference on Aërial Navigation* (Chicago 1893); Marvin, C. F., *Mechanics of the Kite; Instructions for Aërial Observations; Investigation of the Sluggishness of the Meteorograph*; and other bulletins of the Weather Bureau (Washington 1898 et seq.); L. Teisserenc de Bort, "Études sur la température et ses variations," in the *Annals of the Central Meteorological Bureau* (Paris 1897); "Sur l'organisation des sondages aériennes," in the *Memoirs of the International Congress for Meteorology* (Paris 1900); Rotch, A. L., *Use of Kites to Obtain Meteorological Observations* (Boston 1900); Assmann and Berson, *Ergebnisse der Arbeiten am aeronautischen Observatorium in den Jahren 1900 und 1901* (Berlin 1902); *Arbeiten des königliche preussischen aeronautischen Observatoriums* (Lindenberg 1904-1913), and paper by Millet, J. B., in the *Aéronautical Annual* for 1896.

KITSON, Henry Hudson, American sculptor: b. Huddersfield, England, April 9, 1863; d. Tyringham, Mass., June 26, 1947. At Paris he studied at the École des Beaux Arts under Bonnaissieux. He was awarded three gold medals by the Massachusetts Charitable Mechanics' Asso-

ciation, a gold medal of honor by the American Art Association of New York. He received a medal at the Universal Exposition, Paris, 1889, as well as that in 1900. He also received the order of Bene Merenti from the king of Rumania. His more important works are *The Music of the Sea*, in the Boston Museum; the Major Doyle monument, Providence, R. I.; the statue of General Lee at Vicksburg, Miss.; *The Minute Man*, at Lexington, Mass.; the Hayes Memorial Fountain at Providence; the W. H. Hunt Memorial, Boston, and the statue of Roger Conant, Salem, Mass.

KITSON, Theo Alice Ruggles, American sculptor: b. Brookline, Mass., 1871, d. Boston, Mass., Oct. 29, 1932. Her maiden name was Ruggles. Educated in art in Boston and Paris, she married her most distinguished teacher in the former city, Henry Hudson Kitson (q.v.). From her earliest student days she showed peculiar talent for her work as a sculptor; and in Paris, under the instruction of Dagnan-Bouveret, she especially distinguished herself, and was the first American woman to receive honors in sculpture at the Paris Salon. In Paris her work is held in high regard for its simplicity, force and directness coupled with its strength of vision and beauty and precision of execution. Her sculptures have been on exhibition in almost every great exposition in the United States and in numerous art clubs.

Among her notable works are *Woods of Michigan* (two bronze figures at the Chicago Exposition); *Statue of Volunteer for Soldiers' Monument* (Newburyport, Mass.); *Soldiers' Monument* (Ashburnham, Mass.); *Massachusetts State Monument* (National Military Park, Vicksburg); *Portrait Medallions of Dodge, Elihu, Howard, Logan, Ransome, Grierson and other Generals for the Sherman Monument* (Washington); *Statue of Minute Man* (Farmington, Mass.); *Soldiers' Monument* (Walden, N. Y.); *Mother* (Bickerdyke group); *Students' Monument*; *Equestrian Statue of Victory* (Hingham 1929); *Soldiers' Monument* (Pasadena, Cal.). Her work also includes a long list of similar monuments, a list which grew in length and importance from year to year.

KITTANNING, borough, Pennsylvania, and Armstrong County seat; altitude 807 feet, on the east bank of the Allegheny River; 46 miles northeast of Pittsburgh and 76 miles south of Oil City; on the Pennsylvania, and the Pittsburgh, Shawmut and Northern railroads. Bituminous coal, oil, gas, iron, limestone and fire-clays are important mineral resources of the region. Plate glass is made here and at Ford City, three miles south of Kittanning. Clay products, tile, face and brick, refractories, pottery, and foundry products, are distinctive in Kittanning. The name, meaning "place of the great river," was that of an unusually large Indian town, ruled by Chief Jacob. In 1756 Col. John Armstrong (q.v.) killed the chief and many of his braves and destroyed their town, releasing several white captives. Permanent settlement was made by Germans and Scotch-Irish after 1796, although earlier settlement been attempted in 1791. Pop (1950) 7,750.

KITTATINNY MOUNTAINS, kit-à-tin' a range which extends from Ulster County, N. Y., south and southwest, through the north

stern part of New Jersey and into Pennsylvania. The names by which the range is generally known are in New York, the Shawangunk, New Jersey, the Kittatinny and in Pennsylvania the Blue Mountains. The range varies in height from 500 to 2,000 feet. The mountains belong to the Appalachians, and form the eastern edge of the main part of the system.

KITTATINNY PENEPLAIN. See PENEPLAIN.

KITTERY, kit'ēr-i, town, Maine, in York County; altitude 50 feet; on the Piscataqua River, opposite Portsmouth, N. H.; on the Boston and Maine Railroad. The Portsmouth Navy Yard, established 1806, occupies islands in the river.

The town, one of the oldest in New England, was settled in 1624 and incorporated as Piscataqua Plantation in 1647. It was the birthplace of Sir William Pepperell, who built the Sparhawk House (1742) and the Lady Pepperell House (1765). Fort McClary, at Kittery Point, dates from 1690. The *Ranger*, commanded by John Paul Jones, was built in Kittery shipyards in 1777. The *Kearsarge*, of Civil War fame, was also built here. Pop. (1940) 5,374; (1950) 8,088.

KITTIM, or **CHITTIM**, kit'im, a term of biblical origin for the inhabitants of the island of Cyprus, derived from the important town of Kitium or Citium, the modern Larnaca. The "isles of Kittim" are mentioned in Jeremiah 2:10, and Ezekiel 27:6. It is also the name of the third son of Javan and the brother of Elisha, Tarshish and Dodanim (Gen. 10:4).

KITTO, kit'ō, John, English Bible student: b. Plymouth, England, Dec. 4, 1804; d. Cannstadt, Stuttgart, Germany, Nov. 25, 1854. He was son of a mason at Plymouth, and after obtaining a very scanty education began to assist his father, but met with a fall which deprived him of sense of hearing. Sent to the workhouse he was presently apprenticed to a shoemaker, who treated him so cruelly that the magistrates cancelled his indentures. He therefore returned to the workhouse, where some philanthropic gentlemen became interested in him, made provision for his support and procured for him permission to read in the public library. In 1824 he became the pupil of Mr. Groves, a dentist of Exeter, who supported him and gave him a small salary for his services. In 1825 he was sent to the Missionary College at Islington for the purpose of receiving training as printer for the foreign press of the Church Missionary Society. Shortly afterward he was sent abroad by the society, but returned two years later.

In 1829 Mr. Groves organized a private missionary party which set sail for the Persian court, where from 1829-1833 Kitto acquired that familiar acquaintance with the East which he afterward employed in his writing. He had opened a school for Armenians at Baghdad, which he was forced to abandon because of the ravages of disease and floods in the neighborhood.

He founded and edited the *Journal of Sacred Literature* (1848-1853), and although a layman of the English Church received in 1844 the degree of D.D. from Giessen.

He published *The Pictorial Bible* (1835-38); *Pictorial History of Palestine* (1841); *Gallery of Scripture Engravings* (1841-1843);

Cyclopaedia of Biblical Literature (edited 1843-1845); *The Lost Senses: Deafness and Blindness* (1845); *Physical Geography of the Holy Land* (1848); *Daily Bible Illustrations: Morning Readings* (1849-1851); *Evening Readings*; and many other similar works. In his latter years he enjoyed a pension of £100 a year from the crown.

KITTON, kit'ūn, Frederic George, English author and artist: b. Norwich, May 5, 1856; d. Sept. 10, 1904. After receiving his education at a private school in Norwich, he was put under the training of W. L. Thomas, managing director of the London *Graphic*, and became an expert draftsman and wood engraver. In 1882 he added literature to his profession of book illustration.

Among his delightful appreciations of artists, illustrators and authors of his time may be mentioned *Phiz* (*Hablot Knight Browne*), a memoir (1882); *John Leech, Artist and Humorist* (1883); *Charles Dickens by Pen and Pencil* (1890); *Dickens and his Illustrators* (1898); *Charles Dickens, his Life, Writings and Personality* (1902).

KITTREDGE, kit'rij, George Lyman, American educator and author: b. Boston, Mass., Feb. 28, 1860; d. Barnstable, Mass., July 23, 1941. He was graduated in 1882 from Harvard, where he was successively instructor, assistant professor, and professor of English, 1888 to 1936. He devoted much study to English philology and literature.

He edited the *Albion Series of Anglo-Saxon and Middle English Poetry*, with J. W. Bright, 5 vols. (1900-1907); and *Complete Works of Shakespeare* (1936). His published works include *The Mother Tongue*, with Sarah Louise Arnold (1900); *Words and their Ways in English Speech*, with James B. Greenough (1901); *Old Farmer and his Almanac* (1905); *Essays on Chaucer* (1914); *Chaucer and His Poetry* (1915); *Witchcraft in Old and New England* (1929).

KITTS, Saint. See SAINT CHRISTOPHER.

KITTY HAWK, kit'i hòk', village, North Carolina, in Dare County, on a sand barrier between the Atlantic Ocean and Kitty Hawk Bay (the east end of Albermarle Sound), 32 miles southeast of Elizabeth City. Nearby is Kill Devil Hill where the Wright brothers performed their experiments and made the first sustained airplane flight in the United States in 1903. The Kill Devil Hill is now a national memorial. Pop. (1950) c.250.

KIUKIANG, ji-ōōjī-äng', city and treaty port, in the province of Kiangsi, China. The name means, in Chinese, "Nine Rivers," and the city, which is the official head of the province, is situated on the Yangtze, a short distance above the entrance to Lake Poyang. The city which, like most Chinese cities, is walled, is, within this rampart, about five miles in circumference; but the modern town has outgrown the wall and a number of important suburbs lie beyond it.

Kiukiang is connected by rail to Nanchang. The small foreign colony in 1940 included missionaries heading a few churches and schools. The mountain resort of Kuling is situated 13 miles south of Kiukiang. The town exports products gathered in from the surrounding neighborhood, but the range of its industrial and com-

mercial activities does not extend far inland. The exports consist, for the most part, of rice, tea, paper, tobacco, chinaware, hemp and other agricultural products in a lesser degree, and grass-cloth; while the greater percentage of the imports consists of cotton and woolen goods, metals, provisions and leather articles. In the past a great deal of opium was sold in the city and shipped to interior points in China. Pop. about 40,000.

KIUSHU, kyoo'shoo', or **KYUSHU**, Japan, one of five large islands of the empire; area, 16,840 square miles. It contains nine provinces but for administrative purposes is divided into seven *Ken* or prefectures. The island is mountainous and volcanic. The principal harbor is the treaty port, Nagasaki, but in 1889 five special ports of export were opened. Pop. 7,727,000.

KIVA, the sacred ceremonial chamber of the Pueblo Indians. The name is Hopi and the institution is to be found in every Hopi and other village throughout the Pueblo country. The kiva, which was generally known to the first Spanish visitors and explorers in the Pueblo territory, as *estufa* (stove or furnace) is so old an institution that its origin is lost in tradition. At one time its use was much more extensive than at present, or even within historical times, as is evidenced by the remains of kivas in the ruins of prehistoric villages in Arizona, Colorado, Utah and New Mexico. It was probably also in use at one time in parts of Mexico. Some kivas were quite large; and some of those in use in prehistoric times seem to have been larger than those existing at the present time, if we are to judge from existing remains. Castañeda, writing in 1540, tells of one which had "twelve pillars, four of which, in the centre, were each as large as two men could reach around." He is also the authority for the statement that some of the kivas that he had seen "were large enough for a game of ball." The early Spanish missionaries and other visitors to the land of the Pueblos gave the name *estufa* to the kiva because they mistook it for a sweat house, losing complete sight of its sacred character and the part it had long played in the past (and still plays) in the religious life of the Pueblos. Four hundred years ago the kivas of the Rio Grande country were much the same as they are now. They were large underground, or semi-underground, square or round structures, the roofs of which were supported by handsome pillars. About the time of the discovery of America, and for some time afterward, the young unmarried men of marriageable age lived in the kiva, and with them also lived widowers or men who had repudiated their wives. Women were forbidden, under dire penalties, to sleep in the kivas, which they could visit only to bring to their relatives food and other prime necessities. This restriction upon the visit of women is still in force in all the Pueblo villages. Women, however, are permitted to visit the kivas on the occasion of certain public festivals or other ceremonies of a religious or other tribal nature. There are also, in the Pueblo villages, though much more rarely, kivas for women. These latter may not be visited by men except under certain prescribed conditions similar to those

already indicated. These kivas of the women are also the club houses of secret religious ceremonies of a peculiarly sacred nature. The kivas were and still are the common property of the village and never belonged to one individual or set of individuals notwithstanding the fact that they are the home of secret societies. In some villages the kivas are rectangular, in others square, and in still others, circular. They were originally built in the courtyard of the village; but they are to-day usually hidden among the houses; and they are still partially or altogether under ground. One Pueblo may have from one to a dozen kivas, according to its population, wealth and interests. Even those kivas that have the walls partly above the ground have few or no openings at all in the walls, and where the openings exist, they are invariably very small, the entrance to the buildings themselves being invariably from the flat roof, which is reached by means of a ladder that can be drawn up. A second ladder connects the inside of the kiva with the roof, through a trap-door. The roof, which is very strong and thick, is generally made of well tramped earth or adobe bricks overlying beams or rushes, which are supported by the pillars already mentioned. The trap-door which is placed in the centre of the roof, also serves as a hole to permit the escape of the smoke from the fireplace of the kiva which almost invariably occupies the centre of the edifice, and consists of a shallow fire pit. The kiva floor is usually covered with smooth sandstone slabs; and around three sides of the walls run stone benches supported by adobe brick-work. Against the fourth wall is a low ceremonial platform and a ceremonial altar. Many of the kivas have the walls, or parts thereof covered with hieroglyphic paintings, symbolic in nature, and serving to remind the mask ceremonies of the main incidents in the ceremonies to be performed on certain stated occasions.

KIWANIS INTERNATIONAL, an organization of approximately 2,076 men's clubs meeting at weekly luncheons, each club having not more than two of a community's leaders in business or profession. Kiwanis Clubs render constructive service in such fields as aid to underprivileged children, work with boys and girls (as vocational guidance), and the support of law enforcement, public safety, and good citizenship. The organization's motto is "Build." The first Kiwanis Club received its charter at Detroit, Mich., 21 Jan. 1915; its name was derived from an Indian word «Kee-wanis» — «to make one's self known.» Early in 1917 Kiwanis Clubs were chartered in Canada, and at the annual convention in 1924 the official name «Kiwanis International» was adopted. Membership is about 110,000 (1940). *The Kiwanis Magazine* (a monthly) is published from national headquarters, 520 North Michigan Avenue, Chicago, Ill.

KIWI-KIWI, kē'wī-kē'wī. See **APTER**.
KIZIL-IRMAK, kiz'il-ir-māk' (the Turkish for Red River), a river known to the ancients as the Halys, the principal river of Asia Minor. Rising in the east of the peninsula, flows in a circuitous route for over 500 miles and enters the Black Sea near Sinope.

KJERULF, kš'rólf, **Halfdan**, Norwegian musical composer: b. Componist, Sept. 15, 1815; Christianity, Aug. 11, 1868. He began the study of theology; but his musical inclination was so strong and he finally gave up his theological studies and went to Leipzig to study music. He displayed a strong lyrical talent and a facility for the writing of popular songs much above the average of compositions of this class. His songs were sung in public by some of the greatest stage favorites of his day, among them Jenny Lind, Christine Nilsson, and Henriette Sontag, all singers of worldwide reputation, who made the compositions of Kjerulf almost as popular and well known as themselves. He also composed much excellent piano music. All his work shows melodic gifts and power of thought presentation. His great popularity and his real musical gifts enabled him to exercise a noteworthy influence upon the national music of his native land and to create a school of his own, of which the most brilliant pupil was Edvard Grieg.

KLADNO, klád'nō, city, Czechoslovakia, located in Bohemia, 15 miles west of Prague (Praha). It is located in the midst of a rich coal and iron ore area, and contains numerous iron and steel foundries. Pop. (1947) 40,692.

KLAGENFURT, klä'g'en-föört, city, Austria, capital of the province of Carinthia, on the Glan River 62 miles southwest of Graz. In the cathedral, built in the 16th century, is the stone on which the dukes of Carinthia sat to receive the homage of their vassals. This stone has many legends attached to it; it seems to have been originally connected with the ancient pre-Christian religious beliefs of the people of the country. The principal industries of the city are the manufacture of leather, tobacco, cloth, machinery, white lead, chemicals, shoes, and soap. Klagenfurt was the capital of the duchy of Carinthia in 880. For about 150 years after 1122 the duchy belonged to the counts of Lavant; it became part of Austria in 1335. After World War I Yugoslavia claimed the district, and by the Treaty of Saint Germain (1919) a plebiscite was held in 1920 to determine its future. On October 1, 1920, the southern zone gave a majority for Austria. This victory rendered a plebiscite in the northern zone unnecessary, and the whole district went to Austria. Pop. (1948) 65,950.

KLAIPEDA. See MEMEL.

KLAMATH, klām'āth, a name applied to several tribes of American Indians formerly living along the Klamath River in Oregon and California, but now settled on a reservation at Klamath Lake. Their present lands were given them by treaty in 1864, the reservation containing 360 square miles. The Klamaths, who now number about 700, are fairly civilized and are expert stock-raisers.

KLAMATH, lakes, Oregon, two considerable bodies of water connected by a narrow strait. Upper Klamath Lake, in southwest Klamath County, and Lower Klamath Lake (now dry, and extending into Siskiyou County, Calif.) have a combined length of about 44 miles and a maximum width of 14 miles.

KLAMATH, river, in southern Oregon and

northwest California, rises in Lake Ewauna, in Klamath County, Oreg., and flows in a southwesterly direction across the northwest extremity of California to enter the Pacific Ocean. The length is 250 miles.

KLAMATH FALLS, city, Oregon, Klamath County seat, at the southern end of Upper Klamath Lake 15 miles north of the California boundary; it is served by the Southern Pacific, the Great Northern, and the Oregon, California and Eastern railroads. Federal irrigation and power projects utilizing the storage capacity of Upper Klamath Lake have led to agricultural development in the rich Klamath Basin surrounding Klamath Falls. Potatoes, alfalfa, and grain are cultivated, and the city contains lumber mills and meat-packing plants. Settlement was made in this region in the early 1860's around a site called Linkville. Municipal government in Klamath Falls is vested in a mayor and council. Klamath Indian Reservation and the Klamath Wild Life Reservation are in the neighborhood. Klamath Falls is also a popular tourist resort. Pop. (1940) 16,497; (1950) 15,875.

KLANG, kläng, town, Federation of Malaya, located in the state of Selangor, on the Klang River 5 miles from its mouth, it is served by the branch railway line between Kuala Lumpur and Port Swettenham. Coffee estates in the vicinity have given place to large rubber plantations. Klang was, in 1901, the first town in the Malay Peninsula to be thoroughly drained, successfully testing the theory that the incidence of malaria could thereby be greatly reduced. Pop. (1947) 33,506.

KLAPKA, klöp'kő, **György**, Hungarian revolutionary soldier: b. Temesvár (Timișoara), April 7, 1820; d. Budapest, May 17, 1892. He rose to high rank in the Austrian Army, but with outbreak of the Hungarian national rising in 1848 he joined his countrymen. As a staff officer and then as general he did brilliant work. He fought at the Battle of Kápolna and elsewhere in 1849, and distinguished himself especially by his defense of Komárno. Compelled to capitulate before the year was out, he traveled abroad and then settled in Switzerland. He cooperated with Lajos Kossuth (q.v.) in organizing a Hungarian legion in Italy during the Austro-Sardinian War of 1859; and as a Prussian major general in the war of 1866 he organized a Hungarian corps in Silesia. Following the amnesty in 1867 he was permitted to return to Hungary, where he was elected to the Diet.

KLAPROTH, klāp'rōt, **Martin Heinrich**, German chemist: b. Wernigerode, Dec. 1, 1743; d. Berlin, Jan. 1, 1817. His analyses of minerals were carried to a perfection and exactness never before obtained. He discovered the elements uranium, titanium, and zirconium. From 1810 he was professor of chemistry at the University of Berlin. His son, HEINRICH JULIUS KLAUROTH (1783-1835), was a noted Orientalist and Asiatic traveler.

KLATOVY, klát'vī, or **KLATTAU**, klāt'-ou, town, Czechoslovakia, 70 miles southwest of Prague (Praha). It has a fine 13th-century church. The neighborhood is noted as a rose-growing region. Pop. (1930) 14,088.

KLAUBER, kló'bér, **Adolph**, American theatrical producer: b. Louisville, Ky., April 29, 1879; d. there, Dec. 7, 1933. He studied at the University of Virginia during 1896-98, and in 1900, after brief experience of acting with the Empire Theatre Company, he entered journalism, becoming a reporter for the New York *Commercial Advertiser*. In 1901 he joined the reportorial staff of the New York *Tribune*, and three years later he became Sunday editor of the New York *Times*. He was made dramatic critic of the latter newspaper in 1906, a position he continued to fill for the next 12 years. Going into theatrical production, in 1920 he presented *Emperor Jones*, the popular play by Eugene (Gladstone) O'Neill (q.v.). In 1908 he married Jane Cowl (b. 1884), the successful young actress, and he starred her in many leading plays, including *Lilac Time*, *Smilin' Through*, *Romeo and Juliet*, *Pelleas and Melisande*, and *Antony and Cleopatra*.

KLAUSENBURG, former name of Cluj (q.v.).

KLAUSTHAL. See CLAUSTHAL.

KLAW, kló, **Marc**, American theatrical manager: b. Paducah, Ky., May 29, 1858; d. Bracken Fell, England, June 14, 1936. He graduated in law, and was admitted to the bar, but after 1881 engaged in theatrical management. With Abraham Lincoln Erlanger (1860-1930) he formed in 1896 the Klaw and Erlanger theatrical syndicate, which had a most successful career for many years. He secured control of many important theaters throughout the United States, and he introduced numerous novel features into stage life. During the First World War he headed the entertainment services in military training camps.

KLEBER, klá'bár, **Jean Baptiste**, French general: b. Strasbourg, March 9, 1753; d. Cairo, Egypt, June 14, 1800. He first studied architecture in Paris, then entered the military school at Munich; and having joined the Revolutionary army, in 1793 he was appointed brigadier general and sent to La Vendée. He distinguished himself at Fleurus and the siege of Mainz (1794-95); commanded the army of the Rhine and Moselle (1795); defeated the Prince of Würtemberg; took Maestricht and Frankfurt; and subsequently defeated Prince Charles. Under the Directory he had command of the French armies. Bonaparte, in 1798, entrusted the command of the army in Egypt to Kléber; deeming resistance useless, in 1799 he concluded the convention of El Arish with the British, by which the French were to be conveyed home with arms and baggage. This being repudiated by the British admiral, Viscount Keith (q.v.), Kléber determined upon the resubjugation of the country, in which he successfully engaged when he was assassinated by a fanatic. A monument to him was erected at Strasbourg.

KLEBS, klaps, **Edwin**, German pathologist: b. Königsberg, Feb. 6, 1834; d. Berne, Switzerland, Oct. 23, 1913. In 1861 he became assistant to Rudolf Virchow (q.v.) at the Berlin Pathological Institute. He resigned this post in 1866 to take the professorship of pathological anatomy at Berne University, and he was appointed to like chairs at Würzburg in 1871 and Prague in 1873. In 1882 he went to the University of

Zurich as professor of pathology; there, the following year, he was the first to describe the bacillus which caused diphtheria; after it had been isolated by Friedrich August Johanne Loeffler (q.v.), it was known as the Klebs-Loeffler bacillus. He assumed charge of a bacteriological laboratory at Asheville, N.C., in 1895 and the following year he was appointed professor of pathology at Rush Medical College, Chicago, Ill., where he stayed for a brief period. Besides the work on the diphtheria bacillus, he did important research on the bacteriology of anthrax, gunshot wounds, malaria, syphilis, and tuberculosis.

KLEIN, klin, **Charles**, Anglo-American dramatist: b. London, England, Jan. 7, 1867; d. May 7, 1915. Educated at North London College, he emigrated to New York City in 1883 shortly after graduation, and there he became play censor for Charles Frohman (q.v.), a position that gave him immediate and helpful contact with the theater. His constant exercise of judgment on plays presented to Frohman gave Klein a deep sense of the prime requisites of a good play. He frequently helped to fix up and to recast the plays presented; and from this it was only a step to the production of plays on his own account. His dramatic works showed considerable power and no lack of original situations, and some of them proved notable successes, among the latter being *The Auctioneer*, *The Music Master*, and *The Lion and the Mouse*. Among his other dramas were *The District Attorney*, *The Third Degree*, and *The Money-makers*.

KLEIN, Felix, German mathematician: b. Düsseldorf, April 25, 1849; d. Göttingen, June 22, 1925. Educated at Bonn, he became assistant in the physical institute in 1866, and was appointed lecturer at Göttingen in 1871 and professor at Erlangen in 1872; he held chairs from 1875 in the Technical High School of Munich, from 1880 at Leipzig, and from 1886 at Göttingen. In 1893 he represented Göttingen at the World's Columbian Exposition at Chicago. He exercised large influence on American mathematics, having taught many instructors in institutions in the United States. In 1875 he became one of the editors of the *Mathematischen Annalen*, and in 1898 of the *Encyclopädie der mathematischen Wissenschaften*. In 1897 he collaborated with Fricke in the publication of *Vorlesungen über die Theorie der automorphen Funktionen*. His other important works included *Vorlesungen über das Ikosaeder und die Auflösung der Gleichungen vom fünften Grad* (1884); *Ueber lineare Differentialgleichungen der 2. Ordnung* (1894); *Theorie des Kreisels*, 2 vols. (1897-98); *Vorlesungen über die Theorie der elliptischen Modulfunktionen* (1890-1912); *Vorträge über ausgewählte Fragen der Elementargeometrie* (1895). English translations of some of his works were entitled: *Famous Problems of Elementary Geometry*; *Erlangen Program: Mathematical Theory of the Top*; *Lectures on the Isocahedron*. His *Vorlesungen über die Entwicklung der Mathematik in 19 Jahrhundert* was published posthumously (1926-27).

KLEIN, Félix, French clergyman and writer: b. Château-Chinon, department of Nièvre, July 12, 1862. Educated at the seminary of Meaux and Saint Sulpice, the Institut Catho-

de Paris and the Sorbonne, he became professor of philosophy at the École Saint Etienne at Caen in 1890 and in 1893 was appointed professor of French literature at the Institut Catholique.

A tolerant, broadminded ecclesiastic of democratic sentiments, his preface to a French translation of a life of Father Isaac Thomas Eckker (q.v.) in 1897 laid him open to the charge "Americanism." The papal interdiction of that year in 1899 led the abbé to retract and withdraw the book. In 1904 he visited the United States and Canada. He was received by President Theodore Roosevelt, and later published a record of his travels entitled *Au pays de la vie intense in the Land of the Strenuous Life*, (1905) and dedicated to Mr. Roosevelt. In 1907 he made a lecture tour through the United States that furnished materials for *America of Tomorrow* (1910). During World War I the Abbé Klein was attached as chaplain to the American War Hospital in Paris. In this capacity he kept a diary published in 1915 as *Diary of a French Army Chaplain*. It is a simple, profoundly moving account of what war means to the wounded combatants.

KLEIST, klist, **Ewald Christian von**, German lyric poet: b. Zebelin, near Köslin, Germany (now Koszalin, Poland), March 7, 1715; d. Frankfurt on the Oder, Aug. 24, 1759. His early lyrics were of anacreontic type. His most famous work is the fragment *Der Frühling* (1749), a nature poem. He also wrote *Gedichte* (1756), *Ode an die russische Armee* (1757), *Cissides und Paches*, a short epic poem, (1759), and other odes, lyrics, and hymns.

KLEIST, (Bernd) **Heinrich (Wilhelm) von**, German dramatist and novelist: b. Frankfurt (near Berlin), Oct. 18, 1777; d. Wannsee (near Potsdam), Nov. 21, 1811. Scion of a distinguished military family, Kleist served seven years in the Russian army, abandoning it to devote himself to study. Kantian philosophy convinced him of the unreliability of knowledge, vitiated his rationalistic *Weltanschauung*, and liberated his poetic potentialities. His first play, *Die Familie Schrotenstein* (1803), is a tragedy of errors and ill-tarred love. His Rousseauistic plan of "simple life" in Switzerland frustrated by political developments, he returned to Germany, where Christoph Martin Wieland befriended him and greatly admired *Robert Guiskard*, a grandiose attempt at a new and superlative dramatic style at which Kleist labored heroically but which remained a magnificent torso.

While in Prussian civil service at Königsberg (1805-1807), Kleist completed *Amphitryon*, grafting a metaphysical tragedy upon Molière's comedy, and *Der zerbrochene Krug*, one of the greatest of German comedies. *Penthesilea*, the tragedy of the mythical Amazon queen, personifies the splendor and agony of the poet's own soul; it is the most brilliant and daring of his dramas.

Returning to Berlin, then in French hands, Kleist was taken for a spy and imprisoned for six months in France. Released, he settled in Dresden (1807-1809), publishing there an admirable but shortlived literary periodical, *Phöbus* (1808), commenting *Michael Kohlhaas*, perhaps the greatest of German "Novellen," and writing other tales of great originality and realistic power. In the medieval-chivalric *Das Käthchen von Heilbronn* produced his most Romantic and popular play.

Deeply aroused by Napoleon's subjugation of Germany, Kleist wrote *Die Hermannsschlacht*, using the parallel of the Battle of the Teutoburg Forest (A.D. 9) to dramatize the humiliating conditions of his own time and inflame his countrymen with his passionate hatred of the French invader. The same purpose inspired his projected weekly *Germania* and other writings of this period. But it proved impossible to launch *Germania* or produce *Die Hermannsschlacht*, and the patriot was condemned to silence.

After a physical breakdown such as accompanied other crises of his harassed life, Kleist reappeared in Berlin, where he wrote his last and finest play, *Prinz Friedrich von Homburg* (1810), the greatest manifesto of Prussian patriotism and moreover a work of supreme dramatic excellence and human import. In 1810-1811 Kleist published the *Berliner Abendblätter*, Berlin's earliest daily newspaper; brilliantly successful at first, it was throttled by governmental censorship. Despairing of his country's plight and his own ineffectiveness (of his plays, only three had been performed, none with success; indeed, in Weimar, *Der zerbrochene Krug*, chiefly through Goethe's fault, experienced a scandalous fiasco), disowned by his family and reduced to poverty, Kleist shot himself. Ten years afterward, Kleist's posthumous works were published, and the ardent *Hermannsschlacht* and *Homburg* first came to light.

Isolated and frustrated during his lifetime, Kleist was not recognized in his true greatness until practically a century after his death. Today, many rank him above Schiller as Germany's greatest dramatist. While sharing traits with both German Classicism and Romanticism, Kleist's work in drama and narrative is marked by an objective and psychological realism far ahead of his time. His "Novellen" opened a new era in which this genre reached its peak in Germany. His lyric poetry is undistinguished, except for some stirring patriotic songs.

Bibliography.—The Kleist-Gesellschaft, founded 1921, issued until 1937 *Jahrbücher* with invaluable bibliography. Best scholarly edition ed. Erich Schmidt and others, 5 vols. (Leipzig 1904-05); a revised edition of this, ed. Georg Minde-Pouet, 7 vols. (Leipzig 1937), remained unfinished. There is a voluminous literature.

WALTER SILZ,
Columbia University.

KLEMPERER, Otto, German orchestra conductor: b. Breslau, Germany, May 14, 1885. His career as a conductor started at the German Opera in Prague (1907). He was director of orchestras at Hamburg (1910-1914), Strasbourg (1914-1917), Cologne (1917-1924), and Wiesbaden (1924-1927). In the latter year he became musical director at the Kroll Opera in Berlin, where he introduced many new works. Soon after winning the Goethe Medal in 1933 he was forced to leave Germany, going to the United States and becoming conductor of the Symphony Orchestra at Los Angeles, a post he held until 1940. He was guest conductor of leading orchestras in New York, London, and Paris, and in 1946 returned to Europe as conductor of the Budapest Orchestra.

KLENGEL, August Alexander, German composer: b. Dresden, Germany, Jan. 27, 1783; d. there, Nov. 22, 1852. After studying art in his native city he went to Saint Petersburg, where he spent six years (1805-1811). Then he spent two years in Paris; after which he visited England and Italy, improving his execution and his knowl-

edge of his art. On his return to his native city in 1816 he became organist in the chief Roman Catholic church there. His music in the church soon became a feature of the musical life of the city; and many people not of the Catholic faith went to listen to his playing. He was as accomplished a pianist as organist; but his ability as a composer to-day outshines his work as a performer on these instruments. He wrote good salon music and numerous notable fugues and canons, among a multiplicity of other work, all of which is well done.

KLEPHTS, *klēfts* (Greek, "thieves"), Greek bandits who, after the conquest of Greece by the Turks in the 15th century, kept themselves free in the mountains of northern Greece and Macedonia, and carried on a perpetual war against Turkish rule, considering everything belonging to a Turk a lawful prize. During the war of independence these Klephts furnished the Greeks with some of their best soldiers and leaders. Whole tribes, as the Suliotes and Chimariots in Epirus, and the Sphakioti in Crete, are to be numbered among them. They developed a considerable literature of their own, especially in the form of ballads, usually composed in the vernacular. The gradual development of the country after its independence had been established resulted in the disappearance of this picturesque class. See GREECE.

KLEPTOMANIA (from Greek *κλέπτειν*, steal, and *μανία*, madness), a mania for stealing, a propensity often regarded as being irresistible and involving a kind of moral insanity. It is frequently pleaded in law courts as an excuse for theft, although the act constitutes a legal offense. See INSANITY.

KLESEL, Melchior. See KHLESL.

KLIKITAT, a shapatian tribe of North American Indians who once made their home in Klikitat and Skamania Counties, in the State of Washington. They are closely related linguistically to the Yakima who were their neighbors on the east. The Klikitat seem to have never, since they have come within the knowledge of the white man, been very numerous. Lewis and Clark, who visited them in 1805, placed their number at 700. This may not, however, have included all those speaking the same tongue. Between 1820 and 1830 they crossed the Columbia river and dispossessed the cognate tribes then occupying the Willamette Valley; but they were driven back over the river to their former habitat. The Klikitat were among the greatest traders of the western United States and Canada. They carried on an extensive trade, or exchange of commodities between the coast tribes and those living to the east, north and south of them. They were among the first of the western Indian tribes to cede their lands to the United States, which they did by the Yakima treaty (9 June 1855). In the more than 60 years which have passed since then, they have become so mixed with other Indian stocks and tribes that they are now undistinguishable as a separate race, though their descendants are still, for the most part, to be found on the Yakima reservation, Washington. It is, therefore, impossible to estimate their present numerical strength. The word Klikitat means, in Chinookan, "beyond or on the other side of" and was used with

reference to the Cascade mountains, which lay between the Klikitats and the coast tribes.

KLINGER, *klīng'ēr*, **Friedrich Maximilian von**, German dramatist, novelist and essayist: b. Frankfort-on-the-Main, 1752; d. 1831. By profession he was a soldier, though he early showed his literary tendencies when, as a student at Giessen, he was awarded a special prize for his tragedy 'Die Zwillinge' which was published in 1775. He was a man of considerable force of character; and he made rapid advancement in his military life just as he made a strong impression on the literature of his day. In 1776, the year following his literary début, he published a drama entitled 'Sturm und Drang' which was destined not only to profoundly influence the German literary tendencies of his day but to give its name to one of the most intensive literary movements in German literature. Klinger, after several years' military service in Germany, went to Saint Petersburg and there entered the Russian army where he remained most of his life, though in more or less close contact with the leaders of the literary movement in Germany. He rose, through gradual and successive promotions, to the rank of lieutenant-general, and he was held in high esteem by the Russian military authorities. In the army, too, he found some congenial literary spirits over whom he exercised considerable influence. Klinger was one of the first novelists in Germany who worked toward a certain definite purpose ethical in its tendencies; and this in itself attracted many literary men to his standard and gained many readers and critics for his works. Unfortunately his literary taste falls generally below his inventiveness; and so his works are constantly offending through the crudeness of their presentations and their lack of literary discrimination and good form. But the vehemence with which he presented his opinions, more or less novel, and therefore attractive in his day, outbalanced all the shortcomings of their author; gained for him a very extensive following and gave him an influence over literary thought and form of expression of his day out of all proportion to the real value and importance of his literary work. Yet, in the midst of much that offends good taste and of presentations and characterizations that are untrue to life, there is also much in Klinger's work that gave inspiration to the writers of his age and that left their impression indelibly imprinted upon the literary movement not only in Germany but upon that of most of Europe; for he was, in some senses, the most aggressive of the leaders of the "Storm and Stress" period in German literature. His work was very considerable and most of his writings have appeared in various editions. Among his works most worthy of attention for their own intrinsic merits and for the influence they have had on German literary thought are, in addition to those already mentioned, 'Faustus Leben, Thaten und Hölle fahrt'; 'Der Weltmann und der Dichter'; 'Betrachtungen und Gedanken über verschiedene Gegenstände der Welt und der Literatur'; and his dramas, all of which are interesting as reflecting the thought and the literary influences of the age in which he was active at work. A complete edition of his works

lished at Stuttgart in 1841, and a second edition, more or less selected in character, appeared in the same city in 1878-80 (8 vols.). Consult Erdmann, 'Klingers dramatische Dichtungen' (1877); Kürschner, 'Deutsche Nationalliteratur' (Vol. I, which contains 'Stünmer and Dränger,' Stuttgart 1883); Prosch, 'Klingers philosophische Romane' (Vienna 1883); Schmidt, 'Lenz und Klinger' (Berlin 1878). To these might be added a study of his life and work by Rieger (2 vols., Darmstadt 1880-96). This is very exhaustive, though not always reliable. It has been translated into French.

KLINGER, klīng'ēr, **Max**, German painter, sculptor and architect: b. Leipzig, 18 Feb. 1857. He is a pupil of Gussow at Karlsruhe and later at Berlin; studied also at the Berlin Academy; was active at Rome in 1888-92; and from 1893 at Leipzig. Of unusual versatility he was at first chiefly an etcher (1879-86), perhaps the best of his work in this line being the 'Brahmshantasi' (1894), deriving their subjects from various works of that composer. Then he directed his attention to painting in oils, and executed heroic canvases of 'The Crucifixion' (1890), now in the Hanover Museum, and 'Christ on Olympus' (1897) at Vienna. In 1894 he began to devote himself to polychromatic sculpture and one of the best of his plastic works is his statue of Beethoven (1902, Leipzig Museum), in which onyx, bronze and differently colored marbles are combined. Later works include 'The Drama' (1904), a colossal marble group in the Albertinum, Dresden; 'The Athlete,' a colossal bronze at Leipzig, and the striking bust of Nietzsche at Weimar. Klinger was the recipient of numerous awards, academic and otherwise, and honors in recognition of his art. He published 'Malerei und Zeichnung' (3d ed., 1909). He died 4 July 1920.

KLIPSPRINGER, a small, robust antelope (*Oreotragus saltator*), about equal in size to the chamois, and resembling it in habits, found in the mountainous districts of South Africa. It is yellowish-gray, and the hair is long and makes a rough fur. The flesh of the klipspringer is particularly esteemed; the hair is also valued for stuffing saddles; and it has therefore become rare in localities where it was once common. The pinnacles and precipices in which it delights make hunting it with dogs impossible, but to get within rifle shot of it is not difficult. Many interesting habits are given by writers on South African zoology and natural history.

KLÖDEN, klør'dën, **Karl Friedrich von**, German educator and geographer: b. Berlin, 1796; d. 1856. He received his education while apprenticed to a goldsmith; became Potsdam normal school director in 1817, and director, seven years later, in a Berlin commercial school. His chief geographical works are 'Landeskunde von Palästina' (1816); 'Grundrissen zu einer neuen Theorie der Erdgestaltung' (1824). Prominent among his historical works are 'Ueber die Entstehung, das Alter und die früheste geschichte der Städte Berlin und Köln' (1839); 'Lebens und Regierungsgeschichte Friedrich Wilhelms III' (1840); 'Die Onitzows und ihre Zeit' (3d ed., 1889). 'Jugend Erinnerungen Karl Fried-

richs von Klöden,' an autobiography (Leipzig 1874).

KLOET, a volcano on the island of Java. Although among the smaller of the numerous volcanoes there, it came prominently into notice on account of its eruption in May 1901, in connection with which, besides its destructive effects, there were peculiar atmospheric phenomena.

KLONDIKE, The, a famous gold-bearing stream which enters the Yukon, the principal river of the Yukon Territory, Canada, 45 miles below the mouth of Sixty Mile Creek. In recent years the term Klondike is applied to the region surrounding the river and its tributaries, which lies between Alaska and the British possessions. As early as 1862 gold was discovered in Alaska, but no special notice was taken of it; 13 years later gold was found at the head of the Stikine River. In 1879, Juneau, a Frenchman, discovered gold in a creek which they named Gold Creek, and at the mouth of this creek founded a town first called Harrisburg and later Juneau. In 1884 a rich find was reported on Stewart River, in the Yukon district, two years afterward gold was discovered on Forty-mile River close to the international boundary.

It was not till 1897 that the wonderful riches of the Klondike region were made known through George Carmack, who went from Illinois to Alaska in 1890 and there married an Indian squaw. On 16 Aug. 1896 he discovered coarse gold on Rabbit Creek, afterward called Bonanza Creek; the discovery got wind, and immediately all the people in the neighborhood made a rush for Bonanza Creek, which was staked from source to mouth. But it was not till the following summer that the outside world knew of the discovery, when a steamer reached Seattle with a load of gold from the Klondike. In the following year there was a great rush over the Chilkoot and White Passes and down the Yukon River to the district, no fewer than 28,000 persons entering the Territory. Dawson City, the first hut in which was built in September 1896, was founded, and in six months it had 500 houses, in 1901 had a population of 9,142, which had declined in 1921 to 975. Towns were also built at Granville and Grand Forks, and at White Horse at the northern terminus of the White Horse Railway.

The Klondike is not far from the Arctic regions, and for seven months of the year intense cold prevails, varied by furious snow storms which begin in September and occur at intervals till May. The mean temperature at Dawson City is minus 24° in January and 60° in July. By 20 October ice is formed over all the rivers, and the gravel deposits, from which the gold is mined, remain frozen winter and summer alike, and are covered by layers, from two feet to as much as 100 in depth of vegetable mold or "muck," also frozen into a solid mass. The conditions of gold mining in this region are therefore unique. The gravel must be thawed before it can be raised; and in the early days of mining in the Klondike, two methods, "ground-slucing and shovelling-in," and "drifting," were employed, the cost of mining running at from \$10 to \$25 a cubic yard. Steam-thawing was later introduced by McGillivray, a Californian mining engineer;

in some mines pulsometers are used to thaw the pay-dirt in the drifts; the mechanical movement of pay-dirt is accomplished by a self-dumping cable tram called the "Dawson carrier," which carries a bucket with a capacity of from 9 to 11 cubic feet; and gold-washing and separating plant has been installed. Many rich claims have been worked; one, the Eldorado paystreak, four miles in length, yielded gold of the value of \$25,000,000, or \$1,200 a running foot for the bottom of the valley. The total value of production in 1887 was \$70,000, the highest yield (1900) being valued at \$22,000,000. There has since been a decline in value, that for 1929 showing \$742,000. From 1885 to 1929 (inclusive) the total production was valued at \$176,000,000. See ALASKA.

KLONOWICZ, klō'no'vich, **Sebastian-Fabian**, Polish satirical poet: b. Sulmierzyce, 1551; d. Lublin, 1608. Studied at Cracow University, acquired the Latin name Acernus and established himself at Lublin, where he became burgomaster and president of the civil tribunal of the Jewish community. Of modest and virtuous character, his wife was a dissipated, vicious woman who brought him to poverty, obliging him in age to take refuge in the city retreat as an object of Catholic charity. He wrote 'Victoria deorum,' a poem concerning the ills of the poor at the hands of the rich; 'Roxolania' (1584), poem descriptive of Red Russia (Galicia); 'Flis, or the boatman navigating on the Vistula from Cracow to Danzig' (1600); 'Worek Judaszow,' or Judas purse, decrying the wicked acquisitions of the rich (1600); 'Memorial of the Dukes and Kings of Poland' (1600, 1620 and 1639). The Jesuits, against whom Klonowicz leveled so many of his satires and who helped him when in misfortune, burned all his works they could acquire, and some have become very rare.

KLOPP, klöp, **Onno**, German historian: b. Leer, East Friesland, 9 Oct. 1822; d. 1903. He studied at Bonn, Berlin and Göttingen (1841-45), and taught at Osnabrück Gymnasium (1845-58). He shared as intimate friend the exile of King George V of Hanover (1866). Becoming Roman Catholic (1873) his aversion to the Prussians increased and is distinctly marked in his writings. Later he went to Austria. He wrote 'Die Geschichte Ostfrieslands' (1854-81), 'König Friedrich II von Preussen und die deutsche Nation' (1860; 2d ed., 1867); 'Der König Friedrich II von Preussen und seine Politik' (1861); 'Tilly im Dreissigjährigen Kriege' (1861); 'Der Fall des Hauses Stuart' (14 vols., 1875-83); 'Das Jahr 1683' (1882); 'König Georg V' (1878); 'Der Dreissigjährige Krieg bis zum Tode Gustav Adolfs, 1632' (1891-96). He also edited the correspondence of Leopold I with Father Marco d'Aviano (1888).

KLOPSTOCK, klöp'stöck, **Friedrich Gottlieb**, German poet: b. Quedlinburg, Prussia, 2 July 1724; d. Hamburg, 14 March 1803. He studied at the school in his native town and at Schulpforta, and later pursued the course in theology at Jena and Leipzig. He is widely famous as the author of the sacred epic, 'Der Messias,' the first three cantos of which were published in 1748. They are in the Miltonic style, and excited general attention. In consequence, Klopstock was invited to Copenhagen

by the minister Bernstoff, and offered a small pension. In 1764 he wrote his drama 'Hermanns Schlacht' (Battle of Arminius), and in 1771 left Copenhagen for Hamburg, under the character of Danish secretary of legation and counsellor of the margrave of Baden. In Hamburg he finished his 'Messias' (1773). He also wrote 'Die Gelehrtenrepublik' (The Scholar's Republic) (1744), his chief work in prose; 'Geistliche Lieder' (1758); 'Oden' (1771); and several dramas, in addition to the one already named. His reputation did not survive, but he is still known for his great service to German literature in assisting to free it from foreign, especially French, influence. His collected works were published in 12 volumes at Leipzig 1798-1817. A fine edition by Muncker appeared in 4 volumes, 1887 (See MESSIAH, THE). Consult Lyon, 'Ueber Klopstocks Verhältniss zu Goethe' (1879); Lappenberg, 'Briefe von und an Klopstock' (1867); Häbler, 'Milton und Klopstock' (1893).

KLOSS, klös, **Georg Franz Burkhard**, German physician and bibliophile: b. Frankfurt, 31 July 1787; d. there, 10 Feb. 1854. He was the son of a doctor and studied medicine in Heidelberg and Göttingen, but soon turned to book collecting, and gathered a fine collection of old manuscripts, purchasing entire libraries of monasteries. Obtaining Masonic degrees, he started collecting books referring to Freemasonry. In 1844 appeared, at Frankfurt, a bibliography of the Masonic works in his collection, another in 1846. His work 'Die Freimaurerei in ihrer wahren Bedeutung aus den alten und ächten Urkunden' reached its second edition in 1854; he published (1848) 'Geschichte der Freimaurerei in England, Irland und Schottland,' then 'Geschichte der Freimaurerei in Frankreich' (1852-53). His magnificent library of Masonic works is now at The Hague.

KLOSTERMANN, klös'tér-man, **August Heinrich**, German Lutheran theologian: b. Steinhude, Schaumburg-Lippe, 16 May 1837. He studied at Erlangen University and Berlin (1855-58), was assistant pastor in Buckeburg (1859-64), and was repetent and private teacher (*docent*) at Göttingen (1864-68) and has since been professor of Old Testament exegesis at Kiel. He wrote 'Vindicæ Lucanæ' (Göttingen 1866); 'Das Markus evangelium nach seinem Quellenwerthe für die evangelische geschichte' (1867); 'Untersuchungen zur alttestamentlichen Theologie' (Gotha 1868); 'Ueber deutsche Art bei Martin Luther' (1884); 'Die Bücher Samuelis und der Könige ausgelegt' (Nordlingen 1887); 'Zur Theorie der biblischen Weissagung und zur Charakteristik des Hebräerbriefes' (1889); 'Deuteriojesaja, hebräisch und deutsch' (Munich 1893); 'Schulwesen sin alten Israel' (1908). Died, 1915.

KLOTZ, klöts, **Christian Adolf**, German critic and Latin scholar: b. Bishopswe Nov. 1738; d. Halle, 31 Dec. 1771. He was at Leipzig and Jena; became professor of philosophy at Göttingen 1763; and professor of oratory at Halle 1765. He proved expert in philology through his Latin lectured in 'Opuscula poetica' (1766); 'gabe des Tyrtäos' (1764); numerous treatises such as 'Opuscula varii argumenti' (1766); 'Opuscula philologica et oratoria' (1772). He

ot into controversy with the *Allgemeinen Bibliothek*, to which he had contributed, and by his *Über den Nutzen und Gebrauch der alten gemauerten Steine* (1768), criticizing Gotthold Ephraim Lessing's *Laokoon*, he brought forth his poet's response in the *Briefe antiquarischen Inhalts* (1768–1769). His disputes were carried on in *Acta Literaria* and *Deutschen Bibliothek der schönen Wissenschaften* (1767–1772); *Genus Saeculi* (1760) had a satirical purpose, as also had his *Mores Eruditorum* and *Opuscula Latina* (1760).

KLOTZ, Louis Lucien, French statesman: b. Paris, Jan. 11, 1868; d. there, June 15, 1930. He was of Alsatian descent. In 1888 he founded the *Le Franco-Russe*, and in 1895 became editor of the *L'oltair*; and in 1895 he established the *français Quotidien*. He made a special study of financial affairs, customs, and the state contracts with the railway companies. After two unsuccessful attempts, in 1898 he was elected as a Radical Socialist to the French legislature. Subsequently he held the portfolio of minister of finance in several administrations. With outbreak of World War I in 1914 he was made head of the press department of the Ministry of War, and when Georges Clemenceau (q.v.) again became premier in 1917 he returned to the Cabinet as finance minister. In 1919 he was appointed one of the French delegates to the Paris Peace Conference. He was largely responsible for the financial clauses of the Treaty of Versailles.

KLOTZ, or KLOZ, Mathias, Bavarian violinmaker: b. Mittenwald, June 11, 1653; d. there Aug. 16, 1743. The head of a celebrated family of violinmakers, he is believed to have been a pupil of Nicolò Amati (see AMATI) at Cremona, Italy. He was active in Padua before returning Mittenwald in 1683. His violins were much in the manner of those of Jakob Stainer, or Steiner (q.v.), so that only the less metallic tone of Klotz' instruments offers a distinguishing feature. He taught the craft of violinmaking to his three sons: Georg (b. 1687), Sebastian (b. 1696), and Johann Karl (b. 1709); Sebastian was regarded as the finest violinmaker.

KLOTZ, Otto Julius, Canadian civil engineer and astronomer: b. Preston, Ontario, March 31, 1852; d. Ottawa, Dec. 28, 1923. In 1879 he joined the staff of the topographical surveys division of the Canadian Department of the Interior. Employed principally in the northwest, he was largely responsible for establishing geographic points of reference in British Columbia and northwestern Canada. During 1893–1894 he was engaged in the survey of the boundary of Alaska. From 1917 until the close of his life he served as director of the Dominion Observatory, at Ottawa. His published writings included numerous papers on astronomy, geodesy, and terrestrial magnetism.

KLUANE, klōō-ān', lake, Canada, largest body of water in the Yukon Territory, is situated on the northern slope of the Saint Elias Range; the area is 184 square miles. The Kluane River, which issues from the lake, discharges into the White River. The Alaska Highway skirts the north and west shores of the lake. Kluane is a post on the highway at the southern end of the lake.

KLUANG, klōō-äng', town, Federation of Malaya, in the state of Johore, on the Endau River near the east coast of the Malay Peninsula. The coconut industry is of importance. Pop. 6,473.

KLÜBER, klü'bër, Johann Ludwig, German law professor, author; and state official: b. Tamm, near Fulda, Nov. 10, 1762; d. Frankfurt, Feb. 16, 1837. He became professor of law at the University of Erlangen (1786), privat-referendar, state and cabinet counsel, in Karlsruhe (1804), and professor of law at Heidelberg (1807). During 1814–1815 he attended the Congress of Vienna, concerning which he wrote *Acten des Wiener Kongresses in den Jahren 1814 und 1815* (8 vols.); an enlarged edition was published 1830 under the title of *Quellensammlung zu dem öffentlichen Rechte des Deutschen Bundes*. Under Prince Karl August von Hardenberg, chancellor of state, he became privy councillor in the Ministry of Foreign Affairs (1817) and, under its auspices, he assisted in the congress at Aix-la-Chapelle (1818), and in political negotiations in Frankfurt and Saint Petersburg. In 1822 he published the second edition of his *Öffentliche Rechte des Deutschen Bundes*, which brought on political persecution, his resignation, and retirement to Frankfurt, where he died. Other prominent works are *Staatsrecht des Rheinbundes* (1808); *Die Selbständigkeit des Richteramtes und die Unabhängigkeit seiner Urteile in Rechtsprechen* (1832); *Pragmatische Geschichte der nationalen und politischen Wiedergeburt Griechenlandes* (1835).

KLUCK, klōōk, Alexander von, German army officer: b. Münster, Westphalia, May 20, 1846; d. Berlin, Oct. 19, 1934. Entering the army in 1865, he fought in the Austro-Prussian War of 1866 and in the Franco-Prussian War of 1870–1871. He reached the rank of general of infantry in 1906, and two years later he was ennobled. With outbreak of World War I in 1914 he was given command of the First Army. After receiving the surrender of Brussels he drove the British from Mons, took Tournai and Maubeuge, and continued his advance southwest in the direction of Paris. His swing to the southeast at this critical juncture exposed his left flank, which made possible an attack by the French 6th Army under Michel Joseph Maunoury. This brought about his defeat at the Battle of the Marne and forced his retreat to the Aisne. In March 1915, while inspecting an advanced position, he was wounded; and in October 1916 he was placed on the retired list. He published an account of his major campaign entitled *Der Marsch auf Paris und die Schlacht am Ourcq 1914* (1920).

KLUGE, klōō'gë, Friedrich, German philologist and educator: b. Cologne, Germany, June 21, 1856; d. Freiburg, May 21, 1926. A student of philology at Leipzig, Strasbourg, and Freiburg, he was professor of German language and literature at Jena (1884–1893), then at Freiburg. Author of numerous works on philology, Kluge's special fields were Germanic, Gothic, and English etymology and the history of language. Among his best known works are *Etymologisches Wörterbuch der deutschen Sprache* (1881; 16th ed. 1953); *Von Luther bis Lessing* (1888; 5th ed. 1918); *Unser Deutsch* (1907; 5th ed. 1929); and *Deutsche Sprachgeschichte* (1921; 2d ed. 1924).

KLUGE, Hans Günther von, German field marshal: b. Posen, Germany, Oct. 3, 1882; d. France, Aug. 19, 1944. An artilleryman, he served as a staff officer and also in command of troops during World War I, and held various commands in the reorganized army from 1934. At the outset of World War II he commanded the Fourth German Army in the Polish, Western, and Eastern campaigns until December 1941, then the center group of armies on the Eastern front. On July 6, 1944, he replaced Field Marshal Karl von Rundstedt as supreme commander in Western Europe. He was among the senior officers implicated in the attempted assassination of Hitler on July 20. The failure of that plot, the fact that his part would almost certainly be discovered, and his realization of his country's inevitable defeat led him to plan the surrender of all the armies in his command. He arranged a rendezvous with officers of the American Third Army near Avranches (Manche), but the meeting never took place, the Allied delegation being delayed by Allied bomb attacks. However, Kluge absented himself from his command for 24 hours, leaving it exposed to attack while attempting to keep the appointment. Hitler, learning of his unauthorized absence, summoned him to Berlin. Kluge proceeded to Metz by motor, obedient to an order to emplane there for Berlin. Somewhere on the road to Metz he swallowed poison, dying before his arrival.

KLUGHARDT, klōōk'härt, August Friedrich Martin, German composer and conductor: b. Köthen, Germany, Nov. 30, 1847; d. Dessau, Aug. 3, 1902. He was a theatrical conductor at Weimar (1869–1873), Nestrelitz (1873–1882), and Dessau (after 1882). His mature compositions reflect the influence of Franz Liszt. In addition to chamber works, symphonies, concertos, and orchestral suites, he composed much music for the stage, including the operas *Miriam* (1871), *Iwein* (1879), *Gudrun* (1882), and *Die Hochzeit des Mönchs* (1886). His best-known work is the oratorio *Die Zerstörung Jerusalems* (1899).

KMETY, k'mēt'y', György, Hungarian-Turkish army officer: b. Pokorág, Hungary, 1810; d. London, England, April 25, 1865. He distinguished himself in the Hungarian struggle for independence (1848–1849) as a commander under the patriot leader Arthur von Görgey, but was compelled to flee the country after Görgey surrendered to a Russian army in August 1849. Kmety went to Turkey, became a Moslem, and, as Ismail Pasha, served as a general in the Turkish Army. He defended the Armenian stronghold of Kars against Russian besiegers in the Crimean War (1854–1855).

KNAB, k'näp, Armin, German composer: b. Neuschleichach, Germany, Feb. 19, 1881; d. Bad Wörishofen, June 24, 1951. He composed chiefly vocal works, in which he tried to reproduce the spirit and musical qualities of German folk songs. Between 1933 and 1945 he composed a number of songs expressing Nazi ideology. Among his best works are the *Eichendorff* and *Wunderhorn* song cycles. In later years he composed chiefly unaccompanied choral music, notably the cycle *Zeiten*.

KNABE, k'nä'bē, Valentine Wilhelm Ludwig, German-American piano manufacturer: b.

Kreuzburg, Germany (now Kluczbork, Poland), June 3, 1803; d. Baltimore, Md., May 21, 1864. He emigrated to the United States in 1833, and about 1840 began to manufacture pianos in Baltimore, Md. The business was almost ruined during the Civil War but was later revived by his sons, ERNST KNABE (1837–1894) and WILLIAM KNABE (1841–1889), under whose direction the Knabe piano won an international reputation.

KNACKFUSS, k'näk'fōōs, Hermann, German painter and writer on art: b. Wissen, Germany, Aug. 11, 1848; d. Kassel, May 17, 1915. He studied at the Düsseldorf Academy of Arts (1865–1869) and in Rome (1875–1878). After 1880 he was a professor at the Academy of Fine Arts in Kassel. He painted mural and historical scenes in realistic style. He was the author of *Deutsche Kunstgeschichte* (1888), and, after 1895, editor of *Künstler-Monographien* (completed by other hands in 122 volumes, 1911). His brother, HUBERT KNACKFUSS (b. Dillingen bei Aachen, Germany, June 25, 1866; d. Munich, April 30, 1948), architect and archaeologist, was director of the German Archaeological Institute in Athens (after 1912) and a professor at Munich (1919–1934).

KNAPP, Georg Friedrich, German economist: b. Giessen, Germany, March 7, 1842; d. Darmstadt, Feb. 20, 1926. He studied in Munich, Berlin, and Göttingen and in 1867 became director of the Statistical Bureau of Leipzig. Subsequently he was assistant professor of economics at the University of Strasbourg (1874–1918). A leader of the historical school in economics, the influential tendency in Germany in the late 19th century, he was the author of numerous works on statistical method in economics, economic theory and economic history, notably *Die Socialtheorie des Geldes* (1905; 2d ed., 1923); *Die Bauernbefreiung und der Ursprung der Landwirtschaft in den älteren Teilen Preussens* (1887, ed. 1927); and *Grundherrschaft und Kitten* (1897).

KNAPP, näp, George, American journalist: b. Montgomery, N. Y., Sept. 25, 1814; d. at sea Sept. 18, 1883. At an early age he became an apprentice in the office of the *Missouri Republican* in St. Louis, the oldest English-language newspaper west of the Mississippi River. He became part owner in 1837, and subsequently made it one of the most influential newspapers in the United States. Under his control the *Republican* supported the Whigs until the party's disintegration in the 1850's; afterward it supported the Democrats. It was pro-Union but anti-Lincoln in the Civil War.

KNAPP, Martin Augustine, American jurist: b. Spafford, N. Y., Nov. 6, 1843; d. Washington, D.C., Feb. 10, 1923. He graduated from Wesleyan University in 1868 and was admitted to the New York bar in 1869. He practiced in Syracuse, serving as city corporation counsel (1877–1883), and became an authority on legal and other problems of transportation. In 1883 he was appointed by President Benjamin Harrison to the Interstate Commerce Commission, and was reappointed by succeeding presidents until serving as chairman from 1898. He was also federal mediator in numerous railroad labor disputes, a judge of the United States Commerce

urt (1910-1913), and (after 1913) of the Circuit Court of Appeals.

KNAPP, Samuel Lorenzo, American author: Newburyport, Mass., Jan. 19, 1783; d. Hopkinton, July 8, 1838. He graduated from Dartmouth College in 1804 and subsequently was an attorney in Newburyport, a representative in the Massachusetts state assembly (1812-1816), and a colonel of the state militia during the War of 1812. Imprisoned for debt in 1816, after his release went to Boston to start a new legal practice, but soon turned to journalism. He was editor of the *Boston Gazette* (1824-1826), the *Boston Monthly Magazine* (1825-1826), and the *Boston National Republican* (1826-1827). For a period after 1827 he edited the *National Journal* in Washington, D.C.; later he was associated with the *New York Commercial Advertiser*. Knapp was the author of numerous biographical works, notably *Biographical Sketches of Eminent Lawyers, Statesmen, and Men of Letters* (1821); *A Discourse on the Life and Character of DeWitt Clinton* (1828); *A Memoir of the Life of Daniel Webster* (1831); *The Life of Thomas Eddy* (1834); and *The Life of Aaron Burr* (1835).

KNAPP, Seaman Asahel, American agriculturist and educator: b. Schroon Lake, N. Y., Dec. 1833; d. Washington, D.C., April 1, 1911. Graduated from Union College in 1856 and became a teacher. An incapacitating accident interrupted his career in 1866, and he removed to Iowa where at various times he was a farmer, Methodist clergyman, and superintendent of the school for the blind. Becoming interested in scientific farming and stock breeding, he founded the *Western State Journal and Farmer* at Cedar Rapids, Iowa, in 1872 and was a cofounder of the Iowa Improved Stock Breeders' Association, of which he was the first president. After 1880 Knapp's agricultural pioneering began to assume national importance. He introduced improved methods of farming into Louisiana, spurred the development of rice culture in the Southwest, demonstrated methods for curbing the boll weevil in Texas, and inaugurated a federal program of model demonstrations throughout the South. He was the author of many farmers' bulletins issued by the United States Department of Agriculture and numerous articles. The Seaman A. Knapp School of Country Life, associated with the George Peabody College for Teachers, Nashville, Tenn., was named for him.

KNAPP, William Ireland, American scholar and educator: b. Greenport, N. Y., March 10, 1815; d. Paris, France, Dec. 6, 1908. He graduated from Colgate University in 1860, was professor of French and German there (1860-1865), and professor of ancient and modern languages at Yale (1865-1867). The next 12 years he spent in Europe, mostly in Spain. On his return to the United States he was appointed Street Professor of Modern Languages at Yale (1880-1892), and later was professor of Romance languages and literature at the University of Chicago (1892-1908). His last years were spent in Paris. Knapp translated the works of Juan Boscán Almogaver and the poems of Diego Hurtado de Mendoza (1876-1877), and was decorated by the Spanish government. An authority on George Borrow, he brought out the two-volume *Life, Writings and Correspondence of George Borrow* (1899) and

editions of *Lavengro* (1900) and *The Romany Rye* (1900).

KNAPWEED. See CENTAUREA.

KNATCHBULL-HUGESSEN, nach'hül-hū'jě-sèn, **SIR Edward Hugessen**, English politician and author: b. Mersham, Hatch, Kent, England, April 29, 1829; d. Smeeth, Kent, Feb. 6, 1893. Son of Sir Edward Knatchbull (1781-1849), paymaster of the forces and a privy councillor, and a grandnephew of Jane Austen, he entered political life at an early age, holding various posts under Gladstone. On entering the House of Lords in 1880 as 1st Baron Brabourne, he became a Conservative. He wrote several books for children, including *Crackers for Christmas* (1870) and *Higgledy-Piggledy* (1875); and for adult readers, *Life, Times, and Character of Oliver Cromwell* (1877), and *Facts and Fiction in Irish History* (1886).

KNATCHBULL-HUGESSEN, SIR Hughe Montgomery, English diplomat: b. London, England, March 26, 1886. Son of a clergyman, he was educated at Eton and Balliol College, Oxford, then entered the Foreign Office (1908). Attached to the British delegation at the Versailles Peace Conference, he was counselor of embassy at Brussels (1926-1930); minister to Iran (1934-1936); and ambassador to China (1936-1938). After a tour as ambassador to Turkey (1939-1944) he ended his diplomatic career as ambassador to Belgium and minister to Luxembourg (1944-1947).

KNAUS, k'nous, Ludwig, German painter: b. Wiesbaden, Germany, Oct. 5, 1829; d. Berlin, Dec. 7, 1910. He studied art in Düsseldorf, Paris, and Italy, his earliest works being landscapes and genre paintings in the manner of the Düsseldorf school, dark-colored and meticulously realistic. His mature style favored more lively tones and was influenced by the Dutch masters. Knaus was noted for his portraits and genre paintings.

KNEASS, knēs William, American engraver: b. Lancaster, Pa., Sept. 25, 1780; d. Philadelphia, Pa., Aug. 27, 1840. Trained as an engraver in Philadelphia, where he set up in business in 1804 and subsequently became well known for his art, after 1824 Kneass worked as engraver and diesinker for the United States Mint. He produced numerous dies for the gold coinage of 1834 and 1838 and for the silver coinage of 1836, 1837, and 1838.

KNEBEL, k'nā'hēl, Karl Ludwig von, German poet and translator: b. Wallerstein, near Nördlingen, Germany, Nov. 30, 1744; d. Jena, Feb. 23, 1834. He was an officer in a Prussian regiment (1763-1774), and subsequently tutor to Prince Konstantin of Saxe-Weimar (1774-1779). On a journey to Paris with his pupil and the latter's brother Karl August, heir apparent of Saxe-Weimar, Knebel visited Goethe at Frankfurt am Main, and introduced his royal companions to the poet. Karl August became Goethe's patron, and Knebel thereafter was a member of Goethe's intimate circle. He was the author of two collections of verse, *Kleine Gedichte* (1815) and *Distichen* (1827); but his best works were his translations of the classical poets, Sextus Propertius (1798) and Lucretius (1821). His *Correspondence with*

Goethe' (Leipzig 1851, 5 vols.); 'Letters from Duke Karl August of Saxe-Weimar-Eisenach' (ib. 1883); and a collection 'From Knebel's Correspondence with his Sister Henrietta' (Jena 1858), all afford very interesting light on the social culture of the noted period at the court of Weimar.

KNEE JERK, or **PATELLAR REFLEX**, a useful reflex test in diagnosis. When the leg is resting in an easy position, crossed over the other leg, for instance, a sharp blow given to the patella (knee-cap) tendon causes a sudden jerking forward of the leg. This action is brought about by a contraction of part of the quadriceps of the femur bone. This sudden extension of the leg is known as "knee-jerk" and it is generally considered as a reflex action and is often tested for the symptoms of disease, the action being restricted in cases of locomotor ataxia, lead poisoning, chronic alcoholism, and even absent in severe cases, while in other diseases as neurasthenia, hemiplegia, spastic paraplegia, etc., the kick becomes abnormally extended.

KNEELAND, nē'lānd, **Abner**, American theologian and deist: b. Gardner, Mass., 6 April 1774; d. Farmington, Iowa, 27 Aug. 1884. He was at first Baptist, then entered the Universalist ministry, but later became deist. He edited Universalist literature at Philadelphia and New York, then went to Boston where he founded (1831) the *Investigator*. His expressed tenets brought him into the Boston Supreme Court (1836) where he was given a short sentence of imprisonment as guilty of blasphemy. He wrote 'The New Testament in Greek and English' (Philadelphia 1822); 'Lectures on the Doctrine of Universal Salvation' (1824); 'A Review of the Evidences of Christianity' (New York 1829). Consult Kneeland, A., 'Review of the Trial, Conviction and Final Imprisonment . . . of A. Kneeland' (Boston 1838); Parker, S. D., 'Report of the Arguments of the Attorney . . . at the Trial of A. Kneeland' (ib., 1834); 'Review of the Prosecution against A. Kneeland' (in *Cosmopolite*, ib. 1853).

KNEELAND, **Samuel**, American naturalist: b. Boston, Mass., 1 Aug. 1821; d. Hamburg, Germany, 27 Sept. 1888. He was graduated from Harvard in 1840, practised medicine in Boston 1845-50, and was an army surgeon during the Civil War. In 1866 he became professor of zoology and physiology in the Massachusetts Institute of Technology. He was a member of numerous scientific societies, and in addition to editing 'The Annual of Scientific Discovery' (1886-89), a translation of 'Andry's Diseases of the Heart' (1847), and Smith's 'History of the Human Species,' he wrote 'Science and Mechanism' (1854); 'The Wonders of the Yosemite Valley and of California' (1871); 'An American in Iceland' (1876); 'Volcanoes and Earthquakes' (1888).

KNEIPP, knip, **Sebastian**, German clergyman: b. Stefansried, Bavaria, 17 May 1821; d. Worishofen, Swabia, 17 June 1897. He studied theology at Dillingen and Munich, became a Roman Catholic priest in 1852 and pastor at Worishofen in 1881. He became known for the "Kneipp cure," which he advocated for years. This method was based on water, fresh air, sun-

shine and a scheme of regular activity, and included walking barefoot in dew-moistened grass and on snow. Kneipp wrote 'Meine Wasseur' (1887; Eng. trans. 1891); 'Mein Testament' (1894); 'Vorträge in Wörishofen' (1894-98); and other works. His collected works were published at Kempten (1898-99). Consult Verus, 'Vater Kneipp, sein Leben und Wirken' (Kempten 1897).

KNEISEL, **Franz**, German-American musician: b. Rumania, 26 Jan. 1865; d. 26 March 1926. He was a pupil in violin-method of Gruhn and Hellmesberger, became concert-master of the orchestra at Hofburg Theatre of Vienna of Bilse's orchestra at Berlin, and later (1885) of the Boston Symphony Orchestra. He appeared prominently with the Symphony as solo violinist and in 1886 organized under his leadership the Kneisel quartet for chamber music, in which he played the first violin part. This quartet, all of whom were also members of the Symphony, withdrew from the latter in 1903 to undertake an extensive tour. Several European tours were undertaken with success. He removed to New York where from 1905 he was chief of the violin department of the Institute of Musical Art. He was member of the jury of the violin competition at the Paris Conservatory. He received the degree of Mus.D. from Yale in 1911 and from Princeton in 1915. He compiled 'The Kneisel Collection for Violin and Piano' (3 vols., 1900) and composed 'Advanced Studies for the Violin' (1910) and a concert etude.

KNELLER, nē'l'ēr, **Sir Godfrey**, originally **GOTTFRIED KNILLER**, Anglo-German portrait painter: b. Lübeck, 8 Aug. 1646; d. Twickenham, England, 7 Nov. 1723. He studied under Bol and Rembrandt at Amsterdam. He visited Italy in 1672, where he studied under Maratti and Bernin and painted several historical pieces and portraits, both at Rome and Venice. On his return he visited England, in 1674, and was introduced to Charles II, by whom he was much patronized and thereby enabled to quickly outstrip Lely (q.v.) in popularity. He was equally favored by James II, William III and Queen Mary, for the latter of whom he painted the "beauties" at Hampton Court, and several of the portraits in the Gallery of Admirals. He also painted the portraits of the Tsar Peter the Great, Louis XIV and Charles VI of Spain for the same sovereign, who in 1692 knighted him and made him gentleman of the privy chamber. Queen Anne continued him in the same office, and George I, in 1715, made him a baronet. There was hardly a person of note, at least resident in or visiting England, of whom he did not paint a portrait. Among his works should be mentioned also a series of 43 portraits of his co-members in the famous Kit-Cat-Club. He continued to practise his art to an advanced age. Naturally his earnings were very large. Although he lost a good deal of money in the South Sea Bubble and lived in great style, both in London and on his estate, Kneller Hall near Twickenham — now an army college for military musicians — he left a large fortune. He left money and instructions for a splendid monument to himself in Westminster Abbey, erected by Rysbrack in 1729, which bears an epitaph by Pope. His coloring is true and harmonious and his drawing correct, but he dis-

plays a great want of imagination in his pictures, the attitudes, action and drapery being insipid, unvarying and ungraceful. Many of the portraits bearing his name were only partly painted by himself, the less important portions being done by assistants. His fame has declined considerably as time passed, a natural enough fact considering the great superiority possessed by later English portrait painters, such as Reynolds, Gainsborough, etc. His work can be studied to greatest advantage at Hampton Court and in the National Portrait Gallery, London. Comparatively few of his paintings are owned outside England, though there are specimens in the galleries at Antwerp, Brunswick, Munich and Vienna. Consult Ackermann, W. A., 'Der Porträt-Maler Sir G. Kneller im Verhältniss zur Kunstbildung Seiner Zeit' (Lübeck 1845); Anon., 'Lely and Kneller' (in *Munsey's Magazine*, Vol. XVII, p. 542, New York 1897); Baker, C. H. C., 'Lely and the Stuart Portrait Painters' (2 vols., London 1912); Buckeridge, B., 'Life of Sir G. Kneller' (in Piles, R. de, 'The Art of Painting,' 3d ed., London 1750).

KNESEBECK, knä'zë-bëk, Karl Friedrich von dem, Prussian general field marshal: b. Karwe, near Neuruppin, 5 May 1768; d. 12 Jan. 1848. He entered the army (1782) and gained distinction in the campaigns of 1792-94 and was made captain (1799), major (1802), being on the general staff at Auerstadt (1806), when he saved the king from being taken prisoner. He drew up the plan of battle at Pultusk (1806) in the Russian campaign but retired, at the Treaty of Peace of Tilsit, to his estate. He was sent (1809) on a diplomatic mission to Austria during the Franco-Austrian War and went on a mission to Russia in the winter of 1811-12, advising peace. He was made general-adjutant to the king in 1813 and carried on the negotiations with Austria for a coalition, failing which he took a prominent part in the plan of action, hindering the bold schemes of Blücher and Gneissenaу. He was a prominent figure in the continuation of the campaign (1813-14) and in the plan of action. In 1847 he was appointed commander-general of the army of observation against Poland, and, on his retirement, was created field-marshal. His memoirs are said to be unreliable. He wrote also 'Lob des Kriegs' (1805), a poem which had great popularity. Consult Dunker, 'Die Mission des Obersten von dem Knesebeck' (in *Abhandlungen zur preussischen Geschichte*, Leipzig 1876); Lehmann, M., 'Knesebeck und Schön' (ib. 1875).

KNIAZHININ, knyäzh-nën, Jakov Borisovich, Russian litterateur and dramatic author: b. Pskov, 3 Oct. 1743; d. 14 Jan. 1791. He was educated in the University of Saint Petersburg, entered the army, where, however, he stayed only a short time, and for a number of years was connected with the civil service. In 1783 he became a member of the Russian Academy at Saint Petersburg. Of his tragedies the majority are but imitations of French plays, containing with the exception of one or two nothing original. His comedies are replete with bright passages and full of spirit. The tragedies most worthy of mention are 'Didon' (1769); 'Vladimir i Iaropolh' (1779); 'Vladisan' (1786); 'Roslay' (1784); 'Vadim Novgorodskii'

(1789). The two last were patriotic plays, some of the passages of the 'Vadim' being of such a character as to alarm Catharine II and cause its suppression, but it was published in 1793, two years after the death of the author. Of his comedies the most noteworthy are 'Khvastum'; 'Chudakhi'; and the light opera 'Neschastie ot Karety.' A complete edition of his works, in four volumes, was published in 1787, several subsequent editions being published in two volumes in 1847-48.

KNICKERBOCKER, nīk'ër-bōk-ër, the cognomen of an old Dutch burgher family of colonists in New York. The word has been used colloquially for many years as expressive generically of the old elite resident families of New York City, but more properly restricted to the persons descended from the old Dutch settlers of Manhattan Island. Washington Irving, in his 'History of New York' (1809) names the author as 'Diedrich Knickerbocker.'

KNICKERBOCKER, Herman, American lawyer and legislator: b. Albany, N. Y., 27 July 1782; d. Williamsburg, N. Y., 30 Jan. 1855. He studied law at Albany, N. Y., was admitted to the bar in 1803 and entered practice in Albany. In 1809-11 he was a Federalist representative from New York in the 11th Congress, in 1816 was elected to the New York State Assembly from Rensselaer County, and for some time also held the office of county judge. He became a Democrat during Jackson's administration. Through his hospitality he was known as "Prince Knickerbocker."

KNICKERBOCKER HISTORY OF NEW YORK, The. Knickerbocker's 'History of New York from the Beginning of the World to the End of the Dutch Dynasty,' planned and partly written by Peter and Washington Irving together, was later replanned by the younger brother, entirely executed by him and published in 1809 under the whimsical pretense of being by an eccentric Dutch antiquary, Diedrich Knickerbocker. It was originally meant to be a mere skit by which two gay young men might poke fun at their fellow-townsmen, but it grew unconsciously into a full-bodied masterpiece of good-humored satire which established the settlers of an obscure Dutch colony as permanent citizens of the wider world of historical legend. Irving did not derive from facts his conception of the first New Yorkers, nor did he invent it; he merely followed a tradition current in British satire since the wars with Holland in the 17th century. The idea of writing burlesque history, too, was not novel. Moreover, Book I of the Knickerbocker 'History,' with its parodies of pedantic learning, belongs rather with the plan relinquished than with the mature performance. But Irving's indebtedness and his halting overture only slightly modify the credit due him for his comic masterpiece. Hearty affection for New York, tenderness toward any past with a touch of myth in it, natural mellowness of language—these lend substance to a gay and impudent wit. In the third book, which deals with the unforgettable Wouter Van Twiller and the manners of his reign, Irving is at once brilliant and charming. The books recording the deeds of Peter Stuyvesant are even more spirited, particularly in the passages of mock-heroic, which are hardly to be matched else-

where in English. Illustrations for the 'History' have been made by Allston, Leslie, Jarvis and Darley.

CARL VAN DOREN.

KNIFE. A cutting tool of steel, german-silver, silver, gold, bone, horn, wood or other material. According to the purposes for which it is constructed it is called bread-knife, pen-knife, table-knife, erasing-knife, paper-knife, butchers'-knife, etc. Knives can be divided into two broad classifications as having blades that fold into or onto the handle and those that have fixed blades. The essential parts of a knife are its blades and its handle (known as a *haft*); exceptions to the rule are those consisting solely of a blade, as those used by furriers, cigarmakers, etc. The knife haft generally consists of wood, bone, ivory, horn, metal, mother-of-pearl, etc. For the technical make-up of knives see under article CUTLERY.

History.—In its most primitive form the knife was formed from a piece of flint or other stone. The chipped and polished flint knives of the Stone Age (many are extant) are frequently wonderfully formed and show consummate skill in construction. They have keen, practical cutting edges, the ends usually pointed. These are found in nearly all parts of the globe. With the discovery of bronze (Bronze Age), knife blades were among the earliest utensils to be made from this metal. These are found in numbers in the ancient prehistoric "lacustrian" villages of Switzerland, some being fastened to handles of the same metal. In the antique classical period knife blades were made of bronze, iron and copper; the copper being hardened, probably by hammering. In ancient Rome bronze knives were reserved for religious rites. The hafts (handles) of this period are found in ivory, bone or bronze and of varying forms, sometimes the blades of these early knives folded into a groove in the handle. Some were carried in a sheath hung from the belt; the Gallo-Romanesque tombs furnish such, the exterior being of wood and the inside of iron. The ancient sacrificial knife often figures on carved monuments. While a few of the early Greeks used knives at meals, it was usual to serve the meat and other foods cut up, the guests picking up the viands with their fingers and tearing it up with their teeth. For cutting up fruit they used bone knives; they also knew the use of hunting knives. In the 1st century B.C. the Chinese used copper knives as coins, known as *Dau tsien*.

The Franks (Germanic tribes, about 240 A.D.) carried an iron knife suspended from the belt, often enclosed within the same sheath as the dagger. In the Middle Ages steel-bladed knives appear, toward the 14th century. Sheffield, England, was the centre of a steel industry and Langres, France, was renowned, as well as Moulins, already for their steel knives in 1427. By the 17th century the blades were often decorated with chased and gold inlaid designs. Knife handles of that period are found in ivory, bone, mother-of-pearl, silver, copper, steel, and wood. By the 16th century knife handles often assume the form of figurines or caryatids. During the Middle Ages one of the luxuries of the *seigneurs* consisted of having a table service of knives of which the handles varied according to the period of

the liturgical year; the ebony handles were reserved for the period of Lent, those of ivory for Easter. Knives were employed in battle the French termed them, in the 15th century *couteaux de brèche*. Knives figuring among the knights were often highly decorated; that of Louis le Bon (extant) has its handle of hard wood ornamented with bands of silver-gilt and enamels. On the handles were initials, ciphers the owners' coats-of-arms; enamel work, many precious stones vie with arabesques and engravings in the decoration. The knight's knife was generally in a sheath or scabbard. The knife sheath in Bamberg Castle dates back, probably to the 10th century and is, perhaps, the oldest extant; it is of ivory with metal ornamentation. The hunting knife of the Middle Ages (the *couteau de chasse* of the French) was a most elaborate equipment and consisted of a highly decorated sheath containing, besides the heavy-bladed huntsman's knife for killing the game and cutting it up, a set of smaller utensils arranged around it in the sheath. These latter were three small knives, a fork and a *bodkin*. In the sheath or case for use at table there were three knives: one large one called a *trencher* knife (*couteau à trancher*) for cutting into slices or pieces (*tranche*) of which the very large blade terminated in a crescent-shaped point with which to pick up the pieces and serve on the guests' plates; another large knife with two cutting edges; a smaller knife that was placed in front of the host. A favorite method of decorating leather sheaths in the 14th and 15th centuries was to burn or brand designs on the outside. In the refectories of the convents they used knives whose blades had engraved on one side the Benediction and on the other side "Dei Gratias" (*grace* after meals), the musical notes of the chant being cut into the metal. The oyster knife appeared as early as the 16th century. As to folding knives, after being already known to the Romans they probably never went out of use entirely; we read in an inventory of 1380 of "a little knife, of silver handle shaped like a lily, of which the blade folds back into the handle." Clasp or spring knives came into common use in middle of the 17th century. The large strong clasp knife is frequently termed a "Jack" knife; this kind of knife is said to have been introduced into England during the reign of James I (early 17th century) and to have received its name from this fact; it had no spring but the blade closed into the haft. See also CUTLERY.

CLEMENT W. COUMBI

KNIFE MONEY, a bronze currency in the form of knives long in use in China. These money knives were often highly ornamented and each bore on the blade hieroglyphical markings which indicated its value in the money market. The handle of the knife money was usually in the form of a disk in the centre of which there was a circular hole by means of which it was strung on a string with other similar money. See NUMISMATICS.

KNIGGE, Adolphus Francis Frederi Louis, BARON DE, German author: b. Bremenbeck, near Hanover, 16 Oct. 1752; d. Bremen 6 May 1796. In 1769 he went to the University of Göttingen, where he studied law, later became assessor at Cassel, in 1777 was made chamberlain at Weimar, and finally in 1791

ttled in Bremen. Here he joined the Illuminati (v.), and later became involved in the disputes relating to that secret order. Of his writings, the most widely read was his *Über den Umgang mit Menschen* (*Social Intercourse*, 1788) in which he set forth his philosophy of happy and useful living.

KNIGHT, nit, Austin Melvin, American naval officer: b. Ware, Mass., Dec. 16, 1854; d. Washington, D.C., Feb. 26, 1927. Graduated at Annapolis (1873) and commissioned ensign (1874), he was promoted through grades to rear admiral in 1911. In 1876 he was appointed to the Naval Academy, later serving on sea duty. In 1883 he was stationed at the Minneapolis ordnance proving grounds, and was in charge there in 1885-1889. He served in the North Atlantic, European and South Atlantic squadrons (1889-1892), and was again at the Naval Academy in 1892-1895. In the Spanish-American War he assisted in the blockade of the north coast of Cuba and in the Puerto Rican expedition, and in 1901-1903 commanded the *Yankton* on the survey of Cuba's south coast. He commanded on the *Washington* (1907-1909), later was commandant at Narragansett Bay Station, R. I., and in 1913-1917 was president of the Naval War College. In April 1917 he was appointed commander of the Asiatic Fleet, with the rank of full admiral. He was retired in December 1918.

KNIGHT, Charles, English editor and publisher: b. Windsor, England, March 15, 1791; d. Adlestone, May 9, 1873. He succeeded his father as a bookseller in Windsor, and for several years edited a Windsor newspaper. In 1823 he settled in London where he established *Knight's Quarterly Magazine* and superintended the publications of the Society for the Diffusion of Useful Knowledge, which included the *Library of Entertaining Knowledge*, the *Penny Magazine*, and the *Penny Cyclopaedia* (later remodeled as the *English Cyclopaedia*). He also published *The Pictorial Bible*, a *Pictorial History of England*, and (1837-1841) *The Pictorial Shakespeare*. The latter was edited by Knight himself and, both for its text and notes, took a high place among editions of Shakespeare. It went through many editions, and in the United States was published as *The Stratford Shakespeare* (1881). The most important of his own writings was the *Popular History of England* (1854-1861). His autobiography, *Passages of a Working Life During Half a Century*, was published in three volumes in 1864-1865.

KNIGHT, Charles Robert, American artist and author: b. Brooklyn, N. Y., Oct. 21, 1874; d. New York, N. Y., April 15, 1953. He studied at the Art Students' League and the Metropolitan Museum of Art in New York, and became noted for his paintings and models of early man and prehistoric animals and birds. He executed work for the United States government, the Carnegie Museum, Pittsburgh, and the American Museum of Natural History, New York. For the latter, and for the Field Museum, Chicago, and the Los Angeles Museum, he painted a series of murals. Especially fine are his bronze and stone sculptures of prehistoric animals. He wrote and illustrated *Before the Dawn of History* (1935); *Life Through the Ages* (1946); *Animal Anatomy and Psychology for the Artist and Layman* (1947); and *Prehistoric Man: the Great Adventurer* (1949).

KNIGHT, Daniel Ridgeway, American painter: b. Philadelphia, Pa., March 15, 1840; d. Paris, France, March 9, 1924. He studied at the Pennsylvania Academy of Fine Arts (1861-1863), and in 1872 went to Paris where he studied with Charles Gleyre and at the École des Beaux Arts. Four years later, after spending several months in Italy, he worked for a while at the Poissy studio of Jean Louis Meissonier. His work, which idealized the French peasantry, received honors in both Europe and America, and in 1909 the French government made him an officer of the Legion of Honor. His paintings in American galleries include *Hailing the Ferry* (Pennsylvania Academy); *The Shepherdess* (Brooklyn Institute Museum); *The Shearer* (Boston Museum of Fine Arts).

KNIGHT, Edward Henry, American mechanician: b. London, England, June 1, 1824; d. Bellefontaine, Ohio, Jan. 22, 1883. He studied both steel engraving and surgery in London, came to the United States in 1845, settled in Cincinnati, Ohio, where he studied law and became a patent attorney. Naturalized as a citizen in 1851, he served as a surgeon in relief work during the Civil War. In 1872-1876 he was connected with the United States Patent Office in Washington, D.C., and established and edited the *Official Gazette of the United States Patent Office*, a weekly digest of patents issued. He also devised the system of classification of inventions and the method of purchasing copies of patents by coupons. He himself received several patents, three on steam governors, one on a sewing machine guide, one on a process for molding articles from paper pulp, and others. He was in charge of the Patent Office exhibit at the Centennial Exhibition in Philadelphia (1876), and was an official American commissioner to the Universal Exposition at Paris, France, in 1878, where he was made a chevalier of the Legion of Honor in recognition of his work *The American Mechanical Dictionary* (1874-1876). A supplement, *Knight's New Mechanical Dictionary*, appeared in 1882-1884. He also wrote "A Study of the Savage Weapons at the Centennial Exhibition" for the *Annual Report of the Board of Regents of the Smithsonian Institution* (1879).

KNIGHT, Ellis Cornelia, English author: b. 1757; d. Paris, France, Dec. 17, 1837. Her father, Rear Admiral Sir Joseph Knight, died in 1775, and the next year she and her mother went to live in Italy, mostly in Rome and Naples. After her mother's death in 1799, she returned to England, and in 1805 was appointed companion to Queen Charlotte. In 1813 she was appointed to a similar position in the household of Princess Charlotte Augusta. Her autobiography is a valuable source of information for the court history of those days. Her principal work was *A Description of Latium, or La Campagna di Roma* (1805), with etchings by the author. She also wrote the romances *Dinarbas* (1790), *Flamminis* (1792), and *Sir Guy de Lusignan* (1833).

KNIGHT, Eric Mowbray, American novelist: b. Menston, Yorkshire, England, April 10, 1897; d. Surinam (Netherlands Guiana), Jan. 15, 1943. He came to the United States in 1912, and became a naturalized citizen in 1942. During World War I he served as a private in the Canadian Army. He became a major in the United States Army in 1942, and while on official mission

was killed in an airplane crash. He wrote *Song on Your Bugles* (1936); *The Flying Yorkshireman* (1937); *The Happy Land* (1940); *Lassie Come Home* (1940); *This Above All* (1941); *Sam Small Flies Again* (1942), and other books.

KNIGHT, George Wilson, English scholar and author: b. Sutton, England, Sept. 19, 1897. He was educated at Oxford University. From 1931 to 1940 he was Chancellors' Professor of English, Trinity College, the University of Toronto, Canada, where he also staged Shakespearian productions. Some of the best known of his numerous works are *The Wheel of Fire* (1930); *Principles of Shakespearian Production* (1936); *This Sceptred Isle* (1940); and *Hiroshima* (1946). In 1946 he became reader in English literature at Leeds University.

KNIGHT, Jonathan, American physician: b. Norwalk, Conn., Sept. 4, 1789; d. New Haven, Aug. 25, 1864. He was educated at Yale University, studied anatomy and physiology at the University of Pennsylvania, and was one of the founders of the Yale Medical School. In 1813 he became assistant professor of anatomy and physiology there, and in 1826 helped found the General Hospital Society of Connecticut. From 1838 he held the chair of surgery at Yale. He presided at the two national conventions (1846, 1847) at which the American Medical Association was organized, and served as its president from 1853.

KNIGHT, Joseph, English writer and editor: b. London, England, May 24, 1829; d. there, June 23, 1907. He was drama critic of the *London Gazette* (1860); of the *Athenaeum* (1867-1907); contributed to the *Gentlemen's Magazine* and was editor of its *Notes and Queries* (1883-1907). With the poet, Alfred Austin, he founded the Leeds Mechanics' Institute. He wrote *Life of Daniel Gabriel Rossetti* (1887); *Theatrical Notes* (1893); and *Life of David Garrick* (1894).

KNIGHT, Joseph Philip, English song writer: b. Bradford-on-Avon, England, July 26, 1812; d. Yarmouth, June 1, 1887. Among many other songs, he composed the famous *Rocked in the Cradle of the Deep* (1839) while on a visit to America.

KNIGHT, DAME Laura (nee JOHNSON), English painter: b. Long Eaton, England, 1877. She studied at the Nottingham School of Art and first exhibited in the Royal Academy in 1903. Her work has won wide recognition and received many awards. She was made a dame commander of the Order of the British Empire in 1929, and in 1936 was elected to membership in the Royal Academy of Arts. She is best known for her circus and theater subjects, and is represented in many museums, including the Tate Gallery, British Museum, and Victoria and Albert Museum, London; also the Art Institute, Chicago, and the Carnegie Institute, Pittsburgh. Her autobiography *Oil Paint and Grease Paint* was published in 1936.

KNIGHT, Richard Payne, English numismatist: b. Wormsley Grange, near Ludlow, England, 1750; d. London, April 23, 1824. He was privately educated, and in 1764 inherited his grandfather's estates at Downton, Herefordshire. About 1767 he visited Italy, also in 1777, and again in 1785.

During the latter visit he bought the antique bronze head, *Diomedes*, in Rome, the first of his notable collection of bronzes. He also collected coins, gems, drawings, and other antiques. From 1780 to 1806 he was a member of Parliament and for 10 years, 1814-1824, served as one of the trustees of the British Museum, to which he bequeathed his valuable collection of bronzes and Greek coins. In 1830 the trustees of the museum published his manuscript catalog of his coin collection; his manuscript catalog of his gems is in the museum's department of Greek and Roman antiquities. His numerous published works included *An Account of the Remains of the Worship of Priapus lately existing in Isernia* (1786); *An Analytical Essay on the Greek Alphabet* (1791); *An Analytical Inquiry into the Principles of Taste* (1808); *An Inquiry into the Symbolical Language of Ancient Art and Mythology* (1818).

KNIGHT, Sarah Kemble, American diarist: b. Boston, Mass., April 19, 1666; d. near New London, Conn., Sept. 25, 1727. Her father was Thomas Kemble, a merchant. Some time before 1689 she married Capt. Richard Knight, a shipmaster, of whom there is no record after 1706. In 1706-1713 she conducted a writing school at Boston in which Benjamin Franklin is said to have been a pupil, though he does not mention the school in his autobiography. She also served as a recorder of public documents and assisted in settling estates. By New England custom she was called Madam Knight as a token of respect. Her *Journal Kept on a Journey from Boston to New York in the Year 1704* is a valuable account of colonial customs and manners, and is also interesting for its humor, original orthography, and interspersed rhymes. It remained in manuscript until 1825, when it was published in New York, and was reprinted many times. Shortly after 1712 she moved to Connecticut to be near her married daughter, who lived in New London. Here and in Norwich she speculated in land, ran several farms, and kept a shop and an inn, accumulating a comfortable fortune.

KNIGHT, Thomas Andrew, English horticulturist: b. Wormsley Grange, near Ludlow, England, Aug. 12, 1759; d. London, May 11, 1838. He was a younger brother of Richard Payne Knight (q.v.). After graduating from Balliol College, Oxford, he settled at Elton near his brother's residence, Downton Castle, and began his experiments in raising new varieties of fruits and vegetables. He first came to public attention in 1795 through his papers on grafting and the inheritance of disease among fruit trees read before the Royal Society. Many of the new varieties of fruits and vegetables which he raised bear his name. He was one of the original members of the Horticultural Society, founded in 1804, and was its president from 1811 until his death. He was also a fellow of the Royal Society (1805), recipient of its Copley Medal (1806), and a fellow of the Linnaean Society (1807). Besides the papers he contributed to the *Transactions* of the Royal Society, and the more than 100 papers which he contributed to the *Transactions* of the Horticultural Society, he wrote *A Treatise on the Culture of the Apple and Pear, and on the Manufacture of Cider and Perry* (1797); *Pomona Herefordiana, or Natural History of the Old Cider and Perry Fruits of the County of Hereford* (1811). A selection from the *Physiological and Horticultural*

'papers' of the late T. A. Knight was published in 1841 (G. Bentham and J. Lindley, editors), together with a biographical sketch of his life. Consult Royal Society of London, Proceedings, Vol. IV, p. 92, London 1838.

KNIGHT, William Angus, Scottish philosopher and author; b. Mordington, Scotland, 2 Feb. 1836; d. 4 March 1916. He was educated at the University of Edinburgh, and from 1876-1902 was professor of moral philosophy at the University of Saint Andrews. He was widely known as a student of Wordsworth, whose works he edited in 12 volumes (1896-1917). Among his own writings may be cited 'Studies in Philosophy and Literature' (1879); 'Essays in Philosophy, Old and New' (1890); 'The English Lake District as Interpreted in the Poems of Wordsworth' (1878-91); 'Through the Wordsworth Country' (1892); 'Memorials of Thomas Davidson' (1907); 'The Glamour of Oxford' (1911); 'Pro Patria et Rege' (war poems, 1915).

KNIGHT. The word is said to be derived from the Anglo-Saxon Cniht, a servant, one who serves. Hence in feudal times it was used for certain persons doing service to a superior lord or the king, the same as *duke* expressed leadership. As to our knowledge of the origin of the knightly status we must go back as far as the foundation of Rome. Among the early Romans the mounted warriors (*equites*) held a certain special position socially. Its origin has been placed with Romulus who is said (about 750 B.C.) to have made of the three patrician tribes—Ramnes (Latins), Taties (Sabines) and Luceres (Etruscans)—three centuries (300) of riders in war service. Under the kings this number was raised to six, later, by additions of plebeians raising the rank to eight and forming the basis of a special order (*ordo equester*) adapted for cavalry. As the service entailed no extra expense the standing of this body of armed riders was raised above that of citizenship. By law of Roscius (267 B.C.) the condition was imposed of owning a fortune 4,000,000 sesterces. The external badge on the campaign uniform of this body of cavalry was a narrow stripe on the tunic, also the distinction of wearing a gold ring and having special seats in the theatre and circus, besides other political and social features. Under the Cæsars this order of riders (*equester*) was drawn on for imperial officials, to carry on the financial rule of the provinces, etc.

During the Saxon heptarchy, in England, the order of knighthood was conferred by a priest at the altar, Athelstan (900 A.D.) being the first king to create a knight. The receiving of arms at the arrival of the age of manhood was from the days of the Germanic hordes accompanied by a solemn ceremonial, and the candidate to wear arms had to prove fitness in capacity. By the 11th century the ceremony of investiture of arms had become general. Under the feudal laws some tenants and the holders of lands free from rent or service (*modial*) had to be ready on call to serve their lord or king on horseback and wearing a coat of mail. (See CHAIN ARMOR). They were called *ballarii*, from whence the French term *chevalier* is derived. And we now read of a knight's fee in England, or the *feudum loripii*, *fief de haubert* (coat of mail) being "a

certain value of land"; these vassals, we are told, were "serving as knights, mounted and equipped."

The origin of the knight of chivalry is one involved in the history of morals of the European nations—the institution of chivalry. The knighthood of chivalry is an independent and voluntary service. The obligation of the landowner to service of knight in arms did not extend to the rest of the family except the heir. The younger sons ambitious of gaining glory and dignity as knights had to submit their military service to some wealthy lord in the hope of gaining an income by their prowess as well as that social distinction which was theirs by birth, and from this field of achieved personal ambition arose a social advance in which the voluntary seeker of fame in arms raised himself a step higher in the social scale than the knight by legal right regardless of merit or valor in the field. These were the first knights of chivalry. The Crusades increased the number and ranks of these hired knights and at the same time altered and advanced the status of chivalry itself. While the ritual of investing the hired officer with knighthood included such mandates as oaths of fidelity and honor, as well as gallantry and protection to women over and beyond the former claim to discipline demanded of the common soldier (*milites*), this act of crusading for the capture of Jerusalem and the Holy Land introduced a religious feature that did not before enter into the realm of knighthood's services. And we read of the applicant for knighthood first confessing his sins before the priest, spending nights in prayer and passing through pious rites before receiving his titular rank. And the order was conferred on him by a priest instead of being "dubbed" by a knight. Chivalry had become a religious institution and the crusading knight of the 12th century was the militant bearer of the Cross and protector of his Church. Gallantry and protection of the fair sex became a living force among the knights and at tournaments the ladies took a prominent and distinguished part. And we now arrive at the time when the following were the qualifications of a deserving knight: Great respect for the female and three other virtues were enjoined on knighthood, namely, loyalty, courtesy and munificence.

The first of these three virtues included, as paramount, fidelity to engagements, and these engagements were the feudal obligation to superiors and keeping of every promise, besides fidelity to one's lady love. Any breach of engagement was looked upon and condemned with such epithets as: "False, perjured, disloyal, recreant." It forbade the savage instinct to treachery. The knight who perpetrated an offense against this virtue was considered unfit to bear the title of knight. The virtue of courtesy was the display of "modesty, self-denial and respect for others," and included chivalric treatment of prisoners. Under the term munificence was intended the behest of liberality and hospitality to the visitor, freedom in the use of coin to recompense the traveling minstrel, *largesse* to the poor, and financial aid to relatives in need. Besides the qualification of valor in the knight a fixed purpose of enforcing justice and redress of wrongs was

strongly inculcated. In return for his vows of renunciation of vices the knight received numerous privileges. These were the right to wear distinctive and resplendent armor-crested helm, heavy armor displaying his heraldic bearings, spurs of gold, etc. His horse was gay in its bards (see BARDS) and gaudy "housings." In his castle or palace he was permitted the dignity of wearing scarlet robes. Certain civil offices were filled by members of the order. He had the power (to be used not lightly) of conferring knighthood on others (if *gentlemen*). There were class distinctions of knighthood such as knights bannerets and bachelors. The former belonged to those having large estates and able to summon a certain number of lances for battle. A squire carried his master's sign of distinction in the form of a *banner* on the end of a lance. The knight bachelor was permitted to carry only a pointed pennant.

But the above high moral plane of action in the knight's life code, though acting as an incentive to good work and restraint from evil, did not prevent abuse of power from entering the valorous rank. The very elevation of rank entailed a sense of degradation of those beneath. It was but human that this breach extended and cases increased in which the populace received disdainful treatment while some members became more and more haughty. Such irregularities or abuses tended to bring the orders into disfavor. The Knights Templar, a religious and military order for the protection of Christians in the Holy Land, which flourished during the Crusades, became very wealthy and corrupt. Their excesses impaired the name of chivalry and brought retribution. But the cause of the decline and fall of the institution of chivalry's knighthood is placed by some authorities as brought about by the French kings Charles VI and Charles VII bestowing the order of knighthood profusely, and the act of Francis I conferring knighthood on lawyers and other classes of civilians. The efficiency of gunpowder in rendering armor useless, however, is generally accepted as the chief cause of the extinction of the order of knighthood. (For the literature and legends of knighthood, see also CHIVALRY, ROMANCE.) Miguel de Cervantes' *Don Quixote*, published in 1605, ridiculed the dying traditions, and the 16th and 17th centuries saw the displacement of knights by gentlemen and cavaliers. By the 16th century we find the honor of knighthood conferred by the sovereign as a civil more than military honor, as reward for services to state or ruler. And with more peaceful times have arisen numerous orders or fraternities in the social and commercial world utilizing the title, such as the Knights of Columbus, Knights of Labor, etc.

The term knight is applied to a certain piece in the game of chess which is identified by a horse's head; it moves either backward or forward over two squares, one straight and the other diagonal.

In modern England the title of knight is not hereditary, and it ranks below the lowest hereditary title, that of baronet. (See TITLES.) It is given by the king for distinguished service, often in politics, science, literature, or the arts. A knight is called sir, for example, Sir Arthur Sullivan. His wife is Lady Sullivan. A corresponding title, dame, is given to distinguished women, such as Dame Sybil Thorndike. See also BATH, KNIGHTS OF THE; GARTER, ORDER OF THE.

KNIGHT OF THE BURNING PESTLE, a comedy by Francis Beaumont and John Fletcher printed in 1613. It is at once a satire of knighthood, a parody of Thomas Heywood's *The Four Prentices of London*, and a comedy of manners. It is the first English parody play. There are two plots, the real one involving a triangle, and the other an artificial device of a Grocer Errant.

KNIGHT OF THE RUEFUL COUNTERTENANCE. See DON QUIXOTE.

KNIGHT OF THE SWAN, a figure in an ancient Teutonic legend, whose story was adapted by Richard Wagner in his opera *LOHENGRIN* (q.v.).

KNIGHTS OF COLUMBUS is a fraternal benefit society of Catholic men, chartered by the General Assembly of the State of Connecticut, March 29, 1882. Its headquarters are located in New Haven, Conn. The membership (1949) was 768,141 in 2,848 subordinate councils in the United States, Puerto Rico, Alaska, Philippine Islands, Cuba, Mexico, and Canada. The society provides 12 plans of insurance for its members and their families. At the end of 1940 insurance in force amounted to \$355,754,661 and assets were \$73,220,430.

The purposes of the society, as stated in its charter, are: (1) to provide for financial aid to its members and their beneficiaries; (2) to assist sick and disabled members; (3) to promote social and intellectual association among its members; (4) to promote and conduct educational, charitable, religious, social, and patriotic activities. A leisure-time program for boys of the ages 14 to 18 is conducted through an organization known as the Columbian Squires. A comprehensive program against subversive activities is a major project of the society, whose ideals are charity, unity, fraternity, and patriotism.

Among numerous contributions to education are an endowment fund of \$500,000 for graduate scholarships at the Catholic University of America and the endowment of a chair of American history there. State and subordinate councils have established scholarships at many colleges and academies. The fourth degree regularly conducts essay contests on phases of American history. In 1944 the supreme council established an educational trust fund of \$1,000,000 to provide a Catholic college education for the sons and daughters of Knights of Columbus who might either lose their lives in the armed forces during World War II or die or become totally disabled, within a specified period, as a result of military service. Sixteen students, holding scholarships which cover all expenses of a college course, were enrolled in 1950 under the terms of the trust.

In 1948 the society inaugurated a program of advertising Catholic doctrine and practice by space in secular magazines of large circulation. The advertisements invite inquiries and offer free booklets as well as courses of instruction by mail.

The official organ of the Knights of Columbus is *Columbia*, published monthly at the society's own printing plant.

KNIGHTS AND NOBLEWOMEN, 9th-17th CENTURIES

KNIGHTS OF LABOR, American labor organization which dominated the labor movement in the United States from 1877 to 1887. Founded in Philadelphia, Pa., in 1869 by Uriah S. Stephens (q.v.), the Noble and Holy Order of the Knights of Labor (full name adopted in 1871) was established as a secret organization for the protection of its members against any form of persecution by employers.

The order espoused a wide range of objectives during its half century of existence. It sought the long run to organize "every department of ductive industry," but its immediate goal was to employ "organized effort and cooperation" to gain and retain both employment and just remuneration for its members. The Knights also ported a program calling for the establishment of producers and distributors cooperatives.

In the area of specific objectives, the order ght for the adoption of: industrial safety measures, a weekly pay law, a mechanic's lien law, al pay for both sexes for equal work, an eight-hour workday, and arbitration (discussion and references) instead of strikes, although one of first actions was to create a strike fund. The order also favored public ownership of utilities and demanded establishment of federal and state reaus of labor statistics. The Knights also ove for the abolition of child labor under the e of 14; of the contract system, in connection th which it forced the passage of the Contract bor Act of 1885 forbidding the importation of en contract laborers; and of the leasing out of nvicts.

During its first decade, growth of the organization was slow. By the end of 1873 there were ly some 80 local assemblies, chiefly located in hiladelphia and its vicinity. Although the order read, membership remained under 10,000 persons / 1879. In 1878, Stephens resigned and was eceeded as master workman by Terence V. owderly (q.v.). In the same year the order ook on a national character and adopted a rogram of all-inclusive unionism to supplement s previous craft-union emphasis. In 1881 the rder dropped "Noble and Holy" from its name, ast off its religious trappings, altered its ritual, nd eliminated its oath of secrecy. Membership continued to exclude, interestingly, lawyers, bankers, professional gamblers, stockbrokers, physicians (until 1881), and persons making their iving from the sale of intoxicants. Membership was not restrictive, however, on grounds of racial rigin, religion, or sex. The Knights were the first general labor body to encourage the organiza-tion of women.

Within a few years the Knights of Labor developed into the most imposing labor organization known up to that time in the United States. Its membership, rising spectacularly from 51,914 in 1883 to 702,924 by 1886, was in July of the latter year organized into 5,892 locals, including about 200 women's units. Over half of the members were distributed as follows: 110,000 in New York State (60,809 in New York City); 95,000 in Pennsylvania; 90,000 in Massachusetts (81,191 in Boston); and 32,000 in Illinois.

Opposed in principle to the calling of strikes, the order nevertheless was forced to respond to pressures from its members for such activity. Moreover, increased membership rode on the heels of successful strikes against the Union Pacific system in 1884 and of successful negotiations with Jay Gould's system in 1885, after actions against

the Missouri; Missouri Pacific; Kansas and Texas; and the Wabash railroads.

After reaching its zenith in mid-1886 the Knights of Labor began to lose strength rapidly. Contributing significantly to its decline were a series of strike failures in mid-1886 and the Haymarket Square Riot (q.v.). The latter was used by newspapers and employers to discredit the Knights even though they had no connection with it. Other factors in the order's demise were the increased vigor of employers' attacks, particularly their effective use of the blacklist; the interference of court actions; and the successful inroads made on its membership by ascendant craft unions, particularly the American Federation of Labor (q.v.). Additionally, the Knights of Labor suffered from internal weaknesses with respect to both structure and function, from confusion over vague and sometimes conflicting objectives, and from ineffectiveness in resisting the efforts of local craft unions to gain control. Also the Knights' ventures into producers cooperatives tended to dissipate the organization's energies. Although they later failed, some 200 cooperatives, particularly in mining and shoe manufacturing, emerged under the aegis of the Knights.

Even though the Knights persisted as an organization well into the 20th century, the order's importance was gone by 1893, when membership had dropped to 74,635. In that year, Powderly was ousted by socialist and farm groups led by James R. Sovereign, who became master workman, and by Daniel De Leon. Later, the bulk of the Knights filtered into the American Federation of Labor and other craft unions. The Knights of Labor persisted in negligible strength, but in 1917, under John W. Hayes, its last master workman, officially ended its formal organization. See also LABOR MOVEMENT IN AMERICA—*The Knights of Labor*.

(New York 1918); Ware, Norman, *The Labor Movement in the United States, 1860-1895* (New York 1929); Dulles, Foster R., *Labor in America: A History* (New York 1949); Browne, Henry J., *The Catholic Church and the Knights of Labor* (Washington, D.C., 1949).

KNIGHTS OF MALTA. See JOHN, ORDER OF SAINT; ORDERS AND DECORATIONS.

KNIGHTS OF PYTHIAS, social and fraternal order founded in Washington, D.C., Feb. 19, 1864, and embracing more than 3,000 subordinate lodges in the United States and Canada. The organization's basic principles are friendship, charity, and benevolence, and its lessons and ritual are based on the familiar story of the friendship of Damon and Pythias (see DAMON AND PHINTIAS).

The order had its beginnings during the Civil War at a time when its founder, Justus H. Rathbone, believed the new organization might do much to heal the wounds and allay the hatreds caused by the conflict then raging. On being informed of the content of the order's ritual and teachings, President Lincoln advised the organization to apply to the United States Congress for a charter and establish itself nationally. Eventually, by congressional enactment of May 5, 1870, the supreme lodge of the Knights of Pythias was incorporated (effective August 5), and the Knights thereby became the first fraternal order to be so chartered.

Organizationally the Knights of Pythias comprises a supreme lodge, having jurisdiction over the so-called "supreme domain" and over the local lodges; 55 grand lodges, having secondary jurisdiction over the lodges in the states, provinces, and other areas—all of which constitute the grand domain; and more than 3,000 subordinate or local lodges.

The Knights of Pythias maintains a military department and has several recognized auxiliaries. These are the Pythian Sisters (organized 1888), with its junior organization, the Sunshine Girls, open to women and girls related to Pythians by blood or marriage; the Dramatic Order Knights of Khorassan (organized 1895 and congressionally chartered in 1908), whose governing body is known as the Imperial Palace; the Nomads of Avrudaka, an auxiliary of the Khorassan; and the Junior Order Princes of Syracuse (organized 1923), for young men between 14 and 21.

Among its benevolent activities the Knights of Pythias maintains homes for children and for the aged, operates children's vacation camps, supports special facilities for higher education, and contributes to the hospitalization and care of the needy.

KNIGHTS OF SAINT CRISPIN, Order of the, secret early American shoemakers' union. After establishment of its first active lodge in Milwaukee, Wis., on May 7, 1867, the order spread to Massachusetts and other shoe-manufacturing states. In 1868, when the first International Grand Lodge meeting was held at Rochester, N. Y., there were some 600 chapters, and by 1870, membership had reached 50,000.

Major aims of the order were the assurance, in the immediate present, of steady employment and fair wages for its members, and, for the future, "self-employment." The organization also fought vigorously against mechanization of the shoe industry. Although successful in a series of strikes in 1869-1870, the St. Crispins were later so consistently defeated in strike efforts that they had virtually disappeared by the end of 1874. Other factors contributing to their decline were untrustworthy leadership and the order's interference in politics. Following a revival attempt in 1875, the order again folded in 1878, its membership drifting into the Knights of Labor (q.v.) to become that organization's largest trade element.

Consult Lescohier, Don D., *The Knights of St. Crispin, 1867-74* (Madison, Wis., 1910).

KNIGHTS OF THE CROSS, *The*, a massive historical novel by Henryk Sienkiewicz (q.v.) dealing with the struggle of the Poles against the Order of the Teutonic Knights, which culminated in the victory in 1410 of the Poles and their Lithuanian allies at the Battle of Grunwald (Tannenberg), vividly described by the author. The hero of the novel is Zbyszko, a giant Polish soldier, and much of the novel's emotional appeal centers around the misfortunes and death of his young wife, Danusia, and of Yurand, her father. Published in Warsaw in 1898, the novel appeared in English in a two-volume translation by Jeremiah Curtin (Boston 1900).

KNIGHTS OF THE GOLDEN CIRCLE, secret, proslavery, and (later) pro-secession society operating in the United States during

the 1850's and 1860's, whose membership was for the most part subsequently absorbed into the Order of American Knights and the Sons of Liberty.

The Knights of the Golden Circle was organized by Northern sympathizers for the South (see ANTIWAR DEMOCRATS) in imitation of a number of Southern Rights clubs (some bearing the identical name) which had sprung up in the South in 1852-1855. The first "castle" or local branch of the Northern society was founded in Cincinnati, Ohio, in 1854, under the leadership of Dr. George W. L. Bickley. Other units cropped up in Indiana, Illinois, Iowa, Ohio, Missouri, Kentucky, Michigan, and western Pennsylvania under such names as The Circle of Honor, The Knights of the Mighty Host, and the Corps de Belgique. An early goal of the society's military branch, the so-called American Legion, was to set up a great Southern slave empire surrounding the Gulf of Mexico (hence, Golden Circle) but after the order lost enthusiasm for that project, it shifted its attention (by 1860) to promoting secession sentiment in the Gulf and border states.

Beginning in the spring of 1863, most of the society's members transferred to the Order of American Knights, a similar group which had emerged in St. Louis, Mo., under the leadership of Phineas C. Wright, supreme commander. The new society spread to Illinois, Indiana, and other Midwestern sections where the Golden Circle had been active, and to New York and several eastern states.

At a national meeting in New York City on Feb. 22, 1864, the order changed its name to Sons of Liberty and made Clement L. Vallandigham (q.v.) supreme commander. With peak membership estimated at between 200,000 and 300,000, the Sons achieved minor local successes in discouraging enlistments in the Northern armies, in encouraging resistance to the draft, and in shielding soldiers deserting from the Union armies.

The most ambitious project of the society was the so-called Northwest Conspiracy, a plan by which a number of state governments, including those of Illinois, Indiana, Ohio, and Missouri, were to be seized and organized into a Northwestern Confederacy. The plot hardly got beyond preliminary stages, although Southern intriguers actually provided \$500,000 to finance the insurrection. After several postponements of the date set for the uprising, the project collapsed. Meanwhile, other activities of the Sons of Liberty faded as mounting victories by the Northern armies made their objectives meaningless, and as arrests of its members and raids conducted against its headquarters in Kentucky, Missouri, and Indiana, broke the order's strength. The Sons of Liberty dissolved soon after 1864.

Consult Gray, Wood, *The Hidden Civil War, the Story of the Copperheads* (New York 1942).

KNIGHTS OF THE GOLDEN EAGLE a beneficial and fraternal organization founded in Baltimore, Md., on Feb. 6, 1873. The order comprises some 150 member groups scattered throughout the United States and having about 20,000 members. Its male adherents are known as Sir Knights, and members of the women branch are addressed as Companions. The organization's collective motto is "Fidelity, Valor and Honor for Males, and Faith, Hope and Charity for

or Females." The society's teachings are derived from the history of the Crusades, and its ritual is semimilitaristic in character.

Membership is open generally to white persons of at least 16 years of age who are sound of body, possess good moral character, profess faith in Christianity, and who are competent to pursue a useful and lawful occupation. The order has a program of mutual assistance in illness and distress, and provides death benefits and weekly sickness benefits.

KNIGHTS OF THE GOLDEN HORSESHOE, a term humorously applied to themselves by a dozen Virginia gentlemen who participated in an expedition in the summer of 1716. Led by Gov. Alexander Spotswood (q.v.) and accompanied by 14 rangers, 4 Indians, and a number of servants, the troupe left Williamsburg on horseback on August 29 and, pushing into the back country, followed a route to the north and west through what is now Spotsylvania County. After reaching the summit of the Blue Ridge Mountains by September 5, the Virginians returned to Williamsburg to complete, without any notable hardship, their 28-day, 438-mile excursion. Their reports of the trip resulted eventually in promoting the settlement of the Shenandoah Valley.

(consult Bruce, Philip A., *The Virginia Plutarch*, Vol. I, pp. 128-132 (Chapel Hill, N.C., 1929).

KNIGHTS OF THE MACCABEES OF THE WORLD. See MACCABEES, THE.

KNIGHTS OF THE MODERN MACCABEES. See MACCABEES, THE.

KNIGHTS OF THE ROUND TABLE, term descriptive of those knights who had places King Arthur's round banquet table, which was signed, according to some versions of Arthurian legend, to prevent jealousy over seating precedence, or, as explained in other sources, to symbolize the equality of the knights. Sir Thomas Mallory's *Le Mort d'Arthur* (1485), the first full account in English of the Arthurian cycle of legends, claims that 130 knights originally had places at the round table and that there were 20 vacancies for those who might prove worthy. In other accounts, the number of knights ranges to as high as 1,600, but generally only those knights of most conspicuous importance have come to be regarded as comprising the Knights of the Round Table. These have included Lancelot (see LANCELOT OF THE LAKE), Tristan (q.v.) or Tristram, Lancelot, Bors, Pelleas, Percivale (Percival), or Bedivere (q.v.). In Tennyson's *Idylls of the King* (q.v.), the Knights of the Round Table are indicated as Lancelot, Lohkesh, Bors, Pelleas, Percivale, Modred, Tristram, Gareth, Geraint, Balan, and Gawain. See also ARTHURIAN ROMANCES; MORTE D'ARTHUR.

KNIGHTS OF THE WHITE CAMELIA, a short-lived secret organization which arose in the South contemporaneously with the Ku Klux Klan (q.v.) and which was similarly organized to maintain white supremacy in face of the threats of radical reconstructionists during the early post-Civil War years. The order grew out of a so-called White Man's Club organized in May 1867 at Franklin, La., of which a branch

and then national headquarters were established in New Orleans. Within a short time, the Knights of the White Camelia, which held its first general convention in 1868, had gained nearly all the Democratic voters of Louisiana as members.

Developing an interstate organization with councils representing state, county, and local levels, the society spread into Texas and Arkansas, across southern Mississippi, Alabama, and Georgia, and into portions of other Southern states. Along with the Ku Klux Klan and similar organizations, the White Camelias were dissolved in the early 1870's.

(consult Horn, Stanley F., *Invisible Empire: The Story of the Ku Klux Klan 1866-1871* (Boston 1939).

KNIGHTS TEMPLAR, one of the orders appendant to the Masonic Fraternity (q.v.) and the highest of the "York Rite." The Knights Templar occupies a somewhat anomalous position as a military-Christian order in a symbolic, architectural, nonsectarian system, and offers an almost inexhaustible collection of legend and myth, supposedly tracing its origin to the dispersed knights of the Poor Fellow Soldiers of the Temple of Solomon or the Order of the Temple founded in 1118 A.D. and suppressed in 1307-1313 A.D. The theories tracing the fugitive knights to sanctuary in the lodges of Freemasons of Scotland and England are abundant and baffling, and the hiatus of over 400 years between the martyrdom of their last grand master, Jacques de Molay (q.v.), in 1314 and the first appearance of the modern order in the third quarter of the 18th century reduces such stories to mere fancy, characteristic of like tales respecting other phases of Freemasonry.

The modern order is undoubtedly an English adaptation of the Rose Croix and Kadosh degrees of the French Hauts Grades, which sprang up about 1738 A.D. The first preserved account of the working of the degree is contained in the minutes of St. Andrew's Royal Arch Lodge at Boston, Mass., for Aug. 28, 1769.

The order has attained its greatest development in the United States under the Grand Encampment, organized in 1816, and under grand commanderies in most of the states. There are some 1,700 commanderies and over 460,000 members. The order also exists in modified form in Great Britain, Ireland, and Canada.

KNIGHTSTOWN, town, Indiana, situated in Henry County on the Big Blue River about 34 miles east of Indianapolis. Served by the Pennsylvania and New York Central railways, it is essentially a trading center for an agricultural area which raises principally corn, wheat, and hogs. It also has nurseries, manufactures furniture, car bodies, and fencing, and processes canned goods. The State Soldiers' and Sailors' Children's Home (1868) is located nearby. The town was first settled in 1825 and was incorporated two years later. Pop. (1950) 2,486.

KNILLE, K'nillë, Otto, German painter: b. Osnabrück, Germany, Sept. 10, 1832; d. Meran, Austria (now Merano, Italy), April 7, 1898. He studied until 1856 at the Düsseldorf Academy of Art and then in Paris. In 1865 he was commissioned to execute frescoes for the Castle of Marienburg, near Hildesheim, following which he created *Tannhäuser und Venus* (1873), ob-

tained by the Berlin National Gallery, and four frieze paintings (1875–1884) for the Berlin University library. In 1874 he was appointed professor at the Berlin Academy of Art. He later published *Grübeln eines Malers über seine Kunst* (1887) and *Wollen und Können in der Malerei* (1897).

KNIN, k'nin, town and district, Yugoslavia, located along the Kerka or Krka (ancient Titius) River in Croatia. Lying westward of the Dinaric Alps, Knin is a trading center served by a railway extending southward from Zagreb, from which it is some 130 miles distant. Of interest as the former capital of medieval Croatia, the town and its environs have a number of old castles and churches and a Franciscan monastery. Pop. (1953) of Knin district, 18,100.

KNIPPER, k'nip'ēr, Lev Konstantinovich, Russian composer; b. Tiflis, Russia, Dec. 16, 1898. After a musically precocious childhood, he spent five years in the Russian Far Eastern Army before studying music in Berlin and Freiburg, and at the Gnessin School of Music in Moscow.

His first work, a symphonic poem entitled *The Legend of a Plastic God*, was written in 1924 and was followed by his first (1927) and second (1932) symphonies; the ballet *Satanella* (1924); and his first important work, the opera *North Wind*, produced in Moscow on March 30, 1930. His *Lyrical Suite* (1928) was performed at Oxford, England, in 1931. Meanwhile he completed an intensive study of Tadzhikistan folklore, whose themes he interpreted in *Five Tadzhik Songs* (1933), the orchestral suite *Vanch* (1931), and *Five Tadzhik Dances* (1933). He later served as a music instructor in the Red Army, to which he dedicated *To the Far Eastern Army* (1932–1933) and *Poem of the Komsomol Fighters* (1933–1934). These third and fifth symphonies, as well as his fourth (1933–1934), contain mass battle songs, a genre for which Knipper is best known, and include the famous *Song of the Cavalry of the Steppes*. In the period of World War II, he completed two preludes on Iranian themes during a visit to Iran in 1941, *A Poem to Horses* (1942), a choral and orchestral work, a violin concert (1942), and his eighth symphony (1943).

Consult Abraham, Gerald, *Eight Soviet Composers* (London 1943), pp. 52–60.

KNITTELFELD, k'nit'ēl-fēlt, city, Austria, located on the Mur River in Styria Province. A link in the railroad extending southwest from Bruck, about 25 miles distant, to Klagenfurt, Knittelfeld was bombed during World War II because of its iron and steel works and its railroad shops. Pop. (1951) 13,143.

KNITTING, the art of constructing textile fabric by means of needles. Knitted fabric is composed of loops assembled in the form of interconnected vertical chains of loops called wales. The joining of loops by drawing one through another constitutes a stitch. A horizontal chain of loops is referred to as a course. The path of one course as it moves from one loop to another makes a row of inverted loops (known as sinker loops) much like the upright needle loops. In weft- or filling-knit cloths, the yarn follows a horizontal path across the fabric, while in warp-knitted fabrics, the yarn follows a path in the direction of the wales.

Early History.—The earliest known knitted fabric has been traced to ancient Egyptian times. Sir William F. Petrie, the English Egyptologist, found a pair of thick hand-knitted wool socks in a tomb which probably dated back to the 4th century B.C. Knitting by hand apparently did not come into popular use, however, until the late 14th and the 15th centuries in Scotland and England.

The first machine devised for knitting was the stocking frame invented in 1589 by Reverend William Lee (q.v.) of Calverton, England. Its mechanical principles have remained basic to subsequent knitting machines. The English government, however, refused to grant Lee a patent because it feared that the use of such a machine would force many hand knitters out of work. As a consequence, machine knitting did not flourish until about 1750. Other inventors improved on Lee's original machine. In 1745, an Irishman of Dublin invented the truck/presser, which extended the variety of patterns which could be produced on the knitting machine. In 1758, the rib stitch was first made on a frame by Jedediah Strutt of Derby, England, and in 1816, Marc I. Brunel (q.v.) devised a circular knitting machine, which produced a tubular fabric. Matthew Townsend of Leicester, England, in 1847 invented the latch needle, which made cheaper knitting possible and thereby served as a major impetus to the knitting industry.

In 1832 the first power-driven knitting machine was made in Cohoes, N. Y., which led to the birth of the vast knitting industry in the United States. The Cohoes mills virtually became the training center for the industry's pioneers. About 1845, knit-goods men from Cohoes, responding to the increased demand for knitted undergarments, began seeking mill sites elsewhere, and the industry gradually spread throughout the Mohawk Valley and to other sections of the country. In the century which followed, knitting expanded to become one of the leading branches of the textile industry. This evolution resulted mainly from the desire of mankind for the qualities found in knitted goods. Knitted goods are warmer than woven goods of comparable weight and are more absorbent, fit comfortably, and are durable because their fabric yields to the movements of the wearer.

HAND KNITTING

Not much is known concerning the origin of hand knitting, although it may have first been done on the four fingers of the left hand or a series of pegs arranged either in a row or a circle. However, two definite systems of hand knitting eventually evolved. The one which became by far the more popular was by means of two or more rods known as knitting pins; needles; the other was by knitting on pegs placed either in a single or double row or in a circle.

Hand knitting continues to flourish even though it is a slow operation in which the knitter must be satisfied to produce a hundred loops per minute, as compared with a million loops produced by a machine operator. However, machine knitters have much to learn from hand knitters concerning knitting structure and loop manipulation and design and color.

As a rule, hand-knitted articles do not enter world commerce. In most cases the products are made in homes for use within the household. Such articles include dresses, sweaters, shawl

ocks, caps, baby blankets, gloves, mittens, and hats. Among the millions of pounds of yarn annually knitted by hand are large quantities of wool, cotton, and nylon and other synthetics. Tub yarns, such as ratiné, as well as bouclé yarns, are also used.

Hand knitting is practiced with steel or plastic needles. The average knitter uses two for each work, with the stitches on one needle being removed and then worked into new loops formed by the other needle. For fabric which is to be tubular in shape, such as a sock, three or four needles are employed. For tubular fabric of large diameter, a flexible circular needle is often conveniently used.

If the practice of hand knitting is considered to include operators of hand-knitting machines, then the field is a considerable one. In certain sections of the United States, small establishments are equipped with hand-operated frames of the Lamb or V-bed type. These produce the lighter-weight types of children's and women's sweaters.

Hand-machine knitting is widely practiced in Europe. When machines of the "links and links" and V-bed types are operated by skillful craftsmen, they are capable of turning out fashioned articles of clothing which automatic machines cannot entirely duplicate.

MACHINE KNITTING

Machine knitting is organized around five major knitting systems. These are plain or jersey knitting, and rib, purl, interlock, and warp knitting.

Plain Knitting.—The most common form of machine knitting is plain knitting, also known as flat or jersey knitting. This is accomplished with a single bank of needles arranged in a cylinder or dial, or in a linear disposition in a needle plate. The important feature of the plain knitter is that all its needles are spaced side by side and receive the knitting yarn while acting in the same direction. The needles may be of the spring or bearded type or of the latch type. The type of needle used does not affect the appearance of the fabric, provided that the needles are of the same degree of fineness, although in some cases, ring needle-made fabric may be superior in elasticity.

In plain knitting the needles are retained in grooves cut into the cylinder walls or needle plates. They are moved by cams acting on the needle butts. The spacing of the needles is referred to as the "gauge" or "cut" of the machine. The term gauge, as applied to many flat machines and to some circular ones, refers to the number of needles in one and one half inches. A 60-gauge machine would thus have 40 needles per inch. The term cut, applying to both circular and flat machines which have the needles slidably and adjustably mounted, refers to the number of needles occupying one inch in the cylinder.

Needles are also operated en masse. In a machine embodying this operation all the needles are mounted rigidly in a needle bar and are moved upward and downward together. This method is employed in knitting full-fashioned hosiery and sweaters, and in warp knitting. The original knitting machine was fitted with a spring or bearded needles placed in a mold in which molten lead was poured and then solidified around the butt portions of the needles. In modern tricot-knitting machines, three needles

are used in a single lead. Raschel machines are generally fitted with latch needles, a full inch of needles being placed in the mold and cast together. The molten metal used is an alloy of lead, antimony, and tin.

Rib Knitting.—First adapted in New York State in 1885 to the manufacture of underwear and drawers, rib knitting is much more elastic in width than plain knitting. This is because in rib knitting the loops in certain wales are meshed in a direction opposite to those in the remaining wales. Rib knitting may consist of various combinations of plain and rib wales to give different longitudinal effects. Rib fabric is not necessarily confined to the one-and-one-rib stitch. Proportions of 2 to 1, 1 to 3, 2 to 2, or others may also be used.

Rib fabric is made with two sets of intermeshing needles knitting at right angles opposite to each other. In this manner, wales or ribs appear on both the face and back of the fabric. In the finishing of rib fabric, a protective border called a welt is added. Rib knitting yields popular fabrics for women's "slimfit" lingerie, sock tops, and sweater cuffs.

Purl Knitting.—In its simplest form, purl knitting, sometimes referred to as "links and links" knitting, has loops of alternate courses meshed on opposite sides. As constituted, it contracts in length until the first and third courses adjoin on one side and the second and fourth on the other, thus forming a double fabric resembling the back of a plain fabric on both sides. By differentiating the methods of meshing and by using a combination of purl, plain, and rib knit, the fabric may be produced in many varying designs. Pleats in skirts, for example, may be made by combining purl loops with plain loops.

In purl knitting the ordinary latch needle is replaced by a needle containing a hook at each end so as to enable the knitter to change direction without resetting or changing the position of the needle.

Purl knitting is used largely in the manufacture of infants' and children's garments because it more closely resembles hand knitting and gives the desired characteristics of softness and loftiness. Purl knitting is also used for ladies' underwear and men's half-hose stockings.

Interlock Knitting.—Interlock or double-rib knitting was patented in 1908 by R. W. Scott of Laconia, N. H. The fabric produced was not immediately accepted in the United States, but did receive wide approval in Europe and South America, so that by World War II it was in general use. After the war the use of interlock fabric became well-established in the United States.

Interlock Machines.—Interlock knitting machines have been improved to create various patterns by using tuck stitches and by varying the yarn colors. Circular spring needles as fine as 36-gauge and latch needles as fine as 24-cut have been producing pattern knitting in a variety of fabrics, particularly for ladies' underwear.

The interlock machine is similar in outer appearance to a rib machine. Both have dials and cylinders. In the rib machine, all the dial needles and cylinder needles are the same, and knit on every course. In the interlock machine, however, both the dial and cylinder have a long series and a short series of needles arranged alternately (one long, one short). These long and short needles have independent cam races

which enable them to control the needles independently. Thus all the long needles on both the cylinder and dial rise to knit at alternate feeds, and all the short needles on both cylinder and dial are in holding position. After the long needles are pulled down, the short needles rise and knit on the other feeds. In other words, only half the total needles are in action, while the other half are idle.

Interlock Fabric.—The fabric produced is essentially a combination of two opposed rib fabrics having the long cylinder needle wales interposed between the short needle wales. The result is a stretchable double-rib cloth which looks like a rib fabric but whose surface is generally much smoother.

Interlock fabric has a feeling of fullness and warmth, possesses a smooth surface on both sides, is an effective absorbent of moisture, and is of fine texture. Compared with rib fabric, it possesses greater strength, weight, and durability owing to its two-rib construction, and will not curl, therefore making it more desirable to cut and sew.

Interlock fabric is ideal for quality outerwear garments such as polo shirts, T-shirts, sport shirts, pajamas, and children's play shirts, for all types of underwear, and for gloves.

Warp Knitting.—Warp knitting is one of the main processes for utilizing filament yarns, particularly rayon acetate, and viscose rayon and nylon. Warp-knitting machinery achieves a rate of production higher than in most other textile processes; is capable of producing many varieties of patterns; and can yield cloth with a dimensional stability almost equal to that of woven cloth.

The modern warp-knitting machine has a width of either 84 or 168 inches, and the most popular gauge contains 28 bearded needles in each inch of the needle bar. Machines of 84-inch widths may operate at a speed of 500 or more courses per minute, while the double-width (168-inch) machine is capable of producing over 2,000,000 stitches, or 10 square feet, of fabric per minute.

The structure of simple warp-knitted fabric, made with a single set of warp threads, follows a zigzag pattern throughout the length of the fabric, forming a loop at each change of direction. These loops are interlocked during the knitting action with other loops formed by adjacent warp threads following a similar path. Warp knitting from a two-bar machine produces a more stable fabric with better covering properties, provided the two threads which form each loop are wrapped around the needles in opposite directions.

The threads are brought forward to the knitting point and pass through a sley or point bar which separates all the individual ends and which insures that the correct relative positions are retained throughout the length of the warp. When the warping is finished, the threads are retained at the correct spacing and in the correct order by two strips of gummed paper which are applied to either side of the threads while the latter are still under tension.

The knitting of warp fabrics is done on tricot, Milanese, Simplex, Raschel, and Kayloom machines. Tricot is the most widely used machine, because it makes possible the simplest type of warp knitting and lends itself readily to high speeds.

Warp knitting is the newest branch of the textile industry, but it was slow in developing on a large scale because warp-knitted fabrics are more expensive to produce than the circular knitted fabrics. Warp knitting is widely practiced in the United States, Germany, England and Japan. Warp-knitted fabrics are manufactured into underwear, dresses, draperies, mesh curtains, bedspreads, and tablecloths.

WILLIAM E. SHINN,

Head, Department of Knitting Technology, North Carolina State College.

KNOB HILL, village, Colorado, located in El Paso County about three miles northeast of Colorado Springs. Pop. (1950) 3,612.

KNOBEL, k'nō'bēl, **Karl August Wilhelm**, German Protestant theologian: b. Tzschscheln, near Sorau, Germany (now Żary, Poland), Aug. 7, 1807; d. Giessen, Germany, May 25, 1863. Professor of theology at Giessen University from 1838, he became best known for his 1 commentaries. These included *Kommentare über 1 Koheleth* (1836); *Der Prophet Jesajas* (1844); *Die Bücher Exodus und Leviticus* (1857); *Die Genesis* (1860).

KNOBELSDORFF, k'nō'bēls-dōrf, (Hans) **Georg Wenzeslaus von**, German architect: Kuckädel, near Crossen, Germany (now Krośnice, Poland), Feb. 17, 1699; d. Ber Sept. 16, 1753. After serving in the army retired in 1729 to work as a painter, to study architecture, and to travel in France and Italy (1736). From 1740 he served Frederick the Great as supervisor of royal Prussian castles and gardens. He is best known for his roles in the construction of the castle of Rheinsberg (1733-1739), the opera house of Berlin (1741-1744, which was rebuilt in 1926, and the complete rococo palace of Sans Souci (1745-1747) at Potsdam.

Consult Streichhan, Annelise, *Knobelsdorf und die Preussische Rokoko* (Magdeburg, 1932).

KNOBKERRIE, nōb'kēr-ī, or **KNO1 STICK**, a knobbed stick historically used by Zulus, Bantus, or other African tribes, and by tribes in Australasia, particularly the Fijians. Effective as a missile against birds or small animals, it can be thrown with unerring accuracy from quite a distance. It is also used as a walking stick or, at close quarters, as a club.

KNOBLOCK, nōb'lōk, **Edward**, Anglo-American playwright and novelist: b. New York, N. Y., April 7, 1874; d. London, England, Jan. 19, 1945. Graduated from Harvard College in 1896, he became active in the London theatre and acquired British citizenship. During the

t four decades he turned out plays and adaptations at the rate of almost one yearly, including his first great success, *Kismet* (1911), *Marie-Jole* (1915), *The Lullaby* (1923), *The Mulberry Bush* (1930), *Rolling Stone* (1936), and *Bird of Passage* (1943).

For the stage he also adapted several well-known novels: Vicki Baum's *Grand Hotel* (1931), A. J. Cronin's *Hatter's Castle* (1932), and V. Sackville-West's *The Edwardians* (1934). He collaborated with Arnold Bennett on the plays *Lostones* (1912), *London Life* (1924), and *Mr. Chack* (1927); and with J. B. Priestley on the dramatization of the latter's *The Good Companions* (1931).

Knoblock's own novels included *Ant Heap* (1929), *The Man With Two Mirrors* (1931), *The Love Lady* (1933), and *Inexperience* (1941). He published his autobiography, *Round the Horn*, in 1939.

KNOCK-KNEE. See **JOINT**—*Knock-knee*.

KNOCKE, k'nô'kă (formerly **KNOCKE**), town, Belgium, situated in West Flanders Province on the North Sea coast. It is the center of one of Belgium's most fashionable winter and summer resort areas, comprising Knokke-sur-mer and Le Zoute and Albert-Plage, the latter both subcommunes of Knokke, which is the terminus of a branch railway from Bruges, 10 miles southwest. The old-village section of Knokke contains a war museum and memorial and a Gothic church. Pop. (1952) 11,983.

KNOLLES, nölz, or **KNOWLLES**, Richard, English historian: b. (probably) Cold Ashby, England, c.1550; buried in Sandwich, Kent, July 2, 1610. After receiving his M.A. from Lincoln College, Oxford, in 1570, he became the master of the Sandwich grammar school around 1571. His outstanding accomplishment was his authorship of the ornately written *The Generall Historie of the Turkes from the First Beginning of that Nation* (1603), which won the admiration of Samuel Johnson, Henry Hallam, Robert Southey, and Byron, and went through various editions.

KNOLLYS, nölz, **SIR FRANCIS**, English court official: b. about 1514; d. July 19, 1596. He found favor with Henry VIII, who in 1538 granted him in fee his deceased father's estate of Rotherfield Grays, near Henley-on-Thames in Oxfordshire, and who also made him a gentleman-pensioner at court. After the ascent of Edward VI to the throne, he accompanied the king's army to Scotland, and in 1547 was knighted by its commander, the duke of Somerset. With Mary I's accession in 1553, Sir Francis' position as a staunch Protestant induced his voluntary exile to Germany, though he returned to England before Mary's death.

Married to a first cousin of Elizabeth I, Mary's successor, he was appointed to the queen's privy council in 1558 and was made vice chamberlain of her household. Later he won appointment as treasurer of the royal household in 1572, was created a knight of the Order of the Garter in 1593. He was elected to the House of Commons from Horsham (1542), Arundel (1559), Oxford (1562), and Oxfordshire (1572), presenting the latter constituency until his death.

When Mary Queen of Scots fled to England in May 1568, Sir Francis and Baron Henry Scrope were jointly entrusted with her care, first at Carlisle Castle and then at Bolton and Tutbury castles. At first, Sir Francis urged Elizabeth not to keep Mary imprisoned without a trial, but in 1587, as both a member of Parliament and of the privy council, he finally urged the Scottish queen's execution.

KNOLLYS, Hanserd, English Baptist clergyman: b. Cawkwell, England, c.1599; d. London, Sept. 19, 1691. Graduated from Cambridge University, he was ordained a priest in 1629. He became a Separatist in 1636, renounced his orders, and then fled to New England to escape imprisonment for heterodox opinions. Knollys returned to England in 1641, taught school in London, and then became an army chaplain. By 1644 he was preaching his own doctrines in London and Suffolk, which led to his twice being brought before a parliamentary committee. From 1645, when he gathered together his own congregation, until the Restoration he was not interfered with, but in 1661 he escaped prosecution by fleeing to Holland and Germany for several years. After returning to London he resumed his preaching, was arrested in 1670 and imprisoned, but then freed.

Besides numerous sermons, he published the eight-volume *Grammaticae Latinae, Graecae et Hebraicae Compendium* (1665). His writings formed the basis of the posthumously published *The Life and Death of . . . Hanserd Knollys* (1672).

KNOLLYS or **KNOLLES**, **SIR ROBERT**, English military commander: b. Cheshire, England, between 1316 and 1326; d. Sculthorpe, Aug. 15, 1407. His first military service was in Brittany under Sir Thomas Dagworth at the siege of La Roche d'Orient (1346). As a knight he took part in 1351 in the "Combat of the Thirty" in Brittany and was taken prisoner by the French. On his release he remained in Brittany until he joined Henry of Lancaster on his raid (1356) into Normandy. In 1358 he became head of the "Great Company" of plunderers in Normandy, his share of the loot being 100,000 crowns. In the Loire Valley he and his troops captured 40 castles and ravaged the country from Tonnerre to Vezelay and Nevers, and onward to Orléans. His troops then sacked Auxerre (1359), where he exacted a huge ransom. Later he captured Châtillon-sur-Loing (1359) and conducted raids through Berri into Auvergne, threatening Avignon, papal seat of Innocent VI.

Subsequently he returned to Brittany to aid Simon de Montfort against Charles de Blois, duke of Brittany, and then joined Edward, the Black Prince, in his Spanish expedition (1367), assisting in the capture of Navarrete and in the battle of Nájera (1367). Soon he again returned to Brittany where he was given command of an expedition in 1370 which was to land at Calais to offset a military attack planned by France against Wales. From Calais his troops marched on to sack the suburbs of Arras and then through Artois into Picardy and Varmandois, continuing their plundering until reaching Rheims and then Villejuif, near Paris. These extended raids diverted France from launching its assault on Wales. Sir Robert was residing in London in 1381 when the Peasants' Revolt broke out. The

city gave him military control, and he was quickly able to quiet the uprising.

KNOOP, knöp, **Gerhard Julius Ouckama**, German novelist: b. Bremen, Germany, June 9, 1861; d. Innsbruck, Austria, Sept. 7, 1913. In 1878 he was graduated from the Bremen Real-schule, and was sent to the Hannover Polytechnic Institute to qualify as an industrial chemist. He went for further training to Munich (1881) and Mulhouse (1883), in Alsace-Lorraine, before assuming an important post in 1885 with a calico-printing works in Moscow. He remained in Russia until 1911, when he settled in Munich.

His literary work, which he regarded almost entirely as a pastime, was chiefly in the fields of satirical narrative and historical romance. Of particular interest to Americans are his novels *Sebald Sockers Pilgerfahrt* (1903) and *Sebald Sockers Vollendung* (1905), which describe the disappointments experienced in Germany by a young German-American visiting there. His other works include *Die Karburg* (1897), *Die Dekadenten* (1898), *Das Element* (1901); *Hermann Osleb* (1904); *Prinz Hamlets Briefe* (1909); *Der Verfalltag* (1911); *Unter König Max* (1913); *Gedichte* (1914); and *Das A und Das O* (1915).

KNOPF, k'nüpf, **Alfred A(braham)**, American publisher: b. New York, N. Y., Sept. 12, 1892. After graduating from Columbia University (B.A., 1912), he entered publishing in late 1912 as an employee of Doubleday, Page & Company in Garden City, N. Y., and early in 1914 went to work for another publisher, Mitchell Kennerley.

In the summer of 1915, Knopf launched his own firm of Alfred A. Knopf in New York City. After his first publishing venture with Barrett Clark's translation of four plays by Émile Augier, he continued to pioneer in bringing to American readers other translations of outstanding foreign authors. He introduced to Americans Sigrid Undset's *Kristin Lavransdatter* (1920), Knut Hamsun's *Growth of the Soil* (1921), Ivan Bunin's *The Gentleman from San Francisco and Other Stories* (1923), Thomas Mann's *Buddenbrooks* (1924), and Mikhail Sholokhov's *And Quiet Flows the Don* (1934). Knopf also became the American publisher of such important French authors as Jules Romains and André Gide.

In the fields of English and American literature he was responsible for the first American printing of *Green Mansions* (1916), which did much to establish a W. H. Hudson vogue. This novel was followed shortly by Joseph Hergeheimer's extremely popular *Three Black Pennys* (1917); H. L. Mencken's *The American Language* (1917); and most of the works of these authors and of Max Beerbohm, Carl Van Vechten, Willa Cather, and John Hersey. By the time the Knopf firm was 35 years old, its book-list contained some 4,000 titles, including works by nine Nobel Prize winners.

Besides his attention to the contents of books, Knopf insisted on excellence in their manufacture. Relying heavily on fine printers, his firm issued books which were notable for their good paper, variety of type faces, attractive bindings, and colorful jackets.

With Mencken and George Jean Nathan, whose works he also published, Knopf founded the *American Mercury* and was its publisher from

1924 through 1934. In 1916, Knopf was married to Blanche Wolf, who later became co-publisher.

Consult Hellman, Geoffrey T., *AAK: A Profile* (New York 1948; reprinted from *The New Yorker*); and Knopf, Alfred A., *Some Random Recollections* (New York 1949).

KNOPF, k'nöpf, **Siegmund Adolphus**, German-American physician: b. Halle, Germany, Nov. 27, 1857; d. New York, N. Y., July 15, 1940. Graduated from the Sorbonne, Paris, in 1890, he gained his medical diplomas from the Bellevue Hospital Medical College of New York University (1888) and the Faculty of Medicine of the University of Paris (1895). In 1908 he was made professor of medicine in the Department of Phthisiotherapy of the New York Post-Graduate Medical School of Columbia University, where he served until 1920. One of the most active physicians in the combating of tuberculosis, he was affiliated as a consulting physician with numerous sanatoriums for the tubercular and played a major role in founding the New York City and National Tuberculosis associations.

He was the author of *Tuberculosis as a Disease of the Masses and How to Fight It* (1901, 8th ed. 1911), which appeared in at least 27 languages; *Tuberculosis, a Preventable and Curable Disease* (1913); and *A History of the National Tuberculosis Association* (1922; 4th ed. 1928).

KNORR, k'nôr, **Iwan Otto Armand**, German composer: b. Mewe, West Prussia, Jan. 3, 1853; d. Frankfurt-am-Main, Germany, Jan. 22, 1916. After receiving training at the Leipzig Conservatory, he was appointed teacher of music at the Imperial Institute for Noble Ladies at St. Petersburg, Russia (1874–1883). On the recommendation of Johannes Brahms he was, in 1883, named teacher of theory and composition at the Hoch Conservatory in Frankfurt and became director in 1908. The composer of the opera *Dunja* (1904), *Die Hochzeit* (1907), and *Durchs Fenster* (1908), Knorr also produced piano, string, and orchestral pieces, and won a popular following for his *Ukrainische Lieder*.

KNORR, Ludwig, German chemist: b. Munich, Germany, Dec. 2, 1859; d. Jena, June 5, 1921. After studying at Munich, Heidelberg, and Erlangen universities he went to the University of Würzburg in 1885, was promoted to a professorship three years later, and from 1890 on taught at Jena. Through his research in organic chemistry he had by 1884 isolated and synthesized the compounds quinoline, antipyrine, and pyrazolone.

KNORTZ, k'nôrts, **Karl**, German-American author: b. Garbenheim, near Wetzlar, Prussia, Aug. 28, 1841; d. Tarrytown, N. Y., July 28, 1911. After attending Heidelberg University he went to the United States in 1863 and, until 1874, taught school in Detroit, Oshkosh (Wis.), Cincinnati, and New York City. For several years he edited a German daily newspaper in Indianapolis, and then from 1892 to 1905 he was superintendent of the German department of the public schools of Evansville, Ind. In 1905 he moved to Tarrytown, N. Y., to devote full time to writing in the fields of folklore and comparative literature. His works include *Tales and Legends of the North-American Indians* (1871); *American Sketches* (1876); *Longfellow* (1879); *From the H'gawa* (1880); *Capital and Labor in America* (1881); b

ian Legends; Pictures of American Life (1884); *Friedrich Nietzsche, der Unzeitgemässe* (1909); *American Superstitions of To-day* (1913); and *American Jews* (1914). He interpreted American culture to the Germans, and helped make American authors known to them. Died Tarrytown, N. Y., July 28, 1918.

KNOSSOS or **CNOSSUS** or **GNOSSUS**, *nōs'us*, ancient city, Crete, located near the north coast, 4 miles southeast of modern Candia. The center of Cretan civilization in the Bronze Age, it was occupied well before 3000 B.C. Excavations begun in 1900 by Sir Arthur J. Evans brought to light the great palace of the legendary King Minos, built first in about 2000 B.C. (See *Labyrinth*.) The plan of the great palace, based on the remains uncovered by Sir Arthur, includes a great throne room with a limestone throne, a ceremonial or theater area, a central court with adjoining state apartments, and magazines where oil, wine, and other foodstuffs were kept. Many of the halls and rooms were decorated with frescoes, and the palace was flanked by the magnificent houses of nobles and other dignitaries, well as by a hostel or hotel for visitors. The palace is the largest and best preserved of the ancient buildings, and has been the most completely investigated of those monuments. (See *Architecture—Aegean*.) It was destroyed in about 1400 B.C., but the city itself remained an important center until the 4th century A.D. See *ARCHAEOLOGY—Old World*.

KNOT, a limicoline bird (*Calidris canutus*), feeding in the Arctic and wintering in temperate zones. It is chunky and stout, and has a bill which is about equal in length to the length of head. In spring its breast is light robin-red color and its back mottled gray and black; all its color is more nondescript, with the east being whitish. The knots often migrate in closely packed flocks. See also *ROBIN SNIP*.

KNOT, a nautical measure. See *NAVIGATION—Definitions; SHIPPING AND SHIPBUILDING TERMS, WEIGHTS AND MEASURES—Classification, Unit Standards*.

KNOTGRASS. See *GRASSES*.

KNOTS. See *KNOTTING AND SPLICING*.

KNOTT, A(loysius) Leo, American lawyer and public official: b. near New Market, Frederick County, Md., May 12, 1829; d. Baltimore, April 18, 1918. He graduated with honors at St. Mary's College, Baltimore, in 1847, and, after teaching for three years, studied law with William Schley of Baltimore. He was admitted to law practice in 1855. He was prominent in the struggle of 1864-1867 to free Maryland from rule by the Unconditional Unionist Party. His state offices included that of member, Maryland House of Delegates, 1866 and 1899. He served on the Democratic National Executive Committee, 1872-1876, and as 2d assistant postmaster general under Grover Cleveland, 1885-1889. He was a member of the Maryland Historical Society and a president of the Maryland Original Research Society. His works include *History of the Redemption of Maryland* and articles on Maryland for *The Encyclopedia Americana* (1904) and *The Catholic Encyclopedia* (1910).

KNOTT, Cargill Gilston, British physicist: b. Penicuik, Scotland, June 30, 1856; d. Oct. 26, 1922. He studied at Edinburgh University and was assistant professor of natural philosophy there, 1879-1883. He was then professor of physics at the Imperial University, Tokyo, Japan, 1883-1891, and conducted a magnetic survey of Japan in 1887. Returning to Scotland (1892), he lectured on applied mathematics and was awarded the Keith Prize of the Royal Society of Edinburgh for special research work on magnetic strains (1897). He gave the Thomson lectures at the United Free Church College, Aberdeen, on earthquakes (1905-1906) and on radioactivity (1913-1914). His works include *Electricity and Magnetism; Physics of Earthquake Phenomena* (1908). His *Photometry* was in its 11th edition in 1921.

KNOTT, James Proctor, American legislator and legal scholar: b. near Raywick, Ky., Aug. 29, 1830; d. Lebanon, June 18, 1911. He studied law, was admitted to the Missouri bar in 1851, and entered practice at Memphis, Mo. In 1857 he was elected to the Missouri legislature, in 1859 was appointed to the office of attorney general of Missouri to fill a vacancy, and in 1860 was elected to that post. Having refused, at the beginning of the Civil War, to take an oath of allegiance which he considered too severe, he was for a time imprisoned. In 1862 he moved to Kentucky, where he established a law practice at Lebanon; and in 1867-1871 and 1875-1883 served in Congress as Democratic representative from the 4th Kentucky District. He was long chairman of the House Committee on the Judiciary. In the 41st Congress (1871) he made a celebrated speech opposing a land grant to a railroad and poking ridicule at the rising little town of Duluth, Minn., which later forgave him and gave him a rousing welcome. He was governor of Kentucky in 1883-1887, a delegate to the Kentucky Constitutional Convention in 1891, professor of civics and economics in Centre College, Danville, Ky., in 1892-1894, and from 1894 to 1901, professor of law and dean of the law faculty there.

KNOTT, Thomas Albert, American lexicographer and philologist: b. Chicago, Ill., Jan. 12, 1880; d. Ann Arbor, Mich., Aug. 16, 1945. He received the B.A. degree at Northwestern University in 1902 and the Ph.D. degree at the University of Chicago in 1912. He began teaching in 1901, was instructor and associate professor of English at the State University of Iowa, 1920-1926, and professor of English and editor of the *Middle English Dictionary* at the University of Michigan, 1935-1945. His contributions to lexicography and philology include his general editing of *Webster's New International Dictionary, Second Edition* (1934), and his coauthorship, with Samuel Moore, of *Elements of Old English* (1919) and, with John S. Kenyon, of *A Pronouncing Dictionary of American English* (1944).

KNOTTING AND SPLICING, the fastening or tying of ropes or cords. There are hundreds of varieties of knots, most of which are used only on shipboard. Generally, the requirements of a useful knot may be stated to be that, while it holds without danger of slipping while the strain is on it, when slackened it should be easily untied. The simplest knot is the kind generally tied at the end of a thread or a

cord to prevent it slipping. By passing a loop instead of the end of the cord the common slip-knot is formed; and a useful fixed loop is got by tying a simple knot, or the "figure of 8 knot" on the loop of a cord. One of the simplest and most useful running knots for a small cord is made by means of two simple knots. The most secure method of fastening a line to, say, a bucket is the standing bowline; and a running bowline is formed by passing the end through the loop, thus making a running loop. Out of the score or so of methods of fastening a boat's painter the one which will be found most useful is the well-known two half-hitches. The timber hitch is useful for attaching a line to a spar or a stone, and the clove hitch is invaluable for many purposes. It is very simple and cannot slip. A simple method of fastening a rope to a hook is the blackwall hitch, where the strain on the main rope jams the end so tightly against the hook that it cannot slip. There are many methods for shortening a rope temporarily, one of them being the sheepshank.

Of the methods for uniting the ends of two cords the simplest and one of the most secure is the common reef knot, which must be carefully distinguished from the "granny," which will jam if it does not slip; the reef knot will do neither. For very small cords or thread the best knot is the weaver's. The fisherman's knot is a very useful one for anglers and is formed by a simple knot in each cord being slipped over the other; when drawn taut it is very secure, and it is easily separated by pulling the short ends. A useful method of uniting large ropes is to tie a simple knot on the end of one rope and interlace the end of the other, and draw taut. This tie may also be made with the figure of 8 knot. For very large ropes the carrick bend is the simplest and most secure. The bowline bend is formed by looping two bowline knots into each other. For attaching a small line to a thick rope the becket hitch is very useful.

Splicing is the process employed to join two ropes when it is not advisable to use a knot. The three chief varieties of the splice are the short splice, the long splice and the eye splice. The short splice is made by unlaying the ends of two ropes for a short distance and fitting them closely together; then, by the help of a marlin-spike, the ends are laced over and under the strands of the opposite rope. When each strand has been passed through once, half of its thickness is cut away and the remainder passed through again; half of the remainder being also cut away, it is passed a third time, and, when all the strands are so treated, they are hauled taut and cut close. This reducing the thickness of the strands tapers off the splice. The long splice is employed when the rope is used to run through a block, as it does not thicken it. The ends of the two ropes are unlaid for a much longer distance than for the short splice, and similarly placed together. Then one strand is taken and further unwound for a considerable distance, and its vacant place filled up with the corresponding strand of the other rope, and the ends fastened as in the short splice. Other two of the strands are similarly spliced in the opposite direction, and the remaining two fastened at the original joining place. The eye splice is, as the term implies, used to form an eye, or round a dead eye.

To prevent a rope fraying at the ends a variety of methods are employed, the simplest

being to serve or whip the end with small cord.

KNOUT, nout, or nōōt, the official instrument of punishment formerly used in Russia, dating from about 1450, made in various forms but usually being a heavy whip of leather thongs artificially hardened, twisted with wire and sometimes hooked at the ends, etc. On hundred strokes were considered equivalent to sentence of death, as the victim seldom survived. On account of the severity of the punishment Nicholas I issued an order substituting punishment with a lighter whip of three thongs, known as the pleti.

KNOWER, Henry McElderry, American anatomist b. Baltimore, Md., Aug. 5, 1868, there, Jan. 10, 1939. He was graduated from Johns Hopkins University in 1890, and there received his Ph. D. degree in 1896. He served a Johns Hopkins as assistant in biology (1894-1893), as Adam T. Bruce Fellow (1895-1896), as instructor in anatomy (1899-1908), and as associate instructor (1908-1909). In 1909-1911 he was lecturer at the University of Toronto thereafter becoming professor of anatomy at the University of Cincinnati, a position which he held until 1925. He served in a similar capacity at the University of Alabama (1926-1929), and for 21 years was managing editor of *The American Journal of Anatomy*. His notable researches included embryological and anatomical studies of the frog, and experimentation with the human heart muscles.

KNOWLEDGE. In the objective aspect knowledge is simply and logically the known. It comes in, or by, knowing in experience of minds or subjects. More actively or volitionally knowledge is attained or acquired by learning and by study. *Knowing* in the subjective aspect in the "subject-object" relation is the correlate of knowledge in the relations of knowing subjects to existent and real objects. But knowledge of known objects is logically distinct from the objects known. These *three* correlates should not be confused, as they have been too pervasively and often too persistently in reflective thinking and philosophy, and even in systematic thought and science.

The *philosophy of knowledge*, or *theory of knowledge*, the inquiry and study of the nature, origin, development, limitations, and validity of human knowledge, is treated more adequately in the article on **EPISTEMOLOGY**, which is the most recently accepted name for the traditional "theory of knowledge," as a branch of metaphysics and of philosophy. But the philosophy of knowledge includes, besides epistemology, the philosophical extension of logic, the philosophy of science, and especially of psychology. But here we should consider the relation of knowledge to reality, in philosophy and science usually termed the "subject-object relation," or knowledge relation.

Objects appear to subjects, who perceive, recognize, them, and consistently describe them in terms of common experience. We distinguish intuitively or cognitively the subjective and perceptible as mental and the objective and perceptible as existent and external to the mind, and we judge that the subjective percepts are correlative to the perceptual real objects. These percepts are assimilated in developmental concepts. Sub-

sequent similar percepts are recognized and so have *meanings* relative to our past experience and knowledge, and to these meanings subsequent similar meanings are *apperceived*. These experiential and developmental concepts and meanings are synthesized and *organized* in knowledge, which thus is correlative to reality; but knowledge is not *existent* as real objects are. This correlation of perceptual and conceptual knowledge to reality subsists in and depends on physical, and possibly spiritual, properties and actions in, or of, the real objects and transmitted through some medium, or by some means. *Reality* is ascribed to entities and objects that exist, or subsist, in verified, or verifiable, correlation to true and coherent knowledge. Such entities and objects are real. As the knowledge becomes truer the verification becomes more true. The realities are developmental as the entities are, and the verification as the knowledge is. *Truth* is the quality of knowledge veritably correlated to reality. Real objects in real relations constitute the reality of existent systems, and upon this depends the conceptual verity of the real universe. But *existence* is more extensive than reality, and there may be existent entities or objects that are unknown or unrealized.

Knowing is developmental; there is a process of learning and of knowing. Concepts cohere in mental synthesis and in *apperception*, and there is a more complex organization of knowledge in the mind. The subjective and objective aspects indicated above pertain to this developmental and organized knowledge.

Learning is distinct from knowing and from knowledge. The term *learning* likewise has subjective and objective aspects. In the subjective aspect learning is more voluntary and active, and also more methodic than knowing; and it implies not only interest and attention but often study and purpose. In the objective aspect learning is more elaborately developed than knowledge, and methodical systematic education, also purposive, is often implied. The psychological and educational aspects of learning are considered more especially in the article on LEARNING.

Knowledge is qualitatively distinct from belief, opinion, understanding, and intelligence. *Belief* affirms from experience, or more willfully on faith, or on authority, conjectures from insufficient evidence and without verification, and sometimes is prone to conclude from inconclusive inference; yet belief often affirms certitude. *Opinion* derives from reflective thinking on incomplete knowledge or unverified conjecture, and sometimes from inference from partial evidence. *Understanding* comprehends not only the verified knowledge, or the conclusive belief, but the constitutive and intelligible relations in which the realities are comprehended. In the history of philosophy the term *understanding* has been used sometimes too comprehensively as the subjective correlate of knowledge, and sometimes as the objective aspect of mind. *Intelligence* implies, with more definite connotation not only comprehension of knowledge but clearer perception and apperception of the constitutive relations. *Intelligence* is the subjective correlate of the intellect, regarded objectively. The term *intelligence*, used objectively for special available knowledge, is inconsistent and may be confusing. *Mind* is the more comprehensive conceptual term for the developmental, sentient, perceiving, conceiving, thinking, rational, affective, and conative

organism, comprising knowledge, memories, dispositions, tendencies, instincts, affections, purposes, and other mental and conscious processes, states, and activities, which are studied in psychology. For special information the reader is referred to the articles on APPERCEPTION, APPREHENSION, MIND, PERCEPTION, and EDUCATION, PSYCHOLOGY OF.

Kinds of Knowledge.—The terms defined in the foregoing paragraphs are correlative to developmental and interrelated concepts and realities, and there are processes of knowing and products of knowledge. There are also definite *kinds* of knowledge, though they are relative and not exclusive. Perceptions and experiences develop into experiential, or *empirical* knowledge, comprising not only impressions, experiences, concepts, and apperceptions, but *knowledge of acquaintance*, simple judgments and inferences, *common knowledge* of habitual and traditional ways of doing and making things, "knowledge about" nature and worldly concerns, and remembrance of past events, all of which is more or less conceptual, developmental, organized, social or communal, and rational, and which extends into scientific and technical and professional knowledge.

Rational knowledge depends more on comprehensive conceptual knowledge and on valid thinking; and it develops into theoretical knowledge in science and in philosophy, also in economics, in history and in education, especially in the philosophy of these studies. Rational thought also extends into linguistics, aesthetics, and criticism.

Empirical and rational knowledge, whether simple or combined, is *mediate*, or derivative, as distinct from *immediate* and *intuitive* knowledge. Knowledge by acquaintance implies immediate apprehension, perception and recognition, with simple judgment, and without conscious inference; so it is distinct from rational knowledge, though it may have some mediate conception and apperception; but it is distinct from *descriptive* and *analytical* knowledge about things, which may develop into comprehension, understanding, and intelligence in science and in philosophy, but combined with the relevant conceptual and rational thought.

Intuitive knowledge springs also from immediate apprehension, or innate or inherited disposition, or some past *mnemonic* impression, or some revived organized experience. The terms *intuition* and *intuitive* pertain to such judgments, beliefs, and knowledge, which are less conscious or may be unconscious. Yet neither intuitive nor common knowledge is altogether distinct from mediate and rational knowledge. The facts of common knowledge are results of human experience in recurrent similar circumstances, and the intuitive ideas and beliefs that permeate human thought and conduct have developed in the individual mind, and in the racial, from habitual and customary experiences and reactions.

Scientific knowledge, or *science*, defined in the terms of the leading authorities, is verified and organized knowledge, experiential and rational, and especially methodic, proceeding to generalizations, theories, and conceptual systems, and to predictions and verifications. From common and empirical knowledge science is distinct as especially more methodic. From rational knowledge it is distinct as more descriptive and analytical, though it is also synthetic and theoretic. Basic, or fundamental, science is very

largely *applied* in derivative sciences, in the relevant technologies, and in the industries and arts. It is important to distinguish scientific from other knowledge, and science from philosophy. For fuller information the reader is referred to the article on SCIENCE, and to those on the several special sciences.

Knowledge is relative to reality, coherent, organized, and systematic, with a unitary tendency. The supposed kinds of knowledge differ mainly in development and in comprehension.

Organization of Knowledge.—The organization of knowledge comprehends not only the mental processes, the development of concepts and the conceptual synthesis of knowledge, but also the intellectual correlation and systemization of valid knowledge from the simple social synthesis of common experience and elementary education to the more complex conceptual systems of science and philosophy.

Classification is fundamental to the organization and systemizing of knowledge. Regarding the nature of classes see the article on CLASSIFICATION. Special sciences and studies, centered about special concepts, interests, and problems, are distinct and definite with regard to these, but they are more or less dependent on one another, and some are especially derivative on more general or *fundamental sciences*. Some are further dependent on derivative sciences. So there is a gradation from the more general to the more special studies with regard to their dependence. Some studies have like or closely related interests, concepts, and problems, and by virtue of these they may be interrelated. So classes of sciences and of studies are defined and named, though few of the classes are distinct or separate. Usually they are defined by only one or two characters and named by only one or two distinctive terms. They may be more like groups than classes.

The classification of the sciences has been a methodological problem since the triadic division proposed by Greek philosophers: logic, physics, and ethics, to validate thought, to study the nature of the world, and to explicate and ameliorate human life and conduct. By Aristotle this was altered to three partly equivalent divisions: Theoretical, Practical, and Productive studies. The theoretical group he subdivided into physics, mathematics, and metaphysics. Practical philosophy he divided into ethics, politics, comprising rhetoric, and economics, as related to politics. Productive philosophy comprised poetics and the arts. His *poetics* studied, not merely poetry, but other arts and industries, or technologies, which are now regarded as practical and productive too. His division was indeed untenable. But the prior Greek triad was a valid basis for the development of the *system of knowledge*.

The medieval "seven liberal arts" comprised the *trivium*, three studies related to logic: grammar, dialectics, and rhetoric; and the *quadrivium*, four studies related to physics and mathematics: geometry, arithmetic, astronomy and music. In the curriculum of the scholastics those seven studies, or "disciplines," were regarded as preparatory to the higher studies of theology, metaphysics, and ethics. In the last centuries of the Middle Ages and in the Renaissance period several variously rationalized systems of knowledge and study were projected with some regard for Aristotle's divisions and with due regard for the

three faculties, theology, law, and medicine, or the rising universities; and history was added. Those of Georg Reisch (1496) and Johann Matthias Gesner (1548) were encyclopedic. By addition of many studies the systems were extended.

Francis Bacon, who was among the precursors of modern method in science, failed to produce a valid system because of his untenable divisions by three mental "faculties": memory, imagination, and reason, ineptly related to history, the arts, and the sciences and philosophies. Thomas Hobbes in his famous work, *The Leviathan*, came nearer providing a foundation for modern systems; and he added many special studies.

German philosophers of the 18th and 19th centuries proposed systems of historical interest, though not available to the present purpose. Johann Eduard Erdmann, Wilhelm Wundt, and Wilhelm Ostwald outlined valid systems, but they were impaired by untenable divisions.

The French *Encyclopédie des sciences, des arts, et des métiers*, edited by Diderot and D'Alembert, and issued in 1751-1780 in 35 volumes, gave a great impetus to the systemization of knowledge. It was followed in England by the *Encyclopaedia Metropolitana*, and the *Encyclopaedia Britannica*, the former being divided systematically, and the latter containing substantial treatises on the important subjects, though in alphabetic order.

In France there followed the notable systems of André Marie Ampère, the eminent scientist, of Antoine Augustin Cournot, another noted scientist, and of Auguste Comte, the last being the most important historically as establishing a valid order of fundamental sciences: mathematics, astronomy, physics, chemistry, biology, and sociology. He also discriminated the abstract from the concrete.

Herbert Spencer in England, historic systemist, misapplied Comte's contrast of abstract to concrete by dividing all sciences on the basis of these two distinct but inherently related terms for all sciences abstract from concrete objects of data, and the supposed "concrete" sciences have their abstract concepts in their generalizations. But in developing and expounding Comte's principle of gradation from the more general to the more special sciences and studies Spencer indicated a valid ground for classifying and systemizing the fundamental sciences and the subordinate studies, or sub-sciences.

Comte and Spencer were followed in France by Edmond Goblot and Edouard Naville (1901) and in England by Alexander Bain (1870) and Karl Pearson (1892). These systemists applied cross-classification more explicitly, as did also Stadler in Germany in 1896, and Tomáš Masaryk in 1886 in Czechoslovakia, of which he was later president. But these systems were all impaired by untenable divisions on ultrarational principles. More satisfactory orders in the objective naturalistic view were proposed in America by Charles W. Shields (1882) and by Ernest Cushing Richardson (1912).

Subjective and psychological distinctions were developed by the Italian philosopher, Antonio Rosmini-Serbati in 1830, by William Whewell in England in 1840, and by Hugo Münsterberg for the Congress of Arts and Science at St. Louis in 1904. The results were neither real nor ideal, neither objective nor valid; and they were inapplicable and confusing.

Richardson's classification had been made:

CONSPECTUS OF THE SYSTEM OF KNOWLEDGE

PHILOSOPHY.	SCIENCE, KNOWLEDGE.	HISTORY.	APPLIED KNOWLEDGE.
Metaphysics: Epistemology, Knowledge in general; Science in general.		History of Philosophy and Science.	
Ontology, Philosophy of Entity.	<i>Abstract Sciences and General Methods:</i> Logic, Mathematics, Metrology, Statistics.		
Philosophy of Nature.	<i>Natural Sciences:</i> <i>Physical Sciences:</i> Physics, Chemistry.	History of Natural Science, of Physical Science, of Physics, etc.	<i>Technology:</i> Physical, Engineering; Chemical.
Cosmology.	<i>Special Natural Sciences:</i> Astronomy, Geology, Geography, Physical, Human, and Historical; Meteorology.	Historical Geology.	<i>Applied Sciences:</i> Economic Geology, Economic Geography.
Philosophy of Life.	<i>Biological Sciences:</i> Biology, Botany, Zoölogy.		
Philosophy of Human Life.	<i>Anthropological Sciences:</i> Anthropology. Physical: <i>Medical Sciences.</i>	Human Studies and "Humanities." History of Mankind and of Human Life.	Hygiene, and Medical Practice.
Philosophy of Mind.	<i>Psychological Sciences:</i> Psychology: General and Comparative, Individual, Abnormal, Social and Racial.	Archaeology.	Applied Psychology: Psychiatry, Psychology of Education. Education, Teaching.
Philosophy of Social Life.	<i>Social Sciences:</i> Sociology: Social Anthropology, Ethnology, Culture.	Social-political History.	Applied Social Science.
Theology.	Religion.	History of Religions, Mythology.	Applied Religion and Church-work.
Ethics.	Morals.	History of Morals.	Applied Ethics.
Political Philosophy, Philosophy of Law, Philosophy and Science	Political Science. Jurisprudence, and the Science of Economics.	Political History. History of Law. Economic History.	Government, Politics. Practice of Law. Applied Economics, Economies, Industries, Business.
Aesthetics. Criticism.		History of Arts: Industrial, Aesthetic, "Fine": Music.	<i>Arts:</i> Technic of Arts. Industrial, Aesthetic, "Fine": Music. Printing. Rhetoric and Oratory.
Philosophy of Drama.	<i>Philology: Language and Literature:</i> Linguistics, Languages, Dramatics, and the Literature, and the Bibliography, Bibliography, Libraries.	History of Languages. History of Drama. History of Literatures. History of Books. History of Libraries.	Theatre, Theatricals. Writing, Literary. Publishing, Journalism

plicable to the Princeton University Library. He knew the faults of his predecessors, as he was a well credited historian of the problem. Meanwhile an objective, valid, and applicable order of the sciences had been gradually projected by the American Association for the Advancement of Science in organizing the sessions of its fifteen sections and arranging their programs. Yet it was not free from faults. However, it was so far one of the least inadequate as regards validity and applicability, the others being those of Wundt, Shields, Richardson, and Ostwald. But even these had obvious faults and inconsistencies.

In the long history of the problem nearly fifty systems proposed by philosophers and scientists from Plato and Aristotle to Wundt and Ostwald had been found faulty, inconsistent, and unavailable for the organization and systemizing of knowledge in associations, libraries, and bibliographies. The problem remained unsolved.

In the first decade of the present century the writer of this article, finding the classifications established in libraries inadequate and inefficient, was enabled and encouraged to undertake a thorough study of the problem and to develop a systematic classification based on valid principles and elaborated for use in libraries and bibliographies. An outline of his proposed system was published in 1910. The results of the study were published in 1929 and 1933 in his two books on the organization of knowledge in the sciences and in libraries. The system, condensed in one volume, followed in 1935; and this was expanded in three volumes issued in 1940, 1947, and 1953. A synopsis of it is shown on the preceding page.

In the writer's opinion "the System of Knowledge" is a term more valid and comprehensive than the historic name for this problem, "the classification of the sciences." Classification of data and of studies is basic to scientific method; and there is classification in the sciences more truly than of the few classes, or groups, of sciences: abstract, natural, physical, biological, psychological, social, and others; also fundamental, derivative, sub-sciences, composite sciences, and applied sciences.

Cross-classification moreover avails whereas the several sciences and studies have special philosophy and methodology, study and teaching; special histories, theories, technologies and applications.

Special sciences depend on more general sciences, which are applied in them. Conversely the more general sciences partake of the findings of special sciences, some becoming thus composite, like geography, anthropology, and medical science. So there is gradation from the more general to the more special sciences, studies, and technologies, while there is also interrelation within the system. There should be consistency, where feasible, with the order of nature, where discerned in conformities, recurrences, developments, and symmetries. There should moreover be adaptability to the several diverse views, where feasible.

The Value of Humanized Knowledge.—The sustenance, the economy, and the welfare of human life depend on organized and socialized knowledge and on its purposive social application to the economic problems, the political affairs, and the amelioration of human relations and social conditions. Humanized knowledge should be disseminated in education, in social communication, in religious and ethical teaching, in

journalism and literature, in drama, in the arts and in entertainments, thus conducing to mental health, sane thinking, right conduct, civilization and intelligent culture. In the professions, industries, agencies, and institutions organized knowledge is essential to efficiency and successful management.

Knowledge, thought, and purpose are organized in minds individual and communal. Through education social or communal knowledge, thus organized, tends to become systematic, and thus unitary, as real systems in constitutive relations are comprehended in the conceptual universe. Organized human purpose extends ultimately, we may reasonably believe, to teleological divine purpose in the world.

C., "Classification of the Sciences," *Introduction to the Philosophy of Science* (New York 1937); Bliss, Henry E., "Theoretic Principles of Bibliographic Classification," *Transactions, International Federation for Documentation* pp. 57-65, (The Hague 1938); id., "The Problem of Classification for Bibliography and a Proposal," *Transactions*, vol. 15, pp. 84-93 (The Hague 1948).

HENRY EVELYN BLISS,

Author of "The Organization of Knowledge and the System of the Sciences"; "A Bibliographic Classification."

KNOWLES, nölz, Frederic Lawrence, American poet: b. Lawrence, Mass., Sept. 8, 1869; d. Boston, Mass., Sept. 20, 1905. He was educated at the New Hampshire Conference Seminary of which his father, Daniel C. Knowles, was president for many years. After graduation he taught for some time in his father's seminary and at Wesleyan University and Harvard. His verse attracted attention even in college days. His poems appeared in the best magazines and received wide quotation. The week before he died he wrote:

"This body is my house—it is not I,
Triumphant in this faith I live and die."

He was the author of *Love Triumphant* (1904); *On Life's Stairway* (1900). He compiled and edited several collections of poetry the most important of which are *Poetry of American Wit and Humor* (1899); *Cap and Gown College Verse—Second Series* (1900); *Golden Treasury of American Songs and Lyrics* (1901); *Yearbook of Famous Lyrics* (1901); *Treasury of Humorous Poetry* (1902); *Value of Friendship* (1904); *Value of Courage* (1905); *Value of Love* (1906).

KNOWLES, James Sheridan, Irish dramatist and actor: b. Cork, Ireland, May 21, 1784; d. Torquay, Devonshire, Nov. 30, 1862. He served as an ensign in the militia, became an M.D. of Aberdeen University, and then went upon the stage, but meeting with small success.

aught school in Belfast and Glasgow. His tragedy of 'Caius Gracchus' was performed at Belfast in 1815 with success, and from this time he had a prosperous career. He visited the United States in 1834. In 1844 he underwent conversion and became a Baptist; he then took a prominent part in the work of religious revival, became known as an anti-Roman Catholic controversialist, but never preached against the stage. In 1848 he received a pension of £200 a year from government. Among his principal works are the dramas 'Caius Gracchus' (1815); 'William Tell' (1825); 'Virginus' (1820); 'The Hunchback' (1832); 'The Wife: a Tale of Mantau' (1833); 'The Love-chase' (1837); 'Love' (1839). He published besides various poetical pieces, tales and novels, and in his later years works denunciatory of Roman Catholicism.

KNOWLES, Lucius James, American inventor: b. Hardwick, Mass., 2 July 1819; d. Washington, D. C., 25 Feb. 1884. He became a clerk in a shop at Shrewsbury, Mass., the first photographer using the system of Daguerre in Worcester, Mass., turned his attention to inventing, devised the Knowles safety steam-boiler feed-regulator, and constructed and operated several models of steam-engines. In 1843 he invented a machine for the spooling of thread, and this machine he manufactured at New Worcester in 1843-45. He then built spinning-machines for the manufacture of four- and six-cord thread, and manufactured cotton thread and warps at Spencer and Warren, Mass. (1847-53), and woolen goods at Warren (1853-59). Subsequently he manufactured a safety boiler-feeder, a steam pump and a tape loom, under his own patents. He took out over 100 patents, mostly for loom improvements. His plant for the manufacture of looms and their accessories was located at Worcester, Mass., where it was later combined with an English concern and now, under the name Crompton and Knowles Loom Works, has branches in all parts of the world. The Knowles Pump Works, too, have grown to be one of the largest in the world. He was elected to the lower house of the Massachusetts legislature in 1862 and 1865, and in 1869 became State senator. Williams College in 1865 gave him the degree of A.M. Consult Roe, A. S., 'Lucius J. and Francis B. Knowles' (in *New England Magazine*, N. S. Vol. XXXI, p. 483, Boston 1904).

KNOWLES, Robert Edward, Canadian novelist: b. Maxville, Ontario, 30 March 1868. He is a graduate of Manitoba College and of Queen's College, Kingston, was appointed minister of Stewart on Church, Ottawa, 1891, and from 1898 has been pastor of Knox Church, Galt, Ontario. He is the author of 'St. Cuthbert's' (1905); 'The Undertow' (1906); 'Dawn at Shanty Bay' (1907); 'The Attic Guest' (1909); 'The Singer of the Kootenay' (1911); 'The Handicap.'

KNOWLING, nō'ling, Richard John, English clergyman and educator: b. Devonport, Devonshire, 16 Sept. 1851. He was educated at Balliol College, Oxford, and was ordained deacon in 1875 and priest 1876 in the Church of England. He was classical master in the Abingdon Grammar School, 1874-76; curate of

Wellington Somerset, 1876-78 and of Saint Martin-in-the-Fields, London, 1878-84; censor and lecturer in King's College, London, 1884-90; vice-principal of King's College, 1890-97; professor of New Testament exegesis 1894-1905; professor of divinity in Durham University and canon of Durham since 1905. He was select-preacher at Cambridge University 1895; and became Fellow of King's College, London 1899. He was examiner at Oxford University 1897, 1905, and at the University of London 1905-06; examining chaplain to the archbishop of Canterbury and the bishop of Exeter, 1903-05, and Boyle lecturer for the same period. His writings include 'The Witness of the Epistles' (1892); 'Acts of the Apostles,' in the 'Expositors Greek Testament' (1901); 'Our Lord's Virgin Birth and the Criticism of Today' (1903); 'The Epistle of Saint James' (1904); 'The Testimony of Saint Paul to Christ' (1905; new ed., 1911); 'Literary Criticism and the New Testament' (1907); 'Messianic Interpretations and Other Studies' (1911). He died 4 July 1919.

KNOWLTON, Frank Hall, American botanist: b. Brandon, Vt., 2 Sept. 1860; d. Ballston, Va., 22 Nov. 1926. He was graduated from Middlebury College, Vt., in 1884, and in 1898 took the degree of Ph.D., George Washington University; was assistant palæontologist on the United States Geological Survey, 1889-1900, and palæontologist from 1900 to 1907, and geologist from the latter year. Among his scientific monographs are 'Fossil Wood and Lignite of the Potomac Formation' (1889); 'Fossil Flora of Alaska' (1894); 'Catalogue of the Cretaceous and Tertiary Plants of North America' (1896); 'Fossil Flora of the Yellowstone National Park' (1898); 'Flora of the Montana Formation' (1900); 'Birds of the World' (1909); 'Flora of the Raton Mesa Region of Colorado and New Mexico' (1916); 'Flora of the Laramie of the Denver Basin of Colorado' (1916). *The Plant World*, which he had founded in 1897, he edited until 1904. He was a contributor to the Century, Standard and Webster's dictionaries and to the Jewish 'Encyclopædia.'

KNOWLTON, Thomas, American soldier: b. West Boxford, Mass., 30 Nov. 1740; d. battle of Harlem Plains, N. Y., 16 Sept. 1776. He enlisted in the last French and Indian War, took part in the capture of Ticonderoga (1759), and in 1762 went with General Lyman's forces to Cuba as second lieutenant. After the siege of Havana he took up farming. Living at Ashford, Conn., at the beginning of the Revolution, he was elected captain of a militia company organized after Lexington, and with 200 other Connecticut troops was sent to Charlestown. His detachment, ununiformed farmers with shot-guns, fought at Bunker Hill. On 8 Jan. 1776 he made a successful invasion of Charlestown, and subsequently became lieutenant-colonel of the 20th regiment and then of a regiment of Connecticut rangers, usually known as "Knowlton's Rangers." He was killed while leading his command at the battle of Harlem Heights, and was highly praised by Washington in general orders. A statue was erected to his memory by his State in 1895 on the capitol grounds at Hartford. Consult

Coffin, C., ed., 'The Lives and Services of Major-General J. Thomas, Colonel Thomas Knowlton, etc.' (New York 1845); Woodward, A., 'Memoir of Col. T. Knowlton' (Boston 1861); Woodward, P. H., and others, 'Statue of Col. Thomas Knowlton' (Hartford 1895).

KNOW-NOTHING PARTY, The, resulted from nativism in American politics and from the organization of secret political associations such as the United American Mechanics and the Order of the Sons of America in Pennsylvania; the Order of United Americans and the Order of the Star Spangled Banner in New York, founded for the purpose of obtaining the repeal of the Naturalization Law and of the law which permitted others than native Americans to hold office. As a definite political party it may be said to have started in 1852 and existed two or three years. The principles of the Know-nothing party were embodied in the following propositions (at New York, 1855): (1) The Americans shall rule America. (2) The perpetuation of the union of these States. (3) No North, no South, no East, no West. (4) The United States of America—as they are—one and inseparable. (5) No sectarian interferences in our legislation or in the administration of American law. (6) Hostility to the assumption of the Pope, through the bishops, etc., in a republic sanctified by Protestant blood. (7) Thorough reform in the naturalization laws. (8) Free and liberal educational institutions for all sects and classes, with the Bible, God's holy word, as a universal textbook. A society was formed in 1855 in opposition to the above, called Know-somethings. Both bodies were absorbed into the two parties, Democrats and Republicans, at the Presidential election in 1856.

The Know-nothing organization was primarily the result of foreign emigration. In 20 years from 1825 to 1845 the immigration amounted to 1,028,225. The consequence was a sharp awakening of native American prejudice and alarm. The sentiment first showed itself in New York, where the alien population had reached portentous proportions, in the estimation of citizens of the old stock. A native organization for political purposes was effected, and in 1844 it succeeded in electing James Harper mayor on a native American ticket. About this time began the great immigration due to the Irish famine, and in the five years from 1845 to 1850 there came in about as many aliens as had been received during the whole 20 years before. Native Americanism flamed up hotter than ever, and its political conflagration extended to other cities and States. The great volume of the Irish immigration was Roman Catholic, and animosity to that Church gave it fire. At Philadelphia two Roman Catholic churches were destroyed in riots between natives and Irish; at Boston a convent was burned. Six native American representatives were elected to the 29th Congress, that of 1845, four from New York and two from Pennsylvania. Between 1850 and 1855 the immigration amounted to nearly 2,000,000, and the native spirit was aroused even more hotly. Moreover, the anti-slavery agitation, expressing itself in opposition to the extension of slavery to the Territories, was disturbing party allegiance, and special efforts were made to kindle the native

American spirit into a hot flame, with an ulterior motive, it was believed, of turning the current of public sentiment into other channels.

In 1852 the Know-nothing organization, distinctly, made its appearance. It was so-called because it was a secret oath-bound fraternity regarding whose objects and whose real name its members always answered when questioned "I don't know." "Americans must rule America!" was its rally cry, and relentless hostility to the increasing power of the Roman Catholic Church and a demand for the extension of the qualification for naturalization to a residence of 21 years were its main purposes. The Know-nothings started off brilliantly. In 1854 they carried the State elections in Massachusetts and Delaware, and polled a great number of votes in New York. In 1855 they elected governor and legislatures in New York and four New England States, and in the South and West they were successful or nearly approached success in nine States. In 1856 eight of the 31 States had native American governors, but in the Presidential election of that year the party cast only about one-fifth of the popular vote and obtained only eight electoral votes, the votes of the single State of Maryland. In the 34th Congress, 1855, it had 5 senators, 43 out-and-out Know-nothings as Congressmen and 70, nominally Republicans, but members of Know-nothing councils. In the 35th Congress, 1857, it had 5 senators and 14 representatives. In the next Congress it had 2 senators and 23 representatives, all of them from Southern States. Soon thereafter Know-nothingism went to pieces rapidly and no more of it was heard in politics. It had no representation in Congress after the 36th. Amongst its most determined opponents were Henry Ward Beecher and Horace Greeley. (See also AMERICAN PARTY). Consult Carroll, A. E., 'The Great American Battle' (New York 1856); Cluskey, M. W., 'Political Text-Book and Encyclopedia' (Philadelphia 1860); Cross, I., 'The Origin, Principles and History of the American Party' (in *Iowa Journal of History and Politics*, Vol. IV, p. 526, Iowa City 1906); Davis, H. KNOX, nōks, Frank (William Franklin), American soldier, journalist and statesman: b. Boston, Mass., 1 Jan. 1874; d. Washington, D.C., 28 April 1944. His parents had emigrated from St. John, New Brunswick, Canada, shortly before his birth. During his boyhood the family moved to Grand Rapids, Mich., where Frank Knox received his primary education in the public schools. In 1898 he was graduated from Alma College, Michigan, with the degree of Bachelor of Arts. On 4 June 1898 he enrolled in the First Regiment, United States Volunteer Cavalry, better known as the Rough Riders, and with that organization participated in several engagements in the Spanish American War, notably the battle of San Juan Hill, Cuba. He continued his interest in military affairs by serving on the staffs of the governors of Michigan and New Hampshire at various times, and as president of the Military Training Camps Association of New Hampshire in 1917. On the entry of the United States into the First World War in April 1917, he enlisted in the First New Hampshire Infantry, went overseas as a captain in the 78th Division, and later transferred to the 153d Field Artillery in which he rose to the rank of lieutenant colonel before the end of the war. He took part in the St. Mihiel and Meuse-Argonne offensives.

He began his professional career as a journalist in 1898 when he joined the Grand Rapids, Mich., *Telegram* as a reporter immediately after the close of the Spanish American War. His journalistic and publishing successes followed the traditional pattern from then on, culminating in his acquisition in 1931 of the *Chicago Daily News* which he brought to a high state of prosperity and influence. He was also the publisher and part owner of the *Manchester, N.H., Leader and Union*. From 1927 to 1931 he was the general manager of the Hearst Newspaper System.

Knox, throughout his life, took an active part in politics, although he never held an elective office. He belonged to the liberal wing of the Republican Party but left the party to follow Theodore Roosevelt in the Bull Moose campaign of 1912. He returned to the party in 1916 and resumed his role as an active committee worker. The climax of his strictly political career came at the 1936 Republican Convention in Cleveland when he was chosen as the candidate for Vice President with Alfred M. Landon as the presidential nominee. The election, however, was a Democratic landslide—the Republicans carrying only Maine and Vermont.

Knox was appointed secretary of the navy by President Franklin D. Roosevelt in July 1940, and held the office until he died in 1944. By departing from tradition in appointing to this important office a member of the opposing party who had bitterly denounced him and his New Deal policies, the President brought to the attention of the country in the most striking manner possible the concern with which he viewed the

war which had started in Europe in September 1939. Knox had just the qualities of mind and temperament that were most needed to prepare the navy for the entry of the United States into the Second World War, 18 months later, and to bring the navy through the most critical period of the war. He had the wisdom to leave technical and strategic decisions to professional naval officers, but he provided the necessary vision and the driving force to get the enormous expansion program with which the navy was confronted into full swing without delay. He appreciated especially the importance of stimulating the morale of the civilian employees, the enlisted man, and the officers of the navy, and of cultivating sympathetic press relations. His handling of public relations after the attack on Pearl Harbor was particularly effective. In less expert hands the situation might easily have led to loss of confidence by the country in the navy, with consequent lowering of the efficiency of the navy itself.

He married Miss Annie Reid of Alma, Mich., in 1898. There were no children.

J. A. FURER,

Rear Admiral, United States Navy.

KNOX, Henry, American general and statesman: b. Boston, Mass., 25 July 1750; d. Thomaston, Me., 25 Oct. 1806. He was the seventh son of William Knox, of Scotch extraction, who settled in Boston and became a shipmaster. After the father's death in 1762, the son was employed by a Boston bookseller, and in 1771 he opened a bookstore of his own. When a young man he threw in his lot with the patriot cause and spent his leisure studying books on the military art, supplementing his reading by observing and questioning the British officers stationed in Boston. He also joined a military company and, upon its organization, became second in command of the Boston grenadier corps. He was interested in athletics and sports and, in 1773, while hunting, lost two fingers of his left hand. His marriage (16 June 1774) to Lucy Flucker, the daughter of an aristocratic Loyalist of Boston, did not prevent him from joining the Colonial Army at the outbreak of hostilities in the spring of 1775. He fought in the battle of Bunker Hill, acting as aide of General Ward, and then aided in constructing the defenses of the camps around Boston. The army being in pressing need of artillery, Knox proposed to Washington the plan of bringing heavy cannon and stores from Fort Ticonderoga near the Canadian frontier. He set out (15 Nov. 1775) on this perilous enterprise with a squad of mounted men. In the face of great difficulties he succeeded in getting 55 (by some accounts 59) guns, loaded them on sleds, with 23 boxes of lead and a barrel of flints, and reached Cambridge in safety (24 Jan. 1776). For this brilliant exploit he was warmly complimented by Washington. After his return he received his commission as colonel of the one artillery regiment, the appointment having been made by the Continental Congress (17 Nov. 1775). The cannonade of Knox's batteries (on the nights of 1-4 March 1776) enabled General Thomas to take possession of Dorchester Heights, which resulted in the evacuation of Boston by the British forces. In the summer of 1776 he was stationed at New York City with Washington, who found him a true friend and an able

officer. In December he was promoted to brigadier general of the artillery. He distinguished himself in the battles of Trenton and Princeton and took part in the engagements at Brandywine, Germantown and Monmouth. He helped (May 1777) General Greene in planning the defenses of the Hudson River. In the trying winter of 1777-78 he was in camp at Valley Forge, with his young wife. Many of Washington's letters refer to Knox in terms of high appreciation. He rendered valuable service in the operations against Cornwallis in October 1781, his skill as an artilleryman being praised by the Frenchman, De Chastellux. He was made major general (22 March 1782) and appointed to the command at West Point (29 Aug. 1782). Upon him devolved the delicate task of disbanding the army late in 1783. He had already formed the Society of the Cincinnati (q.v.) to keep alive the friendships of officers formed during the war.

Congress appointed Knox Secretary of War (8 March 1785), a position he worthily filled for 10 years. In 1794 he was also at the head of the Navy Department, just organized. Owing to insufficient salary, he resigned from Washington's Cabinet (2 Jan. 1795). His remaining years were passed on his estate, Montpelier, near Thomaston, Maine. Consult Brooks, N., *Henry Knox, a Soldier of the Revolution* (New York 1900); Drake, F. S., *Life and Correspondence of Henry Knox* (Boston 1873); Lindley, E. M., «Montpelier, Home of Major-General Henry Knox» (in *Magazine of American History*, Vol. XVI, p. 121, New York 1886); Stimpson, M. S., «Thomaston—The Home of Knox» (in *New England Magazine*, N. S. Vol. XXI, p. 730, Boston 1904).

KNOX, John, Scottish Protestant reformer: b. Giffordgate, Haddington, Scotland, 1505; d. Edinburgh, 24 Nov. 1572. (The Society of Antiquaries of Scotland discussed the subject of his birthplace in 1858, when Mr. John Richardson of Haddington brought forward evidence that he was born in Giffordgate, a suburb of Haddington, and not in Gifford, a village near that town. He was supported in this view by Mr. Laing, the editor of the reformer's works). After receiving his preliminary education at the grammar school of Haddington, he went in 1521 to the University of Glasgow, where for several years he studied scholastic philosophy and theology. Noted as a master of dialectic subtleties, he was ordained prior to 1530 and became a teacher of philosophy at Saint Andrew's. The study of the fathers, especially of Jerome and Augustine, had shaken his religious opinions as early as 1535, but it was not till 1542 that he became an avowed and marked reformer. The long period of silence, before in mature age he explained his views with completeness, has been regarded as proof that he was naturally of a prudent and peaceful disposition and not a turbulent partisan, as his after career would indicate. His reprehension of certain practices of the Church caused him to retire from Saint Andrew's to the south of Scotland, where he was declared a heretic. After the death of his friend, George Wishart, he remained in retirement till he took refuge with many other Protestants (1547) in the castle of Saint Andrew's, which the regent was vainly attempting to reduce. There for the first time he became known

as a powerful preacher against the papacy. The regent, re-enforced by a French squadron, obliged the garrison to surrender. The terms of the capitulation were violated, and Knox with his comrades was transported to France, where he was imprisoned in the galleys for 19 months. He experienced extreme hardships, and on his release (1549) directed his course to England, where he was appointed to preach at Berwick and at Newcastle and became one of the chaplains of Edward VI. For the boldness of his discourses he was several times called to account, but was able to vindicate himself. A bishopric was offered to him, but he declined it from scruples as to the divine authority of the episcopal order. On the accession of Queen Mary he fled from England to Dieppe and passed thence to Geneva, where, after taking part in the memorable troubles at Frankfort and after a short visit to Scotland, he became pastor (1556) of a small English congregation. The two years of his residence in Geneva, in the society of Calvin, Beza and other learned men, were among the happiest of his life. While in Scotland he had been cited to appear before an assembly of the clergy to be held at Edinburgh, and after his return to Geneva the citation was renewed and he was condemned to be burned as a heretic and the sentence was executed on his effigy. Against this condemnation he published the *Appellation of John Knoxe*. He also wrote a tract entitled the *First Blast of the Trumpet against the Monstrous Regiment of Women* (1558), a vehement attack on the political government of women, at a time when Mary of Guise was regent of Scotland and Mary Tudor Queen of England, and the nearest in succession to both thrones were females. Invited by the Scottish Protestants to resume his labors in his native country, he landed at Leith in 1559. The Queen regent had laid her plans for the forcible overthrow of the reformation. At a convention of the nobility and clergy in Edinburgh all the demands of the Protestants were refused. Several of the reforming preachers were summoned to appear at Stirling for trial, but by the dissimulation of the regent were prevented from attending and then outlawed for their failure. Knox hastened to meet them at Perth, where he preached against the «idolatriy of the mass» and the veneration of images. At the conclusion of the service there was a violent outbreak. The images in the churches were demolished, the pictures torn from the walls and trampled under foot, the holy recesses invaded and the «rascal multitude,» as Knox calls them did not stop till they had sacked and laid in ruins the houses of the Dominican and Franciscan friars and the Carthusian monastery. The Queen regent advanced upon Perth with an army, but, finding the Protestants well prepared for resistance, proposed terms of accommodation which were accepted. The Protestants, in order to consolidate their strength, formed a religious bond or covenant and began to be distinguished as the congregation and their leaders as the lords of the congregation. Iconoclasm was a prominent feature in the Scottish reformation. Events similar to those at Perth followed at Stirling, Lindores, Cupar, Saint Andrew's and other places. Knox had preached in the cathedral of Saint Andrew's with such success that the magistrates united with the inhabitants in

slating the churches and monasteries and in blishing the reformed worship. Meantime l war raged throughout the kingdom between regent, assisted by French troops, and the ls of the congregation. In political as well ecclesiastical affairs Knox was a conspicuous iser and took up his residence in Edinburgh r an extensive circuit through the southern l eastern counties. After a contest of 12 nth, the vigorous assistance rendered by zabeth and the death of the Queen regent ile the English troops were investing Edin- gh led to a truce and to the summons of Parliament to settle differences. Parliament embled in August 1560, the reformed religion s established and Roman Catholicism inter- ted by law in Scotland. Soon after the arrival the young Queen Mary (21 Aug. 1561) she nmoned the influential and noted reformer her presence. Six interviews are recorded ween him and the Queen, and the questions uch she raised were discussed by him with rude vehemence and rigor, which once drove r to tears. She caused his arrest on a charge treason in 1563, but all the councillors ex- pt the immediate dependents of the court ed for his acquittal. The vehemence of his ublic discourses led him into frequent difficul- s. In 1562 he disputed publicly for three ys with Abbot Quentin Kennedy at Maybole; 1565 he quoted certain texts which gave of- ense to the court and was for a short time ohibited from preaching. He fled from Edin- urgh when the Queen returned from Dunbar ter the death of Rizzio; and he preached a rmon at the coronation of the infant King Stirling (29 July 1567). Under the brief re- ncy of Moray, the work of Knox seemed to e completed, but after the assassination of Moray, civil and religious confusion returned nder the regency successively of Lennox and lar Weakened by a stroke of apoplexy in 570, Knox yet reappeared in the pulpit, but so iolent was the enmity excited by his animad- ersions that he left Edinburgh for Saint An- drews, 5 May 1571. He returned in the fol- owing year and his last energies were put orth in denunciations of the perpetrators of he massacre of Saint Bartholomew's. The doc- trines of Knox embraced a Calvinistic creed and a Presbyterian polity. The «Order of Geneva,» a liturgy which he shared in preparing for the use of the church at Frankfort, and subsequently employed in his congregation at Geneva, was introduced into Scottish Protestant churches in 1565. His character was marked by a stern realism, which could be beguiled by no social pretensions, no conventional dignities, no pom- pous traditions. From this sprang his scornful bitterness and his insensibility to the social graces and refinements which Mary exhibited. He was not a thinker except on political topics. His *History of the Reformation of Religion in the Realm of Scotland* is the best known of his writings. The liturgy prepared by him has been edited by Spratt under the title *The Book of Common Order of the Church of Scotland* (Lon- don 1911). Consult *Lives*, by McCrie (1813); Taylor (1885); Brown, P. H. (1895); Lorimer, John Knox and the Church of England (1875); Carrick, John Knox and his Land (1902); Hart, A. B., «John Knox as a Man of the World» (in *American Historical Review*, Vol. XIII, Lan- caster, Pa., 1908).

KNOX, John, English military chronicler: d. Berwick, England, 1778. He became an en- sign in the 43d Foot, rose to be captain, was present at the sieges of Louisbourg in 1757 and 1758, served in Wolf's forces before Que- bec, and remained in Canada until after the capitulation of Montreal in September 1760. His *Historical Journal of the Campaigns in North America, 1757-60*, is the most valuable first-hand record of the events described that has ever been published. Consult Dr. A. G. Doughty's edition, published by the Champlain Society (3 vols., 1914, 1916).

KNOX, John Barnett, American lawyer: b. Talladega, Ala., 16 Feb. 1857. His education was received at private schools, and after study- ing law, he was admitted to practice in 1878. Ten years later he removed to Anniston, Ala., where he afterward resided, and soon became one of the most prominent lawyers in the state. He took a very important part in state politics, was delegated to Democratic National Conven- tions of 1892, 1896 and 1912 and was twice chair- man of the Democratic State Executive Com- mittee. In the State Constitutional Convention of 1901 he was the president. In the debates of this convention and in the framing of the con- stitution he took an active part. His arguments on the legal problems involved showed that he was a master of constitutional law. He died 7 Feb. 1935.

KNOX, John Jay, American financier: b. Knoxboro, N.Y., 19 March 1828; d. New York, 9 Feb. 1892. He was graduated at Hamilton College in 1849, and was a banker till 1862. In that year he received an appointment from Sec- retary Chase, and subsequently had charge of the mint coinage correspondence of the Treasury Department, becoming in 1867 deputy comptrol- ler of the currency. A bill which he proposed was passed with a few modifications and is known as the Coinage Act of 1873. In 1872 he was appointed comptroller of the currency, re- signing in 1884, to become president of the Na- tional Bank of the Republic, New York. In addition to various reports and addresses on financial subjects he published *United States Notes, a History of the Various Issues of Paper Money by the Government of the United States* (New York 1884, revised 1887). Some years after his death there was brought out by B. Rhodes and E. H. Youngman, his *A History of Banking in the United States* (New York 1900). Consult Chamber of Commerce of the State of New York, *Tribute to the Memory of John Jay Knox* (New York 1892).

KNOX, Philander Chase, American law- yer and statesman: b. Brownsville, Pa., 6 May 1853; d. Washington, D.C., 12 Oct. 1921. Grad- uated, Mount Union College, Ohio, 1872; studied law and was admitted to the bar in 1875. He was assistant United States district attorney for the western district of Pennsylvania in 1876-77; resigning this position he took up the practice of law in Pittsburgh in partnership with J. H. Reed. The firm's practice grew rapidly and Knox became known as one of the most suc- cessful corporation lawyers in the United States; in 1892 he was counsel for Carnegie during the Homestead strike. April 1901 he was appointed Attorney General of the United States and held this office till June 1904 when he became senator from Pennsylvania for the unexpired term of

Sen. Matthew S. Quay, and in 1905 was elected for a full term. He served on the Judiciary Committee and took a prominent part in the debate relating to the Panama Canal. As attorney general he was involved in the antitrust agitation, and in 1902 brought suit against the Northern Securities Company and the so-called Beef Trust on the ground that they were violating federal statutes. In 1908 Senator Knox received 68 votes for the presidential nomination in the Republican National Convention. In 1909 he became secretary of state in President William H. Taft's cabinet and served until 1913, dealing competently with the Bering Sea and the North Atlantic fisheries controversies, and opening the way for what was soon to be called "dollar diplomacy" in South America and China. In 1912 he made a tour of the Latin American countries for the purpose of cementing closer relations between them and the United States. He was reelected to the United States Senate in 1916 for the term 1917-1923, but died while still in office. He was a steadfast opponent of the League of Nations and the Versailles Peace Treaty, arguing that they violated the American constitution. He published *Future of Commerce* (1908); *International Unity* (1910); and *Reciprocity with Canada*.

KNOX, Robert, Scotch writer on Ceylon: b. about 1641; d. London, June 19, 1720. He, together with his father—a commander in the East India Company's service—and 14 others were taken into captivity by the Ceylon natives when forced by storms to put into Cottiar Bay in 1659. His father died in captivity but the son escaped, after several unsuccessful attempts, after 19½ years, to Arippe, a Dutch settlement. The East India Company, in 1680, took him into its service and he made a number of other voyages through the Indian seas, becoming a commander. He wrote a number of letters to his cousin, John Strype, now preserved in the University Library, Cambridge, but most interesting reading is furnished by his account of Ceylon, the first ever written. It is entitled *An Historical Relation of the Island of Ceylon in the West Indies; together with an Account of the detaining in Captivity the Author and divers other Englishmen now living there, and of the Author's Miraculous Escape* (London 1681); it has been translated into Dutch, French, and German.

KNOX, Thomas Wallace, American journalist and traveler: b. Pembroke, N. H., June 26, 1835; d. New York, Jan. 6, 1896. He lost his parents while still a small child and was brought up on a farm, but managed to get enough schooling to become head of an academy at Kingston, N. H., in 1858. He went to Colorado during the gold rush in 1860 and there engaged in journalism and during the Civil War served as volunteer aide, rising to the rank of lieutenant colonel. For a time he acted as war correspondent for the *New York Herald*. After an altercation with Gen. W. T. Sherman, he was courtmartialled and banned from the army. Some of his war letters were published as *Campfire and Cotton Field* (1865). With T. M. Cook he wrote *Horatio Seymour* (1868). He made a journey around the world as a newspaper correspondent in 1866 and again in 1877, and wrote many popular books for young people. He was one of the founders and early officers of the Lotos Club. Among Knox's

published works are *Overland through Asia* (1870); *The Underground World*, (1877); *How to Travel* (1881); *Lives of James G. Blaine and John A. Logan* (1884); *The Life of Robert Fulton, and a History of Steam Navigation* (1886); *Decisive Battles since Waterloo* (1887); *Life and Work of Henry Ward Beecher* (1887); *The Republican Party and Its Leaders* (1892); *Boy Travelers* series, 15 vols. (1880-1894); *The Lost Army* (1894); *Hunters Three* (1895); *In Wild Africa* (1895).

KNOX, William, British official and pamphleteer: b. in Ireland, 1732; d. Ealing, near London, Aug. 25, 1810. He was appointed by Lord Halifax "his majesty's council and provost-marshal of Georgia," and sailed with Henry Ellis, who was appointed governor of the colony. They arrived in Savannah in 1757, but, returning in four years, he became agent in Great Britain for Georgia and East Florida. He suggested a colonized aristocracy and representatives in Parliament, then (1765) wrote two pamphlets defending the Stamp Act, and his services were dispensed with. He was under secretary of state for America from 1770-1782. Lord North (1776) based conciliatory propositions on Knox's views. In 1772 the "reversion of the place of secretary of New York" was granted to him without pay. The province of New Brunswick, Canada was created in 1784 at his suggestion, lands there being granted to the expelled Loyalists. He wrote numerous pamphlets, most important of which were *A Letter to a Member of Parliament, Wherein the Power of the British Legislature and the Case of the Colonists Are Briefly and Impartially Considered* (1764); *The Claim of the Colonies to an Exemption from Internal Taxes Imposed by Authority of Parliament Examined* (1765); these two pamphlets lost him his post. *A Defense of the Quebec Act* passed through two editions in 1774, its year of issue; *Considerations on the State of Ireland* was written in 1778.

KNOX, William Franklin. See KNOX FRANK.

KNOX COLLEGE, a coeducational institution, founded in 1837 at Galesburg, Ill., as Knox Manual Labor College. The school was opened in 1841, and in 1857 the name was changed to Knox College. The original plan for founding and maintaining the school was to secure subscriptions to the amount of \$40,000 and to purchase lands in the Mississippi Valley, at government price, the lands to be resold at profit. Every subscriber who purchased 80 acres of land was given free tuition for one student for 25 years. The productive fund in 1951 was over \$3,200,000. A college of liberal arts only; it grants the A.B. and the B.S. degrees. It has a campus of 35 acres and 14 buildings. famous Lincoln-Douglas debates in 1858 were held on the grounds of this college, a fact fittingly commemorated on Oct. 7, 1898. There is much pride today in the fine music conservatory which grants the B. Mus. degree. Annual rollment is about 800.

KNOXVILLE, nōks'vīl, city, Iowa, an Marion County seat, at an altitude of 910 feet 32 miles east-southeast of Des Moines, served by the Chicago, Burlington and Quincy Railroad. It is the shipping point of a coal mining

stock raising area, and has feed mills, bottling works, and platform window and overall factories. A United States Veterans Hospital is here. Founded in 1845, it was named for the Revolutionary War general, Henry Knox (q.v.), who became secretary of war and first secretary of the navy. The city was incorporated in 1854, and is governed by a mayor and council. Pop. (1950) 7,625.

KNOXVILLE, city, Tennessee, seat of Knox County, at an altitude of 933 feet, situated on the north bank of the Tennessee River, four miles west of the junction of the Holston and French Broad rivers, whose confluence is the head of the Tennessee, and 111 miles northeast of Chattanooga, served by the Louisville and Nashville and the Southern railroads and federal and state highways. It has a municipal airport, completed in 1937, with a scheduled air service, while a slack water navigation channel, nine feet deep, extending along the Tennessee River from Knoxville, at the headwaters of navigation, to Paducah, Kentucky, where the Tennessee joins the Ohio River, 627 river miles away, carries an immense amount of river trade.

The city is a manufacturing and commercial center, in an area noted for scenic beauty. Twenty-five miles to the southeast are the Great Smoky Mountains, and approximately the same distance in the opposite direction is Norris Dam, part of the Tennessee Valley Authority system, and source of hydroelectric power.

Industries.—Situated in a rich agricultural region, Knoxville is a trading center for the livestock, dairy, truck, and poultry farms nearby. Great quantities of burley tobacco are grown in the vicinity and the seasonal tobacco market brings growers and manufacturers into contact. A good season more than 14 million pounds of tobacco are sold at the Knoxville auctions. Coal, iron, marble, and other mineral deposits are near the city, and sand and gravel are found in abundance along the rivers. A plant for crushing iron ore is just outside the city, and nearby is a great aluminum plant. The city also processes iron pyrites, manganese, phosphate rock, borite, and silica. Some of the quarries from which comes the Tennessee marble, an exceptionally fine building material, are within the city limits and others are near the junction of the Holston and French Broad rivers, four miles to the east.

Textiles are the city's most important manufactured item: hosiery, cotton underwear, and gloves are the principal goods in the output of the mills. Marble, furniture, electrical porcelain, cement, and steel products follow. Glass, chemicals, plastics, and plastic articles such as buttons, typewriter keys, and handles are also made in Knoxville factories. The shops and yards of the Southern Railroad provide another source of industrial income.

Power.—The development of the Tennessee Valley Authority hydroelectric system has had a tremendous effect on the power situation in Knoxville. In 1938 the city, which had begun construction of a new electric current distributing system, abandoned that project and purchased from the Tennessee Public Service Company an existing system. A TVA report based on records of the Knoxville Power boards says: "It was estimated that the cost of constructing a new system comparable to the one purchased would have been approximately \$1,000,000 less than the

purchase price. The city decided, however, to cooperate with the Authority, . . . eliminating duplication and costly competition."

The city now buys current from the TVA for distribution to residential, commercial, and industrial consumers. The mayor appoints a nonpartisan power board, consisting of five businessmen of the city, to shape the policies of power administration, and a city engineer is made general manager. The power board's records show increased consumption of current in homes, stores and offices, and industrial plants, rate reductions having caused a sharp upturn in demand, according to the Authority's analysis. Official reports state that in the last June before the city began buying power from the TVA the average residential consumer used 85 kilowatt hours of current which cost him \$3.65; and in the first June following installation of the new system he used 104 kilowatt hours, and the cost to him was \$2.58. Increased industrial use of current was also reported. Knoxville is considered significant as a yardstick on municipal distribution of federally generated power.

Another cheap source of power for those industries incapable of using electricity is bituminous coal from nearby fields in Tennessee, Kentucky, and Virginia. Natural gas, piped in from Louisiana and Texas fields, is rapidly becoming another source of abundant power.

Education.—The public school system is organized in elementary, junior high, and senior high school units, and there are several parochial schools. The county has a strong school system, and operates buses for the pupils' convenience.

The University of Tennessee, situated here (see TENNESSEE, UNIVERSITY OF), goes back to the city's earliest days. It began as Blount College, in 1794, and now has an annual enrollment of over 7,500 students. It has a library, a biological museum, and an art collection. One of the university's several agricultural experimental stations is at Knoxville. The university was the first coeducational institution in the country.

Knoxville College, a coeducational school for Negroes, is also located here. It was founded in 1875 by the United Presbyterian Church of America. Among the buildings on its campus are a memorial chapel and a Carnegie library.

The college and university libraries and the Lawson-McGhee Public Library (1917) are well stocked; the last-named houses a notable collection of books and documents relating to the history of the South.

Buildings and Institutions.—Knoxville has many fine modern buildings, including the central post office and the Church Street Methodist Church (1932), of Tennessee quartzite. The courthouse (1885) is a massive structure, and the First Presbyterian Church (1901), of yellow brick trimmed with limestone, stands on the site donated by James White in the early 1790's. Both White and William Blount are buried in its churchyard. Another grave in this interesting old yard is that of the Rev. Dr. Samuel Carrick, the church's first pastor, and president of Blount College. The original church building was replaced in 1852 by one which later was used as a hospital and barracks by the Union forces during the Civil War.

On Market Street stands the Market House (1897), on a site given to the city by two Knoxville citizens in 1853 for a farmers' market. On the second floor there is a public auditorium.

The oldest building in the city is the frame house of Governor Blount, built in 1792, consisting of two stories, flanked by single story wings. It has old colonial furnishings, and is open to the public several days a week.

Knoxville has several hospitals and a tuberculosis sanitarium. It is also the seat of the Eastern Tennessee Hospital for the Insane and the Tennessee School for the Deaf. Of the city's 250 churches, more than forty are for Negro congregations.

Points of Interest.—Twenty-five miles northwest of Knoxville is Oak Ridge, the atomic city, which sprang from open fields and forests into the fifth largest city in Tennessee in the space of a few years. Oak Ridge is the site of important atomic research in the fields of medicine, agriculture, and industry. The city is open to the public.

Four of the 16 giant dams erected in the TVA system are within 30 miles of Knoxville, TVA headquarters. Norris Dam on the Clinch River, a tributary of the Tennessee, is the oldest dam in the system. Completed in 1936, it is 25 miles northwest of Knoxville. Built of concrete, it stands 265 feet high and is 1,860 feet long. The lake formed by the dam extends 72 miles up Clinch River and 56 miles up Powell River. Total reservoir volume is 2,567,000 acre-feet. The power house has two generating units, each capable of producing 50,400 kilowatts. TVA lakes are designed to serve the three-fold purpose of improving navigational facilities, providing control of floods, and producing power. The lakes in east Tennessee also constitute an important addition to the area's recreational resources. All public parks and commercial recreation facilities are operated by private business, concessioners, or by public agencies other than TVA. Facilities include parks, boat docks, swimming beaches, camps, summer cabins, resort centers, and vistas for sightseeing. Thousands of pleasure craft are in use on the lakes. Except for trout, there is no closed season for fishing on TVA lakes. Most of the dams are open to visitors, except during emergency conditions, and an estimated 27 million persons have visited the various dams.

Twenty-five miles southeast of Knoxville are the Great Smoky Mountains. Piled up along the Tennessee-North Carolina boundary line, this mighty mountain range has 16 peaks over 6,000 feet high, the loftiest of all being Clingman's Dome, with an altitude of 6,642 feet.

The Smokies, once the home of the Cherokee, absorbed quantities of hardy Scotch and English colonists into their innermost depths, and the mountain folk of today, descending almost purely from this stock, have lived their hard working, isolated lives almost uninterrupted by the advances of civilization. However, the Appalachian Trail and park highways have opened new vistas of this fascinating folk, bringing tourists to observe them and, most likely, bringing them to observe the tourists, for the first time.

The Great Smoky Mountains National Park is 54 miles long and 19 miles across at its widest point. It is the most popular park in eastern United States in terms of the number of visitors which totaled, during the fiscal year ending Sept. 30, 1950, 1,744,265 persons. The campaign for its establishment began in 1923 and three years later Congress passed the act by which the park was created. Innumerable species of trees, shrubs,

and small plants are found in the park, and there are bear, deer, fox, wild turkey, ruffed grouse, and many other species of birds, reptiles and fish. The park rangers enforce a strict but reasonable code of rules to guard against fires and to conserve the wildlife of this interesting area.

The Qualla Indian Reservation, adjoining the park on the Carolina side, contains the descendants of Upper Cherokee refugees who fled into the Smokies on the deportation of the Cherokees to Indian Territory in 1838. Knoxville maintains bus service to the park.

History.—Knoxville's first permanent settler was a North Carolinian, James White (1747-1821), a captain of militia during the Revolutionary War and later a brigadier general in the Tennessee militia. He built the first house on Knoxville's site in 1786; it was of logs, and with three smaller cabins was enclosed in a palisade that became known as White's Fort. In 1791 William Blount, as governor of "the Territory South of the River Ohio," made White's Fort the seat of the territorial government. A town site was surveyed, and the name Knoxville was adopted, in honor of Gen. Henry Knox, the first secretary of war under President George Washington.

In 1792 Knoxville became the seat of the newly formed Knox County. In 1796 White was a member of the convention that drafted the constitution of the new state of Tennessee, and later he represented Knox County in the state senate. A Presbyterian, he gave land for Knoxville's first church and for Blount College (1794), of which he was one of the charter trustees.

Within six years of its founding Knoxville established itself as a depot where westward-bound wagon trains stopped for repairs and supplies. In 1792 the *Gazette*, a weekly newspaper which was founded in 1791, expatiated upon the merits of the town as a strategic point in trade with the Cherokees and other Indian tribes. It said goods from Philadelphia and points south could be laid down at Knoxville as cheaply as similar shipments could be moved between Philadelphia and Fort Pitt (Pittsburgh), and that the route via the Holston and Tennessee rivers was "shorter and safer than from Fort Pitt down the Ohio and up the Tennessee."

Knoxville had the honor of becoming Tennessee's first capital on that state's admittance into the Union in 1796. From 1812 to 1817 the government removed to Nashville, returning to Knoxville the following two years, removing again to Murfreesboro, and returning permanently to Nashville in 1843.

In 1861 the Confederate forces in East Tennessee made Knoxville their headquarters, and hundreds of persons loyal to the Union were sent to prisons further south. In 1863 the Confederates moved out and a Union army moved in, and in November of that year the Battle of Fort Sanders (see KNOXVILLE, SIEGE OF) was fought. The city was badly damaged in these operations, but after the war it was quickly restored, and entered upon a period of industrial development making use of the natural resources with which its environs are richly endowed.

Government and Population.—Knoxville adopted the commission form of government in 1911, and the city-manager plan in 1923. Upon authorization of the Tennessee General Assembly in 1947, a mayor and council government became effective on Jan. 1, 1948. In 1860 Knox-

ville's population was less than 3,000, but after the annexation of East Knoxville in 1868, the census of 1870 reported a population approximating the 10,000 mark. Between 1890 and 1900 as a result of further annexations, the count rose from 22,535 to 32,637, and when several incorporated suburbs and some unincorporated areas were merged with the city in 1917, the next census, that of 1920, gave the city a population of 77,818. The population in 1950 was 124,769, making Knoxville the fourth largest city in the state of Tennessee.

KNOXVILLE, Siege of. On Nov. 3, 1863, before the battle of Chattanooga (q.v.), Gen. Braxton Bragg sent Gen. James Longstreet to capture or destroy the Union Army under Gen. Ambrose E. Burnside at Knoxville. The next day Longstreet moved from Tyner's Station with the divisions of Gen. Lafayette McLaws and Gen. John Bell Hood, two artillery battalions and Gen. Joseph Wheeler's cavalry, and on November 14 crossed the Tennessee near Loudon. After the engagement at Campbell's Station (q.v.), Burnside resumed his march, reaching Knoxville on the morning of November 17, Longstreet closely following and laying siege to the town. The town had been thoroughly fortified, the line of defense extending from the Holston River on the left, a double line of works fronting west, a strong work called Fort Sanders on the northwest salient and a line from that point across the railroad and again to the right as far as the river. On the south side of the river were some detached works connected with the town by a pontoon bridge. On the night of November 16 communication with Cumberland Gap was cut and by the night of the 18th the siege was well established. Longstreet believed he could starve out Burnside and compel his surrender but Gen. Ulysses S. Grant's success at Chattanooga rendered Longstreet's position critical, wherefore he resolved to carry the works by assault. On the night of November 28 he advanced his sharpshooters to within rifle range of the Union defenses and prepared a column to attack Fort Sanders. Early the next morning the assaulting party of three brigades approached unharmed to within 100 yards of the fort. At dawn Longstreet opened a furious artillery fire and a half hour later his columns charged the fort. The Union troops had placed in front of the fort an abatis and entanglements of wire, on reaching which the forward Confederates became confused, but the heavy mass behind them pushed resolutely onward and some gained the ditch and the parapet. The Union guns then opened up with triple charges of canister and the infantry shot down the defenseless Confederates in the ditch, which soon was piled high with dead and wounded. After a long fight Longstreet withdrew with a loss of 1,000 killed, wounded and prisoners, while Burnside lost only 13 killed and wounded. Meanwhile Gen. William T. Sherman had been sent from Chattanooga with reinforcements for Burnside and as Sherman's advance prevented his junction with Bragg, Longstreet on the night of December 4 passed around the north side of Knoxville and took up his line of march to Holston, Sherman reaching Knoxville the same day. A force was sent after Longstreet but it proved inadequate to cope with him and accordingly he moved without hindrance to the south side of the Holston where during the winter he continued to harass the Union troops in Tennessee, in the spring

joining Gen. Robert E. Lee for the campaign of 1864. Meanwhile at his own request Burnside was relieved from duty and on December 11 the command was formally transferred to Gen. John G. Foster. Sherman left a part of his troops at Knoxville and returned with the rest to Chattanooga.

KNUDSEN, nōōd's'n, **William S.** (originally SIGNIUS WILHELM PAUL KNUDSEN), American industrialist: b. Copenhagen, Denmark, March 25, 1879; d. Detroit, Mich., April 27, 1948. He was educated in the government technical school in Denmark and later served an apprenticeship there as a bicycle mechanic. When he came to America in 1899, he began his career in shipyards and in many shop jobs gradually attaining supervisory rank. He entered the employ of Henry Ford in 1911 and was put in charge of the planning of the assembly line plants. Subsequently he was manager of production of the Model "T" Ford car. In 1922, he joined the Chevrolet Motor Company as vice president, later becoming president, and in 1933 he was appointed executive vice president of the General Motors Corporation with supervisory control of all automobile and body manufacturing activities. In 1937, he became president of General Motors.

During World War II, he was called upon by the United States government to put his production genius at the service of the nation. He was a member of the Advisory Committee to the National Defense Commission, 1940, and director general, Office of Production Management, 1941. As a lieutenant general, United States Army, he directed and coordinated the production of equipment for the War Department. He resigned in July 1945 to return to private industry. He is credited with a large part in the origin of the assembly line and is often referred to as the "mass production genius of American industry."

KNUDSON, nōōd'sōn, **Albert Cornelius**, American theologian: b. Grandmeadow, Minn., Jan. 23, 1873. A graduate of the University of Minnesota (1893), he later received his Ph.D. degree from Boston University (1900). After studying at Jena and Berlin, he was appointed professor of church history at the University of Denver (1898-1900), then held chairs of philosophy and English Bible at Baker University and Allegheny College (1900-1906). From 1906-1943 he held professorships at the Boston University School of Theology. His works include *Principles of Christian Ethics* (1943); *The Philosophy of War and Peace* (1947); and *Basic Issues in Thought* (1950).

KNURR-AND-SPELL. See NUR-AND-SPELL.

KNYPHAUSEN, k'nip'hau-zēn, **BARON Wilhelm von**, German soldier: b. Lützelburg (Luxembourg), Nov. 4, 1716; d. Cassel (Kassel), Dec. 7, 1800. Educated at Berlin, he entered the Prussian army in 1734, in which he became, in 1775, a general officer under Frederick II (the Great). He came to the United States in 1776 as second in command of the Hessians in the English service, and superseded Gen. Philipp de Heister as commander in chief in 1777. He fought at Long Island, White Plains, Brandywine, and Monmouth; and during the temporary absence of Sir Henry Clinton in 1779-1780, commanded at New York. In 1782 he returned to

Germany, becoming military governor of Kassel. He was a capable soldier, who had no high opinion of his unreliable mercenaries.

KOALA, kō-ā'lā, also kōō'lā, a remarkable Australian marsupial, *Phascolarctos cinereus*, commonly called the "native bear." It was formerly abundant throughout eastern Australia, but excessive hunting has rendered it rare except in certain coastal regions of Queensland. It is now rigidly protected by law.

The koala is a solitary animal, slow-moving and defenseless, almost completely arboreal, frequenting eucalyptus forests and feeding at night

Koala.

on the young leaves and buds. It is about two feet long, of heavy bearlike form, and tailless. Its feet, of grasping type with claws, adapt it perfectly for life in the treetops. The fur is brownish gray, dense, woolly, and especially long on the large ears. The young, usually single, is barely three quarters of an inch long at birth. It nurses for several months in the marsupial pouch of the mother and later clings to her back until about a year old.

Consult Troughton, Ellis, *The Furred Animals of Australia* (New York 1947).

JAMES H. MCGREGOR,
Department of Zoology, Columbia University.

KOBBE, kō'bā, **Gustav**, American music critic: b. New York, N. Y., March 4, 1857; d. near Bayshore, Long Island, N. Y., July 27, 1918. Kobbé studied piano and composition under Adolf Hagen at Wiesbaden, Germany, and continued his musical education under Joseph Mosenthal after returning to New York in 1872. He graduated from Columbia College in 1877 and from the Columbia law school in 1879, but chose the field of musical journalism, becoming an editor of the *Musical Record and Review* (1879-1880) and an assistant critic for the *New York Sun* (1880-1882). In 1882 the *New York World* sent him to report the first performance of *Parsifal* at Bayreuth. After his return he was music critic successively for the *Mail and Express*, the *World*, and the *Herald*, all of New York.

Kobbé was an enthusiastic Wagnerian and achieved his greatest success in this field, with *Wagner's Life and Works* (2 vols., 1890) and the lesser *Wagner and His Isolde* (1905). Other books were such novels as *Signora, a Child of the Opera-House* (1902); popularizations like

How to Appreciate Music (1906) and *Famous American Songs* (1906); and romanticized biographies, including *Loves of Great Composers* (1905) and *Portrait Gallery of Great Composers* (1911).

KOBE, kō'bē, kō'bā, Jap. kō-bē, city, Japan capital of Hyogo Prefecture in western Honshu on the north shore of Osaka Bay, 20 miles east of Osaka. It is one of the country's great seaports, a modern city crowded into a narrow strip along the bay shore and the lower slopes of a range of steep hills, which have restricted its expansion inland but protect it from winter wind. The port facilities are excellent and there are good rail and highway connections with other Japanese cities. Leading imports are raw cotton and wool, metals, fertilizers, petroleum, coal, and other raw materials. Textiles, yarns, and a wide variety of finished goods are exported. Kobe is also a major shipbuilding and industrial center manufacturing electrical equipment, chemical metal and rubber goods, machinery, flour, and sugar. Many foreign consuls and the representatives of foreign companies are stationed here. Kobe has several Christian churches, as well as Shinto and Buddhist shrines, and a noted Daibutsu, a bronze image of the Buddha, 38 feet high.

Until the 1860's, when the port was opened to foreign trade, it was merely a fishing village adjoining the old city of Hyogo, which Kobe has since absorbed. Its growth accompanied the industrial development of nearby Osaka—though that city later created its own port—and was aided by the damage its rival, Yokohama, suffered by earthquake in 1923, after which much trade was transferred here, some of it permanently. During World War II, Allied air forces mined the harbor approaches, and Kobe itself, which has added aircraft and submarine building to its industrial activities, was subjected to a devastating series of incendiary raids in 1945. Pop. (1947) 607,079.

KOBELL, kō'bēl, a family of German artist. The first member of note was the landscape painter and etcher FERDINAND KOBELL (b. Mannheim, June 7, 1740; d. Munich, Feb. 1, 1799). The influence of the Dutch landscapists and Claude Lorrain is evident in his early painting gradually superseded by greater realism. He executed about 300 etchings.

Ferdinand's younger brother, FRANZ KOBELL (b. Mannheim, Nov. 23, 1749; d. Munich, Jan. 14, 1822), was sent to study in Italy by Charles Theodore, elector of the Palatinate, in 1776. He remained in Italy until 1785, when he settled in Munich—Charles Theodore having become duke of Bavaria in the meantime—and became a painter to the court. Kobell produced only a few oil paintings, but left a large number of pen-and-ink drawings and etchings of landscapes and buildings.

Ferdinand's son, WILHELM VON KOBELL (b. Mannheim, April 6, 1766; d. Munich, July 15, 1855), began his training under his father, acquiring his Dutch manner, but in later years developed an individual style, evident particularly in his clarity of modeling and his handling of light effects. Kobell became a court painter in Munich in 1792, and a series of battle scenes from the Napoleonic Wars, executed for the Bavarian crown prince Louis, won him wide recognition. Examples of these, Kobell's paintings of horses and riders, and his landscapes, notably the serene

paintings of the Bavarian uplands dating from his later period, are in galleries in Munich and many other German cities. Kobell became a professor in the academy at Munich in 1808 and was ennobled in 1833.

The mineralogist and writer FRANZ VON KOBELL (see separate article) was his son.

KOBELL, kō'bēl, Franz von, German mineralogist and writer: b. Munich, July 19, 1803; d. there, Oct. 11, 1882. He was appointed professor of mineralogy at the University of Munich in 1826 and became curator of the state mineralogical collection in 1849. Kobell, inventor of the stauroscope for studying crystals, was the author of a history of mineralogy, *Geschichte der Mineralogie, 1650-1860* (1864), and numerous books and scientific papers on crystals and the composition of minerals. His many poems, songs, and stories in the folk idiom, mainly in High Bavarian but also in High German and the dialect of the Palatinate (Pfalz), are noted for their gentle, fanciful humor.

KOBERGER, kō'bēr-gēr, Anton (surname also rendered COBERGER, KOBURGER, COBURGER), German printer, publisher, and bookseller: b. about 1445; d. Nürnberg, Oct. 3, 1513. Koberger came of a family of skilled Nürnberg artisans and began his career as a goldsmith. His printing shop in Nürnberg, opened in 1470, issued its first dated volume in 1472, and between 1480 and 1500, by which date more than 200 separate works had been issued, Koberger was one of Europe's leading printers, employing more than 100 workmen at his 24 presses. He used well-designed, readable types, mainly Gothic, paper of excellent quality, and pioneered in the field of woodcut illustration, obtaining the drawings from such well-known Nürnberg artists as Michel Wohlgenuth (or Wolgemut) and Wilhelm Pleydenwurff. The firm's most famous productions were an illustrated German Bible of 1483 and the lavishly illustrated *Nürnberg Chronicle* (Hartmann Schedel's *Liber Chronicarum* or *Weltchronik*) issued in 1493.

After 1500, Koberger, whose firm had entered the fields of publishing and bookselling, gradually gave up printing, engaging shops in Germany, Switzerland, and France to do his work. The firm traded in books over most of Europe, maintained agencies in principal centers, and issued some of the first advertising circulars. It was especially noted for scholarly and scientific books in Latin. Under Koberger's successors the firm gave up publishing and confined its activities to bookselling.

KOBO DAISHI, kō-bō dī-shē, posthumous title of KUKAI, kōō-ki, Japanese Buddhist monk: b. 774 A.D.; d. Koya, now in Wakayama Prefecture, April 22, 835. Kukai read the Chinese classics as a youth. From 804 to 806 he studied in China under various masters, and, having investigated Confucianism and Taoism, was converted to Buddhism. Finding the Chinese Chent'ien school closest to his ideal, Kukai carried its teachings back to Japan where he founded a Buddhist sect called, after the Chinese name, Shingon, or "True Word" (see JAPAN—Religion). In 816 he established a monastery on Mount Koya, which became the sect's headquarters. Many miraculous stories are told of Kukai, who is revered not only as a great religious fig-

ure, but as the inventor of the hiragana syllabary based on Chinese characters and as an accomplished calligrapher, artist, and poet.

KOBOLD, kō'böld, the household spirit of German folklore, a good-natured goblin, mischievous and fond of pranks, who will usually help with the work as long as he is properly fed. Another sort of kobold inhabits caves and mines.

KOCH, Erich. See KOCH-WESER, ERICH.

KOCH, kōk, Joseph Anton, Austrian painter and etcher: b. Obergiebeln, Tirol, July 27, 1768; d. Rome, Italy, Jan. 12, 1839. He began his training in the Karlsschule at Stuttgart, but because of the strict discipline he ran away in 1791, living in Strasbourg and Switzerland, and made his way to Rome in 1795. Here he became an intimate friend of Asmus Jakob Carstens, and, except for a stay in Vienna (1812-1815), he spent the rest of his life in Italy, becoming a recognized leader of the German art colony in Rome. Koch's etchings include his early illustrations of Carstens's *Argonauts*, Italian landscapes, and illustrations of Dante's *Divine Comedy* and the Ossian myths. His paintings are chiefly depictions of figures and scenes from literature and mythology and landscapes in the classic style of Nicolas Poussin and Claude Lorrain. His satirical *Moderne Art Chronicle* (*Moderne Kunstchronik oder die Rumfordische Suppe, gekocht und geschrieben von J. A. K.*) was published at Stuttgart in 1834.

KOCH, kōk, Max, German literary historian and critic: b. Munich, Dec. 22, 1855; d. Breslau, Dec. 19, 1931. He studied in Munich and Berlin, taught at Marburg (from 1880), and from 1890 to 1924 was assistant professor and later professor of German literature at Breslau. An important figure in the comparative literature movement at the turn of the century, Koch was noted particularly for his investigations of links between German literature and the literatures of England and Italy, and for his many studies and editions of German writers of the 18th and early 19th centuries. His most comprehensive work was a history of German literature, to which Friedrich Vogt contributed the account of the early period, *Geschichte der deutschen Literatur* (1893), which went through numerous carefully expanded editions. Koch also founded and edited several journals devoted to comparative literature, and his lifelong interest in music bore fruit in the biography *Richard Wagner* (3 vols., 1907-1918).

KOCH, kōk, Robert, German bacteriologist: b. Clausthal (Klausthal), Hannover, Dec. 11, 1843; d. Baden-Baden, May 27, 1910. A pioneer bacteriologist whose work revolutionized medicine, Koch studied at the University of Göttingen under the great pathologist Friedrich Gustav Jacob Henle, graduating M.D. in 1866, and, after serving as an army surgeon during the Franco-Prussian War, in 1872 entered private practice at Wollstein (Pol. Wolsztyn) in Posen. Here he began his bacteriological researches by investigating anthrax, isolating the bacillus and proving it to be the cause (1876), later publishing a method of preventive inoculation (1883)—a milestone in the establishment of the modern germ theory of disease. In 1878, he demonstrated the role played by bacteria in wound infections. In 1880 Koch went to Berlin, where there were

greater facilities for research, as a member of the Imperial Board of Health. In that year he and Karl Joseph Eberth isolated the typhoid bacillus, and in 1882 Koch revolutionized the treatment of tuberculosis by isolating the tubercle bacillus. The next year he discovered the bacilli that cause two kinds of infectious conjunctivitis, and, also in 1883, in India as head of a German commission, he succeeded in identifying the comma bacillus as the cause of Asiatic cholera. For this achievement Koch was awarded a gift of 100,000 marks (about \$25,000) by the German government, and in 1885 he was appointed a professor at the University of Berlin and director of its Institute of Hygiene. Not all his triumphs were unmixed, however: his discovery of tuberculin was prematurely announced in 1890 as a diagnostic and remedy for tuberculosis; as a remedy it proved a disappointing failure.

Koch was director of the Institute for Infectious Diseases, which had been established for him in Berlin, from 1891 to 1905. During this period he investigated and improved methods of filtrating public water supplies; he studied rinderpest in South Africa, publishing a means of preventive inoculation in 1896; and in 1897 he was in Bombay investigating bubonic plague. From 1903 to 1906 Koch spent much time in Africa studying relapsing fever and sleeping sickness, and proved that the method of transmission to man is by ticks and the tsetse fly, respectively. He was awarded the Nobel Prize in Physiology and Medicine in 1905.

Koch's discoveries in bacteriology, remarkable as the work of one man, his assistants and pupils, accompanied and to a large extent were dependent upon his development of new bacteriological techniques. These included improved microscope apparatus, new methods of staining, and growing bacteria in transparent, jellylike media.

KOCH, kōk, Theodore Wesley, American librarian: b. Philadelphia, Pa., Aug. 4, 1871; d. Evanston, Ill., March 23, 1941. After graduating from the University of Pennsylvania (B.A. 1892) and Harvard (M.A. 1894), Koch was engaged from 1895 to 1900 in compiling an annotated catalogue of the Dante collection presented by Professor Willard Fiske to the library of Cornell University; besides the catalogue itself (2 vols. 1898, 1900), *Dante in America* (1896) and two lists of Danteiana were the fruits of this period. Koch then continued his studies in Paris, 1900-1901, and after his return served as an assistant in the Library of Congress, 1902-1904, and a librarian at the University of Michigan, 1904-1916. After three more years at the Library of Congress, as chief of the order division, 1916-1919, he began his long career as librarian at Northwestern University in 1919. Besides Danteiana, Koch published *The Library Assistant's Manual* (1913); *Reading: a Vice or a Virtue?* (1926); translations of writings on books and book collecting, including *Tales for Bibliophiles* (1929); and short histories and descriptions of European and American libraries.

KOCH-WESER, kōk' vā'zēr, Erich (original surname Koch, changed to avoid confusion with Erich Koch, a Nazi leader), German politician: b. Bremerhaven, Germany, Feb. 26, 1875; d. Paraná State, Brazil, October 1944. Koch, who was mayor of Kassel (1913-1919) at the

time of Germany's collapse in 1918, became one of the founders, led by Friedrich Naumann, of the Deutsche Demokratische Partei (German Democratic Party), a regrouping of former Progressives and left-wing National Liberals dedicated to moderate internal reform and reconciliation with other nations, including acceptance of the Versailles Treaty. He was a member of the Weimar constitutional assembly in 1919 and served in the Reichstag from 1920 to 1930, becoming his party's leader in 1923-1928 and minister of justice (1928-1929) in Hermann Müller's second cabinet. The Democrats, however, gradually lost ground to other parties, a trend that accelerated as the economic situation worsened. Koch led a futile reorganization, under a new name, Deutsche Staatspartei (German State Party), in 1930, and in 1933, with Hitler's advent to power, he left Germany for Brazil.

KOCHANOWSKI, kō-kā-nōf'skē, Jan, Polish poet: b. Sycyna, near Radom, Poland, 1530; d. Lublin, Aug. 22, 1584. Kochanowski, the greatest Polish poet of the Renaissance, was born into a family of landed gentry, in a powerful, prosperous country, at a time when Polish culture was emerging from the Middle Ages and still lacked the vernacular literature that had developed in southern and western Europe. After attending the universities of Kraków (Cracow) and Krolewiec (Königsberg), in 1552 he joined the stream of young Poles going to Italy, studying at Padua and becoming deeply imbued with Renaissance humanism. He returned to live in Poland in 1559, after traveling through France, and for some years was a courtier and a secretary to King Sigismund II Augustus. About 1570, however, he retired to his family estate, Czarnolas, near Radom, where he married (1575) and spent the rest of his life.

Kochanowski wrote fluent Latin lyrics, elegies, and epigrams, mainly during his early period; but his Polish poetry, all apparently written after 1559, entitles him to be considered the founder of Polish poetic literature. Based on Latin and Greek models, saturated with classical allusions, it follows the ideal of his French contemporary, Pierre de Ronsard, creating a national poetic literature along classical lines. The works generally considered Kochanowski's masterpieces are: the songs published in *Sobótka* (*St. John's Eve*); a fine paraphrase of David's Psalms, *Psalterz Dawidów* (1575); a short tragedy in blank verse with choral odes, based on a theme from the Trojan War, *Odprawa Posłów Greckich* (1578, Eng. tr., *The Dismissal of the Grecian Envoys*, 1918); and *Treny* (1580, Eng. tr., *Laments*, 1920), unforgettable elegies on the death of his little daughter Ursula. Other Polish poems include those published in the collections *Fraski* (*Trifles*) and *Pieśni* (*Songs*), as well as many written for special occasions or inspired by events of the day.

The two English translations noted above, *The Dismissal of the Grecian Envoys* and *Laments*, together with *St. John's Eve* and other poems were published in *Poems by Jan Kochanowski* (Berkeley, Calif., 1928).

KOCHER, kō'kēr, (Emil) Theodor, Swiss surgeon: b. Bern, Switzerland, Aug. 25, 1841; d. there, July 27, 1917. He graduated M.D. from the University of Bern in 1865, studied surgery in Berlin, Paris, and London, and was professor

of surgery and director of the surgical clinic at the University of Bern from 1872 until 1911. Kocher was known particularly for surgical alleviation of hyperthyroidism, beginning with his pioneer operation for removal of a thyroid in 1878. This was followed by more than 2,000 similar operations, with a very low mortality rate that was due largely to Kocher's attention to asepsis, in which he was also a pioneer. He was known, too, for surgery of the stomach, gall bladder, brain, and spinal cord, and for methods of alleviating hernia and dislocation of the shoulder. One of the leading surgeons of his day and a teacher who attracted to his clinic thousands of students from all parts of the world, Kocher was awarded the Nobel Prize in Physiology and Medicine in 1909.

KOCHI, kō'chê, city, Japan, capital of Kochi Prefecture, near the south coast of Shikoku Island. It is a commercial and fishing center and port, situated some 60 miles from the coast on a long, deep inlet of Tosa Bay. The summers are warm and humid, the winters mild, which permits the growing of two rice crops per year in the surrounding region. Kochi's leading products are dried bonito, ornamental coral, sake, and raw silk; paper, cement, and lumber obtained from densely forested mountains nearby are other exports. Kochi, a fishing village that became a feudal castle town and later an administrative center, was heavily bombed in 1945 during World War II. Pop. (1947) 147,120.

KOCK, kôk (Charles) Paul de, French novelist and playwright: b. Passy, near Paris, May 21, 1793; d. Paris, Aug. 29, 1871 (these dates are given in his *Mémoires*; some biographers give date of birth as May 21, 1794). He was the son of a Dutch banker who was guillotined during the French Revolution. At 15 he was placed in a banking house, but he showed greater interest in writing, and, beginning with the novels *Corolette* (1820) and *Gustave* (1821), he enjoyed a period of immense popularity that lasted into the 1840's. Paul de Kock was a prolific serial novelist, a hasty, crude writer, though often keenly observant, who entertained his many readers with stories of low- and middle-class Parisian life that were successions of lively incidents spiced with ambiguous situations and exuberant humor. He was even more popular abroad than at home, since his defects of style tended to disappear in translation and foreign readers found their private notions of life in Paris fully confirmed. His innumerable novels included *Mon voisin Raymond* (1822), *La laitière de Montfermeil* (1827), *La pucelle de Belleville* (1834), *Un homme à marier* (1843), and *La fille aux trois jupons* (1861). De Kock's stage works included melodramas, vaudevilles, and light operas, chiefly dramatizations of his novels. His *Mémoires* were published in 1873 (Eng. tr., Boston 1903).

His son, **HENRI DE KOCK** (1819–1892), also a novelist and playwright, imitated his father without equalling his gaiety and good humor.

KODACHROME. See COLOR PHOTOGRAPHY; PHOTOGRAPHY.

KODAK, kô'dâk, a word coined as a trademark by George Eastman and applied to his camera, the first commercial model of which ap-

peared in 1888. The original Kodak was a small box camera, of the fixed-focus type, which took round pictures 2½ inches in diameter and carried a roll of film sufficient for 100 exposures. When all were exposed, the camera was returned to the factory where the film was removed and processed, and the camera reloaded. "You press the button, we do the rest" became the company's widely advertised slogan. The advent of the Kodak, a simple, hand-portable, inexpensive camera, practically marked the beginning of amateur photography.

The roll film used in the first model had a paper base, but this was soon superseded by a more practical transparent, flexible film with a cellulose base. The first films had to be loaded into the camera and unloaded in a darkroom. This handicap was overcome by the introduction of the film cartridge system with its protecting strip of nonactinic paper, making it possible to load and unload in ordinary light.

The early Kodak cameras were of the box type, with fixed focus, although as various sizes were marketed, devices for focusing the lenses were incorporated. The first folding Kodak, equipped with a folding bellows for greater compactness, was introduced early in the 1890's, and the first pocket Kodak appeared in 1895. This camera was of the box type, slipped easily into an ordinary coat pocket, and produced negatives 1½ by 2 inches. The first folding pocket Kodak camera was introduced in 1898.

KODALY, kô'däl-y', Zoltán, Hungarian composer and musical folklorist: b. Kecskemét, Hungary, Dec. 16, 1882. Some of his earliest compositions were performed while he was a student in the Gymnasium at Nagyszombat (later Trnava, Czechoslovakia). Kodály continued his studies in Budapest, where, while taking a scientific course at Péter Pázmány University, he studied composition under Hans Koessler at the academy of music. To answer the question, what is true Magyar (Hungarian) music, Kodály set out on his first collecting expedition in 1905, tracing the folk music to its source among the peasants. In time he recovered several thousand Magyar songs and dances, working after 1906 in collaboration with his friend Béla Bartók, joint author of the first published collection, *Magyar Népdalok* (1907).

As a natural consequence, Magyar folk music exerted a powerful influence on Kodály as composer. The first concert devoted to his works (chamber music) was given in Budapest in 1910, with Bartók as pianist; subsequently his music became known abroad, and in the decade after World War I Kodály became an international celebrity. His first great success was the *Psalmus Hungaricus* (1923), written for the 50th anniversary of the union of Buda and Pest, a setting for tenor, chorus, and orchestra of a 16th century Hungarian version of the 55th Psalm. Kodály's *Székelyfő* (*The Spinning Room*), "lyric scenes" constructed from folk music, was first presented in 1924 (enlarged version 1932); his opera *Háry János* in 1926. The suite from *Háry János*, depicting the adventures of its Münchhausen-like hero, is in the repertory of most symphony orchestras. Kodály's compositions also include the *Dances of Marosszék* (1930) and *Dances of Galánta* (1933) for orchestra, chamber and piano works, songs, and much religious and secular choral music.

KODAMA, kô-dâ-mâ, VISCOUNT Gentaro, Japanese army officer: b. near Tokuyama, Japan, Feb. 5, 1852; d. Tokyo, July 23, 1906. Kodama, who studied military science in Germany and served as governor of Formosa, is known chiefly for the brilliant campaign he planned and directed in Manchuria while chief of staff to Field Marshal Iwao Oyama during the Russo-Japanese War, 1904-1905.

KODIAK, kô'dî-âk (sometimes called KADIAK), island, Alaska, southeast of the Alaska Peninsula, from which it is separated by Shelikof Strait. The island, about 100 miles long and up to about 50 miles wide, is generally hilly, rising to some 5,000 feet at the eastern end. Except for these eastern wooded uplands, Kodiak is treeless but covered with native grass of good grazing quality. The soil is good, and the growing season averages 160 days. The coast is deeply indented, affording numerous harbors for the fishing fleet. Fishing, especially salmon, and fish canning are the leading industries; cattle raising, dairying, and sheep raising are important and increasing. There is also some trapping and fur farming. The famed Kodiak (or Kodiak) brown bear is native to the island.

The first Russian colony in Alaska was founded by Grigori Ivanovich Shelekhov on the southeast coast of Kodiak at Three Saints Bay in 1784. This settlement was moved in 1792 to Kodiak on the northeast coast, now the principal town. In 1912 the island suffered severely from the eruption of Mount Katmai on the Alaska Peninsula, which covered Kodiak with a layer of volcanic ash. The population of Kodiak District—that is, Kodiak Island with some smaller islands and a nearby strip of the Alaska Peninsula—was 2,094 in 1939; 6,264 in 1950.

KODIAK, kô'dî-âk, town, Alaska, on the northeast coast of Kodiak Island. It is the island's principal town, a trade and canning center, and a fishing port. Kodiak was founded in 1792 when the first Russian settlement was moved here from Three Saints Bay, and soon after it became one of the Russian-American Company's main fur-trading stations. Fort Greeley, a supply base during World War II, is nearby, and the naval and air base at Womens Bay is 10 miles southwest. Pop. (1950) 1,710.

KODOK, kô'dök (formerly FASHODA, fâ-shô'dâ), town, Sudan, on the west bank of the White Nile, about 375 miles south of Khartoum. It is connected by road with Malakal, 40 miles southwest. Kodok has a population of about 3,000. The region is inhabited by Negroid Shilluks.

Fashoda Incident.—Kodok is known to the outside world mainly because of the famous Fashoda Incident in 1898, during the scramble by European powers for spheres of influence in Africa. The place had been under Egyptian control, but was abandoned during the Mahdist revolt and the withdrawal of Egyptian forces from the Sudan in 1884-1885. The French government, seeking to extend its sphere of influence, in 1896 sent the noted explorer Captain Jean Baptiste Marchand to Brazzaville in French Congo, whence he was to lead a small body of Senegalese troops by way of the Congo River and a Nile tributary to Fashoda. Here he would be joined by other forces coming in the opposite direction

from Djibouti and Ethiopia. Marchand left Brazzaville in March 1897 and after overcoming incredible difficulties reached Fashoda on July 10, 1898, hoisting his flag over the old Egyptian fort.

Meanwhile the British, who envisioned an unbroken British-controlled belt of African territory from Cairo to Cape Town, hastened the Anglo-Egyptian reconquest of the Sudan from the north. The Egyptian sirdar, Horatio Herbert Kitchener, after crushing the Madhists at Omdurman (Sept. 2, 1898), proclaimed the Sudan an Anglo-Egyptian protectorate, and on September 19, at the head of a large force, he met Marchand at Fashoda. Neither soldier would give way and they referred the question to their respective governments. An acute diplomatic crisis resulted, amid great popular excitement on both sides; but France, unequal to Great Britain in seapower and divided internally by the revival of the Dreyfus Affair, eventually yielded. The French expedition left Fashoda on Dec. 11, 1898, returning by way of Djibouti to Paris, where the gallant Marchand was accorded a hero's welcome.

The dispute was formally ended by a convention of March 21, 1899, by which France relinquished her claims to the Sudan; but it left a legacy of bitterness and in 1904, when the Anglo-French entente was formed, the British tactfully changed Fashoda's name to Kodok.

KOECHLIN, kâk-lân', Charles, French composer and musical theorist: b. Paris, France Nov. 27, 1867; d. Var Department, Jan. 1, 1951. Kœchlin entered the École Polytechnique in Paris in 1887, but two years later, having decided to make music his profession, he left it for the conservatory. Here during the years 1890 to 1898 he studied harmony under Antoine Taudou, counterpoint under André Gédalge, and composition under Jules Massenet and Gabriel Fauré. Kœchlin was acknowledged a teacher, critic, and theorist of high rank. Among his books are *Traité d'harmonie* (1927), *Théorie de la musique* (1935), *Traité d'orchestration* (1949), and critical biographies of Fauré (1927) and Debussy (1927).

As composer Kœchlin is less well-known than his works merit. Many, perhaps most, of his compositions remain unpublished. His music is above all individualistic, the production of a constant experimenter who refused to adhere to any school, whose "style" encompassed the gamut of the modern composer's repertory. His compositions include a "Biblical pastoral" in one act, *Jacob chez Laban* (1925); symphonic poems; ballets; film music; chamber music; songs; and choral works.

KOEHLER, kü'lër, Robert, American artist: b. Hamburg, Germany, Nov. 28, 1850; d. Minneapolis, Minn., April 23, 1917. He was taken to the United States in 1854. Educated and trained in lithography in Milwaukee, Koehler worked as a commercial lithographer there and in Pittsburgh and New York, where he studied drawing in night classes of the National Academy of Design. 1873-1875 he studied painting in Munich, returning there four years later, to spend the next 13 years as student and teacher. Koehler returned to New York in 1892, and in 1893 he accepted an appointment as director of the school of art in Minneapolis, where he spent the rest of his life. Koehler's paintings are mainly portraits and genres. Though represented by paintings hanging in the Pennsylvania Academy of the Fine

and in the libraries of Minneapolis and Duluth and the museums of Minneapolis and Milwaukee, he is chiefly noteworthy for the important influence which he had in promoting art instruction and appreciation in the Midwest. His principal paintings include *The Holiday Occupation*, *Her Only Support*, *The Socialist*, *The Strike*, *The Family Bible*, and *Salve Luna*.

KOEL, one of a group of East Indian and tralasian cuckoos, of the genus *Eudynamis*. y are parasitic, but have many peculiarities, ng which are the glossy black plumage of the s, and the fact that, contrary to the usual, immature young resemble the males instead he females, which have a reddish dress. A lippine species (*E. mindanensis*) is locally d "phow," while an Indian species (*E. hono-*) is known as the "rain bird." They utter l whistling cries.

KOENIGSBERGER, kû'nîks-bër-gër, **Leo**, man mathematician: b. Posen, Oct. 15, 1837; leidelberg, Dec. 15, 1921. He was educated Posen and Berlin, later teaching mathematics physics at Berlin (1860-1864). He was ap- tted assistant professor at Greifswald (1864- 5) and professor (1866-1869), and successively leidelberg (1869-1875), Dresden (1875-1877), Vienna (1877-1884), after which he was ve at Heidelberg. His chief field of interest tered about the principles of mechanics, the ory of equations, and differential equations ut which he wrote extensively.

KOESTER, Frank, German-American engi- r. b. Sterkrade, Germany, Aug. 28, 1876; d. w York, Oct. 6, 1927. After 10 years of oretical training and practical engineering and micipal experience in Germany, he came to the ted States in 1902. He was connected with construction of the New York subway system d other large engineering undertakings in the ited States, South America, Alaska, and the lippines. A considerable part of his practice is devoted to the design, construction, and eration of electric generating stations. Recogn- ing the importance of the growing field of city anning, he began to make a special study of dern methods in this field, and soon became professional consultant in city planning and reet lighting. Among his many published works *Modern City Planning and Maintenance* (1914).

KOESTLER, kěst'lër, **Arthur**, Hungarian- merican author: b. Budapest, Hungary, Sept. 5, 905. After attending the University of Vienna, e became Middle East correspondent for a chain f German newspapers, later becoming Paris rrespondent and Berlin foreign editor (1926- 931). In the early 1930's he joined the Com- unist Party and in 1932 and 1933 traveled ex- ensively in Russia and Soviet Asia as a guest f the Soviet Union. Koestler went to Spain in 936 to cover the Civil War for the London *News Chronicle*, but the following year he was captured and imprisoned by Franco charged with eing a spy. He was summarily condemned to death without a hearing. Efforts on his behalf English friends, however, were successful, and ee months later he was released. His book, *Spanish Testament* (1937), called *Dialogue with Death* in the American edition (1942), records i state of mind during this period of imprison-

Koestler became editor in 1938 of a Parisian German-language weekly which was directed against both Germany and Russia. Already he had severed his connection with the Communist Party, disillusioned and disgusted with the corruption of the Left. In a modern fable, *The Gladiators* (1939), he sets forth his disillusion with revolution. At the beginning of World War II he was imprisoned in a French concentra- tion camp, though his release was again effected by British efforts in 1940, after which he managed to escape to England where he was again locked up for several weeks. *Scum of the Earth* (1941) tells the story of his concentration camp experiences. He later joined the British Army. In 1951 he was granted permanent United States residence by an act of Congress.

Darkness at Noon (1941), a novel based on the Communist Party purge and Moscow trials of 1936 to 1938 portrays vividly the process by which a loyal Bolshevik who has fallen from official favor is pressured into confessing crimes of which he has not been guilty.

Among his other works are *The Yogi and the Commissar* (1945), *Insight and Outlook: an Inquiry into the Common Foundations of Science, Art, and Social Ethics* (1949), and *Promise and Fulfilment: Palestine, 1917-1949* (1949); his novels, *Arrival and Departure* (1943), *Thieves in the Night* (1946), and *The Age of Longing* (1951); and a play, *Twilight Bar* (1945).

KOETSVELD, kōōts'vêlt, **Cornelis Eliza van**, Dutch theologian and novelist: b. Rotter- dam, May 24, 1807; d. The Hague, Nov. 4, 1893. He studied at Leiden, and was pastor at West- maas, Berkel, and Schoonhoven, afterwards be- coming preacher to the court at The Hague. He wrote numerous religious works, but is best known for his *Schetsen uit de Pastorij te Mast- land* (1843; 13th ed., 1902) with its humorous and vivid descriptions of country life. It was trans- lated into English by Thomas Keightley as *The Manse of Masiland* (1860).

KOFFKA, kōf'kà, **Kurt**, German-American psychologist: b. Berlin, Mar. 18, 1886; d. North- ampton, Mass., Nov. 22, 1941. Educated at the universities of Berlin, Edinburgh, Freiburg, and Würzburg, he later taught at the universities of Würzburg, Frankfurt, and Geissen. He emigrated from Germany to the United States. He taught at Cornell, Chicago, and Wisconsin universities. In 1927 he became professor of psychology at Smith College where he remained until his death. His chief research lay in the field of perception. With Wolfgang Köhler and Max Wertheimer he was the founder of the school of Gestalt psy- chology (q.v.) which is based upon the theory that behavior cannot be analyzed into separate component units but must be studied as a whole in its complete configuration. His books, *The Growth of the Mind* (1924) and *The Principles of Gestalt Psychology* (1935), have been basic works in this field.

KOFOID, kō'foid, **Charles Atwood**, Ameri- can zoologist: b. Granville, Ill., Oct. 11, 1865; d. Berkeley, Calif., May 30, 1947. Educated at Oberlin College and Harvard University (Ph.D., 1894), he first taught at Oberlin Academy. He later became a teaching fellow at Oberlin (1890- 1891) and an instructor of vertebrate morphology at the University of Michigan (1894-1895). From

1895 to 1900 he was superintendent of the biological station of the University of Illinois at Havana, Ill., and assistant professor of zoology at the University of Illinois (1897-1900). He was appointed to various positions at the University of California, being professor of zoology (1910-1936) and head of the department of zoology (1910-1919, 1923-1936). He was associate naturalist of the Agassiz expedition to the eastern tropical Pacific on the United States steamer *Albatross* (1904-1905), and assistant director of the Scripps Institute of Biological Research from 1900 to 1924. He invented several plankton nets and a deep-sea water sampler, and received the Saint Louis Exposition gold medal (1904). He was associate editor of the *American Naturalist* from 1897 to 1908 and edited the *University of California Publications in Zoology* from 1909 to 1936.

KOFU, kō'fōō, city, Japan, capital of Yamaguchi Prefecture, is located on Honshu Island about 70 miles west of Tokyo. Its principal manufactures are silk fabrics and fine crystals, and considerable trade is carried on in raw silk and silk cocoons. The fertile district surrounding Kofu produces a grade of grapes which make an excellent wine. Mount Fuji lies just to the south, and within Kofu are a Shinto shrine, a Buddhist temple, and an old castle. Much of the city was destroyed by bombings in World War II. Pop. (1940) 106,579; (1947) 104,993.

KOGEL, kû'gēl, Rudolf, German theologian and court preacher: b. Birnbaum Province of Posen, Feb. 18, 1829; d. Berlin, July 2, 1896. He studied theology and philosophy at Halle and Berlin (1847-1852); was appointed teacher of religion at the Vitzthumsche Gymnasium, Dresden (1852-1854) and pastor in Nakel (1854-1857); and was preacher of the German-Evangelical community at The Hague (1857-1863). Kōgel was appointed simultaneously to the positions of court preacher in Berlin and member of the Consistorium of the Margrave Brandenburg and counselor to the Minister of Public Worship. In 1880 he was appointed chief preacher of the court and was chosen as a member of the Privy Council (1884). He successfully used his influence at court against free-thought church ideas thus giving a conservative turn to the religious thought of Prussia.

KOGIA, kō'jī-ā, the generic and ordinary name of the pigmy sperm whales of the Pacific which differ from the true sperm whales in anatomical particulars and conspicuously in size, not exceeding 9 to 12 feet in length. There are several species of these cetaceans which belong mainly to the New Zealand region.

KOH-I-NUR, kō'ī-nōōr, or **KOHINOOR**. See DIAMOND.

KOHL, kōl, Johann Georg, German traveler and historian: b. Bremen, April 28, 1808; d. Bremen, Oct. 28, 1878. Nearly his entire life was devoted to travel and historical investigation in Europe and North America where he spent four years (1854-1858) and published as the fruits of researches *Travels in Canada* (1855), *Travels in the Northwestern Parts of the United States* (1857), *History of the Discovery of America* (1861), and several essays on American cartog-

raphy. Other works are *Travels in the Interior of Russia and Poland* (1841), *The British Isle and Their Inhabitants* (1844), *The Rhine* (1851) and *The Danube* (1853).

KOHLER, kō'lēr, Josef, German jurist, author, and poet: b. Offenburg, March 9, 1849; d. Berlin, Aug. 3, 1919. He studied at Offenburg and Rastatt gymnasiums and Freiburg and Heidelberg universities. He became doctor of law (1873) and was appointed judge at Mannheim (1874). He obtained the post of professor at Würzburg (1878) and Berlin (1888). In numerous volumes and through his many contributions to journals of law he aided much in advancing the comparative history of law and the philosophy of law. He also wrote extensively on civil law and the history of art, as well as several volumes of poetry.

KOHLER, Kaufmann, American rabbi and educator: b. Fürth, Bavaria, May 10, 1843; d. New York, Jan. 28, 1926. After completing his studies at the universities of Munich, Berlin, and Leipzig, he was chosen as rabbi in Detroit in 1869, and two years later elected rabbi of Temple Sinai, Chicago, where he introduced Sunday lectures, a novelty in those days. In 1879 he was called to Temple Beth El, New York, where he remained until 1903. At his initiative in 1885 a rabbinical conference was held in Pittsburgh which formulated a platform for Reformed Judaism. In later years he frankly receded from the radical standpoint and assumed a more conservative position. From 1903 to 1922 he was president of the Hebrew Union College in Cincinnati. He was a frequent contributor to the Jewish press, edited the *Sabbath Visitor* (1881-1882), the *Jewish Reformer* (1886), and was one of the editors of the *Jewish Encyclopedia*. In addition to numerous critical papers he wrote *Der Segen Jakobs* (1868); *On Capital Punishment* (1869); *On Song of Songs* (1877); *Ethical Basis of Judaism* (1877); *Backwards or Forwards: Lectures on Reform Judaism* (1885); *Church and Synagogue in Their Mutual Relations* (1889); *Guide to Instructions in Judaism* (1899); *Jewish Theology Systematically and Historically Considered* (1918); and *Heaven and Hell in Comparative Religion* (1923). *The Origin of the Synagogue and the Church*, upon which he was working when he died, was published posthumously in 1929, *Studies, Addresses, and Personal Papers*, in 1931.

KOHLER, kû'lēr, Ulrich, German archaeologist: b. Klein-Neuhausen, Grand Duchy Weimar, Nov. 5, 1838; d. Berlin, Oct. 21, 1901. He studied at Jena, was appointed secretary of the Prussian embassy at Athens (1865), and later was made professor of archaeology at Strasbourg (1872). Köhler was governor of the newly founded Archaeological Institute of Athens from 1875 until 1886 when he was appointed professor of ancient history at Berlin. His principal work is the second volume of *Corpus Inscriptionum Atticarum* (Berlin 1877-1895) which contains inscriptions from the time of the Archon Euclid to Augustus.

KOHLER, Wolfgang, German-American psychologist: b. Revel, Estonia, Jan. 21, 1886. Educated at the universities of Tübingen, and Berlin, he became director of the Te

anthropoid Station in the Canary Islands (1913-20). In 1921 he was made professor of psychology and director of the Psychological Institute at Berlin where he remained until he came to the United States in 1935 to join the staff of Northmore College as professor of psychology. Köhler's chief research has been in the field of animal psychology, his experiments at Tenerife on perception and learning in apes and chimpanzees being most notable. With Kurt Koffka and Max Wertheimer, he was a founder of the school of Gestalt psychology (q.v.) which considers the whole pattern of behavior of greatest significance and of a different quality from the individual elements making up this totality.

He wrote *Mentality of Apes* (1925), *Gestalt Psychology* (1929), *The Place of Value in a World of Facts* (1938), and *Dynamics in Psychology* (1940).

KOHLRABI, kōl'ra-bī, a botanical variety of the same species as cabbage (q.v.), from which it differs in the swelled, turnip-like stem with a tuft of loose leaves on the top. This bulbous stem, which may be six inches in diameter, is used for human and stock food, less in America than in Europe.

KOHLRAUSCH, kōl'roush, **Friedrich**, German physicist: b. Rinteln, Oct. 14, 1840; d. Marburg, Jan. 17, 1910. The son of Rudolf Kohlrausch (q.v.), he studied at Erlangen and Göttingen. He became lecturer (*docent*) at the Frankfurt Physikalischer Verein (1864), became professor of physics at Göttingen (1866), and was appointed professor, successively, of the Polytechnikum, Zürich (1870); Darmstädter Polytechnikum (1871); Würzburg (1875); and Strasbourg (1888). He was appointed president of the Physikalisch-Technische Anstalt (Imperial Physico-technical Institute) of Berlin (1895) and honorary professor of Berlin University (1900). His work was chiefly in the realm of electric currents, resistance, the constitution of galvanic currents, the defining of the Ohm and electrochemical equivalents, thermo-electricity and conductivity of heat, electrolytic conductivity, total reflection of light, elasticity of matter, and especially reaction of elasticity. He constructed numerous magnetic and electric measuring instruments, a bifilar-magnetometer, an intensity-variation meter, a voltmeter, and a switch-rheostat. His exposition of the most important methods of measurements in physics is expounded in his *Leitfaden der praktischen Physik* (Leipzig 1870; 19th ed., 1944). Among his other works are *Ueber den Leitungswiderstand des Quecksilbers* (Munich 1888) and *Das Leitvermögen der Elektrolyte, insbesondere der Lösungen* (Leipzig 1898) are important.

KOHLRAUSCH, Rudolf Hermann Arndt, German physicist: b. Göttingen, Nov. 6, 1809; d. Erlangen, March 9, 1858. He was successively teacher of mathematics and physics at Lüneburg, Rinteln, Cassel, and Marburg. In 1857 he was appointed professor of physics of the University of Erlangen. In collaboration with Wilhelm E. Weber, he carried out the first mechanical measurements of electric currents, laying the ground for the absolute system of electrical measurement.

KOHLSAAT, Herman Henry, American publisher: b. Albion, Ill., March 22, 1853; d.

Washington, Oct. 17, 1924. Although he had little formal education, he managed to acquire a considerable fortune in the bakery business and other enterprises. From 1891 to 1894 he was part owner of the *Inter-Ocean* of Chicago. From 1895 to 1901 he was editor and publisher of the *Chicago Evening Post* and the *Times-Herald*. The latter, in 1901, was amalgamated with the *Chicago Record* into the *Record-Herald* of which paper he was editor, 1910-1911. In 1912 he bought the *Inter-Ocean*, then bankrupt, and succeeded in seeing it through another receivership in 1914 in which year he combined it with the *Record-Herald*, the new paper being known as the *Chicago Herald*. A devoted Republican, he actively supported McKinley, Roosevelt, and Taft, and used his position to promote his views on the necessity for a high protective tariff and the gold standard.

KOKAND, kō-kānd', city, is located in northwest Fergana Oblast in eastern Uzbek SSR about 100 miles southeast of Tashkent. In the heart of the rich Fergana Valley, Kokand is an important rail, trade, and agricultural center. Among other industries the city contains cotton and silk mills, sugar refineries, machine plants, and facilities for the production of cotton seed oil. Kokand was important as early as the 10th century and was the capital of the former Kokand khanate when the latter reached its height in the 18th century. The khanate was later conquered by the Chinese and finally, after much conflict with other peoples of Turkestan, the region fell to Russia in 1876 and was made a part of the province of Turkestan. The Kokand region became a part of the Uzbek SSR when the latter was formed in 1924. Pop. (1939) 84,665.

KOKCHETAV, kūk-chē-táf', oblast of the Kazakh SSR, is located in southern Soviet Central Asia in the northern part of Kazakh in a wooded steppe region. Formed in 1944, this administrative subdivision, the capital of which is the agricultural center of Kolchetav, has primarily an agricultural economy with wheat, millet, oats, cattle, and sheep being of most importance. It is served by the Petropavlovsk-Balkhash railroad. Pop. (est. 1947) 320,000.

KOKO NOR, kōkō-nōr', **KUKU NOR**, **TSING HAI**, ching'hi', or **CHINGHAI**, lake in the northeast part of Tsinghai Province in west central China. It is approximately 65 miles long and 40 miles wide and lies at an altitude of about 10,000 feet. Its shallow and brackish waters are frozen for several months of each year.

KOKOMO, kō'kō-mō, city, Indiana, seat of Howard County, is a commercial and industrial center located on Wildcat Creek 50 miles north of Indianapolis at an altitude of 815 feet. Situated in the midst of a rich farm region, it is served by the New York, Chicago, and St. Louis and the Pennsylvania railroads. The factory products are widely diversified and include auto supplies and parts, precision instruments, machinery, radios, tools, springs, wire products, signs, plumbing supplies, glass products, farm equipment, rubber goods, clothing, and canned goods. The first practical American automobile was invented here in 1893 and given its first successful road tests the following year in Kokomo by Elwood Haynes. The city was named after Ma-Ko-Ko-

Mo, an early Miami Indian chief. There was an Indian trading post here in 1842; in 1844 it was made the county seat and became a city in 1865. Pop. (1940) 33,795; (1950) 38,672.

KOKOSCHKA, kô'kôsh-kä, **Oskar**, Austrian expressionist painter and writer: b. Pöchlarn, Austria, March 1, 1886. He completed his education at the Vienna School of Arts and Crafts, and after participating in World War I he joined the faculty of the Dresden Academy (1920-1924). His subsequent European and Near Eastern travels ended when he went to live in England in 1938, though after World War II he again returned to the continent. In 1937 his paintings were removed from German galleries. Among his works are several expressionist poems and the plays *Mörder, Hoffnung der Frauen* (1907), *Der brennende Dornbusch* (1911), *Hiob* (1917), and *Orpheus und Eurydike* (1923). His early painting centered about portraiture of great perception. Later he came to pay more attention to landscape painting with bold usage of form and color for violent psychological effect.

KOLA NUT. See **COLA NUT.**

KOLA, kô'lä, **PENINSULA**, Soviet Russia, is situated between the White Sea and the Barents Sea and consists largely of a granite and gneiss plateau. It is covered by many large lakes surrounded in the northern regions by tundra and by forests in the south. The Arctic coast here, some 200 miles long, is known as the Murman Coast, and was in 1918 brought very prominently to the fore by the landing of Allied troops. Murmansk, the chief city, was an important Russian receiving base during World War II. The peninsula has an area of about 50,000 square miles and is very rich in mineral resources.

KOLAR, kô'lär, **Josef Jiri**, Bohemian actor, dramatist, and novelist: b. Prague, Feb. 9, 1812; d. there, Jan. 31, 1896. After leaving Prague University where he had studied philosophy, he devoted himself to the theater and became a member of the Prague State Theater in 1839, gaining fame in Shakespearean roles. He was appointed director of the Czech Theater at Prague in 1869.

He made translations of the plays of Shakespeare, Goethe, and Schiller, and he wrote several novels. Among his plays are the tragedies *Monika* (1847), *Ziškova smrt* (1850), *Magelona* (1851), *Pražský šid* (1871), and *Primátor* (1883).

KOLB, kôlp, **Georg Friedrich**, German politician and publicist: b. Speyer, Bavaria, Sept. 14, 1808; d. Munich, May 16, 1884. He was elected to the Bavarian Landtag in 1849 and was the publisher of the *Neue Speyerer* which was suppressed in 1853. He escaped persecution by living in Zurich, but again became a member of the Bavarian Landtag in 1863 at which time he strenuously opposed the union of Bavaria in the German Bund. His principal works are *Handbuch der vergleichenden Statistik* (Zurich 1857, 8th ed., Leipzig 1879) and *Kulturgeschichte der Menschheit* (Leipzig 1868-1870, 3rd ed., 1885). Under the pseudonym "Broch" he wrote *Italien und jetzige politische Lage des übrigen Europas* (Zurich 1859).

KOLBE, kôl'bē, **Adolph Wilhelm Hermann**,

German chemist: b. Elliehausen, near Göttingen, Sept. 27, 1818; d. Leipzig, Nov. 25, 1884. He studied at Göttingen under Friedrich Wöhler and became assistant to Robert Bunsen at Marburg (1842). He was an assistant to Lyon Playfair at London (1845), but returned to Marburg (1847) in order to continue work on the nitrites started in London. He moved to Brunswick the same year and edited *Handwörterbuch der Chemie* of Liebig and Wöhler. He was made professor at Marburg (1851) and at Leipzig (1865).

Kolbe is of importance chiefly for his researches in organic chemistry and the structure of organic molecules. He made one of the first syntheses of an organic compound from inorganic matter by treating carbon disulfide with chlorine and converting it into trichloroacetic acid which in turn became acetic acid through the action of hydrogen. He also worked on the electrolytic decomposition of organic acids; on the reaction of cyanogen with alcohol; and on the synthesis of cacodyl. He discovered the synthesis of corallin from phenol (1861) and invented a simple process of salicylic acid production from phenol and carbonic acid, learning the next year of the antiseptic properties of this composition. Based on the doctrine of the *para* radicals he attempted to advance chemistry on the radical theory and remained antagonistic to the type and structural theory. He edited the *Journal für praktische Chemie* from 1869. Among his works are *Ausführliches Lehrbuch der organischen Chemie* (Brunswick 1855-1864), which has had many revised editions, and *Kurses Lehrbuch der anorganischen Chemie* (Brunswick 1883).

KOLBERG, kôl'bërk, seaport and resort in the Province of Koszalin, Poland, near the mouth of the Persante River about 75 miles northeast of Stettin. The town first became of importance in the 11th century when it was a fortress and a salt trading center. At this time it was under Polish rule but later came under the sovereignty of the princes of Pomerania. It received municipal rights in 1255 and joined the Hanseatic League in 1284. In the 17th century it was for a time occupied by Sweden. After the Treaty of Westphalia it became Brandenburgian, then a part of the Prussian province of Pomerania. It endured long sieges during the Thirty Years' War, the Seven Years' War, and again in the Napoleon Wars. Kolberg has a well-protected harbor and its suburb of Münde, which has been a favorite resort.

Before World War II Kolberg was an important port for lumber, coal, grain, and fertilizer. Its industries included iron foundries, machine works, drugs, and cosmetics. With 90 per cent of the city destroyed in World War II, the German population was evacuated. It was captured by the Russians in 1945 and assigned to Poland by the Potsdam Conference in 1945. Its Polish name is Kolobrzeg. Pop. (1946) 2,816.

KOLBING, kôl'bing, **Eugen**, German scholar: b. Herrnhut, Sept. 21, 1846; d. Herrnhut, Aug. 10, 1899. He became lecturer at University of Breslau in 1873 and professor of English language and literature in 1880. Kolbing made a specialty of medieval English literature and also edited a number of old Norse sagas. Among his works is *Beiträge zur vergleichenden Geschichte der romantischen Poesie und Prosa des Mittelalters* (Breslau 1876). He founded

(1877) the periodical *Englische Studien*. Consult his biography in *Englische Studien* (Leipzig 1900).

KOLB'S FARM, Engagement at. After the action at Pine Mountain (q.v.), 15 June 1864, General Sherman closed in on the Confederate army defending Marietta and the railroad south to the Chattahoochee, and began the extension of his lines to the right. The Confederates made a corresponding move to the left, and on the night of the 21st Hood's corps of two divisions, Hindman's and Stevenson's, moved from the right, near the railroad north of Marietta, to the Marietta and Powder Springs road, near Zion Church, about four miles southwest of Marietta and a mile east of Kolb's farm. Hood now occupied the extreme left of the Confederate line, and had been instructed by Gen. J. E. Johnston to endeavor to prevent any progress of Sherman's right toward the railroad, the course of which was nearly parallel to the Confederate left and centre, and which was seriously menaced by Hooker's and Schofield's corps. On the morning of the 22d Schofield had advanced one division, Hascall's, on the road from Powder Springs Church to Marietta, with orders to take position on Hooker's right, near Kolb's house. Hooker, in going to the right and forward, reached to the Marietta road at Kolb's, and made connection with Hascall's division. Williams' division, massed by brigades, held Hooker's right, Geary's division was on the left. Williams and Butterfield's division was further to the left on the line of Howard's fourth corps. Williams and Hascall had very sharp skirmishing in getting into position, and from prisoners taken of Hood's corps it was learned that Hood, supported by Hardee, was about to attack, upon which both Williams and Hascall were ordered to deploy their divisions, and they threw up breastworks, Hascall in heavy woods and Williams, for the greater part, on open, commanding ground, giving good positions for artillery. The deployment had not been completed and but few breastworks had been thrown up when, about 5 P.M., Hood made his attack. As he advanced from the woods which had sheltered him and concealed his line, his right was met by a terrific fire of shell, case-shot and canister that tore great gaps in the line and partially broke up his formation; but he pressed on and, coming under still closer canister fire and deadly volleys of musketry, was repulsed after a most desperate struggle of less than an hour. The attack fell upon the divisions of Williams and Hascall, Williams losing only 130 killed and wounded and Hascall a less number. Hood's loss was 1,012 killed and wounded and about 100 missing. Consult 'Official Records' (Vol. XXXVIII); Cox, J. D., 'Atlanta' (New York 1882); Johnston, J. E., 'Narrative of Military Operations' (New York 1874).

KÖLCSEY, kél'sé, Ferencz, Hungarian poet and critic: b. Szödemeter, Transylvania, 8 Aug. 1790; d. Szathmár, 24 Aug. 1838. He studied at Debreczin and went to Pest as a royal officer of the law (1809), where he gave out his first efforts in poetry (1813) and founded (1826) the periodical *Elet és irodalom* (*Life and Literature*), for which he contributed a large number of articles on philosophy, art,

history and criticism. He was a member of the Hungarian Diet (1832-36) and the chief orator of the Liberal party. The Hungarian Academy elected him a member. His 'Journal of the Landtag, 1832-36' (Pest 1848) is interesting. He was the author of the Hungarian national hymn. His complete works were published by P. Szemere (2d ed., Pest 1863).

KOLDING, kōl'ding, Denmark, a town on the east coast of Jutland, situated on Kolding Fiord, a small bay of the Little Belt, and the junction of several railways. The town does a good shipping business as well as considerable trade in lumber, grain and other products. On the northwest side is the picturesque ruin of the burned (1808) royal castle Koldinghuus, built in the 13th century for the residence of the Danish kings. In 1849 the Schleswig-Holstein army under Bonin defeated the Danes here, causing much damage to the town. An antiquarian and historical museum is here. The population, about 14,219. Consult Fühn, 'Efterretninger om Kjøbstaden Kolding' (Kolding 1848-60).

KOLHAPUR, kō'la-poor', or KOLAPUR, India, capital of the state of the same name, is terminus of one of the Southern Mahratta Railway's branches. It is 144 miles south by east of Poona and 188 miles south-southeast of Bombay, situated on the Panchganga River, which is crossed here by a bridge. Numerous fine modern buildings include the palace of the Rajah, government offices, city hall, treasury, etc. From its interesting Buddhist remains this must have been once a religious centre of importance, evidenced in temples, shrines, caves cut into the rock and decorated, etc. Pop. 69,860.

KOLHAPUR, or KOLAPUR, India, the principal state under the Bombay government, covering an area of 3,217 square miles. In the western division it is covered with its mountainous Ghats, but the eastern section has the fertile Deccan plain. The western Ghats furnish little else than lumber and are the strongholds of the feudatory Mahrattas. The vegetable produce of the valleys and plains are rice, millet, cotton, tobacco, sugar-cane, etc. The overlords, or rajahs, claim descent from Sivaji the Great, the Mahratta Empire's founder. Pop. 833,726.

KOLIN, kō-lēn, Czechoslovakia, this Bohemian city is in part termed Neukolin and is built on two islands produced by the river Elbe at this point and crossed by two iron bridges. It is reached by two railways—one leading to Prague (Praha), the capital, 35 miles to the west—and is the seat of government offices.

It contains the 14th century Gothic Bartholomew church, an Evangelical church and a synagogue, an ancient palace and townhall, gymnasium, commercial and trade schools, two sugar and two machine factories, several chemical works, petroleum refinery, two breweries, etc. It does a large trade in vegetables and fruit grown in the vicinity. A noted battle was fought here 18 June 1757 between the Austrians under Daun and the Prussians under Frederick the Great, ending in the latter's defeat and the consequent raising of the siege of Prague as well as the evacuation of Bohemia, together with a battle loss of 14,000 casu-

alties, 29 standards and 43 cannon, while the Austrians lost about 8,000. Pop. 43,958, mostly Czechs.

KOLLÁR, kôl'lâr, Jan, Czech poet and archæologist: b. Mossocz, Hungary, 29 July 1793; d. Vienna, 24 Jan. 1852. He studied at the Pressburg Lyceum (1812-15) and then at Jena, becoming Slovak preacher (1819) to the newly-founded Evangelical Community in Pest. His first work was a collection of short poems, 'Basné' (Prague 1821), followed by 'Slavy Dcera,' the Daughter of Slava, (Pest 1832). The work was added to in further editions (Pest 1845; Vienna 1852; Prague 1862). In these celebrated poems he gives expression to his pain over the suppression of his race under German kultur. He next brought out a praiseworthy collection of Slovak folk-songs, 'Narodnie zpěvansky' (Pest 1834-35). Of his other works should be mentioned 'Rozpravy o jmenach, etc.' (ib. 1830) concerning the names and ancient monuments of the Slovak peoples. With the fight for the freedom of his language in Hungary the entire Slovak youth congregated around the noted poet, although he tried to repress the tendency to Panslavism. He was appointed professor of archæology at the University of Vienna (1849). After his death appeared the archæological work 'Staroitalia slavjanska' (Vienna 1853; Prague 1863) concerning Slavonic Italy. A collection of his works, containing the poet's autobiography, was published (Prague 1862-63) and a second edition (1868), but both are incomplete.

KÖLLIKER, kē'li-kēr, Rudolph Albert von, Swiss anatomist and physiologist: b. Zürich, 6 July 1817; d. Würzburg, Bavaria, 13 Nov. 1905. He studied at Zürich, Bonn and Berlin and became an assistant of Henle (1842), and was admitted to the faculty of the university at Zürich (1843) as docent. He received the degree of professor of physiology and comparative anatomy (1845) but moved to Würzburg (1847) where he was appointed professor of physiology and comparative anatomy. He taught anatomy, microscopies and comparative anatomy (1866-1902) and was acknowledged the highest authority on general microscopical anatomy from the time of the publication of his 'Handbuch der Gewebelehre' (1852; 6th ed., Leipzig 1889-96). Much honor is due him for his epoch-making researches in evolution and zoology, more especially respecting the molluscs and worms in which he was a pioneer. He wrote voluminously; his principal works include 'Ueber die Pacinischen Körperchen' (Zürich 1843), written in collaboration with Henle; 'Mikroskopische Anatomie oder Gewebelehre des Menschen' (Leipzig 1850-54); 'Entwicklungsgeschichte des Menschen und der höhern Tiere' (ib. 1861); 'Icones histologicæ' (ib. 1863-65); 'Entwicklungsgeschichte der Cephalopoden' (Zürich 1844); 'Die Schwimmpolypen von Messina' (Leipzig 1853); 'Die normale Resorption des Knochengewebes' (Leipzig 1873); 'Grundriss der Entwicklungsgeschichte des Menschen und der höhern Tiere' (ib. 1880). He edited *Zeitschrift für wissenschaftliche Zoologie* from 1849 in collaboration with Siebold, and with Ernest Ehlers, later. An accomplished linguist,

he was also a great traveler, well known in all leading European educational centres. Consult his 'Erinnerungen aus meinem Leben' (Leipzig 1899).

KOLMAR, or **COLMAR**, France, chief city of the district of the same name in the liberated provinces of Alsace-Lorraine, in the French department of Haut Rhin, 40 miles south-southwest of Strasburg. Its fortifications were destroyed in 1673 and it is now surrounded by boulevards and entered by three gates. Here is the public library with 80,000 volumes and some pictures by Schön, Albert Dürer, etc.; and the museum, where, among other curiosities, a remarkable aërolite is preserved, which fell near Ensisheim in 1492 and originally weighed about 284 pounds. The portion here weighs about 142 pounds. Kolmar has manufactures of printed goods, calicoes, silks, etc., besides cotton-spinning mills, tanneries and chamois-leather works. It has a considerable trade in the manufactured goods of Alsace, and in iron, grain, wine, madder, etc.; and in colonial produce, with which it supplies Switzerland. It became one of the free imperial cities in 1226, and as such became a place of consideration. In 1632 it was taken by the Swedes, who maintained possession for two years. It was united to France in 1697 by the Peace of Ryswick, and surrendered to Germany by the Treaty of Versailles, 26 Feb. 1871. In the French invasion of Alsace which followed the outbreak of the Great European War in 1914, Kolmar was captured, but soon lost. Pop. 46,518.

KÖLN. See COLOGNE.

KOLO, kô'lô, Poland, a town in Kalish, County of Lodz, situated on an island in the river Warthe (Varta). It has a Benedictine church, several factories and a population of 11,655 in 1910. In the World War this town was one of the bases of the Germans in their first drive at Warsaw and it was a passing point for troops in the following expeditions against Warsaw. The neighborhood contains a number of important brick kilns.

KOLOKOTRONIS, kô'lôk-ô-trô'nîs, Theodoros, Greek general: b. Karytena, Arcadia, 15 April 1770; d. Athens, 15 March 1843. He took part in the sieges of Tripolitza, Nauplia and Corinth and invaded Livadia (1821) as a leader of the Klephts against the Turks. In the next campaign he beat the Turks at Kleones and Phlius. He seized Nauplia and made himself governor (1823) and, by force of threats, was appointed commander-in-chief and, later, vice-president of executive council. Fighting adversely against the government troops under Guras, he withdrew to Karytena and was made state's prisoner (1825). The campaign losses of the Greeks caused them to entrust him with an army-corps and he fought adversely against Ibrahim Pasha. Under Count d'Istria he acted as general in the Peloponnesus and was chosen a member of the provisional government commissioned on the death of the president, sided with the Russians against the government. He turned against the regency, but was arrested (1834) and condemned to death for high treason, but the sentence was changed to King Otho to 10 years' imprisonment. On the king coming of age and ascending the throne

in 1835, he was pardoned and his rank of general was restored.

KOLOMAN or **COLOMAN**, kô'lô-män (Hungarian KÁLMÁN), king of Hungary: b. 1070; d. 1114. The natural son of Geza I of the Árpád dynasty, he took possession of the throne in 1095, on the death of his uncle, Ladislas I. In 1097 he quelled an insurrection of the Croats, and by 1102 he had conquered Dalmatia. The efforts of Emperor Henry V to place Almos, legitimate son of Geza, on the throne were unsuccessful, and Koloman had Almos and the latter's son Béla (later King Béla II) blinded. A learned man and a good administrator, Koloman did much to improve the laws and finances of the kingdom.

KOLOMNA, kû-lôm'nà, city, USSR, located in the Moscow Region of the RSFSR, near the junction of the Moskva and Oka rivers, 65 miles southeast of Moscow. Besides the ruins of a kremlin built in 1585, it has the beautiful Cathedral of the Assumption of the Blessed Virgin (1672), the Church of the Resurrection (13th to 14th centuries), and several other old churches. A major industrial center, it produces locomotives, freight cars, machinery, munitions, and ships.

First mentioned in 1177, Kolomna suffered destruction during the Tatar invasions of 13th century. In 1301 it was annexed to Moscow. Pop. (1939) 75,139.

KOLOMYYA, kû-lû-mi'yà (Pol. KOŁOJA; Ger. KOLOMEA), city, USSR, located in Stanislaw Region of the Ukrainian SSR, on Prut River, 30 miles south-southeast of Stanislaw. Its products include pottery, textiles, chemicals, cement, machinery, and refined petroleum.

Founded in the 12th century, Kolomyya suffered from Tatar and Walachian attacks in the 14th and 16th centuries. It was part of Poland till 1772, when it passed to Austria. Restored Poland in 1919, it was ceded to the USSR in 1945. Pop. (est. 1938-1939) 40,000.

KOLOZSVAR. See CLUJ.

KOLREUTER or **KOELREUTER**, kûl'-i-tër, Josef Gottlieb, German botanist: b. Ulz, Württemberg, April 27, 1733; d. Karlsruhe, Baden, Nov. 12, 1806. Educated at Berlin and Leipzig, he became professor of natural history and director of the botanical gardens at Karlsruhe in 1764. An early experimenter in the hybridization of plants, he published his findings in *Vorläufige Nachricht von einigen das Geschlecht der Pflanzen betreffenden Versuchen und Beobachtungen* (1761-1766). Köreuter studied the fertilization of plants and recognized the importance of insects and of the wind in pollination.

KOLTSOV, kûl'-y'-tsóf, Aleksei Vasilyevich, Russian lyric poet: b. Voronezh, Russia, March 3, 1809; d. there, Oct. 29, 1842. While working as a cattle dealer, he educated himself by studying the works of great authors and began to write poetry. In 1835, 18 of his poems were published under the title *Stikhotvoreniya*, and a complete edition, with a biography by the great critic Vissarion Belinski, appeared in 1846. He is known as the Russian Burns.

KOLYMA or **KOLIMA**, kô-lé'mà (Russ. kû-lî'mà), river, USSR, in the Asiatic portion of the RSFSR. Rising in the Kolyma Range in Khabarovsk Territory, it flows north and northeast for 1,110 miles through the Yakutsk ASSR to the Arctic Ocean. Its chief tributaries are the Omolon and Anyui. From June to October the Kolyma is navigable to Verkhne Kolymsk.

KOMANDORSKIE ISLANDS, kû-mûn-dôr'ski-yë (Eng. COMMANDER ISLANDS), island group, USSR, 110 miles east of Kamchatka Peninsula in Bering Sea. Part of Kamchatka Region, Khabarovsk Territory, it consists of two main islands—Bering, on which Vitus Bering (q.v.) died in 1741; and Medny—and two islets, with a total area of 850 square miles. Inhabited chiefly by Aleuts, the islands serve as a fishing base and as a preserve for fur seals and sea otters.

KOMARNO, kô'mär-nô (Ger. KOMORN; Hung. KOMÁROM), town, Czechoslovakia, situated at the confluence of the Danube and Váh rivers, 55 miles southeast of Bratislava. It has a monument to György Klapka (q.v.), who held out against the Austrians in 1849 in the old fortress, built in the 15th century. Maurus Jókai (q.v.) was born at Komárno. A river port, the town has shipyards, flour mills, and machinery and textile plants. Until 1920 it belonged to Hungary and included the present Hungarian city of Komárom. Pop. (1947) 15,461.

KOMI AUTONOMOUS SOVIET SOCIALIST REPUBLIC, kô'mi, autonomous republic, USSR, situated in the RSFSR, bounded on the north by the Nenets National District, on the east by the Yamalo-Nenets and Khanty-Mansi national districts, on the southeast by the Molotov Region, on the south by the Komi-Permiak National District and the Kirov Region, and on the west by the Arkhangelsk Region. It has an area of 156,200 square miles. The capital is Syktyvkar. Much of the northern area consists of tundra, while two thirds of the southern part is covered by forests. The chief river is the Pechora. Until 1942, when a railroad was completed across the republic, its economy depended on fishing, trapping, lumbering, and a limited agriculture. Thereafter there was considerable development of coal, petroleum, iron, and grindstone resources. Pop. (est. 1947) 450,000.

KOMSOMOLSK, kôm-sô-mòl'sk', city, USSR, situated in Khabarovsk Territory of the RSFSR, on the Amur River, 165 miles north-northeast of Khabarovsk, with which it is connected by rail. Begun by members of the Komsomol in 1932, it developed rapidly as an industrial center. Its products include steel, ships, refined petroleum, lumber, paper, aircraft, and processed food. Pop. (est. 1946-1948) 150,000.

KOMURA, kô-môo-rà, MARQUIS Jutaro, Japanese statesman: b. Hyuga Province, Japan, September 1855; d. Hayama, Nov. 24, 1911. After being graduated from Harvard University in 1877, he returned to Japan and entered the Department of Justice. In 1884 he was transferred to the Foreign Office. He served as chargé d'affaires in Peking just prior to the Sino-Japanese War of 1894-1895. In 1896 he was appointed vice minister of foreign affairs, in 1898 minister to the United States, and in 1900 minister to Russia. In

1901 he was recalled home to become foreign minister; he held this post until 1906, covering the period of the Russo-Japanese War, and taking part in the peace negotiations at Portsmouth, N. H. From 1906 to 1908 he was Japanese ambassador to Great Britain, and for the next three years he was again foreign minister. He had negotiated the Anglo-Japanese Alliance as foreign minister in 1902; and in 1911, while once more in that office, he agreed to modifications in it. He professed sincere admiration for Great Britain and the United States. In 1907 he was created count; and in 1911, marquis.

KONDYLES or **KONDYLIS**, kôn-thé'lyès, Georgios, Greek general and statesman: b. Pruso, Eurytania, Greece, 1879; d. Athens, Jan. 31, 1936. He entered the Greek Army as a private, fought in the Balkan Wars and in World War I, during which he commanded a regiment under the provisional government of Eleutherios Venizelos at Salonika. After the return of King Constantine to Greece in 1920, he retired to Istanbul, where he became a leading supporter of Venizelos. He then took part in the revolution which ousted Constantine (1922), crushed a counterrevolution in Macedonia (1923), and became minister of war of the Greek Republic in 1924; minister of interior, 1924–1925. Exiled by the coup d'état of Theodoros Pangalos in 1926, he was released and returned to Athens to engineer the coup which overthrew the Pangalos government, Aug. 22, 1926. Becoming premier until the elections of November, he handed the government over to Alexandros Zaïmes and retired to France, returning to Greece in 1930. Gradually turning against Venizelos, he was minister of war, 1932–1933 and 1933–1935, in the cabinet of Panages Tsaldares, suppressing the uprising in favor of Venizelos in March 1935. Finally, on Oct. 10, 1935, he carried out a coup which overthrew the Tsaldares government. A plebiscite led to the restoration of George II, Nov. 25, 1935. Differences with the king, however, led to his resignation, Nov. 30, 1935.

KONEV, kó'nyûf, Ivan Stepanovich, Russian military officer: b. Ladeino, in the Podosinovskii district of the Archangel (Arkhangelsk) Region, R.S.F.S.R., Dec. 27, 1897. The son of a peasant, at the age of 12, after a village school education, he went to work as a lumberjack. In 1916 he was called up for service in World War I, and the next year fought in the ranks on the Tarnopol front against the Germans. He joined the revolutionaries early in 1917 and, in November, he helped in confiscating the property of the church and the landowners in his native district.

Joining the Red Army in 1919, he served against the White Russian forces in Transbaikalia headed by Grigori Seménov and Aleksandr Vasilievich Kolchak, and was in command of an armored train in an attack upon the Japanese who had advanced from Vladivostok into the Far Eastern Republic. In March 1921, he took part in the Soviet operations against mutinous sailors in Kronstadt, and then, having chosen the army for his life career, he studied at the military academy at Frunze. He became a commissar in the Red Army in 1922, and two years later he was promoted political commissar of an army corps. From 1931 to 1934 he served as a member of the All-Union Central Executive Committee, and in 1934, having graduated with highest honors at

the Frunze Military Academy, he was given command of an infantry division. In September 1938 he was appointed commander of the Second Far Eastern Army, and in June 1940 he reached the grade of lieutenant general.

He was serving on the western front of Russia when the Germans invaded the country in June 1941. After a counteroffensive which temporarily checked the enemy, he was given command of all troops on the northwest, and under Semén Konstantinovich Timoshenko he directed the tank forces which, in December, barred the attempts of Gen. Heinz Guderian to reach Moscow. Together with Georgi Konstantinovich Zhukov, in the summer of 1942 he launched a drive on the front, west of Moscow, which diverted many German troops from the assault on Stalingrad; and in 1943, through his advance toward Orel and Belgorod, he assisted in bringing the last German offensive in Russia to a standstill. By the close of the year he had driven the Germans across the lower reaches of the Dnieper River, and in February 1944, he was promoted marshal of the Soviet Union for the skill displayed in annihilating the enemy Eighth Army in a pocket west of Cherkassy. His Second Ukrainian Army crossed into Bessarabia on March 19, 1944, and within two weeks drove the enemy back to the line in the south from which they had launched their invasion in 1941; and in August, having crossed the Vistula, they had forced the Germans into full retreat. Transferred to the command of the First Ukrainian Army, in January 1945 he helped in the liberation of Poland; and after sweeping the Germans from their mountain positions in the Sudetenland, he led his victorious troops into Germany itself. He commanded the occupation forces in Austria, 1945–1946, and in November 1946 became commander of all Russian ground forces.

KONG, kông, town, Ivory Coast, French West Africa; formerly capital of a native kingdom. It is 260 miles north of Abidjan, on the railroad between that town and Bobo-Dioulasso. The principal products of the Kong District, of which it is the capital, are cotton and coconuts; gold and manganese are mined. One of the first white men to visit the area was Louis Gustave Binger, who in 1888 persuaded the local ruler to place it under French protection. The protectorate was merged into the Ivory Coast colony in 1893. The town is now largely abandoned.

KONGO, variant spelling of Congo.

KONGSBERG, kôngs'bär, town, Norway; in Buskerud County. It is 40 miles west-southwest of Oslo, on the river Lågen. The famous silver mines in the vicinity, discovered in 1623, are now practically exhausted, but the town has a hydroelectric power plant and an arms and munition factory. There is a monument to Kongsberg's founder, Christian IV. Pop. (1946) 7,852.

KONIG, kú'nîk, Friedrich, German printer and inventor: b. Eisleben, April 17, 1774; d. Oberzell, Jan. 17, 1833. He learned the art of printing at Leipzig (1790–1794), and was active (1803–1805) in improving the printing press at Meiningen and Suhl. Lacking the means to carry out his experiments, he appealed, unsuccessfully, to the Saxon and Austrian governments, then traveled to Saint Petersburg (1806), only to be

gain disappointed. He went to London and made an agreement with the printer Thomas Bensley (1809) to carry out his plans for a book-printing machine. They obtained a patent for a platen press (1810), but the flat-plate principle was soon discarded for the cylinder press. Patents followed (1811, 1813, 1814). He returned to Germany (1817) and formed a company (König and Bauer) at Oberzell and established a steam press factory. In partnership with Johann Friedrich Cotta of Stuttgart, they built a factory for machine-made paper at Schwarzach, near Würzburg (1828).

KONIGGRATZ, former name of Hradec Králové (q.v.).

KONIGSBERG. See KALININGRAD.

KONIGSHOF, German name for the Czech city of Dvur Kralove (q.v.).

KONIGSHUTTE. See CHORZOW.

KONIGSKINDER, kü-nîgz-kîn'dür (Ger., King's Children), a fairy opera in three acts by Engelbert Humperdinck (q.v.), the libretto being written by Elsa Bernstein (b. 1866) under the pseudonym Ernst Rosmer. As originally composed, it had its première at Munich in 1897; Humperdinck subsequently rewrote the music in the United States, and as an opera the work was first produced at the Metropolitan Opera House, New York City, on Dec. 28, 1910. An old witch dwelling in the hills above the town of Hellabrunn had thrown a spell over a king's daughter and held her to watch a flock of geese. A ragged youth, the son of another king, encounters the goose girl in the wilds and falls in love with her, but the spell does not permit her to leave the forest. Three ambassadors from Hellabrunn, respectively disguised as a wood-hopper, a broommaker, and a fiddler, arrive to seek the missing prince, who had meanwhile come to the city and accepted employment as a wineherd. The witch tells the ambassadors that the first person to enter the city gates shall be their future king. The multitude are gathered to receive their king when the ragged youth enters, accompanied by the goose girl, who had been delivered from the witch's power. The nobles drive the two arrivals away with scorn. The outcasts return to the hut and are poisoned with some pastry left by the witch. A band of children sent out to find the couple discover their dead bodies lying side by side in the snow.

KONIGSMARK, kü'nîgz-märk, COUNT Hans Christoph, German army officer in Swedish service: b. Kötzlin, Brandenburg, March 7, 1662; d. Stockholm, Sweden, March 2, 1663. He was an officer in the army of the Holy Roman Empire until 1630, when he entered the employ of the Swedes. In 1636 he reached the rank of colonel, and during the next few years led several predatory expeditions into Westphalia. He served under Johan Gustafsson Baner (q.v.) during 1640-1641, and the next year under Lennart Torstensson (q.v.); at the battle of Breitenfeld, in 1642, he commanded the left wing of the Swedish Army. In 1643 he drove the Imperialists out of Pomerania, and in 1645, having been appointed governor general of the conquered cities of Bremen and Verdern, he forced the

elector of Saxony to accept an armistice. During 1646 he commanded an independent Swedish cavalry force in operations through northwest Germany, and in 1648 he served under Karl Gustav Wrangel (q.v.) at the battle of Zusmarshausen; in the latter year he was in supreme command of the Swedish Army at the battle of Prague, last engagement of the Thirty Years' War (q.v.), capturing enormous booty when he entered the city. He was raised to the rank of count in 1651, and in 1655 he was promoted field marshal. Subsequently the Poles took him prisoner and held him in captivity until 1660. He was the grandfather of Countess Maria Aurora Königsmark and Count Philipp Christoph Königsmark (qq.v.).

KONIGSMARK, COUNTESS Maria Aurora, Swedish beauty and wit: b. May 8, 1662; d. Quedlinburg, Germany, Feb. 16, 1728. She was a granddaughter of Count Hans Christoph Königsmark (q.v.). In 1694 she went to Saxony seeking her missing brother, Count Philipp Christoph Königsmark, and at the court in Dresden met Elector Augustus II, Frederick (qq.v.). Becoming his mistress, in 1696 she bore his son Maurice de Saxe (q.v.); a year later her wise counsel helped her lover to obtain the throne of Poland. She wrote poems in French and German, a drama *Cecrops*, and a comedy in French verse, played in Stockholm. At her death she was coadjutor abbess of Quedlinburg. Voltaire described her as "the most famous woman of two centuries." Paul Burg (b. 1884), the historical novelist, wrote *Die schöne Gräfin Königsmark* (1920).

KONIGSMARK, COUNT Philipp Christoph, Swedish nobleman: b. Stade, Germany, March 14, 1662; d. ?1694. He was the grandson of Count Hans Christoph Königsmark and brother of Countess Maria Aurora Königsmark (qq.v.). Early in life he made the acquaintance of Saxony's heir apparent, later Elector Augustus II, Frederick (q.v.), residing at Dresden and holding the rank of colonel in the Saxon Army. During 1685-1686 he served in Hungary against the Turks, and subsequently he entered the Hanoverian Army. On the discovery that he was a secret lover of Sophia Dorothea, wife of George, crown prince of Hanover (later George I of Great Britain), he fled, July 1, 1694, and it is believed that he was assassinated. Consult Wilkins, W. H., *The Love of an Uncrowned Queen* (London 1900).

KONIGSSTUHL, kü'nîgz-shtül, a place in Germany of historic interest. It is near Rense, on the left bank of the Rhine, in the Prussian Rhine Province. In medieval times the junction of four of the German electorates, it became the meeting place of the electoral assemblies. In 1308 Henry of Luxembourg (Henry VII) was elected German king here; and later elections were held, and treaties made, on the same spot. Emperor Charles IV erected here in 1376 a small octagonal building to which the name of Königsstuhl was given. It was rebuilt in 1843, having fallen into ruins in the 18th century.

KONIGSWINTER, Germany, town of the Rheinland Province, on the right bank of the Rhine 6 miles southeast of Bonn. It is situated at the foot of the Siebengebirge (Seven Mountains), and is a starting point for tourists to the

Drachenfels, which rises behind the town. Pop 4,724.

KONINCK, kō'ningk, **David de**, Dutch painter of still life: b. Antwerp, 1636; d. about 1699. He was a pupil of Peter Boel at Antwerp, and became master of the Saint Luke's Guild. Having traveled through Germany and France, in 1670 he went to Rome. In 1697 he returned to Antwerp, and two years later he settled in Brussels. He painted rabbits and other animals, alive and dead, fruits, flowers, and other still life, after the style of John (Jan) Fyt (q.v.). His pictures are rare. The Royal Museum at Vienna acquired one of his paintings of dead ducks.

KONINCK, Philips de, Dutch landscape and portrait painter: b. Amsterdam, Nov. 5, 1619; d. there, October 1688. He studied and perfected himself in panoramic landscape painting under Rembrandt (q.v.). His works are especially noteworthy for their depiction of atmosphere, light, and space. The National Gallery, London, has a replica of his *View of the Mouth of a River*, which is in the museum at The Hague. In the Amsterdam Museum are *Entrance to a Forest* and others; and among his paintings in the Brussels Museum is *View of the Environs of Scheveningen*. Examples of his portraits, likewise in the style of Rembrandt, are in the museums at Oslo and Copenhagen; and the Uffizi Gallery at Florence has a self-portrait. Several of his landscapes and portraits are in the Metropolitan Museum of Art, New York City.

KONISCOPE, an instrument for indicating the amount of dust in the atmosphere; the word comes from the Greek, *konis*, dust, and *skopein*, to see. The air to be tested is drawn into a glass tube, where it is moistened by damp paper, and then expanded to cool it. During the expansion, moisture condenses on the particles of dust, which are rendered visible in the nature of fog. The density of the fog indicates the degree of dust present in the tested sample.

KONJAK, a perennial tuberous herb (*Amor-phophallus rivieri*) of the natural order Araceae, a native of Japan. The much-divided leaves are about four feet across, solitary, on a tall marbled leafstalk. The flowers appear before the leaves, and are clustered, like those of the cuckoopint, round a deep red spike which protrudes far above the rosy-green spreading spathe. It is largely cultivated by the Japanese, who obtain a large quantity of starchy food from the tubers.

KONKAN, kōng-kān', India, territory on the seaboard of Bombay, some 300 miles in length and 40 miles broad, bounded on the north by the Portuguese district of Damão and on the south by (Portuguese) Goa; the Western Ghats constitute the eastern boundary of the area, and on the west its shores are washed by the Arabian Sea. The territory constituted a Mahratta state until 1818, when the British annexed it; subsequently most of it was administered as districts of the Bombay presidency, three small states surviving under British control.

KONOW, kō-nōv', **Sten**, Norwegian Indologist and philologist: b. Aurdal, 1867. After at-

tending Oslo University he went to Germany for further study at the University of Halle, and in 1894 he was appointed assistant librarian at Berlin University. During 1899 he was a docent at Oslo, and the following year, declining the opportunity to become assistant professor of Sanskrit at Harvard University, he went to India as a member of the Linguistic Survey; in 1906 he became government epigraphist of India. Returning to Oslo in 1909, he was appointed professor of Indian philology. He edited numerous Indian texts, including those in the Harvard Oriental series, and published a *Bashgali Dictionary* (1913) and *India's Religions* (1924).

KONOYE, kō-nō-yē, **PRINCE Fumimaro** Japanese statesman: b. Tokyo, October 1891; d. there, Dec. 15, 1945. A member of the distinguished Fujiwara family, that had been connected with the Imperial House since the dawn of modern Japanese history, he was trained to his traditional offices in Japanese schools. After graduating at the Kyoto Imperial University with a law degree in 1917 he became a member of the nonregular staff of the home ministry, and in 1919 he attended the Paris Peace Conference (concluding World War I) as one of the secretaries of Prince Kimmochi Saionji (q.v.). Back in Japan, he took his hereditary seat in the House of Peers; he became vice president in 1931, and from 1933 till 1937 he served as president of that body. In 1934, after the Japanese invasion of Manchuria had disturbed friendly relations with the United States, he was sent to the latter country as member of a mission whose duty it was to restore good will. Two years later he refused the offer of the premiership of Japan but on June 3, 1937, a month before the Japanese aggressive attack upon China, he formed a "national union" Cabinet with himself as premier. He resigned on Jan. 4, 1939, as a result of the army's demand for greater control of the Japanese economic system, and subsequently he became minister of state without portfolio and president of the Privy Council. Recalled to the premiership for a second time on July 23, 1940, he effected a drastic reorganization of the Cabinet and created a new "national party" along fascist lines; on August 1 he announced that his government would pursue a totalitarian policy which would include Japanese domination over Asia. During his tenure of office, the Burma Road (into China) was closed by the British on demand of the Japanese government, French Indochina was invaded by Japanese troops, Japan signed a pact adhering to the "Rome-Berlin Axis," and relations with the United States concerning control of the Pacific became greatly strained. Nevertheless Konoye claimed subsequently to have been pro-American in his attitude at this period, citing as proof the fact that he had been willing to discuss with the State Department means for lessening the tension respecting the situation in the Pacific. His Cabinet resigned on July 16, 1941, but two days later he returned to his post as premier and again shuffled his Cabinet. The third Konoye government lasted only until Oct. 16, 1941, when he resigned because of disagreement among ministers "concerning the manner of executing national policy." Within less than two months Japanese forces made their surprise attack upon Pearl Harbor, and involvement of both Japan and the United States in World War II ensued. After

the American occupation of Japan in 1945, Konoye came briefly to the fore because of his undertaking to write a new Japanese constitution patterned along democratic lines. However, Allied headquarters named him one of the war criminals on December 6, and on the eve of surrendering to the authorities he took his own life by poisoning. In a note which he left he confessed: "I have been most gravely concerned with the fact that I have committed certain errors in the handling of state affairs since the outbreak of the China incident. I cannot, however, stand the humiliation of being apprehended and tried by an American court."

KONRAD DER PFAFFE (the priest), *kōn'rät der pfäf'ë*, German medieval poet: flourished in the middle of the 12th century. He belonged to the priesthood, and was in the service of Henry X (1108?-1139), known as Heinrich der Stolze (Henry the Proud), who was duke of Bavaria (1126-1138) and Saxony (1137-1139). About 1131 he composed the Middle High German epic *Rolandshied* (q.v.), a free version of the Old French epic *Chanson de Roland* (q.v.). It is probable that he also compiled the *Kaiserchronik* (about 1150).

KONRAD VON HOCHSTADEN, *fōn hōk'shtä-dēn*, German prelate and statesman: d. Sept. 28, 1261. From 1238 he was archbishop of Cologne. He supported the papacy against Frederick II, Holy Roman emperor, but was defeated, wounded, and taken prisoner near Lechenich in 1242. After being freed he renewed the conflict, and in 1248 crowned William of Holland as emperor at Aix-la-Chapelle. During 1249-1250 he was papal legate in Germany. After William died in 1256 he secured selection of Richard of Cornwall as his successor, and the following year he crowned him at Aix-la-Chapelle.

KONRAD VON MARBURG, *mär'bōörk*, German priest and papal inquisitor: d. near Marburg, July 30, 1233. A member of the Dominican Order, from 1226 he was confessor to the wife of the landgrave of Thuringia (later Saint Elizabeth of Hungary). In 1227 Pope Gregory IX appointed him inquisitor of the monasteries of Germany. Because of his fanatical and limitless persecution of heretics throughout the Rhine, Thuringen, and Hesse, in 1232 he was brought before an Imperial Convention at Mainz. Released with censure, on his return journey he was assassinated. The pope canonized him as a martyr.

KONRAD VON MEGENBURG, *mä'gēn-berk*, German author and naturalist: b. Bavaria, 309?; d. Regensburg, 1374. Among other numerous Latin works, he translated into German the treatise *De Sphaera Mundi*, written by Johannes de Sacrobosco (q.v.); the first work in German dealing with astronomy and physics, it was printed in several editions by 1539. His *Das Buch der Natur*, based on the *Liber de Naturis rerum* by Thomas of Cantimpre, is a general and fairly systematic work on natural history, interesting as evidence of the knowledge of that day; it was written between 1349 and 1351, and was published in Augsburg in 1475.

KONRAD VON WÜRZBURG, *vürts'-bōrk*, Middle High German epic and lyric poet:

b. possibly at Würzburg about 1220; d. Basle, Aug. 31, 1287. For his time he had developed, through the study of the poems of Hartmann von Aue (q.v.) and Gottfried of Strassburg (q.v.), an extreme perfection of verse and style, and delighted in the play of synonyms, which contribute much to the beauty of his short poems, narratives, and legends. His longer romances seem never to achieve the same degree of artistic unity as his shorter works. His earliest poems were the *Nantes Tournament* and the *Legend of Saint Nicholas* (which Bartsch published together with Konrad's later and longest work, *Partenopier and Meliur*, Vienna 1870). After settling at Strassburg, where most of his literary life was spent, he wrote the poetic short stories *Otto mit dem Bart*, *Der Schwanritter*, *Das Herzmare*, the allegorical scene, *Der Welt Lohn* (reprinted in Müller's *German Classics*, New York 1900), and his best tale, *Engelhart und Engeltraut* (published by Haupt, 1844, by Joseph, 1885). His huge epic *Partenopier and Meliur* was written in 1277, after the French poem of Denis Piramus, of which Konrad had a translation made for his own use, and was followed by the incomplete *Trojan War*, for which Konrad used as sources not only Benoît de Saint More, but also Statius and Ovid. Consult translations into Modern German in Reclam's *Universal-bibliothek*; Janson, *Studien über Konrad von Würzburg* (Marburg 1902); Rösler, Marg., *Die Fassungen der Alexiuslegende* (Wien 1905).

JACOB WITTMER HARTMANN.

KONSTANTINOV, Aleko Ivanitsov, Bulgarian author: b. Sistovo, 1863; d. near Pechtera, 1897. After studying in Russia he returned to Bulgaria in 1885 and entered the judiciary. An ardent liberal, he earned the hate of reactionaries who assassinated him. His gift of humor is revealed in the satirical novel *Bai Ganyu*, portraying the modern type Bulgarian, and *To Chicago and Back* (1893). He also translated works of Pushkin, Lermontov and Molière. See reference in BULGARIAN LANGUAGE AND LITERATURE.

KONSTANZ. See CONSTANCE.

KONTI, *kōn'ti*, Isidore, American sculptor: b. Vienna, Austria, July 9, 1862; d. Yonkers, N. Y., Jan. 11, 1938. He studied art in Vienna at the Imperial Academy, and in 1886 obtained a scholarship to the Meisterschule of Karl Kundmann, then in Rome. In 1890 he moved to the United States, settling in New York City and there becoming associated professionally with Karl Theodore Francis Bitter (q.v.). He was well known for monumental decorative work executed for a number of expositions, the first of which was, in 1893, the World's Columbian Exposition, Chicago, Ill. In New York City, he executed *West Indies and East and North River* for the Dewey Arch. Work for the Pan-American Exposition, Buffalo, N. Y., in 1901, included *The Despotism Age* and, for the Temple of Music, four colossal groups entitled *Heroic Music*, *Lyric Music*, *Dance Music*, and *Sacred Music*. Much favorable comment was made on his work for the Saint Louis, Mo., Exposition in 1904, this including two grand cascade fountains typifying the Atlantic and Pacific oceans and, for the Manufacturers' Building, a monumental group entitled *Progress*. Among his other numer-

ous creations were the McKinley memorial, Philadelphia; a monument to Kit Carson and Lieutenant Beal at the National Museum, Washington; statues of Justinian and Alfred the Great for the Cleveland, Ohio, courthouse; bronze statues *Genius of Immortality* Metropolitan Museum; Hudson-Fulton memorial, Yonkers; the Bishop Horatio Potter memorial in the Cathedral of Saint John the Divine, New York City. His work was considered by contemporary experts as full of charm and refinement.

KONYA, or **KONIA**, kón'yā, Turkey, a city of Anatolia, 300 miles east of Izmir (Smyrna), capital of a vilayet of the same name; the Iconium of the Phrygians. The Persian poet Jalal-ud-din Rumi (q.v.) lived at the Seljuk court at Konya; his tomb is preserved in one of the great mosques of the city, which also contains the first monastery of the whirling dervishes. Carpets, silk, and cotton goods are manufactured, as well as gloves and hose. Konya is on the railroad line between Afyon Karahisar and Seyhan (Adana). The vilayet (area, 39,410 square miles; pop. 569,684) is traversed in the south by the Toros Dagları (Taurus mountains); while it contains chromium, gold, mercury and other minerals, the principal exports are livestock, cereals, cotton, and wool. Under the Diadochi (Persians) and Romans, the city of Konya was the capital of Lycaonia, and from 1073 it was the capital of the Seljuk sultans of Rum. The battle of Iconium, May 18, 1190, was the last great fight of Frederick Barbarossa (q.v.). The city was captured by Bajesid I (1392), by Mohammed II (1460), and by Ahmed, son of Bajesid II (1511); and it was occupied by Ibrahim Pasha when he captured Reshid Pasha (1832). Pop. (1940) 56,581.

KOO, Vi Kyuin Wellington (originally, KU WEI-CHÜN), Chinese statesman and diplomat: b. Shanghai, 1888. He studied in Shanghai at the Anglo-Chinese College, Yu Tsai School, and Saint John's University, before going to the United States, where he entered Columbia University in 1905 after a year's study at Cook's Academy, New York City. In 1908 he graduated, and soon after obtaining his Ph.D. in 1912 he returned to China to become secretary to President Yuan Shih-kai (q.v.). He was appointed minister to the United States in the fall of 1915, having previously been named minister to Mexico, and in 1920 he went to Great Britain as minister to the Court of Saint James. In 1919 he was Chinese delegate to the Paris Peace Conference, which followed the First World War; he represented his country at the League of Nations in 1920-22; and in 1921-22 he was a delegate at the Washington Conference. He was recalled to China in 1922 to become minister of foreign affairs; he was acting prime minister in 1923; again head of the Foreign Office in 1924 and 1931; and finance minister in 1926-27. In 1932 he became minister to France, and with elevation of that post, he was ambassador from 1936 to 1941. He was appointed ambassador to Great Britain in 1941. Over the preceding ten years, both before the League of Nations and in the countries to which he was accredited, he warned unceasingly against the granting of further concessions to Japan, pointing out "the futility of trying to turn a tiger into a kitten by giving it a dish of cream." During August-September 1944 he represented China at the

Dumbarton Oaks Conference, held near Washington, D.C., preparatory to a general and more formal international meeting; this latter, the United Nations Conference for International Organization, was convened at San Francisco, Calif., the following year, and Wellington Koo, as China's chief delegate, there signed the World Security Pact on June 26, 1945.

KOODOO. See KUDU.

KOOSOO, or **KOSIN**, a bitter drug prepared from the dried flowers of an Ethiopian plant (*Brayera anthelmintica*), which contains much tannin, and is used as a vermifuge.

KOOTENAY (koo'tě-nā) **RIVER**, Canada, a tributary of the Columbia, rising in British Columbia. It is 400 miles long. After flowing south into Montana and Idaho it again enters British Columbia; it flows into Columbia Lake, whence issues the Columbia River. It was discovered by David Thompson (q.v.) in 1808.

KOPISCH, kō'pish, **August**, German poet and painter: b. Breslau, May 26, 1799; d. Berlin, Feb. 3, 1853. He studied art in the Prague Academy (1815) and in Vienna. From 1819 to 1822 he continued painting, when an injury to his hand disabled him, and he started on travels through Italy, and in Rome and Naples applied himself to the study of local poetry and archaeology. He returned to Germany in 1828 and received the title of professor in Berlin. He removed to Potsdam in 1847 and occupied himself in writing an account of the royal castles there and in the neighborhood. Most of his pictures are mere sketches. His witty poems, clever stories, and translations, including one of Alighieri Dante (q.v.), are all included in his *Gesammelte Werke* (1856).

KOPITAR, kō-pe'tār, **Bartholomäus** (in Slovene, JERNEJ BARTEL), Slovenian Slavic scholar and philologist: b. near Ljubljana, 1780; d. 1844. He completed his scholastic studies at Vienna, where he became curator of the imperial library. In 1814 he set out on a tour of Europe which ended in France, whither he went to recover the Slavic manuscripts which the French had carried off in 1809. His *Grammatik der Slawischen Sprache in Krain, Karnten, und Steiermark* (1808) was the first Slavic grammar on true philological lines. Other works included *Glagolita Clozianus* (1836) and *Hesychii Glossographi Discipulus Russus* (1839).

KOPJE, kōp'ě, or **KOP**, an Afrikaans name, applied in South Africa to the flat-topped hills which have been produced by the denudation of an ancient plateau. Kopjes bear a marked resemblance to the buttes of the western areas of the United States, and to the tors of Cornwall, England. *Kop*, a word derived from the Dutch, means top.

KOPP, **Joseph Eutyck**, Swiss historian: b. Beromünster, canton of Lucerne, April 25, 1793; d. Lucerne, Oct. 25, 1866. He studied theology and philology in Lucerne and Freiburg, and in 1819 was appointed professor of Greek in the lyceum of the former town. While serving in the legislative body of the republic, he was led as a "conservative Catholic" into such bitter controversy with the Jesuits that in 1845 he was compelled to retire into private life. He undertook a tour, by way of Vienna to Rome, for the purpose of examining such archives as might throw light upon the history

of his native country. He was elected corresponding member of the academies of Berlin and Vienna. Self-taught as he was, he became the Niebuhr of Swiss history, and proved how her true annals had been obscured by such legends as those of William Tell, etc. Among his chief publications are *Geschichte der Eidgenössischen Bünde* (1862); *Geschichtsblätter aus des Schweiz* (1856); *Dramatische Gedichte* (1866).

KÖPPEN, kúp'ën, Peter Iwanowitsch von, Russian archaeologist and ethnologist: b. Kharkov, Russia, Feb. 19, 1793; d. Karabagh, Crimea, June 4, 1864. He was educated at the University of Kharkov and subsequently traveled widely in order to procure historical and archaeological material for his work. The outcome of his investigations, written in German, is comprised in the reports of the Academy of Saint Petersburg (now Leningrad), but among other works of his are *Kulturgeschichte Russlands* (1825) and his famous *Ethnographical Map of European Russia* (1851).

KORA. See HOTTENTOTS.

KORAN, kô-rân' (Arabic *Qur'ân*, reading ceital). As the bible of Islam, the Koran is the cripture of some 300 million Moslems (1949). Its claim to distinction among the sacred books of mankind rests upon the nature of its doctrinal core and its relation to the Prophet Mohammed, the formation of the text and the peculiar theory of revelation involved, as well as the total impact of the book upon history and the modern world. In what follows, each of the foregoing parts of the subject will be touched upon in the order indicated.

Included in the core of the Koranic message is the affirmation of the unity and sovereignty of God "Say, 'He is God alone. God, the Eternal. He begets not and is not begotten'" (112:1-3). God is enrobed with righteousness and power. His dominion extends over the whole creation, both now and forever. His judgments are inexorable. The death of man is followed by an immediate state leading to the Last Day, the Resurrection, and Retribution. In the hereafter, the ungodly will be visited with damnation; the faithful received into a Garden of physical and spiritual delight.

Central to the message is the injunction to worship God. The first sura (chapter) serves as an equivalent to the Lord's Prayer. Ritual prayers and the weekly Friday Assembly are prescribed in the Holy Book. But all this is not without the admonition that true believers are those "who remember God standing and sitting or lying on their sides" (3:192). In addition to devotional regulations, there are enactments dealing with everyday living. Whether in the laws of mine and thine, the family, the marketplace, and society at large, Islamic jurisprudence relies completely upon the Koran.

Not less integral to the inner making of the Koran are precepts regarding divine election, the brotherhood of believers, and ethical practice. Divine election is implicit in the decrees of God. The Moslem community, called into being by God, is to be governed by His elect, and its territories, bequeathed by the Almighty, must be defended even with life itself. The brotherhood of believers embraces all those of every race and

clan who are brought together by Allah. Ethical living and Islamic morality are likewise steeped in the consciousness of God's demands as they are enshrined in the Book.

In its relation to Mohammed (q.v.), the Koran deserves notice as a record of his spiritual pilgrimage. Reared by the Meccan tribe of Koreish (Quraysh), Mohammed (c. 570-632 A.D.) launched his prophetic career with an assault upon idolatry. Having thus enraged his kinsmen, wealthy custodians of the Kaaba (q.v.) pantheon, he at last fled (622) to Medina. With its harrowing experiences, the earlier Meccan period is reflected in the curt, provocative, and iconoclastic sermons which form the body of the suras (chapters) occurring towards the close of the authorized text. In Medina, the prophet became a worldly-wise, militant, and princely character, and the Koranic material produced in this latter period is patterned accordingly. It flows in a legislative, didactic, narrative style.

To the orthodox Moslem, the Koran is the standard miracle of the faith, its 114 suras being regarded as a replica of an eternal, heavenly original. While not sharing this view, modern scholarship conceives of the Koran as the product of a sincere and brilliant mind. Towards its making, Mohammed contributed the commitment and exalted vision of a truly inspired seeker after the truth.

Discussion of the textual formation of the Book evokes topics such as the codification of the text, the unique function of Arabic as the language of revelation, and the question whether the Koran may be translated. As to codification, it may well be remembered that the first Koranic utterances were memorized or written perhaps on palm leaves and tablets of stone. The emergence of rival collections moved the third caliph Othman ('Uthmân, 644-656) to canonize the codex of Medina. Early in the 10th century, an authorized version was established in Baghdad. Although a modern Egyptian conclave of divines condemned the rendering of the Koran into any other tongue, the consensus of learned opinion among Moslems does not support this position. Insofar as Islamic law is concerned, only the liturgical use of the Koran, in a language other than Arabic, is prohibited. The fact is that translations of the Koran into other languages have been made by several leading Moslems.

Inherent in its theory of revelation was the Koran's disclosure of religious essence. Any people without a divinely inspired "book," such as the Jews possessed in the Torah, the Christians in the Evangel, and the Moslems in the Koran, were reproached as dwellers in ignorance. To these, Islam (literally, submission to the will of Allah) offered itself as the true religion of nature, a simple monotheism. But while the biblical foundation of Islam is carefully conceded, the error of the Jews and Christians, signalized by their falsification of Scriptures, is emphatically set forth.

The impact of the Koran upon history provides a practical criterion for its evaluation. In the field of Arabic-Islamic literature and thought, the centrality of the Koran imparted a normative religious absolute, recognizable in almost every intellectual pursuit. Whether in philology, theology, history, letters, or any other branch of culture, the Koran became the clue to wisdom and understanding. The effervescence of Arab civilization in Spain, North Africa, the Middle East,

India, and elsewhere was presumably bound up with the spiritual, moral, and social commandments of the Koran.

In the wider sphere of universal ideas, the Book—representing in part at least a repercussion from Judaeo-Christianity—propounded an ideology which stands alone. Its anticlassical motif made it a formidable revolt against Greek rationalism and the enthronement of man as the measure of all things. In the Islamic sphere of influence it created an ethos which, though not inhospitable to Hellenistic stimuli, yet seemed to inspire a totally different way of life. It is in the realm of political theory, however, that the Koran's contribution to global harmony is obviously disputable. Its theocracy and germinal law leave little ground for the law of nations. It may be safely said that international law is not a deduction from Koranic legislation.

In the modern world, the Koran draws vitality from the luxuriant body of tradition—oral and literary, lay and theological—that surrounds its name. Supplementing the standard commentaries and exegetical works, are vast collections of sayings and daily acts, ascribed to the Prophet and his companions. From these, and the closely related mass of historical, narrative, and wisdom lore, the Koran acquires extra elucidation, commending it to the believers.

The testimony of representative 20th century Moslems confirms the view that the Koran exercises a powerful influence. Mohammed Rashid Rida, an exponent of the Egyptian Islamic reformation, wrote in 1927 that "Islam cannot live without a sound understanding of the Koran, based upon the continuity of Arabic." Sir Mohammed Iqbal (d. 1938), seer of Indian Islam, defined the main purpose of the Koran as awakening "in man the high consciousness of his manifold relations with God and the universe." Since the latter 18th century, the puritanical Wahhabi revival of Saudi Arabia has sought to restore the Koran to its pristine glory.

The heterodox Shi'ite conception of the Koran permits the religious interpreter to wring from the text far-reaching implications, on the assumption that the learned commentator is commissioned by God to discover and enunciate novel forms of religious truth. Kemalist Turkey broke virgin soil in throwing overboard many canons of Koranic interpretation, including that of the sanctity of Arabic. The Ahmadiya movement of India, centered at Qadian and Lahore, carries the Koran to the farthest ends of the earth. In Europe, Africa, and the Americas, its missionaries have produced interpretations of the Koran, designed to capture the attention of cultured people. Two other schools are constituted by the widespread Moslem mystics of India, and the diehard theologians of Egypt whose mighty fortress is the Azhar seminary of Cairo. The moderates of Islam accept the Koran as it is, seeking to interpret the allegorical and recondite passages in the light of the general principles laid down in the decisive utterances of the Book.

Bibliography.—Extensive references are suggested in the selected bibliography introduced below. Among standard translations, Palmer, E. H., *The Koran* (Oxford 1928); Pickthall, Marmaduke, *The Meaning of the Glorious Koran* (London 1930); Bell, Richard, *The Qur'an, translated with a Critical Arrangement of the Surahs*, 2 vols. (Edinburgh 1937-39). For general historical and cultural background, Hitti, Philip K., *History of the Arabs* (London 1940). Associate Professor of Islamic and Comparative Religion, Princeton Theological Seminary.

KORCE (KORITSA), third city of Albania; population (1930) 22,787. Korçë is situated in fertile farming country not far from the southeastern border. Nearby are granite and limestone quarries; the town itself produces flour, tobacco, and hand-woven cloth and carpets.

KOREA, Kô-ré'a (CHOSŎN; Jap., CHŌSEN), a country of northeastern Asia, extending southward as a peninsula joined to Siberia and Manchuria, between the Yellow Sea and the Sea of Japan. In the following pages the geography of Korea, its history, commerce, industry, social life, language, literature, art, and religion are discussed under the headings:

Area and Population	Transportation and Communications
Chief Cities	People
Physical Features	Education
Climate	Religion
Natural Resources	History
Agriculture	
Trade and Industry	

Area and Population.—The area of Korea is 85,246 square miles (220,795 square kilometers). The greatest length of the peninsula, north and south, is 512.4 miles, and the greatest width, east and west, is 219.6 miles. The most northerly point, near Onsŏng (Onjŏ), lies at 43°2' north latitude; Cheju-do, the southernmost island, reaches as far south as 33°12' north latitude. The easternmost point, near the mouth of the Yalu River, is Maan-do, 124°11' east longitude; the westernmost is Ullŭng-do (Utsuryŏ-tŏ), an island in the Sea of Japan, 130°54' east longitude. The land boundary is formed in large part by the Yalu (Amnok) and Tumen rivers, which separate Korea from southern Manchuria and eastern Siberia. The Russo-Korean frontier, only 20 miles long, is about 80 miles from Vladivostok. The country is divided into 14 provinces, each of which is subdivided into counties and districts.

According to the 1940 census, Korea had a population of 24,326,327, of whom approximately 97 per cent were Koreans, 2.7 per cent Japanese, and the balance foreigners, mainly Chinese. In addition, many Koreans lived abroad. In 1945 there were approximately 2,000,000 Koreans in Japan; 2,400,000 in China and Manchuria; 500,000 in Russia; and 10,000 in Hawaii and the continental United States. Most of the Japanese were repatriated after World War II, and many Korean emigrants have returned to their native land, the majority settling in the south, which has always been more densely peopled than the north. In September 1947, south Korea (the American zone, south of lat. 38°N.) had 20,300,000 inhabitants, and north Korea (the Soviet zone, north of 38°), 8,000,000, totaling 28,300,000. The 1949 population estimate was 29,240,000.

Chief Cities.—Seoul (q.v.) (Kyŏngsŏng; Jap., Keijō), the cultural center of Korea and, since 1392, the capital, is located almost midway between the northern and southern extremities, not far from the west coast. It is the largest and most modern city, with a population (1949) of 1,446,049. About 45 miles to the northwest is

Caesŏng (Songdo; Jap., Kaijō), the capital of the Koryu dynasty (918-1392 A.D.); it has many beautiful buildings and historic relics and has been the chief producer of Korean ginseng. P'yŏngyang (q.v.) (Jap., Heijō), the largest city in northern Korea and the commercial and industrial metropolis, was the great cultural center of northern Korea and Manchuria under the Koryu kingdom (37 B.C.-668 A.D.). Kyōngju (Jap., Keishū), the capital of the old kingdom of Silla (57 B.C.-935 A.D.), in southeastern Korea, and Puyo, capital of the neighboring kingdom of Paekche (18 B.C.-660 A.D.), in southwestern Korea, are important centers for the study of Oriental art. Archaeologists have excavated many of the sites of these periods, and remains can be seen in museums today.

Physical Features.—A country of rugged mountains and gleaming waters, Korea has a coastline fully 5,400 miles long. This figure does not include the 3,479 islands, lying mainly to the south and west, whose combined coastline is about 6,000 miles. The great north-south mountain range falls away toward the south into innumerable hills and plains. Although some patches are sandy and rocky, the plains and narrow valleys are generally fertile for farming. The chief product in the south is rice, while the north is richest in timber and minerals.

Geology.—Crystalline schists underlie a large part of the mountainous land, which contains rich mineral resources. Near the surface is a complex of granite, gneiss and early Paleozoic and Proterozoic limestones and metamorphics. Clay states, sandstones, and lime stones are found in the north; carboniferous beds, consisting mostly of slates and conglomerates, are evident toward the southeast.

Mountains.—The great mountain chain which forms the backbone of the Korean peninsula passes near the coast. To the west the terrain descends gradually, it eastward the mountains drop abruptly toward the sea of Japan. Many of the peaks of this chain are renowned for their beauty. The most celebrated of all is Diamond Mountain or Kūmgang-san (Jap., Kongō-san), close to the east coast, not far north of the 38th parallel. Its "12,000 peaks" form a cluster 50 miles in circumference. The highest peak, Pirochong (5,374 feet), is considered, by both Chinese and Japanese writers, to offer the best mountain scenery of its kind in the world. Through the centuries legends have grown up about the deep canyons, winding ravines, oddly shaped rocks, and crystal waterfalls of Diamond Mountain. Poems have been inscribed on the rocks, sometimes under water. In spring the mountain slopes are covered with wild azalea, magnolia trees, and lilacs. In autumn, when the foliage turns, the entire mountain cluster is a blaze of color.

Rivers and Lakes.—Two rivers rise on the slopes of Paektu-san (Jap., Hakutō-san), at the northern border—the Tumen, flowing northeast for 324 miles into the Sea of Japan, and the Yalu, flowing southwest 491 miles into Sŏjosŏn-man (Jap., Nishi-chōsen-wan; West Korea Bay). Because of the mountainous character of the land, most of the rivers and streams are not long, but many are navigable. Native junks and small craft can sail up the Yalu for about 420 miles, and from the upper part of the river timber is floated down to Tiju (Jap., Gishū). From the mouth of the Tumen, motorboats can proceed 53 miles. The Nakdong (Jap., Rakutō) is navigable for 214 miles, the Han (Jap., Kan) for 186 miles, and the Kūm (Jap., Kin) for 81 miles. During the summer rainy season the rivers occasionally overflow and cause serious floods.

Korean lakes are few and small, the largest, Kwangpo, having an area of only 13.28 square kilometers (about 3.3 acres). Lakes and rivers alike have romantic associations, and there are frequent allusions to them in Korean literature.

Islands.—The islands off the Korean shores are especially beautiful, so beautiful that it has been said immortals live on them. The largest is Cheju (q.v.) (Quelpart; Jap., Saishū), 710 square miles, located 62 miles south of the mainland. Like Korea proper, it is mountainous, its highest peak, Halla (Jap., Kanra; Auckland), reaching up 6,597 feet. The enormous masses of white rock on the mountain resemble snow from a distance. Of volcanic origin, Halla was last reported active in 1007 A.D. Cheju is famous for its iri-

descent mother-of-pearl, and for its diving girls, said to have been able to beat their male partners in combat. At one time the island served as a convict station, and a number of Korea's finest poets were exiled there for their radical political views. At another time it was used for breeding Mongol horses.

The island of Kangwha, north of Inch'ŏn (Jap., Jin-sen), where three rivers the Han, the Imjin, and the Yesŏng—flow into Sŏjosŏn-man, is famous for its historic associations dating back to the legendary Tangun (2333 B.C.), and to the Koryu (918-1392 A.D.) and Yi (1392-1910 A.D.) dynasties. Many forts and towers were built on the island during the 6th and 7th centuries.

Off the southeast coast lie some 200 small islands, which form a natural protection for the mainland. Bold masses of arid rock rise over 1,000 feet above high tide. Treacherous for navigation, the surrounding waters hide coral beds and abound in giant fish, pearls, and sponges.

Harbors.—Among the few good Korean ports, Pusan (q.v.) (Jap., Fusan), at the southeastern corner of the peninsula, affords excellent, protected anchorage for 3,000-ton steamships. The clear, alkaline waters of Pusan's famous hot springs attract numerous bathers. There is also an historic monastery with famed pagodas, built in the 9th century at the time of Silla. Destroyed in part in 1592 by an invading Japanese army, these landmarks were later repaired by the Koreans.

Wŏnsan (q.v.) (Jap., Genzan), on the east coast at the southern end of Yŏnghŭng-man (Jap., Eikō-wan), has an unusually fine harbor which Westerners have often compared with the Bay of Naples. An anchorage area of nearly four square miles, deep water, and the absence of swift currents make it an ideal landing spot. A beach of white sand on the bay has been developed into a popular summer resort.

Mokp'o (q.v.) (Jap., Moppo), the largest port on the southwest coast, was at one time a naval station. At the entrance to the harbor, on Koha-do, is a monument in honor of Yi Sunsin, the 16th century Korean admiral who defeated the Japanese. In the center of the west coast, 24 miles west of Seoul, is Inch'ŏn (q.v.) (Chemulpo; Jap., Jinsen), which serves as the port for the capital. It lies at the mouth of the Han-gang, where the tide rises at times as high as 33 feet. The mild climate and superb scenery of the surrounding area have led many persons to build villas here. Chinnampo, the largest trading port on the west coast, is situated on the bank of the Taedong-gang (Jap., Daidō-ko). The river can be navigated by 2,000-ton steamships for 40 miles, and by junks for 153 miles.

Climate.—Persons who have lived in Korea claim that it has one of the healthiest and finest climates in the world. The interaction of continental and oceanic influences produces a climate that varies considerably in different parts of the country, but throughout it is very comfortable, save for some weeks of a wet and sticky rainy season. In summer the heat is tempered by sea breezes, and winter skies are always blue and bright, with a crisp, dry atmosphere.

In latitude, Korea corresponds to the United States Atlantic seaboard between Portsmouth, N. H., and Charleston, S. C. Save that average annual temperatures are about 6°F. lower in Korea, the climate has about the same variety. Annual precipitation averages 36 inches, but since 81 to 93 per cent occurs during the seven farming months (April through October), Korea generally receives far more water at this time than the Atlantic seaboard over the same period. In some years the summer rains do not come, and occasionally 14 inches may fall in a single day in one locality. To the Korean farmer, with his often primitive methods, the danger of flood or drought is always present. Korea badly needs flood-control and irrigation works.

In southern Korea, winters, though cold, are short (many sections have eight frost-free months), and double cropping is possible. In central Korea, however, there are only six months without frost, and in the north, five. Winter in the northwest, on the Manchurian frontier, lasts almost five months, with temperatures well below freezing. Farmers in this section burn off the brush from the dry and scanty

soil to plant their crops of oats and potatoes. In the northeastern coastal region summers are warm and winters, though cold, last only three months. This is the principal fishing center, particularly for Alaska pollack. The central western section has a mean January temperature of 17° to 21°F. There are many apple orchards in this area, and cotton and ginseng are raised, as well as double crops of wheat and barley. The southeastern region is a narrow coastal belt cut off from the rest of the peninsula by the T'aebaek-sanmaek. Winters in this section are mild, with a January average slightly below freezing, and two crops a year can be grown.

Natural Resources.—Korea's resources, potentially substantial, are largely untouched. By careful development, they could be used to transform the predominantly agricultural economy of the country into a well-balanced combination of agriculture and industry.

Fisheries.—Approximately 80 different kinds of commercial fish are caught off the shores of Korea. In 1937, a typical prewar year, Korean marine products were valued at 87,290,000 wŏn. (Before World War II the Korean wŏn was equal to 25.625 pence, or about 50 cents in U. S. currency.) Sardines make up 25 per cent of the total catch value. Sardine oil, which is used in making hard oils, fatty acids, glycerine, gunpowder, candles, soap, medicines, and margarine, is the most important end product. There is also a sardine cake, used for fertilizer. In 1938 the yield of fish oil was 116,000 tons, valued at 21,979,000 wŏn, and of sardine cake, 198,000 tons, valued at 28,926,000 wŏn. Other important fish are mackerel, herring, hairtail, shrimp, and Alaska pollack. Seaweeds make up an important part of the Korean fishing industry. One of the most important is laver, a purplish weed harvested off the south coast from December to April. It is washed into bamboo sticks set in the mud in shallow waters, then taken out and dried in the sun. After it has become crisp, it is cut into six-inch sheets and packed into boxes. In all, there are 15 kinds of commercial seaweeds, used as food, starch, and medicine, in the manufacture of cloth, and in hundreds of other commodities. On the east coast whaling is an important industry, furnishing food in years of poor harvests, as well as oil and fertilizer. Korean whalers use modern harpoon guns with explosive heads. Many shellfish are caught off Korean shores, and divers bring up sponges, scallops, abalone, Irish moss, conches, sea slugs, oysters, and clams. The shells furnish mother-of-pearl, which is used in ornamenting lacquer ware. There is also an important inland-water fishing industry; in 1938 the catch was 6,400 tons, valued at 5,900,000 wŏn.

Minerals.—With the exception of petroleum, sulphur, and asphalt, Korea is rich in minerals of 113 kinds, although only some 50 different kinds are exploited. These include iron, coal, gold, tungsten, molybdenum, mica, graphite, manganese, copper, chromium, nickel, lead, cobalt, and vanadium. Before World War II gold was the most important mining product, accounting, in 1934, for 59.3 per cent of the value of the total mineral production (69,170,000 wŏn). Iron followed at 18.5 per cent; then coal, 14.4 per cent; and other minerals, 7.8 per cent. Although over 2,000 mountains are known to contain gold deposits, in 1937 only 145 gold and silver mines were in operation. Gold production in 1940 amounted to 1,000,000 ounces. In 1943 the Japanese administration closed all Korean gold mines and transferred their equipment and manpower to mines producing materials needed in war industry.

In northern and central Korea there are rich coal deposits, including high-quality anthracite. Most of the iron produced in Korea comes from the Musan (Mosan) field in the northeast. In the north there are tremendous waterpower reserves, holding distinct promise for heavy industry. Potential waterpower has been estimated at 5 million kilowatts; as of 1948, Korean power plants produced over 2 million kilowatts.

Forests.—Korean forests contain many varieties of trees belonging to the temperate zone. The mountain slopes are covered with magnificent pine, spruce, and fir (60 per cent of the standing trees are coniferous), as well as many species of maple and oak, and juniper, larch, mountain ash, and birch. There are also many kinds of fruit and nut trees, including walnut, chestnut, hazelnut, plum, Korean pear, peach, and cherry. Willows grow everywhere, the hornbeam and the hawthorn are common, and poplar and acacia afford natural protection against erosion. In 1938 forest products were valued at 156,749,000 wŏn.

Wildlife.—Hunters find a paradise all their own in Korea. The tiger, protagonist of many stories and legends, is still there, and the large, beautifully marked skins command high prices. There are also leopards, wolves, bears, wild boars, and deer. The tigers and leopards rarely attack human beings, but they prey on other game if not hunted. There are wildfowl of many species throughout the country. In spring and autumn, swans, ducks, and geese line up in the sky and clamor around every stream and inlet.

The hunting season begins at the end of September and lasts until April 1. White-necked cranes, turkeys, storks, herons, and a certain kind of swan are protected birds, but gray cranes, water rails, eagles, hawks, quail, pheasants, snipe, and pigeons may all be hunted. In northern Korea there are many foxes, badgers, wildcats, otter, sables, rabbits, and squirrels.

Agriculture.—Approximately two thirds of all Koreans are members of farm households, and many more depend indirectly on agriculture for their livelihood. Even the townspeople have small gardens, chickens, and fishponds. Rice is the principal crop; of the estimated 11,260,000 acres of cultivated land, approximately 27 per cent is planted to rice. Before World War II a large proportion of the total rice crop (106,775,869 bushels in 1940) was shipped to Japan, and the per capita consumption of rice in Korea was only one third as great as in Japan. Millet and barley have been the chief substitutes for rice; in 1938 Korea produced 25,977,578 bushels of millet, and in 1940, 37,549,620 bushels of barley. Wheat, oats, and sweet potatoes are raised in quantity. Soybeans, another important crop, amounted to 19,184,462 bushels in 1939. Cotton and tobacco are also raised; in 1938 the land planted to cotton covered 577,000 acres and produced 90,000,000 pounds of ginned cotton. The Korean climate is well suited to the raising of silkworms, and mulberry trees are plentiful. In 1944 approximately 922,000 farm families, or almost one third of the agricultural population, augmented their incomes by engaging in sericulture. In 1936, a typical prewar year, the production of cocoons amounted to 50,000,000 pounds.

Native Korean cattle supply good meat and fine-grained hides. Since most of the crop land devoted to raising grains for human consumption, however, there are only about 1,705,000 cat (1939), and only one farmer in four uses a bul or an ox for plowing. Native Korean horses are small but strong, and there is also a mixed breed which is very popular for racing. The yield of wool from Korean sheep has been improved by crossbreeding. There are about 1,400,000 pigs (1939) and approximately 8,000,000 head of poultry.

Land distribution has long been a serious problem in Korea. In 1944 it was estimated that large landowners, Japanese and Koreans, made 2.7 per cent of the farming households and own 63.9 per cent of the cultivated land. Independent farmers, working their own land, made up 16 per cent of the farming population and own 25.7 per cent of the cultivated land. Another 20 per cent were part owners and part tenants; they owned about 10.4 per cent of the land. The remainder, or about 57.4 per cent of the farm population, consisted of landless tenants or laborers. The average holding was less than four acres, and some plots covered only about the quarters of an acre. Tenants paid high rent, from 40 to 60 per cent of the crop, and were usually in debt. Tenancy increased markedly under Japanese administration, and large areas were acquired by Japanese owners.

Following World War II, the Japanese holdings were taken over, in northern Korea by

age people's committees, and in southern Korea by the New Korea Company, which acquired the arm lands once owned by Japan's Oriental Development Company. In the northern zone drastic and reforms were enacted, and both Japanese and large Korean holdings were divided among tenants and laborers. The new owners, however, did not receive a clear title to their holdings; if they died, abandoned their farms, or were accused of "damaging the interests of the Korean people" the land would revert to the people's committee of the village and be redistributed. In the southern zone tenancy laws were revised, rents being limited to one third of the crop yield and made payable only through government-controlled collection centers. In March 1948, the New Korea Company was dissolved and some 630,000 acres were assigned to the newly created National Land Administration to be sold on easy terms. In 1951 South Korea's crop yield was about one third of its normal size.

Trade and Industry.—Before World War II, Korea ranked high among the trade areas of the Far East, with total exports of over \$260,000,000 in 1939, and total imports of \$360,000,000. The principal exports to the United States were sardine meal, electric bulbs, graphite, and canned fish. Imports from the United States consisted largely of machinery, petroleum products, cotton, and tobacco. In 1936 over 16 million tons of shipping entered Korean ports, or three times the amount entering the ports of Indochina, a country with almost the same population as Korea.

Although Korea is predominantly agricultural, in 1938 there were 6,233 factories employing 1,641 persons and manufacturing goods valued 959,308,000 wŏn. By 1942 manufactured products were valued at 2,700,000,000 wŏn. Of these, approximately 31 per cent consisted of chemicals; 15 per cent, food and beverages; 14 per cent, textiles; and 8 per cent, metals.

According to the Ministry of Commerce and Industry in 1951, South Korea's total imports amounted to \$26,106,498, and exports, \$15,568,903. In January 1952 the number of south Korean factories in operation numbered 2,525.

Transportation and Communications.—All important Korean ports have railway connections. Freight can be brought by rail to Pusan (Fusan), Ulsan, Yösu (Jap., Reisui); Mokp'o (Moppo), Gunsan (Jap., Gunzan), Sinŭiju (Jap., Shin-ŭishū), Yongamp'o (Jap., Ryūgampo), Sŏngjin (Jap., Jōshin), Wŏnsan (Genaan), Ch'ŏngjin (Jap., Seishin), and Najin (Jap., Rashin) and Unggi (Jap., Yūki) in the far northeast. In 1940, Korea had 4,153 miles of railway and 17,000 miles of highway. The main railway lines are standard gauge (4 feet 8½ inches). As of 1938, there were 5,600 miles of telegraph lines and 7,100 miles of telephone lines. There are 1,093 post offices (1940).

People.—Houses.—The traditional house of the well-to-do Korean is a high, one-story building with a tiled roof and a double gateway. It stands on high ground, facing south, surrounded by walls 10 feet high. The main entrance is only for distinguished guests; smaller gates on either side are used for ordinary occasions. Between the house and its gates is an inner courtyard paved with bricks or stone. In the center of the main house is a large room used as a parlor, with smaller rooms on both sides. There are small houses for servants and retainers within the enclosure. The main house is given

over entirely to the men of the family. Pathways connect it with the inner rooms where the women live. In the past, woman's world was quite separate from man's, but segregation is gradually losing favor with the younger generation. Humbler houses have smaller windows and lower roofs, made not of tile but of straw, somewhat like the thatched cottages of England. They usually have four or five rooms, called *kahn*, in addition to inner rooms. Many Korean scholars and poets live in houses like these, for the scholar of Korea has rarely been a wealthy man. Gardens are well tended, with flowers blooming from the earliest plum blossoms in the snow to the latest chrysanthemums braving the frost.

Korean houses are heated by a system called *ondol* which has been in use for 1,500 years, and which may have influenced the modern heating methods of the West. The floor (*gudŭl*) is paved with flat bricks, with flues under the top layer. Somewhat below the floor level a tunnel is dug to carry heat from the kitchen to the main chimney. Floors are usually covered with thick, oiled Korean paper, and sometimes with matting or a woven oak or bamboo carpet.

Koreans do not use chairs or beds, but sit and sleep on the floor. At night, mattresses with blankets or quilts are brought out. In the absence of beds and chairs, even a small room seems large, and furnishings are very simple. Shoes are never worn indoors, or even on the verandas which lie to one side of the house overlooking the courtyard. In all homes, the posts, doors, and sometimes even much of the walls are covered with excellent calligraphy. Some householders use quilted silk to cover their walls; others hang ink paintings, usually depicting plums, orchids, chrysanthemums, bamboos, tigers, or dragons.

Many families maintain a separate guest house, well decorated with paintings and calligraphy and books in the inner wall. Bookcases are usually built-in closets with sliding doors. In addition, there is always an ancestor tablet with two doors, where services are performed on special occasions. The most prominent pieces of furniture are the heavy, brassbound clothes chests, usually one for each member of the household. Often they are ornate, brides' chests being bound with silver and beautifully inlaid with mother-of-pearl. There are also reading desks low enough to be used by persons sitting on the floor. In the kitchen, or on the veranda, are cupboards stocked with fine porcelain and brass dishes. The good Korean housewife polishes her brass until it shines with the shimmer of fine gold. The porcelain, which is handed down in the family, includes scores of different types—rice bowls, covered soup bowls, cake platters, meat dishes of various kinds, wine cups, bowls for rice tea.

Dress.—Formal dress, called *chang-ot*, is worn by both men and women on ceremonial occasions. It has long sleeves where fans, handkerchiefs, writing materials, and the like are kept. This garment is tied at the waist by a brilliantly decorated cord girdle ending in two tassels which almost sweep the ground. Over it is worn a sleeveless, collared tunic cut at the neck so as to join in the form of an oval.

One of the six departments of the old Korean monarchy was the Board of Rites, which formulated and administered social codes of every kind, including what to wear, and how, when, and

where to wear it. In old Korea, one could tell by his dress to which class, trade, or profession a person belonged. Throughout Korean history each new dynasty set its own fashion. Although some Koreans have adopted Western dress, the majority still wear at home the characteristic white or faint sky blue dress of the modern Yi dynasty. (To keep these white clothes spotless, the Korean housewife must spend a great deal of time laundering—300 hours a year in a well-dressed household.) Children, however, wear brilliant colors, often in combination—green, red, yellow, crimson, blue, purple, cerise, or lavender—and a child's jacket often resembles a rainbow.

Traditional Korean dress has no buttons or button-holes; ribbons are used for belt and fastenings. There are no pockets; the *chumäni*, a small bag attached to the belt by a cord, takes their place. Although dress varies widely, all Korean costumes are dignified and majestic and differ in quality and fabric rather than in fashion. All men wear jackets, called *chugori* in winter and *chuksam* in summer, and voluminous trousers called *baji*. Outdoors a flowing tunic (*turumaki*), sometimes of silk or satin, is worn over jacket and trousers, reaching somewhere between the knees and the ankles. In winter, clothes are lined and interlined with silk or cotton padding, all of which must be ripped out each time the garment is laundered. For warmth, wristlets (*tosu*) six inches long are worn; sometimes *tosu* made of reeds are worn in summer. Travelers wear anklets called *haenggön*.

Women wear skirts in addition to the Korean jacket and trousers, changing styles being reflected in the length of the skirt or the jacket, and in the width of the sleeveband. The skirts of elderly women touch the ground, but schoolgirls and young women wear shorter skirts. One of the most important parts of feminine dress is the *höritti*, an embroidered or hand-woven waistband worn between the jacket and the skirt. A bride's *höritti* is usually presented to her as a wedding gift by her uncle or aunt.

On ceremonial occasions women wear ornamental hats resembling crowns. At other times they use scarves or *huyang*, a sort of winter cap longer in back than in front. Men's hats (*kat*), which are made of silk, split bamboo, or horsehair, are always black except in the case of young bridegrooms, who wear hats of yellow straw, or of persons in mourning, who wear white. Bereaved sons, however, wear special yellowish bamboo hats large enough to prevent them from greeting friends in the street: the mourner is not supposed to smile in passing. Men wear indoor hats called *kwon*, pyramidal in shape and woven with geometric designs. Most modern Korean men cut their hair, although there are still a few who have kept the traditional masculine topknot, and one sometimes sees boys with braided hair. Although Korean women usually wear their hair long in a knot at the nape of the neck, an increasing number of young girls bob their hair.

Shoes (*shin*) may be made of leather, grass cloth (*sam*), silk felt, twine, or straw. Wooden clogs are worn in bad weather, and convenient elastic straw sandals, called *jip-shin*, are used by hikers and working people.

Food.—Koreans eat rice, millet, or potatoes with every meal, and cooking rice so that it is neither too wet nor too dry is considered an art. There are many side dishes (*panch'an*), which are served with the rice on small, individual tables. Since meat is not very plentiful, much fish is eaten. The Koreans also eat every imaginable nonpoisonous green, wild or cultivated, including lettuce, spinach, tender shoots of all kinds, sow thistle, celery, dandelions, chicory, sweet basil, ginger, purslane, shepherd's-purse, clover, ailanthus, garlic, leeks, scallions, onions, chives, broccoli, kale, cauliflower, cress, and colewort. The hardy, delicately flavored mustard green is often used for making soup.

The most popular Korean dish, *kimch'i*, is usually made from *paekch'ae*, a tender white cabbage. The finished product is fermented in salt, and combined with shrimp, dried fish, Korean pears, chicken slices, pepper, nuts, and other delicacies. Another type of *kimch'i* is

made by pickling the Korean radish, or *mu*, which is large and white and has a mild flavor. There are several different kinds of peas and beans, including the useful soybean. Soy sauce is the staple Korean condiment, and the nutritious bean cake, a custardlike curd, is put to daily use. The young leaves, blossoms, and flower stems of the *hopak* (squash) are used in making soup. Pepper, nuts, mushrooms, and fruits are also popular. Wheat flour is used chiefly for a famous national dish called *kuksu*, a sort of vermicelli moistened with soup, to which meat, vegetables, *kimch'i*, pears, date and condiments are added. In country districts it is pared for special occasions, and in cities is a popular luncheon dish.

Language.—Until the 15th century, Koreans wrote exclusively in Chinese characters. Then, in 1443, a number of outstanding scholars (Ch'ong Inchi, Söng Sammun, and Shin Shukchu), under the direction of King Sejong, invented a completely phonetic alphabet called *önmun*, which was put to immediate use. It is so simple that a foreigner can master it in a day.

The Korean alphabet consists of 24 letters, generally capable of being sounded as either an initial or a final letter. In this respect, it differs from the Japanese syllabary and is much better suited than Japanese to the transliteration of foreign words. For instance, "football" can be written phonetically in Korean, whereas the closest approximation in Japanese is *futoboru*. Moreover, unlike Japanese and Chinese, Korean contains both an *l* and an *r* sound. The Korean language is soft, with a natural lilt. There are no deep nasal tones, little or no accent except to emphasize some part of the sentence, and no difficult slurring.

Traditionally, Korean has been written perpendicularly like Chinese and Japanese, but a movement to write horizontally received added impetus after World War II. (In 1946, 10,000 Korean high school textbooks were printed in this system in Seoul.) The principal advantage of horizontal writing is in the use of the Korean-alphabet typewriter; added precision can thus be gained in spacing words, sentences, and paragraphs, and in inserting punctuation marks.

Literature.—Although, in the many centuries of Korea's literary history, numerous works were published on philosophy, astronomy, geography, medicine, law, military science, mathematics, and agriculture, prior to the 20th century the greater part of Korean writing consisted of belles-lettres. The traditional Korean scholar was a poet, and to be a great poet and scholar was considered nobler and more desirable than to become a wealthy and powerful man: the literary man, not the rich man, was the hero of Korean youth.

The coming of Buddhism from India in the 4th century A.D. did much to diffuse culture among all classes in Korea. During the Koryu dynasty there was a good deal of reaction against the earlier Confucian education. Under Buddhist influence the literature of this period became more imaginative, and Buddhist monasteries, set in beautiful mountain retreats, developed into centers of poetry and thought. Some of the greatest poets of the Koryu period were monks, but since they did not compete in the civil service examinations, leadership gradually passed to the literary men who did.

Even the ancient poetry written in Chinese characters shows its peculiarly Korean quality, and has a charm all its own. *The Korean Anthology of Selected Literature*, or *Tongmunsin*, in 130 books, which 23 scholars commissioned by the government compiled in 1478, is a good example of that early Korean style, more compressed

and subdued than the Chinese poetry of the same period (early 10th century to mid-15th century).

The outstanding characteristics of Korean poetry written in the Korean tongue are simplicity, kinship with nature, and the symbolic use of nature to express philosophical thought. An anthology of such poetry, entitled *Sichoyuchip*, was compiled and published in 1927 by the great Korean scholar Ch'oe Namsön. The poems of an Yongwoon have been translated into English, but the works of few other modern Korean novelists and poets have appeared in translation.

Music.—Westerners find classical Korean music strange at first, for it was influenced by Chinese music and is written in a scale very different from the modern Western scale. The scale has five tones: *gung* (C), *sang* (D), *gak* (E), *chi* (G), and *um* (A). Korean singing is Oriental singing, and Orientals are not so much interested in creating a carefully modulated tone as a precise mathematical pitch as Westerners are, nor are they interested in following a carefully planned rhythmic pattern. Koreans have their own manner of singing, which is largely spontaneous, even though the text and basic elements of the rhythm have been set down as recorded "scores" for generations. Songs are wanted to the classical text with only the main fact in mind. This effect, reaching to the hearts of Korean audiences, calls forth emotions of recognition and exaltation. Westerners have found it difficult to appreciate Korean music because they approach it from their own background, rather than that of the centuries-old Korean tradition.

According to traditional accounts, Kija, a Chinese lord who came to northern Korea in 1122 B.C., introduced Chinese music and Chinese musical instruments. At one time, there were more than 1,900 books written on the use of these ancient instruments, but only 52 are still extant. Thirteen of them deal with music of the Chou dynasty (c. 1122–256 B.C.), 20 with music of the Wei and T'ang dynasties (590–906 A.D.), and 19 with Korean music proper (the Three Kingdoms and Koryu). In the 1890's the imperial palace supported an orchestra of over 770 musicians performing 66 different instruments. Some of these instruments have already passed into oblivion, and, of the 54 remaining types, many can now be played by only one or two musicians throughout the country.

Classical Korean music is played only by professional musicians who spend a lifetime in its study, and a highly cultivated ear is needed to appreciate it. It is always accompanied by *shijo*, classical songs written by the great Korean poets and interpreted by professional singing girls. Each of the instruments is supposed to interpret a different emotion. The very popular *ko-hunko*, for example, expresses the sorrows of love. This is a long, narrow instrument, somewhat like a bass viol, which is played on a table or on the floor by plucking the strings with the right hand and fingering with the left. The *kayakum* has 12 strings, representing the 2 months of the year. The *haekum*, which looks somewhat like a large croquet mallet, has a short head and hollow handle. Its two strings emit a sharp, melodious clang of violin quality, which the player supplements by whistle he carries in his mouth. There is also an hourglass drum called the *changku*. In addition, there are tone chimes, metal bells and trumpets, guitars, flutes, oboes, and instruments of earthenware, leather, and wood. (One ancient type of music, popular centuries ago in Korea, was produced by tying musical bells to the tails of pigeons. The birds were trained to fly over banquet tables; by jerking their tails at intervals, one could play a tune.)

Korea also has many folk songs, such as those sung by farmers in the fields. These do not require trained singers or listeners and are more easily adapted to Western music than are the classical songs. In summer every village has its own concerts, performed by local musicians. Many Koreans are studying Western music. A few of them, however, recognize the desirability of preserving the distinctive merits of ancient Korean music, even though Western technique may eventually be incorporated into it.

Drama.—Like the Chinese drama, Korean drama probably originated in religious ceremonies, such as the elaborate rituals of ancestor worship. It is a display of two arts, dancing and singing, without which no Korean actor could perform. In the period of the Three Kingdoms (1st century B.C. to 7th century A.D.) actors often wore masks, the heroic image of Whangchang being particularly popular. (According to *Mun-hönpigo*, the 40-volume Korean encyclopedia compiled in 1770 by Hong Ponghan, Whangchang was a boy general of Silla who fought for his king against Paekche.) Dances in which the performers were disguised as lions were also popular. Another old dance, the dance of the storks, is still performed in summer at village festivals. In this dance two performers dressed as storks revolve about a large pink lotus blossom. At the end of the dance they peck the flower open and a girl jumps out. All the early dramas were danced, the actors making stylized gestures with swords, feathers, flutes, and other properties, and they were classified according to the music accompanying them. Toward the close of the Koryu dynasty a famous play called *Sandaekük*, was written. This was a satire ridiculing the Confucian aristocrats and the Buddhist monks. It attacked the class system, which made it difficult for even a person of exceptional ability to rise from one station to another. This play contains some of the most beautiful Korean songs. From the 10th century on puppet plays also became very popular.

The dramatization of the Korean novel *Ch'unhyangchön* is one of the most popular Korean plays. There are some 30 different versions of both the novel and the play. One of the best known was written by Shin Zachyo (also known as Shinowichang), who was born in 1812. For 30 years he wrote dramatic criticism and songs, including a satire on the Westerners then appearing in Korea. Like the Chinese drama, Korean plays are highly realistic and depend very little on supernatural elements. The dramatist's purpose is to depict life in its pathos and comedy, and to exalt virtue, which to an Oriental means self-sacrifice. There are a number of stock characters, easily recognizable by their traditional make-up, including the comic actor, or *kwangdae*, whose specialty is tightrope walking. Korean drama is very different from Western drama. Although it seldom transcends the actual, its aim is to interpret life, not to imitate it. To Korean audiences this symbolic representation is more effective than photographic realism. Nonetheless, since 1909 the technique of Western drama has become increasingly popular with younger Koreans.

Art.—The art of China greatly influenced the art of Korea, which in its turn had a marked effect on the art of Japan. In general, Korean art is characterized by a classic simplicity and an easy dignity. As in China, painting and calligraphy are closely related. The same tools and materials—ink, brush pen, and silk or paper—are used both for writing and for drawing. Painting and poetry usually go hand in hand, the artist alternately drawing and writing. The Western student often is not sufficiently conscious of the fusion of the two arts, which in the Far East complement each other.

Archaeologists excavating old tombs at Nak-nang (Lolang), near P'yöngyang, have unearthed mural paintings from the 3rd or 4th century A.D.

which antedate both Chinese and Japanese murals. The oldest paintings of Japan, dated 595, are of Korean origin. The floral designs decorating the walls at Naknang show a remarkable sincerity and much feeling for the free line. Yet the pattern is formal, and Confucian influence is evident throughout.

Buddhism was introduced to Korea in 372 A.D., and thereafter the peninsula attained a high degree of prosperity and culture. The art of Silla, in the southeast, shows Greco-Bactrian influences, which reached Korea through Khotan (Ho-tien), in what is now the Chinese province of Sinkiang (Chinese Turkestan). Korean frescoes and sculpture of this period are still extant in certain temples. Some remarkably fine things, for example, may be seen in the Hōryūji, near Nara, Japan.

Kyōngju, the capital of Silla, which was partially ruined during the 16th century Japanese invasion, is rich in relics. Still standing are the oldest astronomical observatory in the world, built in 647 A.D., and an ancient icehouse, once used to chill the food and drink of the royal household. In the 7th century, Kyōngju was a center of culture and commerce for the Far East. Chinese, Japanese, Indians, Tibetans, and Persians flocked to the city to study, and Arabs came in caravans to trade. There followed what might be called an Elizabethan period of assimilation and national integration, with little or no foreign inspiration. Then, as Korean art became purely native, Kaesōng (Songdo), the capital of Koryu, became the cultural center of the peninsula.

At Kaesōng was developed the celebrated Korean celadon, a delicately cracked porcelain in a quiet grayish tone. For classic perfection of form and diversity of expression, the celadon of the Koryu period is unsurpassed. Today, a thousand years later, we can see these beautifully shaped vessels, decorated with ribbons, flowers, and leaves delicately marked in black and white, in the Metropolitan Museum of Art in New York and the Victoria and Albert Museum in London. The Koryu dynasty inherited the technique of past masters, but thereafter artists were content to refine forms and to rarefy colors. The later pottery is a beautiful greenish gray enamel decorated with flowers and white leaves—solid, broad shapes suggesting the joy of physical well-being.

One of the royal palaces of the Yi dynasty, the Kyōngpok-kung, is now Seoul Museum. Here may be seen some of the finest specimens of Korean art remaining in Korea. The best Korean art is simple and vital, vigorous rather than delicately ornamented, and thoughtful rather than interpretative. Typically Oriental, such art is inspired by a feeling of kinship with nature, a feeling which underlies all Korean culture and is seen even in the construction of houses, which are built with due regard for the spirits of the earth, air, fire, and water. It is a deep-rooted culture, archaic rather than primitive.

Children and Festivals.—Adults in Korea are very fond of children, and children of their elders. The saying, "Children should be seen but not heard," applies only while the elders themselves are talking, or the grandfather's three-foot pipe is being lighted, ultimate symbol of refinement and leisure. Girls around a swing and boys wrestling or pitching pennies make a great deal of noise even in the presence of their elders.

Korean children love fairy tales and all the ancient folklore of their country—stories of gob-

lins, spooks, elves, fairies, and animals. Mysterious powers are attributed to the trees and flowers on every mountainside and the rocks and caves on every riverbank. The stories tell of fearful tigers, cunning foxes, prankish rabbits, honest turtles, magic gourds, cooperative ants, enchanted wine jugs, haunted houses, and the cruel stepmother of a Korean Cinderella.

The chief Korean holiday is New Year's which falls at the same time as the Chinese New Year, between January 21 and February 19. During the festivities, which last two weeks, presents are exchanged, new clothes are donned, and cakes and candies are provided by every household to children making their rounds. At the end of the fifteenth day, known as the Feast of Lanterns, dice are thrown under the full moon to foretell the luck of the coming year.

Among other important festivals is Buddha's birthday, celebrated on the eighth day of the fourth lunar month with colored lanterns, fire works, and large, floating paper fish. The fifth day of the fifth month is sacred to the memory of a great poet. Then there is a special picnic day when *ijime* (griddle cakes made of azalea petals) are eaten. On the seventh day of the seventh month, Koreans celebrate the love of two stars, Altair and Vega. The story goes that they were once a herdsboy and a weaving girl who neglected their work that they were separated as a punishment, to meet only once a year. Prize wrestling matches are often held on this day. The fifteenth day of the eighth month is the mid autumn harvest feast. After the defeat of Japan in 1945 the Koreans adopted several new national holidays—Memorial Day (March 1), commemorating the Revolution of 1919; Liberation Day (August 15); and October 9, the anniversary of King Sejong's presentation of the Korean alphabet to the people in 1443.

Sports.—Until the beginning of the 20th century stone fighting was a very popular sport in Korean villages. Once a year a village would challenge one of its neighbors to meet in combat on some large field. The fighters of each team would be armed with stones and clubs, and might be protected by heavily padded helmets. Because this sport was so dangerous it was eventually forbidden by law. Swinging, wrestling, and kite fighting have long been popular. A form of basketball in which stones are thrown into the mouth of a wooden effigy has been enjoyed for centuries, as have field hockey, skating, skiing, sledding, weight lifting, bowling, and archery. Koreans have long been expert horsemen, and often hunt on horseback with bows and arrows.

Western sports were introduced in 1903, and since then baseball, basketball, soccer, and tennis have become very popular. Son Kichung, one of the nine Koreans who participated in the 11th Olympic games, held in Berlin in 1936, won the marathon, breaking the Olympic record. Korea also has two champion weight lifters; one of them, Nam Sooil, broke a world record in the 132¼-pound class. Yun Boksu, a Korean runner, set a new record for the course in winning the 51st annual Boston Marathon in 1947.

Education.—Kūl-pang, or literature room, was the name of the traditional Korean school. Its curriculum consisted mainly of reading and writing the classics, the emphasis being placed on imitative essays and poetry, and its aim was to train poet-scholars. In old Korea the poet-scholar belonged to the highest class of society, follow-

the gentleman farmer, the artisan, and, last of all, the merchant and other commoners. Once a scholar had passed his examinations, his place in society was secure, and he might become a cabinet member, a governor, or a king. This system, though exclusive, had certain democratic elements. All were allowed to take the examinations, nor was there any age limit, young and old mingling in the examination room. If anyone failed, he might try again, and there was an uncompromising standard of merit. The high honor in which the scholar was held acted as a stimulus to education.

The system emphasized literary expression by rote memory, and the moral ideals of Confucianism. There was no place for the development of a critical attitude or of scientific research; only one course was open—the pursuit of the traditional literary life. Despite the introduction of new educational methods, as late as 1937 there still remained 5,944 of these ancient *hul-pang*, accommodating 169,999 students.

After Japan annexed Korea in 1910, a new system of education was introduced. Unfortunately, its object was to Japanize the Koreans, and all instruction was conducted in Japanese. The system had, on the surface, modern Japanese features. There were six-year elementary schools and five-year middle schools, from which the student might go to a high school for two or three years, thence to the university, or to a specialized college for three or four years and then to the university. Actual school attendance figures, however, present a more realistic picture of the system. In 1939 there were 3,372 elementary schools in Korea, including mission, private, and short-term schools, with a total enrollment, out of a population of approximately 23 million Koreans, of 1,218,377 Korean pupils, and out of the 800,000 Japanese in Korea, 93,060 Japanese pupils. In the same year there were 19,343 Korean students and 8,524 Japanese students in the 53 middle schools. In effect, five Korean children were competing for each seat in the secondary schools. On May 31, 1939, 1,355,356 Korean children aged 6 to 12, or only 40 per cent of the total, were attending school. For the year 1935, a total of 1,406,331 won was allotted to Korean schools, while 25,841,111 won, or over 18 times as much, was spent on prisons.

When the United States and Russian forces entered Korea in 1945, they found, out of 4,892,18 children aged 6 to 12, only 1,721,873 attending school. The country needed a new system of education to replace the Japanese-dominated system, as well as trained new teachers and additional buildings and equipment. Up to 1948 there were only 16 normal schools in south Korea accommodating about 8,000 students; such schools could supply only 2,000 teachers a year. Although compulsory education was introduced after the liberation, the lack of schools and teachers prevented its immediate extension to all grades.

Religion.—According to old Chinese and Korean accounts, ancestor worship and other practices associated with Confucianism were known in Korea centuries before the time of Confucius (551–478 B.C.). Later, Koreans received the Chinese classics with enthusiasm, and by the 1st century B.C., as excavations at Naknang in northern Korea prove, Confucianism had become deeply rooted in the peninsula. It has remained influential to the present day. The marriage ceremony is nearly always Confucian.

Marriages in Korea must be contracted outside the clan, between people of different names. Few Koreans remain single. Betrothals are arranged through matchmakers, who are known for their insight into the character and position of the families concerned. Horoscopes (*sachu*) are consulted in selecting the marriage partner and the day for the ceremony. The old-fashioned Korean marriage is long and ceremonious. The bride's family must assemble the dowry and trousseau, the groom's family presents money and silk to the bride, and relatives and friends bring gifts.

Korean burial rites and mourning customs are also Confucian. The traditional three-year mourning period on the death of a parent originated in the practice of ancestor worship, and the memory of departed elders is perpetuated in the tablets inserted in the walls of each house. Funerals are solemn and expensive. Relatives and friends come to help and offer presents, including poems (*mansa*) eulogizing the dead. Food and wine are offered to his spirit. Among the finest buildings in Korea are the Confucian temples. The one within the northern gate of Seoul, for example, is larger and more handsome than the famous Confucian temple in Peiping.

Buddhism was introduced in the 4th century A.D., and during the Koryu period there was bitter rivalry between the two faiths. For a time Buddhism was predominant, and in the 11th century laws were passed providing that one of four sons in a family, then one of three, must become a monk. In the following century, however, Buddhism began to lose ground, and, with the accession of the Yi dynasty in the 14th century, the advocates of Confucianism won out. At present there are in Korea 31 principal Buddhist monasteries and 1,384 temples. Monks and nuns number about 8,000, and professed adherents approximately 132,000.

Koreans are Taoists at heart, and Korean literature contains many Taoist concepts. Although Taoism as a separate religion with its own monasteries has never existed in Korea, Sinkyo (Teaching of God), which incorporates many Taoist elements, is found in all parts of the peninsula. In 1864 the great scholar Ch'oe Jewu (1824–1864) founded a new, humanistic religion, called Ch'ondo-kyo (Teaching of the Heavenly Way), devoted to preserving Oriental traditions. It incorporates many of the concepts of the three great religions of the East—Confucianism, Taoism, and Buddhism. Ch'ondo-kyo is also known as Tonghak (Eastern learning). Its founder was executed for heresy. Government persecution of his successor, Ch'oe Shihung (1827–1899), was partly responsible for the celebrated Tonghak Rebellion in 1894. Although Ch'oe Shihung was hanged in 1899, Son Pyunghi (1861–1922) carried on his work. (Son Pyunghi, who led the Tonghak Rebellion, also headed the 33 patriots who signed the Korean Declaration of Independence in 1919. He died in 1922, as a result of torture, in a Japanese prison.) Despite Japanese persecution, the number of adherents of Ch'ondo-kyo increased. At present they are very active in politics and education, and support a number of schools and a college; they have sent many students to universities in both Europe and the United States.

Christianity was introduced to Korea in 1777, when two Korean scholars were converted to Roman Catholicism. Missions were established and a number of converts were made, but the new

faith encountered official opposition, and many Christians were persecuted for their beliefs. Protestant missions began their work in 1884. There are today approximately 3,000 Christian churches and meeting places in Korea, and about 500,000 Christians.

History.—Legend, Prehistory, and Early Kingdoms.—Korea has been inhabited since very early times, and over a period of thousands of years a number of peoples intermingled to produce the Koreans of historic times. In spite of this admixture, however, Korea has long been homogeneous and nationally conscious, with a common tongue and culture throughout the peninsula.

Korean legends tell us that the earliest inhabitants were food-gathering tribes, living in caves and dressing in a fabric of woven grass, who traced descent in a matrilineal line. Then, according to the story, in 2333 B.C. one Tangun (Divine Man) descended from the Taebaek-sanmaek to become the first ruler of Chosŏn (Land of the Morning Calm). He is said to have established his capital at P'yŏngyang, where he taught the duties of ruler and subject, the marriage ceremony, agriculture, cooking, and the use of lumber in building construction. Korean literature and art contain many references to Tangun. Temples have been built in his honor, among them the celebrated shrine on Mari-san in the island of Kangwha.

Korean and Chinese accounts attribute the introduction of Chinese culture to Kija (in Chinese, Chi-tsu), elder brother of the last Shang ruler, who is said to have migrated to Korea in 1122 B.C. (modern scholars, however, date the end of the Shang dynasty and the beginning of the Chou period at about 1027 B.C.), bringing with him the literature, art, music, ceremonies, and medical knowledge of China. He established a government at P'yŏngyang, which he planted with willow trees, and set up a tax system by which one ninth of all agricultural produce went to the government.

For centuries Chinese influence did not extend farther south than the Han River. Southern Korea was loosely organized into three groups of states (Mahan, Chinhan, and Pyŏnhan) known as Samhan, or the three Hans. In the 3d century B.C., Chinhan received a number of immigrants fleeing from forced labor on the Great Wall of China, and in 193 B.C., when his throne was seized by a Chinese fugitive named Wiman, the king of the P'yŏngyang state fled southward and gained control of Mahan. Meanwhile, Wiman set up a dynasty in northern Korea which flourished until 108 B.C. In that year, Wu-ti, Han emperor of China, conquered northern Korea, which he divided into four provinces. It is the capital of one of these provinces, Nakrang (Lolang), just across the Taedong-gang from P'yŏngyang, which has yielded such rich treasures to archaeologists. Here have been unearthed the ruins of an ancient fortress, many tombs, lacquer and porcelain, swords and other weapons, coins and ornaments, tiles and pottery.

The Three Kingdoms.—Since southern Korea remained divided into warring states, the northerners were continually pushing southward. In 57 B.C., therefore, six chiefs of Chinhan, in the southeast, met in a great council and agreed to unite into one kingdom. It was called Silla and was to last until 935 A.D. The northerners, led by King Chumong, also established a strong king-

dom, called Koguryu (37 B.C.–668 A.D.), whose territory extended from the present city of Vladivostok to Port Arthur, and from south of Kangwŏn-do to north of Changchun, in Manchuria. A little later a third state, Paekche (18 B.C.–660 A.D.), was established in the southwest. Silla, Koguryu, and Paekche are known in history as the Three Kingdoms. Both Koguryu and Paekche were warlike states, constantly attempting to conquer their neighbors and extend their territory. Silla, on the other hand, concentrated its energies on peaceful pursuits, maintaining friendly relations with China and attracting settlers from other parts of Korea. Its rulers encouraged agriculture and sericulture, aided widows and orphans, and gave prizes to skilled weavers. Art and literature flourished, and Kyŏngju, the capital, became a great international center. Silla assimilated the art of China and Bactria and then created a style of its own, good examples of which are now displayed in the monasteries and museums of Korea, as well as in the Hōryūji, near Nara, Japan. From Silla and the other two kingdoms, Japan received her script, art, literature, and religion. In the 7th century, with the assistance of China, Silla absorbed Paekche (660) and Koguryu (668), and for nearly 300 years thereafter ruled the entire peninsula, finally welding it into a homogeneous nation with a common language, law, and civilization.

Koryu.—In 918, Wanggŏn, an army officer, led a rebellion and established a new dynasty called Koryu (it is to this dynasty that Korea owes the name by which it was introduced to the West); he overthrew Silla in 935. In 1011 the capital of the new kingdom was established at Kaesŏng (Songdo), which became very prosperous. Chinese influence remained strong, and in 957 a civil service examination system (*kwagu*) much like that of China was adopted. For over 900 years this system remained the principal influence on Korean culture, encouraging literature and scholarship. A notable advance was the development of printing with movable type, antedating Johannes Gutenberg (q.v.) by 50 to 100 years. Buddhism was the state religion in the Koryu kingdom, and the new invention made the Buddhist scriptures accessible to a larger reading public.

By the third decade of the 13th century the Mongols had conquered much of Asia, including northern China, and in 1231 they overran Korea, which became a Mongol protectorate. Using Korea as a base, the Mongol forces of Kublai Khan made two unsuccessful attempts to invade Japan (1274 and 1281). Subsequently, Mongol influence in Korea declined, and in 1368 their dynasty was overthrown in China itself by the Ming. Korean intercourse with China, slight during the Mongol period, revived in Ming times, and the Korean royal court adopted Ming manners and dress, which still survive in modern Korea.

Yi (Li) Dynasty.—During the 14th century the Koryu government became progressively weaker, and in 1392, General Yi Sŏnggye founded a new dynasty and established its capital at Seoul. With the accession of the Yi dynasty, Buddhist influence vanished and Confucianism became the official religion. The third Yi ruler, King Sejong, established Confucian colleges throughout Korea, as well as a foundry for making type to print the classics. Literature enjoyed

a veritable renaissance. Many books were published at this time, and the phonetic Korean alphabet was devised, enabling the untutored to read the classics.

In 1592, Toyotomi Hideyoshi, regent and military dictator of Japan, determined to conquer Korea. He sent an army of 250,000, which fought its way up the peninsula, killing many Koreans, looting art treasures, and destroying cities. Thousands of Korean craftsmen and artists were taken to Japan, where they helped to develop much of the best Japanese pottery, including Satsuma ware. After six years of fighting, Korea, with the aid of Chinese troops and an ironclad tortoise-shaped vessel invented by the Korean admiral Yi Sunsin, forced the Japanese to withdraw their forces from the country. Not long thereafter, in 1627, Korea was again invaded, this time by the Manchus, who were preparing their conquest of China and resented the Korean alliance with the Ming dynasty. The Manchu forces wrought much destruction and took thousands of prisoners with them when they quitted the country a few years later. Korea then recognized the nominal overlordship of the Manchu emperors, but, aside from formal annual tribute, was left to manage its own affairs. This bitter experience with invaders caused Korea to close its doors to all except China, and for 250 years the country was known as the Hermit Kingdom.

In the late 18th and early 19th centuries, Christian missionaries began to appear in Korea. They made a number of converts but encountered official opposition, for the Korean government suspected all foreigners. In 1866 the French government sent an expedition to Korea to avenge the death of some missionaries, and in 1871 a United States force landed on the island of Kangwha, hoping to open the country to trade. Both attempts were unsuccessful, as were the overtures of the other powers. The regent of Korea, Prince Taewŏn, remained inflexible and devoted all his efforts to improving Korean defenses. When, in 1876, the regent retired from active participation in government affairs, Japan was able to conclude a treaty of commerce and friendship with Korea. It was followed in 1882 by a Korean treaty with the United States, and shortly thereafter by treaties with Germany, France, Russia, and Great Britain. Korea's isolation was at an end; the Hermit Kingdom was opened to the world. All this was not accomplished without strong internal resistance. Although many Koreans were interested in adopting Western reforms, others were determined to resist all change, and in 1894 the Tonghaks (Eastern learning as opposed to Western learning) revolted against the government, demanding that all foreigners be driven out of Korea. Their well-armed forces easily defeated the government's infantry. Meanwhile, Japan, eager to secure coal, iron, and other raw materials in Korea and Manchuria, took advantage of the situation and sent troops into Korea, stating that they had come to help suppress the Tonghak Rebellion and to protect Japanese nationals. Although this proved unnecessary—the Tonghaks had suddenly retired, and Korea was at peace—Japan soon had 8,000 troops in the country. They clashed with Chinese troops, also sent to the aid of the Korean government, and the fighting spread. In the war which followed, Japan defeated China, and although the Japanese government had proclaimed its interest in Korean

independence, it kept troops in the country. Korea, paralyzed by the internal struggle between progressives and conservatives, could offer little resistance. The most vigorous opponent of Japanese influence, Queen Min, was assassinated in 1895.

Japan's success in Korea alarmed Russia, which had interests both in Manchuria and in Korea. On its part, Japan feared the possibility of Russian expansion into a prostrate Korea. Relations between Russia and Japan rapidly deteriorated, and in 1904 the Japanese decided to fight. The defeat of Russia in 1905 eliminated the last foreign opposition to Japan's control of Korea. In that year the Japanese forced the Korean government to agree to a protectorate. In 1907 they compelled the emperor to abdicate, and in 1910 they annexed the country to the Japanese empire.

Japanese Rule.—For 35 years Korea remained a colony of Japan, but the Japanese never succeeded in winning the cooperation of more than a tiny minority of the population. Although the Japanese administration made some effort to modernize the country, its improvements—railroads, port facilities, power plants, chemical works, and irrigation projects—were designed for the benefit of Japan, not Korea. Korean interests were completely subordinated to those of Japan, and as Japan began its policy of expansion, more and more of Korea's resources were drained to support the Japanese war effort. Japanese acquired a good deal of the best farming land, and Japanese corporations controlled industry, shipping, and large-scale trade. All important posts were filled by Japanese, and Japanese workers in Korea were generally paid twice as much as their Korean counterparts. Politically, Japanese rule was oppressive; Koreans enjoyed no freedom and had no rights. When, on March 1, 1919, Korean patriots organized a peaceful demonstration for independence, it was put down with harsh reprisals. Thousands of Koreans were jailed, and many lost their lives. Resistance continued, however, and each year many Koreans were imprisoned for political offenses.

Trusteeship.—On December 1, 1943, representatives of the United States, the United Kingdom, and China, meeting in Cairo, promised that "... in due course Korea shall become free and independent." Subsequently, at the Yalta and Potsdam conferences, it was decided that United States and Soviet troops should provisionally occupy the country, the dividing line between their respective zones being placed at the 38th parallel. This agreement was confirmed at the Foreign Ministers' Conference, held in Moscow in December 1945, which placed Korea under a four-power trusteeship for a maximum period of five years. Under Russian and American occupation policies, the two zones developed on entirely different lines, and the demarcation line became the equivalent of a frontier. When Russo-American negotiations on the future of Korea broke down, the problem was referred, in September 1947, to the United Nations.

In November 1947, the United Nations General Assembly approved a United States proposal to hold elections for a provisional Korean government. A U. N. commission was formed and sent to Korea to supervise elections for the entire country. Because of the disapproval of the Soviet government, however, it was not permitted to

enter northern Korea. Following this refusal, in December 1947 certain South Korean political leaders began to lay plans for a coalition conference of north and south with the aim of achieving peaceful unification. In February 1948 the United Nations Little Assembly voted to proceed with elections in the southern zone only. Meanwhile the plans for the coalition conference were maturing and on April 22-23 it convened at Pyongyang, attended by 545 delegates from all Korea, including 240 from South Korea. A resolution was adopted calling for peaceful unification of all Korea and demanding the withdrawal of American and Soviet troops, with strong opposition expressed from both north and south to any foreign military bases on Korean soil. Fanatic nationalism was the order of the day for all shades of political opinion, from extreme rightist, *Kim Koo*, through moderate, *Kim Kiusic*, to extreme leftist, *Kim Dubong*.

These avowed nationalists of the south returning from Pyongyang also denounced separate elections, whereupon the American military command cautioned the people of South Korea against listening to the dupes of Communist propaganda. Ignoring this warning, the People's Committee of northern Korea met in Pyongyang with representatives invited from southern Korea, and on May 1, adopted a constitution for a people's republic.

In the elections held in southern Korea on May 10, 1948, under the sponsorship of the United Nations Temporary Commission on Korea, 200 members of a constituent assembly were chosen. This assembly convened on May 31 and by July 12 had adopted a constitution for a republican government. On July 20, Dr. Syngman Rhee was elected first president, and on August 2, Gen. Lee Bun Suk became premier. The United States recognized the new government on August 12 and on August 15 Dr. Rhee proclaimed it as the Republic of Korea. The speed with which this government was set up did not appeal to those nationalists who could not renounce the goal of immediate unification.

A month later, on Sept. 10, 1948, a people's republic was also formally proclaimed in North Korea. It too claimed jurisdiction over the entire country and requested the immediate evacuation of all Soviet and United States troops. By September 19 the Soviet government announced that it planned to withdraw all its troops by Jan. 1, 1949. On Sept. 28, 1948, the United States sent a note to the USSR, stating that troop withdrawal was part of the larger question of Korean unity and that the decision on the United States troops would be left to the United Nations General Assembly.

It was reported by October that Soviet troops had begun to evacuate northern Korea. On Nov. 20, 1948, the National Assembly of South Korea adopted a resolution, favored by President Rhee, requesting that United States troops remain until the defenses of southern Korea had become strong enough to counterbalance the Soviet-trained northern army estimated to number about 100,000. This seemed necessary, as already there were insurrections against the South Korean government. On Oct. 19, 1948, at Yosu, a seaport in the middle of the southern coast, an estimated 12,000 insurgents had revolted; their rebellion was crushed with savage cruelty. To quiet the dismay of the unionists, north and south, Dr. Rhee and his cabinet members promised conquest

of the north by his armed forces. North Korean radio broadcasts likewise promised unification threatening to destroy the South Korean government.

On Dec. 12, 1948, the southern Republic of Korea was recognized by the U. N. General Assembly in Paris as the only lawful government of Korea, after the United States had brought to that body the Korean problem. Sporadic rebellion continued in the South Korean republic. During the winter of 1948, 15,000 people were killed in Cheju during a rebellion there. On June 8, 1949, President Truman recommended that Congress appropriate \$150,000,000 for aid to the South Korean republic. But on Jan. 19, 1950, the bill was defeated, its opponents arguing that it would be "money thrown down the Korean rat-hole."

Meanwhile the northern forces had increased their numbers near the 38th parallel, where the highways through paddy lands leading to the north had never been blockaded, and on June 28, 1949, the northerners invaded Ongjin, a peninsula on the western coast. The southern government reacted with widespread terrorism and unrest. Assassination of those who voiced a desire for peaceful unification had long been the order of the day, and the Home Minister of the southern republic warned, "The torturing of communists by police is not to be criticized." This policy, continued from previous Japanese practice, was advertised with a display of murdered bodies on doorsteps and served to confuse and embitter the populace further.

In this tense atmosphere the elections of May 30, 1950, were held in South Korea, the 210 assembly seats being contested by 2,144 candidates. The majority of successful candidates were without party affiliation, Dr. Rhee's following securing only about one fifth of the seats. Many Koreans sympathized with the campaign which still continued in secret for peaceful unification. By this time substantial aid had come from the United States, the House of Representatives having reversed its former decision to the extent of granting \$60,000,000. Dr. Rhee would seem to have won at last unqualified support from the Congress of the United States. Furthermore, Ambassador John Foster Dulles on June 19, 1950 told a distraught and uneasy audience, the South Korean National Assembly: "The American people give you their support, both moral and material. . . . You are not alone, you will never be alone. . . ." Six days later, on June 25, 1950, the Korean war broke. The tanks of the North Korean Army rolled southward expecting to join forces with the insurgents south of the 38th parallel.

On June 27, 1950, the United Nations recommended that its members support the Republic of Korea (south) which it had recognized as the only lawful government of Korea. But the South Korean Army, estimated at 100,000 men with 50,000 armed police trained by the Japanese method, at the outset became demoralized even beyond the most pessimistic anticipations of western observers. In four days Seoul was in the hands of the Communist armies from the north, well prepared and well-equipped. These armies would have swept to Pusan with the speed of an avalanche had not United States ground forces stationed in Japan been sent by President Truman on his own authority to fight a delaying action. The invasion tide was stayed at Taejon by the

United States regular army troops, including a large proportion of young soldiers with no prior battle experience.

General Douglas MacArthur, the United States supreme commander in the Far East, was named commander-in-chief of the United Nations' unprecedented move to enforce its decrees by arms. Australia, Belgium, Canada, Colombia, Ethiopia, France, Greece, Luxembourg, Netherlands, New Zealand, the Philippines, Thailand, Turkey, the Union of South Africa, and the United Kingdom contributed ground, air and naval forces, while India, Norway, Panama and Sweden sent noncombat aid. Fierce hand-to-hand fighting lasted from August 5 to September 15 when the U. N. troops, supported by the United States' and allies' air and naval forces, gained a preliminary victory, following an amphibious landing at Inchön led by General MacArthur, which cut behind the Communists on the Pusan perimeter. By September 25, having occupied a beachhead from Pusan to Kyöngju, the U. N. forces broke through to join the forces at Inchön. On September 29 South Korean troops re-entered Seoul in triumph.

On Oct. 1, 1950, South Korean forces first crossed the 38th parallel, initiating an invasion of North Korea and anticipating a recommendation made on October 4 by the United Nations Assembly that "appropriate steps be taken to ensure conditions of stability throughout Korea." The northern capital, Pyongyang, capitulated to the U. N. forces on October 19. Within another week the U. N. and South Korean troops halted a few miles below the Manchurian border, and the historic action of the U. N. seemed on the point of attaining a victorious conclusion.

However, on Nov. 5, 1950, Chinese troops crossed the Yalu River from the Manchurian side, joining battle in behalf of the North Koreans. This event had been unforeseen by the United States, despite the fact that a mutual pact between North Koreans and Chinese had been previously reported by western newspapers (the *New York Times* among others). Evidently the fact was discounted as an agreement between two governments, which, from the U. N. point of view, had no legal existence. But the Chinese invading army was large in numbers and comprised seasoned, well-equipped troops. The United States 7th division launched a counteroffensive against the new enemy forces on November 24, as the war continued with renewed hardship and misery in the icy winter of northern Korea.

Mr. Wu Hsiu-chuan, heading a mission of the Peking government, was immediately invited to attend discussions of the United Nations Security Council, that he might hear at first hand the aims of that body, but on Dec. 19, 1950, he left the United States with his mission unaccomplished and bearing only the condemnation of the U. N., including that of the Chinese Nationalist government on Formosa which, in the eyes of the U. N., was still the legal government of China.

By Christmas the second evacuation of Seoul by the South Koreans was under way, refugees streaming out with household goods in handcarts, and carrying their children on their backs. Some of the refugees fled with only their children. Armies of Chinese troops, called by the Peking government "Volunteers," together with the North Koreans now recaptured

Seoul. By mid-January the Red Army had reached Suwan, Yoju, Wonju and Kangnung.

In contrast to the initial panic of the opening days of the Korean War, the South Korean populace displayed characteristic Oriental fatalism and a kind of order, as millions of homeless refugees of indeterminate political persuasion eddied south to become wards of the U. N. forces firmly entrenched at Pusan. Meanwhile, in less than 7 months, the United States Air Force had dropped 42,000 tons of bombs on Korea, 3,000 tons more than were dropped on Germany throughout the year of 1942 (according to General O'Donnell's report from Tokyo).

On Feb. 1, 1951, the U. N. General Assembly passed a resolution calling the Communist Chinese of the so-called People's Government the aggressors in Korea, by a vote of 44 to 7. India, abstaining, reported that Peking would discuss a ceasefire under certain conditions. On February 7, the U. N. rejected by a vote of 49 to 5 the Russian charge of aggression by the United States in Korea. The Chinese launched another major offensive in Korea on February 12, which collapsed six days later. On March 15, 1951, the U. N. troops again re-occupied Seoul, a city reduced almost to rubble.

The pattern of a stalemate had already taken shape. On March 31 an American tank patrol once more crossed the 38th parallel, to anticipate a suspected May Day drive upon Seoul, preluding several other counter-attacks to the north and along the central and eastern sectors. The second Red spring offensive was thereby thrown off balance and delayed until May 17. When it finally got under way the U. N. troops held firm. Three United States corps, the 1st, 9th and 10th, including British and other U. N. combatants and one South Korean corps opposed a formidable Chinese army, the 37th, 38th, 39th, 40th, 42nd and 66th corps plus one North Korean corps and an assortment of other North Korean divisions. The supply line of the Communist Army stretched 250 miles to the Yalu, a target under continuous air attack by the United States Air Force. It could not, however, be broken, and any gain made by the U. N. ground forces only served to shorten and strengthen the enemy supply line. By the summer of 1951 the 38th parallel, midway across the peninsula, delineated a deadlock.

On June 23rd, Russia's delegate to the United Nations, Jacob Malik, proposed a truce in Korea to take place roughly along the 38th parallel. A preliminary talk was held in Kaesong, July 8, and two days later top level truce talks began there. Beginning July 12 an interruption occurred for three days over U.S. demands that Kaesong, a bit south of the parallel and strongly pro-northern in sympathy, be neutralized. Another interruption of three days was brought about by the Communist delegates over the issue of the withdrawal of all foreign troops from Korea as a first condition for a truce. On July 26th, the U. N. and the Communists agreed on a five point agenda; but on August 23rd the Reds charged an attack on the place of meeting, the neutralized town of Kaesong, and the talks were again broken off. At the insistence of the U. N., they were resumed at Panmunjom, on the score that it was more neutral than Kaesong. On November 27 a provisional cease-fire line was drawn up, with the condition that the agreement would expire

on Dec. 27, 1951, if by that date a truce had not been concluded. It was generally considered at the time that the truce, so elusive during the latter half of 1951, was sure to be signed some time in 1952.

Meanwhile, there was a political crisis in South Korea. In January 1952, the National Assembly rejected a proposal by President Rhee that the constitution be amended to provide for direct election of the president. In April his opponents introduced a bill providing for responsible cabinet government. After his supporters had demonstrated against the second bill, the president declared a state of martial law. Many persons were arrested, including 13 members of the assembly. Accusing Rhee of dictatorial and bureaucratic methods, Vice President Kim Sung Soo resigned on May 29 (the resignation was not formally accepted until June 28). Protests by the United Nations Commission for the Unification and Rehabilitation of Korea (UNCURK) were flouted, and the arrested assemblymen were tried by court-martial behind closed doors. When the president's opponents boycotted assembly sessions so as to preclude the gathering of the two-thirds quorum necessary for adoption of a constitutional amendment, they were escorted to the assembly by the police. Eventually, in July, the amendment providing for direct election of the president, together with enabling legislation, was passed by the assembly. On August 5, President Rhee was elected for a second term.

Gen. Matthew B. Ridgway, who had succeeded General MacArthur as supreme commander, United Nations Forces in Korea, on April 11, 1951, was in turn succeeded by Gen. Mark W. Clark on May 12, 1952.¹ In the summer and autumn of 1952 heavy fighting was resumed. Meanwhile, the truce talks at Panmunjom remained deadlocked on the issue of the repatriation of the prisoners of war. The North Korean and Chinese Communist delegates insisted on the mutual return of all prisoners, while the United Nations stood for voluntary repatriation. The matter was extensively debated at the seventh session of the United Nations General Assembly, which adopted, on Dec. 3, 1952, a revised Indian resolution calling for the establishment of a four-nation repatriation commission which would, after 90 days, refer prisoners refusing repatriation to a political conference for disposition. If the conference had not made a decision after 30 days, such prisoners would be entrusted to the United Nations for care and disposition. These proposals were rejected by the Communists.

On April 11, 1953, agreement was reached on the exchange of seriously ill and wounded prisoners, and between April 20 and May 3, 684 United Nations prisoners and 6,670 Communists were repatriated. During this period further negotiations on the prisoner issue were held at Panmunjom. Finally, on June 8, agreement was reached on the establishment of a Neutral Nations Repatriation Commission (NNRC) representing Sweden, Switzerland, Czechoslovakia, Poland, and India, the Indian member to serve as chairman. The commission would have custody of the prisoners for a 90-day explanation period and would then turn over those still unrepatriated to the proposed political conference for 30 days, after

which it would help any prisoners who wished to go to neutral countries.

The armistice agreement was signed on Jul 27, 1953. Fighting, which had flared up again in May and June, now ceased, and each side withdrew 2 kilometers from the battle lines, leaving a demilitarized neutral zone between them. It was reported on October 8 that United Nations battle casualties in the Korean War were as follows: United States, 144,173 (including 25,604 dead); South Korea, 1,312,836 (including 415,004 dead); Australia, 1,591; Belgium-Luxembourg, 453; Canada, 1,396; Colombia, 686; Ethiopia, 656; France, 1,135; Greece, 715; Netherlands, 704; New Zealand, 115; Philippines, 488; Union of South Africa, 42; Thailand, 913; Turkey, 3,349; and United Kingdom, 5,017.

President Rhee, who had opposed the truce, on his own initiative released about 27,000 anti-Communist North Korean prisoners of war in June 1953. Repatriation under the armistice agreement began on August 5 and was completed on September 6, 12,760 United Nations prisoners and 75,797 Communists being exchanged. The return of the United Nations prisoners brought confirmation of reports of Communist atrocities, including the use of torture to obtain spurious confessions of guerrilla warfare. The explanation sessions for prisoners refusing repatriation were held by the NNRC from October to December. Few prisoners changed their minds, and in January 1954, a political conference having been arranged, the Indian chairman of the NNRC turned over 21,814 unrepatriated Chinese and North Korean prisoners to the United Nations Command and 347 pro-Communist prisoners (including 21 Americans) to the Communists.

Under the provisions of the armistice agreement, a Neutral Nations Supervisory Commission began functioning on Aug. 13, 1953. With regard to the political conference recommended by the agreement, however, it proved difficult to make arrangements satisfactory to both sides. Finally, at the Berlin Conference held in February 1954, the Big Four foreign ministers agreed to hold a meeting on Indochina and Korea at Geneva, Switzerland. The Geneva Conference, which discussed Korean matters from April 26 to June 1954, was attended by the United States, the United Kingdom, France, the USSR, Communist China, North Korea, South Korea, and all of the other United Nations members that fought Korea, with the exception of South Africa. An agreement was reached on the issue of free elections under United Nations supervision, which 16 non-Communist delegations considered essential, and the future of Korea was left unsettled.

The war had caused tremendous damage to Korea. Several million civilians died, and it was estimated in 1953 that more than 10 million persons had been left homeless in South Korea alone. Reconstruction was slow, but with United States aid, amounting to about \$1.5 billion in the five-year period ending June 1955, some progress was made in rehabilitating the South Korean economy.

KORITSA. See KORCE.

KORIYAMA, kō-rê-yā-mā, city, Japan, situated in Fukushima Prefecture, Honshu, on the Abukuma River, 25 miles south of the city of Fukushima. It is the trading center for a rice-growing district and has extensive textile mills and chemical plants. The city was damaged by bombs in World War II. Pop. (1947) 64,741.

KORN, kôrn, **Arthur**, German physicist: b. Breslau, Germany, May 20, 1870; d. Jersey City, N. J., Dec. 21, 1945. After studying at the universities of Freiburg, Leipzig, Paris, and Berlin, taught physics at Munich (1895-1908) and Lin (1914-1939). From 1939 until his death lived in the United States. Korn is credited with the earliest transmission of a photograph of a circuit, from Munich to Nürnberg and back in 1904, and in 1923 he transmitted pictures from Rome, Italy, to Bar Harbor, Me. His best work, however, was done in the theory of potentials and mathematical physics. Among his published works are *Eine Theorie der Gravitation der elektrischen Erscheinungen auf Grundlage der Hydrodynamik* (2 vols., 1892-1894); *Handbuch der Phototelegraphie und Telautographie* (11); and *Bildrundfunk* (with E. Nesper, 1926).

KORNER, kûr'nêr, **Christian Gottfried**, German jurist and literary critic: b. Leipzig, Germany, July 2, 1756; d. Berlin, May 13, 1831. He studied law at the universities of Göttingen and Leipzig, and in 1783 became councilor of the Consistory Court of Dresden. In 1790 he was appointed chief justice of the Dresden Court of Appeals, and in 1815 joined the Prussian civil service as privy councilor of the Ministry of the Interior. Körner is best known for his friendship with the poet Friedrich von Schiller, who resided at his home in Dresden from 1785 to 1787. He prepared the first collected edition of Schiller's works (12 vols., 1812-1815) and contributed a number of articles to Schiller's magazines. In 1808 these articles were published in book form under the title *Ästhetische Ansichten*.

KORNER, Karl Theodor, German poet: b. Dresden, Germany, Sept. 23, 1791; d. Gadebusch, near Schwerin, Aug. 26, 1813. The son of Christian Gottfried Körner, he studied at Freiberg, Leipzig, and Berlin, and in 1811 went to Vienna, where he wrote a number of light comedies, including *Der grüne Domino*, *Der Vetter aus Bremen*, *Die Nachtwächter*, and *Die Gouvernante*, as well as several tragedies, of which *Zriny* and *Rosamunde* were the most successful. These won him appointment as theater poet at the Hofburgtheater. In 1813 he left Vienna for Breslau, where he joined a volunteer corps fighting against Napoleon. He was wounded at Kitzen and killed in a skirmish near Schwerin. A collection of his early poems, published in 1814, appeared in the year following his death, in 1814 his father, published his best-known work, a collection of patriotic

songs entitled *Leyer und Schwert*, of which one, *Das Schwertlied*, was composed on the battlefield a few hours before he died.

KORNGOLD, kôrn'gôlt, **Erich Wolfgang**, American composer: b. Brünn, Moravia, May 29, 1897. The son of the music critic Julius Korngold (1860-1945), he received his musical education from Alexander von Zemlinsky and Robert Fuchs and first attracted attention as a child prodigy. A pantomime ballet, *Der Schneckemann*, composed when he was 11, was produced by the Vienna Opera in 1910. Other early works include *Sinfonietta* (1912) and two one-act operas, *Der Ring des Polykrates* (1916) and *Violanta* (1916). In 1919 he became a conductor in Hamburg, and in 1927 professor at the Vienna State Academy for Music. He went to the United States in 1934, settled in Hollywood, and in 1943 became an American citizen. Among his later works are three operas, *Die Tote Stadt* (1920), *Das Wunder der Heliane* (1927), and *Kathrin* (1939); music for many films, two of which, *Anthony Adverse* (1936) and *The Adventures of Robin Hood* (1938), received awards from the Academy of Motion Picture Arts and Sciences.

KORNILOV, kûr-nyê'lôf, **Lavr Georgyevich**, Russian general: b. Ust Kamenogorsk, Kazakhstan, Russia, July 18, 1870; d. Ekaterinodar, March 31, 1918. The son of a Cossack officer, he studied at the St. Petersburg Artillery College and received his commission in 1892. He commanded a brigade in the Russo-Japanese War, and from 1907 to 1911 was military attaché in Peking. Early in World War I he commanded a division in Galicia. Captured by the Austrians in 1915, he escaped in August 1916 and was placed in command of the 20th Army Corps. After the revolution of March 1917 he was given command of the troops in Petrograd, and in July of the Eighth Army. Then, in the following month, he was made commander in chief. Kornilov advocated decisive measures to restore discipline in the army, and when these were opposed by Aleksandr Kerenski, attempted to make himself dictator. His coup failed, and in September he was removed from his command. After the Bolshevik Revolution in November, Kornilov went to the Caucasus, where he organized an anti-Bolshevik force. He was killed at the siege of Ekaterinodar.

KOROLENKO, kû-rû-lyân'kô, **Vladimir Galaktionovich**, Russian novelist: b. Zhitomir, Russia, July 27, 1853; d. Poltava, Dec. 25, 1921. His mother was of aristocratic Polish origin, and when she was left a widow in straitened circumstances, she opened a boys' boarding school. Korolenko, then 15, assisted her and also gave lessons outside. In 1870 he entered the St. Petersburg Technical School, and in 1872 the Moscow Agricultural Institute, but, having acquired revolutionary opinions, was expelled and sent to Kronshtadt. He managed to return to St. Petersburg, where he secured a position as a reader in a publishing house. He was already a marked man, and in 1879 was arrested and sent to Siberia. He wrote a letter protesting his exile, and was then transferred to Yakutsk, where, amid the immense forests known as taiga, he spent three miserable years. He wrote his first notable story, *Son Makára* (*Makár's Dream*), which was published in 1885, as well as a number of tales, giving remarkably realistic pictures of life in that

desolate region and of suffering humanity, and introducing various types of revolutionists, exiles, and vagabonds as he saw them in the frozen Siberian forests and in far-distant Sakhalin. His *Sketches of a Siberian Traveler* was published in 1896. In these stories and in *The Tramp* (Brodyág, 1886) he gives many reminiscences of his own experiences, as a boy and as a young man. *The Murmuring Forest*, published in the same year as *Brodyág*, considerably added to his reputation, which was wholly confirmed by *The Blind Musician* (Slepói Musikant, 1886), which is an idyllic tale of that Ukraine where his childhood was spent (translated by Aline Delano, with introduction by George Kennan, Boston 1890). In 1888 he began the publication of a long novel in *Russian Thought* (Russkaya Mysl'), but as soon as its plot began to develop, the censor interposed a veto and the publishers were compelled to announce that "on account of circumstances beyond their control" the rest of the work could not be printed. In supposed answer to Tolstoy's doctrine of nonresistance, he wrote *The Legend of Florus* which is regarded as one of his most beautiful tales. The subject was taken from Josephus. Other stories and articles were elicited by famine conditions in Russia and by the evil customs of dueling. In 1885 he was permitted to return from Siberia and engaged in journalism and other literary activities. In 1903 the 50th anniversary of his birth was celebrated all over Russia, and in 1908 the occasion of the 30th anniversary of his commencement as an author was made a jubilee. He is one of the freshest and most vivid of Russian writers and, as shown in his *Yom Kippur*, has a sense of humor unusual in Russian novelists.

NATHAN HASKELL DOLE.

KOROSI CSOMA, kù'rú-shí chō'mō, **Sandor** (known also as CSOMA DE KÖRÖS), Hungarian traveler and philologist: b. Körös, 1798?; d. Darjeeling, India, April 11, 1842. Seeking to investigate the origin of the Magyar race, in 1820 he went to Egypt and thence to Tibet, where he spent four years (1827-1830) in a Buddhist monastery. He next lived for some years in Calcutta, India, and there published a *Tibetan-English Dictionary* (1834) and *Grammar of the Tibetan Language* (1834). In 1842 he set out for western China but died en route.

KORSAKOV, Nikolai A. Rimski. See RIMSKI-KORSAKOV.

KORSØR, kôr-sûr', seaport, Denmark, in Sorø County, on the southwest coast of Zealand (Sjælland) 62 miles west-southwest of Copenhagen (København). Korsør has been a trading center since the 14th century; the fisheries are of importance. Pop. (1945) 10,667.

KORTING, kûr'ting, Gustav, German philologist: b. Dresden, June 25, 1845; d. Kiel, Feb. 1, 1913. He studied in Leipzig (1863-1867), was appointed head teacher at Dresden (1868), and became professor of Romance and English philology at Münster (1876) and at Kiel (1892). His works included *Enzyklopädie und Methodologie der Romanischen Philologie*, 3 vols. (1884-1886); *Grundriss der Geschichte der Englischen Literatur* (1887; 5th ed. 1910); *Handbuch der Romanischen Philologie* (1896).

KORTRIJK, kôrt'rîk (Fr. COURTRAI, kōr-

trâ'), city, Belgium, in West Flanders Province, on the Leie (Lys) River 15 miles north-northeast of Lille. In the 13th-century Church of Notre Dame is one of the greatest works of Sir Anthony Vandyke (Van Dyck), *The Raising of the Cross*. The town hall dates from the 16th century. A high grade of linen is manufactured, and the city is also renowned for its lace of exquisite design and workmanship. Known in the time of the Romans as Cortoriacum, Kortrijk attained the status of a town by the 7th century. Weaving laid the foundations of its prosperity, and in the Middle Ages the population was in excess of 100,000. Here, in 1302, took place the celebrated Battle of the Spurs (q.v.) between the French and the Flemings. Pop. (est 1948) 40,085.

KORZYBSKI, kôr-zip'skê, Alfred Habdank Skarbek, American scientist and writer: b. Warsaw, Poland, July 3, 1879; d. Sharon, Conn., March 1, 1950. He attended the Warsaw Polytechnic Institute, managed his family's estate, and taught mathematics, physics, French, and German in Warsaw prior to World War I. During that conflict he was twice wounded and served on the Russian General Staff before, in 1916, being sent to the United States and Canada on a military mission. In 1920 he served with the Polish Commission to the League of Nations. Thereafter making his home in the United States, he became an American citizen in 1940. A pioneer in semantics, he formed a new school of psychological-philosophical semantics which he named general semantics. His theory was put to practical use in the fields of public, industrial and race relations, and wherever misunderstanding among people was due to different values and structures of words. He was president and the director of the Institute of General Semantics which he established in Chicago, Ill., in 1938 and moved, in 1946, to Lakeville, Conn. Beside numerous scientific papers, he published *Manhood of Humanity—The Science and Art of Human Engineering* (1921) and *Science and Sanity; an Introduction to Nonaristotelian Systems and General Semantics*, 2d ed. (1941).

KOS or **COS**, kôs, island, Greece, one of the Dodecanese group in the southeastern Aegean Sea, situated off the end of the Bodrum Peninsula of Asia Minor (Turkey in Asia). With a length of about 25 miles, the island has an area of 111 square miles. The surface rises partly into rugged hills, though a considerable portion is fertile and well cultivated, yielding grapes, oranges, olives, and pomegranates. Most of the islanders (20,982 in 1947) live in the capital town of Kos (18,482), on the northeast coast. In the *Iliad*, Kos is mentioned as one of the allies of the Greeks. Later it was annexed to the Dorian Hexapolis. It was the birthplace of Hippocrates, Ptolemy II (Ptolemy Philadelphus), Apelles, and other famous men. The island changed hands many times until its capture by the Turks in 1523. It was occupied by Italy during her war with Turkey in 1912; and, with other islands, was ceded to Italy by the Treaty of Lausanne in 1924. By the treaty of 1947, Italy transferred sovereignty to Greece.

KOSCIUSKO, kôs-i-tis'kô, Thaddeus (P. TADEUSZ ANDRZEJ BONAWENTURA KOSCIUSKO) Polish patriot: b. in Grand Duchy of Litt

Feb. 12, 1746; d. Solothurn, Switzerland, Oct. 15, 1817. He pursued military studies at Warsaw and in France, and in 1776 he joined the American Revolutionary Army as a volunteer. He was appointed engineer with the rank of colonel, and afterward general of brigade. He performed excellent service, and at the end of the war received the thanks of Congress, with the brevet of major general. He returned to Poland in 1784, and on the occasion of the reorganization of the Polish Army in 1789 was appointed major general. Having declared for the constitution of May 3, 1791, he fought in the war which soon after broke out, with the rank of lieutenant general. When Stanislas II Augustus (q.v.), in 1793, agreed to the second partition of Poland, Kosciusko withdrew from the army and retired to Leipzig. At this time the Legislative Assembly in France conferred on him the title of French citizen. When a new insurrection broke out in Poland in 1794 for the purpose of delivering the country from the Russians, Kosciusko was recalled and made commander in chief of the insurgent army. He defeated the Russians at Racławice, but at the Battle of Maciejowice his army was defeated and he himself wounded and taken prisoner. He remained in captivity for two years, and then proceeded to England, and thence to the United States. In 1798 he returned to Europe on a mission from Congress to France, and contributed to bringing about an understanding between the two countries and the United States. In April 1812, he addressed a petition to Alexander I, emperor of Russia, requesting him to grant an amnesty to all expatriated Poles, to accept the title of king of Poland, and to give that country a free constitution similar to that of Britain; but the petition remained without effect. In April 1817 he issued a letter of emancipation to the serfs on his estate in Poland. His death was occasioned by a fall from his horse. In 1818 his body was moved at the expense of the Emperor Alexander of Russia to Krakow, where it was buried in a cathedral, and a monument erected to him.

KOSCIUSKO, city, Miss., seat of Attala county, near a branch of the Pearl River 46 miles southeast of Greenwood. It is the center of dairying district. Pop (1950) 6,741.

KOSCIUSKO, Mount, Australia, the highest peak on the continent, having a height of 3,228 feet. Located in New South Wales, it is the culminating point of the Mungion Range, a group of the Australian Alps (q.v.). This region is the coldest portion of Australia, and snowdrifts are met with even in summer. There are numerous evidences of former glaciers, notably lakes and tarns. The tree line is at 5,500 feet; above this level there are bogs and summer pastures. Kosciusko was formerly known as Mount Townsend.

KOSE NO KANAOKA, kō-sē nō kā-nā-ō-ka, Japanese figure and landscape painter: fl. 850-880. His school of artists was inspired by that of the school in China during the Tang dynasty. He resided in Engi where, it is believed, he designed numerous artistic gardens. His work as a painter was notable for fineness of line and color.

KOSEGARTEN, kō-zē-gär-tēn, Johann Gottfried Ludwig, German Orientalist and historian: b. Altenkirchen, island of Rügen, Sept.

10, 1792; d. Greifswald, Aug. 18, 1860. He studied theology and philosophy at Greifswald and Oriental languages at Paris (1812-1814), becoming adjunct professor of the faculty at Greifswald (1815). He was appointed professor of Oriental languages at Jena (1817), but returned to Greifswald (1824) where he died leaving many valuable works uncompleted, such as *Taberistanensis annales*, vols. 1-3 (1831-1853); *Kitāb al-aghāni*, vol. 1 (1840); *Pantschatantra* (1848 and 1859). Of his later works might be cited *Pommersche und rügische Geschichtsdenkmäler*, vol. 1 (1834); *Codex Pomeraniae diplomaticus*, vol. 1 (1843-1862); *The Hudsailian Poems*, vol. 1 (1854).

KOSER, kō'zēr, Reinhold, German historian: b. Schmarsow, Prussia, Feb. 7, 1852; d. Berlin, Aug. 25, 1914. He studied history and philology in Berlin, Vienna, and Halle, and was appointed to work in the Berlin Academy on the correspondence of Frederick the Great. He was appointed keeper of the state archives at Berlin (1882), and was given the posts of assistant professor at Berlin (1884) and professor at Bonn (1891); he succeeded Heinrich von Sybel (1817-1895) as general director of the Prussian state archives (1896). He wrote many works pertaining to Frederick the Great, including *Politischen Korrespondenz König Friedrichs der Grosse* (1879-1883).

KOSHER, kō'shēr, or **KASHER**, in Hebrew כָּשֵׁר, meaning lawful, pure, clean, in conformity with the laws of the Talmud. It is the antithesis of *treifa* or *tref*, the unclean. Food and utensils which have undergone the operations and rituals laid down for the orthodox Jews, such as meats slaughtered under the ritual of the Mosaic law, are said to be kosher. The slaughterer (*shohet*) acts under the license of a chief rabbi. As the far-reaching rules of the Jewish authorities render it impossible for a Jew to obtain sustenance among communities of other religions without breach of some or other of these Mosaic laws or their renderings, there are numbers of Jews who therefore give the matter secondary consideration, and are known as liberal Jews.

KOSHTAN TAU, kōsh'tān tou', peak, Caucasus Mountains, near Dykh Tau, within the Kabardino-Balkarian Autonomous Soviet Socialist Republic, a subdivision of the Russian Soviet Federated Socialist Republic. Its height above sea level is 16,875 feet. The peak is particularly difficult to ascend.

KOSICE, kō'shī-tsě, city, Czechoslovakia, in Slovakia Province, on the Hernád River, 135 miles northeast of Budapest. The Magyar name is KASSA; and the German, KASCHAU. Among its attractive buildings are several old palaces; Saint Elizabeth Cathedral, a fine Gothic structure of the 14th century; Saint Michael's Church, which dates back to the 13th century; and an historic municipal theater. Industries include distilling, brewing, and sawmilling, and the manufacture of woolen textiles and furniture. Košice has had municipal government since 1235, and thereafter it was successively under Austrian, Hungarian, Russian, and Turkish sovereignty. It was part of Hungary during the existence of the Austro-Hungarian Empire, and in 1920, by the Treaty of Trianon, it was incorporated in the new republic of Czechoslovakia. Under pressure

from Germany, the city was restored to Hungary in 1939; it was regained by Czechoslovakia in 1945. Pop. (1947) 58,089.

KOSLIN. See **KOSZALIN**.

KOSOVO, or **KOSSOVO**, or **KOSOVO POLJE**, kô'sô-vô pô'lyč, elevated plain, Yugoslavia, located in the autonomous Province of Kosovo-Metohija, in the southern part of the republic west of Priština. The plain, about 50 miles long and 15 miles wide at its broadest, produces grain, tobacco, and fruit. It is of melancholy interest in Balkan history. At a battle here on June 20, 1389, the Turks under Murad I defeated the Serbs, Albanians, and Bosnians commanded by Lazar I, prince of Serbia. With Lazar's death in the battle the old Serbian Empire was crushed and Serbia passed under the suzerainty of the Ottoman Empire. Here, too, at a battle fought on Oct. 17, 1448, the forces of Sultan Murad II defeated John Hunyadi, national leader of Hungary. During World War I the plain was the scene of a battle on Nov. 20-25, 1915, at which the Bulgarians defeated the Serbians and forced the latter to retreat into the mountains of Albania.

KOSSEL, kôs'ël, **Albrecht**, German physiological chemist: b. Rostock, Sept. 16, 1853; d. Heidelberg, July 4, 1927. He studied medicine at Strasbourg and Rostock, and during 1877-1881 he was assistant to Felix Hoppe-Seyler at the former city. Turning then to the study of physiological chemistry, in 1883 he was appointed an assistant professor at the Berlin Physiological Institute. In 1895 he went to Marburg as professor of physiology, and in 1901 he accepted a like chair at Heidelberg. He was awarded the Nobel Prize for physiology and medicine in 1910. His chief work was the study of the cell and its nucleus elements; the decomposition of albumen in its conversion to peptones; discovery of adenin, thymin; action of the nucleic acids on bacteria. He also made researches in trypsin digestion. He wrote *Untersuchungen über die Nukleine und ihre Spaltungsprodukte* (1881); *Die Gewebe des menschlichen Körpers und ihre mikroskopische Untersuchung* (1889-91) in collaboration with Behrens and Schiefferdecker; *Leitfaden für medizinisch Chemische Kurse*, 7th ed. (1917).

KOSSINNA, kô'si-nä, **Gustaf**, German archaeologist: b. Tilsit, Sept. 28, 1858; d. Berlin, Dec. 20, 1931. He studied at Göttingen, Leipzig, Berlin and Strasbourg and was promoted to doctor of philosophy at Strasbourg University (1881). He was appointed to a position in the University Library at Halle (1886) and in the Berlin Library the same year; and became curator of the Bonn Library (1887), and of the Royal Berlin Library (1892) and librarian (1894). He was given the degree of professor (1900) and undertook a prolonged trip to study the German museums of archaeology. In 1902 he was made professor of German archaeology of the Berlin University and founded the *Gesellschaft für Deutsche Vorgeschichte* (1909). He was a prolific contributor to the archaeological journals. On ethnology he wrote *Die ethnologische Stellung der Ostgermanen* (1896); *Die Indogermanen Frage archäologisch beantwortet* (1902); *Die Herkunft der Germanen* (1911).

Among his works on archaeological subject should be cited *Ursprung des Germanennamen* (1895); *Die vorgeschichtliche Ausbreitung des Germanen in Deutschland* (1896); *Zur Geschichte des Volksnamens Griechen* (1896). He is perhaps best remembered for his *Altgermanische Kulturhöhe* (1927).

KOSSOVO. See **Kosovo**.

KOSSUTH, kôs'ôoth, **Ferenc**, Hungarian statesman: b. Budapest, Nov. 16, 1841; d. there May 25, 1914. The son of Lajos Kossuth (q.v.) he was an engineer prior to 1894, when he returned to Hungary following restoration of the constitution. He became a leader of the independence party in the legislature, and from 1900 until 1909 he served as minister of commerce in the Cabinet of Sándor Wekerle.

KOSSUTH, **Lajos**, Hungarian patriot and statesman: b. Monok, Sept. 19, 1802; d. Turin, Italy, March 20, 1894. He came of a family of noble rank and of the Protestant religion. He studied and practised law, and in 1832 entered the Parliament of Pest as the deputy of absent magnates; at this period he also edited a newspaper which, owing to the stringent press laws, had to be circulated in manuscript. For persisting in publishing the parliamentary debates he was condemned to four years' imprisonment, but was released in 1840 before the end of his term. In 1841 he became editor of the *Pest Journal*, a paper that advocated very advanced views, and in 1844 founded the National League in opposition to the Viennese government. In 1847 he was elected to the Hungarian Diet by the National Party, and in 1848 became minister of finance in the Hungarian government. His influence had much to do in bringing about the revolution which followed and in which he played the most prominent part, being appointed governor with dictatorial powers by his fellow countrymen, but the intervention of Russia rendered all the efforts of the Magyars unavailing. He resigned his position in favor of Arthur von Görgey (whom he accused of treachery), and in 1849 he found it necessary to take refuge in Turkey, where he was kept as a prisoner. Being released in 1851 through the influence of Great Britain and the United States, he soon after visited both these countries and was received in the most enthusiastic manner. He endeavored subsequently to induce Napoleon III of France, as well as Victor Emmanuel II of Italy, to act against Austria in favor of Hungarian independence, but without success. Though by the amnesty of 1867 he might have returned to his native land he did not do so, but lived chiefly in Italy and was never fully reconciled to the union that had taken place between Austria and Hungary. His *Memories of My Exile* appeared in English in 1880. He was the father of Ferenc Kossuth (q.v.).

KOST, **Frederick W.**, American landscape painter: b. New York City, 1861; d. Brookhaven, Long Island, N. Y., Feb. 23, 1923. He studied at the National Academy of Design, New York City, and in Munich and Paris. In the New York Metropolitan Museum of Art is his *Frost Morning*; his *Southfield Marshes*. *Statens Islands* hangs in the Brooklyn Institute of Arts and Sciences; *On the St. John River*, N. B., is in the Pennsylvania Academy of Fine Arts, Philadelphia.

He was a member of the Society of Land-Painters, of the Brooklyn Society of Arts and Crafts, the Artists' Fund Society, the Society of American Artists, etc.

KÖSTER, ke'stèr, Hans, German dramatic poet: b. Kritzow, 16 Aug. 1818; d. Ludwigslust, 6 Sept. 1900. He studied philosophy, studied in Italy and France and then took up residence in Berlin. He moved later to Weimar, then to Villa Priorsberg, near Neuzelle, Brandenburg, for agricultural work. His dramatic works treat mostly of historical events, show lively action and frequently capital characteristics; the earlier ones obtained the approval of the critics but did not reach the public. Later dramas of his, often performed, are 'Ulrich von Hutten' (Breslau 1846); 'Hermann der Cherusker' (Berlin 1861); 'Der Kurfürst' (ib. 1851), etc. He also wrote the tales 'Liebe und Leiden' (Breslau 1852) and 'Erlebnisse und Gestaltungen' (Berlin 1872). The publications entitled 'König Wilhelm und sein Heer' (Berlin 1868) and 'Kaiser Reich' (ib. 1872) are collections of his patriotic poems. He also wrote biblical poetry such as 'Hiob' and 'Die Bergpredigt' (Bielefeld 1885). His Prusso-German sentiments, so richly expressed in a number of political pamphlets, were also made manifest in his speeches as member of the North German and Reich of the first German Reichstag.

KOSTER, Hans Ludwig Raimund von, German admiral: b. Schwerin, 29 April 1844. He studied at the Werder Gymnasium, Berlin, and was candidate for cadet in the navy (1859), then appointed to active service on the coast. He was promoted to lieutenant before reaching his 20th birthday and made a cruise around the world (1878-80). He was chief of staff in the admiralty (1884-87) and rear-admiral in 1889. At the end of 1893 he was director of the Department of Marine, and, until 1896, was in command of the first squadron, then chief of the Baltic marine station. In 1899 he was inspector-general of marine, in which capacity he commanded the squadrons of manoeuvre. In 1900 he was given the rank of hereditary noble and appointed to the command of the active battle fleet (1903). He was raised to the rank of great admiral in 1905, retiring from active service (1906) to devote his time to the advancement of the "greater navy" proposition. In 1908 he was elected president of the German Navy League. His title of nobility made him a member of the Prussian House of Lords.

KOSTER, or COSTER, Samuel, Dutch dramatist: b. Amsterdam, 16 Sept. 1579; d. some time after 1662. He obtained his medical diploma (1610) and practised as a physician at Amsterdam where he was director of the infirmary till 1662. He founded, after Italian style (1617), the *Duytsche Academie*. He is especially noted for his delightful comedies 'Tijl van der Schilden' (1613) and 'Teeuwis de boer' (1612), which show up his talents in drawing up a plot and giving color to the characters. He wrote tragedies, such as 'Ithys'; 'Iphigenia' (1617), a political satire, 'Isabella,' after Ariosto, in conjunction with J. J. also 'Polyxena' (1619). His works are published in collective form, edited by R. M. Olewijn (Haarlem 1883). Consult Rossing, who wrote his biography (Leyden 1875).

KÖSTLIN, kèst-lèn, Christian Reinhold, German poet and criminologist: b. Tübingen, 29 Jan. 1813; d. there, 14 Sept. 1856. He practised law in Stuttgart (1836) but settled in Tübingen as private teacher (*docent*). He was writing, in the meanwhile, poems, also stories for the *Novellenzeitung*, all under the name of C. Reinhold, which were published collectively later (Bremen 1847-48). The success in his career as a jurist was established by his 'Die Lehre vom Mord und Totschlag' (Stuttgart 1838) and 'Wilhelm I, König von Württemberg, und die Entwicklung der württembergischen Verfassung' (ib. 1839). He was given the degree of professor (1851). His most important works on criminal law in his later life are 'Der Wendepunkt des deutschen Strafverfahrens im 19 Jahrhundert' (Tübingen 1849); 'Die geschwornen gerichte' (Leipzig 1851); 'Geschichte des deutschen Strafrechts' (Tübingen 1859).

KÖSTLIN, Julius, German Protestant theologian: b. Stuttgart, 17 May 1826; d. 12 May 1902. He traveled in England and Scotland (1849) and was appointed vicar at Stuttgart (1850), soon to become private instructor (*Repetent*) at the theological seminary at Tübingen. He was given the appointment of professor of Theology at Göttingen (1855), Breslau (1860) and Halle (1870), and retired in 1896. He wrote, among other numerous works, 'Luthers Lehre von der Kirche' (Stuttgart 1854); 'Das Wesen der Kirche, beleuchtet nach Lehre und Geschichte des Neuen Testaments' (ib. 1854); 'Luthers Theologie' (ib. 1863); 'Martin Luther, sein Leben und seine Schriften' (Elberfeld 1875; 5th ed., Berlin 1903); 'Luthers Leben,' a very popular work (Leipzig 1882; 9th ed., 1891); 'Der Glaube und seine Bedeutung für Erkenntnis, Leben und Kirche' (Berlin 1895); 'Christliche Ethik' (Berlin 1898). He was editor of *Theologischen Studien und Kritiken* from 1873. Consult 'J. Köstlin, Autobiographie' (Danzig 1891).

KÖSTLIN, Karl Reinhold, German theologian and aesthetic: b. Urach, 28 Sept. 1819; d. Tübingen, 12 April 1894. He studied philosophy and theology at Tübingen and Berlin but soon devoted himself solely to philosophy. He was given the degree of assistant professor (1857) and made professor of aesthetics and art history (1863). He wrote 'Der Lehrbegriff des Evangeliums und der Briefe Johannis' (Berlin 1843); 'Der Ursprung der synoptischen Evangelien' (Tübingen 1853); 'Goethes Faust, seine Kritiker und Ausleger' (Tübingen 1860); 'Hegel in philosophischer, politischer und nationaler Beziehung' (Tübingen 1870); 'Ästhetik' (Tübingen 1863-69), his chief work; 'Richard Wagners Tondrama: Der Ring des Nibelungen' (Tübingen 1877); 'Ueber die Schönheits begriff' (Tübingen 1879); 'Geschichte der Ethik' (Tübingen 1887); 'Prologomena zur Ästhetik' (Tübingen 1889).

KOSTOMAROV, kö'stō-mā'rōf, Nikolai Ivanovitch, Russian historian: b. Ostrogosz, Government Veronezh, 1817; d. Saint Petersburg, 19 April 1885. He studied in the Kharkov and Moscow universities and entered a dragoon regiment (1836) but obtained his release and was appointed teacher (*docent*) at the Kiev University (1846). He was dismissed the following year for his activities in Little

Russian literature, and joined his friends Szewczenko, Kulisz, and Bitozerski in a secret literary society to resuscitate the Slavophile propaganda. His action caused his arrest and deportation to Saratov. After the death of Czar Nicholas I in 1855 he obtained permission to travel abroad, and in 1859 he was appointed professor of history at Saint Petersburg. On the closing of the university in 1861 in consequence of a students' riot he retired to take up literary work alone, assuming the *nom-de-plume* of Jeremija Halka. His poetic works were written in Little Russia vernacular and were published in Odessa (1875) in a collective issue, the dramas, *Sawa Czalyi* (1838) and *Ukrainskie ballady* (1839), among them.

KOSTROMA, kŭ-strŭ-mà, river, USSR., a tributary of the Volga, which rises in the north-eastern part of the Kostroma Region and flows in a south-southwesterly direction; 200 miles of its length of 250 miles are navigable. At its junction with the Volga stands the city of Kostroma.

KOSTROMA, city, USSR, in the north central part of European Russia, capital of the Kostroma Region. It is located on the left bank of the Volga at its confluence with the Kostroma River, 45 miles east-northeast of Yaroslavl. The richly adorned Cathedral of the Assumption dates from the 13th century. The city is an important center of the lumber industry, and manufactures include cotton and flax textiles, leather goods, machinery, and woodenware. Kostroma is said to have been founded in 1152 by Juri Dolgoruki. During the 13th century it lay within the Rostov-Suzdal principality, and in the 15th century it passed to the Moscow principality. The Tatars plundered Kostroma on several occasions. Pop. (1939) 121,205.

KOSTRZYN, kôs'chĭn, city, Poland, in Poznan Department, on the Oder at its confluence with the Warta, 53 miles east of Berlin; formerly in Brandenburg, Prussia, it was known as KŮSTRIN or CŮSTRIN. The Prussian crown prince, later Frederick the Great, was held prisoner here by his father during 1730-1732. An important industrial city, its manufactures include potato meal, machinery, furniture, cigars, and stamped and enamel work. Kostrzyn developed from a fishing village in the 13th century, and it became of importance after 1535, when a fortress was built here for the protection of Berlin. It was bombarded by the Russians in 1758, and it was held by the French from 1806 until 1814. In 1945, during World War II, heavy fighting occurred in the vicinity between the Germans and advancing Russians. With the end of the war that year, the Potsdam Conference assigned the city to Poland. Pop. (1939) about 20,000.

KOSZALIN, kô-shà'lĕn, city, Poland, capital of a province of the same name, 5 miles from the Baltic Sea and 88 miles northeast of Szczecin (Stettin); formerly within Pomerania, Prussia, it was named KŌSLIN, or CŌSLIN. It contains a notable 14th-century Gothic church. The city is an important railroad junction. Brewing, fish preserving, and paper manufacture are the principal industries. Koszalin was founded about 1188 and was incorporated as a town in 1266. The Russians captured it in 1945, during World War II. With war's end the Potsdam Conference

of that year assigned it to Poland. The province of Koszalin, formerly part of the Szczecin department, was constituted in 1950. Pop. (1946) 31,937.

KOSZTA, kô'stâ, **AFFAIR**, in United States history, a diplomatic incident. A Hungarian refugee to the United States, named Martin Koszta, obtained his "declaration of intentions" or first citizenship papers in 1850. He visited Smyrna (Izmir) in 1853 and was seized by members of the crew of the Austrian brig *Huza* on June 21. Capt. Duncan Nathaniel Ingraham (q.v.) of the American war sloop *Saint Louis* under instructions from the United States minister at Constantinople (Istanbul), demanded his release. Hearing that the prisoner was to be transported secretly to Trieste, Captain Ingraham set a time limit to the surrender and made preparations to attack the *Huza* on July 2. The prisoner was surrendered. The Austrian government issued to the European powers a note of protest against the American procedure. Baron Hülsemann, Austrian chargé d'affaires at Washington, asked Secretary of State William Learned Marcy (q.v.) "to disavow the conduct of its agents . . . hasten to call them to a severe account, and tender to Austria a satisfaction proportionate to the magnitude of the outrage," claiming the arrested man to be an Austrian citizen and the action of Ingraham violative of international law. Marcy's reply, within a month, declared Koszta was not a citizen of Austria but "that Koszta, when seized and imprisoned, was invested with the nationality of the United States, and they therefore had the right, if they chose to exercise it, to extend their protection to him." The other powers ignored the Austrian protest.

KOTA BAHRU, kô'tâ bâ'rōō, city, British Malaya, capital of the state of Kelantan. Federation of Malaya, on the right bank of the Kelantan River 6 miles from its mouth. It is served by the east coast branch of the Malayan Railway. In December 1941, during World War II, the Japanese made a landing here in their drive down the Malay Peninsula to Singapore. Pop. (1947) 22,765.

KÖTHEN or **CÖTHEN**, kŭ'tĕn, city, many, on the Ziethe 12 miles southwest of Dessau. The 15th-century cathedral, in the Gothic style, has notable old glass paintings and a fine organ. Until 1853 Köthen was the capital of the former duchy of Anhalt-Köthen; the former ducal residence contains a library, picture gallery, art museum. There are lignite mines in the vicinity. Machinery and metal goods are manufactured. The city dates back to the 10th century, when it was a Slav settlement. It was chartered as a town in the 12th century; and in 1603 it became the capital of the principality, later duchy, Anhalt-Köthen. Pop. 26,595.

KOTKA, kô't'ká, seaport, Finland, capital of Viipuri department, in the Gulf of Finland on the island of Kotka at the mouth of the Kymmen River. Cellulose, paper, woodenware, and sugar are manufactured. Kotka is an important shipping point for lumber. Pop. (1946) 22,476.

KOTO, a Japanese musical instrument, having a long box, larger at one end than the other, and with a convex top over which 13 silk

strings are strung and fastened tightly at each end, each string having a bridge. To tune the instrument it is necessary to move the bridges. The instrument is played with both hands like a harp.

KOTONU, kô-tô-nôô', or **COTONU**, principal seaport of Dahomey, French West Africa. See **COTONU**.

KOTOR, kô'tôr, Yugoslavia, a seaport of Dalmatia, 38 miles southeast of Dubrovnik (Ragusa), formerly known as **CATTARO**. Industries include lacemaking and the manufacture of cheese. It contains a Roman Catholic cathedral dating from the 9th century, and Serbian Orthodox churches and monasteries. Kotor, known to the Romans as *Ascrivium*, was subject to several nations in turn during the Middle Ages. It was acquired by Austria in 1707, and Italy in 1805, and during 1807-13 it formed part of the French Empire. The Congress of Vienna restored it to Austria in 1814, and after the First World War it was incorporated in the newly-established kingdom of Yugoslavia. Pop. (1940) 4,985.

KOTOW, kô-tow', or **KOWTOW**, a Chinese form of obeisance; a ceremony in which an inferior, kneeling, touches his forehead to the ground.

KOTZEBUE, kôt'së-bôô, **August Friedrich Ferdinand**, German dramatist; b. Weimar, May 3, 1761; d. Mannheim, March 23, 1819. He held official positions at Saint Petersburg and Weimar, but in 1800 was arrested and sent to Siberia. Recalled by Paul I, he became director of the German theater in Saint Petersburg. After the death of the emperor he returned to Weimar, where he attacked Johann Wolfgang von Goethe (p.v.) and other great German authors of the romantic school. During 1803-05 he lived in Berlin, assisting in editing *Der Freimütige*, an antimantic journal. In 1813, as Russian councillor of state, he followed the military headquarters, constantly writing to excite the nations against Napoleon. From 1817 he lived in Germany as a secret Russian agent; he was assassinated by a student for ridiculing the Burschenschaft (q.v.) movement. His plays included *Menschenhass und Reue*, and *Die deutsche Kleintadler*. Besides plays, he wrote biographical and historical works, novels, sketches, and stories.

KOTZEBUE, **Otto von**, Russian navigator; second son of A. F. Kotzebue (q.v.): b. Reval, Dec. 30, 1787; d. there, Feb. 15, 1846. In his 17th year he accompanied Krusenstern on his voyage round the world. In 1815 he was appointed to the command of the ship *Rurik*, destined to ascertain the practicability of a northeast passage in the direction of Bering Strait. He discovered several groups of islands in the Pacific, and a large sound on the southeast of Bering Strait, which now bears his name; and returned after a three years' absence. The results of the voyage were published in a work called *A Voyage of Discovery in the South Sea and to Bering's Strait in Search of a Northeast Passage* (1821-23). In 1823 he was commissioned by the Emperor Alexander to make a third voyage round the world. He returned in 1829 publishing the results of the voyage in a work which has been of great importance to hydrography, particularly that of the Pacific, *A New Voyage Round the World* (1830).

KOTZEBUE SOUND, an inlet on the northwest coast of Alaska, north of Seward Peninsula. The Noatak and Kobuk rivers drain into it. Otto von Kotzebue discovered the inlet in 1816.

KOUMISS. See **KUMISS**.

KOUROPATKIN, or **KUROPATKIN**, kôo-rû-pât'kyin, **Aleksei Nikolaevich**, Russian soldier; b. March 17/29, 1848; d. Pskov, Russia, Jan. 22, 1925. He was trained at the Imperial Military College and studied in various European countries; in 1874 became a member of the general staff of the army; in 1876-1877 assisted Mikhail Skobelev in the conquest of Khokand, Turkestan, and its reorganization as the territory of Ferghana, and in 1877-1878 won high distinction in the Russo-Turkish War by his services at Plevna (Pleven) and the Chipka Pass. In 1878 he was made colonel and in 1878-1879 was chief of the Asiatic bureau of the general staff. In 1880-1881 he was in Middle Asia, where he commanded the main detachment against the Tekke Turkomans, and, after a forced march of 600 miles across the desert, stormed Geok-Tepe, by which victory he won his greatest reputation. He was made major general in 1882, lieutenant general in 1890, governor of the Transcaspian district and commander of the troops in that district in 1890, and minister of war in 1898. In 1901 he became general of infantry. At outbreak of hostilities with Japan in 1904 he was sent to command the Russian forces in the Far East. After the Battle of Mukden he was superseded by Gen. Nikolai Linevich, under whom he continued in service as commander of the First Manchurian Army. His failure in the Far East was attributable, in part at least to his position of subordination to the viceroy. In World War I he fought on the western front of Russia before becoming adviser to the emperor when the latter succeeded the Grand Duke Nicholas in chief command of the army. He was appointed governor general of Turkestan in August 1916, but was dismissed after the February Revolution the following year. He retired to Pskov, where he taught school.

Among his writings was *The Russian Army and the Japanese War*, translated into English in 1909. Extracts from his diaries were published by the Soviet government in *Red Archives* (1922, 1924 and 1935).

Consult D. Story, *The Campaign with Kuropatkin* (London 1904).

KOUSSEVITZKY, kôo-së-vîts'kî, **Serge (Alexandrovitch)**, American orchestra conductor; b. Vyshni Volochek in the Tver (now Kalinin) Region, Russia, July 26, 1874; d. Boston, Mass., June 4, 1951. He studied and then taught the double bass at the Philharmonic Music School in Moscow and subsequently became the leading player of that instrument in the Moscow Imperial Orchestra. Under Czar Nicholas II he was director of State Symphony Orchestras (1917) and of Grand Opera in Moscow (1918). With the assistance of his wife, Natalya Konstantinovna Koussevitzky, he established in 1909 the Russian Music Publishing Company, the profits of which went to young composers. Later he acquired the Guthrie Music House for a similar purpose. Between 1910 and 1917 he and his orchestra and celebrated soloists toured extensively through Russia, on three occasions journeying 2,300 miles down the Volga River to present concerts before widely scat-

tered audiences hitherto denied such privilege. Early in his career as conductor he led the orchestra of the Berlin Hoch Schule, and later he conducted in other European countries, in Britain making guest appearances with the London Symphony Orchestra and with that of the British Broadcasting Corporation. Leaving Russia in 1917 after the October Revolution, he made his home first in Paris, and there, in 1921, he instituted the "Concerts Koussevitzky." He was invited to the United States in 1924 to become conductor of the Boston Symphony Orchestra, and in the course of the next two decades he developed it into one of the most perfect symphonic ensembles in the world. The string tone of the orchestra, in particular, was considered to be unequalled. At Lenox, Mass., he established in 1934 the Berkshire Music Center, and its symphonic festivals soon became an outstanding feature of American musical life. In 1940 he organized the Berkshire Music School in conjunction with this institution.

KOVALEVSKI, kü-vü-lyäf'skü-ï, **Aleksandr Onufriyevich**, Russian embryologist: b. Dünaburg, Nov. 7, 1840; d. St. Petersburg, Nov. 22, 1901. He studied in Heidelberg and Tübingen, and after traveling, became professor at the St. Petersburg University and member of the Academy of Science. He rendered useful service by his researches into the formation of the ascidians (1866-1871) and Amphioxus (1867) and evolved the first acceptable hypothesis of the relationship between vertebrates and invertebrates. He did similar research work effectively on nearly all branches of the animal kingdom; among them was his useful work on the anatomy of the Balanoglossus (1860), on the formation of the Ctenophora coelenterates (1865), the embryology of worms and arthropods (1871). Other work concerned the organs of secretion and lymph-cysts of the vertebrates, brachiopods and coelenterates (1874). He wrote *Anatomie des Balanoglossus delle Chiaje* (1866); *Entwicklungsgeschichte der einfachen Ascidien* (1866); *Entwicklungsgeschichte des Amphioxus lanceolatus* (1867); *Coeloplana metschnikovii* (1882); *Etude sur l'anatomie de l'Acanthobdella peledina* (1896).

KOVALEVSKI, Sonya (Russ. name SOFYA VASIL'YEVNA KOVALEVSKAYA, nee KORVINA-KRUKOVSKAYA), Russian mathematician and writer: b. Moscow, Jan. 15, 1850; d. Stockholm, Feb. 10, 1891. After marrying in 1868 Vladimir O. Kovalevski, brother of Aleksandr Onufriyevich Kovalevski (q.v.), to legalize her as a college student, she studied mathematics at Heidelberg. Unable, because of her sex, to enter the University of Berlin, during 1871-1874 she studied privately under Karl Weierstrass, and in 1874 she was granted a degree at Göttingen for a notable thesis on partial differential equations. From 1884 until her death she was professor of higher mathematics at Stockholm University.

For her solution of the problem "how to perfect in one perfect point the theory of a movement of a solid body around an immovable point," she received the Prix Bordin of the Paris Academy, raised from 3,000 to 6,000 francs for the extraordinary production. In the realm of light literature she wrote such works as *Der Privatdozent* (1877), a description of German university life; *Der Kampf ums Glück* (with Anna

Leffler, 1887); *Kindheitserinnerungen* (1890); and *Die Nihilisten* (1896).

KOVNO. See KAUNAS.

KOVROV, küv-rôf', town, Russia, on the Klyazma River, in the Vladimir Oblast of the RSFSR, 150 miles east of Moscow. It is a railroad center, and has manufactures of cotton goods, motorcycles, excavators, and machine tools. It was chartered in 1778. Pop. (1939) 67,163.

KOWEIT. See KUWAIT.

KOWLOON, kou'loön', also **KAULUN** or **KAULUNG**, town, China, on the west shore of Kowloon Peninsula, separated from Victoria or Hong Kong Island by the Hong Kong harbor across which it maintains ferry service. It is a part of the British colony of Hong Kong. Great Britain obtained cession of Kowloon Peninsula, an area of three square miles, in 1860, and was granted a lease in 1898 for the adjoining New Territory, with adjacent islands, Deep Bay and Mirs Bay, amounting to 356 square miles. The city extends into the New Territories and has an urban area of 18 square miles.

In conjunction with Victoria, Kowloon is a free port, and has manufactures of cotton goods, cement, rubber shoes, cigarettes, and rope, and several sugar mills. A railroad connects the port with Canton. A 1949 estimate of Greater Kowloon, which includes Kowloon proper on the peninsula and New Kowloon in the New Territories, gives the population as 700,000. Kaitak, Hong Kong's international airport, is located on the outskirts of the city.

KOZLE, kôzh'lě (Ger. COSEL or KOSEL), town, Poland, in Opole Province, on the Oder River, 25 miles south-southeast of Oppeln (Opole). Before 1945 it was a part of Germany, in Upper Silesia. It has sugar refineries, paper and flour mills, and metalworking plants. Pop. (1939) 13,337; (1946) 8,277.

KRAAL, kräl, an Afrikaans word used in South Africa to designate a native village whose circular huts are surrounded and protected by a circular hedge or stockade. The word may be derived from an African source, but it is probably taken from the Spanish *corral* or the Portuguese *curral*, meaning a cattle pen or fold. Hence the term is used to define the folds or enclosure built for the protection of cattle.

KRAFFT-EBING, kräft'ä'bīng, **BARON Richard von**, German neurologist: b. Mannheim Aug. 14, 1840; d. Mariagrun, near Graz, Dec. 2, 1902. He studied psychology at Heidelberg, Zurich, and Prague, and after service in the Franco-Prussian War he directed an electrotherapeutic clinic at Baden-Baden. Successively, he was appointed to professorships of psychology at Strasbourg (1872), Graz (1873), and Vienna (1880). In 1902 he returned to Graz. His *Lehrbuch der Psychiatrie auf klinische Grundlage* (1872, 1880) and his *Lehrbuch der gerichtlichen Psychopathologie* (1875) determined the place of psychiatry in clinical science. In neurology also he did great service by his work on epilepsy, hemiplegia, and paralysis agitans. His *Psychopathia sexualis* (1886; 17th ed. 1924) was translated into seven languages.

KRAFT or **KRAFFT**, kräft, Adam, German sculptor and architect: b. probably in Nürnberg, between 1455 and 1460; d. Schwabach, near Nürnberg, between Dec. 13, 1508 and Jan. 10, 1509. His earliest known work was a statue of Sebald Schreyer in the church of St. Sebaldus in Nürnberg. He carved monuments in the Church of St. Mary the Virgin for the Pergenstorff family (c.1498) and in the chapel of the Church of St. Aegidius for the Landauer family (1503). One of his greatest achievements was the tabernacle in the Church of St. Lawrence (1493-1496), a magnificent example of late Gothic architecture. After 1500 his style was characterized by a greater formal simplicity, as in the seven reliefs (*Stations of the Cross*, 1505-1508) near the entrance of St. John's Church (six were moved to Busch-Reisinger Museum of Germanic Culture, Harvard University) and the 15-figure group in Holzschuher chapel of the same church.

KRAGUJEVAC or **KRAGUYEVATS**, krā'gōo-yē-vāts, city, Yugoslavia, in central Serbia, 60 miles south-southeast of Belgrade. was the cultural and political center of Serbia in the 19th century, and served as the Serbian capital (1818-1839) under Miloš Obrenović I. Its industries include munitions, vegetable canning, and flour milling. When Kragujevac oblast was established in 1949, the city became its capital. Pop. (1948) 32,528.

KRAIT, krīt, a venomous snake (*Bunarus coerules*), related to the cobras, which inhabits India and Ceylon and causes more deaths than any other snake. It reaches a length of four feet or more, has smooth scales, a ridge along the spine, no hood, and is bluish or brownish black with highly variable bars and markings of yellow and white.

KRAKATAU or **KRAKATAO**, krā-kā-tōu' (also KRAKATOA, krā-kā-tō'ā; local Malay name RAKATA, rā-kā'tā), volcanic island, Indonesia, in the Sunda Strait between Sumatra and Java, located in 6° 9' south latitude and 105° 27' east longitude. An eruption of its volcano (alt. 2,667 feet), which began on May 20, 1883, was climaxed on the night of August 27-28 by one of the most terrific seismic explosions ever recorded. The sound of the concussion was heard in Australia, the Philippines, and Japan. An estimated cubic mile of rock was thrown into the air, two thirds of the island, including the volcano's crater, disappeared, and the resulting sea waves caused the death of about 36,000 persons in western Java. Clouds of volcanic dust were diffused through the atmosphere the world around and gave rise to brilliant sunsets, observed as far away as England. As a result of the explosion the boundaries of the Sunda Strait were altered, islets disappeared, and new ones were formed.

Subsequent eruptions occurred in 1927, when an underwater explosion formed a new crater, Anak Krakatau (Child of Krakatau), and again in 1933. Further volcanic activity was reported in 1950 and 1952. Never inhabited, Krakatau since 1927 has been a low island measuring about three miles across, with a crater lake 820 feet in diameter and 230 feet deep.

KRAKEN, krā- or krā'kēn, a term, of Norwegian origin, applied to a fabulous sea-monster, generally assumed to be a gigantic squid.

KRAKOW, krā'kōōf (Eng. CRACOW, krā'kō; Ger. KRAKAU, krā'kou), province, Poland, bounded on the east by the province of Rzeszów, on the west by that of Katowice, and on the south by Czechoslovakia. Its area of 6,710 square miles before World War II was diminished to 5,901 square miles in 1945, when part of its territory was transferred to the newly formed Rzeszów province. Through the province of Krakow run the Vistula and its tributary the Dunajec rivers, and near its southern border is the Ryśy (alt. 8,212 feet), the highest peak in Poland. Mineral products of the province include salt, iron, lead, and coal, and its chief agricultural products are grains, potatoes, and livestock. Among important industries are lumbering and the manufacture of machinery, railroad cars, chemicals, and wood and metal products. Its capital is Kraków; other important urban centers are Tarnów, and Nowy Sącz; and resort centers are Zakopane, Krynica, and Rabka. Pop. (1946) 2,005,779.

KRAKOW (Eng. CRACOW; Lat. CRACOVIA), city, Poland, capital of Kraków Province, situated at an altitude of 720 feet on the Vistula River, 155 miles south-southwest of Warsaw. Besides being one of the cultural centers of Poland, Kraków is a rail junction and commercial center, manufacturing railroad cars, boilers, agricultural machinery, chemicals, clothing and paper, and processing food, tobacco, and hemp. Nowa Huta (pop. c. 100,000), a metallurgical center which grew up on the sites of the nearby villages of Mogiła and Pleszów after 1949, became a part of Kraków in 1951. Among the city's many historic monuments are St. Florian gate and Barbican fortress, which were part of the walls originally surrounding the city; the 13th century cloth hall, which contains the Polish National Art Museum; and the Gothic cathedral (rebuilt in the 14th century) and royal castle, both situated on the Wawel, a hill in the eastern part of the city. The city also has many richly decorated churches, such as the Church of St. Mary, which contains a carved altar executed by Veit Stoss (q.v.), and, in the outskirts, two prehistoric mounds, one of which is named after Prince Krak, the traditional founder of the city. Noted for its intellectual life, Kraków has many learned societies and academies, and is the seat of the University of Kraków (also called Jagiellonian University), Poland's oldest university, founded 1364.

History.—Inhabited from the 4th century by the Vistulans, a western Slav tribe, Kraków came under the domination of Bohemian princes in the 10th century, before Boleslav I (called Chrobry, "the Mighty," r. 992-1025) proclaimed himself king of Poland and established a bishopric there (c.1000). Kraków was the capital of Poland from 1138 to 1609, when the royal house was transferred to Warsaw, but continued to be the coronation and burial place of the Polish kings until 1764. In 1795 it passed to Austria in the Third Partition of Poland and from 1809 to 1815 was part of the Grand Duchy of Warsaw created by Napoleon. By the provisions of the Congress of Vienna (1815) it became the Republic of Kraków, a protectorate of Russia, Prussia, and Austria, but in 1846 it reverted to Austria as the Grand Duchy of Kraków. After World War I the city was included in the reconstituted independent Polish state and became the capital of the newly created Kraków Prov-

ince. It was captured by the Germans in World War II (1939), but suffered relatively little damage, although the university was pillaged. Kraków was taken from the Germans by the Russians on Jan. 19, 1945. Pop. (1950 est.) 347,500.

KRANACH, Lucas. See **CRANACH.**

KRAPP, George Philip, American educator: b. Cincinnati, Ohio, Sept. 1, 1872; d. New York, N. Y., April 21, 1934. After graduation from Wittenberg College in 1894 he attended Johns Hopkins University, receiving his Ph.D. in 1899. He taught English at Horace Mann School in New York City for one year, and for 10 years from 1897 taught both at Teachers College and at Columbia University. The University of Cincinnati called him from 1908 to 1910, but he returned to Columbia and continued there as professor of English throughout his life.

His greatest contributions were made in the field of the English language as spoken and written in the United States, a study in which he pioneered with such books as *Modern English, Its Growth and Present Use* (1909) and *The Rise of English Literary Prose* (1915). He argued against pedantic purism in the use of language holding that standards of speech should be based on current cultivated usage rather than on arbitrary rules.

KRASICKI, krä-sëts'kë, Ignacy, Polish poet: b. Dubiecko, Poland, Feb. 3, 1735; d. Berlin, Germany, March 14, 1801. Of aristocratic Roman Catholic parentage, he studied at the Jesuit College in Lwow (Lvov), and lived in Rome from 1759 to 1761. He was appointed bishop of Ermeland (1766), and after its annexation by Prussia (1772), he became a Prussian citizen and spent much time in Berlin and Potsdam where he enjoyed the favor of Frederick the Great. He was made archbishop of Gniezno (Gnesen) in 1795. Under the influence of the French cosmopolitanism of the court of Frederick the Great, Krasicki wrote volumes of *Bajki i przypowieści* (*Fables and Tales*, 1779), *Satyry* (*Satires*, 1779), and *Listy* (*Epistles*, 1780-1784), which display his polished, epigrammatic style.

KRASINSKI, krä-sën'y'-skë, COUNT Zygmunt, Polish poet and playwright: b. Paris, France, Feb. 19, 1812; d. there, Feb. 23, 1859. At the age of 12 he began to write historical novels, influenced by those of Sir Walter Scott, and at 15 matriculated at the University of Warsaw. His greatest work, *Nie-boska Komedya* (*The Undivine Comedy*, published 1834) was written when he was only 21 years old. This drama (English translation by H. E. Kennedy, 1924), depicting the social and cultural conflicts within bourgeois society, was followed by another prose drama, *Irydion* 1836; (*Iridion*, English translation by Florence Noyes, 1927), a story laid in ancient Rome, representing allegorically the tragedy of Poland. Deeply concerned with the philosophical problems of modern man as well as with the political plight of Poland, Krasinski presented his messianic philosophy based on love and the Hegelian "kingdom of the Spirit" in the poems *Przedświt* (*The Dawn*, 1843) and *Psalmy przyszłości* (*Psalm of the Future*, 1845) and in several prose writings.

KRASNODAR, kräs'nô-där, territory, USSR, covering 32,800 square miles in the Russian SFSR, from the Sea of Azov and the Black Sea north to the lowlands of the Kuban River, which rises in the Caucasus Mountains and with its affluents the Belaya and Laba rivers drains the territory. The variegated agricultural products of the area range from wheat, sunflowers, barley, tobacco, and corn in the north, to cotton, hemp, and soybeans near the Sea of Azov, and citrus fruits, oil, wines, and tea in the subtropical climate of the Black Sea littoral. Rice is grown in marshy sections of the lower Kuban River and, in the mountain meadows and valleys of the Caucasus, livestock is raised.

Oil is found near Krasnodar, its capital, and Neftegorsk, and is refined at Krasnodar, Armavir, and Tuapse, the latter two places being the chief petroleum export points. The leading industries of the territory are the processing of agricultural and petroleum products and fishing. Krasnodar Territory was formed in 1937 out of the former Azov-Black Sea Territory. Pop. (1946 est.) 3,000,000.

KRASNODAR (formerly **EKATERINODAR, ê-kât-ër-ë'nô-där**), city, USSR, capital of Krasnodar Territory, in the southeastern part of the Russian SFSR, 160 miles south of Rostov. It is situated in a fertile lowland on the Kuban River, and is a processing and distribution center for such agricultural products as vegetable oils, alcohol, canned fruits, starch, tobacco, and flour. An important industrial city, Krasnodar produces steel and heavy machinery, and has railroad shops and oil refineries. A regional museum, a research institute, and several colleges are located in the city, which is one of the leading cultural centers of the Caucasus.

Krasnodar was founded in 1794 as Ekaterinodar (Catherine's Gift) under Catherine II and in 1920 was renamed Krasnodar (Red Gift). During World War II the city suffered heavy damage and was occupied by the Germans from August 1942 to February 1943. Pop. (1939) 203,946.

KRASNOVODSK, kräs'nô-vötsk, city USSR, in western Ashkhabad oblast (region) Turkmen SSR, 320 miles west-northwest of Ashkhabad. A seaport on the Caspian Sea and the western terminus of the Trans-Caspian Railroad, it is a shipping center for oil, cotton, grain, timber, and salt, and has petroleum-refining and food-processing plants. Founded in 1869, Krasnovodsk developed with the extension of the railroad (1895) and from 1939 to 1947 was the capital of the former Krasnovodsk oblast. Pop. (1939) 23,600.

KRASNOYARSK, kräs'nô-yärsk, territory USSR, in Russian SFSR, covering an area of 928,000 square miles, from the Sayan Mountains in the north to the Kara and Laptev seas of the Arctic Ocean. Through its terrain, comprise chiefly of forests and tundra, the Yenisei River flows northward into Yenisei Bay, and in the south the Trans-Siberian and South Siberian railroads cross the territory east and west. Natural resources include forests, and gold, coal, and graphite deposits; its chief exports are lumber, gold, and the agricultural products from the southern part (which contains 94 per cent of the population). It includes the administrative

isions Taimyr National Okrug (District), Evenki National Okrug, and Khakass Autonomous Oblast. Its chief industrial centers are its capital, Krasnoyarsk, and Kansk, Achinsk, and Minusinsk, and its chief seaport is Igarka, on the lower Yenisei River. The territory was formed in 1934. Pop. (1946 est.) 2,100,000.

KRASNOYARSK, city, USSR, the capital of Krasnoyarsk Territory, 2,100 miles east of Moscow, on the Yenisei River in Russian SFSR. Located on the Trans-Siberian Railroad, Krasnoyarsk is a transportation and industrial center, trading extensively in timber, grain, furs, and tea. Gold, iron, copper, and manganese are mined in the vicinity. Its industries include lumber and flour milling and the manufacture of heavy machinery, cement, paper, and textiles. The city is also a cultural center, with scientific research institutes, a regional museum, and schools for doctors and teachers.

Krasnoyarsk was founded by Cossacks in 1628 as a fort, Krasny Yar, and later in the century was attacked several times by the Tartars and other tribes. In 1822 it became the capital of the Yeniseisk government. With the completion of the Trans-Siberian Railroad in 1898 the city grew rapidly. Its population fell off between 1917 and 1925, but the mining and industrial development of the surrounding area under the Soviet Five-Year plans stimulated its growth and during World War II a new industrial section was built up on the east bank of the Yenisei. Pop. (1946 est.) 300,000.

KRASZEWSKI, krā-shěf-skē, Józef Ignacy, Polish novelist and historian: b. Warsaw, Poland, July 28, 1812; d. Geneva, Switzerland, March 19, 1887. After graduating from the University of Wilno (Vilna) in 1832 he devoted his life to literary activity. His works comprise over 500 volumes and include novels describing epochs in Polish history; political novels written under the pseudonyms Kleophans Pasternak and Bolesławita; long poems, such as *Anafielas* (1840-1843), an epic of the history of Lithuania; culture romances, such as *Moritur* (1874-1875) and *Resurrecturi* (1876); dramas; and critical writings. He published the periodical *Athenaeum* (1841-1851) and in 1860 edited the Warsaw *Gazeta Codzienna* (*Daily Gazette*). Obligated to leave Warsaw for political reasons, he went to Dresden in 1863, where he remained, with several interruptions, until imprisoned for espionage in 1884. He was released the next year, and traveled in Europe as an exile until his death.

KRAUS, krous, John, German-American educator: b. Nassau, Germany, Feb. 2, 1815; d. New York, N. Y., March 4, 1896. After gaining prominence in Germany as an advocate of the educational principles of Johann Heinrich Pestalozzi and Friedrich Froebel, he went to America in 1851 and began to establish schools and lecture extensively on education. He was one of the first to publish articles in the United States on Froebel's kindergarten theories. In 1857 he accepted a position under Henry Barnard, the first United States commissioner of education. Through Kraus' influence, a committee of the National Education Association, set up in 1873, endorsed the educational principles of Froebel not only for the kindergarten but also for the higher grades in American elementary schools.

His wife, MARIA KRAUS-BOELTÉ (b. Hagenow, Germany, Nov. 8, 1836; d. New York, N. Y., Nov. 1, 1918) was an educator in her own right, having studied and taught in Germany and England before going to the United States in 1872. They were married in 1873 and together organized a training school for kindergarten teachers in New York City. They were co-authors of *The Kindergarten Guide* (2 vols., 1877).

KRAUS, Karl, Austrian satirist, critic, and poet: b. Jicin, Czechoslovakia, April 28, 1874; d. Vienna, Austria, June 15, 1936. After several years as a successful journalist in Vienna, he founded the periodical *Die Fackel* (*The Torch*) (1899), in which he presented critical essays varying from humorous satires to bitter polemics against moral and intellectual hypocrisy, against the "journalistic" approach to literature, and, after the outbreak of World War I, against militarism. During the war he also began to publish his poems *Worte in Versen* (1916-1930). His monumental anti-war drama *Die letzten Tage der Menschheit*, (*The Last Days of Mankind*), appeared between 1918 and 1922.

KRAUSE, krou'zē, Ernst Ludwig (pseudonym CARUS STERNE), German scientific writer: b. Sulcin (Zieloniz), Poland, Nov. 22, 1839; d. Eberswalde, Prussia, Aug. 24, 1903. Settling in Berlin in 1866, he contributed to the propagation of the new Darwinian theory of organic evolution and was associated with Charles Darwin and Ernst Heinrich Haeckel in the publication of the monthly *Kosmos* (1877-1882). His chief work was *Werden und Vergehen. Entwicklungsgeschichte des Naturganzen* (Berlin 1876).

KRAUSE, Karl Christian Friedrich, German philosopher and writer: b. Eisenberg, Thuringia, Germany, May 6, 1781; d. Munich, Bavaria, Sept. 27, 1832. He studied philosophy under Johann Gottlieb Fichte and Friedrich Wilhelm Joseph von Schelling at Jena, where he became *privat-dozent* in 1802. He subsequently taught at Dresden (1805), Berlin (1814), Göttingen (1824), and Munich (1831), but was unable to obtain a professorship. His philosophy, a modification of pantheism which he called *Panentheism*, was based on a conception of the universe as contained in God; the goal of mankind he conceived as a universal union (*Menschheitsbund*), the beginnings of which he saw in Freemasonry. Although overshadowed by his greater German contemporaries, he nevertheless exerted some influence on 19th century philosophy. His most important works are *Vorlesungen über das System der Philosophie* (1828) and *Vorlesungen über die Grundwahrheiten der Wissenschaft* (1829).

KRAUSKOPF, krous'köpf, Joseph, German-American rabbi and humanitarian: b. Ostrowo, Prussia (now Ostrów, Poland), Jan. 21, 1858; d. Atlantic City, N. J., June 12, 1923. He immigrated to America at the age of 14, and after graduating from the Hebrew Union College, Cincinnati, in 1883, he held a rabbinical post in Kansas City before moving to the Congregation Keneseth Israel in Philadelphia, where he served as rabbi from 1887 until his death. A practical idealist, he was a leader in Reformed Judaism in

the United States. His outstanding achievement was the foundation in 1896 of the National Farm School, a nonsectarian agricultural institution at Doylestown, Pa., inspired by the advice of Tolstoy, whom he had visited in Russia in 1894. He was director of the Jewish Commission in the Federal Food Administration (1917).

KRAUTH, krôth, **Charles Porterfield**, American Lutheran theologian: b. Martinsburg, Va., March 17, 1823; d. Philadelphia, Pa., Jan. 2, 1883. The son of Charles Philip Krauth (1797–1867), the first president of Pennsylvania (now Gettysburg) College, he graduated at the age of 16 from the institution headed by his father, and after his ordination in 1842, held ministries successively at Canton and Baltimore, Md., Shepherdstown, Martinsburg, and Winchester, Va., and Pittsburgh and Philadelphia, Pa. He is remembered for his leadership of the conservative Lutheran movement which grew up in America with the immigration of many German Lutherans in the middle of the 19th century. Departing from the platform of the General Synod, Krauth adopted the dogmas of an earlier European Lutheranism and stated his theological position in *The Conservative Reformation and Its Theology* (1871). He was editor in chief of *Lutheran and Missionary* (1861–1867) and the *Lutheran Church Review* (1882–1883) and served on the faculties of the Lutheran Seminary at Mt. Airy, Philadelphia (1864–1883) and of the University of Pennsylvania (1868–1883).

Consult Spaeth, Adolph, *Charles Porterfield Krauth*, 2 vols. (New York 1898–1909).

KREFELD, krä'fêlt, city, Germany, since 1945 in the State of North Rhine-Westphalia, 12 miles northwest of Düsseldorf. Krefeld is the principal locality in Germany for the manufacture of silk and mixed silk goods, which was begun there in the 17th and 18th centuries by Protestant and Mennonite refugees from Jülich and Berg. The city is an industrial center, with railroad shops, boiler works, machine shops, iron foundries, chemical works, distilleries, sugar refineries, soap works, tanneries, and paper mills. A textile school was founded in the city of 1885.

Krefeld dates from 1166 and received its charter in 1373. The chief industry was linen weaving until the city came into the possession of Prussia in 1702, when the silk industry received a monopoly from the government and became predominant. The city was occupied by the French during the Napoleonic wars. In 1929 Krefeld was combined with nearby Uerdingen and was known as Krefeld-Uerdingen am Rhein until 1940. During both World Wars the city was bombed by the Allies. Pop. (1950) 170,482.

KREHBIEL, krä'bêl, **Henry Edward**, American music critic: b. Ann Arbor, Mich., March 10, 1854; d. New York, N. Y., March 20, 1923. After receiving a public school education, he was associated with the *Cincinnati Gazette* (1874–1880) and the *New York Tribune* (1880–1923) as music critic. His most important work was the English edition of Alexander Wheelock Thayer's *Life of Ludwig van Beethoven*, which he published, from Thayer's original material, in 1921. His other publications include *Studies in the Wagnerian Drama* (1891); *Chapters of Opera* (1908); *A Book of Operas* (1909); *The*

Pianoforte and Its Music (1911); and *Afr American Folksongs* (1914).

KREISLER, krîs'lêr, **Fritz**, Austrian-American violinist and composer: b. Vienna, Austria, Feb. 2, 1875. At the ages of 10 and 12 respectively, he won first prize and a gold medal for his skill as a violinist at the Vienna Conservatorium, where he worked under Joseph Hellmberger and Leopold Auer (q.v.); and the first grand prize at the Paris Conservatoire, where he studied violin under Joseph L. Massart and then under Clément P. L. Delibes (q.v.). In 1888–1889 he successfully toured the United States with Moriz Rosenthal, pianist, making his debut at Boston on Nov. 9, 1888. On his return to Vienna he was unsuccessful in obtaining a position in the Vienna Philharmonic Orchestra, and abandoned music to enter successively upon medical studies at Vienna; the study of painting in Paris and Rome; and a brief period of service in the Austrian Army. After resuming his playing, he made brilliant return debuts in Berlin (1899) and London (1901), which with his triumphal American tours of 1901 and 1903 won him the lofty position he has since maintained on the international concert stage. Wounded while serving in the Austrian Army during World War I, Kreisler went to the United States in 1911, remaining until 1924. Following German annexation of his native Austria in 1938, he became a French citizen. In 1943 he acquired American citizenship.

Long considered the world's leading concert violinist, Kreisler is also a well-known composer who has greatly enriched the violin literature of the world. His longer works include a comic opera, *The Marriage Knot* (1919); two operettas, *Apple Blossoms* (1919) and *Sissi* (1933); Quartet in A Minor (for strings); an Concerto in G Major (for violin). The most popular of his shorter compositions, principally for violin, include *Liebesfreud*, *Liebeslied*, *Romance*, *Scherzo*, *Caprice*, *Berceuse Romantique*, *Rondino* (on a theme by Beethoven), *Capriccio Viennois*, and *Tambourin Chinois*.

KREITTMAYR, krît'mîr, **Baron Wigula Xavier Aloys von**, Bavarian jurist and statesman: b. Munich, Bavaria, Dec. 14, 1705; d. there, Oct. 27, 1790. He practiced law in Wetzlar, the Supreme Court, and was made Aulic councillor (1725) at Munich and a baron of the empire in 1745. Four years later he became vice-councillor of the Privy Council and a minister of the cabinet. The most important branch of Bavarian law were codified by him in works appearing from 1751 to 1756.

KRELING, krä'ling, **August von**, German sculptor and painter: b. Osnabrück, Germany, May 23, 1819; d. Nürnberg, April 23, 1876. His first important work was the ceiling decorations at the Hanover Court Theatre. In 1853 he was appointed to reorganize the Nürnberg School of Art, during which work he painted the *Coronation of Ludwig of Bavaria* in the Maximilianeum, Munich, and drew the cartoons for the pictures of German emperors, as well as a cycle of pictures from the traditions of Karl der Grosse. For his great service in advancing the arts and crafts he was honored with the civil Order of Merit. He modeled the colossal bronze statues of Prince Heinrich of Reuss, at G

of Kepler, at Weil, and a great fountain which was presented to Cincinnati by Mr. Proctor.

KRELL, or **CRELL**, Nikolaus, Saxon chancellor and anti-Lutheran reformer: b. Leipzig about 1551; d. 9 Oct. 1601. He studied law and was appointed Aulic councillor at Dresden and secretary to the Elector Christian, who, on accession to the throne (1586), made him ivy councillor and (1589) chancellor. His position to the orthodox Lutheran Church leaning toward Calvinism brought the hatred of the citizens and members of the court. By his introduction of a new catechism and edition of the Bible with his Calvinistic glossary he brought about his downfall when Friedrich Wilhelm von Weimar succeeded the deceased Christian. Involved in the meshes of law he was imprisoned and after much litigation between the higher powers of the different states he was finally condemned to death and was executed at Dresden. Consult Richard, 'Der kurfürstliche sächsische Kanzler Nikolaus Krell' (Dresden 1859); Brandes, 'Der Kranzler Krell, ein Opfer des Orthodoxismus' (Leipzig 1873).

KREMENETZ, krém'yě-nyěts, Poland, a town in the county of Wolyn (Volhynia) situated on the Ikva River and a branch of the South-West Railway. It has six churches, is the seat of the chief magistracy of the Radzivilov customs division. Above the town on a sandstone cliff are the ruins of an ancient castle. The town dates back to the 8th century, belonging formerly to the principality Vladimir as included in Poland; it was fortified by Poland I but was captured (1648) by a body of Cossacks in revenge for persecution on account of their fidelity to Poland. It is a very fertile district. Its population is about 10,000, with about one-third Jews.

REMENTCHUG, krém'én-choog', Russian district town in Poltava in the Ukraine, situated on the Dnieper River and junction of railways. It has an iron railway bridge, Greek-Catholic churches, three churches of Protestants, a Lutheran prayer house, three synagogues, a high school, girls' progymnasium, a bank; also numerous manufactures as mills, tobacco factories, etc. It does considerable trade in grain and wood and holds annual markets. The town was founded in 1765 and was, from 1765-89, the capital of New Russia. It has a suburb across the river called Kow. Together they have about 98,895 inhabitants.

KREMERS, kré'mérz, Edward, American pharmacist: b. Milwaukee, Wis., 23 Feb. 1865. Studied at the University of Wisconsin, receiving the degree Ph.G. (1886) and B.S. (1887), and Ph.D. at the Göttingen University (1890). He was appointed instructor of pharmacy at the University of Wisconsin (1890-92), professor of pharmaceutical chemistry and director of a course in pharmacy from 1892, and director of the Pharmaceutical Experiment Station from 1913. He was editor of the *Pharmaceutical Review* (1896-1909), scientific editor of *Midland Druggist and Pharmaceutical* (1909-10), coeditor *Standard National*, etc. In collaboration with Gildebrand and Hoffmann, he compiled 'The Ole Oils' (1900; 2d ed., 1913).

KREMLIN, a Russian citadel, especially the citadel of Moscow (q.v.). It lies in the centre of the city, and contains the former royal edifices and churches, particularly the former residence of the emperor.

KREMELITZ, Marie (Mite), German author: b. Greifswald, 4 Jan. 1852. She married and moved to Bucharest (1875), where she became acquainted with the Rumanian queen (Carmen Sylva). She removed to Berlin (1897) and settled there. In collaboration with Carmen Sylva she published the 'Rumänischen Dichtungen' (3d ed., translation Bonn 1889), and under the pseudonym Dito und Idem the following novels: 'Aus zwei Welten' (Leipzig 1884; 7th ed., Bonn 1901); 'Astra' (Bonn 1886; 6th ed., 1903); 'Feldpost' (ib. 1887); and the tragedy 'Anna Boleyn' (ib. 1886); also 'In der Irre' (ib. 1888), and 'Rache, und andre Novellen' (ib. 1889), stories. Individually she wrote 'Rumänische Skizzen' (Bucharest 1877); 'Rumänische Märchen' (Leipzig 1882); 'Carmen Sylva ein Lebensbild' (Breslau 1882); an extensive biography, 'Carmen Sylva' (Leipzig 1903). She also wrote the novel 'Ausgewanderte' (Bonn 1890), and the stories 'Elina: Zwischen Kirche und Pastorat' (Breslau 1895); 'Sein Brief' (ib. 1896); 'Herr Baby' (ib. 1901); 'Mann und Weib' (ib. 1902); 'Fatum' (ib. 1903). Under the pseudonym George Allan she wrote 'Fluch der Liebe' (Leipzig 1880), and other stories as well as the novels, 'Aus der Rumänischen Gesellschaft' (ib. 1881), and 'Ein Fürstenkind' (ib. 1883). Died. 1916.

KREMELITZ, krém'nits, or **CREMELITZ**, Czechoslovakia, a town (called in Hungarian Körömczébánya), in the county of Bars, in a deep valley surrounded by lofty hills, 15 miles northeast of Schemnitz. It consists of the town proper, surrounded by walls, and containing two ancient churches and a castle; and of several large suburbs, in which are almost all the public buildings. There are some old churches, a Franciscan monastery of the 17th century, a mint, hospitals, etc. The manufactures consist of paper, delft-ware, vitriol and cinnabar; but the prosperity of the town depends chiefly on the gold and silver mines in the vicinity. Pop. 4,515.

KREMS, kréms, Austria, a town on the confluence of the rivers Krems and Danube and on two branches of the State Railway, one of which crosses the Danube here on a great bridge. It is the official seat of the district and has four churches, a town-hall with archives, monuments to Joseph II and General Schmidt, an obere gymnasium, upper high school, trade school, teachers' institute, wine and fruit industrial schools, Piarist College, lady-teachers' institute, city museum, theatre, savings bank, etc. Among its various manufactures are breweries and mustard, cognac, preserves, chocolate, coffee-substitute, machine, mill, garden tool and other factories. Pop. 14,384.

KREMSIER, Czechoslovakia, a town in Moravia, 37 miles from Brünn by rail, situated in the fertile Hanna region, on the March and on two railways. It is the official seat of the district, has a Collegiate church, archbishop's palace, finished 1711, library, great park and menagerie, a German and a Czech obere gymnasium, German and Czech national upper high school, archie-

piscopal boys' seminary, teachers' institute, agricultural school, etc. Its manufactures consist of machinery, iron foundries, two malt factories, two breweries, sugar factory, electric works, and it does considerable trade in barley, fruit, cattle, etc. In 1110 it was one of the estates of the 1,063 newly formed bishoprics of Olmütz by the purchase of the Olmütz Count Otto, and obtained town rights through Bishop Bruno (1266) and Bishop Theodor (1290), becoming the episcopal residence. It was besieged and stormed by the Swedes, in 1643, and burned. During the 1848 insurrection the Reichstag was held here. Pop. 16,528, chiefly Czechs.

KRENNERITE. A rare mineral consisting of telluride of gold and silver in orthorhombic form. Composition variable (AuAg) Te. Carries 43.86 per cent of gold and a very small amount of silver. Occurs in mines of Cripple Creek, Colo.

KRESTOVSKI, krěs'tōf'skī, V., the pseudonym of Nadezhda Dmitrievna Khvoshtchinskaya, one of the most noted of Russian women novelists and writers: b. Ryazan, 1825; d. 1889. See *Khvoshtchinskaya, Nadezhda Dmitrievna*.

KRETSCHMAR, krěch'mär, August Ferdinand Hermann, German musician: b. Olbernhau, 19 Jan. 1848. He graduated at the Leipzig Conservatory, was appointed (1876) bandmaster at the opera house at Metz, became (1887) music director at the Leipzig University, and was called to Berlin (1904) where he became professor of the history of music for the state. He wrote numerous choral and organ pieces and many monographs, essays on the lives of noted musicians, etc. His 'Führer durch den Konzertsaal' (3 vols., Leipzig 1887-90) is highly praised. Died, Berlin, 10 March 1924.

KRETSCHMER, krěch'mër, Edmund, German musician and composer: b. Ostritz, 31 Aug. 1830; d. 1908. He was a pupil of Julius Otto and Johann Schneider at Dresden and was appointed court organist there (1854). He became (1872) instructor of the royal Kapellknabeninstituts and was leader of a number of choral unions. In 1892 he was given the degree of professor. He first became favorably known as a composer by his opera 'Die Folklunger' (1874) that was followed by 'Heinrich der Löwe' (1877); 'Der Flüchtling' (1881); and 'Schön Rothraut' (1887). He also wrote several Masses and other church compositions, also profane choir pieces, such as 'Pilgerfahrt,' 'Festgesang,' 'Sieg im Gesang.' His 'Geisterschlacht,' written for a man's choir with orchestra, won a first prize. Consult Schmid, O., 'Edmund Kretschmer' (Dresden 1890).

KRETSCHMER, Paul W., German philologist: b. Berlin, 2 June 1866. He studied at the Luisenstadt gymnasium and the Berlin University, becoming private teacher (*docent*) there (1891). He became assistant professor (1897) at Marburg University, and professor (1899) at the Vienna University. He traveled in Greece (1896-1901) and wrote 'Griechischen Vasenschriften' (1894); 'Einleitung in der Geschichte der griechischen Sprache' (1896); 'Entstehung der Koine' (1900); 'Die heutige Lesbische Dialekt' (1905). He was editor of *Glotta*, a periodical in the Greek and Latin

languages, from 1907 and is member of the Imperial Academy of Science of Vienna.

KRETZER, krět'sër, Max, German novelist: b. Posen, 7 June 1854. He went to Berlin at an early age and worked in various capacities as a factory laborer, a house painter, etc. He met with an accident, and during the period of convalescence began to write, becoming one of the most popular German novelists for a time. His naturalistic novels dealing with the common people of Berlin are interesting pictures of contemporary life. The best are 'Die beiden Genossen' (1880); 'Die Betrogenen' (1882); 'Im Sturmwind des Sozialismus' (1883); 'Meister Timpe' (1888).

KREUTZER, kroi'tsër, Konradin, German composer: b. Messkirch, Baden, 22 Nov 1780; d. Riga, 14 Dec. 1849. He studied law at first but produced an operetta (1800) that was played while he was a student at Freiburg, and he then undertook the study of counterpoint (1804) under Albrechtsberger at Vienna. He was appointed bandmaster (1812) at Stuttgart and (1817) filled the same position for Count von Fürstenberg in Donaueschingen. In 1822 he returned to Vienna where he became bandmaster of the Kärntnerthor Theatre, after the successful production of his opera 'Libussa.' He filled the same post successively at the Josephstädter Theatre (till 1840), then at the Cologne Stadttheatre (till 1846), when he returned to Vienna. He wrote 30 operas of which only 'Nachtlager zu Granada' (1834) and Raimund's 'Verschwender,' for which he wrote the score, have remained popular. On the other hand his male choruses are still pieces with the *Verein*. A monument to his memory has been erected in his birthplace.

KREUTZER, Rodolphe, French violinist and composer: b. Versailles, 16 Nov. 1766; d. Geneva, 6 Jan. 1831. He studied the violin under Anton Stamitz, under whom he was perfected and was able to appear in public in his 13th year. He became solo-violinist in the Italian theatre orchestra (1790) where he produced his first opera, 'Jeanne d'Arc' in the same year, to be followed by 39 other dramatic works such as 'Paul and Virginia'; 'Lodoiska' (1701); 'Werther' (1792), etc. Following a tour through Italy and Germany (1796) he was appointed teacher of the violin at the Paris Conservatoire. In 1801 he took Rodé's place as solo-violinist at the Grand Opera, and (1817) became its bandmaster till his retirement in great honor (1826). Of his many compositions only those for the violin have survived to this day in popularity, among which his '40 Etudes ou Caprices' is a necessity in training a violinist. Beethoven dedicated his 'Kreutzer Sonata' to him.

KREUTZER SONATA, the popular title of Beethoven's Sonata for piano and violin in A, op. 47, dedicated to his friend R. Kreutzer, and played first in 1803. Leo Tolstoy, the Russian reformer and author, used the title for one of his novels, published in 1880, in which he placed the modern conventional marriage in a hideous light. It caused bitter debate for a rather prolonged period.

KREUTZNACH, kroi'ts'nagh, Prussia, tract town and popular bathing resort in the jurisdiction of Coblenz, situated on the Na-

ver, 37 miles south-southeast of Koblenz. Nearby is the ruin of an ancient Roman fortification, the Heidenmauer or "heathen wall." The town was chartered in the 13th century and ceded to Prussia in 1814. It is well known for its baths and mineral springs. Among the leading manufactures are leather, tobacco, combs, glass and arble goods. Pop. (1939) 30,246.

KRIEGSPIEL, krēks'shpēl, German name for the "war game" in which metal counters representing opposing forces are moved about on a large-scale map. It is often used to instruct students of military tactics. A form of *Kriegspiel* is also played on chess boards.

KRISHNA, krish'nā, in Hindu mythology the eighth avatar, or incarnation of Vishnu and the most important deity in the Hindu pantheon. In the *Bhagavad-Gita* (*Song of the Blessed One*), Krishna is represented as a great spiritual teacher revealing the doctrine of *bhakti* or "loving devotion." However, in popular legend he is less ad-

Krishna, the eighth incarnation of Vishnu. Associated with the cowherd figure—the cowherd, he was originally a hero of the Rajput tribe and became one of the most widely worshiped deities of the Hindu religion.

mirable as he dallies with the Gopis, daughters of the cowherds. At the close of the 15th century two Indian teachers, the reformer Chaitanya and Vallabha, established sects in worship of Krishna. Vallabha's sect was notorious for its indecencies but in the 19th century Swāmi Narayan purified the cult and acquired numerous followers. See also AVATAR; HINDUISM; INDIA—Religion and Philosophy.

KRISTIANSAND or **CHRISTIAN-SAND**, kris'chān-sānd, seaport in southern Norway, capital of Vest-Agder County, located on a peninsula on the Skagerrak about 160 miles southwest of Oslo. Founded in 1641 by Christian IV of Norway and Denmark, the port was ravaged by many fires until 1892 when the greater part was rebuilt in brick. Today it is one of Norway's chief harbors. It is also a bishop's seat and has a 17th century Gothic cathedral. Fish and lumber are among its leading exports. Other industries are carried on in its flour mills, sawmills, dairies, and woolen mills. During World War II the German cruiser *Karlsruhe* was sunk off Kristiansand before the seaport was captured by the Germans who occupied it from 1940 to 1944. Pop. (1946) 24,343.

KRISTIANSTAD, kris'chān-stād, seaport, Sweden, capital of the Province of Kristianstad, located on the Helge River about 10 miles from the Baltic Sea in the center of a rich agricultural district. It was founded in 1614 by Christian IV of Norway and Sweden. Granite and wood pulp head the list of its exports. In addition to flour and woolen mills, it has sugar refineries and distilleries. Pop. (1949) 23,779.

KRISTIANSUND or **CHRISTIAN-SUND**, kris'chān-sōōnd, seaport in western Norway, capital of Møre og Romsdal County, located about 90 miles west-southwest of Trondheim. The town, which is built on four islands enclosing a harbor, was founded in the 18th century and has since become a leading center for the export of fish, butter and lumber. Shipbuilding also is an important industry. Retreating Germans inflicted heavy damage on the town in 1944 during World War II. Pop. (1946) 13,152.

KRIVOI ROG, kryi'voi'rōk', city, USSR, located in the Dnepropetrovsk Region of the Ukraine, on the Ingulets River about 80 miles southwest of Dnepropetrovsk. This young industrial center owes its rapid growth to a strategic location in the midst of the Soviet Union's chief iron-mining region and it is also near the coal fields of the Donets Basin. In 1940 the area produced some 19 million tons of iron, and reserves are estimated at well over a billion tons. During World War II the Germans occupied the city and mines from 1941 to 1944. Aside from iron and steel plants the city has mills and chemical works. Pop. (1939) 197,621.

KROEBER, krō'bēr, Alfred Louis, American anthropologist: b. Hoboken, N.J., June 11, 1876. He received his A.B. from Columbia University in 1896 and his Ph.D. in 1901. The same year he was appointed instructor in anthropology at the University of California at Berkeley, serving as professor from 1919 to 1946. Since 1948 he has been visiting professor of anthropology at Columbia University. Mr. Kroeber has gone on many expeditions in pursuit of his special fields, the North American Indians and the archaeology of Mexico and Peru. His publications include *Handbook of the Indians of California* (1925); *Cultural and Natural Areas of Native North America* (1939); *Configurations of Culture Growth* (1944); *Anthropology*, new rev. ed. (1948).

KROGH, krōg, August (in full SCHACK AUGUST STEENBERG), Danish physiologist: b. Grenaa, Denmark, Nov. 15, 1874; d. Copenhagen, Sept. 13, 1949. Receiving his doctorate in 1903 from the University of Copenhagen, Krogh subsequently served there as lecturer (1908 to 1916) and until 1945 as professor of zoophysiology. In 1920 he received the Nobel Prize for physiology and medicine, for his researches dealing with the activities of the capillaries, particularly their regulative effect on the conveyance of blood to the muscles. Among his writings are *The Anatomy and Physiology of Capillaries* (1922); and *The Comparative Physiology of Respiratory Mechanisms* (1940).

KROL, crül, Bastiaen Jansen, colonial officer in New Netherland: b. Harlingen, Holland, 1595; d. Amsterdam, 1674. A velours worker by trade, he applied to the Dutch Reformed Church in Amsterdam for assignment abroad as comforter of the sick, a church office which provided for restricted divine services in the absence of a minister. In this capacity he sailed for New Netherland on Jan. 25, 1624. After a brief trip home to plead for ministers he returned to his post until 1626 when he was appointed commissary at Fort Orange (later Albany). In 1628 when the Rev. Jonas Michaëlius arrived to organize the first church in New Netherland, Krol was made a member of the consistory of the Reformed Dutch

Church inside the fort, on Manhattan. He crossed the ocean four or five times and acted as agent for Van Rensselaer in his manor. According to local tradition, during one winter, when provisions were scarce, he made a nourishing and palatable fried cake of flour and honey, which took its name from his, the cruller. The word is unknown in Holland and the pronunciation, very similar in the personal name and the actual thing, points to the probable origin of this American delicacy. On Van Twiller's arrival, in 1633, he was succeeded in the command of Fort Orange by Hans Jorissen Houten. On 28 Sept. 1645 he was at holy communion in the church in Amsterdam, Holland. A handsome memorial of this zealous and efficient pioneer has been erected in the Reformed Church edifice on Second avenue in New York. Consult Van Laer, the 'Van Rensselaer-Bower Manuscripts,' published by the State (1906); and Eckhoff, 'Bastiaen Jansz. Krol' (1910); Hofstede, 'Oost Indien Kerk-Zaken,' Rotterdam (1779), and 'Ecclesiastical Records of the State of New York' (1901).

KROLL, kröl, Wilhelm, German classical scholar: b. Frankenstein, Silesia, 7 Oct. 1869. He studied at Breslau, Berlin and Bonn, and, after a journey through Italy and Sicily, he entered the faculty at Breslau University, for classical philology. He was made professor at Greifswald (1899), Münster (1906) and Breslau (1913). He contributed numerous essays to the *Rheinisches Museum, Jahresberichte über die Fortschritte der Altertumswissenschaft, Glotta*, and the *Realenzyklopädie* of Pauly-Wissowa. He edited the 6th edition of Teuffel's 'Geschichte der Römischen Literatur' (1910-13). Among his other works are 'Antiker Aberglaube' (1897); 'Die Altertumswissenschaft im letzten Vierteljahrhundert' (1905); 'Geschichte der klassischen Philologie' (1908).

KROMAYER, krö'mi'ër, Johannes, German historian of ancient battles: b. Stralsund, 31 July 1859. He studied at Stralsund, Metz, Weissenberg and at the universities of Jena and Strassburg. He was appointed as teacher at the gymnasiums of Strassburg, Thann and Metz and then traveled through Italy and Greece (1887-88). In 1898 he became teacher at the Kaiser-Wilhelm University, Strassburg, but headed the scientific expedition in Greece and Turkey making research of the ancient battlefields (1900), and a similar expedition to Italy and North Africa (1907). He was appointed professor of ancient history at the Czernowitz University (1901) and filled the same post at Leipzig (1913-27). He wrote 'Antike Schlachtfelder' (1902-11); 'Roms Kampf um die Welt-herrschaft' (1912).

KRONBERG, krön'bär-g', Julius, Swedish painter: b. Karlskrona, 11 Dec. 1850. He studied at the Stockholm Academy of Art and gained a scholarship which permitted him to visit Düsseldorf, Paris, Munich and Rome. Upon his return he made his reputation with his biblical, mythological and historical pictures and became the leading colorist. His principal works are 'Death of Cleopatra'; 'David and Saul' (1885), in the Stockholm National Gallery; 'Romeo and Juliet'; 'Queen of Sheba'; 'Hypatia,' and the ceiling decoration of the Treppenhaus of the Royal Palace,

Stockholm (1890-92). He was elected member of the Stockholm Academy of Art (1881) and was made professor in 1885. Died, 17 Oct 1921.

KRONBERG, Louis, American painter: b. Boston, 20 Dec. 1872. He studied art at the Boston Museum of Fine Arts, the Art Students League, New York, and the Académie Julien, Paris. He is instructor of the portrait class of the Copley Society, Boston, received the silver medal of the Massachusetts Charitable Association and the Longfellow Traveling scholarship. His works have been exhibited at the Paris Exposition (1900) and are represented in the permanent collections of the Pennsylvania Academy of Fine Arts, Philadelphia ('Behind the Footlights'); New York Metropolitan Museum of Art ('The Pink Sash'); Boston Museum of Fine Arts, etc. Other works of his are in the private collections of the late Mrs. J. L. Gardner and F. Gair Macomber.

KRONECKER, krö'nëk-ër, Leopold, German mathematician: b. Liegnitz, 7 Dec. 1823; d. Berlin, 29 Dec. 1891. He studied at Berlin, Bonn, Breslau and took his degree (1845) in Berlin, when he returned to Liegnitz. He was made a member of the Berlin Academy of Science (1860) and held lectures at the university (1861). In 1883 he was made professor of mathematics of the university. He did exceptional service in the advancement and systematizing of algebra, and his graduates' feast essay, 'Grundzüge einer rein arithmetischen Theorie der algebraischen Grössen' (Berlin 1882), is of lasting value. He edited, at first with Weierstrass, later alone, Crelle's *Journal für Mathematik*, and commenced publishing the works of Lejeune Dirichlet at the request of the Academy. His 'Vorlesungen über Mathematik' were collected and published by Hensel and Netto in parts. The attempt he made to abolish irrational numbers and fractions reducing the science to whole numbers altogether is quite interesting. His biography by H. Weber is in *Jahresbericht der deutschen Mathematiker vereinigung* (Berlin 1893).

KRONES, krö'nës, Therese, Austrian actress: b. Freudenthal, 7 Oct. 1801; d. Vienna, 28 Dec. 1830. She became a member of the Leopoldstädter Theatre, Vienna (1821), after numerous engagements at provincial theatres. She learned greatly to improve her technique here through playing with Raimund, and, being of a lively and cheerful temperament, besides possessing graceful form, she became a great favorite in comedies and national plays. Several plays were written by her, such as 'Sylphide,' 'Nebelgeist,' etc. Her life figures in a novel by Bäuerle and in a play by Hauffner.

KRONSTADT, krön'stat, or CRONSTADT, Rumania, called by Rumanians Braşov, a town in the county of the same name in Transylvania, junction of four railways and most picturesquely situated. It is wedged in by a valley gorge of the Schuler Mountains, open only on the northwest. In front of the mouth of the gorge rises the Schlossberg, an old fortification or citadel dating back to 1554. The suburbs lie in small neighboring ravines, some built on terraces. In the middle of the old former fortified central city is the cathedral erected under King Sigismund (1385-1425) in imposing Gothic style, but serving now as

vangelical parish church and termed locally the "black church," on account of its charred walls; its gigantic organ contains 4,060 pipes. The triangular market place contains the ancient town-hall with its archives, erected 1420 and renovated (1770) in Baroque style; also the great Kaufhaus, built 1545. There is also a Catholic parsonage in Italian style, a Rumanian church in Byzantine style, besides several other Catholic, Evangelical and Grecian churches and a Reformed church. Other prominent public edifices are the Franciscan monastery, the treasury building, etc. There are monuments erected in memory of Honterus, one to Bishop Deutsch and the Millennium monument. Its population is about 41,056, of whom most are Magyars, the remainder Wallachs, Saxons, Greeks and other Orientals. Considerable commerce is carried on, the metal and wood industries being important. There are manufactures of earthenware, bed-coverings, cement, leather, paper, as well as sugar and petroleum refineries. Among its institutions are three gymnasiums, a state upper high school, trade academy, theatre, etc. This city suffered many times by war ravages; it was destroyed by the Tartars (13th century) several times, was conquered by the Turks (1421), becoming a frontier town of Protestantism in the days of Honterus the Reformer (16th century), it was plundered by Gabriel Báthori (1610), besieged in 1611 and 1612 General Caraffa executed (1688) many of its citizens and plundered the city; it was burned down the next year by the soldiery. In 1718 and 1755 the pest decimated its inhabitants; in 1849 it was besieged twice and the Russians took possession. Consult Herrmann-Meltzl, von, 'Das alte und neue Kronstadt' (Hermannstadt 1885-88); Filtzsch, 'Die Stadt Kronstadt und deren Umgebung' (Vienna 1886).

KRONSTADT, krōn'stāt, or **CRONSTADT**, Russia, a maritime fortress in the government of Leningrad, and about 25 miles west of that city. It stands in the narrowest part of the Gulf of Finland, opposite to the mouth of the Neva, on a height of the long, narrow, rocky island of Kotlin, forming, both by its position and the strength of its fortifications, the bulwark of Leningrad, and the most important naval station of the Soviet. It was founded by Peter the Great in 1710, and has spacious, regular streets, with many handsome houses; Greek, Lutheran, English and Roman Catholic churches; very large marine establishments, a navigation school, a naval arsenal, a non-foundry, a barracks, building-yards, docks, etc. The harbor consists of three separate basins — a merchant haven, capable of containing 1,000 ships; a central haven for the repair of ships of war, and the war haven, which, in addition to the other works of the place, is defended by the strong fort of Kronslot, built on two small adjoining islands. The chief disadvantage of Kronstadt as a port is the long period during which the harbor is blocked up by ice. The construction of a canal affording direct access by sea to Leningrad has diminished the trade of Kronstadt, which in consequence is declining as a commercial port. A revolt of the fleet personnel took place in May 1917. The local administration passed to the hands of the Committee of Workmen's and Soldiers' Delegates on 2 June 1917. The pro-

visional government at Leningrad was defied by the president of the local committee. Drastic measures were decided upon by the former, but the fall of the Kerensky government gave the malcontents and others an opportunity of escaping from the consequences of their acts. See SHIP CANALS; WAR, EUROPEAN.

KROPOTKIN, krō-pōt'kīn, **Peter Alexievitch**, Russian geographer and revolutionist: b. Moscow, 9 Dec. 1842; d. 1921. He was educated in the Corps of Pages at Saint Petersburg, and joining a regiment of Cossacks of the Amur went to eastern Siberia as aide-de-camp to the military governor of Transbaikalia, becoming later attaché for Cossacks' affairs to the governor-general of eastern Siberia. He was connected with a prison commission and strove to get some reforms introduced into Siberian convict prisons, but his efforts proved of no avail. From 1863 he devoted his energies to a scientific investigation of Manchuria and the neighboring parts of Siberia, and his work in this department gained him, in 1864, the gold medal of the Russian Geographical Society. In 1871 he was sent by the Geographical Society to Finland to study glacial phenomena. Arrested in 1874 for promulgating radical ideas of social reform, he was confined in the prison of the military hospital, from which he contrived to escape to England in 1876. In the following year he went to Switzerland, where he founded at Geneva an anarchist journal called *Le Révolté*, but in 1881 was expelled by the Swiss authorities on the demand of Russia. Returning to England in 1882, he wrote and lectured against the government of Alexander III. Having gone to France, he was arrested by the authorities and condemned (January 1883) to five years' imprisonment for participation in the International, but he was released in January 1886, in consequence of a strong appeal made by leading French and English savants. Afterward he lived in England, and engaged in literary work. He wrote much on scientific subjects and contributed to various encyclopædias. His separate publications include 'Paroles d'un Révolté' (1885); 'In Russian and French Prisons' (1887); 'La Conquête du Pain' (1888); 'L'Anarchie, sa Philosophie, son Idéal' (1896; Eng. trans. 1897); 'The State: its Part in History' (1898); 'Fields, Factories and Workshops' (1899); 'Memoirs of a Revolutionist,' first issued serially in *The Atlantic Monthly* (1899); 'The Orography of Asia' (1904); 'Ideals and Realities in Russian Literature' (1905); 'The Great Revolution, 1789-93' (1908); 'Terror in Russia' (1909). Prince Kropotkin was one of the ablest representatives and most eloquent exponents of that theory of society known as anarchist-communism. He was opposed to all societies based on force or restraint, and looked forward to the advent of a purely voluntary society on a communistic basis. He desired to see the division of labor, which is the dominant factor in modern industry, replaced by what he called the "integration of labor," and was a staunch believer in the immense possibilities of intensive agriculture. In 1901 he lectured at the Lowell Institute in Boston.

KROUT, Mary Hannah, American journalist and author: b. Crawfordsville, Ind., 3 Nov. 1857. She was educated at home, became asso-

ciate editor of the *Crawfordsville Journal* in 1881, and editor on the *Terre Haute Express* in 1882. As a special correspondent for leading newspapers, she spent several years in Hawaii, Europe, Asia, and Australasia. She died May 31, 1927.

KRUDENER, krü'dé-nér, BARONESS **Barbara Juliane von**, Russian pietist and novelist: b. Riga, Nov. 11, 1764; d. Karasu-Bazar, Dec. 25, 1824. The daughter of Otto von Vietinghoff, she was married in 1782 to Baron Burchard von Krüdener (d. 1802), Russian ambassador to Venice and Denmark, but separated from him in 1785. At Venice she was involved in a love affair with a young French officer, Count Charles Louis de Frégeville; it formed the basis for her novel, *Valérie* (Paris 1803), which was a literary sensation. She led a gay life in Germany, France, Russia, and Switzerland, and became a notable figure in Parisian society, her intimates including Madame de Staël, the Vicomte de Chateaubriand (qq.v.), and others. After her husband's death she left Paris and settled on the estates at Riga inherited from her father. In 1804, at the age of 40, she came under the religious influence of the Moravian Church (q.v.) through the ministrations of a shoemaker, and then studied the South German cult known as Chiliasm (q.v.). From this time she devoted herself ardently to a fantastic religion, her whole being becoming at last absorbed in mysticism and superstition. In 1808 she fell under the influence of the teaching of Johann Heinrich Jung-Stilling (1740-1817), who acquainted her with the cult of Emanuel Swedenborg (q.v.). For nonpolitical and religious reasons, in 1815 she suggested to Emperor Alexander I the title for the Holy Alliance (q.v.). During the years 1816-1817 she devoted herself to the welfare of the poor driven from Switzerland and the Black Forest by famine. She then gave herself up to the belief that she was a prophetess, claiming divine influence, with the result that she was expelled from Switzerland and Germany, and lost the friendship of Alexander I. In 1824 with her daughter and son-in-law, she went to the Crimea, where she died in the pietist colony of Princess Galitzin.

KRUEGER, krōō'gēr, **Walter**, United States military officer: b. Flatow, West Prussia, Germany, Jan. 26, 1881. Brought to the United States in 1889, he received a public school education in the Middle West, and on the outbreak of the Spanish-American War, when he was 17 years old, he enlisted as a volunteer from Madison, Ind., the home of his parents. He saw service in Cuba, and when mustered out in 1899 he re-enlisted as a regular soldier; assigned to the 12th Infantry, he took part in some of the engagements during the Philippine insurrection. Given a commission as 2d lieutenant in 1901, he was transferred to the 30th Infantry, and with his regiment he returned to the United States two years later. Besides doing regimental duty he graduated at the Infantry-Cavalry School, Fort Leavenworth, Kans., and the Army Staff College, and in 1908 was sent back to the Philippines for mapping duties. After his recall to the United States he was an instructor in languages at Fort Leavenworth until 1912. He served on the Mexican border in 1916, and the next year, after the United States entered

World War I, he became acting chief of staff of the 8th National Army Division, then stationed at Camp Taylor, Ky. In February 1918 he proceeded to France, where he served with the 26th Division and also the Tank Corps. Returning to the United States in 1919, he filled various posts at army schools and on the general staff, and by 1936 he had reached the rank of brigadier general. Promoted major general in 1939, he was sent to Fort Sam Houston, Texas, where he was given command of the 2d Division. Krueger commanded the 8th Army Corps in 1940, and the next year as temporary lieutenant general, he was sent to San Antonio, Texas, to take command of the Third Army. Engaged in training new formations at the time the United States became involved in World War II (December 1941), he was transferred to the Southwest Pacific early in 1943 to command the newly activated United States Sixth Army, then assembling in Australasia. Troops of his command invaded the island of New Britain (Solomon Islands) in December 1943 and Hollandia (Netherlands New Guinea) in April 1944, and on Oct. 20, 1944, he led the American ground forces which landed on Leyte, large island of the Philippines. In the course of the ensuing campaign to recapture the Philippine Islands, his Sixth Army invaded Luzon in January 1945, and in March the United States Senate approved his promotion to the rank of full general. Krueger continued to lead the Sixth Army until the surrender of Japan, directing 21 major amphibious operations in the course of an advance that had covered 4,500 miles. He commanded the Sixth Army in the southern section of the Japanese home islands until it was inactivated on Jan. 26, 1946.

KRUG, krōōg, **Julius Albert**, United States public official: b. Madison, Wis., Nov. 23, 1896. He worked his way through the University of Wisconsin, where he graduated in 1929 and secured a master's degree the next year, specializing in utilities management and economic engineering. Thereafter, he spent two years with the Wisconsin Telephone Company as business research analyst, and then was chief of the depreciation section of the Wisconsin Public Utilities Commission until 1936, when he was called to Washington, D.C., to join the Federal Communications Commission as an expert on public utilities. During 1937-1938 he reorganized the Kentucky Public Service Commission, and for the next two years he served as chief power engineer of the Tennessee Valley Authority. In 1941, when only 33 years old, he was summoned to Washington once more, now as chief power consultant of the Office of Production Management; he greatly aided in increasing the country's industrial efficiency after the United States was involved in World War II. When the OPM was reconstituted in 1942 as the War Production Board, Krug was appointed program vice chairman, and in February 1943 he was selected to head the Office of War Utilities. He also continued his work with the WPB, but relinquished both posts early in 1944 to enter the United States Navy. Commissioned with the rank of lieutenant commander and assigned to damage control duties, when his ship's sailing was delayed, naval officials sent him to Europe to make a survey of postwar utility needs in France and Italy. In August 1944 he was recalled from navy service.

ce to become acting chairman of the WPB, and when Donald Marr Nelson (q.v.) resigned the chairmanship in September, Krug was designated to succeed him. Continuing as chairman of the WPB until the war's end, he maintained the great output of munitions and also initiated many measures for conversion of industry to meet civilian requirements. The WPB was liquidated on Nov. 3, 1945, and Krug, who had efficiently directed its activities during its last year, was shortly after (Feb. 26, 1946) appointed by President Truman secretary of the interior, succeeding Harold L. Ickes. He resigned his Cabinet post Nov. 10, 1949, reportedly in disfavor with the president.

KRUGER, krōō'gēr, **Stephanus Johannes Paulus (Paul)**, South African statesman: b. Colesberg, Cape Colony, Oct. 10, 1825; d. Clarens, Switzerland, July 14, 1904. At the age of 10 he accompanied his parents northward in the Great Boer Trek (see UNION OF SOUTH AFRICA—History), crossing the Orange River into what later became the Orange Free State, and eventually settling in the future South African republic (Transvaal). His early manhood years were occupied with hunting and in the frequent tiring of the settlers with the Matabele and Zulus, and he helped to negotiate with Great Britain in 1852 the Sand River Convention, which acknowledged the independence of the settled communities in the Transvaal region. Kruger also had a part in framing, in 1855, the constitution of the South African Republic, which at first comprised a few of the Transvaal districts, and he was associated with the unsuccessful attempt of Marthinus Wessels Pretorius (q.v.) in 1857 to unite the Orange Free State with that young country. Kruger was elected commandant general of the forces of the South African Republic in 1864, and when, on the promise of a considerable measure of home rule, the country was annexed to Great Britain in 1877, he was appointed to a government post by Sir Theophilus Shepstone. He visited London twice with Dutch delegations which protested at the undertakings had not been fulfilled, and because he continued to demand retrocession of the country he was dismissed from British service in 1878. Following the war with Britain in 1880–1881 he was associated with Pretorius and Petrus Jacobus Joubert (q.v.) in negotiating restoration of Dutch independence north of the Vaal River, and in 1883 he was elected president of the reconstituted South African Republic. That same year he again went to London, and there he concluded in 1884 a convention which defined the future relationship between his country and Great Britain. Re-elected to the presidency in 1888, 1893, and 1898, Oom (uncle) Paul, as he was affectionately termed, was beset with the numerous difficulties arising from the discovery of rich reefs of gold on the Witwatersrand (q.v.) and the consequent influx of great numbers of *witlanders* (foreigners) to develop them. Bitterly resisting the ideas for reform held by the more liberal of his people, he clung stoutly to an administrative system already effete, grew steadily more corrupt. The foreign element, who paid the greater part of the taxes, had no voice in the expenditure or administration of affairs, and failure of the *witlanders* to secure the franchise and other concessions precipitated the abortive Jameson

Raid. (See JAMESON, SIR LEANDER STARR.) In June 1899 Kruger met Sir Alfred (later Viscount) Milner (q.v.) at Bloemfontein in an attempt to compose the differences between the countries respecting the status of the *witlanders*, and with failure of the conference the South African War (q.v.) soon ensued. At the age of 74 Kruger was too infirm to take the field, and with the assent of his government he left the country in 1900 after the British had captured his capital. Conveyed to the Netherlands aboard a Dutch cruiser, he sought in vain to enlist the aid of European powers and the United States on behalf of the hard-pressed republics. Most of his remaining years were passed at Utrecht, where, in 1902, he published *The Memoirs of Paul Kruger*. His body was returned to South Africa and interred at Pretoria on December 16, the national holiday termed Dingaan's Day which commemorates the defeat in 1838 of the great Zulu warrior Dingaan (q.v.) by a force of Dutchmen whose numbers included the 13-year-old Kruger.

KRUGER NATIONAL PARK, Union of South Africa, is the world's largest wild life sanctuary. Located in the northeast of the Transvaal province, bordering Mozambique, it is 200 miles long and 40 miles wide, the area being about 8,400 square miles. The park, comprising river-threaded gorges, open plains, and dense thorn-bush country, contains thousands of animals living in a natural state, notably lion, giraffe, elephant, hippopotamus, buffalo, zebra, and antelopes in wide variety. While hunting is forbidden, the park is open to visitors from June 16 to October 15 each year. Some 1,000 miles of roads and numerous rest camps make travel by automobile easy and comfortable. From Pretoria, the park may be reached by railroad eastward to Nelspruit, 222 miles distant from the capital. The park had its genesis in the Sabi Game Reserve, established in 1898 by President "Paul" Kruger (q.v.) of the South African (Transvaal) Republic; subsequently the area was considerably enlarged, and in 1926 it was renamed Kruger National Park.

KRUGERSDORP, Union of South Africa, a town of Transvaal Province, 20 miles northwest of Johannesburg. It is an important center of the goldmining industry of the Witwatersrand (q.v.); and manganese is also mined. Named for Stephanus Johannes Paulus (Paul) Kruger (q.v.), the town was founded in 1887; within its limits stands the Paardekraal Monument, recording the victory of the early Dutch migrants over the Zulu chief Dingaan (q.v.) in 1838. Pop. (1936) 54,810 (whites, 20,583).

KRUMBACHER, krōōm'bā'kēr, **Karl**, German Byzantine scholar: b. Kürnach, Bavaria, Sept. 23, 1856; d. 1909. From 1897 he was professor of medieval and modern Greek at the University of Munich. His principal work was *Geschichte der byzantinischen Literatur* (Munich 1891; 2d ed., 1897), covering from Justinian to the fall of the Eastern Empire, 1453. He founded the *Byzantinische Zeitschrift* (Leipzig from 1892), and *Byzantinische Archiv* (ib. from 1898).

KRUPP, krōōp, **Alfred**, German inventor and metallurgist: b. Essen, Prussia, April 26, 1812; d. there, July 14, 1887. He was a son

of Friedrich Krupp. In 1848 he assumed control of the Krupp steel and iron works at Essen. Three years later, after discovering a method of casting steel into large masses, he sent to the Great Exhibition at London a two-ton ingot of steel, the flawlessness of which astonished observers. In 1861 Krupp was manufacturing breech-loading rifles and heavy artillery pieces which were subsequently employed with devastating effectiveness by the Prussian Army in the Franco-Prussian War (1870-1871). In the 1860's he developed a new Bessemer steel for the production of improved weapons and railway wheels, and later devised a method of hardening armor plate. Although the Krupp plant also manufactured a wide variety of articles for peacetime use, its international fame rested primarily on the superiority of its armament production.

KRUPP, Friedrich, German manufacturer: b. Essen, Germany, July 17, 1787; d. there Oct. 8, 1826. In 1810 he established at Essen a small forge, and was able in 1812 to produce cast steel, the formula of which had been kept a secret in Great Britain. Around 1818 he built a plant comprising eight smelting furnaces, establishing on the same site the beginnings of the Krupp iron and steel foundries which later became internationally famous as the most extensive in the world. See also other articles under KRUPP.

KRUPP, Friedrich Alfred, German industrialist and financier: b. Essen, Germany, Feb. 17, 1854; d. there, Nov. 22, 1902. The son of Alfred Krupp (q.v.), he vastly extended the operations of the Krupp iron and steel works. Under his direction the Krupp enterprises absorbed other steel works at Rheinhausen and near Magdeburg; acquired coal and iron mines in Germany and iron holdings in Spain; purchased shipyards and engine shops in Kiel and Berlin; and operated a large fleet of steamers. Although he took little active part in the technical aspects of production, his skill in administration consolidated one of the world's most powerful industrial combines. He also extended the Krupp welfare program, initiated by his father to stem the tide of trade unionism among his workers. As early as 1861, Alfred Krupp had begun erecting low-cost housing for his employees, and before the end of the century, this enterprise, accelerated by his son, comprised numerous housing colonies and model villages at Essen and its environs. The Krupp organization also created substantial insurance, trust, pension, and other welfare funds for its employees and their families.

Friedrich Alfred was survived by his daughter Bertha (b. Essen, March 26, 1886), who immediately took charge of the Krupp concern and its 43,000 workers. On Oct. 10, 1906, she married Dr. Gustav von Bohlen und Halbach. He later assumed the name of Krupp, and in 1909 took over the direction of the Krupp combine. Dr. Gustav Krupp von Bohlen und Halbach (b. The Hague, Holland, Aug. 7, 1870) had been educated at Lausanne, Strasbourg, and Heidelberg, and had held diplomatic posts at Washington, Peking (now Peiping), and Rome. Under his management, during World War I, the Krupp factories gained a virtual monopoly of German iron and steel production, and employment in the works rose to 167,000 by 1918. One of the outstanding wartime technical achievements of the Krupp foundries was the construction of "the Big

Bertha," a new type of long-distance gun.

In the mid-1930's Dr. Krupp became one of Adolf Hitler's important supporters among the German industrialists, and after 1933 his industrial establishments became the center of the Nazi rearmament program. Although judged incompetent in 1945, because of senility, to stand trial as a war criminal, he was indicted of having "promoted the accession to power of the Nazi conspirators and the consolidation of their control over Germany." He died at Bluehnbad Castle, Salzburg, Austria, on Jan. 16, 1950.

His son, Alfred Krupp von Bohlen und Halbach, who had succeeded to the direction of the Krupp works in 1942, was tried as a war criminal at Nürnberg and was sentenced (July 1948) to imprisonment for 12 years. Against the son, the Nürnberg tribunal dismissed charges of aggressive war and conspiracy, but found him guilty of plundering occupied countries and of exploiting forced labor. All except one of the Krupp directors were sent to prison, and the entire properties, 70 per cent destroyed by bombings, were confiscated by the Allies. On Jan. 31, 1951, U.S. High Commissioner for Germany, John McCloy, commuted Alfred Krupp's sentence in Landsberg Prison to the time already served, released other Krupp associates, and ordered restoration of the Krupp properties.

Consult Berdrow, W., *The Krupps: 150 Years of Krupp History, 1787-1937* (Berlin 1937) and Menne, B., *Blood and Steel* (New York 1938).

KRUPSKAYA, krōp' skū-yū, Nadezhda Konstantinovna, Soviet public official and educator and wife of Nikolai Lenin (q.v.): b. St. Petersburg (now Leningrad), Russia, Feb. 23, 1869; d. Moscow, Feb. 27, 1939. At the age of 14 she worked as a tutor and then attended a woman's college. After becoming a Marxist she met Lenin in 1893 and joined him in revolutionary activities at St. Petersburg. Following her role in a strike in 1896 she was sent to three years' exile in Siberia, where at Shushenskoye in 1898 she was permitted to marry Lenin, also in exile. Her sentence expired after her husband had been released, and she joined him in Munich, Germany, in 1901. From then until 1917, as secretary of the Bolshevik section of the Social Democratic Party, she assisted him at various European capitals in directing the revolutionary movement within Russia. In April 1917, immediately following the outbreak of the Russian Revolution, she turned with Lenin to Russia, and in 1922 she became commissioner of education for the Soviet Union. She took no active part in the struggle for party power which followed Lenin's death in 1924, but in 1930 announced her support of Stalin.

Meanwhile she had begun her valuable contributions to Soviet educational theory and practice. She sought the abolition of illiteracy among women and, by encouraging the building of nurseries, kindergartens, communal dining halls, laundries, attempted to reduce for women the drudgery of domestic life. In 1927 she became a member of the Central Committee of the Communist Party and of the presidium of the Supreme Soviet. She was the author of *Popular Education and Democracy* (1916); *Memories of Lenin* (Eng. tr., 1930); and of *Soviet Woman* (Eng. tr., 1937).

KRUSE, krō'zē, Heinrich, German dramatist and poet: b. Stralsund, Germany, Dec. 15, 1815: |

Bückebur 13 Jan. 1902. He studied philology at Bonn and Berlin after which he dwelt abroad several years, chiefly in England. He was appointed (1844) teacher at the gymnasium, Minden, but joined (1847) the editorial staff of the *Kölnische Zeitung*. As successor to Terminus he managed (1848-49) the *Deutsche Zeitung* at Frankfurt, but returned to the *Kölnische Zeitung* and became chief editor in 1855, remaining in that post till he took up residence (1872) in Berlin. He lived at Bückeburg from 1884. Among his dramatic works are 'Die Gräfin' (Leipzig 1868; 4th ed., 1873), a tragedy which won the Schiller prize; 'Wullenwever' (1870; 4th ed., 1894); 'König Erich' (1871); 'Moritz von Sachsen' (1872); 'Brutus' (1874); 'Marino Faliero' (1876); 'Das Mädchen von Byzanz' (1877); 'Der Verbannte' (1879), etc., all tragedies. Of his short plays and poems might be mentioned 'Festnachtspiele' (Leipzig 1887); and his clever 'Seegeschichten' (Stuttgart 1880). Consult Brandes, F. H., 'Heinrich Kruse als Dramatiker' (Hanover 1898); Lange, E., 'Heinrich Kruses pommersche Dramen' (Greifswald 1902).

KRUSENSTERN, kroo'zën-stërn, **Adam Johann von**, Russian navigator: b. Haggud, Estonia, 19 Nov. 1770; d. there, 24 Aug. 1846. He entered the cadet corps and took part in the war (1788) with Sweden, and served in the English fleet (1793-99). He was given (1803) command of an expedition to the northwest coast of America and Asia, with the object of opening up the fur trade of the Pacific coast and renewing the Japanese commercial relations. He failed in the latter object but the scientific outcome of the world's circumnavigation was important. From 1827 to 1842 he was director of the naval school and, in 1841, was made general-admiral. His bronze statue was erected (1876) at the naval school, Saint Petersburg. He wrote 'Voyage round the World in 1803-12' (Saint Petersburg 1810-12), translated into several languages and containing an atlas and plates; 'Atlas de l'Océan Pacifique' (Saint Petersburg 1824-27, with supplements).

KRYLOV, krë-löf, **Ivan Andreevich**, Russian fable writer: b. Moscow, 13 Feb. 1768; Saint Petersburg, 21 Nov. 1844. He was the son of a poor subaltern officer, yet in his 15th year he wrote the successful opera 'Kofejnica' ('The Coffee Fortune-teller') and was appointed Unterkanzlist in a circuit town (1781) and Kanzlist at Tver end of the same year. He received a position in the Chamber of Finance at Saint Petersburg (1782) and in the cabinet of the empress (1788) but retired in 1790. He then published several periodicals unsuccessfully though they established his reputation as journalist, the fine satiric talent displayed in his contributions, and by gift of observation and masterly language. Meanwhile he was writing odes, tragedies, a comic opera 'The Crazy Family' (1793) and comedies, all in the French taste but none important. From 1797-1801 he lived on the estate of Prince Golitzyn in the Ukraine, becoming his secretary (1803). In 1806 he went to Moscow, then Saint Petersburg, where he wrote (1807) his most popular comedy 'The Fashion Magazine,' and 'A Lesson for Daughters,' the 'Magic Opera,' 'Ilja the Hero,' etc. He next turned

to poetry, his true field soon appearing to be fables. The first issue of his fables (23) appeared in 1809, the second (21 new) in 1811, in which year he was elected member of the Saint Petersburg Academy. The last collection under his supervision (1843) contained 197 fables and reached its 26th edition in Saint Petersburg in 1891. He was appointed assistant at the Imperial Library in 1812. A memorial in his honor was erected (1885) in the Saint Petersburg Summer Garden. Through their Russian sentiment, humor and naturalness, wit and good nature, his fables have become the favorite book of the people and new editions continue to appear rapidly. Translations in the French (Paris 1825) and the Italian languages have been published, and German versions by Torney (Mittau 1842), Löwe (Leipzig 1874) and Frau von Gernet (ib. 1881) find wide circulation. A comprehensive collection of his works was published (1847 and 1859) in Saint Petersburg with a biography by Pletnev, and another by Kalasha (Saint Petersburg 1914). W. Kenevitch's 'Bibliographical and Historical Notes on the Fables of Krylov' (Saint Petersburg, 2d ed., 1878) contains perhaps, the best commentaries.

KRYPTON, a gaseous element discovered in the atmosphere by Ramsay and Travers, in 1898. (The history of this member of the argon group is so bound up with that of argon itself that reference should be made to the article ARGON, and to the references there given). Krypton was discovered in the last fraction remaining after the evaporation of a considerable quantity of liquid air. The residue consisted chiefly of argon, oxygen and nitrogen; but when the oxygen and nitrogen had been removed, a spectroscopic examination of what remained showed lines that indicated the existence of at least one new element, in addition to argon and helium. To this new element the name "krypton" was assigned, from a Greek word signifying "hidden," in allusion to the circumstances under which the discovery was made. (See also NEON and XENON). Little is known, as yet, concerning the properties of krypton. When it was isolated by means of a tedious diffusion process, it was found by Ramsay and Travers to have a density about 40.75 times as great as that of hydrogen and an atomic weight of about 81.5. The ratio of its specific heat at constant pressure to its specific heat at constant volume was found to be 1.66, as in the cases of argon and helium. Subsequent experiments by Ladenburg and Krügel have indicated a density of about 29.5, and therefore an atomic weight of about 59. Travers, in his book issued subsequently to these later experiments, makes no reference to them. Considerations based upon the periodic law (q.v.) appear to indicate that the results of Ramsay and Travers are the more probable; but this point is as yet undecided. Krypton exists in the air in the proportion of about one part in a million. It has the chemical symbol Kr and appears to be as inert, chemically, as argon.

KTISTOLATRÆ. See MONOPHYSITES.

KU-KLUX (kü'klüks') **KLAN**, a secret society which existed in the Southern States of the United States during the period immediately following the Civil War (1865-76). It was originally established at Pulaski, Tenn., about

1865 and its purpose was at first the amusement of its members. However, the sudden enfranchisement of the blacks of the South brought to the white population the serious problem of social readjustment. Politicians and unscrupulous business men (carpet-baggers) were among the many Northerners who flocked to the South to exploit the new citizens, while the Negroes, loosed from the restraining influence of their masters, and ignorant of and unprepared for the responsibilities of full citizenship, were demoralized and lawless. The Ku-Klux Klan, therefore, took upon itself the duty of frightening the blacks into good behavior and obedience. From this beginning, all sorts of lawless deeds of violence were performed in the Klan's name, until the band became notorious. At the first meeting a name was suggested—"Ku-Kloi," from the Greek "Kuklos," a band or circle. On the mention of this name someone cried out, "Call it 'Kuklux.'" Nearly all present were Tennesseans, with only one or two from farther south. The name was adopted and the society provided for the following officers: A grand cyclops or president; a grand magus or vice president; a grand turk or marshal; a grand exchequer or treasurer and two lictors. There were the outer and inner guards of the "den," as the place of meeting was designated. Each member was required to provide himself with the following outfit: A white mask for the face, with orifices for the eyes and nose; a tall, fantastic cardboard hat, so constructed as to increase the wearer's apparent height, and in shape like those placed on the heads of the heretics formerly burnt in the Portuguese and Spanish *auto-de-fes*; a gown or robe of sufficient length to cover the entire person. The color and material were left to the wearer's fancy and each selected what would in his judgment be most hideous and fantastic. Each member carried also a small whistle, with which, by means of a code of signals agreed on, they held communication with one another. The Klan increased in numbers and in power, an *imperium in imperio*, until its decrees were far more potent and its powers more dreaded than that of the visible commonwealths which it either dominated or terrorized. In April 1867 the grand cyclops of the Pulaski den sent out a request to all the dens scattered over the South to appoint delegates to meet in convention at Nashville, Tenn., in the early summer of 1867. At the time appointed this convention was held. Delegates were present from the Carolinas, Alabama, Georgia, Louisiana and other Southern States. A plan of reorganization previously prepared was submitted to the convention and adopted and the delegates returned to their various states as secretly as they had come.

The grand officers were: The grand wizard of the invisible empire and his 10 genii. The powers of this officer were almost autocratic. The grand dragon of the realm and his eight hydras; the grand titian of the dominion and his six furies; the grand cyclops of the den and his two nighthawks; a grand monk; a grand exchequer; a grand lictor; a grand scribe; a grand turk; a grand sentinel. The genii, hydras, furies, goblins and nighthawks were staff officers. The gradation and distribution of authority were perfect.

One of the most important things done by this Nashville convention was to make a positive and emphatic declaration of the principles

of the order. It was in the following terms: "We recognize our relations to the United States Government; the supremacy of the Constitution; the constitutional laws thereof; and the union of the States thereunder."

This Nashville convention also defined and set forth the peculiar objects of the order as follows:

1. To protect the weak, the innocent and the defenseless from the indignities, wrongs and outrages of the lawless, the violent and the brutal; to relieve the injured and the oppressed to succor the suffering and especially the widows and orphans of Confederate soldiers.

2. To protect and defend the Constitution of the United States and all laws passed in conformity thereto, and to protect the states and people from all invasion from any source whatever.

3. To aid and assist in the execution of a constitutional laws, and to protect the people from unlawful seizure, and from trial except by their peers in conformity to the laws of the land.

The Klan had a very large membership; it exerted a far-reaching and terrifying power but its influence was never at any time dependent on or proportioned to its membership. A careful estimate placed the number of Kuklux in Tennessee at 40,000, and in the entire South at 550,000. In 1871, a special message was sent to Congress by President Grant, pointing out the fact that the constitutional rights of some of the citizens and officials of the United States were being rendered insecure by the lawless membership of the country and urging a Congressional enactment to put a stop to this condition of affairs. An investigation followed, and Congress passed the "Force Bill" for the purpose of enforcing the 14th amendment and dealing with all offenders against that amendment. In October of the same year, the president issued a proclamation calling on the members of all illegal associations in nine counties in South Carolina to disperse and surrender their arms and disguises. Five days later a proclamation was issued suspending the privileges of the writ of habeas corpus in the counties named. Several hundred persons were arrested, and this demonstration caused the gradual dissolution of the organization. Its purpose—to check the threatening political supremacy of the Negroes in the South—had been accomplished.

A second, though distinct, organization known as Ku Klux Klan came into existence in 1915. Founded in Atlanta, Ga., by William Joseph Simmons as a fraternal organization, it stood for white supremacy in the South and a militant Protestantism, excluding from its ranks, besides Negroes, the Jews, Roman Catholics, and all born abroad. In 1920 Edward Young Clarke, a former newspaper man, undertook to promote the movement, extending it from the South as far as Maine, and into the Middle West and the Pacific seaboard. Appointed imperial kleagle, Clarke selected organizers, termed kleagles, in 40 states; he received \$4 of each \$10 membership fee, and the king kleagle \$1, the remainder going to the imperial treasurer. Many outbreaks of violence were attributed to the Ku Klux Klan, which became politically powerful, electing several state officials and also members of Congress. After 1926, when it had over 2,000 local organizations, the influence of the Ku Klux Klan

egan to wane, its decline due to state laws compelling unmasking, and to unsavory scandals in the personal and official lives of leading clansmen; among others, the governor of Indiana and the mayor of Indianapolis were indicted and convicted.

Consult Mecklin, John M., *The Ku Klux Klan* (New York 1924).

KUALA KANGSAR, kwä'lä kŭng'sēr, town, Federation of Malaya, in Perak state, on the Perak River 12 miles southeast of Taiping. It contains the residence of the sultan of Perak and a Malay college which prepares students for entry to the University of Malaya. Pop. (1941 est.) 6,030.

KUALA LIPIS, kwä'lä lŏ'pīs, town, Federation of Malaya, capital of Pahang state, on the Jelai River 75 miles north of Kuala Lumpur. It is the center of a rice-growing area, and is served by the east coast branch of the Malayan Railway. Pop. (1941 est.) 4,111.

KUALA LUMPUR, kwä'lä lŏm'pŏr, city, Federation of Malaya, capital of Selangor state and of the Federation, on the Klang River 27 miles northeast of Port Swettenham. It is on the west coast branch of the Malayan Railway, and from it a spur line runs to Port Swettenham. The city has many modern buildings, and contains a Malay girls' college and a technical college. It is the commercial center for a large tin-mining and rubber plantation area. Pop. (1947) 175,961.

KUALA TRENGGANU, kwä'lä trēng-gānŏ, town, Federation of Malaya, capital of trengganu state, at the mouth of the Trengganu river. Coconuts and rice are cultivated extensively in the vicinity. Pop. (1947) 27,004.

KUBAN, kŏŏ-bān', river, USSR, rising in the foothills of Elborus (Elbrus), highest peak of the Caucasus Mountains. It flows in a generally northwesterly direction into a delta with three mouths—two on the Sea of Azov and one on the Black Sea. The river has a length of 1,122 miles but is navigable for large vessels for less than 100 miles. It was known to the ancients as *Hypanis*.

KUBELIK, kŏŏ'bē-lik, Jan, Czech violinist: b. near Prague, July 5, 1880; d. Prague, Dec. 5, 1940. He studied at the Prague Conservatory and made his first public appearance at Vienna in 1898. The first of many appearances in the United States was at Carnegie Hall, New York City, in 1901. He became a naturalized Hungarian citizen in 1903. After World War I he composed several violin concertos, and a symphony first presented in Prague in 1939. During 1927-1931 he appeared in India, China, and Japan, and in several South American and South African cities. He was regarded as one of the most able violinists of his time.

KUBLA KHAN, a poetic fragment of 54 lines by Samuel Taylor Coleridge (q.v.) which describes in highly imaginative language the stately pleasure palace built by an Eastern prince amid strange and visionary surroundings. According to Coleridge's own account the poem came to him as an opium dream, after he had been reading an account of Kubla Khan in *Pur-*

chas, his Pilgrim (1619) by Samuel Purchas (q.v.). *Kubla Khan* was published at the request of Lord Byron (q.v.) in 1816. It belongs to the brief period of Coleridge's creative activity, and is akin in imaginative and poetic qualities to the two other masterpieces of Coleridge's muse, *Christabel* and *The Ancient Mariner*, though less coherent than either of these longer works. The vision has no meaning and needs none. It is simply a succession of images, dreamlike and unreal, but vivid and colorful.

JAMES H. HANFORD.

KUBLAI KHAN, kŭ'bli kǎn', or **KHUBILAI KHAN**, or **KUBLA KHAN**, Mongol khan and founder of the Mongol dynasty in China: b. 1216; d. 1294. He was the son of Tului and grandson of Genghis Khan (q.v.), and brother of Mangu Khan and Hulagu. After Mangu, his older brother, became Mongol khan in 1251, he took part in the campaign for the conquest of southern China, advancing into Tonkin and going as far as the frontiers of Tibet. Following Mangu's death in 1259 he was in turn chosen khan, and in the years that followed he completed the subjugation of north China by expelling Kin Tatars. He suppressed several rebellions, and during 1264-1267 he established his capital (on the site of what became Peiping), known as Khanbalik (City of the Khan), Tai-tu, or Cambaluc. In 1280 he founded the Yüan dynasty, becoming ruler over a vast domain which extended westward across Asia as far as Russia. Both Korea and Burma fell to him, but he failed to conquer Japan and Java. He made Buddhism the state religion of his empire. Between 1275 and 1292 he made frequent use of the services of Marco Polo (q.v.), who left a vivid account of his experiences. The magnificence of his court inspired Samuel Taylor Coleridge's unfinished poem, *Kubla Khan* (q.v.). Through a wise administration he was able to repair the evils of so many wars, and he brought letters, commerce, industry, and agriculture to a very flourishing condition by the encouragement which he gave to them.

Consult Yule, Sir H., *Marco Polo* (London 1875); Howorth, Sir H. H., *History of the Mongols* (London 1876); Lamb, Harold A., *Genghis Khan* (New York 1927).

KUCHING, kŏŏ'chīng, town, Borneo, capital of the British colony of Sarawak, on the Sarawak River about 10 miles from its mouth. Most of the country's exports, with the exception of petroleum products, are shipped from its port. There is a weekly steamship service to Singapore; and Kuching is also connected with Singapore and North Borneo by a service of Malayan Airways. The Japanese captured the town on Dec. 26, 1941. Pop. (1950) 37,954.

KUCHUK KAINARJI, kŭ-chŭk' kī-nār-jī', village, Rumania, in the southeast of the country near Silistria (Silistra); it is now known as CAINARGEA-MICĂ. Here, on July 21, 1774, a treaty was signed ending the first war of Catherine II (Catherine the Great) of Russia against Turkey. Russia was permitted to fortify Azov, at the eastern end of the Gulf of Taganrog, and to navigate through the Kerch Strait into the Black Sea; she also secured territory on the Bug and Kuban rivers, and Orthodox Christians in the Ottoman Empire were placed under Russian protection.

KUDU, kōō'dōō, one of the largest species of antelope found in Africa. The greater kudu (*Strepsiceros kudu*) is found all over South Africa, in the west up to Angola, in the east to Somaliland and Ethiopia, and north into the Anglo-Egyptian Sudan. This majestic animal stands about 52 inches, is tawny to slate gray in color, with white markings which include vertical stripes on the sides. There is a mane on the back and throat. The horns, up to 60 inches long, are twisted in a wide open spiral of about two turns. The lesser kudu (*S. imberbis*), inhabits the bushy country of East Africa up to Somaliland. It is about 40 inches tall and its white markings are more distinct than those of the greater kudu. There is no mane on the throat and the spiral horns are up to 34 inches long. The females of both species are smaller and hornless.

KUENLUN SHAN. See KUNLUN SHAN.

KUFA. See AL KUFA.

KUFIC or **CUFIC WRITING**, kū'fik, the angular characters used by the Arabs in inscriptional and ornamental writing, as distinguished from the rounded cursive, popularly known as Naskhi, used in governmental and commercial offices, books, and private correspondence.

The early Arabs of southern Arabia developed a square writing, called Musnad, which has survived in tomb and votive inscriptions. Later, the northern Arabs replaced the Musnad with an entirely new type of writing evolved out of the Nabataean Semitic characters by the 3d century after Christ. The earliest extant inscription is that of Namarah in northern Syria and is dated 328 A.D. The earliest extant cursive specimen comes from Egypt and is dated 643 A.D. The Kufic presumably was first perfected in the 7th century by calligraphers in the newly-founded city of Kufa in present-day Iraq. Its use spread throughout the fast expanding Islamic Arab empire established shortly after the death of Mohammed, the founder of Islam, in 632. Kufic characters generally are larger and heavier than the cursive. They often were used for seals, coins, and glass weights. Because of its size and impressiveness, the Kufic script also was used up to about the year 1000 for the Koran, especially for large copies for use in mosques.

Kufic characters were quite simple at first. But during the first three centuries of Islam (7th-10th centuries) the parent Kufic gave rise to a number of progressively elaborate styles of ornamental Kufic for inscriptions, for sumptuous copies of the Koran, and for decorative titles and chapter headings of literary manuscripts. In the meantime, the more practical and widely used cursive writing also had branched out into a number of styles, some of which were anything but decorative or artistic. Ibn Muqlah (d. 940), a famous calligrapher and a wazir at the court of the caliph of Baghdad, stabilized the basic forms of individual letters and also classified and described the leading styles. He paid particular attention to the more practical cursive scripts. Some of these scripts replaced the more elaborate and difficult Kufic, at first in noninscriptional writing such as the Koran, and later in inscriptional writing itself. The Kufic script went out of style about 1000 A.D. and was eventually almost forgotten. It was a rare Arab scholar of the

later Middle Ages who could decipher the ancient Kufic inscriptions or literary texts.

Modern scholars, interested in the early historical inscriptions of Islam, took great pains to decipher Kufic texts. More recently, the Near East itself has shown a revived interest in this ancient writing art. Today, old and new Kufic scripts are used for their decorative effect in printed books and in eye-catching advertisements on the main streets of such Arab cities as Cairo and Baghdad.

NABIA ABBOTT,

Professor of Islamic Studies, University of Chicago.

KUFOW or **CHUFOW**, chū'fōō', town, China, in the southwestern part of Shantung Province about 65 miles south of Tsinan. Confucius (c.551-479 B.C.) lived here for most of his life, and his descendants, the K'ung family, continue to reside in the town. Kufow contains a magnificent temple originally built in 478 B.C. and rebuilt or renovated by successive emperors. Confucius' tomb and the graves of thousands of his descendants are in the 600-acre cemetery located one mile north of the town. Industries include silk weaving and straw plaiting. Pop. (est. 1949) 20,000.

KUHLMANN, kü'l'män, Richard von, German statesman: b. Constantinople (now Istanbul) Turkey, May 3, 1873. After serving in diplomatic posts in London, Constantinople, and The Hague in August 1917 he became foreign secretary and negotiated the peace treaties with Russia (at Brest Litovsk, March 3, 1918) and with Rumania (at Bucharest, May 7, 1918). In July of the same year Kühlmann was forced out of office for publicly urging peace with the Allies through reciprocal concessions rather than by force of arms alone.

KUHN, kōōn, Adalbert (in full FRANZ FRIEDRICH ADALBERT KUHN), German philologist and mythologist: b. Königsberg (Newmark), Germany Nov. 19, 1812; d. Berlin, May 5, 1881. He studied in Berlin, taught at the Kölnisches Gymnasium and became its director in 1870. Kuhn founded a new school of comparative mythology based on comparative philology. He established his reputation with research on Indo-German languages and history. His most important work is *Zur älteren Geschichte der indogermanischen Völker* published in 1845. His other works include *Herakunft des Feuers und des Göttertrains* (1859).

KUHN, Richard, German chemist: b. Vienna, Austria, Dec. 3, 1900. He studied at the University of Munich and served as director of the Kaiser Wilhelm Institute for Medical Research in Heidelberg. Kuhn's reputation is based on his researches on carotinoids and vitamins. He contributed toward the isolation of riboflavin or B₂. He was awarded the Nobel Prize in 1937 but declined it on instructions from the Nazi government.

KUIBYSHEV, kōō't-bī-shēf (formerly KUIBYSHEVSKAYA), oblast (region), USSR, in the southeastern part of the European RSFSR. It lies on both sides of the great bend in the Volga River and extends over an area of some 20,800 square miles. South of the Volga bend the terrain is mostly

vel or gently rolling steppes. A large multipurpose dam was begun in 1950 which will irrigate the drought area east of the Volga. Mineral resources include petroleum, oil shale, asphalt, gypsum, phosphorite, sulphur, cement rock, limestone, and quartz sand. Agriculture is the chief occupation, and major crops raised include rye, oats, barley, potatoes, and sunflowers. Wheat is grown in the south, vegetables, sugar beets, fruit and coriander in other parts of the oblast. Industries include food processing, flour and sugar milling, tanning, and quarrying. In the larger urban centers light manufacturing is carried on and also metal- and wood-working. Transportation facilities by rail and road are extensive. The region exports petroleum, building materials, machinery, chemicals, grain and livestock. It was made an oblast in 1936. During World War II Kuibyshev was exploited as a vital petroleum region. Pop. (1946 est.) 1,950,000.

Kuibyshev, capital city of the oblast of the same name, its largest city and a river port, is located on the left bank of the Volga River at its junction with Samara, about 530 miles southeast of Moscow. It is a leading industrial, commercial, and transportation center. It manufactures aircraft, locomotives, rail cars, ball-bearings, tractors, synthetic rubber, and textiles. It also refines petroleum and has pipelines from the Pokhvistnevo and Zhiguli Mountains oil wells. Hides, grain, meat and sunflower oil from the surrounding agricultural area are processed here. Grain and livestock are the chief exports. As a cultural center, Kuibyshev has technical, medical, economic and teachers colleges and research institutes. There are two cathedrals, some old churches, museums and several monuments. During World War II it served as the temporary capital of the Soviet Union when German troops threatened Moscow, more than doubling in population. Originally Kuibyshev was a Moscovite stronghold founded in 1586. During the 17th century it became a thriving trade center, chiefly for grain merchants. After railroads were built to Siberia in 1896 and Central Asia in 1906, it developed into a major industrial center. In 1918 it was the seat of the anti-Bolshevik provincial government and Russian constituent assembly. Formerly called Samara, it was renamed for the Soviet leader Valerian V. Kuibyshev in 1935. Pop. (1946 est.) 600,000.

KUKA, kōō'kà, or **KUKAWA**, kōō'kà-wà, town, Nigeria, situated in Bornu Province, near Chad. During the 19th century it was the capital of the Bornu kingdom, a Mohammedan state in the central Sudan. As the departure point for Tripoli-bound caravans, it also was a thriving communications center with a population of some 60,000. In 1893 Kuka was captured by the African chieftain Rabah Zobeir and thereafter fell into ruin. When it came under British protection in 1902, the British rebuilt it as a garrison town. Inhabitants today raise cassava, millet and cotton and produce gum arabic. The town also has salt works. Pop. (1931) 3,282.

KUKAI. See **KOBO DAISHI**.

KUKI-CHINS, kōō'kī-chinz', are a constellation of tribes which inhabit the hill country of eastern Bengal, Assam, and western Burma. They are Tibeto-Burmese in speech, and Mongoloid in physical type. They raise some crops in jungle clearings and keep mithan (domesticated bison), but

depend on hunting and fishing for much of their food. Being extremely warlike, they live in hilltop villages protected by spike fences and sharp bamboo points embedded in the ground. The Kuki raid enemy villages for plunder and captives; the Chin kill anyone encountered in enemy territory. However, since the people are alert to danger there are few casualties. Each village is politically independent. Among the Old Kukis of Assam a council of elders administers village affairs while an elected chief acts as religious leader. The culturally predominant Lushei Kukis have hereditary village chiefs with theoretically absolute powers. Outside the lineage from which chiefs are drawn, prestige is attained by giving feasts. Most Kuki-Chins believe their country inhabited by spirits of the dead and by evil spirits who must be propitiated with sacrifices. In 1931 the Kuki-Chins numbered 554,842. In the first part of the 20th century over half of the Lushei Kukis were converted to Christianity, with a loss of old customs beliefs.

ELIZABETH E. BACON.

KUKU NOR. See **KOKO NOR**.

KULA GULF, kōō'là, a body of water about 17 miles long and 10 miles wide, between New Georgia and Kolombangara in the Solomon Islands. United States naval forces scored two victories here over the Japanese in July 1943.

KULDJA or **KULJA**, kōō'l'jä, (formerly NINGYÜAN), town, China, in the northwestern part of Sinkiang Province, on the Ili River, about 300 miles west of Urumchi near the Russian border. Located between the Tien Shan and Ala Tau mountain ranges, it trades in tea and cattle, grows cereals and fruit and manufactures wool textiles. Iron and coal mines are nearby. Formerly an important trade center for westbound caravans, this walled city still is connected by routes to Issyk Kul and Alma Ata in the Soviet Union. Russia seized Kuldja in 1871, occupied it for ten years, and restored it to China by a treaty in 1881. Pop. (est.) 30,000.

KULM. See **CHELMNO**.

KULMBACH, kōōlm'bāk, city, Germany, in northern Bavaria, Upper Franconia district, 12 miles northwest of Bayreuth, in the American zone. A rail junction, malt manufacturing and brewing center, Kulmbach is noted chiefly for its beer. Other important industries are toys, shoes, lumber, textiles, food, and metals. There is a 15th century Gothic church and a 17th century baroque monastery, among other notable edifices. The Hohenzollern fort which overlooks the city has served as a prison since 1808. Kulmbach first was mentioned in 1035 and it was chartered sometime before 1248. The margraves of Kulmbach resided here from 1340 to 1603. Imperial troops almost destroyed it in 1533. It passed to Prussia in 1791 and in 1810 to Bavaria. United States troops captured Kulmbach in April, 1945. Pop. (1950) 24,159.

KULPE, kül'pē, **Oswald**, German philosopher and experimental psychologist: b. Candau, Germany, Aug. 3, 1862; d. Munich, Dec. 30, 1915. He was educated in German universities and in 1894 was appointed adjunct professor of philosophy and aesthetics at Wurzburg University. He rendered

effective service as director of the Psychological Institute at Würzburg, where he applied the principles of Wilhelm Wundt (q.v.). He defined psychology as the science of personal experiences in dependence upon the individuals who experience them, and held that the theory of knowledge is the doctrine of fundamental ideas and principles as the material assumptions of all particular sciences. Association is reproduction resulting from experience; and sensations which have been together in consciousness tend to reproduce one another. His works included *Die Philosophie der Gegenwart in Deutschland* (5th ed. 1911); *Immanuel Kant* (3d ed. 1912); *Psychologie und Medizin* (1912).

KULTURKAMPF, kōōl-tōōr'kämpf', a German term denoting the contest for political and legal rights waged between the authorities of Germany on the one hand and the authorities of the Roman Catholic Church on the other. The conflict was begun by Prince Otto Eduard Leopold von Bismarck-Schönhausen (q.v.) in 1872 and had for its main point of dispute the control by the state of educational and ecclesiastical appointments. He contended that the declaration of papal infallibility by the Vatican Council in 1870 was an arrogation of rights dangerous to the state and that the Catholic Church had assumed an attitude of aggression dangerous to the laws of the state. The ill feeling arising from the questions at issue led the Reichstag to pass a law in 1872 expelling the Jesuits from the German Empire. The outbreak of the kulturkampf, however, dated from the enactment of the May laws (1873), aiming at state control of the clergy. The Catholic bishops, clergy, and people refused to recognize the validity of the new laws. This opposition was met by still more drastic government measures, and in 1875 all recusant priests were deprived of their salaries and all religious orders were abolished. The accession of Pope Leo XIII prepared the way, however, for a resumption of friendly relations between the imperial government and the Catholic Church, and negotiations began in 1878 resulting in a nullification of the laws of 1873. The only remnants of the repressive legislation that remained were the proscription of the Jesuits and compulsory civil marriage.

KUM. See QUM.

KUMANOTO, kōō-mā-mō-tō, Japan, capital of a prefecture of the same name, on the west coast of the island of Kyushu near the mouth of the river Shirakawa. The city contains a formidable 16th century castle famous in Japanese annals and subsequently the headquarters of a military district. It has several institutions of higher learning, including a government medical school; Lafcadio Hearn (q.v.) taught in Kumamoto. The silk industries are of importance. Pop. prefecture, 1,407,500; city, 201,400.

KUMANOVO, kōō-mā'nō-vō, Yugoslavia, town of Vardarska County, 20 miles northeast of Skoplje (Uskub). It lies on the main highway between southern Serbia and Bulgaria, in a richly mineralized district, and has a considerable trade in livestock and agricultural produce. In October 1912, during the Balkan

Wars (q.v.), the Serbs gained a decisive victory over the Turks near Kumanovo. The town was captured by the Bulgarians on Oct. 20, 1915, during World War I, and here, three years later, the Bulgarian Army surrendered. Pop. (1931) 16,949.

KUMASI or **COOMASSIE**, kōō-mā'si, British West Africa, capital of Ashanti, a division of the Gold Coast, 168 miles north of Sekondi. The town was occupied by British forces in 1874, and again in 1896. When the Negro kingdom of which it was the capital was annexed in 1901, the town became an administrative headquarters. Kumasi was rebuilt on modern lines after the railroad reached it in 1903, and eventually it became an important center for missionary and educational work. The economic prosperity of the town depends chiefly upon the production of cacao in the vicinity. A motor road of 130 miles extends from Kumasi to Pamu, on the western frontier of Ashanti. Pop. (1942 est.) 43,413.

KUMAUN, kōō-moun' India, an administrative division of the United Provinces, 13,725 square miles in area, situated in the foothills of the Himalayas west of Nepal. Most of the division is covered by dense forests which contain numerous species of hardwoods. Kumaun is highly mineralized, and there are many tea plantations. Pop. (1941) 1,581,262.

KUMBAKONAM or **COMBACONUM**, kōōm'ba-kō'nām. India, town of the Tanjore district of Madras, in the delta of the Cauvery 194 miles southeast of the city of Madras. The town was once the capital of the Chola kingdom, a Hindu dynasty, and is one of the strongholds of Brahmanism (q.v.) and Brahmanical culture. A place of special sanctity, it contains numerous temples and water tanks, according to tradition, a subterranean stream connects one of the latter with the Ganges. Pop. (1941) 67,008.

KUMISS, kōō'mis, a preparation of milk whether cow's, mare's, ass's, or goat's, which said to possess nutritive and assimilable properties valuable in the treatment of tuberculosis, scrofula, and diarrhea. It consists essentially of milk in process of fermentation. On the Asiatic steppes, where it has been long used as a beverage, it is made of mare's milk, but kumiss of mare's milk or goat's milk has a somewhat unpleasant smell. The manufacture of kumiss is carried on in Switzerland, Russia, and elsewhere.

KUMMEL, kim'el, Henry Barnard, American geologist: b. Milwaukee, May 25, 1867; Trenton, N. J., Oct. 23, 1945. He received his B.A. from Beloit in 1889, and for the next two years taught at the academy attached to the college. During 1891-1892 he was assistant geology at Harvard, where he took his master's degree in the latter year, and from 1892 to 1895 he occupied a fellowship in geology at the University of Chicago; there, in 1895, he obtained his Ph.D. He was assistant professor of physiography at Lewis Institute, Chicago, from 1896 till 1899; and from 1902 he served as state geologist for New Jersey. From 1904 until 1915 he was executive officer to the Forest Commission of New Jersey; he was

esident of the Association of American State zoologists from 1908-1913. He contributed numerous useful articles to periodicals, especially on the stratification of the New Jersey ils and similar subjects.

KUMMEL, kīm'ēl or **DOPPELKUM-EL**, a liqueur produced by the distillation of cohool with caraway seed or by mixing oil of araway with alcohol, and adding sugar and ater. The best known kinds are Gilka Getreide-ummel, from the Gilka factory at Berlin; kauer, a very strong and fine liqueur having much oil of caraway; and Allasch, the kümmel made at Allasch, near Riga, and containing anied, fennel, and coriander as well as caraway.

KUMMER, kōōm'ēr, **Ernst Eduard**, German mathematician: b. Sorau, Silesia, Jan. 29, 1810; d. Berlin, May 14, 1893. He studied (1828-31) theology at Halle, then mathematics. In 1832 he was appointed instructor in mathematics at Liegnitz, and 10 years later he went to Breslau as professor. From 1855 until 1874 he taught at the Berlin Military Academy. He was permanent secretary of the Academy of Sciences from 1863, retiring from active work in 1884. In his second period he worked on the theory of numbers. He created the system of ideal prime numbers in order to overcome difficulties encountered in his work on complex numbers. In 1857 he was awarded the Grand e by the Paris Academy. He also devoted k later to advance the science of geometry. *Allgemeine Theorie der Strahlensysteme* him on to the Kummer Surfaces, named r him. Other works by him were *Über die kung des Luftwiderstandes auf Körper von schiedener Gestalt insbesondere auf die Ge-isse* (1875).

KUMMER, **Frederic Arnold**, American hor and playwright: b. Catonsville, Md., g 5, 1873; d. Nov. 22, 1943. After graduat- at the Rensselaer Polytechnic Institute, y. N. Y., in 1894, he pursued a career in ueering until 1907, when he resigned to de- e himself wholly to literature. His novels luded: *Plaster Saints* (1921); *Design for vder* (1936); *Death at Eight Bells* (1937); e *Great Road* (1938). Sigmund Romberg ote the music for his musical comedy *The ogic Melody* (1919), and Victor Herbert that r *My Golden Girl* (1919), a musical play. e music for his play *Song of Omar* (1935) as composed by Harry Tierney. Numerous ooks written under the pseudonym Arnold edericks included *One Million Francs* (1912) s *The Spanish Lady* (1938). His motion- ure scenarios included *The Slave Market*, e *Ivory Snuff Box*, and *The Belgian*.

KUMQUAT, kūm'kwōt, a genus of shrubs, *Fortunella*, of the family Rutaceae related to the orange. Several species are known, natives of China and Japan. The plants are 10 to 15 high, with small fragrant white flowers, oblong or globose fruits 1 to 1½ inches in eter. Kumquats were introduced into the d States about 1850 and subsequently were sively grown along the Gulf Coast and in ornia. They are the hardiest of the citrus s, being able to withstand temperatures as as 15°F. without injury. The fruits are

eaten raw, but are more generally used for making marmalade, jelly, and candied fruit.

KUN, kōōn, **Bela**, Hungarian politician: b. near Győr, 1885. He was of Jewish parentage. After graduating in law at the University of Kolozsvár (Cluj), he turned to journalism and politics. At the outbreak of World War I he was called to serve in the Austro-Hungarian Army, in 1915 being captured by the Russians. Espousing bolshevism, he returned to Hungary in 1918 and commenced publication of the *Vörös Ujság* (*Red News*). In 1919 he organized a Communist revolution in Budapest, and on March 22 he became premier in succession to Count Mihály Károlyi. (See KÁROLYI, COUNTS.) As head of a coalition administration of Social Democrats and Communists he introduced radical changes in government, but failed to get the support of the peasants. On July 31, 1919, he was ousted by a counter-revolution which was aided by the Rumanians, and was forced to flee. He went first to Vienna, where he was held for a time in a mental hospital, and thence to Russia. In April 1928 he reappeared briefly in Vienna, only to be deported to Russia after a short imprisonment.

KUNCHINJINGA. See KANCHENJUNGA.

KUNDT, kōōnt, **August Adolf**, German physicist: b. Schwerin, Nov. 18, 1839; d. Israelsdorf, near Lübeck, May 21, 1894. He graduated at the Berlin University (1867), becoming teacher (*privatdozent*), and going to the Zürich Polytechnikum (1868) as professor of physics. Thence he went (1870) to Würzburg, and next (1872) to Strassburg. In 1888 he was called to Berlin. He investigated first the acoustic vibratory motion of solids and gaseous bodies and discovered the dust figures in closed sounding tubes, which offer a medium for calculating the velocity of sound in gases and to compare these with those in solid bodies. He investigated the phenomena of the anomalous dispersion of light of substances which show strong absorption of certain colors. His researches in heat conductivity and friction in gases were very fruitful, also those into the rotation of the plane of polarization in gases and the optical characteristics of metals.

KUNDT, **Hans**, German army officer: b. New Strelitz, Mecklenberg, Feb. 28, 1869; d. Lugano, Italy, Aug. 28, 1939. At the age of 19 he became a cadet of infantry. In 1911 he was sent to Bolivia as head of a military mission, but returned to Germany at outbreak of World War I. He served on the staff of Gen. Field Marshal August von Mackensen (q.v.), reaching the rank of major general, and in 1920 he went back to Bolivia. Becoming a Bolivian citizen, he helped create a powerful army, but was dismissed following a revolution in 1926. He was recalled to military command during 1928-1930, and again in 1932, sharing in direction of the G-an Chaco War against Paraguay. Losing his post as a result of the disasters in 1933, he sailed once more for Germany. Disliking the Nazi regime there, he settled in Italy.

KUNENE. See CUNENE.

KUNERSDORF, kōō'nērs-dōrf, a village

in the Province of Brandenburg, Prussia, 10 miles north-northeast of Frankfurt an der Oder, the scene of an important battle in the Seven Years' War, fought Aug. 12, 1759. A Prussian army of between 40,000 and 50,000 men under Frederick the Great attacked nearly twice that number of Austrians and Russians. In his initial attack on the Russian flank, Frederick gained considerable advantages, capturing 180 guns. He next proceeded against the Austrians, who, however, held their ground and brought all their artillery to bear at close quarters, with the result that the Prussians were totally routed with a loss of 20,000. The other side lost even more, about 25,000. Through this failure Dresden fell, three weeks later, into the hands of the Allies.

KUNG, kōōng, H. H. (K'UNG HSIANG-HSI), Chinese statesman: b. Taku, Shansi, 1881. A lineal descendant of Confucius (q.v.) in the 75th generation, he married Ai-ling, sister of T. V. Soong (q.v.), and through her sisters, Ch'ing-ling and Mei-ling (Mayling) he was also brother-in-law of Sun Yat-sen and Chiang Kai-shek (qq.v.). He was sent to the United States for his education, graduating at Oberlin College in 1906 and obtaining his master's degree at Yale the next year. In 1911 he established at Taku the Oberlin Shansi Memorial College, and he served as its president until 1932. Meanwhile he took an active part in the new republican administration of China, conducting negotiations with Japan (1922) and Russia (1924-1927), and serving as a member of the executive committee of the Kuomintang (1926-1928) and as minister of industry (1928-1931). In April 1933 he succeeded T. V. Soong as governor of the Central Bank of China, and the following November he was also appointed the Nationalist government's minister of finance. He went to London in 1937 to represent China at the coronation of George VI, and subsequently he visited several European countries, and the United States, seeking loans to finance the war against Japan. He was replaced as finance minister in November 1944, and in July 1945, after returning to Chungking from a visit to the United States, he also resigned the governorship of the Central Bank. In 1951 he was a non-resident alien in the United States.

KUNIGUNDE, kōō'nē-gōōn'dē, Saint: d. Kaufungen, near Cassel, March 3, 1039. She was a daughter of Count Siegfried of Luxembourg and wife of Emperor Henry II. Legend says both vowed to live in celibacy. She was active during the foundation of the bishopric of Bamberg in 1007. The legend that she passed unscathed through the fire test in order to prove her innocence when accused of infidelity has been proven false. After Henry's death (1024) she became a nun in the convent at Kaufungen, which she had founded, and died there. She was buried in Bamberg Cathedral. In 1200 she was canonized by Pope Innocent III.

KUNIYOSHI, kōō-nī-yō'shī, Yasuo, yā-sōō'ō, American painter: b. Okayama, Japan, Sept. 1, 1893. After coming to the United States in 1906, he studied painting at the Los Angeles School of Art and Design (1908-1910) and at the National Academy of Design (1912-1914). He also attended the Art Students League (1916-1920), where he later became an instructor

in painting and composition; he has also taught at the New School for Social Research.

In 1922 he was honored in New York City with his first one-man exhibition, and has since become represented in more than 20 major American art collections, including the museum of the Library of Congress. Kuniyoshi has frequently won exhibition prizes, including first prizes at the American Exhibition at the Golden Gate Exposition (1939) and at the Carnegie Institute show in 1944. His paintings, generally reflecting slight French and Oriental influences, are lyrical and sophisticated in style, reflect control of form, and are sensitively drawn. Frequent Kuniyoshi subjects are nudes painted in moments of lonely relaxation or contemplation, such as his *All Alone, The Morning After*, and *Somebody Tore My Poster*. Occasionally he conveys pointed social comment from such canvases as *Cemetery* and *Pic in the Sky*, and frequently, especially in his *Still Life*, his subject matter reflects fresh originality and wit in his arrangement of objects.

Although not an American citizen because of his Japanese birth, Kuniyoshi contributed to the American World War II effort by painting posters for the Office of War Information and by writing radio scripts for the Coordinator of Information.

KUNLUN SHAN, kōōn'loōn' shān', a mountain system of central Asia, on the northern fringe of the Tibetan plateau and south of Sinkiang; from the Pamirs and the Karakoram Range on the west, it extends to Tsinghai in the southeast and lesser ranges in central China.

KUNMING, kōōn'ming' (formerly YUN-NAN), city, China, capital of Yunnan Province, 380 miles southwest of Chungking. It is the terminus of a railroad to Indochina and of the Burma Road (q.v.), and in World War II was an important strategic center, used as a United States Air Force base. It has a considerable trade in furs, precious stones, tin, and tea. Pop. (official est. 1945-1946) 255,462.

KUNTZ, kōōnt, Karl Sigismund, German botanist: b. Leipzig, June 18, 1788; d. Berlin, March 22, 1850. Influenced by Alexander von Humboldt (q.v.) to study botany, in 1813 went to Paris and there classified and described in his *Synopsis* (1822-1825) the collection plants made in the equinoctial regions of the Americas by Humboldt and Aimé Bonpland, the French naturalist, during 1799-1804. In Paris he also published: in Latin, *Nova genera speciei plantarum*, 7 vols. (1815-1825); French and Latin, *Mimosas et autres plantes légumineuses du nouveau continent* (1819); and in French, *Révision des graminées*, 2 vol. (1829). In 1819 he was appointed professor at Berlin University and vice-director of the botanical gardens. Later works included *Enumeratio plantarum omnium cognitarum secundum familias naturales disposita*, 5 vols. (1833-1850).

KUNZ, kōōnts, George Frederick, American gem expert: b. New York City, Sept. 2, 1856; d. there, June 29, 1932. In 1898 he secured a master's degree at Columbia University and he received a Ph.D. at the University of Marburg, Germany, in 1903. At various periods he was president of the American Scenic and

oric Preservation Society; vice-president of the City History Club; past president and fellow of the New York Academy of Science; past president and Fellow of the American Association for the Advancement of Science; resident of the Museum of Peaceful Arts; past president of the New York Mineralogical Club, 1915; past vice-president of the American Institute of Mining Engineers; Fellow of the Geological Society of America; honorary member of the Uralian Natural History Society of the Ural Mountains; correspondent of the *Histoire Naturelle*, Paris; honorary correspondent of the *Chambre Syndicale Pierres Précieuses*, Paris. He was special agent of the United States Geological Survey, 1882-1909. He was placed in charge of the department of mines at the Omaha, Atlanta, World's Columbian and Paris expositions. He was juror of the Nashville Exposition in 1898 and of the Jamestown Exposition in 1907. Chairman of the Honorary Committee of the Berlin Exposition, 1910; chairman sub-committee on Scientific Exhibits of the Hudson-Fulton Celebration Commission; president of the Joan of Arc Statue Committee. He was third vice-president and gem expert of Tiffany and Company; honorary curator of precious stones in the American Museum of Natural History. He had the decoration of the Order of the Red Eagle, fourth class, of Germany; he was Chevalier of the Legion d'Honneur of France; Officer d'Instruction Publique de France; Knight of Saint Olaf of Norway; Officer of the Order of the Rising Sun of Japan. He wrote annual reports (1882-1905) on the production of precious stones in mineral resources of the United States. He published 200 pamphlets on gems, precious stones, mineralogy, meteorites, folklore and scenic conservation. He published 'Gems and Precious Stones of North America'; 'Precious Stones of Mexico'; 'Gem Materials of California'; 'The Curious Lore of Precious Stones'; 'The Magic of Jewels and Charms'; 'Ivory and the Elephant.' He was also senior editor of the 'Book of the Pearl'; 'Rings of All Ages.' Dr. Kunz was a member of the Century Association, the Union League, Grolier, Mineralogical clubs, and honorary vice-president of the Tuna Club of California. He died 29 June 1932.

KUNZE, koon'tsē, John Christopher, American Lutheran theologian: b. Artern, Saxony, 4 Aug. 1744; d. New York, 24 July 1807. He studied theology in the gymnasiums of Bossleben and Merseburg, and at the Leipzig University. After several years teaching as docent, he came to Philadelphia (1770), appointed associate pastor of the Lutheran church, keeping a theological seminary at the same time and acting as professor of Oriental languages at the Pennsylvania University (1780-84). He became pastor of the Lutheran church at New York in 1784, serving as professor of Oriental languages and literature at Columbia (1784-87) and again (1792-99). He was one of the early advocates of the need of teaching English to German youth, and he aided in introducing the English language in German churches in the United States. He wrote 'A Hymn and Prayer Book for . . . Lutheran Churches' (New York 1795), the first American-published Lutheran hymnbook. Consult Norton, C. E., 'Four American Univer-

sities' (New York 1895); Appleton's *Cyclopædia of American Biography* (Vol. III, ib. 1898).

KUNZITE, koon'tsit, the name of a precious stone found in southern California; so called in honor of Dr. George F. Kunz, the special agent in charge of precious stones, United States Geological Survey, 1883-1909. It is a brilliant gem and is between the topaz and pink sapphire in color. A rose-lilac is the tint which marks this stone, a color new among gems; and its radiance is peculiar and beautiful.

Kunzite was brought to light in 1902 near Pala, in San Diego County, Cal., and was sent for classification to Dr. Kunz, the eminent mineralogist of New York. Much attention was attracted by the beautiful lilac-colored crystals, for nowhere in the country, not even in the American Museum of Natural History at New York, which has the finest collection of spodumene, under which the new gem was classed, had there been seen such remarkable and perfect specimens as these. Dr. Kunz identified the gem and described it; but Dr. Charles Baskerville, professor of chemistry in the University of North Carolina, finally subjected it to ultraviolet light, then to the rays of high penetrative power, and lastly to the bombardment of the corpuscles shooting out from radium, which resulted in some wonderful effects new to the scientific world. Of these effects Dr. Charles Baskerville, who took the liberty of naming the gem "Kunzite," for his friend, gives the following account:

"On examining this gem we directed our attention to discovering the effect of radium on precious stones. It was shown early in the experiments of the French mineralogist, Curie, that many diamonds phosphoresce, that is, glow in the dark, after being exposed to the emanations of radium. All diamonds phosphoresce with radium, as we learned by applying the test to about two thousand gems collected from some fifteen thousand. The gem in which we were particularly interested belongs to the class of spodumene. Mineral spodumene is usually obtained in large opaque whitish crystals, but from time to time small specimens, often richly colored and transparent, are found. The three characteristic varieties of the latter are a clear yellow gem spodumene of Brazil, the green hiddenite, or lithia emerald of North Carolina, and the lilac sometimes found in Connecticut. These are without doubt remnants of large specimens, which must have been elegant. Spodumene is very subject to alteration and has usually lost all its transparency and beauty of tint."

The California spodumene crystals are of a rose-lilac tint, varying with the spodumene dichroism, from a very pale tinge when observed transversely to the prism, to a rich amethystine hue longitudinally. No such crystals of spodumene have ever been seen before, and the discovery is of great mineralogical interest. The crystals have been etched by weathering and have a twinning like the hiddenite variety. When cut and mounted parallel to the base, they yield gems of great beauty. Baskerville, Kunz and Crookes have found this almost as luminously responsive to the action of radium as the diamond.

KUOPIO, Finland, a government in the eastern part of the northern republic, surrounded by the governments Uleaborg, Vasa,

Saint Michel and Wiborg and in the east by the government of Olones. It has an area of about 16,498 square miles, of which over 16 per cent consists of lakes. The chief industries are the fisheries, forestry, agriculture and cattle breeding, also butter production. A considerable amount of iron ore is produced. Pop. 327,573, mostly Finns.

KUOPIO, kü-öp'i-ō, Finland, capital of the government of the same name, situated on Lake Kalla-vesi and on the Kuivola, Kuopio and Isalmi Railway. It is the bishop's seat and has a modern cathedral, fine park, two lyceums and several trade schools and has considerable commerce. Pop. 23,656.

KUR, koor, or **KURA**, koo'ra, Russia, largest river in Transcaucasia, known in ancient days as Kyros. Its source is in northern Armenia, whence it runs, edged in by mountains, flowing in a southeasterly direction through the Soviet states of Georgia and Azerbaijan; it enters an arid steppe and, branching out into several arms, falls into the Caspian Sea. Its course runs for 830 miles and is navigable for steamers for 130 miles up to the junction of the Aras branch. The leasing of the fisheries near Saljany and Boshij Promsyl afford the state 1,000,000 rubles yearly. The most important places along its shores are Ardahan, Akhaltzikhe, Gori, Tiflis and Saliandy.

KURANDA, koo-rän'da, Ignaz, Austrian publicist and statesman: b. Prague, 1 May 1812; d. 4 April 1884. He was the son of a Jewish bookseller, studied in Vienna and did journalistic work on the leading papers at Leipzig, Stuttgart and Brussels. He founded (1841) in Brussels a weekly, *Die Grenzboten*, the editorial offices of which were transferred to Leipzig, where he issued the work, 'Belgien in seiner Revolution' (Leipzig 1846). In the same year his drama, 'Die letzte weisse Rose,' was performed successfully at the Hofburg Theatre, Vienna. In 1848 he was elected member of the Frankfurt Parliament. He went to Vienna and founded the *Ostdeutsche Post*, a political paper conducted with dignity, which lasted till 1866. He was a common councillor and elected member of the Reichsrat in 1867, where he became one of its most noteworthy political orators.

KURDISTAN, koor-dē-stän' (Persian, 'land of the Kurds'), an extensive territory of western Asia, comprehending the greater part of the mountainous region which borders on the western side of the great plateau of Iran or Persia, and stretches westward till it overhangs the low plains of Mesopotamia on the southwest, and reaches the borders of the Turkish vilayets of Diarbekir and Erzerum on the northwest. The surface is very mountainous, and is traversed by lofty ranges with summits reaching above 10,000 feet in height, stretching northwest to southeast. The whole surface on the west of the Persian frontier is drained by the Tigris and the Euphrates and their tributaries. Unless Lake Van is considered as partly within the territory, there are no lakes of any consequence. The mountains are covered with forests of oak and other hard timber. Many of the valleys are under regular culture, with corn-fields, orchards and vineyards. One of the most remarkable vegetables is manna, expressively called in Turkish *Kudret-hal-vassiz*, or the Divine sweet-meat, which is

used as food. Fine horses and oxen are bred and sheep and goats are kept in large numbers.

The Kurds are a stout, dark race, well formed, with dark hair, small eyes, wide mouth and a fierce look. Most of the men are armed using lances, sabres, daggers, muskets and pistols. Many of the tribes are still nomadic. The language is of the same stock as the modern Persian. The great body of the Kurds are Mohammedans. They care little for trade, although they send to Kirkuk, Hamadan, etc., gall-nuts, tobacco, honey, sheep-skins and cattle; obtaining in return coffee, rice, leather and clothing (chiefly cotton goods). Their allegiance to the governing states is but slight. The famous Sultan Saladin was a Kurd. In the terrible massacres of Armenian Christians instigated and carried through by the Turkish government in 1914 and 1915, during the progress of the Great European War, the Kurds took an active and sinister part. It is very difficult to form even an approximate estimate of the whole Kurd population; that portion which is in the territory of the former Turkish empire, namely eastern Turkey, Armenia and Mosul, Iraq, is given as about 1,300,000, and the portion in Persia as about 400,000.

KURDS, koordz, or **KOORDS**, an Asiatic people of Iranian descent dwelling in a section named after them Kurdistan, 'the land of the Kurds,' located in Persia and former Turkey in Asia. They number about 1,700,000 and are nearly all Islamites. They are of mixed character, brave, freedom loving, hospitable, rather shy, and, to some extent, true to their word, on the other hand they have no liking for orderly work, are firmly devoted to bloody revenge and consider a robbery as honorable as an heroic act. They have great family love, the nomads wandering with their tents of black skins or the settlers living in low houses with flat wooden roofs, that serve in summer time as sleeping quarters. Their women have more freedom than is usual among Orientals, going outdoors unveiled, dealing with men without timidity. The girls, as a rule, are given in marriage at from 10 to 12 years of age upon a dower payment. Only the rich and elite have a plurality of wives. For head covering they use the Turkish turban or a globular yellow fur cap; they shave the head generally, wearing only a mustache, the aged alone wearing a full beard. Their weapons are long riders' lances, sabres and pistols; the fighters on foot carry guns, and a dagger in the belt. Their history dates back to the Gutis of ancient Assyria in which empire they appear to have had an independent political position; they were merged with the Medes after the fall of Nineveh. Cyrus subjugated them since which they have been under the domination of the Macedonians, Parthians and Sassanians, successively. After numerous insurrections their chief fortress, Sermaj, was captured, in the 9th century, and reduced by the caliphate of Bagdad, but they appear to have been in the zenith of their power in the 12th century and held sway over the Kurdistan Mountains, and included Khorasan, Egypt and Yemen. The invading Mongolians and Tatars appear to have held them later in subjection. For further facts consult Lerch, 'Forschungen über die Kurden' (Saint Petersburg 1857-58).

Jillingen, *Wild Life among the Koords* (London 1870); Creagh, *Armenians, Koords, and Turks* (London 1880); Sykes, *Kurdish Tribes in the Ottoman Empire* (London 1907); Safrastian, *Kurds: their Origins and History* (London 1928).

KURE, an atoll in the North Pacific, at the extreme northwestern end of the chain of the Hawaiian Islands, 60 miles west of Midway; it is sometimes known as Ocean (not to be confused with the South Pacific island of Ocean, q.v.) and occasionally as Green Island. The United States has jurisdiction over Kure, which was made a responsibility of the Navy Department by Executive Order No. 7299, dated Feb. 20, 1936. Within the atoll's lagoon are two small sandy islets without native population.

KURENBERG, kŭ'rĕn-bĕrk, der von (or DER KÜRENBERGER), a German minstrel of the 12th century. His short love songs belong to the ancient folklore as to their subjects and are composed in Nibelungen stanzas. He came of a knightly family of Austrian origin located either at Linz, Burghausen, or Schala, each of which places had branches of this family. He was the author of *Das Falkenlied*, and of love songs. Although he is regarded as the oldest Minnesinger, he was not the author of the original *Nibelungenlied*.

KURGAN, kŭr-gĕn', Soviet Union, city of Chelyabinsk Region, Russian Soviet Federated Socialist Republic, on the Tobol River due of the city of Chelyabinsk. It is the center of a rich agricultural district with a notably active trade in butter. Agricultural machinery is manufactured in Kurgan. Settlements have existed at the site of the city since prehistoric times. Kurgan is a Russian word meaning "tumulus," "burial mound"; many such mounds in the neighborhood were undoubtedly erected by Neolithic peoples. Pop. (1939) 53,224.

KURIA MURIA, kŭ'rĕ-à mŭŭ'rĕ-à, ISLANDS, a group of five small islands 21 miles off the southeast coast of Arabia, forming part of the British colony of Aden; the aggregate area is 10 square miles. The largest island is Hallaniya, 4 square miles in area. The Arab inhabitants, who number some 2,500, work the islands' guano deposits and engage in fishing. The imam of Muscat ceded the group to Great Britain in 1854 for use as a cable station.

KURIHAMA, kŭŭ'rĕ-à-mà, Japan, a place one mile west of the village of Ūraga where Commodore Matthew Calbraith Perry (q.v.), on July 14, 1853, landed to present the letter of President Millard Fillmore requesting the emperor of Japan to establish diplomatic and trade relations with the United States. This historic event was commemorated by the erection of a monument by the America's Friends Association which was unveiled on July 14, 1901. The Perry Monument, a monolith of Sendai granite, is inscribed in letters of gold penned by the Marquis Hirobumi Ito; it is enclosed by 36 granite posts, linked by ship's anchor chains, in the center of a broad square enclosed by banks faced with stone.

KURIL or **KURILE**, kŭŭ'rĭl, ISLANDS, a chain of 32 small islands in the North Pacific,

extending northeast for nearly 750 miles from Japan to the Kamchatka Peninsula; now belonging to the Union of Soviet Socialist Republics, they were formerly owned by the Japanese, to whom they were known as CHISHIMA. The aggregate area of the islands is 3,944 square miles, and the population in 1945 numbered some 4,500. From north to south, the larger islands are Paramushiro (Paramoshiri), Shimushiru, Uruppu, Etorofu, Shikotan, and Kunashiri; Furubetsu, the administrative headquarters, lies on the northwest coast of Etorofu, the largest island. The Kurils are volcanic in origin; on many of the islands are fissures whence issue jets of smoke or steam, pools of boiling water, and sulphurous deposits. Chachanobori (7,382 feet), on Kunashiri, is the highest peak on these mountainous islands. Coniferous trees and bamboo are plentiful, and bears, sables, and foxes abound; the fisheries are valuable, cod, herring, and pin seals being obtained.

Martin de Vries, the Dutch navigator, discovered the islands in 1634. The northern islands were occupied by Russian fishermen and those in the south by Japanese down to 1875, when the Russian government agreed to surrender all claims in exchange for Japanese withdrawal from Sakhalin (q.v.). During World War II, United States aircraft and warships attacked Japanese fortifications on the islands. The agreement signed at Yalta on Feb. 11, 1945, between the United States, Russia, and Great Britain contained a secret clause (revealed a year later) handing over the Kuril Islands to the Soviet Union after the defeat of Japan; accordingly, Russian forces took possession of them in August, 1945.

KURISCHES HAFF, kŭŭ'rĭsh-ĕs hĕf, large lagoon on southeast coast of the Baltic Sea, reaching from Labiau to Memel (Klaipėda), 60 miles long and separated from the sea by a sand bar called the Kurische Nehrung. A number of rivers are discharged into this lagoon, such as the Dange, Minge, Russ, and Gilge. While navigation is carried on in the Memel Deep, a channel connecting with the North Sea and 20 feet deep and about 1,000 feet wide, this lagoon has little shipping value. The water is fresh, being fed by the above-mentioned rivers and the much larger Niemen.

KUROSHIO, kŭŭ-rŭ-shĕ'ŏ, or **JAPAN CURRENT**, a warm ocean current off the northeast coast of the Japanese island of Hondo; in Japanese the word means "dark blue salt," signifying a black current or stream. An old Japanese map shows the general features of the Northern Pacific, Bering Strait, and islands and its shores quite accurately delineated. Yet this river of warm water in the Pacific Ocean was first scientifically studied and described in 1854 by Lieut. Silas Bent (q.v.), whose statements were in the main confirmed by later investigators. In history, this stream of black brine contributed notably to the peopling of both Japan and America and to its flora and fauna. The first host of invaders from the Asian continent through Korea were aided by it to reach Idzumo and Hiuga, and the second set, or the great drift of humanity, from the Malay world, made good use of the current and landed at many points on the coasts of Japan. The Kuroshio is bent southward, not by impinging on the land, but is prevented from entering the Arctic Ocean by the Bering Strait, which at its deepest is only 30 fathoms, or 180 feet deep, and much less than 50 miles wide, and in it are three islands. Through this opening the

cold water rushes from the icy seas, drawing or pushing the Kuro Shiwo eastward. Though fogs abound, only a little polar ice comes through, with no icebergs, as in the Atlantic Gulf Stream. One curious effect was to supply the Hawaiian Islands with the splendid timber of "Oregon"—a word which ultimately came to mean anything unusually fine and is so used, as an adjective, in the Hawaiian version of the Bible. Consult Perry's 'Narrative of the Japan Expedition' (1857); Rein's 'Japan' (1884); 'Transactions of the Asiatic Society of Japan.'

KUROPATKIN. See KOUROPATKIN.

KÜRSCHNER, kürsh'nër, Joseph, German author and editor: b. Gotha, 20 Sept. 1853; d. on a journey to Huben, 29 July 1902. His first employment was in mechanical engineering, then he studied at the Leipzig University, thereupon (1875) living several years in Berlin. He managed the Stuttgart periodical *Vom Fels zum Meer* (1881-89) and founded *Deutsche Nationalliteratur*; he was appointed literary director of the Deutsche Verlagsanstalt and removed (1893) to Eisenach. He devoted some time to compiling theatrical history, then became editor (1880-82) of *Neue Zeit*, official organ of German dramatical authors and composers, then (1885-86) he edited *Deutsche Schriftstellerzeitung*, etc. After editing several encyclopedias he compiled *Allgemeiner deutscher Literaturkalender* from the fifth to 24th yearly issue. He wrote also 'Konrad Ekhof' (1872); 'Heil Kaiser, dir!' (1897); 'Frau Musika' (1898); 'Kaiser Wilhelm II als Soldat und Seemann' (1902).

KURSK, Russia, a former government bounded by Tchernigov, Ukraina, on the northwest, Orel on the north, Voronezh on the east and Charkov and Poltava, Ukraina, on the south. It covers an area of about 17,937 square miles. It consists of a wide plain framed in by heights which discharge their water by over 400 rivers of which the Seim is chief. It has a population of about 3,133,500, mostly Great Russians, who have, however, adopted many of the customs of the Little Russians, all belonging to the orthodox Greek Church. It is one of Soviet Russia's most fertile areas. The chief industry is agriculture with a large output of wheat, rye, oats, barley, buckwheat, sugar-beets, hemp, etc. It has a great growth of fruit such as apples, cherries and plums; the bee-culture, has, however, declined greatly and its cattle trade is small. Manufactures are inconsiderable, sugar being the most prominent along with oil-pressing.

KURSK, kürsk, Russia, chief city of the former government of Kursk situated on the Seim at the mouth of the Kur River and on several railways. It has 16 orthodox Greek churches, a Lutheran church, priests' and teachers' seminaries, two gymnasias, a high school and a school of geodetics, besides banks, theatre, commercial exchange, etc. Considerable industry is carried on in leather work, steam grinding mills, oil-pressing, pottery, tobacco manufacturing, as well as commerce in grain, tallow, hemp and hemp-oil, and bristles. Pop. 98,794.

KURTH, kërth, Godefroid, Belgian historian: b. Arlon, 11 May 1847; d. Assche, Brabant, 4 Jan. 1916. From 1872 to 1906 he was

professor at the University of Liège, and from the latter year until his death was director of the Belgian Historical Institute, Rome. He was a member of the Academy of the Catholic Religion of Rome, of the Royal Society of Literature of London, of the Dutch Literary Society of Leyden, of the Royal Academy of Belgium and of other societies Belgian and foreign. He was president of the board of administration of the Royal Library, Commander of the Order of Leopold and Knight of the Order of Pius IX. He wrote 'Cato l'ancien'; 'Etude critique sur Saint-Lambert et son premier biographe'; 'La loi de Beaumont en Belgique'; 'Les origines de la civilisation moderne'; 'Les origines de la ville de Liège'; 'Histoire poétique des Mérovingiens'; 'La frontière linguistique en Belgique et dans le nord de la France' (2 vols.); 'Les études franques'; 'L'église aux courants de l'histoire'; 'Clovis' (2 vols.); 'Chartes de l'Abbaye de Saint-Hubert en Ardenne'; 'Notger de Liège et la civilisation au Xe siècle' (2 vols.); 'La cité de Liège au moyen âge' (3 vols.); 'Manuel de l'histoire de Belgique'; 'Abrégé de l'histoire de Belgique'; 'Manuel d'histoire universelle' (2 vols.); 'Notre non national'; 'Mizraïm, souvenirs d'Egypte'; 'La nationalité Belge.' He founded and became first director of *Archives Belges, revue critique d'historiographie nationale*.

KURZ, kürts, Heinrich, German historian of literature: b. Paris, 28 April 1805; d. Aarau 24 Feb. 1873. Of German parents, he studied at Leipzig and Paris, and lived in Munich and Augsburg from 1830, in the latter city publishing a constitutional opposition paper, *Die Zeit*, which caused his incarceration after a few weeks. He next removed to Switzerland teaching German and literature in Saint Gall and was promoted to professor (1839) at Aarau and made librarian also (1846). The rich treasures of the Aarau Library furnished him material for the study and research in German literature. He wrote 'Handbuch der poetischen Nationalliteratur der Deutsche seit Haller' (Zürich 1840; 3d ed., 1859); 'Handbuch der deutschen Prosa von Gottsched bis auf die neueste Zeit' (ib. 1845-53); 'Geschichte der deutschen Literatur' (Vols. I-III, Leipzig 1851; Vol. IV, 1868-72), his greatest work, which reached its seventh edition in 1876. He also edited 'Esopus von Burkard Waldis'; 'Simplicianische Schriften' of Christoffel von Grimmelshausen; Fischart's 'Dichtungen'; Wickram's 'Rollwagenbüchlein.' He edited collective works of Goethe (1867-68) and of Schiller (1867-68) in 12 and 9 volumes, respectively, also of selected works of Lessing, Herder, Wieland, Chamisso, von Kleist and E. T. A. Hoffmann, and compiled 'Die deutsche Literatur im Elsass' (Berlin 1874).

KUS, a semi-wild tribe of Dravidians inhabiting parts of Bengal and Orissa. They are also generally known as Khonds and number over half a million. See KHONDS.

KUSI, koo sē. See COOSY.

KUSKOKWIM, kūs'kō-kwīm, Alaska, the second river in size in the Territory, rising on the northern slopes of Mount McKinley, after a southwestern course of over 650 miles flowing through the wide estuary of Kusk

kwim Bay into Bering Sea, about 200 miles south of the Yukon delta. It is navigable for about 500 miles. The North Fork and South Fork, its two upper tributaries, rise in the Alaska Range near Mount McKinley National Park. The Kuskokwim drains an area of some 48,000 square miles. Bethel, 80 miles from the mouth of the river, is the principal trading station. Indians and Eskimos constitute the majority of the inhabitants of the region. Soon after discovery of gold in the valley of the Kuskokwim in 1901 the valley was dotted with mining camps.

KUSNACHT, kūs'nākt, commune, Switzerland, in Zurich canton, situated on the shores of Lake Zurich south-southeast of Zurich. Pop. (1930) 6,084.

KUSSMAUL, kōōs'moul, **Adolf**, German physician: b. Graben, near Karlsruhe, Feb. 22, 1822; d. Heidelberg, May 28, 1902. He studied at Heidelberg, and in 1847 removed to Vienna, then Prague; in 1848 he became military surgeon for Baden. He became instructor at Heidelberg University in 1855, and was appointed adjunct professor (1857) and professor (1859) and director of the medical clinic and polyclinic at Erlangen. In 1863 he practiced in Freiburg im Breisgau, and in 1876 at Strasbourg. He retired in 1889 and lived at Heidelberg. He made useful researches in epilepsy, and advanced the treatment of diseases of the stomach by usage of the stomach pump. His works include: *Die Farbenerscheinungen im Grunde des menschlichen Auges* (1845), an invaluable work; *Ueber die Behandlung der Magenerweiterung durch eine neue Methode* (1869).

KUSSNACHT, kūs'nākt, village, Switzerland, in Schwyz canton, located at the foot of the Rigi Mountain at the northeast corner of the Lake of Lucerne (Luzern) just east of Lucerne. Climbers of the Rigi set out from here. A fountain has been erected in Küssnacht in memory of William Tell (q.v.), and on the spot nearby where legend states that Gessler was shot is Tell's chapel; there are the ruins of a castle supposed to have been the Gessler abode. Pop. (1951 est.) 4,500.

KUSTANAI, kōō-stū-nī', town, USSR, capital of the Kustanai Region, Kazakh Soviet Socialist Republic, situated on the left bank of the Tobol River 170 miles east of Magnitogorsk. It is the market center for a rich grain-growing area. The principal industries of the town are flour milling and the manufacture of leather products. Kustanai was founded in 1871. Pop. (1939) about 30,000.

KUSTANAI REGION, subdivision, USSR, part of the Kazakh Soviet Socialist Republic, bounded on the north by the Kurgan Region of the Russian Soviet Federated Socialist Republic, on the east by the Kazakhstan, Kokchetav, and Akmolinsk regions, on the south by the Karaganda Region, and on the west by the Aktyubinsk Region of the Kazakh SSR and the Chkalov and Chelyabinsk regions of the RSFSR. The area is 147,648 square miles. The capital is Kustanai (q.v.). Gold is found, but agriculture is the chief occupation of the inhabitants.

KUSTENJA. See **CONSTANTA**.

KUSTENLAND, kūs'tēn-lānt, a former province of southwest Austria, comprising the crownlands of Istria, Görz, and Gradisca. Trieste was the focal point of the administration. The area of Küstenland was 3,077 square miles, and the population numbered about 900,000. Most of it was assigned to Italy after World War I; a small portion went to Yugoslavia, and in World War II that country acquired the greater part of the area, with Trieste being made a Free Territory under the administration of the United Nations.

KUSTRIN. See **KOSTRZYN**.

KUT, kōōt, province (*liwa*), Iraq, in the southeast of the country, bordering Iran. Pop. (1947) 224,792.

KUT-AL-IMARA or **KUT-EL-AMARA**, kōōt'al-ā-mārā, town, Iraq, on the left bank of the Tigris, 100 miles southeast of Baghdad. It is the center of a grain-growing region and a market for carpets made in the vicinity. It is all but encircled by the river, which forms a U-shaped loop here.

In World War I Kut (as it was popularly termed) was the scene of much fighting between the Turkish forces and the British. The latter, under the command of Gen. Sir Charles V. F. Townshend, advanced up the Tigris from Amara toward Baghdad until reaching a point 15 miles below Kut. Here, during Sept. 26-28, 1915, they attacked the Turkish positions defending the town and scored a complete victory after a severe struggle. Townshend pursued the retreating enemy up the river toward Baghdad but was defeated at Ctesiphon on November 21 and was compelled to withdraw. He reached Kut again on December 3, and there, five days later, he was besieged by the Turks. Kut was invested completely for four months, the Turks, poor transport, and the weather proving too strong for a relief expedition that strove to fight its way through to the village. The place was doomed, and on April 29, 1916, after a siege of 143 days, Townshend surrendered to the Turks with 9,000 men. The British loss had been upward of 20,000 men. Operations for recapture of Kut were begun in December. It was at the head of an adequate and well equipped army that Gen. Sir Frederick Stanley Maude concentrated a force on the south side of the Tigris about 7 miles from the village. The whole position was in his hands on Feb. 23, 1917, when he marched on Kut, which passed into possession of the British once more. The Turks retreated with all speed toward Baghdad, 24 miles up the river. See **WAR, EUROPEAN — TURKISH CAMPAIGNS** (9).

KUTAHYA or **KUTAHIAH**, kū-tā-yā', town, Turkey, capital of a vilayet of the same name, on the Porsuk (Pursak) River 65 miles southeast of Bursa. Built on the site of the ancient *Cotiacum*, the town contains the ruins of Byzantine fortifications and numerous baths. It is in the center of a fertile agricultural area. Highly decorative faience is made here, but the former thriving potteries are mostly extinct. There is a trade in wool, goats' hair, opium, carpets, and meerschaum. A treaty between Turkey and Egypt was signed here on May 14, 1833; and it was here that Lajos Kossuth (q.v.) was interned during 1850-1851. Pop. (1945) 17,939.

KUTAIISI, kōō-tā'i-sī, or **KUTAIIS**, kōō-tū-ēs', city, USSR, in the Georgian Soviet Socialist Republic, on both banks of the Rion River 65 miles northeast of Batum. Its magnificent cathedral of Georgian architecture, dating from the 11th century, was laid in ruins by the Turks in 1692 and has not been restored. The city is served by a branch line of the railroad between Tiflis and Poti. Coal and iron are mined in the vicinity, and the district is famous for its silk, fruits, and vines. Hydroelectric power from the Rion has made the city of great industrial importance. Trucks and automobiles are manufactured, and there are numerous textile and tobacco factories. Known to the ancients as *Alea*, Kutaisi was the capital of Colchis; and, from 792, of Imeritia. At various periods it was ravaged by the Persians, Mongols, and Turks. The Russians occupied it in 1773, and it became the capital of a government in Transcaucasia having an area of 8,145 square miles and a population exceeding 1,000,000. In 1939 the city had a population of 81,479, but this was greatly increased during World War II.

KUTCHIN, kŭ-chīn', a name given to the tribes of the Athabaskan Indians who live near the Yukon in Alaska, and in the Yukon and Northwest Territories down to the lower Mackenzie Valley. They are also called Loucheux and Quarrelers. They number less than 2,000. They are very fond of games and athletic contests, and are of a hardy, manly, and warlike disposition. They are among the most hospitable of the Indian tribes of the American continents. Guests are entertained for weeks and even months at a time. Property is carefully recognized by the Kutchin, and the chiefs, medicine men, and those in general who possess wealth or rank, or both, have several wives. They have somewhat complicated religious ceremonies and myths, and the medicine men possess very great authority, exceeding that of the chiefs.

KUTNA HORA, kōōt'nā hō'rā, town, Czechoslovakia, in the province of Bohemia, 45 miles southeast of Prague (Praha); the German name for it is KUTTENBERG. Numerous churches include the beautiful unfinished Saint Barbara Church of the 14th and 15th centuries, in Gothic style, and the Saint Jacob's, with its high tower. The old royal Wälsche (Welschen) Hof of the 13th century and its beautiful chapel, as well as the mint (once the residence of the kings of Bohemia) are notable structures. The old Headek castle has been converted into a Czech teachers' seminary. The town's industries consist of fruit and vegetable raising, sugar and alcohol factories, a brewery, machine works, an iron foundry, and an organ factory. The foundation of Kutna Hora originated from the discovery of silver ore in the vicinity. Silver mining flourished in the 13th century, when the town rapidly expanded. Captured by the Hussites in 1422, the town suffered severely in the struggles that ensued. Subsequently it recovered its prosperity, but it was again ravaged in the Thirty Years' War (1618-1648). Pop. (1930) 13,900.

KUTUZOV, kōō-tōō'zōf, **Mikhail Ilarionovich**, PRINCE OF SMOLENSK, Russian field marshal: b. Saint Petersburg, Sept. 16, 1745; d. Bunzlau, Germany (later Bolesławiec, Poland), April 28, 1813. He fought against the Poles (1764-1769)

and the Turks (1770-1774), losing an eye in the Crimean campaign of 1774. For some years he dwelt abroad, and in 1784 he was made major general. He was appointed governor general of the Crimea in 1787, and he fought with distinction under Count Aleksandr Vasilievich Suvorov in the Turkish War of 1788-1791, particularly at the sieges of Odessa and Bendera and the battles of Rimnik and Mashin. In 1793 he was appointed ambassador to Constantinople and later ambassador at Berlin. After the assassination of Czar Paul I in 1801 he was appointed governor general of Saint Petersburg, for a while going thence to his estates in Volhynia. In 1805 he was given command of the 1st Army Corps for the war against Napoleon. He gained a signal victory, on November 18 and 19, over Marshal Édouard A. C. J. Mortier at Dürrenstein, and commanded, under Czar Alexander I, on Dec. 2, 1805, the allied armies in the Battle of Austerlitz, where he was wounded for the third time. From 1806 to 1811 he was governor general at Kiev, then at Vilna, then becoming commander in chief in the Russo-Turkish War; for his services he was created a prince. After the Peace of Bucharest (May 28, 1812) he succeeded Prince Mikhail Barclay de Tolly as commander in chief in the army against Napoleon. He fought the bloody Battle of Borodino (q.v.), Sept. 7, 1812 and became field marshal. He was granted the title Smolensky for his victory over the French at Smolensk. Calling on all Europe by proclamation, he carried on the campaign; but he died early at Bunzlau, where a monument was erected in his memory.

KUTZING, kŭt'sīng, **Friedrich Traugott**, German botanist: b. Rittberg, near Artern, Dec. 8, 1807; d. Nordhausen, Sept. 9, 1893. He studied natural science at Halle, was appointed (1838) teacher of natural science at the high school at Nordhausen, retiring in 1883. He wrote and studied on the algae species specially, establishing a new epoch in the knowledge of the subject. His most important work is *Grundzüge der Philosophischen Botanik* (Leipzig 1851-1852), in which he fought against the theory of stability of the species and advocated spontaneous generation.

KUWAIT or **KUWEIT**, kōō-wit', sheikhdom, Arabia, at the head of the Persian Gulf between Iraq and Saudi Arabia; in part it is separated from the latter by a neutral zone having an area of 2,250 square miles. The sheikhdom has an area of 1,930 square miles and a population estimated to number 100,000. Al Kuwait (pop. 35,000), the capital, is a seaport 80 miles south of Basra. There are valuable pearl fisheries; dhows are built, dates are cultivated, and horses, donkeys, and sheep are raised. Petroleum deposits, subsequently put at 9 billion barrels, were discovered in 1938; the Kuwait Oil Company is owned jointly by the Anglo-Iranian Oil Company and the Gulf Exploration Company, of Pittsburgh, Pa. Kuwait and Saudi Arabia agreed in 1947 to share the income from oil produced in the neutral zone by United States concessionaries. American oil companies have developed for their staffs a new town named Ahmedi, 15 miles from Al Kuwait. The sheikhdom, founded in 1756, came under British protection in 1914.

KUYP, Albert. See CUYP, ALBERT.

KUYPER, *koi'pēr*, **Abraham**, Dutch Protestant theologian and statesman: b. Maasluys, Oct. 29, 1837; d. The Hague, Nov. 8, 1920. He held pastorates from 1867 until 1874, when he was elected to the legislature. In 1886 he formed the Free Reformed Church. He was leader of the Anti-Revolutionary Party in the lower house and editor in chief of *De Standaard*. His books included *Calvinism and Art* (1893); *Pantheism* (1893), and *Calvinism: The Origin and Safeguard of our Constitutional Liberties* (1895). He became prime minister in 1901, and until 1905 he served as minister of the interior. From 1913 he was a member of the upper house of the legislature.

KWAJALEIN, *kwōj'a-lin*, an atoll of the Marshall Islands, Pacific Islands Trust Territory of the United States, in the central part of the Ralik Chain 2,415 miles southwest of Pearl Harbor, Hawaiian Islands. The atoll has a length of some 78 miles; there is excellent anchorage in the lagoon. The chief of the 18 islets are Kwajalein, at the southeast end, and Roi and Namur at the northern end of the lagoon. When the Marshalls became a Japanese mandate after World War I Kwajalein was strongly fortified. In 1944, during World War II, United States forces assaulted and captured the atoll.

KWANGCHOWAN, *gwāng'jō'wān'* (French *KOUANG-TCHÉOU-WAN*, *kwān'chā-ōō'wān'*), Chinese territory formerly leased to France and administered with French Indochina. It is on the southwest coast of Kwangtung Province, some 270 miles west of Hong Kong. The area of 325 square miles comprised a narrow strip along the eastern side of the Luichow Peninsula, leased in 1898, two large islands leased the following year, and several islets. The lease, which was for 99 years, permitted the French to construct a railroad into Chinese territory and give them exclusive mining rights in contiguous effectures. Fort Bayard, the French administrative center, resumed its Chinese name of Chang-shih after France returned the leased territory to China in 1946; it has an excellent harbor.

KWANGSI, *kwāng'sē*, province, China, in the southern part of the republic, bounded on the north by the provinces of Kweichow and Hunan, on the east and south by Kwangtung Province, on the southwest by Tonkin (northern area of Viet Nam, French Indochina), and on the west by Yunnan Province. The area is 83,985 square miles, and the population is 14,861,000 (1947 est.). The greater part of the province is mountainous. The lengthy Si River (Si-kiang) passes through the eastern part of Kwangsi, and among its tributaries which water the province are the Yang (Yu), Hungshui, and Kwei. It is one of the least developed of China's provinces. Vast forests yield such products as cassia, camphor, cinnamon, and wood oil, and rice is cultivated on considerable scale in the river valleys. Among other crops are corn, sugar, and tea. Silk and cotton textiles are manufactured in limited quantity. Yungning (Nanning), a river port on the left bank of the Siang in the southwest part of the province, is the capital.

KWANGTUNG, *gwāng'dōōng'*, province, China, in the southeast part of the republic, bounded on the north by the provinces of Hunan

and Kiangsi, on the northeast by Fukien, on the east and south by the South China Sea, and on the west by Kwangsi Province. The area is 83,918 square miles, and the population numbers 32,339,000 (1947 est.). The Meiling (Ta Yu Ling) Mountains are along the northern border. The principal rivers are the Si (Si-kiang), Peh (Pei), Tung, and Han. Hainan is the chief of several islands along the coast, and there are others in the delta of the Si. Canton, the chief port and city of southern China, is the capital. Rice, tea, sugar, tobacco, and fruit are extensively cultivated; manufactures include silks, lacquered ware, pottery and embroidery.

KWANTUNG, *gwān'dōōng'*, or **KWANTUNG LEASED TERRITORY** (also **KWANTO**, *gwān'dō'*), territory of northeast China, in southern Manchuria, consisting of the southern part of the Liaotung Peninsula. The area is 1,444 square miles, and the population numbers 1,750,000 (1938 est.). Dairen (Dalny, Talien, Talienwan), the capital, has one of the finest harbors on the coast of east Asia. Port Arthur (Ryojun, Lüshunkow), 20 miles west of Dairen, is a naval base of great strategic importance. The South Manchuria Railway connects these places with the railroad systems of both China and the Soviet Union. In 1898 China was compelled to lease the territory to Russia, and in 1905, after the latter had been defeated in the Russo-Japanese War, Japan assumed the lease. The lease to Japan was extended in 1915 to 99 years, but this came to an end in 1945 when the Japanese were defeated in World War II. In that year Russia once more secured Kwantung Leased Territory by treaty with the Chinese government of Chiang Kai-shek, but a Sino-Soviet treaty made in February 1950 recognized Manchuria as an integral part of the Communist-dominated Chinese People's Republic and provided that Port Arthur should revert to China on the signing of a peace treaty with Japan or not later than 1952; the status of Dairen was to be considered when that treaty was negotiated.

KWEICHOW, *gwā'jō'*, province, China, in the southern part of the republic, bounded on the north by Szechwan Province, on the east by Hunan, on the south by Kwangsi, and on the west by Yunnan. The area is 69,278 square miles, and the population numbers 10,557,000 (1947 est.). For the most part, the surface of the province is an elevated plateau, which is watered by tributaries of the Yangtze (Yangtze Kiang) and the Si (Si-kiang). The forests yield valuable timber. Copper and mercury deposits have been exploited, but other mineral resources are largely undeveloped. There is little agriculture. Cattle are raised, and also horses of high grade. Many aboriginal peoples, notably the Miao, still are found in areas remote from large centers of population. Kweiyang (Kweichu), the capital, lies 220 miles south of Chungking.

KYD or **KID**, *kīd*, **Thomas**, English dramatist: b. 1557?; d. ?1595. As a playwright he was one of the most important of the precursors of Shakespeare, but little was known concerning his troubled career until the closing years of the 19th century. The son of Francis Kyd, a Londoner, he was enrolled at the Merchant Taylors' School late in 1565. After leaving school he entered his

father's profession of scrivener. He was greatly influenced by Seneca and Lyly. As far as known at present Kyd brought out his 'The Spanish Tragedie containing the Lamentable End of Don Horatio and Bel-imperia; with the Pitiful Death of Old Hieronimo' in the period between 1584 and 1589. For over 60 years 'The Spanish Tragedy' was the most successful play on the English stage and long retained its great popularity. A prologue was added in 1592 entitled 'The First Part of Hieronimo, or The Warres of Portugal' (first printed in 1605). It is now believed on good ground that Kyd was the author of the original draft of the tragedy of Hamlet, Prince of Denmark, which was drawn upon extensively by Shakespeare. Another work of Kyd, 'Soliman and Perseda' appears to have been written about 1588. In 1590 or thereabouts Kyd abandoned his career of playwright and entered the service of a lord who kept a troop of players. Boas thinks this lord was Robert Radcliffe, 5th earl of Sussex. Kyd dedicated his translation of Garnier's 'Cornelia' to the Countess in 1594. Other works of Kyd are 'The Householder's Philosophy' a translation from Tasso, and 'The Most Wicked and Secret Murdering of John Brewer, Goldsmith' (1592). Other works are lost with the exception of fragments. When Marlowe was arrested in 1593 for his "lewd libels," some of Kyd's papers were found among his effects and the latter was also arrested. When papers at his house were examined there was discovered one of "vile heretical conceits denying the deity of Jesus Christ." Kyd was tortured at Bridewell, but maintained his innocence and blamed Marlowe for his predicament. Released after a time, he was abandoned by his patron and died in destitute circumstances. Kyd's importance in the literature of his period lies not in any inherent excellencies of his verse but rather in the fact that he was a pioneer who exerted a marked influence on Ben Jonson, Fletcher and Shakespeare. Consult the collected edition of Kyd's works with biography edited by F. S. Boas (Oxford 1901); Manly, J. M., 'Specimens of Pre-Shakespearean Drama' (Vol. II, Boston 1897); edition

of 'The Spanish Tragedy' by Schick (in 'Temple Dramatists,' 1898); Sarrozin, 'Thomas Kyd und sein Kreis' (Berlin 1882); Ward, 'History of English Dramatic Literature' (Vol. II, London 1881).

KYMRY. See CYMRI.

KYNETT, kī'nēt, **Alpha Jefferson**, American clergyman: b. on the site of the battle of Gettysburg, Pa., 12 Aug. 1829; d. Harrisburg, Pa., 23 Feb. 1899. His people moved to Iowa in 1842. He was a self-educated man and taught for sometime in the public schools. In 1852 he entered the ministry of the Methodist Episcopal Church, uniting with the Iowa Conference, becoming a charter member of the Upper Iowa Conference in 1856. After 12 years in the pastorate he became secretary of the Church Extension Society of the Methodist Episcopal Church in Philadelphia in 1866 and served until his death. It was through his influence that the society was organized in 1864. Its headquarters were located in Philadelphia. He was a member of eight General Conferences, beginning with 1864. During the Civil War he was on the staff of Governor Kirkwood and was active in recruiting several regiments as well as in the Sanitary and Christian commissions. Under his management the Church Extension Society aided over 11,000 churches to erect edifices to the extent of nearly \$6,500,000, which was mostly raised by church collections.

KYRIE ELEISON, kīr'i-ā ā-lā'i-sōn (from the Greek *Kyrie eleēson*, "Lord, have mercy"), an invocation following the Introit of the Mass. It is almost the only part of the liturgy in which the Roman Catholic Church has retained the use of Greek words. Just after the Introit the priest celebrating the Mass and the servers repeat alternately three times "Kyrie eleison," and then as many times in the same manner, "Christe eleison," and so on alternately. When it is sung the leading singer takes the part of the priest, and the choir that of the servers. The introduction of the Kyrie into the Mass is attributed to Pope Sylvester I, in the beginning of the 4th century.

L This letter was the 12th in order in the North Semitic alphabet from which the Greeks took their written symbols. As a result of various rearrangements of the order, it stands 2d in the Ethiopic (South Semitic) and 23d in the Arabic scripts respectively; and as the result of various additions and omissions, 13th in the Cyrillic (Old Church Slavonic), 12th once more in the Latin (which has dropped *θ*, but added *g*)—and hence in modern western European scripts; and also 12th in the modern Russian (which has dropped two intervening symbols (*ds, i*); and added *Н* for consonantal *і*; both Cyrillic and Russian having *у* after *б*). In early alphabets—Cretan, North Semitic, Greek, and Italic—the posture of the letter varies, namely, *λ* and *λ*, or, with a sharp angle *λ* or *λ*. This is probably a result of an early style of writing, known technically as serpentine *boustrophedon*, in which the direction of writing, instead of being fixed either right to left or left to right, was changed in alternate lines (*boustrophedon*), that is, *λ* or *λ*, and also the posture of the letters inverted, that is, *λ* or *λ*—probably at first merely a matter of convenience in cutting letters with hammer and chisel on a slab of stone. Then the one position or the other was stabilized, and the Eastern Greek alphabets (from which Attic is descended) took *λ*, later *Λ*; the Western (from which Latin comes) took *λ*, later *L*. One curious consequence is that in Italic alphabets, the convention was established of distinguishing *l* and *v* (*υ*) by means of this very device, so that those which have *Λ* or *λ* or *Λ* for *l*, use *λ* or *υ* for *v* (*υ*) and vice versa. In Latin cursive *L* came to be written *λ* or *λ*, whence the common form *l*. As for *L* with the numerical value 50 in Roman numerals, this is not the letter *L*, but is an adaptation of the western Greek *λ* = *λ*. Like the other aspirate symbols, this also was superfluous as a letter, since Latin properly had no *λ*-sound. Accordingly it was diverted to a different value, and altered successively to the shapes *λ*, *λ*, and *L*.

The Semitic name of the letter was *lamd* or *lamed*, and its apparent meaning "ox-goad," which agrees well enough with its ancient shape. From *lamd* comes the Greek *labda* or *lambda*, the former showing an assimilation of *b* to *d*, the latter an inserted glide *b* between *m* and *d*, the better to accord with Greek habits of utterance. It has suggested that the odd name *Labda*, recorded by Herodotus as the name of the mother of the Corinthian Cypselus, may be due to the circumstance that she was lame and thus recalled the form of the letter (*λ*) in use at Corinth, the suggestion is fanciful.

The sound denoted by *l* is commonly produced by the vibration of one or both sides of the tongue, the median line of the mouth being closed by contact of the tongue with the upper part of the

mouth. Hence, depending on the position of the contact, various forms of lateral consonants (*l*) are produced. These may be either breathed or accompanied by voice. The former type, which is the rarer, occurs in modern Welsh (written *ll*, for example, *llan* "parish, church"); this Welsh *l* is also unilateral, being produced by a majority of Welsh speakers on the right side of the mouth. Ancient Greek also had for a time a breathed *l*, written (in inscriptions) *λh*. When the front part of the tongue is in contact with the hard palate we have the Italian sound written *gl* (a palatal *l*), or the *ll* of Castilian Spanish. A velar *l* (with the back of the tongue forming an occlusion against the soft palate) occurs in association with back vowels or some consonants (other than palatal *l*). It is sometimes heard in English *milk*, *vulgar*. The alternation of palatal with velar *l* is responsible for such apparent "irregularities" as Latin *uolle* "to wish," or *uelim* (present subjunctive), but *uolo* "I wish," *uult* "he wishes." A velar *l* tends to be lost; hence in *calf*, *half*, *almond*, *qualm*, *should*, *would*, the lateral consonant *l* has disappeared, not without effecting modifications of the preceding vowel. So too in *chaud* (Latin *calidum*), French *autre* (Latin *alterum*), Sicilian *auto* (Italian *alto*), a change that appears also in Italic, as Umbrian *muta* "penalty," Latin *multa*. Modern spoken Polish has converted a velar *l* in some positions, for example, *Lodz*, into a consonantal *u* (like English *w*), and this also was an Umbrian change (*vaper*—beside Latin *lapid-is*). Dutch has *koud* "cold," like the northern English dialects. Ancient Cretan had *καυλός* for *χαλκός* "bronze."

Other common alternations are *d*: *l* (Latin *lacrima* "tear," for an older *dacruma*, compare Vedic Sanskrit *ile* "I praise," for *ide*), *l*: *r* (Sanskrit *rinakti* "he leaves" beside Latin *linquit*; English *pilgrim*, French *pèlerin* from *peregrinum*). Old Persian regularly substituted *r* for *l*, and native speakers of Chinese find difficulty in distinguishing European *r*, *l*. Similarly *r*: *d* appears in Spanish *rado* from Latin *rarum*.

A syllabic *l* (written *le*) occurs in English *shimble*, *little* and similar words; an approximation to *ul* is often heard in its place, and that writing is standard in *sepulchre* and a few other words. Again English has only a short ("single") *l* for the writing *ll* (*villa*, *tell*, *skull*); contrast the Italian pronunciation of *villa*.

The abbreviation *£* (pound sterling) stands for Latin *libra* "pound." For bibliography see article A. See also ALPHABET.

JOSHUA WHATMOUGH,
Harvard University.

LAAGER or **LAGER**, *lä'gër* (Dutch, "a camp"), in South Africa, an encampment more or less fortified. The original Boer laager was an enclosure formed by the wagons of a traveling party for defense against enemies.

LAAR or **LAER**, lār, Pieter van (called **IL BAMBOCCIO**) Dutch genre painter: b. Haarlem, Netherlands, July 30, 1592; d. there, June 30, 1642. Early in life he went to France, and subsequently visited Italy (1623). Here he mainly resided at Rome, where he became associated with Claude Lorrain and Nicolas Poussin. He was small and crooked in stature and was thus called by the Italians "Bamboccio," and the comic scenes of rustic life painted in his style became known as "Bambocciads." He returned to Haarlem in 1639. He painted pastoral and banditti scenes, fairs and such rural incidents, with spirited and vigorous brush, although his coloring is somewhat hard. A masterpiece of his, *The Market Crier*, is in the gallery at Kassel. *The Departure from the Inn* and *The Shepherds* are in the Louvre, Paris. Other pictures of his are to be found at London, Dresden, Vienna, and Munich. About 20 etchings from his hand are also extant, chiefly animals and landscapes, which are spirited and finely executed.

L'ALLEGRO, lā-lā'grō. 'L'Allegro' and 'Il Penseroso' (q.v.) are companion poems by Milton. They are assigned to the period (1632-38) after his life at Cambridge, in which he retired to his father's house at Horton, Buckinghamshire, for study and reflection. That is, they were written about the same time as 'Comus' and 'Lycidas,' just before Milton's travels and some time before his prose writings and most of his sonnets and his greater poems. They are really poetic exercises; the young poet expresses his thoughts on life in the forms common in the literary poetry of the day. The two poems are companion pieces; 'L'Allegro' gives the gay or cheerful mood or humor, while 'Il Penseroso' gives the contemplative mood. They give their ideas in much the same way: each begins by driving away the mood opposed to the subject of the poem; in 'L'Allegro' it is "loathed Melancholy." Each goes on with an invocation, as one may say, to the goddess of the mood; "Thou Goddess fair and free, in Heaven yclept Euphrosyne, and by men heart-easing Mirth." The main part of each poem, however, presents the mood of the poet by describing a characteristic day; in 'L'Allegro' the poet is waked by the lark, hears the huntsman on the hill and the plowman nearer by, takes a country walk and joins the youths and maidens of the upland hamlets in their merry-making, he goes home and spends the evening in reading and music, or, according to another interpretation, he goes to town and enjoys the gay life of society. The poem is to the average mind old-fashioned and formal; it is classic in form and allusion and has little in it that seems inspired by deep poetic feeling. But on the other hand each word and phrase is so full of meaning and so characteristic of the poetic mood that it makes a definite place in the mind of every lover of poetry. Some other general considerations are noted under 'Il Penseroso.' There are a good many editions of Milton's Minor Poems, mostly made for school purposes. The first volume of Masson's edition of Milton or Verity's edition of the Minor Poems may be especially noted.

EDWARD E. HALE.

L'AMI FRITZ, lā'mē frīts ('Friend Fritz'), published in 1864, formed for Erck-

mann-Chatrion a restful interlude between two stirring patriotic novels, 'Le Conscriit de 1813' (1864) and 'Waterloo' (1865). Indirectly it is like them a plea for quiet living, toleration, peace and concord between nations and between religious confessions as well. The scene, significantly for one writing in the year of the Austro-Prussian attack on Denmark for Schleswig-Holstein, is laid in an idealized Bavarian Highlands. The time is about 1850. The theme is an epicurean idyl, the unobtruded moral that the shortest road to a middle-aged bachelor's heart is by way of his stomach. Seldom have the joys of eating and drinking been so affectionately dwelt upon in fiction. As the story opens, Fritz Kobus, a well-to-do bachelor of 36, rejoicing in his freedom, jests at the matrimonial counsels of his father's friend, the genial old Rabbi Sichel, a matchmaker by instinct and predilection. How in the next two years Fritz comes, step by step, and unconsciously almost to the last, under the spell of Suzel, the ingenious, charming and housewifely young daughter of his anabaptist tenant farmer Christel, is told with rare quiet humor and genial irony. With modifications, natural after the Franco-Prussian War of 1870, 'L'ami Fritz' was dramatized by its authors in 1876. The play was very popular and has been translated as 'Friend Fritz.'

BENJAMIN W. WELLS

L'ASSOMPTION, lā'sōn'syōn', Canada, village and capital of L'Assomption County, Quebec, 23 miles northeast of Montreal, on the Canada National Railroad. L'Assomption College is located there and the village is also the site of a Roman Catholic convent and hospital. It has several manufacturing industries. Pop. (1931) 1,576.

LA BALLERINA, lā bāl'lēr'ina (The Ballet Dancer). This short realistic novel, by Matilde Serao, which first appeared in the *Nuova Antologia* (No. 165, 1899), and then in the form of a novel (Catania, 2 vols., 1899) portrays the trials of a poor young Neapolitan girl, Carmela Menino, in her efforts to earn a livelihood in the rank and file of the ballet dancers employed at the San Carlo Theatre in Naples and at other resorts in the vicinity. The interest of the romance centres in the description of the sinister conditions that prevail rather than in the characters themselves, which are of secondary importance and whose sensuality and material needs furnish the dominating motive of their every action. In the case of the heroine of the novel, Carmela Menino, however, it is not sensuality, but a kind of religious sentimentality, together with her poverty, which is the mainspring of her conduct in life. This sentimentality is the cause of her fetich worship for her godmother, the ballet artist, Amina Boschetti, and of her loyalty to the memory of the latter years after her death. It also figures prominently at the end of the novel in the night watch of Carmela Menino at the bedside of the prodigal suicide, Count Ferdinando Terzi di Torregrande. The entire descriptive material is characterized by that vividness and realism displayed in the best of the author's earlier books. 'Il paese di Cuccagna,' 1891 ('The Land of Cockaigne'), showing those keen powers of observation which have placed Matilde Serao

the front rank of the contemporary writers of fiction in Italy. Among the salient features early drawn in 'La Ballerina,' three stand out conspicuously: (1) The rottenness of the entire ballet system as carried on in Naples. So vivid and effective is the description of the ballet conditions, analagous to that of the lottery system in 'Il paese di Cuccagna,' as to create a strong impulse on the part of the reader never to lose an opportunity, if ever one be presented, of doing his best to purge the entire system. (2) The very important rôle that sentimentality plays in the life of the Neapolitan youth of both sexes, nullifying the possible advantages which the use of ordinary common sense would, in all likelihood, provide. The well-nigh uncontrollable desire of the youth of Naples to pose continually as millionaires is exposed so forcefully as to bring out strikingly the absurdity of creating so false a situation. (3) The distinction between the feeling of reverence, akin to love, as seen in Carmela Menino's life, and the varied and multitudinous congeners of love as seen in the lives of the sensual ballet personnel of which Carmela Menino is one of the links. The insane relations between the ballet dancers and their sentimental lovers contrast rudely with the sincere sentimental loyalty and worship, not, however, very well accounted for by the author, shown by Carmela Menino toward the victim of the suicide with which the romance ends, thus producing a strong revulsion from the false pleasures of life. Together with 'Addio amore' ('Good-bye Love') and 'Dopo il perdono' ('After the Pardon'), 'La ballerina' is among the best of the author's later novels. A translation of it was published in England without the translator's name, and issued in London 1901. JAMES GEDDES, JR.

LA BARCA, là bär'kä, Mexico, town in the state of Jalisco, east of Lake Chapala, and 60 miles southeast of Guadalajara, on the International Railroad between that city and Mexico. The town was founded in 1529 by Nuño de Guzmán, and during the Mexican war for independence the town was the scene of two serious battles. Pop. 7,437.

LA BARRACA, là bär-räk'ä ('The Farmhouse'), a novel by Vicente Blasco Ibáñez (q.v.). In 'La Barraca,' the agrarian problem existing in the territory about Valencia engages the attention. First published in 1898, his work soon made its way into French and, appearing as 'Terres maudites' in the *Revue de Paris* in 1901, it established the author's fame abroad and brought him more note at home. With a sure eye and a firm hand, Blasco Ibáñez has outlined for us, on the background of the *huerta* or suburban district of Valencia, types of character such as Pimentó, the local bully, and Batiste, the industrious small farmer. Batiste has the misfortune to take up a farm from which the avaricious landlord had evicted the previous tenant and upon the occupancy of which the people of the *huerta* had put a ban. The result is the boycotting and ruthless persecution of Batiste by the *huerta* under the leadership of the worthless bravo, Pimentó, the killing of Pimentó by Batiste in defense of his own life, and the burning of Batiste's farmhouse by his neighbors. In the face of a systematic boycott the honest,

home-providing Batiste has no redress, and he must depart sadly to try his fortunes elsewhere.

JEREMIAH D. M. FORD.

LA BARRE, là bär', Antoine Joseph Le-fèvre de, French sailor: b. about the beginning of the 17th century; d. 4 May 1688. He rose to early prominence as an officer of the French navy, and was appointed governor of Guiana in 1663. He was successful in recapturing Cayenne (1667), which had been occupied by the Dutch. On being commissioned lieutenant-general he sailed for the West Indies, and, in a fight with the English in the Antilles, compelled them to raise the blockade of Saint Christopher. Succeeding Frontenac as governor of Canada in 1682, his irresolution in his negotiations with the Indians was so disastrous that he was recalled in 1685. He obstructed La Salle in his western explorations.

LA BREA, Los Angeles, Cal., a park, west of and within the city limits, on an almost level area bordered by the Santa Monica Range to the north. It is famous as the site of the "La Brea Tar Swamp," a prehistoric petroleum "trap" which has contributed to paleo-zoology the most extraordinary remains of extinct animals ever discovered. Major Hancock, then owner of the ranch on which the pool was located, as early as 1875, was presumably the first person to take particular notice of the bones in the asphalt, William Denton in that year mentioning a canine of the large sabre-tooth tiger received from him. After the definite discovery of the historical value of the deposits in 1906, excavation work was carried on by the University of California, and within a space of about 1,400 feet long, northwest by southeast, and 150 feet wide, thousands of skeletons were discovered, many hitherto unknown to science. Pools of water and tar still are characteristic features of this section of California, and in the Pleistocene period were natural drinking places for many kinds of herbivorous animals and for the carnivorous types which preyed upon them. Both in their struggles became trapped in the treacherous tar seep or pool, which has been an excellent preservative of their skeletons. The remains of mammals and birds of extinct type determined thus far in the university collection include 630 sabre-tooth tigers; over 700 "big wolves"; 7 mastodons; 39 giant ground sloths; 39 bison; 39 horses; 39 camels; 17 elephants (including the skeleton of the first "Imperial" elephant found), besides skeletons of the great American lion; the gigantic teratornis, with a 14 foot wing spread; California peacock and a vast number of minor specimens. In 1914 a human skull, possibly several thousand years old, was recovered from the pit. Fifteen mounted examples of the most important of these remarkable prehistoric animals and a great quantity of unmounted specimens are exhibited in the Museum of History, Science and Art in Los Angeles. Mrs. Ida Hancock, the owner of the property, donated 32 acres of the land enclosing the pool to Los Angeles County, which now maintains a park and subsidiary museum around this interesting "death-trap." Consult Merriam, J. C., 'A Death-trap which antedates Adam and Eve' (in *Harper's Weekly*, 18 Dec. 1909).

LA BRUYÈRE, là brü-yär, Jean de, French moralist: b. Paris, 17 Aug. 1645; d.

Versailles, 10 May 1696. He was educated for the law, became treasurer at Caen, and through the influence of Bossuet was employed in the education of the Duke of Bourbon, grandson of the great Condé, with a pension of 3,000 livres, and was attached to his person during the remainder of his life. In 1688 he published the 'Characters of Theophrastus,' translated into French, to which he added others of his own, in which he represented the manners of his time with great accuracy, and in a style epigrammatical, ingenious and witty. The work contained 386 "characters"; the 4th edition (1689), 340 additional ones, while the 9th, in press at the time of the author's death, included over 1,100 "characters." Consult Rahstede, 'La Bruyère und seine Charaktere' (1886); Allaire, 'La Bruyère dans la maison de Condé' (1886); Pellisson, 'La Bruyère' (1893). See CHARACTERS OF THEOPHRASTUS.

LA CALPRENEDE, là käl'prē'nād, **Gautier de Costes de**, French novelist: b. Sarlat, Dordogne, 1610; d. 1663. He went (1632) to Paris and entered the guards' regiment as officer, becoming royal chamberlain. His chivalry novels, copying the style of 'Amadis,' brought him fame, especially his 'Cléopâtre,' extending into 12 volumes (1647-58). He selected names from the period of Augustus as a framework in which to describe persons of his own day, the subtlety and stale sentimentality of the work finding favor. The characters, however, are, for the most part, well drawn and some scenes are excellent. Notable among the novels are 'Cassandre' and other works in 10 volumes (1642-50); 'Faramond' and others in seven volumes (1661-70); 'Les nouvelles, ou les divertissements de la princesse Alcidiene' (1661). He also wrote a number of plays, most notable being 'La Mort de Mithridate' (1637); 'Le Comte d'Essex' (1639); 'Edouard, roi d'Angleterre' (1640). Consult Körtling, 'Geschichte des französischen Romans im XVII ten Jahrhundert' (Vol. I, Oppeln 1891); Hill, H. W., 'La Calprenède's Romances and the Restoration Drama' (Chicago 1911).

LA CHALOTAIS, là sha'lō'tā, **Louis René de Caradeuc de**, French magistrate: b. Rennes, 6 March 1701; d. Rennes, 12 July 1785. He was a procureur-général of the Parliament of Brittany and one of the most ardent adversaries of the Jesuits in the reign of Louis XV. His notes under title of 'Compte rendu des constitution des jésuites,' placed before the Brittany government (1761) led to the abolition of the order from France. He next hoped to reorganize public education and wrote 'Essai d'éducation nationale' (Geneva 1763, Paris 1825), a remarkable treatise and translated into several languages, which was highly eulogized by Voltaire. The enmity of the Duke d'Aiguillon and others brought false persecution against him successfully and he was arrested in 1765 and imprisoned. Failing to bring about a fair trial after several attempts his friends demanded justice and Louis XVI placed him back in his former parliamentary position at Rennes in 1775. Consult Robidou, 'La Chalotais et les jésuites' (Rennes 1879); 'La Chalotais et le duc d'Aiguillon,' (published by Henri Carré, Paris 1893), from 'Chevalier de Foulette's Correspondence.'

LA CHARTREUSE DE PARME, là zhār'trüz dē parm', 'La Chartreuse de Parme,' esteemed the best of the novels of Stendhal (Henri Beyle), was written in 1830, though not published till 1839. In time it belongs to the first flush of the Romantic movement, and it has highly romantic passages, but there are others which seem clearly to foreshadow the naturalistic and the psychological schools of fiction. Some descriptive passages are of rare brilliancy. The story, opening in 1796, passes rapidly to the decade following Waterloo. The scene is chiefly in Milan or Parma; the plot, ingenious but over-tortuous, deals with the intrigues of a petty Italian court; the interest, whether for author or reader, is almost wholly in character. Though crude in coloring and melodramatic in treatment the novel seems the first serious attempt in French fiction to exhibit not merely foreign scenes but foreign ideals and psychic life. Fabrice, the hero, his military career closed by the fall of Napoleon, turns his ambition, though not his heart, to the Church, and after adventures that show him, in Sainte-Beuve's phrase, "like an animal given over to his appetites or like a wanton child who follows his caprices," not, indeed, without shrewdness, dies an archbishop in a Carthusian monastery, whence the story's title. The heroine, Duchess Sanseverina, beautiful, witty and loving Fabrice, her nephew, with the desperation of a last passion, murders, marries and forgets her marriage vows in his behalf, incarnating the intense passions of some familiar female figures of the Italian renaissance Count Mosca, to Balzac a glorified Metternich, is for us a diplomatic courtier, ingeniously unscrupulous in reconciling the duties of his station with the demands of his lusts. Palla, political outlaw and highwayman, the philandering agent of the duchess' criminal designs, is an interesting age-fellow of Hugo's Hernan. All four illustrate as many phases of Stendhal's conception of the unreasoning fatality of love.

BENJAMIN W. WELLS

LA CHAUSSÉE, là shō-sā, **Pierre Claud Nivelle de**, French dramatist, founder of the so-called "pathetic comedy" or melodrama: b. Paris, 1692; d. there, 14 March 1754. 'Le Pré jugé à la Mode' (1735) by him was the first French pathetic comedy. Of 18 dramas by him among the best are 'School of Friendship' (1737); 'Melanide' (1741); 'Love for Love' (1742); 'Pamela' (1743); 'School of Mothers' (1745); 'The Governess' (1747). His plays were all written in verse and followed strictly the rules of the classic drama.

LA CITTA MORTA ('The City of the Dead'), a modern tragedy in five acts and in prose, by Gabriele d'Annunzio, performed for the first time in Paris at the Renaissance Theatre, 21 Jan. 1898. Although every effort was made to expose to the best advantage the artistic possibilities of the tragedy, Sara Bernhardt playing the part of the blind Anna with all her rare skill and intelligence, the play was not a success. It has been played in England and in America, but received rather coldly, and for several reasons, one of which may be said to be its lack of dramatic action; for it is more a lyric poem in dialogue, or a succession of descriptions artistically composed, than a drama as ordinarily understood.

The scene is laid in Argolis, near the ruins of Mycenae. The *dramatis personae* consist of five characters; an archaeologist of a most ferocious type, Leonardo; his sister, Bianca, Maria, a young woman, endowed with exuberant health and beauty and possessing rare personal charm, who accompanies the archaeologist and shares his keen interest in his excavations and discoveries; Alessandro, a poet and scholar, ever inspiring and helping Leonardo in all he undertakes; Anna, the wife of Alessandro, who is blind although not from her birth. This misfortune gives Anna's mental vision a sensitiveness and acuteness which makes up in no small degree for her loss of sight; lastly, a nurse, an attendant of Anna, whose informing rôle suggests somewhat the part filled in a certain measure by the old Greek chorus. As in the plays of Sophocles and Euripides and of Racine's *Andromède*, it is fate or destiny that controls the incidents of the tragedy and hangs heavily over the participants. In the air itself, breathed by the archaeologist and the poet in their passionate search for the tomb of the house of Atreus, is rank poison emanating from the crimes committed by the Atridae. So atrocious is the curse over this ill-starred house that, as Alessandro tells his wife (I-4) some direful traces must still remain in the dust trampled by the sons of Atreus. This gives the key to the trend of events.

That a tragedy having the three mainsprings of its action in incest, adultery and fratricide, even with a Greek setting, should be received coolly by Anglo-Saxon audiences is readily understood. That it received such acceptance as it secured is due in a measure to the remarkable acting of Eleonora Duse, who impersonated Anna. The tragedy has been the subject of much diverse criticism. However repellent the subject may appear, enwrapped as it is in a sullen and depressing atmosphere, the tragedy itself is unquestionably a highly artistic production. The author not only possesses the inherent qualities ascribed to the Latin and Italian temperament, but the old pagan strain reveals itself in utterly ignoring the conventionalities usually adhered to more or less by writers in general. Moreover, his accurate knowledge, gained on the spot, of ancient history and literature, together with unusual poetical gifts make up a combination producing a result that has rightly attracted the attention of the literary world. Revolting as may be his remorseless brutality, especially to the non-Latin temperament, it is impossible not to recognize an artist exceptionally gifted and a literary production quite out of the ordinary. A translation of *La città morta*, by G. A. Symons, was published in 1900; another by G. Mantellini (New York 1902). Consult also Muret, Maurice, *La Littérature Italienne d'aujourd'hui* (pp. 90-95, Paris 1906); Huneker, J., *Duse and d'Annunzio in Iconoclasts*, pp. 338-344, (New York 1907).

JAMES GEDDES, JR.

LA CONDAMINE, là-kôn-dä-mên, Charles Marie de, French geodesist and author: b. Paris, Jan. 28, 1701; d. there, Feb. 4, 1774. He entered the army, but resigned to pursue scientific studies. Elected at twenty-nine to the Académie des Sciences, he made field trips to Asia and Africa. In 1735 he went to Peru with the astronomer Louis Godin (1704-1760) and the

hydrographer and mathematician Pierre Bouguer (1698-1758) to determine the length of the arc of a degree of the meridian at the equator. From the Amazon in 1736 he sent several rolls of *caoutchouc* to the academy with a report on its uses, thus introducing rubber into Europe. He returned to France in 1744. In several of his writings he advocated inoculation for smallpox a generation before Edward Jenner (q.v.) made his epochal discovery of vaccination (1796). Among his principal works are an account of his travels in South America (1745), a history of the pyramids of Quito (1751) and the journal of his travels to measure the meridional arc (1751). Three memoirs on inoculation appeared in 1754, 1758 and 1765, and his *Histoire de l'inoculation de la petite vérole* in 1773. A stamp bearing his portrait was issued in 1935 by the Republic of Ecuador.

LA CONFESSION D'UN ENFANT DU SIECLE, là kôn'fès'syôn d'ung' ô'n'fôn dü syäcl' (*Confession of a child of the century*) is one of the most characteristic works of Alfred de Musset. It owed not a little of its immediate great success to the fact that, while ostensibly a novel, it was a thinly veiled history of the poet's love affair with George Sand, which she had already begun to use as literary material in her *Lettres d'un voyageur*. Written (1835) shortly after that ultraromantic adventure in ecstasy and torture, it is very generous to the heroine of that experiment and without the bitterness that later marked the references of each of the principals to the other. For the frankness and sincerity of its self-revelation it is a personal document of great interest. But it is more. It is a wonderfully striking expression of that peculiar state of mind, often called "Byronic" in English, so common among the youth of the generation coming after the French Revolution and the Napoleonic wars, and known in France as the "maladie du siècle." Its opening pages contain a famous description of that malady and an analysis of the conditions out of which it grew. So it is a document even more precious for what it tells us of the century than for what it reveals of the child.

ARTHUR G. CANFIELD.

LA COSA, la kô'sa, Juan de, Spanish navigator: b. about 1460; d. November 1509. He was the companion of Columbus in the discoverer's voyage to Hispaniola in 1493 and settling at Santoña, in Aranzham, made his living and reputation as a draughtsman of charts (1496). He accompanied Ojeda in an expedition to the Pearl coast in 1499; and in 1501 explored the northern coast of South America from Venezuela to Panama. In the course of an expedition on which he accompanied Ojeda, the party on landing in the bay of Cartagena was attacked by Indians, and he perished with his companions, of whom Ojeda alone escaped. His map of the world, beautifully illustrated on vellum, is in possession of the Spanish government, and is the earliest known to include the New World, having been made in 1500.

LA CROIX, la krwä', Alfred, French geologist: b. Mâcon (Saône-et-Loire), Feb. 4, 1863. He was head of the scientific expedition sent to Martinique (1902-03) and of numerous other scientific parties, to United States, Canada,

Asia Minor, Greece, Italy, Germany and England. He was also head of a committee on historical and scientific work in 1895, and was charged with the geological map of France in the following year. His published works include *Minéralogie de la France et de ses colonies* (1893-1902); *Les Enclaves des roches volcaniques*; *La Montagne Pelée et ses éruptions* (1904). He has also contributed very extensively to scientific journals and magazines, especially on the metamorphism of eruptive rocks, volcanic action and causes and mineralogy.

LA CROSSE, là kròs', city, Wisconsin, La Crosse County seat; altitude 649 feet; on the Mississippi River (9-foot channel); 820 miles northwest of Chicago; on the Chicago and North Western; Chicago, Burlington and Quincy; and Chicago, Milwaukee, St. Paul and Pacific railroads; with a municipal airport. The city is the trade center of an agricultural region comprising parts of southwestern Wisconsin, southeastern Minnesota, and northeastern Iowa. It has a wide variety of industries, including the manufacture of agricultural implements, air conditioning and heating equipment, gauges for automobiles and airplanes, beer, rubber footwear, truck trailers, tools and dies. La Crosse maintains a public library with two branch libraries; parks with playgrounds; two armories, several hospitals, and a tuberculosis sanitarium. Schools include an adult vocational school, and a state teachers' college, the latter having a museum. A city planning commission through zoning ordinance directs the growth and improvement of the city. In 1939 a toll-free bridge across the Mississippi was completed.

History.—La Crosse started as a trading post in Indian territory. At first the site was called Prairie la Crosse by the French who occasionally stopped here to trade with the Winnebago Indians. The latter played a game which reminded the French of the la crosse game. The site was first permanently settled in 1841 by Nathan Myrick; one of the city's parks is named in his honor, and a plaque identifies the site of the first building which was erected by him. The first and largest group of settlers came from New York, Ohio and Vermont. They were followed by Germans and Norwegians after 1848. In 1851 the settlement was incorporated as a village and in 1856 it received its city charter. Government is by a mayor and board of aldermen. The water supply system is city-owned. Pop. (1940) 42,707; (1950) 47,535.

LA CROSSE, a Canadian outdoor game played with a ball and a stick of light hickory, bent at the top like a bishop's crozier, from which the game derives its name. It was very popular among the Indians of North America, being sometimes taken part in, according to Catlin, by 800 to 1,000 players, in which tribe was set against tribe, the game lasting for days, broken arms and legs being common among the players, and some even killed. The games were preceded by rigorous training on the part of the contestants. A game of ball, played at Michillimackinac on the king's birthday, June 4, 1763, was by Pontiac made the occasion of an ingenious stratagem by which the garrison was surprised and massacred.

The stick employed in the game is 5 or 6 feet in length. Strings of deerskin are stretched di-

agonally across the hooked portion of the crosse forming a network. Only one ball is employed made of india rubber, and eight or nine inches in circumference. Posts or poles about six feet high, with a small flag at the top of each, complete the equipment. The players are usually 11 on each side, but their number, as well as the distance of the goals apart, is nearly optional. The object of the game is for one side to drive the ball through their opponents' goal. The ball must not be touched with the hand or foot, but is scooped up from the ground with the bend of the crosse, on which it is carried horizontally, while the player runs toward one of the goals, dodging his antagonists. The game is played in two halves, of a half-hour's duration. A club was formed at Montreal in 1846; in 1860 it began to attain popularity in Canada, and it was introduced into the United States in the early 70's. The National La Crosse Association of Canada was organized in 1867.

Consult Beers, *La Crosse: the National Game of Canada* (Montreal 1869); Schweitzer, *La Crosse: an Expert's Instruction* (New York 1904); Stanwick, T., *La Crosse* (New York 1940); Official La Crosse Guide, prepared by the National Collegiate Athletic Association (New York 1943).

LA DAME AUX CAMELIAS, là dān ò kà-mā-lyā' (*The Lady of the Camellias*). This play by Alexandre Dumas, the Younger, first appeared (1848) as a novel written under stress of debts gathered in accumulating experience that it in part reflects. The novel was dramatized in 1849, but, owing to the failure of the theater and curious complications with the censorship, of which a preface gives vivacious account, it was first acted Feb. 2, 1852. Success was immediate and lasting. In manifold adaptations it has been played in many lands and has engaged the talent of many noted actresses. In America it is known in eight editions as *Camille*, in two as *The Lady of the Camellias*. It had immediate origin in the life and death at 22 of an acquaintance of the dramatist, Alphonsine Plessis, a Parisian courtesan, once maid or a farm, who died of consumption in 18-7. Her unselfish charm was celebrated in a brief funeral address by Théophile Gautier and is commemorated in a much visited monument at the cemetery of Père La Chaise. Dumas' *Lady of the Camellias*, Marguerite Gautier, is so drawn by a requited love to Armand Duval that she makes all material sacrifices to live wholly with and for him. His father shows her what this will involve for Armand's career. Then, rising to the height of immolation, she deliberately estranges her lover, sacrificing his esteem and her life to Armand, who learns too late the price of her devotion. The theme of the courtesan redeemed by love is at least as old as Prévost's *Manon Lescaut* (1731). It has been dramatized by Ponsot (1782) and again by Hugo in *Marion de Lorme*. But *La Dame aux camélias* marks in the French stage the beginnings of the realist study of social problems which has since largely engaged its attention.

BENJAMIN W. WELLS.

LA DEBACLE, là dā'bā-kl' (*THE DOWNFALL*), (1892), a realistic novel by Emile Zola, told of the horrors of the Franco-Prussian War of 1870. Nothing more powerful of its kind has been written in France, or perhaps in any other country. Here Zola applies to war that natura-

tic method which he had used with remarkable, if unpleasing, effect in his studies of domestic and social life and which has become celebrated as "Zolaism." In 'La Débâcle' the reader is hurried from disaster to disaster, from error to horror. He beholds the people of France in the grasp of uncontrollable events, which move and crush as surely and inexorably as a glacier. Of what importance, in the lay of these giant social forces, are the lives of Maurice, Jean, Henriette and untold thousands of others? Of what avail are courage and innocence? Justice seems to have disappeared from the face of the earth. Zola's pictures of the defense of the plateau of Illy, culminating in the magnificent but hopeless cavalry charge, and of the horrors of Sedan, are among the most powerful in literature. The effect is heightened by the author's objective treatment, his apparent indifference to the ruin of his country. Here the patriot, as Zola certainly was, is subordinate to the artist, as he shows himself to be in this his masterpiece. Whatever the reader's attitude toward "naturalism," it is doubtful if the naturalistic method could be carried farther than in 'La Débâcle' or applied with more telling effect. And whatever the future fate of "Zolaism," it is probable that this arch example of the method, presenting so graphic a picture of a fateful epoch, is secure of a permanent place in literature.

LA FAMILIA DE ALVAREDA of Fernán Caballero, pseudonym of Cecilia Bohl de Faber, is one of the best-known works of that author. The outline was first sketched in German in 1822 but the book in its present form was not published until 1856. It is one of the first novels of manners in modern Spanish literature and bears the sub-title, "Novel of popular customs." The author writes in the preface that the story was taken from its essential details from events narrated to her by her jealous friend, Perico de Alvala, and the degradation of the latter into a thief and outlaw. The tragedy culminates in the execution of Perico and the death and disintegration of his own family and that of his victim. The tale merely serves as a vehicle for a vivid and picturesque description of Andalusian village life in the early part of the 19th century. Popular legends, traditions, and folksongs are generously interspersed. The author constantly obtrudes her moral both in the narrative itself and in footnotes, and insists that the Spanish peasant can be happy only by clinging to the religious faith and the simple customs of his forefathers. The book is liked by Spaniards because of its didactic and moral tone, and is valued by foreigners because it is one of the many human documents of Spanish literature. There is a German translation of the tale. Caballero, much to her annoyance, claimed as a German because of her father's German origin. There is a good annotated American edition by P. B. Burnet. An account of the author's life and work may be found in the complete edition of her works, vol. I, in the 'Colección de Escritores Castel-

one of the forerunners of the Félibrige movement: b. Lacoste (Gard), 1791; d. 1846. He came of a family celebrated in statesmanship, literature and military life, among his ancestors being the famous poet, La Fare, and the no less notable French marshal of the same name. After having studied law at Toulouse he entered the army in 1814, but left it five years later and returned to his native place where he continued to reside and to devote himself to literature. In 1830 he began publishing in *L'Echo d'Alais* his southern dialect poems, which became very popular in the *langue d'oc* country. These poems were published in book form in 1844 under the title, 'Las Castognados,' at Alais. In these poems the music-loving south felt an echo of their own life. Their harmony, their gentle sweetness and their brilliancy at once made La Fare a literary leader among the Provençal people, until then without one in later years. His poems, therefore, did much to further the elevation once more of the *langue d'oc* into a literary tongue.

LA FARGE, Christopher Grant, American architect: b. Newport, R. I., 5 Jan. 1862. He studied at the Massachusetts Institute of Technology (1880-81), and in the office of H. H. Richardson (q.v.), and in 1884, with G. L. Heins, took charge of the architectural works of his father, John La Farge (q.v.). From 1886 to 1910 he was a member of the firm of Heins & La Farge, whose principal work is the cathedral of Saint John the Divine, New York. Other works that may be named are the Houghton Chapel at Wellesley College; the Roman Catholic chapel at West Point; and Saint Matthew's Church, Washington, D. C., church of the Blessed Sacrament, Providence, R. I.; Roman Catholic Cathedral, Seattle, Wash.; stations of the original New York subway, etc. He was fellow and director, American Institute of Architects, past president, Architectural League, New York; trustee and secretary, American Academy in Rome; member advisory council, School of Architecture, Mass. Inst. of Tech.; member advisory board, Princeton Univ. School of Architecture. Died, 11 Oct. 1938.

LA FARGE, John, American artist: b. New York, 31 March 1835; d. 14 Nov. 1910. He was the son of Jean Frédéric de la Farge, French midshipman, who escaped imprisonment at San Domingo, 1806, and eventually settled at Philadelphia. He studied drawing with his grandfather Binsse and went abroad in 1856. He studied for some time under Couture in Paris and later settled down in a lawyer's office in New York. He became much attracted by the Arundel prints of Giotto and formed a deep appreciation of Japanese art. He found a friend and master in William Hunt. He married Margaret Perry, great-granddaughter of Benjamin Franklin, in 1860. He originally developed a taste founded on Japanese liberalism, pre-Raphaelite conventionality and imaginative conventionalism. In 1876-77 he was engaged on the mural decoration of Trinity Church, Boston. He began glass painting and window designing in 1878 and was successful in the manufacture and designing of stained glasses. He was connected with Saint-Gaudens in the erection of the King mausoleum at Newport, R. I. He visited Japan and the islands of the Pacific in 1886. Many water-color

SAMUEL M. WAXMAN.

LA FARE-ALAIS, la fär-ä'lä', Christophe-Martin, MARQUIS OF, a provençal poet and

sketches of native life resulted from this trip. One of his greatest works is the large altarpiece in the church of the Ascension, New York (1888). Other noteworthy works are 'Christ and Nicodemus,' Trinity Church, Boston; 'The Muse of Painting,' Metropolitan Museum, New York; 'Coming of the Magi,' church of the Incarnation, New York; among his mural decorations are those in the Brick Church, New York; Paulists' Church, New York; Congregational Church, Newport, R. I.; Minnesota State Capitol, Saint Paul; his glass designs include 'Samuel' in Judson Memorial Church, New York; 'The Philosopher,' Crane Memorial Library, Quincy, Mass.; window in Second Presbyterian Church, Chicago; 'Battle Window,' Memorial Hall, Harvard; 'Paul at Athens,' Columbia University Chapel. In 1869 he became a member of the National Academy; in 1891 was made officer of the Legion of Honor, and was one of the seven original members of the American Academy of Arts and Letters. La Farge was skilful as a colorist, however much we may criticise his inadequate conception and weakness in drawing. He is an important figure in the history of American painting and was a real pioneer in mural painting. He also painted portraits, flowers and landscapes. He contributed frequently to the magazines and published 'Consideration on Painting' (1895); 'Great Masters' (1903); 'Higher Life in Art' (1910); 'Reminiscences of the South Seas' (1912). Consult Coffin, C. H., 'American Masters of Painting' (New York 1892); Cary, E. L., 'International Studio' (Vol. XXXVIII, ib. 1909); Cortissoz, Royal, 'John La Farge: A Memoir and a Study' (ib. 1911); Isham, Samuel, 'History of American Painting' (ib. 1905); Waern, 'John La Farge: Artist and Writer' (London 1896).

LA FARINA, *la fà-rē'nā*, **Giuseppe**, Italian statesman and historian: b. Messina, Sicily, 20 July 1815; d. Turin, 5 Sept. 1863. He studied at the University of Catania; entered the law; implicated in a revolutionary conspiracy, was compelled to flee from Sicily (1837); and finally settled in Florence (1841), where he devoted himself to historical composition. Having returned to Sicily in 1848, he was there successively member of Parliament, and Minister of Education, Public Works and the Interior. After the suppression of the revolution in Sicily (1849), he resided in France and Italy, was secretary of the National Italian Society, and strongly advocated Italian unity. Following the war of 1859, he reorganized the National Italian Society, of which he became president; in 1860 was sent to Sicily to represent Victor Emmanuel; and from 1861 sat for Messina in the Italian Parliament. His chief work is 'Storia d'Italia dal 1815 al 1850' (2d ed., 1860).

LA FAYETTE, **Marquis de**, see **LAFAYETTE**.

LA FAYETTE, *lä fä-yèt*, **Marie Madeleine Pioche de la Vergne**, **COMTESSE DE**, French novelist: b. Paris, 16 March 1634; d. there, 25 May 1693. All her life she was in the foremost literary circles, after marriage her house being a noted rendezvous of wits and scholars, including Mme. de Sévigné, La Fontaine and La Rochefoucauld. Her first novel was 'The Princess de Montpensier' (1660);

followed by 'Zaïde' (1670), which among her works ranks next after 'The Princess of Cleves' (1678), her most celebrated work, revealing the conflict between love and duty in a woman's heart, and one of the classics of French literature. She wrote also a 'History of Henrietta of England' (1720), and 'Memoirs of the Court of France for the Years 1688 and 1689' (1731). Consult 'Lives,' Haussonville and Rea (1909). See **PRINCESS OF CLEVES**, **THE**.

LA FÈRE, *la fâr*, France, city in the department of the Aisne and the arrondissement of Laon, on the river Oise, which is joined here by the Somme. It is a town of the second class with several outer forts and has a church of the 15th century, an artillery school, arsenal, college, theatre, museum, machine works, oil factory, etc. When the World War broke out (1914) it had about 5,000 inhabitants. It was captured by the Prussians under Bülow on 27 Feb. 1814, but held out in 1815 against bombardment and investment. In 1870 it surrendered to the Germans after two days' bombardment and an ineffectual sortie.

LA FLÈCHE, *la flêsh'*, France, town and capital of an arrondissement in the department of Sarthe, on the Loire, 30 miles southwest of Le Mans. It is the seat of the famous Prytanée, a school for the sons of officers, originally a college founded for the Jesuits in 1607 by Henry IV. It is a preparatory school of Saint-Cyr. The town carries on tanning, flour milling, paper making and also has establishments for the manufacture of bicycles, gloves, wooden shoes, etc. Pop. (town) 7,800; (commune) 10,830.

LA FLESCHE, **Susette**. See "BRIGHT EYES."

LA FOLLETTE, **Robert Marion**, American statesman: b. Primrose, Wis., 14 June 1855; d. Washington, D. C., 18 June 1925. Graduated from the University of Wisconsin in 1879, in 1880 he was admitted to the bar. He became district attorney of Dane County in 1880, retaining that position till 1884, when he took up the regular practice of his profession. In 1887 he was elected to Congress, serving till 1891; he won reputation as an orator, and as a member of the Committee of Ways and Means took a prominent part in the framing of the McKinley Tariff Bill. At the close of his service in Congress he resumed his practice, and remained active in politics, becoming one of the leaders of the younger men in the Republican party. He took part in a campaign against the exclusive privileges of corporations and against the boss system. His two pamphlets, 'Menace of the Machine' and 'The Nomination of Candidates by Australian Ballot' (1897), attracted wide attention. In them he outlined his program for electoral reform in Wisconsin. He was elected governor of his State three times, 1902 and 1904. As governor he led in the movement for a direct primary law, for the equalization of taxation and the regulation of railroad rates. He resigned the governorship in 1904 to become United States senator and was elected in 1911, 1916 and 1923. In the Senate he demanded progressive legislation and became well known for his advocacy of the physical valuation of railroads, his speeches on railro-

subjects showing him to be a profound student of these questions. He was prominently mentioned for the Presidential nomination in 1908, receiving 25 votes, and again in 1912. In 1924, he headed a third party ticket and received a popular vote of 4,667,312. He was one of the leaders in the movement to have U. S. Senators elected by popular vote. Other causes championed by him include: Workmen's compensation, publicity of campaign expenses, the parcel post, the Federal inheritance tax, exemption of co-operative farmers' and labor organizations from the anti-trust laws, woman suffrage, and the Seaman's Act. He was one of the senators who opposed the arming of American merchant vessels in the European war zone.

LA FONTAINE, la fōn-tēn, **Jean de**, French poet: b. Chateau-Thierry, Champagne, 8 July 1621; d. Paris, 13 April 1695. He was the son of Charles de la Fontaine, a forest ranger of the highest middle class. Jean was the eldest child and was sent to school at Rheims. After finishing at the grammar school he studied for a time without much seriousness for the priesthood, but abandoned it because of lack of interest. At the age of 26 his father resigned his position in Jean's favor, and married him to Marie Héricart, a girl of 16, with considerable fortune. The marriage was not altogether satisfactory, for La Fontaine was absent most of the time, squandered his wife's fortune, in 1658 consented to a "separation des biens." For the greater part of his life he lived at Paris, while his wife remained at Chateau-Thierry.

It was not until he was 30 that La Fontaine began to devote himself to literature. Content at first with the lighter forms of poetical composition, he wrote his first serious work, *L'Eunuque*, an adaptation of the *Eunuchus* of Terence in 1654. This was addressed to Fouquet, and won for the author his first patron. A number of minor poems and ballads were also written for the superintendent. When the displeasure of the sovereign was incurred by Fouquet, La Fontaine found new patrons in the Duke and Duchess of Bouillon, who settled some of his legal difficulties and made him welcome at their home. In 1664 his first book of the *'Contes'* appeared. They are stories with old themes based on Boccaccio, the *'Cent Nouvelles Nouvelles'*, and other collections of legends, reanimated by his swift and easy power of narration and his keen analysis of the characters. Among his best friends of this period were Racine, Boileau and Molière, with whom he formed the famous quartet of the Rue du Vieux Colombier, which made the literary history of the time. The Duchess Dowager of Orleans was his next powerful friend. He lived for a few years under her protection, and at her death was invited to the home of Madame de la Sablière, where he remained for the next 20 years.

His *'Les Amours de Psyche'* and *'Adonis'* romantic novels, were printed in 1669. His second volume of *'Contes'* had appeared in 1666, and two years later six books of the *'Fables'* were published. Contemporary critics gave high estimates of his works, and public recognition came in 1683, when despite considerable opposition he was elected to the Academy. His health began to fail, and it was during a severe illness

(about 1692) that he was converted and repented of the improprieties of many of his stories. The death of Madame de Sablière in 1693 affected him profoundly, and, broken in health and old, he accepted the patronage of Monsieur and Madame Hervait who cared for him in his last days.

The curious personality of La Fontaine has given rise to many stories concerning his life and habits. The candor and simplicity of his character acquired for him the title of "le bon homme." He was proverbially absent-minded, awkward and rude in society. The best of his works are the *'Contes'* and the *'Fables'*, which mark him as the master of narrators of short stories and tales. The latter have received more favorable comment, since their tone has pleased more exacting critics; while the improprieties of the former have blinded some to the high artistic value of the composition itself. The *'Fables'* abound in keen analysis, cleverly hidden political teaching, natural and homely morals and delightful descriptive passages. His rhyme is of artful irregularity and is the art medium for his deft and skilful power of narration. Of his plays, which are considerably weaker than his other works, the most noteworthy are *'Le Florentin'*, *'Ragotin'* and *'La Coupe enchantée.'* His separate poetical works are represented by *'La captivité de Saint Malo'* (1673) and the *'Poème du Quinquina'* (1682). A volume of mystically religious verse was published by him in 1671, and several unimportant comedies (collected in 1702). His letters, scattered poems, etc., were edited as *'Œuvres diverses'* in 1729. Both the *'Contes'* and the *'Fables'* have been superbly printed. The latter were illustrated by Oudry (1755-59), and the former by Eisen 1762. Gustave Doré also did illustrations for the *'Fables.'* The best scholarly edition is that by Walckenaer (1826-27), who has also written an excellent biography and critical estimate of La Fontaine. Most well known is the edition by Regnier in the *'Grand Ecrivains'* series (9 vols., 1888-92). Other good editions are by Moland (7 vols., 1872-76) and Marty-Laveaux (5 vols., 1857-77). Consult Lafenestre, G., *'Jean de la Fontaine'* (1885); Faguet, E., *'Jean de la Fontaine'* (1900); Taine, *'La Fontaine et ses fables'* (15th ed., 1901); Hookum, P., *'The Masterpieces of La Fontaine'* (New York 1916). See **LA FONTAINE FABLES**.

LA FONTAINE, Sir Louis Hippolyte, Canadian statesman and judge: b. Boucherville, Lower Canada, October 1807; d. Montreal, 26 Feb. 1864. He early achieved prominence at the bar, and after the rebellion of 1837, in which he was accused of complicity, he went to England and afterward to France, and on returning to Canada in 1838 was imprisoned but released without being brought to trial. He became prominent in the Assembly of United Canada, was joint first minister in the La Fontaine-Baldwin administrations (1842-43, 1848-51). In the second of these important measures were passed and reforms effected—University and Rebellion Losses bills, the introduction of the decimal currency, reorganization of the postal system and the reduction of rates. La Fontaine worked steadily to create a better feeling between the French and British elements in the two provinces. His was the first cabinet

In which the principle of colonial government was recognized. In 1853 he became chief justice of the Court of Queen's Bench of Quebec, and as such presided over the special Seigniorial Court which met in 1855 to adjudicate on claims under the act of the previous year abolishing feudal rights and duties in Lower Canada. He was created a baronet in 1854. Consult 'Baldwin, Lafontaine, Hincks,' by S. Leacock, in the 'Makers of Canada' series (Toronto 1907).

LA FONTAINE FABLES. The Fables of La Fontaine are part and parcel of French literary consciousness to a greater degree than any other classic of its literature. For generations many of these little apologues have been read, committed to memory, recited, paraphrased, by every French school boy and school girl. Countless phrases from them are current coin of conversation; familiarity with them is assumed among all who have more than the rudiments of education.

The first collection of these Fables appeared in 1668 when La Fontaine was already 47 and known to readers chiefly as the author of 'Contes,' lively stories in verse, grazing and sometimes transgressing the bounds of license. The 'Fables' had no such over-spicing. Additional groups of them appeared in 1678-79 and in 1694. After 1683 La Fontaine's mellowed genius expressed itself in this form alone. In all there are 239 of the 'Fables,' varying in length from a few lines to some hundred, those written later being as a rule longer than the earlier. They are divided into 12 books. The first six books, collected in 1668, were in the main adapted from the classical fabulists Æsop, Babrius and Phædrus. In the later books there is a wider range. The Indian Bidpai is drawn upon, as those Eastern fables had come to the French through the Persian. Avienus and Horace are laid under contribution and the earlier French writers, Rabelais, Marot, Maturin Regnier and Des Periers. Contemporary happenings, too, were occasionally turned to account, as for instance an accident at the funeral of M. de Boufflers (vii, II). No fable, so far as appears, is of La Fontaine's invention. The subject is often common property of many ages and races. What gives La Fontaine's 'Fables' their rare distinction is the freshness in narration, the deftness of touch, the unstrained suppleness of metrical structure, the unfailing humor of the pointed moral, the consummate art of their apparent artlessness.

The personages of the 'Fables' are usually animals, each, as Taine has observed, standing as a rule, of course with frequent exceptions, for a distinct class in French society in the age of Louis XIV. The lion is the king; so, too, the rarely introduced elephant. The tiger and the bear stand for the great nobles and the arrogant officials. The ape, the fox and the wolf represent different types of courtiers, as they might be observed at Versailles, shallow imitators of royalty, shrewd self-seekers, time-servers, knavish fops. The dog is the gentleman in waiting, obsequious and supercilious by turns; the cat the hypocrite, watching his chance of advantage; the ass the eternal dupe. But, though these animals stand for men, La Fontaine never forgets that they are animals, and shows himself always a keen, if desultory,

observer of nature. Where men are introduced, these too are social types, the king, the lord, the priest, the monk, the recluse, the burgher, the pedant, the doctor, the coward, the vain man, the arrogant man, the hypocrite, the self-seeker, and, most sympathetically treated of all, the peasant laborer. It has been well said of La Fontaine that he knew men like Molière and society like Saint-Simon. Keen insight into the foibles of human nature is found throughout the 'Fables,' but in the later books admirable ingenuity is employed to make the fable cover yet convey, social doctrines and sympathies more democratic than the age would have tolerated in unmasked expression. So the 'Fables,' first delighting the child for their own sake, delight the man as social parables, full of ageless teachings of worldly wisdom, of ironic observation, of broad humanity, for all their seeming child-like simplicity.

Lamartine could find in La Fontaine's 'Fables' only "limping, disjointed, unequal verses, without symmetry either to the ear or to the page." But the poets of the Romantic School, Hugo, Musset, Gautier and their fellows, found in the popular favor these verses had attained and held an incentive to undertake an emancipation of French prosody which they in large measure achieved. Yet it may be doubted if any lines they wrote awaken so manifold an echo wherever French is spoken as the little apologues of the Grasshopper and the Ant, the Crow and the Fox, Death and the Wood-cutter, the Animals in the Pestilence, the Two Pigeons and many more that crowd to memory. "La Fontaine's Fables," wrote Madame de Sévigné, "are like a basket of strawberries. You begin by selecting the largest and best, but, little by little, you eat first one then another, till at last the basket is empty." There are translations into English verse by E. Wright and Rev. W. L. Collins. An attractive edition of the original text with a preface by Jules Claretie was published in two volumes (New York 1910).

BENJAMIN W. WELLS.

LA FOURCHE, la foorsh, a bayou in southeast Louisiana, and an outlet of the Mississippi River, which begins at Donaldsonville, on the right bank, and flows southeast to the Gulf of Mexico, through Fourchon and Timbalier passes, about 50 miles west of the Delta of the Mississippi. It has a total length of 150 miles and is navigable by steamboats 100 miles from its mouth.

LA GIOCONDA, la g'io-kōn'da, a tragedy in four acts, in prose by Gabriele d'Annunzio and dedicated to "Eleonora Duse delle belle mani." It was first played 15 April 1899 at the theatre Bellini, Palermo, and was not very warmly received. Although the prose form and modern language of the play, the time and the place of the events differentiate it from the old Greek drama, nevertheless, the inexorable fatality which dominates the course of events and against which human defense is in potent renders the play tragic as in the case of the fateful tragedies of antiquity. And yet the fatality is not the predestination of the Greek drama, but a conception of Beauty, whether created by art or nature, as the sovereign power of the world, to which must necessarily be sacrificed goodness, morality, and even life.

itself. The three principal characters are Lucio Settala, a sculptor, his wife, Silvia, and his model and the inspirer of his works of art, Gioconda Diante, a woman of marvelous beauty, with whom he is infatuated. Silvia represents virtue, and Gioconda the supremely beautiful in art. The battle between these two for the soul of the sculptor forms the dramatic struggle of the tragedy. Finally Art triumphs over Virtue, just as a man triumphed over destiny in *La Città Morta*; or, rather, in both cases, the triumph is with Eros, the instigator and director of the motif in d'Annunzio's productions. In *La Gioconda* aesthetic fatality has its fulfillment amid the tears of the good and innocent, upon the ruin of whom the work of immortal art rises. Beauty reigns supreme over the moral virtues trampled in the dust. Despite the lack of action throughout the play, its nonconformity by reason of very long passages to what is supposed to be the conventional dramatic procedure; despite its reversal of generally accepted standards of the conduct of life and the horrible mutilation with which the tragedy ends; despite the supposed influence of German and French writers, the play remains, none the less, as in the case of *La Città Morta*, a thoroughly original production such as only d'Annunzio is capable of producing. *La Gioconda* has been well translated by Arthur Symonds (Chicago 1913).

JAMES GEDDES, JR.

LA GRANDE, là gränd', city, Oregon, and Clatsop County seat; altitude 2,784 feet; on the north Ronde River, 55 miles southeast of Penetion, on the Union Pacific Railroad. It is the center of a fruit, livestock and lumber region, and headquarters for hunting and fishing trips into the Callowa and Blue Mountains. It has railroad shops, creameries, cold storage and meat packing plants, saw and flour mills.

The first settlement was made at this point on the old Oregon Trail in 1861, and was called Brown Town, after Ben Brown who kept a tavern here. The name was changed in 1863 when the settlement obtained a postoffice.

It was incorporated and named county seat in 1864, a title it lost to Union in 1874, and regained 10 years later. Eastern Oregon College of Education is here. Pop. (1940) 7,747; (1950) 9,657.

LA GRANGE, lá gränj', city, Georgia, Troup County seat; altitude 786 feet; 39 miles north of Columbus, near the Alabama state line, and 69 miles southwest of Atlanta; on the Atlanta and West Point, and the Atlantic Coast Line railroads. It is an important trading center, and has textile mills. It manufactures tire-cord fabrics, yarn, overalls, cloth. Sawmilling is also important. It is the seat of La Grange College, the oldest women's college in Georgia.

The city was named after Lafayette's estate in France. It was incorporated in 1828. Pop. (1940) 21,983; (1950) 25,025.

LA GRANGE, residential village, Illinois, in Cook County, altitude 657 feet, on the Chicago, Burlington and Quincy, and the Indiana Harbor Belt railroads; 15 miles west of Chicago. Manu-

factures include transportation equipment and aluminum products.

La Grange was settled in 1830 and incorporated in 1879. It has village government. Cossitt Avenue is named for W. D. Cossitt who became the first village president on incorporation. Pop. (1950) 12,002.

LA GRANGE, city, Texas, Fayette County seat; altitude 272 feet; on the Colorado River, 96 miles west of Houston, and about 55 miles east-southeast of Austin. It is a trading, shipping, and processing center for cotton, dairy, and truck farm products.

La Grange was first settled in 1828 and incorporated as a city in 1854. Men from La Grange fought with Sam Houston at San Jacinto in 1836. The government is by mayor and council. Pop. (1940) 2,531; (1950) 2,738.

LA GRANGE COLLEGE, an educational institution founded for women, at La Grange, Georgia in 1831 as the La Grange Female Academy. In 1843 the state gave it power to confer degrees. Since 1857 it has been controlled by the Methodist Church. In 1948-1949 it admitted male students. The enrollment as of 1951 was 40 men and 138 women.

LA GUAIRA, là gwí'rá, town, Federal District, Venezuela, about seven miles from Caracas, on the Caribbean Sea, was founded in 1588, and is the most important commercial city in the republic. The harbor, improved by a breakwater, has a floating dry dock and shipbuilding plant. La Guaira exports coffee, cocoa and skins, and imports chiefly manufactured goods. Its annual trade amounts to about \$12,000,000. It has cigars, cigarettes, shoes and hat factories, the products of which go entirely into the home market. It has steamship communication with Europe and North America. It is connected with the capital by railway 29 miles long, winding around the bases of the mountains. Pop. (1941) 10,103.

LA GUARDIA, Fiorello H., American public official: b. New York City, Dec. 11, 1882; d. there, Sept. 20, 1947. His family moved to Arizona, where he was educated. When the Spanish-American War broke out he went with his father, a military band master, to Florida and was a correspondent of a St. Louis paper at the age of 15. His father died in Florida and the young La Guardia was taken by his mother to live with her relatives in Budapest, Hungary. There, in 1903, he secured employment in the United States consulate. Later he was acting American consul at Fiume, where he won a reputation as champion of American-bound immigrants. From 1907 to 1910 he was interpreter at Ellis Island, New York Harbor, and studied law in the evening classes at New York University. After his admission to the bar he entered politics under the Republican aegis. In 1914-1917 he was deputy attorney general of New York State. In 1916 he won a seat in Congress by a small plurality. In the House of Representatives he quickly made a record for himself as a member of the Progressive bloc. When World War I came he voted for American entrance and for the draft, tried to enter Plattsburg, but was rejected because he was not tall enough. He learned to fly, enlisted in the air corps and led a squadron of fliers to Italy. He

returned a hero and a major and was returned to Congress. There he fought profiteers and opposed the espionage acts. In 1919 he was elected president of the Board of Aldermen of New York City, the first Republican in 20 years to hold this office. After a stormy term he was re-elected to Congress and remained there for ten years. During his five terms he received the endorsements of Republicans, Socialists and other minor parties. He was an ally of the Norris-Brookhart-La Follette wing; was a bitter foe of prohibition; and helped pass an anti-injunction bill which won him the respect of labor. His first major political defeat was in 1929 when he ran for mayor of New York against James J. Walker. The next time he ran (1933), after Walker had hurriedly quit office under fire, he was successful. Re-elected in 1937 and 1941, he was the first three-term mayor in the history of Greater New York. During his tenure, which ended Dec. 31, 1945, a new city charter was adopted (1938) and the power of Tammany Hall was reduced to a shadow. In March 1946 he succeeded H. H. Lehman as director general of UNRRA, retiring in December. Courageous, honest, an indefatigable worker and able administrator, he won the respect, admiration, and affection of the New York electorate.

LA HABANA, Cuba. See HAVANA, Cuba.

LA HAGUE, là hăg', Cape, (Fr. CAP DE LA HAGUE), a headland of Normandy, France, opposite the island of Alderney, 20 miles northwest of Cherbourg and forming the northwestern extremity of the peninsula of Cotentin, in the English Channel. It is often confounded with Fort La Hogue or La Hougue on the opposite side of Cotentin.

LA HOGUE, là hōg' or LA HOUGUE, là hōōg', roadstead, France, off Point Barfleur on the east coast of Cotentin Peninsula, Department of Manche. It was here that the united English and Dutch fleets, under Admiral Edward Russell, defeated the French under Comte de Tourville, May 19-24, 1692.

LA JONQUIERE, là zhōn'kyār'. Pierre Jacques de Taffanel, French naval officer: b. Lagrassies, near Alby, 1680; d. Quebec, Canada, 1753. He accompanied Duguay-Frouin at the taking of Rio Janeiro (1711), was captain under Admiral de Court (1744) at the Battle of Toulon and commanded the French Fleet at the Battle of Finisterre (1747), with his six vessels fighting against 17 British men of the line. Taken prisoner, he gained his liberty on the Treaty of Aix-la-Chapelle when (1749) he went to Quebec as governor of Canada. He proved an able governor.

LA JUNTA, là hōōn'tū, city, Colorado, and Otero County seat; altitude 4,100 feet; on the Arkansas River and on the Atchison, Topeka and Santa Fe Railroad; 64 miles southeast of Pueblo; with a municipal airport and airline service. It has large railroad shops, and processes the meat and dairy products from neighboring stockraising and dairy-farming lands. The Bent's Fort Museum (erected in commemoration of Old Fort Bent) maintains a Kit Carson collection.

La Junta was settled in 1863, incorporated as a town in 1881, and as a city in 1901. It has mayor and council. Pop. (1950) 7,712.

LA LIBERTAD, town, Salvador, the country's second largest port. Its exports include coffee and sugar. Pop. (1948) 2,219.

LA MALBAIE, là māl-bā', resort village, Quebec, Canada, in East Charlevoix County, at the confluence of the Malbaie and St. Lawrence rivers. It is an important farming and lumber region.

The village site was visited by Samuel de Champlain in 1608, who gave it its name because of poor anchorage. Later it was settled by Scots. Prisoners were confined here during the American Revolutionary War. The vicinity around La Malbaie is geologically interesting. Pop. (1951) 2,466.

LA MARE AU DIABLE, là mār ô dy-âbl (*The Devil's Pool*). The most perfect of the works of George Sand was undoubtedly *La Mare au Diable* (1846). Its perfection is due to the fact that it escapes most of her characteristic defects and possesses her finest qualities in their full maturity. This resulted quite naturally from the choice of a simple plot—the love a lonely ploughman feels for a poor shepherdess just emerging into womanhood, and a setting laid in the heart of Berri, the country where the author had lived as a child, and to which she had now returned. The characters, simple Berrichon peasants, as well as the country, were known to her, therefore, not through an imagination only too easily fired, but through observation and long years of sympathetic interest. There is consequently a refreshing absence of that impassioned pleading which frequently threw her early works out of artistic focus and gave us threats and tears for facts and blood. Intense individualist that she was, her distrust of the perplexities of society had been re-enforced by her own unhappy marriage, and from the first she had, with Rousseau and Wordsworth, favored the primitive, the simple soul, close to nature. Here she found warrant for her faith that both man and nature are good. This had been indicated in many earlier incidental characters, the flower girls in *André* (1833), the country philosopher Patience, in *Mauprat* (1837), and the story of the poacher, Mouny-Robin (1841). But throughout that earlier period her mind had been tense with the social problem. This nervous tension had disappeared with the years, and now among the scenes of her childhood her native genius had its way. There is here a sureness of touch and the sense of being on firmer ground. It is no impossible that in the peasants she also saw the salvation and future of France. Their way of life, their homes, the country roads, the night in the woods about the Devil's Pool, are truly and beautifully described, and the idealized peasant themselves are likewise true, at least in the sense that they are psychologically consistent and conform to a healthy ideal. The style is simple, limpid and musical, like a woodland brook. In spite of the seemingly unpremeditated manner of her narration, the author keeps steadily to her story and in construction it is superior. *François le Champi* or *La Petite Fadette* which followed it. The student of George Sand feels that she had turned with a sense of relief to "these Georgics of France," as Ste. Beuve aptly called them, and there was something undoubted fresh and reassuring to readers stirred by the revolutionary spirit of '48 in this new and honest

ul portrayal of a realm that promised humanity health, stability and strength.

CHRISTIAN GAUSS.

LA MARMORA, là măr'mô-rä, MARCHESE or (ALFONSO FERRERO), Italian general and statesman: b. Turin, Nov. 18, 1804; d. Florence, Jan. 5, 1878. He was educated at the Sardinian Military Academy, was advanced (1823) to lieutenant of artillery and (1831) captain. He distinguished himself in the war (1848) against Austria at the siege of Peschiera and was advanced to the rank of brigadier general. In 1849 he suppressed the rebellion in Genoa and took the portfolio of minister of war to thoroughly reorganize a disrupted army. In 1855 he commanded the Sardinian expeditionary forces to the Crimea. From 1856 to 1859 he was minister of war and marine and became chief of the general staff on the outbreak of war with Austria. After the treaty of peace of Villa-Franca he again became minister of war and marine (1860). Late in 1861 he became first prefect at Naples and showed energetic action against the movements of Garibaldi and of the Camorra. He headed (1864) the cabinet, after the Turin troubles, as minister of foreign affairs and carried out the September convention with France. In 1866 he concluded a trade treaty with Germany and an alliance with Prussia, and when the war broke out he joined the king and army as chief of general staff. The unsuccessful plan of campaign was his and he fell into great disfavor after the unfortunate Battle of Custozza, resigning his portfolio.

He wrote much in defense of his military plans and after the death of his former adjutant friend, Govone, he published the dispatches to the Berlin (1866) mission in *Un pô-più di luce* (Florence 1873) to prove faithlessness and seditious intent of the Bismarck policy. The denunciations of Bismarck and Prussia stopped him from issuing the second volume of the work, but he issued *I segreti di stato nel governo costituzionale* (ib. 1877) in self-defense. In 1891 a statue on horseback was erected in his memory in Turin.

LA MARQUE, lü märk', or **LAMARQUE**, residential community, Texas, five and one half miles southwest of Texas City, 40 miles southeast of Houston, and 18 miles west of Galveston. It is served by the Galveston, Houston and Henderson Railroad which runs through the center of the town. The Southern Pacific and Texas City railroads cross at the southeast corner of the city. It is a truck farming center. The Southwestern oil field penetrates La Marque and constant drilling operations exist.

The community was settled during the 1860's and received the name La Marque in 1890. Pop. (1950) 7,359.

LA MESA, là mä'sä, residential city, Colima, in Cundinamarca Department, on a high plain about 27 miles from Bogotá. Because of its high elevation above sea level (4,330 feet), the climate is delightful. The surrounding country is a fertile agricultural region. Trade is carried on in coffee, honey, salt, tobacco, fruit and livestock. Pop. (1938) 3,444.

LA METTRIE, là mē-trē', Julien Offroy de La Mettrie, French physician and materialist: b. St. Malo,

Dec. 25, 1709; d. Berlin, Nov. 11, 1751. He studied theology in the Jansenist schools, then decided upon the pursuit of medicine and in 1733 went to Leiden to study under Boerhaave. In 1742 he was appointed surgeon to the guards in Paris. His medical observations led him to believe that physical phenomena were purely physical in their origin. His *Histoire Naturelle de l'Âme* (1745) voiced this conviction and raised so strong a feeling against him that he fled to Leiden. There he elaborated his theories, presenting them forcibly in *L'Homme Machine* (1748). He further expressed his beliefs in *Discours sur le bonheur* and *L'Art de jouir*. He maintained that happiness for the world could be found only in atheism, thereby ending theological strife and the ban on pleasures of the senses. He was forced to leave Leiden in 1748 and found a refuge at the court of Frederick the Great, who appointed him court reader. Among other writings are *Observations de Médecine pratique* (1743); and *Reflexions sur l'origine des animaux* (1750).

LA MORRA, là mōr'rá, an ancient Roman game still played in Italy; the Romans designated the game *micare digitis*, "to flash with the fingers." The game requires two players and consists of the simultaneous throwing out of the right hands of the players and the calling of a number which, in order to score, must total the number of fingers extended upon the right hands of both players. A tie means no score, a correct guess one point; and the game is played for 5 or 10 points. It is commonly used as a gambling game.

Consult Story, W. W., *Rota ali Roma*, 8th ed. (Boston 1887).

LA MOTTE-FOUQUE, là mōt'fōō-kä', BARON Friedrich Heinrich Karl. See FOUQUE, FRIEDRICH HEINRICH KARL.

LA NAVIDAD, là nā-vē-dād'. See NAVIDAD, LA.

LA NOUE, là nōō', François de, French Huguenot captain: b. near Nantes, 1531; d. Moncontour, Aug. 4, 1591. He came of an ancient Breton family and saw his first military service in Italy. He was in the first Huguenot War and in the second one distinguished himself by capturing Orleans in 1567 with only 15 followers. He commanded the rear guard at the Battle of Jarmac in March 1569 and was taken prisoner at Moncontour in October of that year. However, he was soon exchanged, resumed the governorship of Poitou and defeated the Royalist army at Rochefort. He lost his left arm at the Battle of Fontenay in 1570, but an iron one was made for him, thus giving him the name "Bras de fer." With the dawn of peace in France he joined the Dutch Protestants in 1571, but was captured and sent as a prisoner to France. He was requested by Charles IX, after the massacre of St. Bartholomew, to attempt the reconciliation of the Huguenots with the king, but finding the task impossible and war inevitable he gave up his royal commission and served as general of La Rochelle from 1574-1578.

With the conclusion of peace, La Noue served the Huguenot cause in Holland, but in 1580 he was taken prisoner by the Spaniards; they, holding him dangerous through the

splendid character he bore, confined him for five years in prison. While in prison he wrote 'Discours politiques et militaires,' a work of great value, which has been translated into English and German. He was exchanged in 1585 and bound not to take arms against his captors. In 1589 he joined Henry of Navarre, saw service through the siege of Paris, at Argues, Ivry and other battles, and was fatally wounded at the siege of Lamballe in Brittany. He wrote 'Déclaration pour prise d'armes et la défense de Sedan et Jamets' (1588); 'Observations sur l'histoire de Guicciardini' (2 vols., 1592), etc. His 'Correspondence' was published in 1854.

LA NOUVELLE HELOISE, la noo'vél à-lô'è'z ('The New Heloisa'). In 'Julie' or 'The New Heloisa' (1761) Rousseau gave play to his temperament and talent. Here his genius abounded, for it was not a work based on erudition or on the bitter facts of life against which his ardent disposition so frequently rebelled. It was a creation of pure fiction, of unhampered imagination, touching life only on the sides to which he was most attracted, and it left him the largest possible freedom of procedure. Writing, furthermore, in the epistolary style so common in 18th century French and English novels, he took full advantage of the discursive manner of his time. No little of the interest of the novel, therefore, lies outside of the plot proper, in eloquent passages on the right to love, the morality of duelling and suicide, the equality of men, the advantages of country as against city life, and above all on the beauties of lake and mountain scenery in Switzerland. Some 30 years before, Thomson had published his 'Seasons,' and more than 20 had passed since Haller had written his stilted but historically important descriptive poem 'The Alps.' Switzerland, however, had not yet become a place of pilgrimage for tourists. The success of the 'New Heloisa' was to bring them to the shores of Lake Geneva in increasing numbers, and not a few came to visit the scenes described in the famous novel and to wander about in them book in hand.

It would, however, be a serious mistake to overlook the extraordinary interest which the passionate love story itself aroused in Rousseau's contemporaries. The editions could not be printed rapidly enough, and persons of quality stood in line before circulating libraries for an opportunity to rent it at 10 sous an hour.

Rousseau's heroine was to him the model and type of the virtuous woman of sentiment. She had, to be sure, yielded to her plebeian lover and tutor, Saint Preux. Her later marriage she explains as due to motives of duty, devotion and friendship. That after Saint Preux's long absence he should have been invited to live at the house of his former mistress and her husband, and should have accepted, may well appear to have produced an unnecessarily strained situation, fraught with dangers for the virtuous but once passionate lovers. The tension is therefore relieved when Julie loses her life in attempting to save her child from drowning.

To attribute the genesis of Rousseau's famous story to his own attachment for Mme. d'Houdetot is no longer possible; for it seems

well established that the novel had been planned before that episode. That he was indebted to Richardson and England is beyond question. For all this, however, most of his novel received its character and quality from the fact that it was prompted and colored by his own eager and vivid hopes, desires and aspirations. It is the expression of Rousseau's ideal of social and domestic life.

CHRISTIAN GAUSS.

LA PAZ, la päs (Sp. lä päth), department in the northwest of Bolivia, bounded on the north by Brazil, on the east and south by the departments of Beni, Cochabamba and Oruro, and on the west by Peru. Its area has never been accurately determined; according to a recent conservative estimate it is 40,686 square miles. Extensive tracts in the northern portion are still unexplored, and the boundary disputes with Brazil and Peru add a large element of uncertainty. Calculations based upon the extreme Bolivian claims give the fabulous area of 275,413 square miles. The department is divided into nine provinces and these are subdivided into cantons. The entire department is subject to a prefect, representing the national government. Some of the highest peaks of the Bolivian Andes rise above the great Titicaca Basin (itself 13,000 feet above sea-level) in the southern half of this department, which portion has a temperate and moderately salubrious climate (see LA PAZ, the capital, etc.). Chief products are copper, silver, tin, gold, coca, wheat, maize, barley, potatoes; in the torrid lowlands of the north, sugar-cane, rice, tobacco and coffee; and from the forests along the tributaries to the Amazon are obtained rubber and cinchona. Cattle and sheep are bred in large numbers on the upland pastures. The population, according to an official estimate, is 813,860.

LA PAZ, Bolivia, capital of the department of the same name, and, temporarily, of the republic (see SUCRE). It is the metropolis and commercial centre of Bolivia, situated in the Quebrada del Choqueyapu, 650 feet lower than Lake Titicaca (from which the distance by road is about 45 miles) and yet quite 12,120 feet above the level of the sea. The mean annual temperature is about 54° F., and the extremes of temperature 19° F. to 75° F. The clearness of the sky occasions rapid loss of heat by radiation; the nights are therefore much colder than the days. Though the thermometer often falls below freezing-point, plants are rarely frozen for the reason that the air at this great height is very dry. It is substantially built on 40 hills, bridged by 20 bridges, with clean, well-paved streets. The Plaza Murillo, a fashionable promenade bordered with beautiful flowers and the fine tree-bordered Alameda, are the best of its thoroughfares. The cathedral is distinguished by the fine carved stone work of its façades. There are some noteworthy public institutions—a museum, library, university with four faculties, professional schools of various kinds and courts. Railways connect with Antofagasta and the port of Arica. The city was founded in 1549 by Alonzo de Mendoza. Pop. 200,000.

LA PAZ, Mexico, port on the east shore and capital of the southern district of Baja California. It is pleasantly situated bet

the coast range and the bay, and has commercial dealings principally with San Francisco, Mazatlan, Guaymas, San Blas and Manzanillo. Silver mining and agriculture are among principal industries, and the most valuable pearl fishery on the Pacific coast is here located. Pop. 5,536.

LA PELTRIE, la pèl'tre, Marie Madeline le, née CHAUVIGNY, French-Canadian educator: b. Alençon, 1603; d. Quebec, 1671. She was of a religious turn of mind, but was refused permission to enter a convent, was married at 17 and widowed at 22. She answered Father La Jeunes' appeal for help in the education of Indian girls in the Jesuit schools in Canada, and decided to employ her fortune in founding an institution for the work. In 1639 she went to Canada, accompanied by three nuns and several hospital sisters, and founded the Ursuline Convent at Quebec, the first school in Canada for the instruction of girls, teaching both whites and Indians. She was with the Montreal colony in 1642-46, when she returned to Quebec and became a nun, devoting her entire means to the convent.

LA PÉROUSE, la pâ'rooz', Jean Francois de Galaup de, French navigator: b. near Albi, Languedoc, France, 22 Aug. 1741; d. after 1788. He served in the French navy against England (1778-83), and was in command of the frigate *Astrée* in the attack on a British convoy off the coast of Nova Scotia in July 1781. He sailed in August 1785 with two ships on an exploring expedition to the Pacific, one of the objects of which was to discover the northwest passage from the Pacific side. By sailing through La Perouse Strait, between Saghalien and Yezo, he discovered that each of these was a separate island. He touched at points in China and Japan and visited the Solomon Islands and Australia. In February 1788 he sailed from Botany Bay, and after this no more was heard from him. In 1826 it was fully ascertained by the English Captain Dillon that both of the French ships had been wrecked in a storm on a coral reef off Vanikoro, an island lying north of the New Hebrides, and in 1898 a few relics of his party were found there. An account of the early portions of La Perouse's voyage, prepared from journals sent home by him, was published under the title of 'Journey Round the World.'

LA PEYROUSE, Philippe Picot de, French naturalist: b. near Toulouse, 1744; d. 1818. He was advocate-general in the parliament of his native town in 1768-71; thereafter until 1789 engaging in natural history researches. He was then named president of the administration of Toulouse, became inspector of mines and professor of natural science at Toulouse, and in 1800 he was mayor. He became perpetual secretary of the Toulouse Academy of Sciences in 1811, and during the period of the Hundred Days he served as president of the electoral college of Haute-Garonne. He wrote 'Description de plusieurs espèces nouvelles d'orthocératites et d'ostracites' (1781); 'Traité des mines et forges à fer du comté de Foix' (1786); 'Flore des Pyrénées' (1795-1801); 'De quelques espèces d'orobes des Pyrénées' (1818), etc. Consult Decampe, *loge de M. Le Baron de La Peyrouse* (1819).

LA PIEDAD, la pè-ä-däd', Mexico, city in the state of Michoacan, near the northern boundary, on the Lerma River, 62 miles southwest of Guanajuato. It is the centre of a large agricultural district. A fine bridge crosses the Lerma at this point. Pop. 10,604.

LA PLACE, la'plas', or **PLACEUS**, Josué de, French Protestant clergyman: b. Brittany about 1606; d. 17 Aug. 1665. He was educated at Saumur, became pastor of the Reformed church at Nantes in 1625 and professor of theology at Saumur in 1632. He wrote. 'These theologicæ de statu hominis lapsi ante gratiam' (1640), in which he set forth liberal views on the subject of original sin. His views were rejected at the *Formula consensus* of 1765. He also wrote 'Disputationes academicæ' (3 vols., 1649-51), and 'De imputatione primi peccati Adami' (1655). His collected works were published (1699, 1702).

LA PLACE, Pierre Simon de. See **LA-PLACE**.

LA PLATA, la pla'tä, Argentine Republic, capital of the province of Buenos Aires. After the Congress of the republic declared Buenos Aires to be the capital, the legislature of the province of Buenos Aires decided to build a new city, which should be the provincial capital. The cornerstone of La Plata was laid on 19 Nov. 1882, in a barren waste a few miles from the village of Ensenada and about 24 miles below Buenos Aires, on the south shore of the Rio de la Plata. The port of La Plata, built in Ensenada, five miles distant, is in communication with the city by means of a railroad and a canal, which is navigable by seagoing vessels. The city is laid out on the same plan as Washington, D.C., with diagonal avenues 97½ feet wide, streets 58½ feet wide, and 23 public squares. The principal buildings are the government house, the capitol, and the various public departments have been erected on a magnificent scale. To the National University there is attached an astronomical observatory, and it possesses one of the finest museums in South America, especially rich in the departments of palæontology and anthropology. There is an excellent water supply. There are several handsome churches, three theatres, a race-course, a splendid park planted with eucalyptus trees and street railway service. Railways connect this port with nearly every province of the republic, and there is steamer connection with Liverpool. Pop. 193,364.

LA PLATA, Rio de. See **PLATA**, RIO DE LA.

LAPORTE, Roland (1675-1704), known also as «Rowland», leader of the Camisards, Protestant peasantry of the mountainous Cevennes region of southern France. Roland organized and carried on military resistance, beginning in 1702, against persecution resulting in consequence of the revocation of the Edict of Nantes in 1685. The latter decree had granted Protestants some legal protection and certain civil rights in France, and it had been bitterly opposed by the Catholic Church. Its revocation outlawed Protestants again, and was the signal for renewed persecution of them.

Roland, a nephew of the Camisard leader Laporte who was hunted down and shot in 1702, took up the fight, recruiting over a thousand guerrilla fighters whom he organized into a dis-

ciplined force having arsenals and hospitals and enjoying almost solid support from the countryside. The beginning of hostilities was marked by the assassination, in 1702, at Pont-de-Monvert, of the Abbé du Chayla, veteran Catholic missionary from Siam (Thailand), who on being appointed inspector of missions in the Cévennes, had begun subjecting heretics to the squeezers, an instrument of torture resembling the Scottish boot. Popular resistance became fanatical, and Roland, as one of its leaders, soon became celebrated for the daring action and rapid movement of his forces. He joined forces with Jean Cavalier (q.v.), the only Camisard leader to excel him in fame and exploits, and together they waged one of the fiercest partisan wars in French history. In 1702 the two leaders gained entrance to the town of Sauve by a ruse, burned the church, and carried away provisions and ammunition.

For the next two years Roland harassed enemies of the Huguenots throughout the countryside, burning houses and churches, and slaying suspected informers and hostile persons, but taking no pillage for himself. Roland and his forces had just cut to pieces a Catholic regiment sent against them when word came that Cavalier was negotiating with the duc de Villars (q.v.), one of the greatest generals in French history. Negotiations between the latter and Roland, however, came to nothing, and Roland resumed resistance, only to be betrayed in 1704 and shot while defending himself against his captors.

LA PORTE, là pòrt', city, Indiana, seat of La Porte County, is located in the center of a fertile farming area on the edge of the rich industrial Calumet region 59 miles east of Chicago at an altitude of 812 feet. It is served by the New York Central (main line), Nickel Plate, and Pere Marquette railroads as well as by numerous truck lines. Due to its location and excellent transportation facilities, La Porte is one of the leading industrial cities of the Middle West. Products of its factories include road and farm machinery, rubber goods, shoes, gas and oil heaters, brass and aluminum castings, conveyor belts, lumber and mill work, furniture, automobile equipment, canned goods, and woolen cloth.

La Porte (French for the *portal* or *door*) was founded in 1830, and was given its name by the early French settlers, for through it passed all trade between central and southern Indiana and the lake regions of Indiana, Illinois, and Michigan. It was incorporated in 1832 and chartered as a city in 1852. It is governed by a mayor and city council elected every four years. Pop. (1940) 16,180; (1951) 20,414.

LA PORTE, city, Texas, industrial community and resort area, is located on Galveston Bay 21 miles east-southeast of Houston. Settled in 1889 and incorporated in 1892, it is served by the Texas and New Orleans Railroad. La Porte is within a few miles of the San Jacinto Battleground. Pop. (1950) 4,429.

LA RABIDA, là rà'bē-dà, Spanish Franciscan convent of Santa María de Rábida on a hill near Palos in Huelva Province, Andalusia. Its historical interest identifies it with Christopher Columbus, who stopped there on the occasion of his projected visit to France to arouse interest in his theories. He succeeded in gaining the at-

tention of the prior, who besought and gained for him the interest of Queen Isabella. In 1492 a huge monument to Columbus was erected here. A copy of the convent was built in Chicago for the World's Fair of 1893 and was later used as a sanitarium for children.

LA REY, Jacobus Hercules De. See D. LA REY.

LA RIVE, là rêv', Auguste Arthur de, Swiss physicist: b. Geneva, Oct. 9, 1801; d. Marseilles, France, Nov. 27, 1873. He received the appointment to the chair of natural philosophy in the Academy at Geneva at the age of 21. First devoting himself to the study of the specific heat of gases, and of the observation of the temperature of the earth's crust, he soon turned his complete attention to electricity, making original discoveries in connection with magnetism, electrodynamics, the relation between magnetism and electricity, and the properties of the voltaic arc, and presenting new theories of the aurora borealis. He discovered a process of electroplating, for which he received a prize of 3,000 francs from the French Academy of Sciences. His chief work was a complete treatise on electricity.

LA ROCHEFOUCAULD, là rôsh-fôo-kô, Duc François de (PRINCE DE MARCILLAC) French courtier and moralist: b. Paris, Sept. 1, 1613; d. there, March 17, 1680. He entered on a military career and was engaged as an officer at the age of 16. In the wars and intrigues of the Fronde (q.v.) he served the party of the Parliament, took part in the defense of Bordeaux (1650), less from conviction than to please the duc de Longueville, and he was wounded at the Battle of Faubourg Saint Antoine (1652). At the end of the civil war he abandoned the pursuits of ambition for a life of repose and reflection. He frequented the salon of Madame de Sablé, and his house became a resort of the most distinguished wits and people of culture of the time, notably the duchess de Longueville, the marquise de Sévigné, and the comtesse de La Fayette (qq.v.).

The first fruits of his literary activity were his *Mémoires sur la Régence d'Anne d'Autriche*, a spirited representation of that time, published surreptitiously in 1662 without the author's knowledge, and by him repudiated; but his denial of the authorship was not generally credited. It is now believed that only about a third of the work is his. In 1665 appeared anonymously the work that has made his name immortal, *Réflexions, ou Sentences et Maximes Morales*, which passed through five editions in the course of the author's life, was subjected to careful revision by him and has frequently been republished. There are about 700 maxims, varying from two or three lines to half a page in length. No one prior to his day or since has given so much point, brevity replete with fullness, and cutting edge to his thoughts. The prevailing thought in the book is that self-love is the dominating spring of human action; virtue has its recompense, but in being virtuous it is only our desire to gain the recompense. This view is presented with such piquancy and variety of aspect that the reader is so much enamored of the author's skill in presenting his point of view that he forgets to condemn this libeler of the

man race. An English version by G. H. Howell appeared in 1903. Consult 'Lettres,' correspondence published 1818; Bourdeau, 'La Rochefoucauld' (1895); Hemon, 'La Rochefoucauld' (1896); Rahlstedt, 'Studien über La Rochefoucauld' (1888). See MAXIMS.

LA ROCHEFOUCAULD-LIANCOURT, lā'koo', François Alexandre Frédéric, French philanthropist and social reformer: b. La Roche Guyon, 11 Jan. 1747; d. Paris, 27 March 1827. He early entered the carbiniers as an officer, and after a visit to England he established a model farm and a school for the children of soldiers. The school from 1788 received royal support as the École des Enfants de la Patrie. He was elected to the States-general in 1789 and there carried forward his measures for social reform. While devoted to the person of Louis XVI he was by principle opposed to the government and endeavored to warn the king of the dangerous trend of public affairs. On 18 July, four days after the fall of the Bastille, he became president of the National Assembly, and afterward he was appointed to the command of a military division in Normandy. He hoped to secure the personal safety of the king and sought to have him take refuge in Rouen. Failing in this he aided the king with a large sum of money. During the Terror he found safety in England, and in 1795-97 he visited America. He returned to Paris in 1799 but took no part in politics, devoting himself to his projects of social betterment, and especially to the furtherance of vaccination. After the Restoration he entered the House of Peers. His school, the École des Enfants de la Patrie, received the favor and support of the successive governments and for 23 years he was government inspector of it. He founded the first savings bank in France and served as a member of boards of administration for hospitals, prisons and agriculture. He refused to support the government in 1823, which led to the loss of his positions and the abolition of his vaccination committee, the welfare of which he had greatly at heart. In protest the academies of science and medicine elected him to their membership. He never regained official favor. Author of 'Voyage dans les États—Unis d'Amérique' (8 vols., 1798); 'Les Prisons de Philadelphie' (1796).

LA ROCHEJACQUELEIN, lā rōsh-zhāk-lān, Henri Du Verger, COMTE DE, French Vendean royalist: b. Chatillon, 20 Aug. 1772; d. Nouaille, 4 March 1794. On the outbreak of the Revolution he retired to La Vendée, and the peasants of La Vendée having taken up arms in the royal cause, he placed himself at their head and addressed them in the short and pithy harangue: "Let us go to meet the enemy; if I draw back, kill me; if I advance, follow me; if I die, avenge me." After gaining 16 victories in 10 months he fell at Nouaille, shot by a Republican soldier whom he was offering quarter.

LA ROCHELLE. See ROCHELLE, LA.

LA RONCIÈRE LE NOURY, lā rōn'-syār lē noo'rē', Camille Adalbert Marie Clément, BARON DE, French vice-admiral: b. Turin, 1813; d. Paris, 1881. He was admitted to the École Navale in 1829, received rank as ensign in 1834, captain in 1855, rear-admiral in 1861, and vice-admiral in 1868. He was in charge

of the evacuation of Mexico in 1867; and at the outbreak of the Franco-Prussian War he was placed in command of the marines in the forts of Paris. He was at Saint Denis as commander-in-chief and participated in the battles before Paris, receiving the Grand Cross of the Legion of Honor in acknowledgment of his services. He was elected to the National Assembly in 1871 and to the Senate in 1876. He was an ardent supporter of the Bonapartes. Author of 'Considérations sur les marines à voiles et à vapeur de France et d'Angleterre' (1844); 'La marine au siège de Paris' (1872).

LA ROTHIERE, lā rō'tyār' France, village in the department of Aube, seven miles southwest of Brienne and 23 miles east of Troyes. It has historical prominence as the scene of a battle between the Allies under Blücher with 100,000 men and the French under Napoleon with 45,000 men, 1 Feb. 1814. Napoleon was defeated. The combined losses of the armies was 8,000 men, about evenly divided.

LA SALE, lā' sal', Antoine de, French writer: b. in Provence, probably at Arles, about 1388; d. 1462. He entered the court of Anjou in 1402, doubtless as a page, and spent his life in the employment of various kings and princes. He is reckoned the most important satirist of his day but there is considerable doubt as to his authorship of several works ascribed to him, as he never acknowledged them. There is no doubt that 'Le petit Jehan de Saintré' (1459) is from his pen, and it is the work upon which his fame rests. It is dedicated to Jean d'Anjou, Duke de Calabre, one of the several princes he tutored; and 'La Salade' (1438-47), a textbook of studies suited to a prince, was likewise dedicated to his pupil. He is credited with the authorship of 'Les Quinze Joyes de Mariage,' one of the most celebrated of French satires and his claim is fairly well substantiated. The 'Cent nouvelles nouvelles' were long ascribed to Louis XI, but critics in general now credit the work to La Sale. The stories are modeled on the style of the Italian *novella* and are of a licentious character. There are numerous other works credited to him by various critics. 'La Salade' was printed several times in the 16th century, while the 19th century saw editions of his other works. The best editions are Guichard, J. M., 'Petit Jehan de Saintré' (1843); Wright, T., 'Les Cent Nouvelles Nouvelles' (1858); and Jannet, P., 'Les Quinze Joyes de Mariage' (1857).

LA SALETTE, lā sa'lēt, France, place of pilgrimage in the parish of La Salette-Fallavaux, department of Isère, 23 miles southeast of Grenoble. On 19 Sept. 1846, in an afternoon of full sunlight, the Virgin Mary is said to have appeared before two peasant children, Mélanie Calvat, called Mathieu, aged 15, and Maximin Giraud, aged 11. While the story was openly discredited outside the Church, and violently disputed within it, a great church was built there, the foundation for which was laid 25 May 1852. Miraculous cures are said to be wrought there and the church as a place of pilgrimage is second in fame only to the Lourdes. Consult Verdunoy, 'La Salette, étude critique' (Paris 1906).

LA SALLE, Jean Baptiste de, SAINT, French priest and educator, called the father of modern pedagogy: b. Rheims. 30 April 1651;

d. Saint-Yon, 7 April 1719. After completing the preparatory course of humanities, he entered the university of his native city where, at the age of 19, he took his master's degree. Shortly afterward he went to the Seminary of Saint Sulpice at Paris; and, while living there, followed the theological courses of the Sorbonne. On Easter eve 1678, he was ordained priest, being already a titular canon at the Cathedral Church of Rheims; two years later, in 1681, after defending a thesis before the faculty of the University of Rheims he obtained the degree of doctor in sacred theology.

A man of means and academic culture, he was also a friend of the people, a true philanthropist, giving away all his patrimony in alms to help the deserving poor. He interested himself at an early period in education, especially the education of children belonging to the humbler classes. He noticed that nowhere was there a clear distinction drawn between primary and secondary education and that nowhere was there any provision made for instructing school-children in subjects of acknowledged utility to them in after life. To correct this state of affairs he founded in 1681 a society of teachers under the name of Brothers of the Christian Schools (q.v.), enjoining them by rule to take the vows of religion but not to enter holy orders. By this latter regulation, he sought to free them from ecclesiastical duties so that they might be able to devote themselves unreservedly to the work of education. The rules and constitutions of the society were approved in 1724 by Pope Benedict XIII.

The first great change introduced by De la Salle and successfully carried out by his followers was the substitution of French for Latin as the language of the classroom. As in the case of antecedent reforms, this roused a swarm of wrathful critics; but it soon met with the approval of the universities and highest authorities in church and state.

The individual system of teaching was then in vogue, and as it seemed to him to involve loss of time and to favor idleness, he replaced it by the "simultaneous" method in which the teacher addresses himself to a numerous division and frequently to a whole class at a time. He insisted on the Socratic method of teaching for all subjects, rejecting the lecturing style as unsuited to elementary instruction. He also recommended the frequent use of object-lessons. Such thorough-going changes gave a great impetus to education inasmuch as it increased the efficiency of the teacher while diminishing his drudgery, and ensuring substantial results. In due time, these bold innovations in educational method brought about a general system of popular education in France as well as in other European countries, and merited for their author the title of Father of Modern Pedagogy. In 1684 he opened a *Seminaire de Maîtres d'Ecole* for the formation of competent masters for the rural districts, which seminary was the first normal school or training college founded in Europe. Admission was by examination; and during the course, opportunities were afforded for practice-work by the free schools attached to the institution. In his endeavors to instruct the masses and educate the people, De la Salle established in Paris in 1699 regular public courses in science and art in which instruction was given to all comers on Sunday

from 12 to 3, the session being always concluded by a short religious instruction. These schools were called *Ecoles Dominicales* and were, in some respects, the prototype of our Sunday schools. At Saint-Yon, near Rouen, he also founded a school of higher studies in which the students were allowed to select the courses best adapted to their wants. De la Salle lived to see his society firmly established in France and his educational work appreciated at home and abroad. Among his published writings are 'Le Devoir du Chrétien' and 'La Conduite des Ecoles'; others are of an ascetical character and refer to the religious life.

This great educator and benefactor of the people was of a gentle yet firm disposition; severe to himself but kind and encouraging to others. The holiness of his life was proclaimed to the world by Pope Leo XIII, who on 24 May 1900 conferred on him the honors of canonization and enrolled him among the saints of the Catholic Church.

LA SALLE, René Robert Cavalier
SIEUR DE, French explorer; b. Rouen, France, 21 Nov. 1643; d. Texas, 19 March 1687. Born of a wealthy family, he became a novice of the Jesuit order, 5 Oct. 1658, and two years later took the vows and was known as Brother Robert Ignace. In October 1667 he left the order. He sailed for Canada in 1668 with the hope of making his fortune there; became owner of a seigniory and a fur trader at La Chine (so named for its supposed position on the route to China), explored Lake Ontario, established forts on the Saint Lawrence, was made by Frontenac commander of a fort which stood where Kingston, Ontario, now stands, and was the discoverer of the Niagara and Ohio rivers. Returning to France he received large grants of land in Canada, and was ennobled, but on the discovery by Marquette of the Mississippi, he left his new estate to seek the mouth of the great stream. His designs were favored by the French Minister of Marine, who supplied him with men and ships. In 1679 he had built and launched on the Niagara River a bark of 45 tons, the *Griffin*, crossed Lake Erie and Lake Saint Clair, and reached Green Bay. Here he loaded the *Griffin* with rich furs and sent it to meet the claims of his creditors at Montreal. He then proceeded in bark canoes and reached the banks of Lake Peoria, Illinois, where he built Fort Crèvecoeur, and from thence he made a memorable journey, mostly on foot, back to Fort Frontenac, where he learned of the wreck of the *Griffin*, and another ship sent with supplies for him from France. In the meantime his little band of explorers had been scattered through dissensions, but he succeeded in gathering them and, late in 1681 he set out with an expedition and descended to the mouth of the Mississippi, of which he took formal possession in name of the French king (9 April 1682), and named the adjacent lands Louisiana, and built a fort. This was the great achievement of his life. In 1683 he constructed Fort Saint Louis, on "Starved Rock," near Utica, Ill. The recall of Frontenac was disastrous to the explorer's interest; his successor, La Barre, was hostile to western expansion. After a visit to France he failed on his return (1684) with 4 vessels and 280 men, to locate the mouth of the Missis-

ppi. He had a difference on this point with eaujeu, the naval commander, who persisted in sailing on to Matagorda Bay in Texas. Here a Salle, to avoid further quarrels and recriminations, abandoned his companions; the colonists who followed him lost most of their supplies in a gale of wind, but managed to fortify the fort of St. Louis; they failed in their agricultural attempts, and sought in vain for gold. Their numbers were reduced to 35, and in 1687 he set out for a return to Canada. Two men, Dubant and l'Archevêque, who had embarked capital in the enterprise, were incensed at its failure, and in a quarrel murdered the nephew of La Salle, who, when he enquired into the matter, was shot dead from ambush.

LA SALLE, là sal', city, Illinois, in La Salle County, altitude 638 feet, on the Illinois River and the Great Lakes, 90 miles southwest of Chicago. It is served by the Illinois Central, Rock Island, Burlington and La Salle, and Bureau County railroads.

With Peru west and Oglesby south, La Salle forms a tri-city unit. The La Salle-Peru-Oglesby Junior College has school buildings in La Salle and a stadium in Peru.

The city is in a former coal mining region with rich deposits of limestone, silica, sand and fire clay. The principal industry is clocks and watches, cement, and zinc. Other items of manufacture are: acids, air-conditioning equipment, animal feed, beer, beverages, brick chemicals, coal furnaces, electric capacitors and condensers, electric armatures, and motors, electric controls, furniture, grinders, glaziers' points, millwork, nails, plating, potassium permanganate, prefabricated metals, replacement radiators, shoes and wire recorders.

The town was founded about 1827 when the Illinois and Michigan Canal was planned, and was named in honor of the explorer, La Salle. Nearby is the site of Fort Wilbourne of Black Hawk fame, where on June 16, 1832, Abraham Lincoln enlisted in the company commanded by Jacob N. Early. The city was chartered in 1852. Pop. (1950) 12,083.

LA SALLE COLLEGE, an educational institution in Philadelphia, Pennsylvania, founded in 1863 under the auspices of the Roman Catholic Church. It is under the management of the Brothers of the Christian Schools. In 1950-1951 there were 75 instructors, 1,375 students and more than 15,000 volumes in the library, and the grounds and buildings were valued at \$1,982,000.

LA SELLE, là sél', mountain group, Haiti, West Indies, on Hispaniola Island. The highest peak is La Selle, 8,793 feet.

LA SERENA, là sà-rā'nā, city, Chile, capital of the Province of Coquimbo on the Pacific coast, 215 miles north of Valparaíso. A railroad connects it with Coquimbo, eight miles distant. Other railroads connect it with Vicuña and Riva-

davia in the interior, and with Valparaíso and Santiago to the south.

La Serena is a commercial and agricultural center trading in dried fruit, barley, flowers, and livestock. Exports are mineral ores (copper, silver, gold, manganese). Industries include tanning, brewing, soap-making, and olive-oil processing. Founded in 1544, La Serena was declared a city in 1554. Pop. (1949 est.) 23,130.

LA SERNA Y HINOJOSA, là sēr'nā è è-nô-hô'sā, José de, Spanish general and viceroy: b. Jérez de la Frontera, 1770; d. Cadiz, 1832. He served in the Peninsula War and was with Wellington in 1813, and in 1815 received rank as field-marshal. In 1816 he commanded the Royalist Army in Upper Peru. Acting against his own judgment, but in accordance with that of the viceroy, Pezuela, he was defeated by the patriots at Salta and Jujuy and resigned in 1819. The threatened invasion of San Martín induced him to accept the post of commander in chief of the forces against the patriot chief, and on Jan. 29, 1821, he succeeded his old antagonist, Pezuela, as viceroy. He was compelled to evacuate Lima, July 6, 1821, but set up his capital at Cuzco, and although cut off from Spain for three and a half years defended the interior successfully until the Battle of Syacucho, Dec. 9, 1824, when he was defeated and with his army captured by Sucre. He returned to Spain in 1825, was created Count of the Sudes, and was otherwise honored.

LA SEYNE-SUR-MER, là sâ'n'sür-mâr', seaport commune, France, in Var Department, on Mediterranean Sea, 4 miles southwest of Toulon. It has large shipbuilding works and sawmills. Pop. (1946) 27,073.

LA SIZERANNE, là sêz-rân', Maurice de, French philanthropist: b. Tain, Department of Drome, 1857; d. there, 1924. He was blind from the age of nine, was educated at the Jeunes Aveugles in Paris and later was appointed professor there. He especially occupied himself in connection with literature for the blind, perfecting an abbreviated orthography for the blind widely adopted in France.

He was the founder of the *Revue Braille*, and was a chevalier of the Legion of Honor. He was author of *Les Aveugles par un aveugle* (1888); *Les Aveugles utiles* (1896); *Les Soeurs aveugles* (1901); and *La Question des aveugles* (1911).

LA SIZERANNE, Robert de, French writer and art critic, brother of Maurice de La Sizeranne (q.v.): b. Tain, in the Department of Drôme, 1866. He was educated at the College de Vaugirard, Paris, was admitted to the bar in 1895, but turned to the study of art for a career. He received the Vitet Prize from the French Academy in 1909.

He was a contributor to the *Revue des Deux Mondes* and the *Revue Encyclopedique*, author of *La Référendum communal* (1893); *La Peinture anglaise contemporaine* (1895); *Ruskin et la religion de la beauté* (1897); *Le Miroir de la vie* (1902-1909); *Le Vertueux condottiere Federigo de Montefeltro duc d'Urbino* (1928).

LA TENE PERIOD, name given a European period of culture also known as the second early Iron Age, or Marnian period, extending about

400 B.C. to the Christian era. It is named for La Tène, an ancient Celtic settlement near Marin, Lake Neuchâtel, Switzerland, where remains include iron objects—50 swords, 23 spearheads, 5 axes, 4 knives, with scythes, rakes, plows—and more than 100 personal ornaments of bronze, silver, and other materials. The characteristic types of fibula, bead, and other ornaments are found in Gaul, Britain, Scandinavia, Bosnia, and Scythia. The period succeeds the Hallstatt epoch (q.v.). Early Tenean types (400–250 B.C.) come from 30 sites in England. Middle Tenean (250–150 B.C.) are poorly represented. Late Tenean (150–1 B.C.)—called by the Franks late-Celtic—are well represented at Bibracte, in the Glastonbury lake villages, and at Aylesford, Kent, where a bronze-bound bucket bore fantastic horse designs identical with those on a La Tène scabbard. The pottery was wheel-made, and the scroll ornament marks the beginning of that Celtic art which found its highest development in Britain. See also *ARCHAEOLOGY—Iron Age*.

LA TOUR, là tōor, **Maurice Quentin de**, French portrait painter: b. St. Quentin, Sept. 5, 1704; d. there, Feb. 18, 1788. His art was largely self-developed. He first exhibited in the Salon in 1737, and in the succeeding 37 years he showed there some 150 pastel portraits of exceptional beauty and excellence; he was elected to the Academy in 1746, and was appointed painter to the king in 1750. His sitters included the royal family and the fashionable members of the court. Probably the finest specimen of his art is the portrait of Madame de Pompadour, executed in life-size and exhibited in the Salon in 1755. His portraits of Louis XV, his consort, the dauphin and dauphiness, Voltaire and Rousseau are regarded as being almost as valuable for their historical exactitude as for their high art value. The splendid collection of his work owned by the museum at St. Quentin consists of portraits which were in his own possession at the time of his death; many of these are sketches for his finished portraits and afford a rich field for study.

LA TOUR D'Auvergne, là tōor' dô-věrn'y, **Théophile Malo Corret de**, French soldier: b. Carhaix, Brittany, Nov. 23, 1743; d. Oberhausen, Bavaria, June 27, 1800. Enlisting in the army in 1767, he steadfastly refused promotion beyond the rank of captain. He displayed extraordinary valor during the Revolutionary wars in the Alps and Pyrenees, but was forced by ill health to leave the army in 1795; returning to Brittany by sea, he was captured by the British and imprisoned for two years. Rejoining the army in 1797, he fought in Germany and Switzerland; by a decree published on April 27, 1800, he was named "First Grenadier of France." He was killed in action while serving with the Army of the Rhine. His courage, simplicity, and modesty having made him a hero, remarkable honors were paid to his memory. Bonaparte ordered his name to be kept on the roll of the 46th regiment, and called at parades, when a sergeant was to reply *Mort au champ d'honneur* (Dead on the field of honor). His heart was embalmed and carried in a silver box by his regiment, and in 1889 his body was interred in the Pantheon, at Paris.

LA TRAPPE, là tráp', name of a Cistercian abbey of France. It lies in hilly country in the department of Orne, 26 miles northeast of Alençon and 2½ miles from Soligny. Founded in 1140 by Count Rotrou de Perche, it was known as Notre Dame de la Maison Dieu; from its situation in a damp, unhealthy glen, accessible only by a narrow stony passage it was called La Trappe (the trap). The monks were as distinguished for austerity during the 14th and 15th centuries as they subsequently became for licentiousness and violence, when they were known as the Bandits of La Trappe. The monastery however, passed into the hands of Armand Jean le Bouthillier de Rancé (q.v.) in the middle of the 17th century. The brilliant abbot had early abandoned himself to worldliness, but became converted, introduced Benedictine monks into La Trappe, and enforced severe discipline. The brethren rose at 2 A.M., retired at 7 P.M., slept on straw, were forbidden wine and flesh, spent each evening some time in digging their own graves, and never spoke excepting to say to each other, "Memento mori." Rancé discouraged literary pursuits but enforced constant manual labor; he died in 1700, and the Trappists were driven out of France by the revolution. They founded a house at Valsainte, Switzerland, which was destroyed by the French in 1798, but they were again put in possession of La Trappe on the restoration of the Bourbons. In 1829 the Trappist houses were closed by a royal decree, and all but nine monasteries were suppressed; these were compelled to seek refuge in Algiers 1844, and the United States in 1848, where they established houses in Kentucky, Iowa, and Rhode Island.

LA TREMOILLE, là trā-mōō'y, **Louis de, VICOMTE DE THOUARS**, twār, **PRINCE DE TAJMONT**, tál-môn' (known as **CHEVALIER SANS REPROCHE**, shē-vá-lyā' sän' rē-prōsh'), French soldier: b. Sept. 20, 1460; d. Pavia, Italy, Feb. 24, 1525. A member of a distinguished family of France, in 1488, while in command of the army of Charles VIII invading Brittany, he defeated and captured the duke of Orleans at the battle of Saint-Aubin-du-Cormier. Louis XII gave him command of the army of Italy; he fought at Fornova in 1495, and conquered the Milanese in 1500, but was defeated in the Neapolitan territories in 1503 and by the Swiss at Novara in 1513. La Trémoille fought at Marignano in 1515, and during 1521–1523 he successfully defended Picardy; he was killed in action at the battle of Pavia.

LA TUQUE, là tük', Canada, town in Champlain County, Province of Quebec, on Saint Maurice River 85 miles northwest of city of Quebec. It contains a college, convent and technical school. Situated in the midst of a lumbering region, pulp manufacture is the major industry. A trading post was established on the site by early French colonizers; the town grew considerably after it was reached by the Canadian National Railway in 1908. Pop. 7,95

LA VALETTE, là vā-lět', **Antoine Mar Chamans, COMTE DE**, French statesman: Paris, 1769; d. Feb. 15, 1830. He served under Napoleon in the Italian and Egyptian campaigns, became French minister to Saxony during the First Empire, and was subsequently postmaster

meral of France and a councilor of state. Sentenced to death after the Restoration, he was smuggled out of prison by his devoted wife, milie Louise de Beauharnais (1780-1855). Much information concerning the First Empire is found in his *Mémoires et Souvenirs du Comte de La Valette* (2 vols., 1831; new ed., 1905).

LA VALETTE, Jean Parisot de, French soldier: b. Toulouse, 1494; d. Valletta, Malta, Aug. 28, 1568. Elected in 1557 grand master of the Knights of Malta (see JOHN, ORDER OF SAINT), he conducted a renowned defense of Malta against the Turks from May 18, 1565.

LA VALLIERE, là vâ-lyâr', Françoise Louise de la Baume Le Blanc, DUCHESS DE, mistress of Louis XIV of France: b. Tours, Aug. 7, 1644; d. Paris, June 6, 1710. In 1661 he went to the royal court as maid of honor to Henrietta, Duchess of Orleans (q.v.), and soon attracted the attention of the king. Their intimacy developed into a liaison which lasted for some six years, during which she bore four children to the king; she was created a duchess in 1667. Superseded by the Marquise de Montespan (q.v.), in 1674 La Vallière retired into a Carmelite convent, taking the veil the next year. She was reputedly the author of *Réflexions sur la Miséricorde de Dieu* (1685).

LA VERENDRYE, là vâ-rân-drê', Pierre Gaultier de Varennes, SIEUR DE, explorer in America: b. Three Rivers, Canada, Nov. 17, 1685; d. Quebec, Dec. 6, 1749. His maternal grandfather was Pierre Boucher (q.v.), governor of Three Rivers. Entering the French colonial army, he served in the French and Indian wars, taking part in the raid on Deerfield, Mass., in 1704. From 1707 to 1711 he was an army officer in Europe, fighting in the War of the Spanish Succession, and thereafter resumed service in Canada. Appointed in 1726 to command of a military post on Lake Nipigon, north of Lake Superior, he learned from the Indians of routes by which the West might be reached, and three years later returned to Quebec seeking permission for exploration. He was promised a monopoly of the fur trade in whatever regions he might discover, and in 1731 he commenced a series of explorations in company with three of his sons—Jean Baptiste, Pierre, and François—and a nephew, La Jemeraye. Pushing westward from Lake Superior, he built Fort St. Pierre on Rainy Lake and, in 1732, Fort St. Charles on Lake of the Woods. In 1734 Fort Maurepas was erected on the shore of Lake Winnipeg, but disaster overtook the expedition in 1736, La Jemeraye dying in May and later in the summer Jean Baptiste and other members being murdered by Sioux Indians on Massacre island, Lake of the Woods. Nevertheless La Verendrye continued to push westward, his party now joined by his fourth son, Louis Joseph. He constructed Fort La Reine on the Assiniboine River in 1738, and Fort Rouge on the site of the future city of Winnipeg, Manitoba, and then journeyed overland to the villages of the Mandan on the Missouri River. During 1742-1744 four of the party reached mountains to the westward variously identified as the Rockies or the Black Hills. A leaden plate which they turned on the return journey at Fort Pierre, South Dakota, was unearthed in 1913 by some

school children. In 1744 he was ordered to remain in French Canada, command of the western posts being entrusted to another officer; for his services, in 1747 he was awarded the Cross of St. Louis. Given permission in 1749 to resume his explorations, he died while making preparations for another expedition. He is regarded as the discoverer of Manitoba, the two Dakotas, the western plains of Minnesota, perhaps part of Montana, and a great area of western Canada. His name is commemorated in the Verendrye National Monument (q.v.). Consult Burpee, Lawrence J., ed., *The Journals and Letters of Pierre Gaultier de Varennes de la Verendrye and His Sons* (Toronto 1927).

LA VICTORIA DE JUNIN, là vèk-tô' ryâ dâ hoo'nin, ode by José Joaquín Olmedo (q.v.), published in 1826. During the Peninsular War, in Spain, Manuel José Quintana (q.v.) cried out in his heroic odes against the attempted conquests by Napoleon, and in similar fashion Olmedo voiced the spirit of revolt in the Spanish colonies which rose against the tyrannous exactions of the motherland and combated the Spaniard as a wicked dominator. On Aug. 6, 1824, the forces of the Liberator, Simon Bolívar (q.v.), won a signal victory over the Spaniards at Junin, in the viceroyalty of Peru. This triumph was followed on December 9 of the same year by the decisive Battle of Ayacucho, in which Antonio José de Sucre (q.v.), a lieutenant of Bolívar, vanquished a Spanish army with his smaller body of patriots. As a result of the two victories, the independence of Peru, and ultimately of all Spanish America, was achieved. The Liberator requested Olmedo to celebrate the two battles, and he responded with the long ode entitled *La Victoria de Junin Canto a Bolívar*, which was published at London in 1826. With Quintana's odes as his model—and he doubtless had the heroic verse of Juan Nicasio Gallego (q.v.) in mind also,—Olmedo has written a noble paean to Bolívar, which bears witness to the magnitude of that warrior's whole military career and not merely to the significance of the two military exploits which the poet was asked to commemorate. The magnificent scenery of the South American forests provides a background; the poet's reminiscences of Horace, Virgil, and other classic writers supply no small part of the imagery abounding throughout the 800 verses of the Canto. Unfortunately, the supernatural is introduced without the support of a vision or dream, and there is all too much hyperbole in the terms of praise lavished upon Bolívar and his generals. This latter fact was stressed by Bolívar himself in a letter to the poet, which shows that the Liberator was a man of wonderful good taste in matters of literary criticism. The ode opens with an account of the thunderous effect of the victory of Junin and of the revelry in which the Spanish-American camp is engaged on the night following it. Suddenly there appears in the clouds the shade of the Inca, Huayna-Capac, who apostrophizes and vilifies the Spaniards and, prophesying the approaching victory of Ayacucho, gives good counsel to Bolívar. When the Inca has ended his long address, the Virgins of the Sun surround him and break out into beautiful choral song. Then, as all are still listening in rapt wonder, the supernatural visitors disappear. Critics agree in finding the

ode a work of freshness and vigor, containing brilliant passages of an epic and a lyric nature.

JEREMIAH D. M. FORD.

LA VILLEMARQUE, la vël'mär'kă, Théodore Claude Henri Hersart, VICOMTE DE, French antiquary and Celtic Scholar: b. Quimperlé, Brittany, 7 July 1815; d. there, 8 Dec. 1895. His first notable literary achievement was the collection and translation into French of the folksongs of Brittany, accompanied by their melodies. These were followed by the prose legends of the same district, and he next made an important contribution to the knowledge of Celtic verse of the 6th century, also translated into French, thereby establishing his reputation as an authority in that field. His further labors included the collection and translating of the prose legends of Ireland, Cambria and Brittany. He wrote a number of textbooks on the subject, and edited after the death of De Le Gonidec his 'Dictionnaire français-breton' (1847-50). Author of 'Barzas-Breiz' (2 vols., 1839; 6th ed. 1867); 'Contes populaires des anciens Bretons' (2 vols., 1842); 'Nouvelle grammaire bretonne' (1849); 'Poèmes des bardes bretons du vi^e siècle' (1850); 'Notices des princepsaux manuscrits des anciens Bretons' (1856); 'Légende celtique en Irlande, en Cambrie et en Bretagne' (1859); 'Myrdhinn ou l'Euchanteur Merlin' (1861); a Breton drama of the Middle Ages, 'Le Grand Mystère de Jésus' (1865); 'Poèmes bretons du moyen âge' (1879); 'La légende de Saint Gurthiern' (1880).

LA VITA NUOVA, la vë'ta noo-ô'va, ('The New Life'). 'La Vita Nuova' is the proper introduction of the reading and understanding of Dante's 'Divina Commedia' (q.v.). It is autobiographical, in that it purports to tell of his first meeting with Beatrice, when he was nine years of age, and how from that time «Love lorded it over his soul,» how he saw her from time to time and with constantly increasing devotion attempted to keep secret his passion for her. He predicts her early death, and when his prediction is verified he portrays his intense sufferings. Then in an interlude he tells of the change that has taken place in his life, and in the last part he enlarges on his renewed love for the glorified Beatrice and his resolve to study so as to compose a suitable memorial for her. The first 17 chapters embody nine sonnets and a ballade, describing his youthful love and the physical charms of his bellissima donna. Then follow 11 chapters which glorify her spiritual beauties, with seven sonnets and three canzoni, which he calls «new rimes,» wherein the tongue spoke of its own accord. Here he relates his deeds and thoughts. The poems in these chapters were composed between the age of 22 and 25. The next seven chapters tell of Beatrice's early death, and contain two canzoni and two sonnets expressing his grief. The last makes a false start and begins anew. Four chapters treat of his love for another lady, who had shown him compassion. Each of them leads up to a sonnet. Then his love for Beatrice reawakens and in three chapters, each ending with a sonnet, he relates his acts and thoughts till he is 35, when, according to his chronology, he had the experiences described in the comedy. In the last chapter he has a wonderful vision and prom-

ises to say of Beatrice «what was never said of any woman.»

It will be seen that the prose narration of 'La Vita Nuova' is a setting for Dante's love-poems. It explains how each sonnet, ballade and canzone came to be written. Moreover, he appends to almost every one an elaborate and very artificial analysis of it. Dante when he was writing this work was studying the Commentaries of Saint Thomas Aquinas, and as that learned man often treated Aristotle's statements with a formal analysis, the poet followed his example. Boccaccio tells us that the poet regarded these as a blemish and wished that he had omitted them. They have annoyed many students of the Vita Nuova. Dante Gabriel Rossetti left them out of his translation.

Students of Dante have differed widely in their interpretation of the meaning of the title of the work, as well of the work itself. Some have regarded it as wholly symbolical and have understood Beatrice to be not a woman of flesh and blood but a type of mystical love. The same differences are found in the various commentaries of the Comedy. The truth is that Dante incorporated in the 'Vita Nuova' and in the 'Convito' ('The Banquet or Love-Feast') the minor poems which he wrote at various periods of his life. His earliest sonnet, written in 1283 when he was 18, is found in the third chapter, where he tells of having had a marvelous vision, and writes the sonnet, saluting all the «faithful of Love» and requesting that they expound it for him; he adds that many made answer, in many diverse ways. The sonnets and other lyrics in the first part of the 'Vita Nuova' are imitations of the Provençal troubadours; in the latter part, where Dante is supposed to have freed himself from this influence, the poems show more maturity, as of course they were written later. Dante in this brief composition, especially in the prose framework, betrays his recent study of Aristotle's 'Physics,' 'Metaphysics' and 'Ethics.' This is particularly evident in the pedantry of the style, which is artificial; and yet it breathes of that gay and beautiful Florence which was then coming to be one of the most prosperous cities of Italy. Dante's delineation of Beatrice has been the admiration of poets and artists for centuries. Charles Eliot Norton calls her «the most delightful personage in the daily picturesque life of Florence . . . the loveliest and most womanly woman of the Middle Ages.»

'La Vita Nuova' was first printed in Florence in 1576, with reprints in 1723, 1877, and was copied in Pesaro 1529, in Venice 1840 and in Livorno 1843. It was published with English and Italian text by Luigi Ricci (London 1903). It was translated into English by Dante Gabriel Rossetti (London 1861); by Theodore Martin (London 1862); by Charles Eliot Norton (Boston 1867; revised ed., 1892, with essays and notes); by Charles Stuart Boswell, with notes and introduction (London 1895). It was published with illustrations and with music by Alfred Mercer (New York 1914).

NATHAN HASKELL DOLE.

LA VOISIN, la vva'zăn' (real name CATHERINE MONVOISIN), French sorceress: b. Paris, 20 Feb. 1680. She was a fortune-teller practising the most obnoxious arts of the pre-

ession, and was a midwife and medical practitioner of evil repute, but enjoyed a wide patronage among the grande dames of the court of Louis XIV. She also belonged to the coterie of professional poisoners whose activities at length became so notorious that in 1679 a royal commission was appointed to investigate and bring the offenders to justice. La Voisin was accused in particular of an attempt to poison Louise de La Vallière, mistress of Louis XIV, supposedly at the instigation of the Comtesse de Soissons. The sessions of the commission were for a time interrupted owing to the fact that its findings established guilt in such high quarters that exposure would have brought intolerable scandal upon the court, but while several of the chief offenders were shielded the commission resumed its work and many of the poisoners were convicted and executed. La Voisin was the first to be executed, first having been tortured. Consult Funck-Brentano, F., 'Le drame des poisons' (1900); Masson, A., 'La sorcellerie et la science des poisons au XVII^e siècle' (1903).

LAAGER, lā'gēr (Dutch, «a camp»), in South Africa, an encampment more or less fortified. The original Boer laager was an enclosure formed by the wagons of a traveling party for defense against enemies.

LAALAND, lā'lānd, or **LOLLAND**, an island of Denmark, in the Baltic Sea, between the islands of Falster and Langeland. Its greatest length, southeast to northwest, is 36 miles; breadth, varying from 9 miles to 17 miles; area, 447 square miles. It forms with Falster the district of Naribo. The surface, as implied by its name, meaning «low land», is so very little raised above the sea, the highest part being only 95 feet above sea-level, that parts of it along the coast are subject to frequent inundations, and for a considerable distance around it the water is so shallow that there are few places in which vessels drawing eight feet can approach it without danger. The soil, consisting generally of a heavy loam, is very fertile, and yields excellent crops of corn, beans, hops and hemp are extensively grown. Varieties of hardwood timber are abundant. Pop. 71,280.

LAAR, lār, or **LAER**, Peter van, Dutch painter: b. Haarlem, Netherlands, 1590; d. sometime after 1658. Early in life he went to France, and subsequently visited Italy (1623). Here he mainly resided at Rome, where he became associated with Claude Lorraine, Poussin and Sandrart. He was small and crooked in stature and was thus called by the Italians «Bamboccio», and the comic scenes of rustic life painted in his style became known as «Bambocciads.» He returned to Haarlem in 1639. He painted pastoral and banditti scenes, fairs and such like rural incidents, with spirited and vigorous brush, although his coloring is somewhat hard. A masterpiece of his, 'The Market Crier,' is in the gallery at Cassel. Other pictures of his are to be found at London, Paris, Dresden, Vienna and Munich. About 20 etchings from his hand are also extant, chiefly animals and landscape, which are spirited and finely executed.

LAAS, lās, Ernst, German philosopher and pedagogue: b. Fürstenwalde, 16 June 1837; d. Strassburg, 16 June 1885: He studied at the

Berlin University, at first theology then philosophy, under Trendelenburg. He became teacher (1860) at the Friedrich Gymnasium, then (1868) at the Wilhelms Gymnasium, and was given (1872) the degree of adjunct-professor of philosophy at the newly founded Strassburg University. He leaned toward empiricism which induced him to write 'Idealismus und Positivismus' (Berlin 1879-84), differing from Plato and Kant and more nearly following the English theories of Hume and Mill. He became a leading representative of positivism in Germany. As pedagogue an epoch-making work of his was 'Der deutsche Aufsatz in den obern gymnasialklassen' (Berlin 1868; 3d ed., by Imelmann, 1898). He wrote also 'Der deutsche Unterricht auf höheren Lehranstalten' (ib. 1872); 'Gymnasium und Realschule' (ib. 1875); 'Kants Analogien der Erfahrung' (ib. 1876). His 'Literarischer Nachlass' was edited by Kerry (Vienna 1887) and contains a short dissertation on pedagogy. Consult Hanisch, 'Der Positivismus von Ernst Laas' (Halle 1902); Gjürts, 'Die Erkenntniss Theorie des Ernst Laas' (Leipzig 1903); Kohn, P., 'Der Positivismus von Ernst Laas' (Bern 1907).

LABADIE, Jean de, French mystic and separatist: b. Bourq en Guienne, 13 Feb. 1610; d. Altona, Prussia, 13 Feb. 1674. He was educated at Bordeaux by the Jesuits and belonged to their order till 1639. He then quitted it, both because irregularities were detected in his conduct and he was found to have adopted many very peculiar and extravagant views. For these he was cited before the Parliament, but fled to Geneva. At a later period he returned to France and took up his residence in Amiens, whose bishop entrusted him with the visitation of the monasteries in his diocese. He also found a patron in the archbishop of Toulouse. His zealous opposition to some of the clergy subjected him again to persecution, and to escape from it he, in 1650, went over to the Reformed Church, but not finding himself so comfortable as he expected, he thought he had received a call to found an apostolic church for himself. He now became a preacher in Montauban, and afterward, on being obliged to leave it, in the town of Orange, from which he proceeded successively to Geneva, Middleburg and Amsterdam. In the last city he collected his followers into a distinct church or society under the name of Labadists. They were anabaptists, believed in the community of goods, held that marriage with the unregenerate was not binding, and that the children of the regenerate were born without original sin. Toleration being now denied him, he in 1670 proceeded to Herford, where the Palsgravine Elizabeth gave him protection. Driven thence by an imperial edict in 1672, he went first to Bremen and finally to Altona, where he held private meetings. See LABADISTS.

LABADISTS, followers of Jean de Labadie (q.v.), whose doctrines were a compound of mysticism and Calvinism. The sect was formed at Amsterdam in 1669. Its two most prominent defenders were Anna van Schurmann and Antoinette Bourignon. The Labadists, proposing to form a colony in America after failure in Surinam, S. A., sent over (1678-79) two of their number, Dankers

and Sluyter, to spy out the land and report. To these men, in their journal, translated into English and published by the Long Island Historical Society, we owe the existence of a most lively, not to say rather tart descriptions and criticisms of the Dutch and other folk in the middle colonies. The Labadists made a settlement, first in New York, which mismanaged, impoverished the home congregations and failed. Another was made later in Maryland which continued during a generation or two, but after the death in 1722 of Dankers, the leading spirit, was abandoned and the name and faith were lost among the dispersed. Consult the 'Journal of Our Voyage to Neuw Nederlandt, begun in the Name of the Lord and for His Glory.'

LABAND, la'bānt, Paul, German jurist: b. Breslau, 24 May 1838. He studied law at Breslau, then Heidelberg and Berlin and was appointed private teacher (1861) of German law at Heidelberg. He was made adjunct-professor (1866) at Königsberg, and went (1872) in the same capacity to Strassburg. He devoted his work chiefly to state law and commercial law, on which subjects he wrote 'Das Budgetrecht nach den Bestimmungen der preussischen Verfassungsurkunde' (Berlin 1871); 'Das Finanzrecht des Deutschen Reichs' (in Hirth's *Annalen* 1873); 'Das Staatsrecht des Deutschen Reichs' (Tübingen 1876-82; 5th ed., 1901), his greatest work, of which he issued an abridged edition in Marquardsen's 'Handbuch des öffentlichen Rechts der Gegenwart' (Freiburg 1883; 6th ed., 1912). He was coeditor of *Zeitschrift für das gesamte Handelsrecht* from 1864, and founded (1886), with F. Stoerk, the *Archiv für öffentliches Recht*, and was long editor of *Deutsche Juristenzeitung*. 'Direkte Reichssteuern' was published 1908. Died, 1918.

LABARUM, the name given from the time of Constantine to the imperial banner and intended to commemorate the vision of the cross in the sky which was the cause of the emperor's conversion. Eusebius has described it with much particularity. It was in the form of a long pike, crossed at a certain height by a beam, from which depended a banner richly embroidered with gold and adorned with precious stones. The pike was surmounted by a crown of gold, enclosing within it a monogram of the two initial letters of the name of Christ.

LABAT, Jean Baptiste, zhōn bāp'tēst lä-bā, French Dominican missionary and traveler: b. Paris, 1664; d. there, 6 Jan. 1738. In 1693 he went as a missionary to the French Antilles, landed at Martinique and undertook the care of the parish of Macouba, which he superintended for two years, after which he was sent to Guadeloupe. His mathematical knowledge recommended him to the governor there, whom he accompanied during a tour through the island to assist him in selecting the points best adapted for works of defense. On his return to Martinique Labat received the office of *procureur-général* of the mission, in which an opportunity was afforded him of displaying the whole extent of his useful activity at the same time that he served the government by his mathematical knowledge. In 1705 he was sent to Europe on business of the order, and, landing at Cadiz, surveyed geometrically and scientifically the

environs and the whole coast of Andalusia as far as Gibraltar. He returned to Paris in 1716. His 'Nouveau voyage aux îles de l'Amérique,' which has been translated into several languages, contains an account of the natural history, particularly of some of the smaller and less frequented islands; of their productions; the origin, customs, religion and governments of the inhabitants. He also published a 'Nouvelle relation de l'Afrique occidentale'; 'Voyage en Espagne et Italie'; 'Relation historique de l'Ethiopie occidentale'; 'Mémoires du chevalier d'Arvieu.'

LABBE, lāb, Philippe, French Jesuit: b. Bourges, 10 July 1607; d. Paris, 25 March 1667. He taught philosophy and theology for a time at Bourges, but he was soon called to Paris where he spent his life in writing and research. He was quite a prolific writer, but his most prominent works are 'Sacrosancta concilia ad regiam editionem exacta' (Paris 1662-72, 18 vols., reprinted by Coletus, Venice 1728-32, 23 vols.), Gabriel Cossart edited the last 10 volumes after the author's death; 'Galliae synodorum conciliorumque brevis et accurata historia' (Paris 1646); 'Historica synopsis conciliorum nationalium, provincialium,' etc. (1661). Chronological works of his are 'Concordia chronologica' (Paris 1656); 'Abregé chronologique de l'histoire sacrée et profane' (1663-66). On martyrology he wrote 'Hagiologium Franco-Galliae excerptum ex antiquo martyrologia sanctae obliatae Sancti Laurentii Biturecensis' (1643). On history he wrote 'Michælis Glycæ annales' (1660); 'Mélanges curieux de plusieurs sujets rares' (1650); 'Bibliotheca bibliothecarum' (1664). Consult Michaud, 'Biographie universelle' (Paris 1843-65, Vol. XXII); Backer, 'Bibliothèque des écrivains de la Société de Jésus' (Liege 1869-76, Vol. 11).

LABÉ, la'bā, Louise, French poet: b. Paris, about 1526; d. Lyons, March 1566. Her true name was Charly and her father was a ropemaker, hence, on account of her beauty, she was called «la belle cordière.» Her talent in acquiring foreign languages and her bold and dauntless disposition in her early years created wonder among her companions. While scarcely 16 years of age she took part, dressed as a cavalier, and in the name of Captain Loys, in the siege of Perpignan (1542). She married and devoted herself to poetry and music and her home became the rendezvous of poets, sages and artists; the street on which she lived was called, in 1607, rue de la Belle Cordière. Her poems, sonnets and elegies show Petrarch influence, but have lyric flights and a purity of expression of great rarity. We have of hers also an allegory in prose 'Le Débat de Folie et d'Amour.' The earliest editions of her works (1555 and later) are very rare; the latest appeared in Paris (1887). Consult Gonon, 'Documents historiques sur la vie et les mœurs de Louise Labé' (Lyons 1844); Laur, 'Louise Labé' (Strassburg 1873).

LABÉDOYÈRE, Charles Angélique Hu-chet, shārī ān-zhā-lēk hü-shā lä-bā-dwa-yāt, COMTE DE, French general: b. Paris, 17 April 1786; d. there, 19 Aug. 1815. He entered the army in his 20th year and served with much distinction in Spain, Germany and elsewhere. Napoleon raised him to the rank of general of

division in 1815 and he fought with great courage at Waterloo. After the battle he hurried to Paris and there distinguished himself by his hostility to the Bourbons. On the capitulation of Paris he followed the army behind the Loire, but returning to Paris was taken, tried by court-martial and shot.

LABEL, Union. See **UNION LABEL**.

LABEO, la bā'ō, **Marcus Antistius**, Roman jurist. He was a man of unbending firmness of character, of strong republican sentiment, that turned him against Augustus, and of all-round training. His juridical works compose 400 volumes. Notable among them are found in the pandects of the Justinian 'Corpus Juris.' Seeking to extend the law he became the founder of a special juridical school, which was called the Proculian, after his pupil Proculus. Consult Pernice, 'Marcus Antistius Labeo' (Halle 1873-92); Sohm-Ledlie, 'Institutes of Roman Law' (2d ed., Oxford 1901); Teuffel, 'Geschichte der römischen Literatur' (Vol. II, 6th ed., Leipzig 1910).

LABERIUS, la'ba'ri-ūs, **Decimus**, Roman knight and writer of mimes: b. 106 B.C.; d. 43 B.C. At the age of 60 he was commanded by Caesar to appear on the stage in one of his own mimes, a disgrace for nobility which forfeited all titles, actors being of the lower and slave class. His prologue was filled with touching complaint of the insult and its wording has come down to us. The knightly honors lost by the act were later restored to him. Ribbeck has collected the existing fragments of some 40 mimes of his in 'Comitorum romanorum fragmenta' (3d ed., Leipzig 1898); they show original wit and keen expression.

LABEZARES, Guido DE, gwê-dō dā lā-bā-thā'rēs, Spanish adventurer: b. Bilbao, Spain, 1510; d. Manila, 1580. He began his career in South America, from which he made a voyage to Java and Sumatra, 1542. In 1550 he discovered the Bay Filipina, in Florida, and in the following year with Luna de Arellano visited and renamed the place Bay Santa Maria. He entered with Legaspi upon the project of conquering and converting the Philippine Islands. His success was complete in the matter of conquest, and in 1574 he was appointed governor-general of Manila. By means of new fortifications he so strengthened the place against the Chinese corsairs and the Dutch pirates that these were driven from the adjacent islands. In 1575 he took the position of lieutenant-governor, under a new governor-general from Spain and kept his position until his death.

LABIATAE. See **MENTHACEÆ**.

LABICHE, Eugène Marin, è-zhān mā-rān lā-hēsh, French dramatist: b. Paris, 5 May 1815; d. there, 23 Jan. 1888. He wrote, chiefly in collaboration with other authors, upward of 100 plays, many of them very successful. It was the qualities that he brought to the collaboration that made them a success. His long series included a few real comedies of character and manners. His farces and vaudevilles are distinguished by extravagant plots, crisp and sparkling dialogue which is at times a little broad, by the absence of the love element and admirable stage technique, and they form capi-

tal characterizations of the bourgeoisie of his time. In 1880 he was elected to the Academy and after that date ceased to write for the stage. His dramatic works were collected in 10 volumes (1878-79) and met with a notable and, for the author, an unexpected success. Among the best of them may be mentioned 'Frisette' (1846), the original of the famous farce, 'Box and Cox'; 'The Italian Straw Hat' (1857); 'Le Voyage de M. Perrichon' (1860), a delightful picture of middle-class vanity; 'Moi' (1864). Consult Matthews, 'French Dramatists' (1901).

LABLACHE, Luigi, loo-ē'jē lā-blāsh', operatic singer: b. Naples, Italy, 6 Dec. 1794; d. there, 23 Jan. 1858. He studied at the local Conservatorio della Pietà della Turchini under the guidance of Valesi and made his début as a bass singer, *buffo Napoletano*, in Fioravanti's 'Molinara.' Later he enlarged his repertoire by singing in grand opera, to which his voice, which was one of wonderful range and volume, was admirably adapted and appeared as Mercadente in 'Elisa and Claudio.' His reputation soon extended over Italy. In his 20th year, when the triumph of Rossini was at its height, he stood forth as the greatest interpreter of that master, and reached the summit of his fame. A medal was struck off in his honor at Vienna in 1825. For the next 17 years he annually appeared in Italian opera in London, Paris and Saint Petersburg. He was the singing-master of Queen Victoria. He was equally admirable in comic and serious operas and the school of music which he opened in Paris had considerable success in handing on the traditions of his style. Don Giovanni and Leporello were his greatest parts.

LABOR. Definition.—Labor may be defined as the physical or mental effort of human beings for the attainment of some object other than the pleasure of the effort itself. Simple as this definition is there is scarcely a word in it but what has been the subject of discussion. The popular use of the word labor restricts it to those who engage in manual toil, but this is of course too narrow. Any scientific definition must include mental effort. In modern industry brains are needed as well as muscle. Men must organize the productive forces and direct their employment along chosen lines. Upon their ability quite as much as upon the skill and strength of the manual workers, and indeed to an even greater degree, depends the success of modern enterprise. To-day this concept is fully recognized and not even the most extreme socialist would deny the productive character of mental effort.

Labor is generally limited in popular usage to that of human beings but not all economists have so defined it. Adam Smith spoke of "labouring cattle," and said more than once that "nature labours along with man." J. R. McCulloch, who always exaggerated or distorted any half-truth of his intellectual father, Adam Smith, went so far as to say that no distinction should be made between the operations of domestic animals, of machinery, of nature and of man. Labor, he said, is "any sort of action or co-operation, whether performed by man, the lower animals, machinery, or natural agents, that tends to bring about any desirable result." Such a definition is, however, confusing rather

than helpful. To-day practically all economists restrict the term labor to that of human beings. Labor means human labor.

More difficult of restriction within the ring-fence of a definition is the next concept. Some writers have denied the term labor to any exertions which yield pleasure or are undertaken for the sake of the pleasure accompanying them. Painful effort only is labor. Thus W. S. Jevons wrote, "Labor, I should say, is any painful exertion of mind or body undergone partly or wholly with a view to future good." And yet even Jevons pointed out that most forms of labor, after the initial irksomeness had been overcome, yielded distinct pleasure to the worker, a principle which the French socialist Fournier had earlier made the basis of his scheme for the organization of labor. It is impossible thus to limit the term, for it would exclude some of the highest forms of creative art or literature or even handicraft and confine it only to distasteful or painful occupations. Indeed the same kind of exertion might at one time be called labor and at another time be denied that name. The whole psychology of labor is moreover involved in this limitation of the idea. Labor is regarded as a curse. But the purpose of economic progress and of human invention is, or should be, to lighten the burden upon labor, to associate with the performance of necessary tasks a pleasure and pride in workmanship. In its highest aspect labor should be regarded as a privilege rather than a curse.

The final notion involved in this definition is that the labor is performed for the sake of some ulterior object or some useful purpose. Quite aside from the question of whether pleasurable effort is entitled to the name of labor, it is contended that it must be productive. The distinction was early made between productive and unproductive labor. The Physiocrats, for instance, insisted that only the work of agriculture was productive, the labors of manufacturers, merchants and others being sterile. Even Adam Smith thought that the work of servants was unproductive. The modern conception, however, is that any effort which satisfies a want or creates a utility is productive—that of the actor, the fireman or the judge, as well as that of the farmer, the miner, the cotton-spinner or the locomotive engineer. Effort directed toward the rendering of some intangible or transient pleasure is held to be productive as well as that engaged in extractive industry or in fashioning some durable object. In no case does man create anything; he can never do more than change the form or the place of material things. It is, therefore, as impossible to draw a line of distinction between the labor of those engaged in raising grain and those employed in serving bread at the table as it is to make a distinction between manual and mental effort.

Free and Slave Labor.—Thus far only free labor has been considered, but historically probably more of the work of the world has been performed by unfree labor than by free. Slavery has existed as far back as historical records go into the dim past. Indeed it has been asserted, rather paradoxically, that the institution of human slavery marked the greatest step forward that had yet been made in human progress. From an ethical standpoint slavery

was certainly an improvement over cannibalism and from an economic standpoint it marked great advance because now for the first time there was provided a fund of labor that could be directed to steady and arduous toil. Until this time man had lived by hunting and fishing primarily; but now settled agriculture became possible, permanent homes were established, cattle domesticated and some accumulation of property began. Primitive man did not work willingly and the compulsion of slavery furnished the training school in which the human race painfully and slowly learned the lesson of labor.

The question has been raised and much debated as to whether the course of human progress has been from a state of original freedom and equality to one of inequality and bondage or the reverse. The view was formerly widely held that the original tribal organization early gave place to a closer union in the village community or mark. Freedom, equality of rank and possessions, and in the case of the mark communal ownership and cultivation of the land characterized these early communities. As a result of conquest and other forces this original state of freedom gave way to one of inequality, both political and economic, which has persisted to this day. Modern democracy and socialism are simply efforts to restore the original and natural heritage of mankind. About 1880 however another school developed in England and France especially, which denied the accuracy of the historical data upon which the mark theory had been built up, and gave a different explanation of the existing economic constitution of society and the position of labor. These writers denied that early societies had enjoyed freedom and communal ownership of the land, but insisted that as far back as history can be traced there had always existed a system of primitive serfdom and private property. The evolution of human progress has therefore been from a condition of slavery and inequality to one of increasing freedom and equality of opportunity and possessions. Labor has progressed from bondage to freedom and is ever moving further in the same direction.

Perhaps the best evidence of the growing dignity and importance, as well as the well-being of labor, is the esteem in which it has been held by economists. In this respect there has been steady progress. By the Greeks and Romans, if we may accept as typical the utterances of their leading philosophers, labor was held in low esteem. Artisans belonged to the lowest caste, and labor was held to be degrading. Slavery was generally practised and of course did not help to elevate the status of the free laborer. The later Roman writers, however, condemned this institution on economic grounds. The spread of Christianity led also to moral condemnation, and during the Middle Ages slavery was generally modified into serfdom, according to which the serf was bound to the soil but was personally free. Although the Church taught the equality and brotherhood of man, these doctrines did not ameliorate his condition during this period. Men's chief intellectual interests were theological rather than economic, war absorbed the energies of the ruling classes, and the primitive methods of agriculture, manufactures and transportation as well as insecurity of life and

property prevented the working classes from making any economic advance.

Economic Views.—The Renaissance and the discovery of the New World made far-reaching changes in economic institutions and thought which were reflected in the conceptions of labor. By the Mercantilists, labor was assigned a position of considerable importance; according to Locke (1690) labor is the almost exclusive source of value, for, he wrote, «it is labour indeed that puts the difference of value on everything.» But the Mercantilists after all emphasized trade and money rather than labor. The Physiocrats introduced the distinction between productive and unproductive labor; according to them the only productive labor was that which added something material to the world's stock of goods. They therefore confined the term to agricultural laborers and the extractive industries; merchants and manufacturers were unproductive or sterile. Emphasis was laid by them therefore more upon the direction of labor than upon its well-being. Land and the bounty of nature was the real center of the Physiocratic system.

Adam Smith placed labor in the very arch of his economic philosophy; his book on *The Wealth of Nations* (q.v.) begins with a discussion of labor as the source of the annual wealth of a nation, and the first chapter describes the division of labor as a means of increasing production. The opening sentence of this book is, «The annual labour of every nation is the fund which originally supplies it with all the necessities and conveniences of life.» Labor is both the cause of value and its measure. In spite of the high position thus assigned labor in Smith's economic system, the practical results in the hands of his followers were bad. He had insisted upon the need of greater freedom of enterprise and of contract and this doctrine was erected into the principle of *laissez-faire* by the classical school. Competition was given full sway and all restrictive barriers were swept away. This meant the exploitation and degradation of labor. Ricardo and Malthus (q.v.) register in their writings the hopeless attitude of economists as to the impossibility of improving the condition of labor, view which persists even in John Stuart Mill (q.v.).

A reaction against this position soon set in. The Socialists insisted upon the rights of labor and the injustice of existing methods of distribution. The changes wrought by the Industrial Revolution brought many industrial readjustments and serious economic ills such as poverty, unemployment and crises. Increasing attention began to be given to the subject of distribution instead of production or exchange. Social reformers interested themselves in the practical work of abolishing specific abuses. The labor movement became too important to ignore, and not only has it secured an increasing amount of space in recent economic literature, but it has been treated with greater sympathy and understanding. In many of our colleges and universities courses in labor problems are given, and an increasing amount of study is being devoted to the subject. See **SOCIAL REFORM PROGRAMS; SOCIALISM.**

LABOR, American Federation of. See AMERICAN FEDERATION OF LABOR.

LABOR, Department of. A government department of the United States, established by act of Congress March 4, 1913 "to foster, promote, and develop the welfare of the wage earners of the United States, to improve their working conditions and to advance their opportunities for profitable employment." Originally a part of the Department of the Interior, it was later transferred to the Department of Commerce and Labor before becoming a separate department headed by a Cabinet member. The department consists of the following operating bureaus: Bureau of Apprenticeship, which formulates and promotes the extension of labor standards necessary to safeguard the welfare of apprentices; Bureau of Labor Standards which develops desirable standards in industrial practice, labor law administration, state labor legislation, industrial safety standards and performs the functions conferred upon the secretary of labor regarding the filing of organizational and financial information by unions; Bureau of Labor Statistics which collects, analyzes and publishes information relating to wholesale prices and living costs, employment, working hours, wages and payrolls, productivity, and allied subjects involving activities of wage earners; Bureau of Veterans Reemployment Rights, which assists former members of the armed forces and of the Merchant Marine in the exercise of their reemployment rights; Women's Bureau, which encourages standards and policies to promote the welfare of wage earning women; Wage and Hour and Public Contracts Divisions, which are charged with administering and enforcing the minimum wage and maximum hours standards provided by the Fair Labor Standards Act of 1938 and administering and enforcing the provisions of the Walsh-Healey Public Contracts Act. The following offices are directly responsible to the Secretary of Labor: Office of the Solicitor (the Solicitor serves as legal adviser to the Secretary of Labor and other department officials, handles all the Department's legal proceedings, administers the Copeland Anti-Kickback Act, establishes prevailing wage rates for laborers and mechanics employed in the performance of construction projects for the Federal Government under the Davis-Bacon Act); Office of International Labor Affairs is responsible, under the general supervision of the under secretary of labor, for the supervision, direction, policy formulation and coordination of the international activities of the Department and of its bureaus; Office of Information, under the Director of Information, is responsible for the dissemination of information concerning the activities of the Department and its constituent bureaus, offices and agencies.

MAURICE J. TOBIN,
The Secretary of Labor

LABOR BUREAUS. Nearly every state in the Union has a labor bureau, or department of labor, the oldest being that of Massachu-

setts, organized in 1869. Several of the state bureaus, particularly those of New York and Connecticut, maintain free employment agencies. These state bureaus have been kept remarkably free from partisan politics, and they have been decidedly successful in the settling of labor disputes and in preventing strikes and lockouts. The chief functions delegated to be performed by the state bureaus are assistance in bettering the condition of toilers, investigating complaints of ill-treatment, and grievances, to furnish information as a basis for enlightened legislation, to keep a record of the labor supply and labor condition in the state and to inform the general public of the results of its work. In some states the administration of the labor laws was committed to the bureaus, as also administering employment offices, compensation laws, etc. These organizations proved so successful that European nations soon followed the American example. In 1891 France organized a bureau of labor and in 1892 Germany followed with a labor commission. In 1893 a labor department under the direction of a commission for labor was instituted in England. Austria, Italy, Sweden, New Zealand, New South Wales, and Canada have since established similar bureaus. Consult Wright, *The Workings of the Department of Labor*, and "The Value of Influence of Labor Statistics," in *Monographs on Social Economics* (Washington 1901); *American Year Book* (annual); *American Labor Legislation Review* (1911, I, No. 2, 123-134; No. 3, 59-68; No. 4, 61-104).

LABOR CHURCH, a movement started in England to bring religious work into the labor movement. John Trevor was the founder (1891), the first Labor Church service opening in Charlton Town Hall, Manchester. The growth of the movement was such that, at a conference held in 1893, the Labor Church Union was organized with 10 churches represented, and by 1894 there were 24 labor churches in England and Scotland. Five principles were adopted at the inauguration declaring religion part of the labor movement, that it is no class movement or class religion, but nonsectarian. In 1903 a restatement of principles was drawn up embodying the conditions of the former one and declaring the labor movement, besides its religious activity, includes improvement of social conditions, development of personal character, both essential to "emancipation from moral and social bondage," and therefore insists on the study of the economic and moral forces of society. Over 30 labor churches were eventually established, but since 1907 the movement apparently has lost vitality.

LABOR CONGRESS, an assemblage, either national or international, of representatives of organized labor. Various national labor congresses are held in several countries, particularly in England, where annual conventions have been held since 1868. The first attempt to form an international organization of workers was made by a group of Continental exiles at a conference held in London in 1847, in which Karl Marx took part. The Communist League that was formed issued Marx' and Engel's famous manifesto just before the revolution of 1848, but the organization disappeared in the succeeding reaction. The first international

labor congress was organized by the International Workingmen's Association—the «First» International—which was established in London in 1864. Its first congress was held at Geneva, Switzerland, in 1866, about 60 delegates being present from England, France, Germany, Holland, and Switzerland. The results of this meeting were the condemnation of the industrial employment of women, the advocating of technical education, and the organization of mutual credit associations. At the congress of 1869, held at Basel, Switzerland, labor representatives were in attendance from Russia, Austria, Germany, France, England, Spain, Italy, and Switzerland. This assembly by a vote of 54 to 4 declared that landed property should be abolished. At the congress at The Hague in 1872 the anarchists, led by Bakunin set up an independent international, which continued a stormy existence until 1879. The First International, after holding two more congresses (the last in Philadelphia in 1876), ceased to be an effective force.

In 1889 the Second (Socialist) International was launched. Two international socialist labor congresses were held at Paris at the same time one, the Marxist, by 400 delegates, and the other, the Possibilist, by 600 delegates. In 1891 a socialist-labor congress was held at Brussels, at which 400 delegates were present from nearly every country in the world, including Canada and the United States. Among the topics discussed were the eight-hour day, militarism, universal suffrage and legislative protection of labor. At the congress of 1893 at Zurich, Switzerland, 385 delegates were present, and admission was denied to all avowed anarchists. The congress, now assuming definite organization as the Second International, met in London in 1896 and arranged to meet every four years thereafter. The anarchists were again denied admission, and resolutions were adopted opposing standing armies, advocating the nationalization of land and the socialization of industry.

The next congress was held in Paris in 1900, when the assembly discussed the laws regulating strikes and boycotts and favored the abolition of the capitalist class. Resolutions were passed favoring a fixed minimum wage and the nationalization of mines. Subsequent meetings were held at Amsterdam (1904), Stuttgart (1907), Copenhagen (1910) and at Basel in 1912. Efforts to hold congresses during the First World War proved abortive. The Second International was revived in 1920 at Vienna and set up on a reorganized basis at Hamburg in 1923, holding congresses thereafter at intervals of about four years until the outbreak of Second World War.

Meanwhile the Third (Communist) International—the Comintern—had been organized at Moscow in 1919, and held seven congresses until its dissolution in May 1943.

The International Labor Organization, which was established in 1919, at the Paris Peace Conference, and of which the United States is a member, held its first session in Washington in 1919 and its twenty-sixth in Philadelphia 1944.

Plans for a World Labor Conference, sponsored by the British Trades Union Congress and scheduled to meet in London in June 1944 were suspended in May, because of the Allied inva-

sion of France on June 6. The World Trade Union Congress (WTUC) meeting in London in February 1945 discussed establishment of a new organization to replace the International Federation of Trade Unions; at a subsequent WTUC meeting in Paris, announcement was made, Oct. 3, 1945, of the founding of the World Federation of Trade Unions (WFTU). The latter held executive meetings in 1946 in Paris, Washington, and Moscow. See also INTERNATIONAL or INTERNATIONALE; INTERNATIONAL LABOUR ORGANIZATION; SOCIALISM; LABOR UNIONS.

LABOR DAY, in the United States, the first Monday in September, a legal holiday in all the states and District of Columbia, Puerto Rico, Hawaii, and Alaska. The celebration of this day was inaugurated by the Knights of Labor (q.v.), who in 1882 held a parade in New York, and again in 1884, when a resolution by George R. Lloyd, one of the Knights of Labor, was passed, recommending that parades be held on Labor Day. According to an article entitled "Labor Day" in Bulletin No. 29 of the United States Department of Labor, published July 1900, Oregon was the first state to legislate for general observance of Labor Day as a legal holiday. This law, enacted Feb. 21, 1887, specified the first Saturday in June as Labor Day; but in 1893 the day of observance was changed to the first Monday in September. Other states which passed similar legislation in 1887 were: Colorado on March 15; New Jersey, April 8; New York, May 6; and Massachusetts, May 11. All these states set the first Monday in September as the holiday. In Europe the celebration of the first of May as Labor Day commenced in 1890.

LABOR DEPARTMENTS, Foreign. The development of early labor legislation in all countries soon pointed out the fact that labor laws are useless unless properly enforced by special authorities. Accordingly most countries sooner or later created one or more departments to deal with the ever-increasing number of labor laws. The functions of these departments is first of all to administer all existing labor laws and then to conduct investigations that will lay foundations for future legislation. Under their administrative functions labor departments appoint inspectors to enforce workshop regulations, regulate social insurance laws, conduct labor exchanges to help unemployed and serve as, or create, boards to settle industrial disputes or fix wages and hours of labor. Under their functions as investigators labor departments conduct research, gather statistical data, issue reports and often draft laws. In the larger European countries the departments are under the guidance of ministers of labor, while in smaller countries they are attached to other ministries.

In England, factory inspectors to enforce workshop regulations were for the first time provided for under the Factory Act of 1833. They were placed under the supervision of the secretary of state for home affairs. At present the Home Office has a factory inspection department supervised by an undersecretary. Other labor laws before World War I were administered by the Labor Department of the Board of Trade, established in 1893. The department administered the Labor Exchanges Act of 1909, the Trade Boards Act of 1909, and the National Unemployment Insurance Acts of 1911

and 1916. The Board of Trade also issued a monthly paper, and annual and special reports on wages, hours and labor in other countries. During World War I its powers and authorities were transferred to a Ministry of Labor. Health insurance is regulated by boards of insurance commissioners.

In Germany, before World War II, the enforcement of the labor law was mainly left to the individual states. Each state had a labor or inspection bureau that enforced workshop regulations with the help of the police authorities. Central supervision was very slight. In Prussia the factory inspection department was under the Ministry of Commerce and Industry. At the head of the insurance system was the Imperial Insurance Office assisted by district and local insurance offices. The above departments also conducted investigations and research work.

In France a Bureau of Inspection of Labor was for the first time established in 1841. In 1891 the Superior Council of Labor, representing employers, employees and the government, was founded to investigate labor conditions and act as adviser to the government in labor problems. The Inspection Service, like the Superior Council, was a part of the Ministry of Labor, established in 1906, at the head of which was a member of the Cabinet. Accident insurance was regulated by a special bureau and old-age pensions were under the supervision of a Superior Council in the Ministry of Labor.

Austrian labor laws were administered by the Ministry of Commerce and at the head of the inspection service was a central industrial inspector. In Holland a Bureau of Labor was established in the Department of Public Works in 1916 to institute unemployment insurance and supervise labor exchanges. In Belgium there was, before the war, a Ministry of Industry and Labor, under which there was a Labor Office. The latter was organized in 1895. It administered all labor laws, investigated labor problems, inspected factories and supervised insurance. In Italy a Labor Department was established in 1902, in Switzerland in 1886, in Denmark in 1859, Sweden in 1902 and in Spain in 1903.

SELIG PERLMAN,

Professor of Economics, University of Wisconsin.

LABOR LEGISLATION. The term labor legislation today covers a broad group of laws embodying governmental policies on the economic and social status of workers. In most industrial countries labor legislation began during the early stages of the factory system as an attempt to regulate child labor. These first laws were little more than an expression of policy against the exploitation of very young children. The comprehensive body of laws now in effect includes not only corrective and protective measures, but also legislation establishing certain basic rights of labor.

The first step was the enactment of laws to protect women and children from excessive hours and to safeguard all workers against hazardous working conditions. These laws achieved results only as they were gradually reinforced by factory inspection with police powers.

The next step was the recognition of labor's right to promote its own safety and welfare through mutual association. The resulting laws include measures guaranteeing labor's right to organize, to strike, and to bargain collectively;

and extending the help of government in promoting industrial peace and fair treatment through mediation, conciliation, and arbitration. (See also LABOR UNIONS.)

Other types of legislation to protect workers include insurance against occupational injuries and diseases, unemployment insurance, minimum wages and overtime after certain basic hours of work, and regulation of private employment agencies. The latest trend is to provide nonoccupational sickness insurance and protection against discrimination in employment on the basis of race, religion, or ancestry.

Labor Legislation, United States.—Labor legislation existed in colonial and early republican America. In direct contrast to its purpose today, it was then directed to restrict and control workers. For example, colonial statutes prohibited the payment of wages beyond a specified maximum instead of providing a floor for wages. And the early laws branded as conspiracy the organization of workers for promoting and protecting their own interests. But the maximum wage laws could not operate effectively in a new country where labor was desperately needed, and the doctrine of conspiracy proved foreign to the American concept of the dignity of labor. So labor legislation became legislation for labor, not against it. As in other countries, early efforts in behalf of labor sought first to control working hours and age limits of children employed in textile mills.

Under the United States system of government, powers not specifically granted to the federal government by the Constitution are reserved to the states. Hence the individual states enacted practically all of the early labor legislation, with the result that there was a great variation in laws from state to state.

Federal labor legislation is based on the power of Congress to control interstate commerce specifically granted by the Constitution. Most of the early federal labor laws dealt with railroads and their employees without extending into other industries. Gradually, a broadening concept of interstate commerce led to the enactment of more far-reaching federal legislation.

The years since 1932 have witnessed a great advance in the field of labor and social legislation. In the brief period of its operation, the National Industrial Recovery Act of 1933 brought, for the first time on a national scale, a shorter work week, minimum wage scales, and a substantial improvement in safety and health measures. This law, and the National Labor Relations Act, which followed, established government recognition of labor's right to organize and bargain collectively with employers. Developments since 1933 have been influenced by the national conferences on labor legislation. These conferences are called each year by the secretary of the United States Department of Labor. They are composed of governors' representatives (usually labor commissioners and representatives of organized labor) from the various states, the territories, and the District of Columbia. These conferences have established desirable labor standards for most types of labor legislation.

Child Labor.—Every state now has a child-labor law, but they are not equally effective. In general, they set a minimum age of 14 or 16 for employment, with a growing trend toward the establishment of a 16-year minimum age in factories and in all occupations during school hours.

They generally fix a higher minimum age (usually 18) for employment in hazardous occupations; require employers to obtain employer or age certificates for each young worker the hire under 16 or under 18; limit maximum hours of work, usually to an 8-hour day and a 40-hour or 48-hour week; and prohibit night work for 11 or 12 hours a night for children under 16, and for 8 night hours for those 16 and 17.

Closely tied in with child-labor laws are school-attendance laws. The laws of all of the states, the territories, and the District of Columbia require children generally to go to school at least to the age of 16, ten of the laws requiring attendance to 17 or 18 years of age. However, most of these laws have exemptions permitting children under 16 to leave school for certain reasons, such as upon completion of a specified grade or because of poverty or distance of residence from school. Most states require attendance for the full term, usually 9 or 10 months.

The federal government controls employment of children mainly through the child-labor provisions of the Fair Labor Standards Act which sets minimum ages for the employment of minor in interstate or foreign commerce, or in the production of goods for shipment in such commerce. Two other federal acts also contain child-labor provisions, the Walsh-Healey Public Contract Act that sets minimum ages for work under government contracts, and the Sugar Act of 1948 under which certain standards are established for the work of children in cultivating and harvesting sugar beets or sugar cane.

See also separate article on CHILD LABOR.

Wages and Hours.—Although the National Industrial Recovery Act was declared unconstitutional in 1933, strong sentiment remained for federal regulation of wages and hours. In 1937 Congress passed the Fair Labor Standards Act applying to workers engaged in interstate or foreign commerce or in the production of goods for such commerce. This act, as amended effective Jan. 25, 1950, provides for a minimum wage of 75 cents an hour, and time and one half for hours worked in excess of 40 a week.

The Federal Public Contracts Act, generally known as the Walsh-Healey Act, requires that employers holding government contracts in excess of \$10,000 must pay the prevailing minimum wage as determined by the secretary of labor must pay time and one half after 8 hours a day or 40 hours a week, and may not employ boys under 16 and girls under 18. Another federal act, the Davis-Bacon Act, requires payment of prevailing wage rates to laborers and mechanics on contracts in excess of \$2,000 for the construction, alteration or repair of public buildings or public works.

Both federal and state laws regulate the wages and hours of persons employed on public works.

Practically all the states have enacted legislation limiting the hours of labor and regulating the working conditions of women and children ("Working conditions" includes sanitary and rest facilities, meal and rest periods, and standard of employment in occupations especially hazardous for women and children.) All but five states have some regulation of the daily hours of work of women and almost all of these also have weekly limitations. Maximum hours range from an 8-hour day in specified industries in many states to a 10-hour day allowed by a few states in one or more industries. In most cases, these

laws do not permit overtime, except in cases of emergency. Some states place some limitations on night work for women and almost every state places restrictions on night work for minors, at least those under 16.

Hours regulation under state laws for men has for the most part been limited to hazardous industries. Many of the states have laws requiring one day of rest in seven, and these usually apply to men as well as women.

Twenty-six states, the three territories and District of Columbia, now have minimum wage laws applying to women and minors, and seven of these laws (Connecticut, Massachusetts, New Hampshire, New York, Rhode Island, Hawaii, and Puerto Rico) apply also to men. Most of these laws provide for tripartite boards to issue wage orders by industry; a few also set a statutory minimum wage rate.

All but two of the states, Delaware and Florida, and the District of Columbia, have some legislation covering the payment of wages. Wage payment laws set certain requirements as to frequency of payment, medium of payment, payment to workers separated from the payroll, statements to workers and other records. About one fourth of the laws include the very important provision authorizing the state labor department to take assignments of wage claims for the collection of wages for the employee. Under these laws, millions of dollars in wages due have been collected for employees. Few of the state laws give complete protection to workers by covering all these important subjects adequately. Some states have wide coverage of workers but limit the scope of the laws. Agricultural and domestic workers usually are not covered by wage payment laws.

Labor Relations.—Unlike other social legislation, which was first enacted by the states, labor-relations legislation had its beginning by action of the federal government. The principle of collective bargaining underlies all recent federal legislation on labor relations. The National Industrial Recovery Act of 1933 (held unconstitutional in 1935) recognized the right of employees to organize and bargain collectively through representatives of their own selection. Enacted in 1935, the National Labor Relations Act continued and reinforced this policy by provisions designed to guarantee these rights in fact as well as in theory. To this end it prohibited certain employer practices which hinder the organization of labor, set up election machinery to settle controversies concerning the representation of employees, and created the National Labor Relations Board, of three members, to carry out these provisions.

In 1947 this act was amended and re-enacted the Labor Management Relations Act, commonly called the Taft-Hartley Act. As re-enacted it continues to guarantee the right of collective bargaining, it retains the list of unfair labor practices of employers, and it adds unfair labor practices of employees. It also makes certain changes in the administrative provisions by enlarging the board from 3 to 5 members and by giving final authority to the general counsel, instead of the board, for the investigation and prosecution of unfair labor charges.

For many years the issuance of injunctions by various federal courts impeded labor's efforts to organize and bargain collectively and limited its right to strike. In 1932 Congress passed the

Norris-LaGuardia Act, that defines and limits the powers of the federal court to issue injunctions in labor disputes. Under this act, a federal court may issue a temporary or permanent injunction in cases involving or growing out of a labor dispute only after hearing the testimony of witnesses in open court with opportunity for cross-examination. Such hearings shall be held only after personal notice to all known persons involved. The court must also find among other facts, that irreparable property damage will follow if the injunction is not issued, and that greater injury will result to the complainant from denying the injunction than to the defendant from granting it.

As modified by the Taft-Hartley Act, temporary or permanent injunctions may be issued by federal courts under certain circumstances without regard to these conditions.

Under the Taft-Hartley Act, a Federal Mediation and Conciliation Service was established, independent of the Department of Labor, to assist labor and management in arriving at peaceful settlements of labor disputes. Generally, the service attempts to mediate and conciliate if the dispute threatens a substantial interruption of interstate commerce. When a dispute would have only a minor effect upon interstate commerce and a state or local agency is available, the federal service usually does not offer its mediation and conciliation facilities.

The service may intervene in labor disputes at the request of one or more of the parties to the dispute or on its own motion. The Labor Management Relations Act requires employers and unions who wish to modify or terminate existing collective bargaining agreements to serve a notice on each other 60 days before the effective date of such changes. It also requires such parties, if the dispute is not settled within 30 days, to file a notice with the federal service and any state mediation or conciliation agency which might have jurisdiction.

It is the policy of the service to promote collective bargaining and encourage the parties to settle industrial disputes by themselves. The service exists to assist parties who have reached a deadlock in bargaining relations to settle their differences and to reach their own agreements. It has no coercive or compulsory powers.

The Railway Labor Act, passed in 1926, and amended in 1934, 1936, and 1940 governs the labor relations of railroads and airlines and their employees. The act makes it the mutual duty of carriers and employees to make and maintain agreements; guarantees, and provides for the exercise of labor's collective bargaining rights; and prescribes methods for the settlement of various types of disputes. The act applies to all railroads, express companies, and sleeping car companies engaged in interstate commerce and their subsidiaries, and to airlines engaged in interstate and foreign commerce and transportation of mail.

A number of states have passed acts similar to the federal Wagner, Taft-Hartley, or Norris-LaGuardia Act.

Eleven states and two territories have industrial relations acts up to the present time. The first five of these were passed in 1937 and were modelled on the Wagner Act. Amendments to some of these and later acts passed in some other states, contained provisions designed to control not only the practices of employers but of labor

organizations as well. On the other hand, the original trend was followed by Rhode Island in 1941 and Connecticut in 1945. Thus at present the state labor relations acts fall into two classifications. Those of Connecticut, Massachusetts, New York, and Rhode Island are modelled on the original Wagner Act; and those of the second group, Colorado, Kansas, Michigan, Minnesota, Pennsylvania, Utah, Wisconsin, Hawaii, and Puerto Rico, contain union-restrictive clauses similar to those incorporated in the Taft-Hartley Act of 1947.

In addition to the labor relations acts, other state laws affecting labor relations are found in most of the states.

About half of the states have "little Norris-LaGuardia" acts. Other acts provide for mediation and voluntary arbitration for the adjustment of labor disputes. In some states permanent boards are created for this purpose, while in others adjustment is carried on by the officer or agency charged with the general administration of labor laws. Other state laws include a number of union restrictive provisions, such as regulation or prohibition of picketing, boycotting, and blacklisting; regulation of industrial relations in public utilities; or supervision of certain union affairs. A number of states have also passed legislation forbidding anti-union contracts.

While some union-restrictive acts were passed prior to 1947, the great bulk of such laws were passed in that year. This trend was somewhat reversed in the last three years, when several of the union-restrictive acts were repealed or modified.

Social Security.—In order to assure workers an income during their old age, as well as to provide benefits for the unemployed and to take care of widows and orphans, Congress in 1935 enacted the Federal Social Security Act. Amendments in 1939 and 1950 considerably liberalized the law and increased the benefits. The act provides for grants to states for noncontributory old-age assistance plans and creates a federal old-age annuity system, financed by contributions by both employers and employees. It also provides for grants to states for the administration of approved unemployment compensation laws. The act extends assistance to needy and dependent children, grants to states for maternal and child health services, services for crippled children, child welfare services, vocational rehabilitation of the partially disabled, public health services, and aid to the blind.

Under the impetus of the Social Security Act, every state has adopted an unemployment insurance law. These laws follow a general pattern, although many provisions differ considerably from state to state. In every state, regular unemployment benefits are paid to unemployed workers who qualify under the state law. See also separate article SOCIAL SECURITY.

The Bureau of Employment Security of the United States Department of Labor carries out the federal government's responsibilities in connection with the unemployment insurance program, and, in addition, the public employment service program. The United States Employment Service provides national leadership and coordination to a system of public employment offices operated by state and territorial agencies affiliated with the bureau. These 1,800 full-time local offices and 2,700 part-time offices are the medium through which the public employment

service system seeks to bring about the best possible organization of the labor market; its principal function in accomplishing this is helping the worker to find suitable employment and the employer to obtain qualified workers.

Service to Workers and Employers.—In addition to providing the basic placement facilities for the matching of workers and jobs, the public employment service provides counseling service to persons having employment problems and applies specialized techniques in finding work for young people, veterans, older workers, and the physically handicapped. The United States Employment Service also participates with the state employment services in the special activities involved in placing agricultural workers and in operating a system for clearing workers across state lines from areas of labor supply to areas of labor demand.

The Bureau of Veterans' Reemployment Rights of the United States Department of Labor assists former members of the armed forces in the exercise of their reemployment rights as provided by Section 8 of the Selective Training and Service Act of 1940, as amended, and related reemployment statutes and Section 9 of the Selective Service Act of 1948.

Information to ex-servicemen, employer, labor and veteran organizations, and others interested in the reemployment provisions of the various acts is provided by local offices of the state employment services. Local offices of the employment service refer ex-servicemen to Volunteer Reemployment Committeemen located in their communities. Assistance to ex-servicemen and employers on reemployment problems is provided by Volunteer Reemployment Rights Committeemen who serve under the supervision of the bureau's field representatives in resolving controversies with employers over reemployment rights by negotiation and voluntary settlement.

A separate federal law provides retirement annuities for aged and disabled railroad employees. Congress has also provided for a comprehensive system of unemployment insurance for employees of carriers engaged in interstate commerce, designed to meet the special needs of the railroad industry.

The social security system in the United States, unlike many European systems, makes no provision for workers unable to work because of sickness. Rhode Island, however, passed a Cash Sickness Compensation Act in 1947. Three other states have followed the lead of Rhode Island in providing benefits of this type. California, New Jersey, and New York. The New York law is administered by the Workmen's Compensation Board, the three others by the Unemployment Insurance Administration.

Workmen's Compensation.—All of the states have workmen's compensation laws. In addition federal laws cover government employees, longshoremen and harbor workers, and employees in the District of Columbia. The main object of this legislation is the payment of benefits to injured employees or to the dependents of those killed in industry, regardless of who was at fault in the accident.

Although the results sought are much the same, there is great variety in the details of the several laws. Some apply only to employees engaged in hazardous employments; others apply only where employees are not less than a specified number. The amounts of benefits vary within

vide range. In some states employers are required to operate under the compensation set, while in others they may refuse to do so if they prefer to risk an injured worker's suit for damages. In 25 states of the United States, Alaska, Hawaii, and the District of Columbia, coverage is provided for all occupational diseases as well. See separate article WORKMEN'S COMPENSATION.

Safety and Health.—Most of the states have laws to protect the safety and health of workers. In the last few years many states have strengthened their safety laws or enacted new ones. This was no doubt due, to a considerable degree, to the President's Conference on Industrial Safety, held in Washington, D.C. in 1949, 1950, and 1951. At the first conference, a thousand leaders of business, labor, government, insurance companies, educational groups, and private safety organizations from all over the country responded to the president's call, and accepted his challenge to reduce job accidents by 50 per cent by the end of 1952. State safety laws usually place responsibility for providing reasonably safe work places for workers on the employer, and authorize the labor department of the state to enforce the safety regulations. Some of the laws establish standards in detail. The present tendency in legislation is to indicate standards and grant large discretionary powers to the responsible administrative agency for achieving those standards. About three fourths of the states, the department of labor or other administrative agency is authorized to issue safety codes and regulations to enforce them.

Private Employment Agencies.—Another line of legislation, the purpose of which is to protect the worker, is the regulation of private employment agencies. Such laws were first enacted to eliminate various undesirable practices formerly prevalent in the placement of persons, such as misrepresentation of jobs or the charging of exorbitant fees. At present 42 states and the District of Columbia have laws regulating the operation of such agencies. While their provisions vary considerably, these acts usually require the agency to obtain an annual license, to post a bond, and to refrain from performing certain undesirable practices.

Industrial Home Work.—The control of industrial work in private homes is a further method of protecting workers against undesirable working conditions. Nine states and Puerto Rico now have laws under which industrial home work may ultimately be prohibited. Certain limited home work is permitted under these acts for persons who cannot leave their homes. A number of states have some regulation of home work, and the Federal Fair Labor Standards and Walsh-Healey Acts contain provisions affecting this type of work. The Walsh-Healey Act prohibits such work in government contracts of more than \$10,000. Under the Fair Labor Standards Act, home work in certain industries is prohibited except under certain conditions, and all home workers must be paid the wages set by that act, with time and one half beyond 40 hours a week.

Discrimination in Employment.—The most recent trend in labor legislation is the enactment of Fair Employment Practice Acts. Since 1945 eleven states have passed such acts, designed to eliminate discriminatory employment practices with regard to race, creed, color, or ancestry. Most of these forbid employers to discharge or discriminate against any person in compensation

or other terms and conditions of employment because of race, creed, color, national origin, or ancestry. Labor organizations are prohibited from excluding from membership any person for these reasons, and employment agencies are also prohibited from practicing such discrimination. In some states employers and employment agencies are forbidden to print advertisements or issue publications expressing any discriminatory preferences. Two of the states provide for voluntary compliance only, emphasizing the elimination of such practices by educational measures.

Administrative Agencies.—In nearly every state a department of labor, established by law, is vested with broad powers in dealing with labor problems. At first, the chief duty of labor departments was the collection and distribution of statistical information relating to the various fields of labor and to industrial development. At the present time most of the labor departments are also required to enforce and administer important labor laws. The authority of labor departments and other agencies to issue regulations and codes, particularly with respect to such fields as safety and health, child labor, and the employment of women is a comparatively recent development. In some states the labor department administers all labor laws. In some states, however, the unemployment compensation act is administered by a separate agency, and in several states a special agency has been created to administer the workmen's compensation law.

The United States Department of Labor, an executive department of the federal government since 1913, administers the Fair Labor Standards Act, the Public Contracts Act, and other labor measures, and also extends its highly developed research and service facilities to labor, management, and other government agencies. See also LABOR LEGISLATION, FOREIGN.

WILLIAM L. CONNOLLY,
Director, Bureau of Labor Standards, United States Department of Labor.
